That human sacrifices, apparently unknown in the Aryan cradle-land, were everywhere practised by the Eurasians in their new western homes, that is, were adopted from their Euro-African predecessors, is evident from Cesar’s account (de Bell. Gall. vi. 16) of the frightful holocausts in Gaul, and from many other less familiar indications. From Tacitus we learn (Germ. ix.) that ‘deorum maxime Mercarium solunt, cui certa diebus humanis quoque sacrificia spectant’ (Tacitus, Histories of the Germans and Scandinavians (as seen in the English Wednesday-day), and the Greek Ἐγκυρία, who, Herodetus tells us, was sacrificed by the Thracians to their gods (v. 7). In Rome, sexagenarians were called semes deportantes, ‘old bridge-castaways’; because old people, when a bridge was finished, were thrown into the water as a sort of bridge-toll to appease the offended river-god for this intrusion on his domain. The tribute had to be paid not once only, but every year, and it was a function of the Vestal Virgins to throw the deportantes into the river. Later, for the living victims the so-called arges—rush or straw figures—were substituted as the piscorum virorum simulacra. The statement that the sexagenarii deorum were the same which dejicibus’ occur in Festus, and in Tacitus, who referring to the Emperor’s attempts at general assembly in The Evolution of the Jews, 356. An echo of the practice, which appears to have been wide-spread, survives in the Wendland district of Hanover on the Elbe, formerly inhabited by Slavs (Wedos), but now by Low Germans, who declare that their exhortation, kruus unwor, kruus unwor, de Welt is de gräns (‘creep under, creep under, to thee the world is [now] grim’), was once used as a prayer [encouragement] when the old people were thrown from the bridge into the water (ib.). Bridge-building was a matter of such importance to the community that a priest called a pontifex, or ‘bridge-maker,’ was appointed to superintend the works, and to be a guide and, graduate of the priestly order, the Pontifex Maximus—a title which still survives as that of the Roman Pontiff, whence Long fellow’s

We are told by Tacitus (Germ. xxix.) that the Semones, who occupied a vast domain between the Elbe and the Oder, opened their national assemblies with horrible barbaric rites at which a human victim was immolated publice, that is, on behalf of the people. Even sati, or widow-burning, which was practised in India and unknown to the Greeks, Romans, and Celts, was practised both by the Slavs and by the Germans. After her husband’s death the wife mounted the pyre—not, however, as an act of heroic devotion and a voluntary immolation, as amongst the Later Hindus, but because she had, nonets volens, ‘to share the fate of all the other possessions which were sent into the graves of a deceased man, perhaps under the impression that he could make use of them in the other world; perhaps because the idea that they should fall into other hands was repugnant to him. Besides his weapon, his horse, his attendants, and his boudoir, his wife also was sent after him’ (Herber, op. cit. p. 31). In Greece we hear little of human offerings, which seem almost excluded by Herodotus, who asks (ii. 45): ‘If even animals, except bulls, swine, calves, and geese were unlawful, facet obsa (the Hellespont) perhaps the bodies of the dead were thrown into the Egean sea, and were wounded together with the ships. I myself have seen the heads of the Slavs, then the head of the German and the head of the Irish person, the head of the Christian, who were burnt in Nar-land, where the custom was universal till the introduction of Christianity, and was even observed, or at least threatened, by way of retaliation, by the first converts in Iceland. In the year 1000, the champions of the old faith having offered up two men to the gods, calling upon them not to let Christianity overrun the land, the Christians retorted that they too would make an offering of two men.

‘The heathens,’ they said, ‘sacrifice the worst men, and cast them over the bridge or cliffs; but we cast the best men, and call it a gift for victory to our Lord Jesus Christ’” (Crangie, The Religion of Ancient Scandinavia, p. 88 l)

In the same spirit, on the opposite side, the Norwegian king Olaf Tryggvason (968) threatened a great immolation, saying:

‘I will not choose thralls or criminals, but will select the most distinguished men to give to the gods’ (ib. 461).

So in Denmark, at the great national gathering held every nine years, a holocaust was made of ninety men, with as many horses and dogs. In the Swedish annals it is recorded under the Thorsmen kings (v. 7). In Rome, sexagenarians were called semes deportantes, ‘old bridge-castaways’; because old people, when a...
the early kings was made a ‘burnt-offering’ to Odin in order to end a famine caused by his slackness in keeping up the sacrifices, while another king immolated nine of his sons in succession to Odin, to obtain long life for himself. Lastly, it is related in the Guta Seige that the people of the island of Gotland ‘sacrificed their sons and daughters and their cattle. All the land was hallowed with sacrifices with fresh human beings; he also bad each third (of the country) by itself’ (ib. p. 571).

For the western Celtic world reference has already been made in the account of the Irish Druids. But the early Slavs were also a people steeped in the rites and beliefs of the nature-goddess and her followers. Finally, we have the Hellenistic colonists who brought to Europe the Greek idea of the persistence of the human soul after death, and also the idea of the immortality of the soul.

For the rest, there is no hard and fast line to be drawn between the religious beliefs and practices of the early Aryans and the later European peoples. The transition was gradual and often incomplete.

But such details made little difference; and, when we find monogamy the rule amongst the early Europeans and later universal, we recognize in the fact the same moral conception of the marriage laws

which placed them so far higher than all contemporary nations of antiquity. In this respect the Aryans are proved to have been a civilized nation of the first rank’ (Ihering, op. cit. p. 29).

No less beneficial was the patriarchy, with descent through the male line, which everywhere superseded the universal tabu of the incipient Celtic, the presence or absence of which is the main feature of the primitive marriage system. For the Aryans had developed or adopted the system of patri-matrimony, where the mother of the children belonged to the husband of the mother, and the father of the children was the father of the children. This is a matter of some importance, for the Aryans entered Europe, where, consequently, the trace of the system is still preserved to-day in the form of family, where the slave or servent, the wife, and the children were all under the head of the husband, and the woman was the steward of her husband.

But the Aryan system was not the only system of marriage that was adopted by the Aryans. The Romans, for example, had a mixed system of marriage, where the husband was the head of the family, and the woman was the steward of her husband. The Romans also had a system of polygamy, where a man could have more than one wife.

Thus in the Dianachus it is stated that to Crom Cruch, the chief Irish deity, his votaries offered ‘the first-born of all offspring, and the first-born of the female children’—probably a Phenician god, as the story goes. In Greece, too, the gods were worshipped in pairs, and the worship of the gods was an important part of the religious life of the people.

It matters little whether this actually occurred or not, since the mere mention of it as a possibility shows that the early Christian writers were aware of the pagan customs, for which there is in any case a vast abundance of collateral evidence.

Thus in the Dianachus it is stated that to Crom Cruch, the chief Irish deity, his votaries offered ‘the first-born of all offspring, and the first-born of the female children’—probably a Phenician god, as the story goes. In Greece, too, the gods were worshipped in pairs, and the worship of the gods was an important part of the religious life of the people.

If the proto-Aryans adopted these revolting practices from the Afro-European aborigines, which seems scarcely open to doubt, they did so not because their own practices were good, but because they could not afford the luxury of many wives. Moreover, the marriage relation received religious sanction, which was even compulsory in certain cases, and was thus a prehistoric time the whole of Aryanized Europe was ordered to have been monogamous. The business part of the transaction varied considerably; in Rome the bride brought the dowry to her husband, while the Germans and Slavs brought the dowry to the bride, that is, bought her, as we see in the case of Vladimir the Great (898), who forcibly abducted an unwedded Byzantine princess, and then paid her relations for her; cf. Tacitus: "dedit non uxori marito, sed uxori maritus offert" (Germ. xviii.).
Catawbas of North America, and still is by the Bulgarians, the Japanese, the Hindus, the Tahitians, and the Fijians of the central Pacific Ocean. Small-fire-myths are met with from the Prometheus in Hellas to that of the extinct Tasmanians, who had no fire at all until two natives, standing on a hill, threw it about like sticks.

'After this no more was fire lost in our land. The two blackfellows are in the clouds; in the clear night you see them staking around the hill above it and through, and put the fire to roast and melt at the fire. . . . Lady — says the Princess Indian — is the consummation whenever the fire is not strangers at table; and she thinks her Royal Highness really has a superstition that destroying this efficacy of her husband will bring the more the life of his Domestication of his Royal Highness (G. Clerici, a Queen of Indiscretion, J. Chapman's English ed. 1667).

So in Ross-shire the rudely shaped image of the person aimed at is 'stuck all over with pins and thorns and placed in a running stream. As the image is worn away by the action of the water the victim is carried away with some mortal disease. The more pins that are stuck in from time to time the more excruciating agony the victim suffers. Should, however, any watcher discover the corp (effigy) in the stream, the spell is broken and the victim duly recovers' (Haddon; Magic and Fetiche, p. 59).

In the Isle of Wight the plan is to put a slug under a flower-pot, fix it there with a pin or a needle, and leave it to die, when the victim also is sure to die.

"Our early Teuton forefathers," remarks F. York Powell (in Religions Systems of the World, London, 1891, p. 570), "were influenced by anthropomorphism and animism, and thought that inanimate objects, as stones, stars, and the elements, and organisms such as trees, fishes, birds and beasts, were possessed of spirits akin to their own.

From this root-idea, which belongs to all primitive systems (see art. ETHNOLOGY, § 9), sprung these countless hosts of invisible beings, some good, some evil, some harmless, some who have throughout the ages filled the upper, the terrestrial, and the lower regions, and whose numbers were greatly increased by the ancestor-worship which was highly characteristic of the pre-Aryanans. As these immigrants failed to sweep away the lower forms of animism (as above), so the Christian system not only left the spirit-world untouched, but enlarged it with Lucifer and his fallen angels, and with those δαίμων πόλλα and πηγαινα έκδο- αγών whose name was 'Legion' (Mk 5). Satan and Beelzebub were also recognized, and, demonology having thus received a new lease of existence, it is not surprising that it should continue to flourish throughout Christendom down to the present day. Its name is still 'Legion,' as we read in the Life and Works of Robert Burns (ed. R. Chambers, 1831, p. 10), where Betty Davidson, who lived in the family,

'had the largest collection in the country of tales and songs concerning devils, ghosts, fairies, brownies, witches, warlocks, spookies, kelpies, elf-candles, dead-light's, wraiths, apparitions, caradoces, giants, enchanted towers, dragons, and other tripe.'

Nor does this exhaust the list, which further includes leprechauns, leprechauns, churlions, good people, fairies (imagined), the Law Family, the Fair Family, the Ithoehod, the Cynoerach, the morrigan, phoebes, pixies, spooks, spectres, sprites, nixers or water-kelpies, bogles or boggs, bug-bears, bug-a-boys, goblins, holm-goblins, fays, ogres, daces, dwarfs, liab-

friends, pucks, trolls, nissens, damhests, damavoi, rotri, korkis, korigans, nadals, nymps, dryads, syphes, wer-warch, and every more local and personal Gespenister and 'familiar spirits' (cf. Socrates), so that some parts of Europe are said to be more thickly peopled with these invisible spirits than with human beings. And Sir Conan Doyle writes (Sir Nigel, 1898) that 'in those simple times (14th. cent.) the Devil raged openly upon the earth; he stalked behind the hedge-rows in the gloaming; he laughed loudly at the laughing time the night-time. His 'brothers' (through Smyth, Abor. of Vict., Melbourne, 1878, ii. 461).

A closer parallel is the wax effigy of a person, by means of which he was done to death at a distance—a practice found almost everywhere in Europe. The process as described by Ovid (Ep. vi. 91)—

"Devente absentes, simulacra cecis fict,"

Et miracum tenues in juere urget acous"—

is exactly the same as that adopted by the hapless Princess Caroline to encompass the death of the Prince of Legist.

'She made a wax figure as usual, and gave it an amiable addition of large horns; then took three pins out of her gar- ment and stuck them through and through, and put the figure to roast and melt at the fire. . . . Lady — says the Princess Indian — is the consummation whenever the fire is not strangers at table; and she thinks her Royal Highness really has a superstition that destroying this efficacy of her husband will bring the more the life of his Domestication of his Royal Highness (G. Clerici, a Queen of Indiscretion, J. Chapman's English ed. 1667).

Then, as the majority of these spirits were dangerous or ill-disposed, all kinds of devices were naturally invented or developed to thwart their designs and the machinations of those supposed to be in league with them (see art. DEMONS AND SPIRITS). Thus arose those otherwise unaccountable charms (formule), spells, incantations, preparations, reading of horoscopes, fortune-telling, ordeals, duels, and especially that sinister belief in witchcraft (g.v.) which broke out again and again through the medieval times and which is perpetuated of unaccountable horrors by religious and other fanatics. It is scarcely three centuries since James i., the author of a special work on Demonology, put two hundred wretched victims of the craze, along with a noble and learned physician, to a horrible death on the charge of having 'raised the wind' against the coming of his Norwegian bride. Whoever wants to understand the full essence of his frightful blasphemy and ferocity should read Cantic's official revelations of the witchcraft mania, which did not receive its death-blow till the judges of the ecclesiastical courts were themselves struck at by their victims under torture (see Manzoni, I Promessi Sposi, Turin, 1827).

'Fear in high places thus removed one great evil, but left others which still persist, and all of which have a religious basis. Such is the ordeal, which is the last surviving form of the ordeal in Europe. Its great antiquity is shown by its archaic Latin form duellum, of which belium is a much later modification (cf. Hor. Od. iii, v. 29, 'paccum duello miscuit'). The ordeal itself, that is, the A.S. ordeal, the Germ. Urteil, and Lat. judicium Dei, persisted under various forms from the earliest times far into modern times, as will be clearly seen in Shakespeare's Richard III. 1. 2, where allusion is made to the test of touch to which suspected murderers were subjected. At their contact the wound of their victims were supposed to bleed afresh. The close association of these oracles with early religious beliefs, as pointed out in art. AUSTRALASIA, is clearly illustrated in the pagan Anglo-Saxon coronet, under which an accused person was required to swallow a piece of bread or cheese exorcised by the priest. If he did so easily, he was innocent; if with an effort, guilty: and it may easily be supposed that, in persons of weak nerves, the awe of the surroundings might produce the effect, even in the case of guiltless persons. In Christian times the coronet, like the fire, water, and so many other unpleasant ordeals, was still continued, the consecrated wafer being now substituted for the exorcised bread (see, further, artt. DUELING, ORDEAL).

A still more striking instance of the fusion of the old and the new systems is afforded by the mixed rite of his manifestation among the European gypsies, more especially those of Hungary and Austria, who have for some generations been nominal Christians, mostly Roman Catholics, but also Orthodox Greeks in some dis-

...
tricks. But none of them is quite clear about the presiding deity, though the prevalent idea is that the dethroned ruler, the Bero puro ducel, ‘great old god,’ has long been dead, and that the world is now governed by his son and successor, the dino tarmo ducel, the ‘small young god,’ i.e., Jesus Christ. Another theory is that the first still lives, and has only abdicated in favour of the second. Others, again, hold that the old god is really dead, but that he is not the son, but the son of a carpenter, having, like Jupiter, usurped the throne on which he is now seated. He controls the elements, and is not a beneficent deity, since, like Saturn, he ‘devours his children,’ i.e., allows them to die. He also has fire, lightning, and thunder, when he sends down thunder and lightning, snow, rain, and hail, which destroy their crops, burn their villages, and cause many other disasters. These gypsies can ascertain the nature properly so called. They do not worship the old or the new god, they have no kind of rites or ceremonies, and their heng, or devil, is borrowed from the Christians.

They believe in omens and prophecies; they give credit to the existence of ghosts and spectres, are afraid of the pernicious touch of the evil eye, and suspect to have the portrait taken lest they might be bewitched” (Featherman, Dirveut, p. 64).

In these respects the eastern gypsies differ in no way from their western kindred, or from the great bulk of the uneducated classes in every part of Europe. The Irish peasantry have endless magic cures for rheumatism, jaundice, whooping-cough, toothache, and other ailments.

Edith Wheeler tells (O值守ia Review, iv. [Nov. 1903] that the jaundiced are managed by having taken three times over water running south. The whooping-cough is stopped by taking the patient to a child that has never seen its father, and letting the ‘sacred hair’ of the sufferer and ‘the curse with work.’ On a headland in Co. Clare there is an old altar, and near it a pool of fresh water, and a ‘bed of stones’ — the saint’s bed—to which the pilgrims come and walk round three times, and, if a child of stunted growth be carried round in the same way and then dipped in the pool, it will grow up properly, if the little fishes come to the top of the water.

So in Co. Mayo there is a well from which no woman, though perishing with thirst, would dare to draw water, until certain rites are performed with a new-born babe, else it would turn to worms and blood. In the same district another well is visited by women who come to pray for the sick. ‘They go round the well and kiss the water, praying and weeping, till they obtain satisfaction. At the conclusion of their devotions, a strange thing is seen in the well; their prayer is answered. I have seen a poor woman know the answer, and look in the well with the eyes half closed, and gaining with agonised anxiety into the clear water’ (Sir H. Blake, in Mac. 1903, no. 11).

Here is an Irish charm for the toothache: “May the thumb of chosen Thomas in the side of guileless Christian heal my teeth and make me whole, and cast away from me worms and maggot’ again showing the blend of old pagan and Christian traditions. The strong, the harmless, and the personal concerns at funerals are also very ancient, and certainly pre-Christian, if not pre-Aryan.

Certain observances, which later acquired a religious character or became associated with magical agencies, were originally of a purely practical nature. See, e.g., art. AUSTRALASIA; so also the inspection of the entrails of birds and cattle for divination purposes in Greece, Rome, and Etruria had a similar utilitarian object. But many, or perhaps all, of the divinatory operations recognized by Democratia, who thought that not the pleasure of the gods, but the healthiness of the climate and the richness or poverty of the soil, were indicated by the condition of the intestines of the animals living in the district:

‘palmi genus, et sarmum remus, quas terra processat, vel ulceratur, geit noxum terrae exumia, nullam temetum etiam, aut pestilentiam extis esticendi sita’ (Cicero, Nat. D. 2. 4. 9). This view is rejected by Cicero but adopted and revived by Ihering (loc. cit.), who concludes generally that the ancients associated with the study of the extra, the flight and song of birds, i.e., the ‘avium voces volutusque,’ as in Tacitus, Germ. x., the feeding of poultry (tripudia), and so on—

‘sui pratticae, quaeque peccatae, quaeque sanctae quodammodo ut sunt, and has been added, as was the case with so many other primitive institutions, after they had lost their original and practical meaning.”

Those who reject this explanation can take refuge only in the notion that in remote antiquity the people believed that the deity revealed himself in the belly of an ox (‘interesse deum singulis pecorum flius’) (Héring, p. 570). This is, in fact, the natural solution of such practices, since primitive man must at some time have been concerned with the quest of food and other material considerations than with costly and elaborate religious ceremonies (see, further, art. DIVINATION). Some of the methods of divination are of great age, and may well have been brought by the proto-Aryans from their Asiatic homes. Such is that of the old Germans which is described by Tacitus, Germ. x., and is exactly like one practised by the Seythians, as in Herodotus, iv. 67. The ancient oracles have long been silent, but their voices, the messages from above, seem still to linger in the thunder-cloud, in the lightning-flash, in the soughing of the wind, and especially in the sound of bells, which, like the holy water, are potent, when blessed, to dissipate foul weather and to scare the evil spirits riding in the gale.

It is the custom, the consecration, which endows the bell, the Agnus Dei, the scapular, and other such talismans with their mana, their supernatural virtue (see art. MELANIES and AUSTRALASIA), and has caused Haddan to declare that ‘all religion is saturated with magic.’ Certainly the belief in magic influences is still universal in Europe, and Haddan does not hesitate to declare that ‘four-fifths of mankind, probably, believe in sympathetic magic’ (ops. cit. p. 2). By sympathetic is meant what Frazer calls a compound magic, which requires, if not actual contact, at least some material connexion between the person and the object operated upon. A few hairs, nail-parings, a drop of blood, clothes, personal ornaments, anything will suffice, not only to cause death, but also to produce any other desired effect. Thus in England:

‘a girl forsaken by her lover is advised to get a lock of his hair and bell it; whilst it is simmering in the pot he will have no rest. In certain parts of Germany and Transylvania the clipping of the hagels-pohonius is magic, which, if performed, is said to bring the dead into the garden, and if buried beneath the elder tree which grows in the courtyard are not burnt, or carefully hidden, for fear of witches” (ib. p. 5).

To this, perhaps, may be due the strange object some people have to being overshadowed by an eider-tree, one of which the present writer had to remove from his garden to oblige a superstitious neighbour.

All kinds of magic processes are adopted as counter-charms against the baneful effects of the evil eye, &c., the dread of which is universal in Italy. Any reputed jettatore—and Pope Pius the Ninth himself was one—causes a general stampede should he appear in a crowded street, and, ‘ever since the establishment of the religious orders, monks have had the special reputation in the church of wearing the fatal influence’ (ib. p. 34). It is perhaps the very oldest superstition of which there is distinct record. It was known not only to the Greeks and Romans (Julius Tertullus), but even to the early Egyptians, one of whose most common amulets was the so-called ‘Eye of Osiris.’

‘These mystical eyes were worn equally by the living and the dead as amulets. If the eye were natural, they were supposed to have the power of having the power of the homopathic magic, that representations of the eye itself should have been considered potent amulets against its malign influence’ (ib. p. 31). See also ERF. Much more common was the practice of cutting off any one falling under its baneful influence.

And of the ‘Hundred Battles,’ a legendary Irish hero, it is related that he always kept his right eye closed, because its glance was found to be fatal to any one falling under its baneful influence.
As a rule, any one might practise magie if only he or she knew how. But there were specialists—medicine-men, shamans, Druids, magicians, sorcerers, wizards, witches, wise women, and others—who professed the science, and who had to undergo a severe probation, in which long fasting and vows proved that their sins had been forgiven. Amongst the Finns and Lapps they were also constituted the tribe or college of witches, which, like those of the Roman and Etruscan augurs and haruspices, exercised considerable influence even in political matters. But after the suppression of the order of Druids (q. e.) by the Emperor Claudius, such societies were never reconstituted in Aryan Europe, and their place was later taken by the Christian hierarchy. Nevertheless, C. G. Leland refers to some such association that still persisted in Tuscany, which, however, is shrouded in much mystery. Its professors, mostly women, are said to meet in secret and, like the Anatolian Yezidis, to observe some old-time rites, and to dispense charms and spells to their followers (Etruscan Roman Remains in Popular Tradition).

It may be mentioned in this connexion that the term saecratores occurs more than once in Tacitus (Get. 148, 150), although references from other sources that the Germans had no distinct order of priests like the Celtic Druids. Thus Cæsar states positively (de Bell. Gall. vi. 21) that the Germans 'neque Druides habebant, neque sacrificium student.' Yet Tacitus calls his saecratores 'ministros deorum,' and adds that they kept order and controlled the proceedings in the public assemblies. On the other hand, we know from the sagas that amongst the pagan Scandinavians there was no distinct priestly caste, but that the priestly and civil functions were vested in the same person—the king, earl, or district chief, spoken of as 'ruler of the sanctuaries,' or godi, from goði, 'god,' like the English 'divines' from root divus, deus. It appears, also, that women, to some extent, acted as priestesses, although their precise relation to the priestly chiefs is not clear. The office was hereditary, and, as the godi was both a chief and a priest, the name did not disappear with the adoption of Christianity, though it naturally lost its religious associations and thereupon was denoted only the recognized leader in the various districts' (Craigie, op. cit. p. 65).

About the Celtic Druids, their status and functions, much diversity of opinion still prevails, the reason being that the term itself covers three different orders, as it was used in Gaul and in Britain. By Cæsar these are all merged in one, the Druidic as opposed to the military order; but they are carefully distinguished by Diodorus, Pliny, and especially Strabo (after Ptolemy), who speak, as we still do, of the Druids proper, the vates (seers), and the poets (bardis). The Druids were rather philosophers and theologians than priests, though they had to be present at the sacrifices. They taught Pythagorean doctrines, and the immortality of the soul through transmigration, to their disciples gathered in caves and secluded groves where trees might have still survived, and where, in any case, high honour was paid to the cow, and to its parasite the mistletoe, the emblem of love, which still plays a part in our Yule-tide festivities. Cæsar (de Bell. Gall. vi.) says that these arcaea were known not only in Gaul, but under the Continental Druids resorted to complete their education. So in later times the first dawning of the new learning came also from Britain and Ireland (p. 23). And if the term 'ascetic' be extended to include the Stoical, Christian, or Scholastic philosophy. The true priests were the vates, who performed the sacrifices which, till suppressed by the Roman Emperors, were marked by features of a peculiarly atrocious character. They practised divination by the slaughter of a human victim, and the observation of the aëreous emanation which from it might issue forth, the spitting of the blood, and the like, this being 'an ancient and established practice among their disciples. And lastly, the barda (v. e.) were minstrels and poets, often retainers of powerful chiefs, whose heroic deeds they sang, thus stirring up fierce rivalries between neighbouring clansmen in society, and acting as pacemakers. They would at times step in between hostile tribes, and, like the Sabine women, induce them to stop the fight. A volume would scarcely suffice to state the contradictory views held regarding the Irish Druids, barda, brenons (legislators), ollamhs (teachers), and others, all of whom, according to the bias or ignorance of the writers, receive indiscriminate praise or vilification as priests, philosophers, astronomers, minstrels, poets, learned doctors, law-givers, or physicians, or else as charlatans, impostors, astrologers, sorcerers, necromancers, magicians, and so on. Eugene O'Curry, who knew them best, declares that 'there is no ground whatever for believing the Druids to have been the priests of any special positive worship'; while E. Ledwich tells us confidently that 'the Druids possessed no internal or external doctrine, either verified by symbols, or clouted in enigma, or any religious tenets which did not, but the charismatical elements, the mental and physical powers of ecstasy or religious illusion' ('Antiquities of Ireland, quoted by Bonwick, Irish Druids, p. 36'). Cæsar also notes, Rel. of Anu, Celta, 1911, passim.

Hence Bonwick (p. 23) shrewdly remarks that 'it is as easy to call a Druid a deceiver as a politician a traitor, or a scientist a sorcerer, and a saint a phoney.'

One thing is clear, that Druidism was not removed by Patrick, who rather exaggerated Christianity on the pagan superstition with so much skill that he won the people over to the Christian religion before they understood the difference; there was no distinct priestly caste, but that the priestly and civil functions were vested in the same person—the king, earl, or district chief, spoken of as 'ruler of the sanctuaries,' or godi, from goði, 'god,' like the English 'divines' from root divus, deus. It appears, also, that women, to some extent, acted as priestesses, although their precise relation to the priestly chiefs is not clear. The office was hereditary, and, as the godi was both a chief and a priest, the name did not disappear with the adoption of Christianity, though it naturally lost its religious associations and thereupon was denoted only the recognized leader in the various districts' (Craigie, op. cit. p. 65).

EUSTATHIUS.—Eustathius, bishop of Sebaste in Armenia, was regarded as the apostle of monotheism in the northern part of Asia Minor. Probably he was the compiler of the so-called "Life of the Ascetic Life attributed to St. Basil." (Constitutions Asceticæ, see Garnier's Intro. to the Benedict. ed. of St. Basil's works). For these reasons he
deserves more generous treatment than he has generally received at the hands of ecclesiastical historians.

Euthanasia appears to have been the son of a bishop, Eulalus (Soz. iv. 24, 9; Soc. ii. 43, 1), and was born about A.D. 300. He was the pupil of the heresiarch Arian in Alexandria (Basil, Ep. 223, 224). He does not appear to have been prepared in advance for his duties of dogmatic teaching. He acquired, while in Egypt, a great admiration for the lives of the early hermit ascetics. On his return to Asia Minor he commenced to practice asceticism in a manner which brought him into conflict with his father, Bishop Eulalus (Soc. ii. 43, 1), and earned him a reputation as a dangerous man (Basil, Ep. 223). He gathered around him a considerable band of disciples, known as Eustathians, who perhaps exaggerated his ascetic practices and teaching. They, though apparently not Eustathius himself, came under the censure of the Council of Gangra (341). There is no suggestion that they were idolized as dogmatically unsound; what was objected to was the severity and unchristian nature of some of their forms of asceticism, and the extreme, puritanical narrowness of their efforts to make the clergy in general conform to these ascetic practices. We must either have been opposed to this exaggeration of his teaching or must have disassociated himself from his followers, for, in or about A.D. 345, he became bishop of Sebaste. A few years later his intimate friendship with St. Basil began (Basil, Ep. 223).

He was at this time noted as an able preacher, a man of exemplary life (Soz. iii. 14, 30), and a leader of 'very excellent monks' (vii. 27, 4). He founded his ἱστολογος, a great house for strangers and hospital for the sick, in Sebaste (Epiph. Hier. lxxv. 1), and placed it under the charge of monks. This was the model of St. Basil's more famous institution in Caesarea. Although he lived through the stormy period of the Arian and semi-Arian controversies, his interest in dogmatic questions appears to have been small. He probably believed that some satisfactory middle way could be discovered, and wished to be left in peace to perform his practical work. He signed, without apparently realizing his inconsistency, the creeds of Ancyrn (A.D. 350), Constantine (359), and Lampsacon (364) (see ARIANISM). It was this indifference to the dogmatic issues at stake that was the cause of his quarrel with Basil. Perhaps the main reason was not the man to spare an opponent, and Eustathius had suffered in the estimation of ecclesiastical historians by the account which is given of him by his former friend, after the rupture. We last hear of Eustathius, then an old man, in Basil's Ep. 269, written A.D. 377, and we may suppose that his death took place shortly after this date.

JAMES O. HANWAY.

EUTANASIA.—Euthanasia may be defined as the doctrine of the life-saving, in certain circumstances, when, owing to disease, senility, or the like, a person's life has permanently ceased to be either agreeable or useful, the sufferer should be painlessly killed, either by himself or by another.

The discussion of the subject, especially from the standpoint of Applied Ethics, is exceedingly difficult for several reasons. In the first place, it may easily be misconstrued as a mere recommendation of suicide or of the wholesale murder of aged or infirm people. Secondly, the effect of such a doctrine on weak or unbalanced minds, incapable of weighing aright the conditions which may be held to render death more desirable than life, is very apt to be pernicious. Thirdly—and this is the greatest difficulty of all—the question must be considered whether there are any grave and important obstacles in the way of any practical application in a modern civilized community. In order to make euthanasia in any sense a legal proceeding, one would be obliged to encumber, not merely prejudices or even time-honoured religious beliefs, but the healthy and moral feeling that human life is too sacred and valuable to be taken except under a few very definite conditions.

In other words, euthanasia would constitute a new form of justifiable homicide, and, unless most strictly regulated, would lead to an appalling increase in sordid forms of crime already far too common. It would be particularly objectionable in the case of an infant afflicted with an incurable hereditary disease, or with idiocy, might be put to death, a new excuse for infanticide—terribly prevalent, as is well known, in the case of illegitimate children—would at once come into existence. The most part a mere act of insensateness, rashness, or cowardice—would be likely to become more common than it now is if, for instance, persons suffering from a disease known or supposed to be incurable were rather encouraged to take their life than discouraged from such a procedure.

On the other hand, we can hardly refuse to recognize that an application of the doctrine of euthanasia could provide a solution to many grave problems which the modern State is obliged to face. Take a single example, already incidentally mentioned. In all communities a great number of children are born seriously defective in body, or mind, or both. Although a certain proportion of these can be cured by proper medical attention, many cannot, by all the resources of modern surgery and medicine, be made normal; and this applies especially to those who are more or less completely idiotic. Many of these unfortunate are not so obviously abnormal as to make their condition plain to a casual observer, and, especially among the poorer classes, they are frequently treated almost as fully rational beings and allowed to mingle with the community at large and even to propagate their kind. The only substitute for euthanasia is segregation; but the argument for which was put forward some years ago by an eminent worker in that field, M. W. Barr, of the Pennsylvania School for Feeble-minded Children. This writer draws attention to the excellent results produced, within his own experience, in a large number of cases, by industrial training in properly-conducted institutions. His claim is that the feeble-minded can be made actually useful, as many of them, we consider that the physical skill, and that their lives are far from unhappy under such conditions. But he freely admits that it is only by careful segregation and training that such results can be accomplished; and this obviously involves heavy expense of all sorts, including the diverting of the abilities and energies of a number of physicians, etc., from other fields of activity. Whether, even in the most favourable cases, the result would be justified by the labour and this leaves out of account many individuals whose mental disabilities afford little or no hope of any considerable improvement. A carefully controlled system of euthanasia, on the contrary, would eliminate the more hopeless, but in the very necessity of control lies the
great, if not the fatal, difficulty. Supposing all objection removed to the taking of life otherwise than in battle, self-defence, or capital punishment, there would still remain the fact that, as a valuable asset, and the question as to where, in any conceivable community, an authority could be found competent to decide whether a given individual was to live or not, and to carry out the decision in practice. Apart from all purely moral considerations, if we treat the matter as one of mere calculation, it is obviously most difficult, if not impossible, to judge whether a helpless, known to possess considerable intellectual powers, or is not more of a burden to the community by reason of the constant attendance he will require than of benefit to it because of his possibilities of brain-work. And, even were this difficulty overcome, we should still have to deal with the vexed question of the limits of the State's functions; for by no means all thinkers, even of those farthest from extreme Individualism, are disposed to allow to any State such wide authority in matters of life and death. Thus Sidney Ball, a writer of rather decided Socialist tendencies, holds that 'the real danger of Collectivism is ... that it would be easier, or at least as easy, as Plato his old direction of "social surgery."' When to these theoretical difficulties are added the certainty of most emphatic opposition from all religious bodies, the problem remains too little to be reckoned with of the more squeamish kind of humanitarianism, and the great likelihood, already referred to, of abuse in practice, it is obvious that any extended application of this doctrine is, at present at least, out of the question. This goes a long way to account for the extreme paucity of literature on the subject in recent times. So far as the present writer is aware, no important work by any modern author deals at any length with the topic. And, as a matter of historical fact, euthanasia has never been put into practice. We intend in the remainder of this article to give a brief account of certain approximations to it which have existed or still exist, and of the views of those writers—mainly ancient—who have upheld some form of it.

1. Non-civilized communities. — One of the most noteworthy features of savage and barbarian, as opposed to civilized, society is the relative unimportance of the individual as compared with the community. This is seen, for example, in the frequency of various forms of human sacrifice, which appears to have been so generally accepted and quite calmly by the victim himself; in the absolute obedience of most, if not all, savages to the elaborate and often irksome tabus affecting marriage, the obtaining, preparation, and consumption of food, and other essential acts of life; and, most clearly of all, in the practice of a sort of crude euthanasia. This is generally the result of economic forces. When the available food-supply is limited, the numbers of the community must also be kept within bounds; and, if the population becomes too large, the least necessary members are simply got rid of. These are generally young children or very old people (cf. art. ABANDONMENT AND EXPOSURE, vol. i. p. 3). Perhaps the most striking example of this primitive application of economic laws, regardless of individual feelings, comes from the South Seas, where infanticide—usually a matter for the individual or the family—was actually enforced by law under the native chiefs.

'The Polynesians,' says R. L. Stevenson, 'a competent and sympathetic observer though not a professed anthropologist, met this emergent danger (of famine) with various expedients of activity and prevention ... Over all the island world, abortion and infanticide are to speak of a valuable asset, and the question as to where, in any conceivable community, an authority could be found competent to decide whether a given individual was to live or not, and to carry out the decision in practice. Apart from all purely moral considerations, if we treat the matter as one of mere calculation, it is obviously most difficult, if not impossible, to judge whether a helpless, known to possess considerable intellectual powers, or is not more of a burden to the community by reason of the constant attendance he will require than of benefit to it because of his possibilities of brain-work. And, even were this difficulty overcome, we should still have to deal with the vexed question of the limits of the State's functions; for by no means all thinkers, even of those farthest from extreme Individualism, are disposed to allow to any State such wide authority in matters of life and death. Thus Sidney Ball, a writer of rather decided Socialist tendencies, holds that 'the real danger of Collectivism is ... that it would be easier, or at least as easy, as Plato his old direction of "social surgery."' When to these theoretical difficulties are added the certainty of most emphatic opposition from all religious bodies, the problem remains too little to be reckoned with of the more squeamish kind of humanitarianism, and the great likelihood, already referred to, of abuse in practice, it is obvious that any extended application of this doctrine is, at present at least, out of the question. This goes a long way to account for the extreme paucity of literature on the subject in recent times. So far as the present writer is aware, no important work by any modern author deals at any length with the topic. And, as a matter of historical fact, euthanasia has never been put into practice. We intend in the remainder of this article to give a brief account of certain approximations to it which have existed or still exist, and of the views of those writers—mainly ancient—who have upheld some form of it.

EUTHANASIA

2. Greece. — Passing now to ancient civilization, we have to note in the case of the Greeks a twofold exemplification of principles which may be roughly identified with euthanasia: first, in the practice of certain States; second, in the precepts, often actually followed, of a not a few philosophers. On cornt stoels, where the horror of shedding the blood of a member of the tribe goes far to explain the seeming inhumanity of leaving a helpless person to starve, rather than killing him quickly.

'Such 'social surgery' we may call the public application of euthanasia. With regard to its private application, it should be noted that suicide is rare among civilized people. Some races, as the Andamanese and Central Australians, seem never to have heard of it; others believe it will be punished in the next world (Dakotas, Kayans), or treat it as an offence against the chief or king (Dalhomme); while others regard it as an indifferent, or at most a foolish, action (Accad). There is always something of the nature of responsibility, even as conducive to future happiness (Estokins of Dav's Strait). Some cases may be classed as genuine euthanasia. Thus, among the Karens of Burma, 'if a man has some incurable or painful disease, he says in a matter-of-fact way that he will hang himself, and he does as he says.' But, on the whole, the natural love of life is strong in savages, although, as we have seen, the vague sense of the importance of the community may at times overpower it.

1 'Moral Aspects of Socialism,' JIE vi. 313. For Plato's views, see below, p. 606.
2 The two we have used the word 'euthanasia' to mean simply 'dying well,' i.e. in such a manner as to conduct to happiness hereafter. This, of course, nothing to do with the present sense. See, e.g., among the Wa-Orians of Brit. E. Africa, 'women will sometimes, after deserting their husbands, kill their children

3 See, further, Post, Grundzüge der etikologie. Jurisprudenz, Oldenburg, 1894-95, l. 174, l. 11, 43.

5 Westermarck, MI II 331. Many other examples are given in the same chapter.
EUTHANASIA

to death. There is, however, a curious story 1 that, in Kos, 'very old men come together garlanded as if to a banquet, and drink hemlock (Barson) (the famous narcotic poison) • Contum maculatum), when they realize that they are incapable of doing anything useful to their family or fatherland.'

Passing over this case of voluntary euthanasia, which may or may not be genuine —for Ariadne clearly thinks more of edification than of historical verity, and such a beautiful story is—perhaps, we must next consider that State which, more than any other, claimed and exercised absolute power over the lives of its citizens—Sparta. Plutarch 2 gives us the following information:

The authority to rear his child, when born, but brought it to a place called the Leech; here the elders of his tribe sat and examined the infant. If it were well-made and strong, they made him rear it, and appurtenances to it one to the 900 allotments of land; but, if it was feeble and ill-shaped, they sent it to the so-called Place of Casting-out (Koepke) —a chain near Mt. Titytos,—considering that for a child ill-suited from birth for health and vigour to live was disadvantageous alike for itself and for the State.

By this rigid elimination of weaklings, combined with a rough kind of enege, 3 Sparta endeavoured, and for several generations successfully, to maintain a high standard of physical efficiency. Other States, however, scientificly, generally speaking, the parents of a child could choose whether or not they would rear it; if for any reason it was not thought desirable to let it live, it was simply exposed, with certain provisions, one guilder, to keep its ghost from being troublesome. Examples of this are wearisomely frequent in New Comedy, and are often found in earlier drama. 4 But this is not euthanasia; it is a mere shirking of parental responsibility. Also, it did not necessarily result in the death of the infant, which might be found still alive, and in such a case became, it would seem, the absolute property of the finder. 5

The same is not to be the case of an accident in accordance with popular feeling when he mentions as justifiable causes intolerable pain or disgrace. We hear very little of it among the Greeks, from Homer down to the end of the Hellenistic Age. In a sense, what doubtful passage of the Odyssey (xli. 271 ff.), Epikaste (= Jocastra) hangs herself on learning of her unconscious incest; but the suicide of Ajax seems to belong to the non-Homerico tradition. One curious instance, which reminds us of Hindu sati, is the self-slaughter of Euandre on the pyre of her husband Kapanæus,; 6 while, among historical examples, we may cite the suicide of Pantites, one of the two Spartiates who survived Thermopylae, as a mark of dishonour; and of Themistocles, to avoid fighting against his fellow-countrymen. 9 But in Athens at least, although the regular form of capital punishment was enforced suicide, self-destruction in general was looked upon with disfavour, perhaps from fear of the dead man's ghost; at any rate, the right hand of the corpse was severed before burial, 10 with which custom we may compare the mutilation (μακροχερωύς) of a murdered man by his slayers. 11

(2) The philosophers, and especially the later schools (Stoic, Epicurean, etc.), were interested chiefly in the question of suicide; of euthanasia in their little. Plato, however, whose State is to a great extent an idealized form of the constitution of Sparta, is in favour of a some-

what ruthless application of the principles under discussion to weak children and also to invalids. 12 The children of inferior parents, and any malformed offspring of the others, they require to be, for the (euthanasia) purpose of cutting off. 13 But the subject is also naturally more of interest to a writer on the well-being. Not dissimilar views were held by Aristotle, 4 in whose ideal State maimed children are not to be reared, and abortion may occasionally be practised. Later, however, the popular prevalence of extended protestations against the custom from Munsonius 5 (1st cent. A.D.). With regard to other applications of euthanasia, Plato considers that invalids ought not to be kept alive by an elaborate regimen, but allowed to die, as they are quite unable to attain to the higher developments of either mind or body. 6 Cf. art. Suicide.

3. Rome.—With regard to the Romans, there is almost nothing to add. Their philosophy was borrowed entirely from Greece and was for the most part either Stoic or Epicurean. The former school inspired most of the famous suicides, such as Cato of Utica; hence Shakespeare's reference is, for us: 'Shall we be mere shadows to the world?... But that the rather I will so live, that when I shall die, men will say, This was a man.' Self-immolation and abortion are also mentioned occasionally late date. Neglecting myths, mostly of palatable Greek origin, one hears of the former as early as the comedies of Plautus and Terence in these are Greek; and it is under the Empire chiefly that we hear of wholesale avoidance of maternal responsibility. The potestas of the father, however, was supreme, and with his formal recognition of a child it was not reared.

5. Judaism.—It is to the credit of the Jews that we hear nothing of such practices among them, owing partly to their strong desire for offspring,—causing them to rear even a child blind or otherwise helpless from birth,—partly to their regard for human life, and partly to the fact that the patria potestas did not, at least in the times of the later kings, extend to life and death. 7 Suicide, though not formally prohibited, 8 seems to have been rare; (2) an offence against the community; (3) a usurpation of God's power to kill and make alive—arguments of which the second is Aristotelian, 9 and the first derived, it would appear, ultimately from Plato (Laws, loc. cit.). 10 Other forms of euthanasia are equally opposed to orthodox Christianity, at least as heretofore stated, owing to its enormous emphasis on the value of the individual. It is

EVANGELICAL ALLIANCE

perhaps from this source that Islam borrows its prohibition of suicide.

The misconception of modern civilized States is for the part in accordance with this doctrine, even where not actually dictated by it. Thus, the medical profession traditionally keeps a patient alive as long as possible, although an exception has sometimes been made in cases of hydrophobia, where, as readers of George Macdonald will remember, smothering used formerly to be resorted to. 1 The law of murder, again, does not take any account of the physical condition of the victim; and suicide is a legal felony. Theological writers are less uncompromising. Thus Sir Thomas More represents suicide as occasionally practised in Utopia — indeed he may be regarded as an enthusiast.

But if the disease be not only incurable, but also full of continual pain and anguish; then the priests and the magistrates exhort the man, saying he is not able to do any good as a soldier of the laws. and to him to do any injury to others, and to himself, for if he determine with himself no longer to cherish that pestilential [sic] malady, he determined with himself no longer to cherish that pestilential [sic] malady.

Among the morbidities of the inferior type of pessimist we may note a tendency to glorify voluntary death, as in the well-known lines of Thomson (City of Dreadful Night, xiv.)

This little life is all we must endure; The grave's most holy peace is ever sure; and the following lines. But that greatest member of that school, Schopenhauer, regards it as defeating its own ends, 4 since it is not a denial but an assertion of the will to live, the great obstacle to moral freedom. Home's famous Essay was directed against the growing objection to it, and declared it to be no dereliction of duty, human or Divine. Despite the classical argument of Kant, 5 most writers on Ethics would probably agree in substance with Pascal 6 that to refrain from it in great bodily or mental anguish may be heroic, but is no definite duty; 'Heidemant ist nicht Pflicht, But, as has been already remarked, euthanasia in general has received little if any discussion. See, further, art. SUICIDE.

H. J. ROSE.

EUTYCHIANISM.—See Monophyism.

EVANGELICAL ALLIANCE.—This is an association of Evangelical Christians of different countries and speaking different tongues, united for the swiftness and promotion of Christian union and the advancement of religious liberty. It owed its origin to a wide-spread and growing desire in Protestant Christendom for closer fellowship among true believers holding to the same essentials of faith, and desirous of bearing faithful witnesses to their obedience to the Lord's prayer, 'that they all may be one; as thou, Father, art in me, and I in thee' (Jn 17:21). The union of Christians of different denominations in the formation of some of the great Foreign Mission Societies and the American Board of Commissioners

W. Tytler, pt. II. vii. 'Of Wooden, nese persons, etc. (p. 127, Cambridge ed.)

Kant regards self-preservation as 'the first, if not the highest, of the moral virtues' (in the sense of suicide; 'The destruction of the moral subject in oneself is tantamount to a driving out of the world, as far as can be in ones, of Morality itself') He adds that it involves the expelling of man in general (Assen non-sans) as represented in one's own person.

Euth, II. 103 ff.
3. Modes of operation.—The Alliance has sought to accomplish its work mainly in three ways: through the Week of Prayer, General Conferences, and efforts to put a stop to religious persecution.

(a) Annual Week of Prayer.—This institution was first proposed at a meeting of the Alliance at New York, 1846, in the resolution urging the friends of the Alliance throughout the world to observe the first week of January as a season for concert in prayer on behalf of the objects contemplated by the Alliance. The Alliance then outlined its programmes in answer to an appeal from English and American missionaries in India. The British branch issues this year (1912) its 65th programme of topics. These topics have included Union with Christ, thanking for various benefits, and Prayer for Home, City, and Foreign Missions, for nations and their Rulers, for the Y.M.C.A. and Schools, for the Family, the Observance of the Lord's Day, and other subjects. The Week of Prayer, observed in cities and hamlets in all parts of the Christian world and in missionary territory, has, without a question, exercised a profound influence in promoting the spread of the Gospel and cordial co-operation among ministers and laymen of the different Protestant communions.

(b) Conferences.—National or Local Conferences have been held by the British branch and biennially by the American branch, 1875–1893 (with several intermissions). The international or General Conferences, ten in number, have been held in London, 1831; Paris, 1833; Berlin, 1837; Geneva, 1847; Amsterdam, 1867; New York, 1873; Basel, 1879; Copenhagen, 1884; Florence, 1891; London, 1896. The meetings have been called by agreement of the branches, and the arrangement and the carrying out of the programme have been left to the branch within whose bounds the Conference met. The topics discussed have included reports of the religious condition of the nations; the conflict of Christianity with infidelity, Romanism, and superstition; the practical and humanitarian enterprises of the Church; Christian education and revivals. The London Conference in 1831 probably included representatives of more Protestant denominations than had ever sat together since the Reformation. The Conference in New York was the most largely attended and widely influential religious gathering held up to that time in the Western World. This result was largely due to the efforts of Dr. Philip Schaff, who made four journeys to Europe to present invitations to attend the meeting and to arouse interest in it. The Alliance has received the recognition of crowned heads and of the President of the United States. Frederick William iv. of Prussia authorized the invitation to meet in Berlin, was present at one of the sessions, and accorded a reception to the members at his palace. The King and Queen of Denmark, the Crown Prince and Princess, and the King and Queen of Greece attended some of the meetings of the Copenhagen Conference. The President of the United States, Mr. Grant, and the Vice-President, Mr. Colfax, signed the signatures, endorsed the objects of the Alliance and the invitation to the meeting in New York; and President Grant, surrounded by the members of his Cabinet, gave the delegates to the New York Conference a reception at the White House. The then king of Italy sent a cordial letter of greeting to the Conference in Florence.

(c) Opposition to persecution.—In its earliest period an eloquent appeal was made by Merle Aubigné in behalf of the General Confederation of Russia, and at the same time an appeal was made for the oppressed Armenians. Early cases of successful intervention were the release, through an appeal to the Grand Duke, of the Medial family of Thesarny (1822), from imprisonment and holding religious meetings; and the release (in 1863) of Matamors, Carrasco, and their friends in Spain, who were thrown into prison and condemned to the galleys on the reign of Isabella. The Alliance interceded for the Methodists and Baptists in Sweden (1838), and through a delegation (in 1871) to the Czar, then supporning at Friedrichshafen on the Lake of Constance, for the persecution of Lutherans, and with relief, relief for the Russian and Finnish Allies of the Baltic Provinces. Again in 1874 it sought the Czar's good offices for the Baptists of Southern Russia, and in 1879 it sent a deputation to the Emperor of China to make known their sympathy in Bohemia, and the request was granted. It helped to secure from the Sultan (1856) rights for the missionaries in Turkey, and has made efforts to secure relief for the Nestorians in Persia, the Stundists in Russia, and other persecuted Christians.

The influence of the Alliance can be traced in the formation of the Pan-Presbyterian Alliance, the Pan-Anglican Synod, and the Pan-Methodist Conference, and in the Federation of the Churches of Christ in the United States, which held its first meeting in New York in November 1902, representing 18,000,000 communicants belonging to 35 denominations, as well as of Baptists and other bodies. It is the purpose of the next section to give a brief account of the proceedings of the Federation of the Churches of Christ in the United States, which was formed at New York in 1905, and the constitution and structure of this federation.

LITERATURE.—Conference on Christian Union. Narrative of Proceedings of the Meetings held at Liverpool, Oct. 5th, 1857; London, 1847; Annual Reports of the British Branch, London, 1846 ff., and of the American Branch, New York, 1857 ff. The Proceedings of the General Conferences have been issued in the tongues spoken at the places of meeting, and for the most part in English reproduction, viz. those of London, Paris, Berlin, Amsterdam, New York (ed. of P. Schaff and S. Irenaeus Prine), Basel (Ger., ed. by J. H. Riggenbach; Eng., ed. by J. Murray Mitchell), Copenhagen (only in Danish, ed. by Yahl, 1880), Florence (Eng. ed. by R. A. Bedford), London (the Jubilee vol., ed. by J. A. Arnold). Brief but notable satisfactory histories of the Alliance may be found in the Alliances of the World, 1857, by James Davis, secretary of the British branch, and in the Jubilee Proceedings of the Alliances, ed. by Rev. H. G. Carrasco, The Life of Philip Schaff, New York, 1897, pp. 252–274, 323 ff., 520 ff. Special documents have been issued from the offices of the British and American branches. The more notable of the latter are The Narrative of the State of Rel. in the U.S., by Henry B. Smith, presented at the Amsterdam Conference in 1875; The Proceedings on the Alliance Deputation to the Czar of Russia, 1871, and The Reception of Christians in Persia, 1870. The latter was a result of a work, which was presented to the council of the Alliance held in conjunction with the Columbian World's Exposition in Chicago, 1893. The 'Alliance, Evangelische' in PRS I p. 376, by E. C. Achelis, pronounces an unfavourable judgment on the Alliance as having departed from its original aims, and carrying on a hostile separatist propaganda. It declares that the Alliance reached the height of its history at the Berlin Conference in 1857, and that, as a religious organization, it has no longer any significance in Germany. This is not the place to enter upon a consideration of the conditions which call forth a judgment so partial and unjust. The British branch issued a monthly, under the title Evangelical Christendom, 1847–1899, The Evangelical Alliance Quarterly, 1850–1898, and annually, Evangelical Christendom, 1900 ff.

DAVID S. SCHACHT.

EVANGELICALISM.—The name given, in English-speaking lands, to a movement of revival which has borne other names in other parts of Christendom. This movement is usually traced to Holland, where it began under the name of Federalism, being so named from its foremost representative, Cocceius († 1669), professor at Leyden, whose theology was called 'Federal' on account of the prominence given in it to the conception of religious union (see GENEVAN THEOLOGY). The next phase was Pietism (q.v.), the principal representatives of which were Spener († 1705), who operated chiefly by prayer-meetings,
known as collegia pietatis; A. H. Francke (1663-
1727), professor at Halle, where he founded the
orthodox Pietist school, still fond of the academic
centre; and J. A. Bengel (1687-1752), the Pietist
of South Germany, and author of the well-known
Gnomon, which may be taken as an index of the
devotion to Biblical studies characteristic of the
movement. Out of these Pietists, one at least, as
sociated with the name of Count Zinzendorf
(1700-1760), the passionate lover of Christ and
inaugurator of those foreign-mission efforts for the
extermination of which the name of Halle has so
distinguished a name (see MORAVIANS),
Methodism, the next phase, was evolved from
Moravianism as obviously as the latter was from
Pietism. In many respects it is the most remark-
able phase of all; and it would be a pleasure to
follow the course of its development, first in Great
Britain and then in America, where it has achieved
phenomenal success; with its great leaders, the two
Wesleys and Whitefield, and their many notable
successors; with its divisions and reunions; its
open-air preachings and camp-meetings; its class-
meetings and local preachers; its hymnody and its
doctrine; but all these topics will be dealt with in
art. METHODISM.

1. In the Church of England.—The Anglican
Church might have retained Methodism within
itself, for the original leaders were most unwilling
to give it an official character. But, at one
time, however, there arose within the State
Church a number of clergymen who imitated the
zeal and efficiency of the Methodists, and earned
the name of 'Evangelicals.'

Among these, in the latter part of the 18th cent.,
the most conspicuous figure was the Rev. John
Newton (1725-1807). After a wild youth, spent at
sea, he underwent as thorough a conversion as any
Methodist, and no Methodist could have had less
scruple in making his religious experiences public.
Though over forty before being settled in a parish
of his own, at Olney in Buckinghamshire, he im-
mediately unfolded an earnestness and force of
character which could not fail to make him a centre
of influence; and from the time when he was trans-
lated to the Church of St. Mary Woolnoth, in
Lombard Street, London, in 1778, he exercised
without the name of bishop, a more than episco-
pal sway over those within the State Church who were
coming under the influence of the revival. Before
leaving the country, he had won as a convert the
incalculable number of a community. Among these,
the Rev. Thomas Scott (1747-1821), who was shaken out
of Socinian views and out of the habits of a careless
life by hearing Newton preach. At first this ad-
herent fought against his convictions; but, Newton
wisely refraining from being drawn into contro-
versy with him, he at last shut himself up with his
Bible for three years, determined to discover what
was the religion taught in this oracle and to hold
to it alone. From these studies he emerged with
the conviction that the Evangelical system was the
only true gospel; and so convinced was he that a
 creed obtained as his had been must be the correct
one, that he wrote an account of his experiences
under the title of The Force of Truth (1779)—a
book which gained an enormous circulation, and
of which John Henry Newman said that he almost
owed to it his soul. If Scott was able to prove
the new tenets to be Scriptural, another adherent
of the school, Joseph Milner (1744-97), undertook
to prove, in his History of the Church of Christ,
that they were the doctrines of the Apostolic Age
of the Church, and of the theologians of the Church of
England. The Evan-

But the Evangelical doctrines had the good for-
tune to secure a means of propagation far more
more rare and effective, in those other years, than
the Bible, as an expositor or an ecclesiastical historian. While
living at Olney, Newton had for a neighbour the
poet Cowper (1731-1800); and to the gentle bard
this strong man of God became a hero and Great-
heart. The literary tastes of Cowper have persistent
represented Newton, indeed, as a tyrant, who drove
the poet distracted; but Cowper's insanity was in
the blood; he had been in confinement before Newton
ever saw him. But, if a friend would not come to
him, the poet could not finally rescue him from his fate,
he redeemed him from himself and furnished him with
employment, by which he was made, in the intervals of his
disease, a useful and a happy man. Besides enjoying his collaboration in the writing of
the Olney Hymns, Newton suggested other themes for his muse, which drew from him not a
few of his happiest efforts; and thus, for the
peculiar beliefs and sentiments of Evangelicalism,
there was a secured the benefit of musical and im-
perishable expression; for there is no more com-
plete or accurate representation of them than is to be found in Cowper's verse.

In prose, also, the new way of looking at Chris-
tianity was to receive brilliant expression from a
layman. This was at the hands of William Wil-
berforce (1759-1830), who, having been turned from
a life of frivolity;摇了: a fortunate
Isaac Milner, brother of the ecclesiastical historian,
carried his newborn enthusiasm into the business
of Parliament, of which he was a member, and into
the upper ranks of English society, of which he
was an acknowledged leader. To this society
his statement of the Evangelical position was ad-
dressed, as was shown by its full title, A Practical
View of the prevailing System of professed Chris-
tians in the higher and middle Classes of this
Country contrasted with real Christianity; and
the grace, the frankness, and the humour of its
style made it acceptable in circles into which reli-
gious literature seldom penetrated.

But Wilberforce rendered to Evangelicalism a
still more important service by leading its accumu-
1

lating numbers in a crusade against the Slave
Trade. In this he enjoyed the support of a large
portion of the community in which the new views had
made remarkable progress—the members of the
upper middle class, engaged in banking and similar
occupations. Of these there happened to be such
a number as to make them the dominant force in
the whole Evangelical party was sometimes styled 'the
Clapham Sect.' Taking this nickname and con-
verting it into a title of honour, the genial
historian of Evangelicalism, Sir James Stephen, has
under this caption, in his Essays in Ecclesiastical
Biography (London, 1907, vol. ii.), penned capti-
vating sketches of such men as Henry Thornton,
Granville Sharp, Lord Teignmouth, and Zachary
Macanlay, who not only stood by Wilberforce in
his prolonged and laborious campaign against
slavery, but were distinguished in many other
walks of philanthropy. For Evangelicalism had
reached and tapped the springs of active benefi-
cence. To whatever it may have been due—
whether to the Calvinistic doctrines, believed by
Evangelicals, or, as they might rather themselves
have said, to the work on their spirits of the Spirit
of God—the adherents of the new views not only
believed, but turned their beliefs into practice.
It was a maxim with them that every one to whom
the good news had come was bound, according to
his powers and station, to do good. Their first
actions, accordingly, were to propagate
the gospel both by personal testimony and by cor-
porate action. They visited the poor, they tended
the sick and dying, they instructed the ignorant,
they founded schools and colleges, they not only sought out candidates for the ministry, but bought and removed in order that parishes might be manned with clergymen of the right sentiments, the force operating behind these efforts being the solemn sense of their own responsibility as well as of the danger and the duty to those whose belief they were exerting themselves. The Church Missionary Society and the Religious Tract Society came into existence in 1779, the British and Foreign Bible Society in 1804. Far, however, from the extinguishment of the Evangelical party, these men, who were the sons, they were directed from the first to the body also; and soon philanthropies were devised for prisoners, for children and women working in mines, for the blind, the deaf and dumb, the paralytic, and, in short, for every form of human misery. Wilberforce was succeeded in the next generation by Lord Shaftesbury (1801-85), who, in Parliament, was the unfailing advocate of the poor and needy, and, after a life of unwearying philanthropy, exclaimed, on his deathbed, that he was sorry to quit a world in which so much misery still existed. Through his influence with Lord Lansdowne, the Prince of Wales secured for the Evangelicals a fair share of the influential offices in the Church. In one of the universities, Evangelicalism fought its way to power through the advocacy of the dean of Chester, Charles Simeon (1759-1836); and the first heads of the Evangelical divinity halls, founded at Cambridge and Oxford, both rose to be bishops. In the latter half of the 19th cent., the party profited by throwing itself into the revivals which passed over the entire kingdom, coming from American sources; and a centre for the quickening of the spiritual life was provided in conferences, held annually from 1878 at Keswick.

Though, for more than a hundred years, a large and influential party in the Anglican Church, Evangelicalism has never succeeded in permeating that communion completely. W. E. Gladstone, while crediting it with the high merit of pervading the Church as a whole with the preaching of Christ crucified, showed, in an article published in 1879 and republished in Gleanings of Past Years (1893-97), that it had manifested a singular incapacity for retaining its own more gifted children, these going off to the left or the right, when they reached maturity. The rise of the Broad Church party in the early half of the 19th cent., furnishes, in other persuasion, a parallel to the same process which Evangelicalism was not satisfying; and the same was still more manifestly by the phenomenal development of the High Church and Ritualistic party, which has not yet suffered any check, and has in recent decades eclipsed all rivals. Those who have themselves passed from Evangelicalism to Ritualism are wont to regard the one movement as a preparation for the other, which is, they say, its natural completion. But this is a sanguine view, in which Evangelicals will by no means concur; and a historian will be more likely to recognize in Ritualism a reincarnation of the Anglicanism of King Henry VIII of Elizabeth, while in Evangelicalism he sees a revival of the Puritanism which long struggled inside the Anglican communion, before it was driven forth into dissent. At the present time the strength of this party is estimated by G. R. Balleine at fully a fourth of the entire Church; and the proportion might be reckoned higher if the Anglican Church in the United States and the Colonies were included.

2. In English Nonconformity.—By the Dissenting communities of England it might be contended that, in its essence, Evangelicalism was among them not only before it appeared in the State Church, but even before it was seen in the form of Methodism. Long before the conversion of John Wesley might be manifested with clergymen with whose belief they were exerting themselves. The Church Missionary Society and the Religious Tract Society came into existence in 1779, the British and Foreign Bible Society in 1804. Far, however, from the extinguishment of the Evangelical party, these men, who were the sons, they were directed from the first to the body also; and soon philanthropies were devised for prisoners, for children and women working in mines, for the blind, the deaf and dumb, the paralytic, and, in short, for every form of human misery. Wilberforce was succeeded in the next generation by Lord Shaftesbury (1801-85), who, in Parliament, was the unfailing advocate of the poor and needy, and, after a life of unwearying philanthropy, exclaimed, on his deathbed, that he was sorry to quit a world in which so much misery still existed. Through his influence with Lord Lansdowne, the Prince of Wales secured for the Evangelicals a fair share of the influential offices in the Church. In one of the universities, Evangelicalism fought its way to power through the advocacy of the dean of Chester, Charles Simeon (1759-1836); and the first heads of the Evangelical divinity halls, founded at Cambridge and Oxford, both rose to be bishops. In the latter half of the 19th cent., the party profited by throwing itself into the revivals which passed over the entire kingdom, coming from American sources; and a centre for the quickening of the spiritual life was provided in conferences, held annually from 1878 at Keswick.

Though, for more than a hundred years, a large and influential party in the Anglican Church, Evangelicalism has never succeeded in permeating that communion completely. W. E. Gladstone, while crediting it with the high merit of pervading the Church as a whole with the preaching of Christ crucified, showed, in an article published in 1879 and republished in Gleanings of Past Years (1893-97), that it had manifested a singular incapacity for retaining its own more gifted children, these going off to the left or the right, when they reached maturity. The rise of the Broad Church party in the early half of the 19th cent., furnishes, in other persuasion, a parallel to the same process which Evangelicalism was not satisfying; and the same was still more manifestly by the phenomenal development of the High Church and Ritualistic party, which has not yet suffered any check, and has in recent decades eclipsed all rivals. Those who have themselves passed from Evangelicalism to Ritualism are wont to regard the one movement as a preparation for the other, which is, they say, its natural completion. But this is a sanguine view, in which Evangelicals will by no means concur; and a historian will be more likely to recognize in Ritualism a reincarnation of the Anglicanism of King Henry VIII of Elizabeth, while in Evangelicalism he sees a revival of the Puritanism which long struggled inside the Anglican communion, before it was driven forth into dissent. At the present time the strength of this party is estimated by G. R. Balleine at fully a fourth of the entire Church; and the proportion might be reckoned higher if the Anglican Church in the United States and the Colonies were included.

2. In English Nonconformity.—By the Dissenting communities of England it might be contended that, in its essence, Evangelicalism was among them not only before it appeared in the
the expectation of conversions; and, it is believed, he was not disappointed. Though he had not enjoyed the advantages of academic training, he was a man of a broad and liberal mind, and the subjects likely to help him in preaching, Greek included; and he founded a theological college, of which he was president, delivering lectures on patristics, which are esteemed among the best ever produced on the subject. His capacity for business and the warmth of his heart enabled him to carry on a large orphanage; and he maintained, besides, an extensive library of Evangelical literature, and especially his own sermons, which were published every week and sold in thousands. The tabernacle built for him, in South London, held 5000, and was always full, serving, indeed, for a whole generation as a rallying-point for Evangelicals from all corners of the globe. In it was upheld the banner of Evangelicalism, the doctrine of which were preached with clearness, fullness, and spiritual power. In later life, Spurgeon came to believe that the younger ministers of his denomination were forsaking these truths; and, in consequence, he alienated himself from the Broad Union. But the officials of that body denied his accusations, or at least refused to endorse them.

The other leader of Evangelical Nonconformity, R. H. Hutton (1781-1865), was more open to new light and more inclined to learn from others. He used to speak with earnest conviction of the need for a reconstruction of Protestant theology. At some points he was in sympathy with the Broad Church, especially with Mauroy. With him he believed in the creation of humanity in Christ; like him he held strongly by the sacredness of secular life; and, with him, he believed that the wicked would live for ever in torment. Yet he gloried in the peculiar doctrines of Evangelicalism, such as the death of Christ as the ground of divine forgiveness, justification by faith, and the supernatural work of the Holy Spirit in redemption; and equally did he value the Evangelical ethos, as he called it—its passion for Christ and for the souls of men.

3. In Scotland.—It was fortunate for Evangelicalism that it was mediated for Scotland through the big brain and big heart of Thomas Chalmers (1780-1847). In England it has sometimes exhibited a somewhat petticoat aspect. It is impossible, for example, to find of the developments at Cheltenham by which Frederick William Robertson was driven away from his early associations into the Broad Church without recognizing that Evangelicalism could be narrow and unlovely, deservedly bringing down on itself the nick-name of 'the hard church' given to it by R. H. Hutton. But Chalmers (q.v.) could not have been the founder of a hard Church. His humanity was broad; he had passed through an intellectual before experiencing a spiritual awakening; he had a distinctly philosophical mind, which delighted in tracing facts to their causes; and his position as an academic teacher could not but intensify this natural bent. Still he was profoundly practical. Among the documents of Evangelicalism there is not one more important than the address he sent to his parishioners at Kilmany when quitting that rural parish, in 1816, for the city of Glasgow. Reviewing the years he had spent among them, first as an opponent and then as an apostle of Evangelicalism, he fixed on this as the essential point: 'The object of all preaching is to realize the righteousness and holiness which his early preaching had utterly failed to produce. Afterwards he was always speculating on the reason for this, and he found it in 'the expulsive power of a new affection.' He did for theology, in his academic prelections, exactly what Schleiermacher was doing for it at the same time in Germany, though from a very different point of view. He believed that to be a true theologian is to be a man of the world, and that is to say, instead of beginning with the mysteries of revelation and coming down from these to human experience, he took his stand on experience and worked his way up to the mysteries without which such experience could not have been enjoyed. His dogmatic consisted of two parts—first, the disease; then, the remedy.

There had, indeed, been an Evangelical party in the Church of Scotland before, but its influence had not been felt upon the scene; and, outside of the State Church, the doctrines of the gospel had been preached to growing numbers by the ministers of the Secession and the Relief denominations; but it was by the mighty voice of Chalmers that the new views secured the attention of his countrymen as a whole. In the courts of the Church his influence grew space, till the 'Moderates,' on the opposite side, saw the preponderance vanishing. In their straits they sought and obtained the assistance of the civil courts, by which the reforming party was so limited and thwarted that, in 1845, it quitted the Church and formed itself outside as the Free Church of Scotland.

The virtue of the Evangelical principles by which the Free Church was inspired was made visible by its success (1843-1850). In 1845, two erected churches, manses, and schools all over the land for its own necessities, but threw itself into mission work of every kind, both at home and abroad. All the foreign missionaries had joined the outgoing movement; and not only were they provided for, but the Church was ready to rise to opportunities, as these presented themselves, to extend its operations. Similarly, the home mission problem was attacked with such vigour that even in Glasgow, where the growth of the city has been phenomenal, the increase of the means of grace has kept pace with that of the population; and at the present moment measures are being organized for meeting the wider needs disclosed by the recent developments of labour. For these missionary and philanthropic exertions the Church was strengthened by widespread revivals of religion in 1859-60, 1874, 1881, and 1890, with which the ministers and members associated themselves sympathetically.

This also enabled the Church, under the leadership of Principal Rainy (1836-1900), to meet and survive not a few科的 by example, to which the development of the Church was contributed by Professor Robertson Smith (1846-94). As this scholar recognized the Bible to be the word of God, the only rule of faith and duty, and appealed with full personal conviction to the text: *monimentum Spiritus Sancti internum*, his views met with a tolerant and patient hearing from his fellow-countrymen, and were, to a large extent, accepted without injury to Evangelical faith.

Meantime the two denominations mentioned above outside the State Church, after uniting in 1847 to form the United Presbyterian Church, had been pursuing a similar course, growing in the same convictions and being educated by similar providences. They outran the Free Church in the development of worship, by adopting earlier the use of hymns and the assistance of organs; and they were earlier in the adoption of a Declaration Act (1879; the Free Church Act was passed in 1894), by which the Confession of Faith was modified in the direction of a more cordial acknowledgment of the Scriptures. It is the view of the party that there is no gloomy view of human nature and its destiny. But this branch of the Church excelled particularly in enthusiasm for foreign missions; and, when it and the Free Church united in 1900, there was an
EVANGELICALISM

expansion within the united Church of this species of Evangelical sentiment.

At the Disruption of 1843 those who remained in connexion with the State were the so-called "Moderates," who had stood in opposition to the Evangelicals in the same way as, on the Continent of Europe, the Rationalists had faced the Pietists. But from the first there had been left in the State Church a considerable amount of Evangelical sentiment with this history of which it is now, being favoured by such spirits as Norman Macleod (1812-72) and Robert Flint (1838-1911); and a sign that it is strongly represented among the younger men of light and leading may be seen in the cordiality with which these are now seeking union with those from whom they were separated in 1843. There are few men of mark at the present day in any of the ecclesiastical bodies in Scotland who would be averse to being designated "Evangelicals."

4. In America.—An additional proof of the suggestion made above, that the true source of Pietism, as it is to be sought in English Puritanism rather than in the Continental movements to which it is usually traced, is supplied by the fact that in America it arose earlier than it did in England. The date of John Wesley's conversion is 1738, but as early as 1726 there occurred the first of those awakenings which took place at Northampton, in New England, through the preaching of Jonathan Edwards (1703-58), which spread astonishment and awe far and near, and was heard of even in England. In fact, it is known that John Wesley had himself read an account, penned by Edwards, of the experiences in America before anything of the kind had occurred under his preaching in London. While the German Pietism, from Moravianism, and from English Methodism entered into the religious life of the United States: yet in the revivals which have, from the time of Jonathan Edwards, formed an outstanding and frequently recurring feature of American Christianity, the impulse has always been a native one; and America has, in this particular, been in a position to give to Europe rather than to receive from it. Very remarkable awakenings were experienced in Kentucky and the neighbouring States from 1796 onwards; and in 1837 the whole country was pervaded by a similar movement. During this time and the earlier, from Ireland and Great Britain. Not infrequently have such movements had their origin in schools and colleges, and so marked has been their influence upon the young that some psychological observers in America are declaring conversion itself to be a manifestation of puberty. In the early revivals there were physical accompaniments, sometimes of a singular and alarming character; but these have tended to disappear with the progress of time. In the same way, at first, the experiences were looked upon as altogether divine; but, as they became commoner, it was recognized that human agency also had a part to play in the setting apart of time for prolonged religious exercises, and the mind could be interested in spiritual things, and, by the bringing together of large numbers for a common purpose, social influences could be generated. Certain persons, it was discerned, had the power of awakening parents or of bringing the hesitating to decision. It was found, in short, that revivals could, to a certain extent, be manufactured; and thus a new danger had to be guarded against; namely, mechanical excitement passing itself off as religion, or even of revivalism becoming a trade and falling into unworthy hands.

The Puritan religion of New England had originally a very particular character. The township and the congregation were identical, all the inhabitants being communicants. But, as population multiplied, it became apparent that there was a growing discrepancy between these two magnitudes; and Edwards became the proponent of the surprising view that only those should be admitted to the Lord's table who had undergone a religious change, of which evidence was supplied by a consistent life. Indeed, he became the victim of this contention; for so much antagonism was provoked by his severity that he was driven from his pastorate at Northampton and had to betake himself to a mission to Indians; though he did not continue under a cloud, being appointed in 1758 president of Princeton College (see art. EDWARDS). But the demand for a distinct personal experience, of which an account could be given, became more and more general, and the frequent occurrence of revivals, by which this was promoted, fostered a general dependence on this mode of acquiring religious experience, to the disparagement of the regular work of the ministry and the influence of the family. Against this a protest was raised by Horace Bushnell (1822-76), one of the most outstanding American thinkers, who, in 1846, in a little work entitled Christian Nurture, recalled attention, with marked success, to the slower and less exciting processes by which many are brought into the kingdom of God.

Still, in spite of drawbacks, the revivals were gifts of infinite value to the Church in America. One of them is said to have added to the Church more than a million members; and devout observers have noted that they seemed to be granted when the country stood on the verge of any particularly trying period, in which new tasks had to be faced or new hardships borne. It was by means of the enthusiasm and influences thus thrown out special grace that the Church in America rose to the efforts rendered necessary by the developments of the country's history and the course of Providence; and the Evangelicalism of the United States was not behind that of England or Scotland in the variety or extent of the forms of sin and misery with which it was able to cope. America has all the philanthropies of Europe; and in some spheres, such as the Sunday School and the Young Men's Christian Association, it has specially excelled. But the great task of the Christianity of the country has been the provision of ordinances for the everyday life of those who at this point would have been fatal. But the Church has nobly risen to the occasion, the Methodist and Baptist denominations distinguishing themselves by the zeal and heroism with which they have accompanied the pioneer and settler into the wilds of the West and the South, and helped to lay the foundations of Christian civilization. In spite of the phenomenal growth of the population, the provision of ordinances compares favourably with that of Europe.

Jonathan Edwards was a profound metaphysician and theologian as well as a revivalist; and in his works the seed was sown of that most original and philosophical activity which has accompanied the more practical efforts of American Christianity, not a few of those who succeeded him in developing the New England Theology, as it is called, either to his left or right, the development of metaphysical theologian and powerful evangelist. Edwards' speculations were all directed towards the practical end of reconstituting Calvinism on a wider basis than that which he described as the "muchness" of the doctrine in the writings he was the mouthpiece; and the abest of his successors moved in the same sphere. It must, however, be confessed that, in some of the speculations indulged in, any practical aim was difficult to discern; but at least the attempt to widen the truth to the best element in Edwards' theology—that dealt
with his great work, A Treatise concerning Religious Affections (1746).

5. On the Continent.—While these phases of the problem were disclosing themselves in the English-speaking countries—and for a complete view the Colonies of Australia, South Africa, and Canada would also require to be taken into account—other phases of what was substantially the same movement were manifesting themselves on the Continent of Europe. These were in part derived from Great Britain or America. Thus, a visit paid by one of the brothers Haldane, consisting in descent from a common mother. An ancient interpretation adopted by Wellhausen and some other modern scholars gives Hawwah the meaning ‘serpent,’ and finds in Genesis a trace of the primitive belief that earthly life originated in a serpent, as in some forms of the Babylonian cosmology, all things spring from Tiamat, the primeval dragon. Zimmermann (KAT, p. 438) suggests that the Eve narrative has been influenced by the Babylonian goddess Ishtar. Skinner (p. 85 f.) writes, with regard to the connexion between the name Hawwah and Semitic words for ‘serpent’:

1. Quite recently the philological equation has acquired fresh significance from the discovery of the name on a lead, Punic tabella ecosterea ... of which the first line reads: ‘... Lady HVIY, goddess Hawwah, in ...’ This was a Punic mythological personage a goddess of the under-world, and as such a serpent-deity, and identified with the biblical Hawwah. Hawwah would thus be a ‘depotentialised’ deity, whose prototype was a Phoenician goddess of the under-world, worshipped in the form of a serpent, and also as the ‘Mother of all living.’ Cf. also the OT niva. Probably the references to Eve in Gn 3 and 4 do not belong to the most ancient form of the creation story, but to a later stratum of J (so C. J. Ball, ‘Genesis, in SBOT). In the older story (Gn 2) the man names the first woman ‘ishshath (the ordinary Heb. word for woman,’ because she was taken from a man, ’ish; or, better, as the LXX and Sam., from her husband, ’ishah). But this derivation is not accepted by modern scholars, who derive ’ishshah from ’ash, ‘to be soft or delicate,’ and ’ash from ’ash, ‘to be strong,’ unless, indeed, ’ish is a primitive form, independent of any verbal root (cf. Oxf. Heb. Lex., pp. 35, 61).

P (Gn 16? 5?) states that mankind was created in two sexes, and tells us that each of the antediluvian patriarchs had daughters (P. 1), but says nothing about their wives. In J, however, P refers to the wives of Noah and of his three sons. The first woman mentioned by name in P (11?) is Sarai (Sarah), as she had already been given to Abram as his wife, Adah and Zillah, and his daughter Naamah (41? 2). A characteristic feature of the Eve narrative is the sentence (4) referring to the birth of Cain, ἐγερθεὶς αὐτοῦ—Unfortunately these words are very obscure, and the text may be corrupt. The RV tr. is ‘I have gotten a man with the help of the Lord’ (similarly LXX, Vulg., Symm.). Another tr. is ‘I have gotten a man, even Jehovah’ (Gr. tr. in Hexapla; Lather), understood as expressing Eve’s belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of express Eves’ belief that the Messiah supposed to be promised in Gn 3:16 had now been born—a mere exaggeration of expres...
EVIL EYE

serpent is used as an illustration of the possible seducing of the Church, the bride of Christ, from her Divine Spouse, probably by the devil. On 1 Cor. 5:1-13, of a passage of the narratives of Jewish, Christian, and Muhammadan legends, see ADAM.

The Book of Adam and Eve,' also called 'The Conflict of Adam and Eve,' an extant in an Ethiopian version (Eng. tr., S. C. Malan, London, 1882), was written in Arabic or Syriac by an orthodox Christian of the 5th or 6th cent. A.D. Starting after the Fall, it expands the narrative of Adam and Eve in a less ahratic to the account of the patriarchs down to Abraham, and summarizes the history down to the Advent.

EVIL.—See GOOD AND EVIL.

EVIL EYE.—I. The supposed influence.—'Evil eye' is the common English term for an influence the belief in which may justly be described as both primitive and universal, and which is in many countries as current to-day as it was in prehistoric times. Its equivalent may be said to exist in every written language, living or dead: Gr. θέρατος, Lat. fascinum, hence modern English, French, Spanish, Portuguese—fascinacion; German—böscher Blick; Neapolitan—jettatura, murriana, and fascino. Fascino applies to the act as well as to the effect, and consequently, by development, to one of the best known protective against it. An idea so widespread cannot but have its more common descriptive and colloquial alternatives, such as malocchio in Italian, Spanish, and Portuguese, marronis in French. By Shakespeare and in English dialects the act implied is forcibly expressed by the verb 'over-look'—'over-looking' used in a well-understood sense, wholly distinct from the literal form meaning 'surveillance' (see OED). The word 'evil' is still a household word among English pensanians, though, except in theology, becoming obsolete in literature (HDB, s.v. 'Evil'). Many diseases of man and beast are called, e.g., 'king's evil,' 'breast evil,' 'udder evil,' 'quarter evil,' and others. In some dialects the word is habitually contracted into 'ill,' and this household word for sickness keeps alive one of its original meanings, viz. sickness or misfortune caused by a worldly evil eye (Essay ix. 'Of Envy') says there is a belief in a power of working evil which is ejaculated upon any object it beholds, that has existed in all times and in all countries. Notwithstanding modern science and education, this belief is as strong as ever it was, and, if this were the case, endless authentic stories might be adduced to prove it.

The root conception of the very earliest ages, and still everywhere held by superstitious people, is that certain individuals have the power, by some considered demoniac, whether voluntary or not, of casting a spell or producing some malignant effect upon every object, animate or inanimate, upon which their eye may be exercised, with the consequence of exercising upon the victims of their displeasure. There does not appear, however, at present, or, so far as is regarded, in the past, to be any sort of belief in the power of the eye to produce any good or desirable influence upon the person or thing upon which it may rest, except that doubtful one known as 'love. From the earliest times the eye per se had been supposed to work only a wholly maleficient effect. In Ps. 33:19, 'Of the eye is the whole body, and to understand to be the product of a distinctly voluntary and beneficent power, the word 'eye' in these cases being used to denote a personal surveillance. On the 'lifting up the eyes' (Ps. 25:5, Dan. 4:15, Eccles. Bibel, 1905, p. 353) says this is the opposite of the evil eye, the same in meaning as 'make His face to shine upon.' Its supposed manifestations have undergone a process of change in the expression of more or less descriptive definitions; and these in their turn have further branched out and acquired conventional meanings, which at first sight seem to have no connexion with the original idea of the 'evil eye.' Summing for example, is our Eng. word 'envy,' meaning malig-nant or hostile feeling that may be said to arise from natural jealousy—as in 1 Sam. 16, where Saul 'eyed David.' It is obvious how close is the connexion here between the definition and the fact denoted. The classic invideo describes most accurately what we mean to-day by 'over-look'—'to gaze with evil intent' (see French, Syn. of NT, 1865, pp. 83-106). The Lat. invideo denotes the feelings connected with 'envy,' but is to-day an alternative word for the modern Italian malocchio.

The Hebrew word (епg) expressing 'envy' signifies also evil eye, that is, the natural selfishness, the inbred tendency of humanity, the covetous irritation of unattainable desire. In Scripture, envy and the evil eye are synonymous. One of the characteristics of envy is 'to desire the attainment of . . . equality or superiority by the particular means of others being brought down to our own level, or below it' (Butler's Sermon on 'Human Nature,' 1-12, note). So rooted was the belief in this fell influence of the malignant look that in the earliest times every human mischance, all sickness, and whatever was undesirable in the world, was looked upon as the certain result of the fatal glance of some person or animal, not necessarily inimical by intention, as will appear later. This conviction remains to the present day among many people, even in England, as strong as ever, while in more backward countries and among so-called savages it is universal and undoubted. In Italy and Southern Europe generally the belief is more prevalent than in more northern countries, and consequently more in evidence. In the last moment, in many parts of England, there are always one or more persons who believe themselves, and are commonly believed to be, slowly dying from being 'over-looked.' This is particularly true of the Welsh, and, as F. C. Ryle says (Life and Letters of F. R. Hawker, London, 1905, p. 490), the evidence to be adduced to later, found upon the earliest settlers of Babylonia, the cradle of civilization, as well as upon those of Egypt, proves conclusively the importance of the belief, and not only that the dread influence was all-powerful, but that, and to have a malevolent, and to guard their bodies against it. Pith, the father of the gods, brought forth all the other gods from
his eye, and men from his mouth—a practical rendering of the ancient belief that, of all bodily emanations, those from the eye were most potent. The passages in Scripture referring to the evil eye, such as Deut. 23, Lk 11, Ps 29, etc., prove how prevalent the belief was in the ancient East. Among Jews, Muhammadans, Hindus, and all Orientals at the present day it is as firm as ever (see Westermarck, ‘The Origin of Marriage,’ pp. 277, 278, 282). The so-called ‘ornaments’ of Jg 8, (AVm ‘like the moon’) were none other than the protective charms, some crescent-shaped brasses, some blue glass beads or disks, such as may be seen to-day upon the camels’ necks. Young animals of all kinds are now, as ever, thought to be specially liable to injury. Virgil’s shepherd (Ec. iii. 108) says, ‘Nescio quis teneros oculos mihi fascinat agnos,’ Plutarch (Symp. v. 7) says that certain men’s eyes are destructive to infants and young animals. Cows and horses everywhere are to-day subject to the malignant eye, as, indeed, are all kinds of domesticated animals. In the time of Elizabeth, eye-biting witches were executed in Ireland for causing diseases among cattle. One effect of the evil eye on cows to-day is to cause them to lose their milk; this is believed to be due to an antidote for the eye. Even the mention of the word fascino or jettatura is enough to cause some to decamp (for a curious instance of this, see Elworthy, The Evil Eye, 17).

The antiquity of the belief in the power of the evil eye, as well as its constant persistence, is proved by abundant evidence. In the times of ancient Greece, and in all the subsequent ages, the earliest, the latest, the most familiar, the most constantly portrayed in need of all the possessed are the Medusa, whose fatal glance turned to stone all who beheld her awful face. She was at first depicted in a more or less conventional manner, with staring eyes, wide, grimacing mouth, showing wolf-like fangs, and a protruded tongue split down the centre. This was the typical archaic form, and to her fearful ugliness was attributed her baneful influence. The story once started evidently developed rapidly, for at a very early period a parallel version seems to have taken root, and henceforward until comparatively recent times the two stories were distinct. First story: She lost her extreme hideousness, and by degrees, easily traced in ancient art, it became at last in Roman days just as lovely as it had been frightful, while the story was more or less descriptive. So much she was said to have been beautiful at first, and then to have been punished by being changed into a hideousness so terrible that whoever looked upon her was turned to stone (see ‘Solution of the Gorgon Myth’ in Folklore, xiv. (1903) 212 ff.). The belief that her baneful influence arose from her fearful hideousness continued to hold its full force, while, at the same time, the story had developed in the opposite direction to such an extent that her power of fascinating, bewitching, or entrancing was held to be the result of her matchless beauty; yet with all this development the belief has ever remained that the spell was on the eyes alone. Thus we see the process by which these terms applied to women in our day derive their meaning. Many Greco-Roman and Etruscan Medusæ are beautiful, but have a sort of horrid-struck, exquisite expression (see Elworthy, Horns of Honour, 61 ff.).

Many theorems have been put forward respecting the Medusa and the legend of Perseus—all more or less mythical and speculative. The other famous exploit of Perseus, the rescue of Andromeda, is doubtless still more mythical; by some it is said to be the classic form of the fight between the sun-god of Babylon and the dragon (cf. Jb 9, 13). Horses slaying the dragon is several forms on Egyptian paintings is but another version; the myth also appears in the fight between Michael and the dragon, and again is perpetuated by St. George on modern coinage. The representations of Perseus and St. George in art are almost identical, except that the former rides the winged Pegasus, while in some instances St. George rides the dragon. It is the ancient armour. The panic-stricken lady on the rock, instead of being in the classic nudity of the figure where Perseus is the hero, is dressed in the hoop and farthingale of the Renaissance, in sculptured marbiles at the Louvre and Paternoster Museums.

Domestic animals of all kinds have ever been specially suspected of being possessed of the Medusa. Some animals of all countries have been killed on account of the ‘ominous’ (Jb 8) (AVm ‘like the moon’) were none other than the protective charms, some crescent-shaped brasses, some blue glass beads or disks, such as may be seen to-day upon the camels’ necks. Young animals of all kinds are now, as ever, thought to be specially liable to injury. Virgil’s shepherd (Ec. iii. 108) says, ‘Nescio quis teneros oculos mihi fascinat agnos,’ Plutarch (Symp. v. 7) says that certain men’s eyes are destructive to infants and young animals. Cows and horses everywhere are to-day subject to the malignant eye, as, indeed, are all kinds of domesticated animals. In the time of Elizabeth, eye-biting witches were executed in Ireland for causing diseases among cattle. One effect of the evil eye on cows to-day is to cause them to lose their milk; this is believed to be due to an antidote for the eye. Even the mention of the word fascino or jettatura is enough to cause some to decamp (for a curious instance of this, see Elworthy, The Evil Eye, 17).

The antiquity of the belief in the power of the evil eye, as well as its constant persistence, is proved by abundant evidence. In the times of ancient Greece, and in all the subsequent ages, the earliest, the latest, the most familiar, the most constantly portrayed in need of all the possessed are the Medusa, whose fatal glance turned to stone all who beheld her awful face. She was at first depicted in a more or less conventional manner, with staring eyes, wide, grimacing mouth, showing wolf-like fangs, and a protruded tongue split down the centre. This was the typical archaic form, and to her fearful ugliness was attributed her baneful influence. The story once started evidently developed rapidly, for at a very early period a parallel version seems to have taken root, and henceforward until comparatively recent times the two stories were distinct. First story: She lost her extreme hideousness, and by degrees, easily traced in ancient art, it became at last in Roman days just as lovely as it had been frightful, while the story was more or less descriptive. So much she was said to have been beautiful at first, and then to have been punished by being changed into a hideousness so terrible that whoever looked upon her was turned to stone (see ‘Solution of the Gorgon Myth’ in Folklore, xiv. (1903) 212 ff.). The belief that her baneful influence arose from her fearful hideousness continued to hold its full force, while, at the same time, the story had developed in the opposite direction to such an extent that her power of fascinating, bewitching, or entrancing was held to be the result of her matchless beauty; yet with all this development the belief has ever remained that the spell was on the eyes alone. Thus we see the process by which these terms applied to women in our day derive their meaning. Many Greco-Roman and Etruscan Medusæ are beautiful, but have a sort of horrid-struck, exquisite expression (see Elworthy, Horns of Honour, 61 ff.).

Many theorems have been put forward respecting the Medusa and the legend of Perseus—all more or less mythical and speculative. The other famous exploit of Perseus, the rescue of Andromeda, is doubtless still more mythical; by some it is said to be the classic form of the fight between the sun-god of Babylon and the dragon (cf. Jb 9, 13). Horses slaying the dragon is several forms on
ducking a wonderful effect, much as the influence of love by the eyes.

He says that envy exerts an evil influence through the eyes, and that this most directly and perilously are the products of evil, which pierce like poisoned arrows. Moors of Morocco still hold the same beliefs (Westermark, loc. cit.).

It is the influence of the evil eye in all the world is ascribed to children, and that it is necessary for the mother to keep one breast tied up for 40 days, feeding the child with the other only, by which means the spirit is starved to death. If the child is fed from both breasts it will grow up with the evil eye. Muhammadans have more fear of the evil eye than of any other evil. The Hindus; and texts from the Qur'an, as in all other countries of India, are used as arguments against the evil eye (Heliodorus).

The speculator in the native H. of India, is the outcome of this belief. San, the Hindu Saturn, had been left out of the invitation to the gods to rejoice at the birth of a boy. One of the saints, Parvati; he appeared on the soil, in a rage, and with the first glance of his eye he caused the child's head to drop off. The other gods instantly cut off the head of a young elephant and stuck it upon the infant's body; hence Gopala is frequently thus represented.

Plautus has said that a portion of fruit bought in the market should be thrown into the fire to avert mazar (the native term). It is usual in some parts for a mother to blacken her child's face with a burnt stick to preserve it during the day from the evil influence. Natives of India put kalai (lamp-black) on their eyebrows, believing that they are thereby protected against, as well as incapable of casting, the evil eye. This blackening of the eyebrows, usual all the world over, is not merely a piece of female vanity, but a veritable protective.

The Targum give a wider reading to gen, explaining that all the sons of Israel went out one door, lest the evil eye should have sway over them as they went out to buy. Again, Ezek. xxi. 26. (malevolent) eye after Moses. Much is said on the subject by A. Goodrich Freer (Upper Isles, 73. Marion Crawford (Pietro Ghisleri, 1583. li. 50. I. 42. and Anton Josef, 1596. p. 21.) (Sym.) while the whole subject is dealt with very exhaustively by Frohmann, de Fascinat.ion.

2. The possessors.—A power so baneful and so stumbling would obviously lead to much speculation and contention as to the personality of those possessing it; hence arose a multiplicity of canons by which they might be known.

There are physical peculiarities, whether of beauty or of ugliness, that have been rare evidence of the dread power in all ages associated with the supernatural, with the demons and the powers of darkness. Even the gods were believed to possess it, and to use it when wishing to injure. Juno was particularly so credited; and for this reason Mercury the messenger was provided with a safeguard in his codiscus, lest he might be hindered in his flights by the envious eye when on errands for rival deities. Fear of anything uncommon seems to be part and parcel of the nature of all living creatures. All those among the ancients who in any way surpassed conspicuously the common-condition, for instance, in athletic or physical strength or size, were dreaded as possessors; and so on, the other hand, any one specially defective, particularly a dwarf; the latter, if hungrily, was the most feared still more. Squinting or differently coloured eyes were always certain marks of what is now a jettatore. In India and in Italy a squintor (guercio) is ipso facto considered a jettatore.

We English unconsciously preserve the same idea, for we say 'So-and-so has a "cast" in his eye'—a word purely technical in this sense, and implying the same meaning as the It. jettore, 'to cast or throw.' In Armenia very blue or green eyes are evil.

Many animals, particularly those with remarkable eyes, e.g. the serpent and the fox, were undoubted possessors of the evil eye. The peacock, with its tail full of eyes, is very much envious and ill-natured of the deities, has always been, and still is held to be, a potent mischief-maker. Many well-educated people in England, go on the supposition that there are shocked if peacocks' feathers are put up as ornaments, or even if they are brought into a house; death or at least some evil is believed to be the consequence. The grasshopper's prominent eyes gave it in classic days so a reputation as to lead to a certain proverb: "Nulli nescit it was the exact counterpart of our English, 'Thou art over-looked.' Tycho Brahe

would not proceed on his way if a hare crossed his path. The hare is on the Greek-Italian Vase, 1879, Naples Museum, as an emblem of ill-luck. Very much superstition still attaches to the hare; doubtless its properties stem from the belief that its eyes are so powerful that they could drive the sun from the skies. They have been thought to cast the evil eye on their cattle; therefore they believed hares to be witches, and consequently there used to be a general slaughter of them on May Day. The hare is still believed in some parts of Italy, particularly in Naples and the Isle of Man, to be the favourite animal into which the witches change themselves (see lycanthropy). Kaluks regard the rabbit with fear and reverence. Even to-day in Devonshire, fishermen will not pronounce the word 'rabbits,' but describe the animal by some roundabout method (Deacon Assoc. Trans., 1896). Pregnant Chinese women must not look on a hare lest its eye falling on them should cause the child to be born with a hare-lip. Fishermen almost everywhere avoid mentioning by name not only the hare and rabbit, but also the pig, salmon, trout, and dog, and go out of their way to have a bad reputation. Old gamekeepers do not speak of a fox to each other; it is always a 'thing.'

Pliny (HN. xvi. 107.) says that the rear of the Nile is found a wild beast called the otocolipus, an animal of moderate size . . . sluggish in the movement of its limbs, and its head is remarkably heavy. Pliny says it not for a moment to believe that it proves the destruction of the human race; for all who behold its eyes fall dead at the spot.

In Brazil there is a tradition that there is a bird of evil eye which kills with a look. A hunter once killed one of these birds and cut off its head without the eye being carried on him. He was instantly struck with a paralysis, and within a few years again lived a reputed witch. Whenever she wished to injure a neighbour she placed a toad at his door, so that when he opened it he might find the toad looking at him, and so receive its first glance.

Snakes have always had a reputation for having the power to fascinate, and there are many marvellous stories of the way in which they hypnotize frogs, birds, and other animals until they seem unconsciously to submit to being swallowed. One kind in particular, Bucephalus capensis, is so noted.

At the time of the Black Death in England it was currently believed that a glance from the death's eyes was very much more effective than the usual glance. This was sufficient to infect those on whom it fell. To this Shakespere refers in Macbeth to his wife: 'Write, "Lord have mercy on us," on those three; They are infected; in their hearts it lies; They have their plague, and caught every eye.' (Love's Labour's Lost, V. il. 141. 2.)

Stalin Dasa describes the Khali's eyes: 'A Syrian blind of one eye was not allowed near him a second time. He declared 'nothing can resist it'; illness and misfortune are all caused by the evil eye.' Saul was probably believed to possess it (I S. 189). Heliolodius implies that most, if not all, individuals have it; he says: 'When any one looks at what is excellent with an envious eye, he fills the surrounding atmosphere with a pernicious quality and transmits his own envenomed exhalations into whatever is nearest to him' (Theop. and Char., ii. 7.) Pinctarb says that the Thebans had this faculty so powerfully that they could destroy not only infants, but strong men. Cretans and Cypriots have had this reputation from ancient times, and retain it even at the present day. So also in Moslem the whole families of sinners was held on account of their eyes. People with deep-set eyes, and those whose eyebrows are united over the bridge of the nose, are particularly dangerous' (Westermark, loc. cit.).

Pliny says that the Thibii and others possessing the fatal power have a double pupil in each eye; others have neither, while some have two pupils in each eye; and that in Africa there are families who can cause cattle to perish trees to wither, and indite to die. Especially the Triballi and Illirii have such a power of fascination with the eye that they can kill those on whom they fix it (Xen. Hell.). Cicero (De Div. ii. 35) says that 'fumus ingenios ubique vici norecque duplicitis pupulis habet.' However, there are those who maintain that the 'ocularis oblivic.' Bacon (loc. cit.) and Frohmann (de Fascinatione, p. 11) repeat the same thing. Ovid mentions the double pupils, and Pliny explains that 'incuriosus omnis' (vii. 365). The Greek islanders still in heart worship a certain proverb:

Some persons are reputed to have the dread power over special persons or objects. In Italy
there are many stories of those known as *jettatori di bambini*, who are of all the most dreaded by mothers, and so are carefully shunned. Another class are supposed to have the faculty of obstruction—such are said to have a *jettatura sospensiva*. If any such person is met on the way to an enterprise, or on setting out on a journey, nothing will succeed, the business will fail, there will be an accident, one must return and give it up for the day.

Pope Pius IX. was confidently affirmed to have the evil eye, and his successor Leo XIII. was said to have it still more; it will probably become part of the reputation of the present Pontiff. It is, moreover, a well-known fact that all ecclesiastics are more or less suspected, especially monks. The murder of King Humbert was confidently ascribed to the *jettatura* of Leo XIII. The Russian peasant is convinced that his or her priest has the evil eye (Norman, *All the Russians*, 1902, p. 44).

In Abyssinia the reputed possessors are called *budus*; they are also magicians, who can work evil at will on any one whose name is known, by taking a certain reed, which the practitioner bends into a circle and places under a stone. At that moment the victim is taken ill; if the reed snaps in bending, only the person who made it will suffer. It is looked upon as *budus* (Bent, *Sacred City of the Ethiopians*, 1893, pp. 63, 212); cf. our legend of Wayland Smith. These moderns are most likely the descendants in name and reputation of the *Buduni* of Herodotus, who refers to them (iv. 109) as evil-minded enchanters; he says that one day in every year they changed themselves into wolves— but he himself did not believe it (see Lycanthropia).

Some circumstances referred to in wer-wolves (see his de *Dei, xviii., 18; see also Pliny, *HN* viii. 30).

Not only have the evil-disposed the fatal power, but it is possessed by some involuntarily and much to their own sorrow. Woyciki (Polish Folklore, translated by Lowenstein, p. 52) mentions an unhappy Slav who, with the most loving heart, was afflicted with the evil eye, and in sheer desperation blinded himself that he might not be the cause of injury to his dears ones. Cases of involuntary fatal power are related as existing still in England and elsewhere (Mabel Peacock, *Daily News*, Aug. 13, 1895), so that mothers will not venture to expose their infants to the touch of a stranger. Thus a father who was several years ago than 1901 a farmer of Somerset was said to ‘have the evil eye so bad’ that if he looked on his own cattle they died. De *Sp* is held by Fro- manner the most wide writer on the subject, to be a distinct communicable possession acting upon this terrible influence acting against the will of the possessor. Among the Bhiyia and Bhiyuvar of India, children born on Saturday have the evil eye, and there are special spells to obviate it (Crooke, *TC* ii. 84, 97).

Perhaps no phase of this superstition is more generally wide-spread than that relating to the danger arising from praise or admiration to the object of it. ‘*Landet qui invicit*’ was believed devoutly by the Romans; it is held and acted on, if unconsciously, among the English to-day, and still more commonly among the belonging to other nations. The conventional or national words uttered instinctively on receiving compliments seem to reflect the notion that danger exists, and that protection must be sought by appeal to a higher power, *mens sana in corpore sano*.

One is inclined to see the beginning of this in the old Roman baneful influences, who in their forms resemble the ancient ‘Black Art.’ These have been met by analogous acts, so that both baneful and antidote fail more properly under the subject of MAGIC; but, inasmuch

should say. ’In Italy the custom in a like ease is to say, *Si mal ochio non ci fosse*, ‘No evil eye take effect.’ In England it has always been recognized as a rule of good manners not to over-praise; but few reflect that it springs from the old danger (rather than from politeness) lest the speaker should himself fascinate the object of his admiration; for those who were highly praised by others, or even by themselves, were liable to be blasted (Elworthy, *Evil Eye*, 121). In the Hebrews this belief is very strong. Miss Goodrich-Freer writes of horses falling down as if dead (soon after being admired)—the work of the eye (Outer *Iles*, 293). A Highland minister’s wife, whose child had been much admired, said, ‘Oh, dear, something is sure to happen to that child; I hope she has not given it the Evil Eye!’ (Murray-Aynsley, *Synb.*, 140). Narcissus was thought to have fascinated himself, hence his untimely fate; so also Eutelidus, who wasted away in consequence of his own admiration of himself. From these old legends we learn why to-day it is not so much ill- mannered as directly impious and dangerous to boast of one’s belongings, or to praise oneself. Lane (*Mod. Egyyp*, ed. 1895, p. 258) says a modern Egyptian is thereby alarmed, and will reprove one who is over-praising or asking him, ‘*O God, what does the Prophet*.’ If, then, the envier says, ‘O God, favour him,’ no ill effects will be feared. In England, ‘bad luck,’ it is thought, is certain to follow undue praise or boasting: this is well within the experience of all who have known the experience of all who have known

‘Only yesterday I was saying I had not broken anything for years, and now I have let fall this old glass that belonged to my grandmother. As I was letting loose a fine piece of silver I said to a friend, ‘Of all the dogs I ever had, this is the most intelligent, and he will grow up to be a treasure.’ Half an hour later he picked up a poisoned rat in the garden, and said it about ten yards, ran half a mile farther, and died!’ (1895).

Just as the hunchback is believed to have the evil eye, so, when his influence has been counteracted, he is thought to be a defender against the malignant influence of others; hence, it is said, a notable one gets his living at Monte Carlo by waiting outside the Casino that players may touch him for a consideration, in the belief that so doing will bring luck, i.e., prevent evil influence. Luck or good luck is but a negative result depending on the absence of evil or malevolent opposing influence. A very ancient beliefs is that a bonnet of pearl, silver, lava, or other materials, is a gobbe, or hunchback, to be found everywhere, even in Moscow, dressed in Russian clothes. An Italian who was wearing one under his waistcoat, having actually received a wound, said he was bear to part with it; and at last declared that all his good fortune was gone. He died shortly afterwards.

2. Protective.—A fear so wide-spread ‘and so deeply rooted could not but lead to the invention of innumerable means by which the dreadful influence could be counteracted. The direct emanations from the eye are the most to be avoided, and the first glance falling upon the susceptible object is the most injurious: if that can be averted or met by some antidote, no harm will be done. It has been shown (Elworthy, *Evil Eye*, 170 ff.) that the devices upon the heads and shields of warriors were originally intended to attract, and so to counteract, the first glance of the adversary in battle. Thus has arisen all that is now understood under the word *helmets* as heraldic blazon. I say ‘Glory be to God!’ ‘Lord be wi’ us!’ Little gratitude is expressed, and certainly no Christianity, but simply a desire to avert the evil expected. This was so strongly felt by the Romans that it became customary for the speaker of praise or compliment to accompany his speech with the words, *praeclare dixerim,* freely translated, ‘Fend evil eye...’
as many of these acts are confined exclusively to the central group of the front gable, it is needful to refer to them here at some length. All authori-
ties and all experience agree that to neutralize the look it is essential to attract it towards some-
time, through the cabs of the diversified group. Without this the object is liable to injury. Hence arose the use of bright, shining ornaments of all kinds—of glitter-
ing helmets and fantastic head-dresses. Some have even held that this was the origin of the wearing of such appurtenances. The point is maintained (Boettiger, Kleine Schriften, 1837-8, iii. 402; Lobeck, Agath., 1829, ii. 973), were first adopted to prevent injury to the persons of those who were necessarily much exposed to the gaze of possible enemies. ‘Everything that was ridiculous and obscene was supposed to be iminical to the malignant influence of fascination by the oddness of the sight’ (Dodwell, Class. Text, 1819, ii. 54); hence we find that the amulets that were most poten-
t were of this character. Nothing attracts curiosity like obscurity, so amulets of a phallic character have been in all ages the most common, all the worst over. Indeed, some writers consider that this is the basis of all protective amulets (J. G. R. Forlong, Rivers of Life, 1883). Foremost in this class must be placed that known by classæ writers as the phallic roes (Etruschi form., Ling., Litt. vol. v. 99). For a full description, see Payne Knight’s Worship of Priapus, 1866, pt. ii. p. 152; Jahn, ‘Uebcr den Abergel.’; Frohmann, p. 5. Specimens of this amulet, both to be worn on the person and for household suspension, are to be seen in the British and many other Museums.

Amulets against the evil eye are of three classes (for distinction between amulets and talismans see Eden’s Evil Eye, 1921). Those intended to attract upon themselves the malignant glance, such as were worn on the outside of the dress, or such as were sculptured, painted, or otherwise exposed in or upon houses or public buildings, etc.; (2) all those endless objects worn on or concealed beneath the dress for the purpose of averting evil; (3) written texts from the Scriptures, Qur’an, or other sacred writings; cabalistic figures and magico-
formula, either in appropriate covering, or carved, painted, or otherwise displayed on houses.

The turpentina roes was so much in use amongst the Romans that it is only known by the name of Jesus, as in Hor. Epod. viii. 18. On this Frohmann (ib. Fase, p. 5) remarks at length in unquotable language. In fact, fascinae became the Roman name for mistrustful, and especially, as fascino in modern Italian. Where our present day conven-
tions perceive nothing but obscurity, our ancients saw only the sumam of everything indispensable to combat successful-
ly the most terrible danger. With them ‘fascination was destruction, death—the phallic was life’ (Tischmann, München, ii. [1896] 10). The survivor and clearest remaining part of the fascinum is still to be seen in the ordinary silver charm worn by Roman infants, and known as mano in fea (see El-
worthy, Evil Eye, 192, 250). Its analogue among ourselves survives in the coral and bells of our childhood. Most of the objects worn by the ancients as amulets were generally emblems or symbols (defined in Evil Eye, p. 117) of a god, to whom the wearer tacitly appealed by the display of his or her attri-
t. The amulet denoting one of the four lascivious gods were by far the most common. Of these Priapus, called also Fascinum, according to Lucian, was the special patron of lustful women. Jesus was his special social emblem. Infinite in number and in variety of obscurity are the emblems of Priapus, for in all ages and countries his cult seems to have held a prominent position. In Babylonia, Egypt, India, Greece, Rome—among the ancients everywhere—he was in striking evidence. His emblem was displayed on the pediment and in the house. The phallus was consecrated to Osiris, the protector of Egypt.

To-day his cult is prominently visible among all savages and so-called Nature-worshippers, while in sculptures and cryptic forms it is represented by more civilized people, even by the English. In most museums of antiquities it is to be seen spec-
imen of the grosser kind of phallic amulets. That of Naples, containing the remains of Pompeii, gives the greatest number; and few are without specimens of the turpentina roes before al-
uded to (on this see Knight, op. cit.; Jahn, op. cit.; Montelius, Etrusci, 1880, p. 200). A singular example of obscurum Graecae Fabae is to be seen in a small terrac-
cotta (W. 75, Read) at the Brit. Mus., obviously intended as a protective. It consists of two phalli personified, in the act of saving an eye. Pompeii presents numerous specimens still in situ. From medieval times many are to be found in monastic curios, even monastic as gags in legends, etc., and elsewhere. Publicly exhibited obscurum carvings of the Middle Ages were mostly intended as a protection against the evil eye. Cl. Mt. Chamis and Amulets (Greek), in vol. iii. p. 435 f.

Next to phallic subjects and their developments, perhaps the commonest was a representation of the eye itself, either alone or in combination with other well-known protective symbols. The best known ancient example is the uzu, or Eye of Osiris, on most Egyptian coffins or sarcophagi. A good example is one on a large wooden sarcophagus in the middle of the Egyptian room at the British Museum. A great eye was carried in Egyptian funeral processions, and, along with the winged serekh, a blue uzu was placed over the incision made at the embalming of the body as a protector of the dead. Blue and red are everywhere protective colours in Europe, Palestine, India, and throughout the East; in Eng-
land and all over the world they are the favourite colours for horse ornaments.

The eye as a defence against the evil eye is a good instance of sympathetic magic (on this see HDB, e. v. ‘Magic’). As a protective amulet it figured among several races, Greeks, Romans, and is used to-day by Turks, Arabs, Nubians, Italians, Russians, and many others. Inghirami (Pitt. di Vasi Etruschi, 1852, ii. 164) gives a shield having an eye proper in the centre, as the only device; also (ib. 400) Hercules nude has a large eye on each breast and on each thigh, to protect him from the malignant glance of the enemy. A striking shield on a Greek vase in the British Museum has the club of Hercules in the centre, with a large eye upon the appendage beneath (see pl. xiv. in Millingen, Painted Gr. Vases).

In modern Italy any glass bead or stone having a marking at all like an eye is carefully preserved as an amulet. Bellucci of Pergia has a great number of such, many set in silver and much worn. Ancient Egyptians ornamented their pottery with a similar eye as a special feature, often in combination with surrounding accessories. Maspero (Egypt. Arch., 1902, p. 245) gives a notable example: three fish having one eye common to all, alternating with three lotus flowers. A remarkable sculptured scene with the eye as the central object is the famous Woburn-relief, first published by Millingen in Archaeologia, xix. 70, and here reproduced. In this the evident meaning is the same as that referred to above (Brit. Mus. Read.). Here the eye is being attacked by several hostile animals and by a gladiator, while above it is a man in
Phrygian cap in a well-known indecorous attitude of mocking contempt. This attitude is still practised literally and habitually by Italian sailors against adversity; and it is not unlikely that the writer's knowledge in England both in act and in words to match. Other curious instances of the eye being attacked by a ring of enemies are found on many ancient gems (ib. Elworthy, *Evil Eye*, 130), but perhaps the most curious is that (ib. 131) where the eye is surrounded by seven symbolic figures, representing the seven powerful and beneficent deities who in turn preside over the days of the week.

This amulet, therefore, provides a protection for every day. Several compound gem amulets having the eye as the centre surrounded by inimical protectors are shown and fully described in ib. 130. The accumulation or piling up of protective amulets is an old-world custom (see Lanciani, *Atheneum*, April 25, 1891). Examples of its prevalence exist in the numerous *dies sacrif* of Graeco-Roman times, 350 B.C., discovered chiefly at Taranto. One notable specimen is to be seen at the British Museum, and one other at Naples, while two are in the Ashmolean. These have been fully dealt with in the *Soc. Antiq. Tras.*, 1898, and more particularly in the present writer's *Horns of Honour*.

The same accumulation, and unwillingness to ignore, protective amulets are still in evidence in the dedications of abbeys and churches, e.g. to St. Michael and All Angels, to certain Apostles conjointly, to two or more Saints, and, lastly, to All Saints, that none be omitted.

The Gorgon's head already described not only preserves the earliest evidence of the dread of the Evil Eye, but has also been in all ages one of the most favoured amulets against it. Especially has it survived as one of the commonest devices upon the door-knockers, not only of Pompeii, but of modern Naples and all the cities of Europe; thus becoming, even to-day, a potent protector of the horse against every new-comer. Birmingham little dreams how persistently she aids in maintaining an ancient myth. One of the most potent of protective is the *horn* in its various shapes and developments. In modern Italy, especially in Naples, it is so much in use that the word 'horn' has become generic; every kind and description of protective charm against *jettatura* is 'un corno.' The phrase 'non vale un corno' is equivalent to our 'not worth a fig.' On close analysis both phrases are found to bear an identical phallic signification (see Horax). Pintarch (Symp. v. 7) declares that objects fixed up to ward off fascination derive their efficacy from the strangeness or ridiunculousness of their forms, which attract the mischievous working eye upon themselves. The same effect is aimed at in the numerous grotesque devices found upon ancient gems. *Grifli*, a quasi-technical term, though included in 'corni,' is the name of all amulets of this comic description. In modern Italian, *grillo* is not only a cricket or grasshopper (a potent protector, because *per contà* a possessor of the evil eye), but also a caprice of fancy, said to be a classic survival. *Idem* (Antiquities) gives the writer's knowledge in England both in act and in words to match. Other curious instances of the eye being attacked by a ring of enemies are found on many ancient gems (ib. Elworthy, *Evil Eye*, 130), but perhaps the most curious is that (ib. 131) where the eye is surrounded by seven symbolic figures, representing the seven powerful and beneficent deities who in turn preside over the days of the week.

The Scripture *tēphēlium*, called 'phylacteries' in the NT, are combinations of an object to be worn conspicuously and a hidden writing enclosed within it. Their Greek name promises their purpose as protective, while the Hebrew *tēphēlium* ('prayers') indicates more clearly their contents (HDB, s.v. 'Phylacteries'). The Jews are still devout believers in the evil eye, and hence preserve many objects in their ceremonies of a prophylactic nature; among these is the *mezuzah*, awesomely a literal fulfilment of Dt 6'. Strict Jews' doorposts still exhibit this valued safeguard. Persians as well as Jews use tassels, or *tallith*, which have a mystic prophylactic meaning (see HDB, s.v. 'Fringes').

Luck if analyzed is really the absence of misfortune, i.e. of evil wishing, whereby desires and natural expectations are frustrated. Damocles who, according to Theocritus (*Idyll* vi. 39), admired his own beauty reflected in the water, knew of the probable consequence, and used the well-known remedy against fascination, spitting three times on his breast. Spitting is a protection against many misfortunes. In Bulgaria it is believed that spitting protects against fascination and also against perjury at a trial.

Many objects besides those already noted, believed to be potent against the evil eye generally, are in some parts held to be specific against certain effects of it. The crescent—symbol of the moon, Ishtar, Hathor, Artemis, Diana, and the Virgin Mary—is everywhere a potent amulet. Along with the sun, it is to be seen on great seals and coats of arms, even episcopal. As a separate amulet, it specially appeals to all who are powerful deities in the Graeco-Roman world, but in Sicily the horned shell called *coquzes di luna* is worn by children and others against toothache, always considered as the result of malice on our part. There also the *operculum*, everywhere a protective amulet from the natural eye upon it, is a certain specific against sore throat (male di gola); so also a little wooden cross tied to a piece of crystal is good against sore throat. Small gold earrings are worn by *carboneari* and others, accustomed to ward off the *malocchio*; and our own navvies and showmen wear them for the like purpose, not merely for ornament. A double triangle of silver, a viper's skin in a bag, a silver ring called 'di S. Biagio,' and many other objects are specific against various maladies. Many special Sicilian amulets *contro la jettatura* were exhibited by Pitrè at the Palermo Exhibition, 1905:

1. A piece of red cloth. Red everywhere is inarticulate to witchcraft of all kinds, and is constantly used, from the most orthodox, to the most heretical, both alone and as a strengtheners of other amulets against the evil eye. Our phallic horses and our notorious red and white ribbons, and the King's ornament their horses with bright colours to keep off their enemies. Of red wood or horse is always woolen or worsted. Charms in Italian and Sicilian shops are always tied with red woolen braid or painted red; horses on butchers' shops are always painted red and white.

2. *Viritoceia* (Sicilian), *Funzolo* (Italian), the perforated wheel used in spinning. This is but one example of perforated amulets.
of which also the holed stones used everywhere as protective amulets are another (see Elworthy, Evil Eye, p. 55). Amulets known as 'Zabara' (on protector embossed speciality. A prophylactic string 112 Chlave 256) Tola any, Smyrna. Tigers' teeth have been used in Italian, Napo-My-Anna, etc. Amongst showmen, protective amulets are all specially avowed to protect them from the evil eye at his trial. On a child in Corsa was a small silk bag, containing salt, charcoal, a nail, and a clove of garlic.

Evil of carallo, tied with red cord. The horsehoe to us is perhaps the most familiar of all amulets against the evil eye. It is explained as being merely the conventionalized form of the horseshoe, and that the horseshoe was not, as is commonly supposed, an importation from the Far East by the early Christians. Britain, is always shaped like the Byzantine crescent. Power is cumulative; so iron, the base of witchcraft, is further strengthened by association with the horsehoe (cf. Elworthy, Evil Eye, 215).}

5. Callo di chiodo di ferra. All rings are amulets, but silver ones, Diana's own metal, above all. In Italy the rings sold speciality. A prophylactic string 112 Chlave 256) Tola any, Smyrna. Tigers' teeth have been used in Italian, Napo-My-Anna, etc. Amongst showmen, protective amulets are all specially avowed to protect them from the evil eye at his trial. On a child in Corsa was a small silk bag, containing salt, charcoal, a nail, and a clove of garlic.

tective value, and have it still, particularly red. Their form, the slit ball, was so established that the Fatcino Iron, made by L. Frommond (Frommon), of Deux-Familles, Nuremburg, 1785; V. Alarios, of Fichi and Frommon Felonum (Felonum, Paris), of Theaumus (Guillai), of Nuremburg, 1808. The Fatcino Iron, always a protective amulet, has been used in ages—always as protective. On farm teams in the West of England, the devil was supposed to have a so-called amulet, a row of five or six long-jangling bells, ornamented de regueur with red woofed fringes, was carried above the collar of the leaner. The noise was often diminished: the purpose was to drive away evil spirits, while the red colour attracted and so absorbed the first glance of the devil. Many of these amulets are not originally intended as calls to prayer, but rather as a preparation for it, by driving away evil spirits, to whom the noise is a terror. The better to be effective, the best advice given by eighteenth-century present writer, are sung specially on their respective Saints' Days to 'drive the devil over to the other parish.'

'The sea-horse occurs on many early crosses in the east of Scotland, notably at Aberlemno and Meigle' (Reliquary, Oct. 1856, p. 251). Miss Goodrich Freer says: 'In the Hebrides coal-breachan, water ragwort, called armpit flower of St. Columba, is placed in byres, etc., to protect cattle from the same. The cock is sacred to keep off evil spirits' (on this see Elworthy, Horns of Honour, 93). In India the excrescences of the Bombax, or cotton tree, are considered protective; and in the same tree has the like reputation in Mexico, where it is common. The usual shop amulet of butchers in Naples is a pair of cow's horns, painted red and white, over the door; but, in addition, very many of the better class have a stag's head with bucking horns affixed to the inner wall. Many have other objects suspended, such as a horsehoe with a single pendant horn tied with red (see Horns). Macaroni and provision dealers frequently have several curiously combined amulets hung up inside their shops. Laundresses usually have a glove filled with sand, the thumb and two middle fingers sewn in, so as to make the mano carvino. These are worn and often a common finial for the silver spada worn by women in their hair; some have a flower, bird, or piece of coral. Written texts, cabalistic signs (such as the well-known Solomon's seal) of many descriptions are also potent protectors against the dreaded influence. Many are of a double character, i.e., possessing power as visible amulets, but with special virtue from the nature of their contents. Magic squares, still worn in modern Italy in brooches, and even well-known to the ancient Romans, many in terracotta having been found, with numbers arranged precisely as they are to-day. In Scotland, written charms against various ills were very common (Folklore, iv. [1904] 359). In Tenerife it is the custom to scatter mustard-seed through the house after a birth to keep off witches and the evil eye. The Dangi of India, in similar fashion, burn mustard and pepper, the fam cariteit and pepper on a Tuesday or a Saturday, and the Khairwa salt and pepper (Crocke, TC ii. 251, 329, iii. 224). Iron, as being a well-known seer of demons, is employed to avert the evil eye among the Tharu (ib. iv. 369); and the Armenians spit on a stone and turn it under, or make cakes of dough, wet them with water, and throw them into a fire, the evil eye being broken as the cakes crack assunder (Abeghian, Armenischer Volksglauhe, p. 124 f.). Elsewhere an effort is made to ward off the evil eye by giving a deprecatory name to a child, as among the Indian Raja (Crocke, op. cit. iv. 214), though among the Golapahar this is resorted to only when the first child of a marriage has died (ib. iii. 427).

Besides all this multiplicity of concrete objects, there is an endless multitude of incantations, of which the mass of knowledge has for the like purpose, too numerous to be more than referred to. Sayce (Rel. of Anc. Bab., App. iii.) gives a long list of magical texts. Abra-Melin also gives a vast number of magical squares, formed of letters, for warding off or producing all sorts of evil.

EVIL-SPEAKING.—See SLANDER.

EVOLUTION (Biological).—In the history of biological thought the term 'evolution' has had more than one meaning. It has, however, been more especially used to denote those views on the interrelation of living things which imply the conception of the mutability of species, now so closely associated with the name of Charles Darwin (1809-82).

1. The idea of the transformation of species, of the origin of new forms from existing ones, is very old; it is to be found in the teachings of many of the Greek philosophers. Aristotle devotes some attention to it, and his writings doubtless express in large measure the opinions generally prevalent in learned circles during the time in which he lived. He taught that there had been a continuous succession of animal forms, during which the older and less perfect had gradually given rise to the younger and more perfect, in a process of giving rise to yet more perfect forms. Life itself arose through the direct metamorphosis of inorganic matter. Plants came early in the succession; after them appeared the animals, powers of nourishment and reproduction, they have neither feeling nor sensibility. Later came the plant animals or zoophytes; and still later the animals proper, gifted with sensibility and even, to some extent, with powers of thought. Highest of all is man, the one form capable of abstract thought. The process of Nature is a struggle towards perfection, the expression of a perfecting principle inherent in the universe. The result is a gradual evolution from the lower to the higher, owing to the resistance offered by matter to any change of form from that which the perfecting principle seeks to impose upon it. At the back of the perfecting principle is the Efficient Cause; though, whether this Efficient Cause gave the original impulse and the consequent movement remained outside the operations of Nature, or whether it is all the time constantly at work, is a question on which Aristotle raises without being able to resolve.

In his conception of the processes of Nature, Aristotle had advanced as far as the existing state of knowledge went. In more detail, the idea of progressive change in the organic world stands out clearly enough. But he was unable to point to any natural agency through which change might be brought about. Curiously enough, he considers in one passage
a crude form of the survival of the fittest which was advanced by Empedocles, though only to reject it. It was tacitly assumed and argued by the feeling of design in Nature to sift out the argument for natural selection dimly foreshadowed in the writings of the earlier philosopher. Moreover, the facts at his disposal were far from forcing him to pay attention to the great amount of variation normally found among living things or to realize its significance. In the teaching of Aristotle are summed up the contributions of the Greeks to the problems of evolution, and, as Osborn has said, they 'left the later world face to face with the problem of causation in three forms: first, whether Intelligent Design is constantly operating in Nature; second, whether Nature is under the operation of natural causes originally implanted by Intelligent Design; and, third, whether Nature is under the operation of natural laws due from the beginning to the laws of chance, and containing no evidences of design, even in their origin' (From the Greeks to Darwin, ch. iv.).

2. The acute and speculative minds of Greece had in large measure formulated the problem of evolution, and for many centuries it rested much where they had left it. The learning of Europe passed through a definite stage in the mental work where it became a means of extolling the glory of God rather than a pursuit to be followed for its own sake. It was in the order of things that a firm belief in another and better world should dominate the imagination only so long as the sinful and transitory life, and the touch thus exerted upon natural curiosity produced its inevitable result in the stagnation of natural knowledge. It is true that some of the more liberal minds in the Church, notably Augustine and Thomas Aquinas, endeavoured to reconcile the teaching of the Greeks with the Mosaic cosmogony, but eventually the precision of the first chapter of Genesis conspired with the inclination of the faithful to behold in the manifold variety of Nature incontrovertible evidence of the manifold power of the Creator. It was only after the lapse of many years that the weakening of the authority wielded by the Church, helped largely by the renaissance of Greek learning, lent a fresh stimulus to curiosity, and enabled men to put aside the temptations of a future life and to devote themselves to the discovery of the world in which their lot was cast. But it was long before definite progress was made with the idea of evolution. In the early revival of science, men were more attracted to the study of the phenomena of nature in their stable aspect, where the phenomena encountered were less likely to suggest the derivation of one form of matter from another in orderly sequence. In the provinces of zoology and botany, where these problems are more likely to arise, the naturalists were for too long too busy with absorbing into their classifications the facts continuously streaming in to devote much attention to the philosophy of their subject.

3. Starting with the great miscellaneous compilations of Aldrovandus and Gesner in the 16th cent., the process of arrangement gradually took shape through the labours of Ray and others till it reached the status of a system of Linnaeus (1707-78). The problem of species had been discussed before Linnaeus, but it was the Systema Naturae which by its comprehensive and logical arrangement insisted upon the question of the way in which species were related to one another. Linnaeus himself, though a man of science, was a good Christian, and held to the Church’s teaching of the separate creation of each species and animal. Linnaeus allowed himself a little more latitude, and admitted that in certain cases new forms might have come into being through crosses between the original species. But the change so brought about was held to be a degenerative one, tending to obscure the perfection of the original type as it had been issued from the creative hand of God. It was the classification of species that interested Linnaeus—the demonstration of criteria by which the vast variety of animal and plant forms could be definitely separated out and arranged. Howard’s conclusions that differences might have come about was a question in which he was not greatly interested. Nevertheless, his attempt to fix the limits of natural species inevitably forced the botanist and the zoologist to inquire more closely into the nature of species itself.

4. Contemporary with Linnaeus lived another great naturalist, who, perhaps more than any one, should be regarded as the father of modern evolutionary thought. In most respects the mind of Buffon (1707-88) contrasted sharply with that of Linnaeus. Though no less insistent upon exact description as a first necessity in science, he held that the mere accumulation of facts was not an end in itself, but that the scientific mind was fulfilling a proper function in combining and generalizing upon the facts which it had brought to light. For this reason at service to the progress of thought, and were full of suggestion for many who came after him. To determine precisely the credit due to Buffon in the development of the conception of evolution is a matter of extreme difficulty, for his own standpoint was only set on the stage of changes during different periods of his life. Like Linnaeus, he started with a belief in the fixity of species, each enjoying the attributes with which it was invested at its creation. But with the riper knowledge that came from his studies in comparative anatomy, he found himself questioning the perfection of the plan upon which an animal is built. In his famous dissertation upon the pig he points out that this animal cannot be regarded as formed upon an originally perfect plan, but that it evidently has parts which, though well formed, are of little or no service to it. In fact, it may be regarded as a compound of other animals. From this position it was not a great step to a belief in the frequent mutability of species, and to the conception that the members of a group of species should be capable of being mankind from a common ancestor, some by becoming more perfect, others by degeneration. So might the horse and the ass, so even man and the ape, be related to one another. Yet, after forcibly advancing the theory of evolution, Buffon will suddenly remember the susceptibilities of his neighbours, and protest that, after all, it cannot be so, since there has been vouchsafed to us a direct revelation that all animals have issued in pairs, completely formed, from the hands of the Creator. How far this attitude was irrational is difficult to say, nor need it greatly concern us here. There is little doubt that in his inmost mind he believed in the mutability of species, and held that changes in animal and plant form could be directly brought about by changes in their environment, and that these changes could become hereditarily fixed. Buffon’s great mental work lay in his suggestiveness. He questioned the orthodox notions as to the relation of species to one another, and from the width of his learning, the acuteness of his intellect, and the charm of his style he raised his questions in such a way that no man henceforward could afford to ignore them.

5. The seed so sown by Buffon soon began to bear fruit, and within a few years Erasmus Darwin (1731-1802) in England and Lamarck (1744-1829) in France each put forward a theory of evolution. Each accepted the doctrine of the mutability of species, and each adopted almost the same hypo-
thesis to explain how the transformation of species might be brought about. Buffon had expressed the opinion that the natural surroundings in which animals lived might directly influence their form. Both to Erasmus Darwin and to Lamarck a changed environment was at the bottom of the natural phenomena, as an indirect one. The changed circumstances of its life led to an alteration in the habits of an animal; and the altered habits, by causing increased use of some organs, together with decreased use of others, eventually brought about a change in form. Sources of alteration of form brought about by increased use or disuse of organs—'acquired characters,' as they are now generally called—were assumed by Erasmus Darwin and Lamarck to be inherited. The net result of a permanent change in the environment was a permanent alteration in form, though this was reached only indirectly through a change in the animal's habits. Unless the animal reacted to the altered environment by an alteration in its habits, a change in form could not take place. Evolution was effected only through the co-operation of the animal's nervous system.

In addition to this, the views of Erasmus Darwin and Lamarck failed to secure a firm hold on men's minds. At the English Universities, scientific studies were at a low ebb; and although, including the acute and gifted Paley, was directly hostile and sufficiently powerful to prevent the new doctrines from percolating far. In France the great weight of the learning of Cuvier (1769-1832) was cast into the scale against Lamarck, and the younger generation probably grew up to regard him as little better than a madman. The doctrine of the transformation of species implied a unity of plan running throughout the kingdom. In this idea Cuvier, who stoutly upheld the orthodox view of the separate creation of species, was vigorously opposed. He contended that there were several perfectly distinct plans or types upon which different groups of animals were built, and that these different types could not be related to one another. There were instances in which animals built upon one plan might show apparent resemblances to those which were built upon another, but careful analytical examination showed that in reality the resemblance was one of analogy only. His great knowledge of comparative anatomy enabled him to doubt until the rise of modern embryology that the fundamental unity of plan common to the great animal groups came to be clearly perceived.

7. Comparative anatomy, as it then existed, was ranged on the side of special creation as opposed to the gradual evolution of species. But another study was already coming into greater prominence. The year (1830) that witnessed the victory of Cuvier over the Lamarckians in the Academy of Sciences at Paris witnessed also the publication of the first volume of Lyell's Principles of Geology. In that work was set forth what came to be known as the uniformitarian doctrine in geology—the principle that the past must be explained by the present unless good cause can be shown to the contrary. Lyell pointed out clearly and forcibly that the formation of the rocks in past ages could be referred to the operation of causes similar to those now at work, and that there was no valid reason for assuming the interpolation of a series of cataclysmal changes such as Cuvier had advocated. But Cuvier's followers, however incompetent to account for the non-living part of the globe, Lyell strengthened the hands of those who were trying to show that it could also account for the living. Moreover, the uniformitarian doctrine in geology provided another strong argument for the evolutionist. Paleontology had arisen as a serious study, and in the hands of Cuvier and his pupils it had already gained ground in an environment in which animals lived might directly influence their form. It had been perceived that, on the whole, the different strata of the earth's crust contained different and distinctive collections of fossil forms, and that the animal life of the globe had undergone a cataclysmal changes, which involved the extinction of world catastrophes which blotted out animal life, followed by a series of separate creations which re-peopled the earth with new and distinctive fauna. By abolishing the catastrophe the geologist brought the naturalistic face to face with the problem of explaining the connexion between the fossil forms of life and those still living, and, as the science of paleontology developed and fresh discoveries were made, it came to be more clearly seen that the distribution of these various fossil forms in time accorded well enough with the idea that there existed a genetic continuity between them, but that it was not easily to be reconciled with any other hypothesis.

8. The development of the natural sciences during the earlier half of the 19th cent. was rapid, and by the middle of it the evolutionist was able to set forth a good array of arguments in support of the idea. In Germany, theories of the transformation of species had excited considerable interest. Through the works of Oken, Treviranus, von Baer, and others, science was brought to be said to have been not only familiar with the idea, but also in large measure sympathetically disposed towards it. In England, on the other hand, isolated as she had been from the solvent action of the Napoleonic wars, scientific opinion was largely represented by men of sincere and orthodox religion, to whom the idea of the mutability of species, and all that it implied, was unwelcome and even repugnant. The existing arguments for evolution were actually brought together by Robert Chambers, whose work on the Vestiges of the Natural History of Creation ran through many editions and excited very considerable discussion and controversy. A brief presentation of these will show that the case for evolution was forcibly stated before 1830, and it is not easy to understand why scientific men in England were not more early sensible of their weight.

(1) Argument from the general presumption of science against 'supernatural' explanations of phenomena.—The first argument for the discovery is to eliminate the miraculous as an element in the causation of natural phenomena, and to regard this causation as having from the earliest times been operative in the same way as we see it now. With the accumulation of facts in the physical sciences the principle of the continuity of natural causation had become so firmly established, through the discoveries of Newton and other great natural philosophers, that it was accepted as axiomatic by those who worked at these branches of knowledge. In deciding, therefore, between two rival theories to account for the causation of the organic world, it was obvious that the presumption was in favour of the one which permitted a continuous and orderly process of natural change, as against that which explained the phenomena by the sporadic intervention of an alien and incalculable force.

(2) Argument from uniformitarianism in geology. —The influence of the rise of modern geology, with its doctrine that the past is to be explained by the present, has been perhaps the most important bearing upon the question of organic evolution as opposed to a series of special creations is sufficiently obvious without further remark.

(3) Argument from homologies in vertebrates. —The studies of the comparative anatomists, began
in the 18th cent. and so brilliantly developed by Goethe, St. Ray, Buffon, and Cuvier, and demonstrated that the parts of the skeleton of vertebrates could all be reduced to a common plan. Widely different in appearance as were the wing of a bird, the fin of a whale, and the hand of a man, they all still stood in the same structural relation that there was an intimate correspondence between them, so that the separate parts of the one could be clearly recognized, though greatly modified, in the other. This was the homology confined to the vertebrates; for even at this time cases had been worked out among such groups as the insects and molluscs. Such homologies were obviously in harmony with a theory which implied community of descent through a process of gradual evolution.

(4) Argument from the variability of existing species.—Though the study of variation had not yet made much headway, there was one group of facts which pointed clearly to the possibility of species being capable of permanent modification. The various domesticated races of animals offered evidence that certain species were capable of modification, and that such modification could be transmitted. Whatever the origin of the variability, its existence at any rate was positive proof that species could undergo transformation.

(5) The sequence of types in paleontology.—As the fossiliferous strata of the Earth came to be more fully explored, it was seen that a rough order was apparent in the succession of the new forms brought to light. The more recent the strata, the higher the types; and the more nearly approximating to living species; while, conversely, the older strata were characterized by a simpler fauna and by the absence of the higher and more specialized types. Though the general import of the sequence of types was unmistakable, the evidence, as it existed in the middle of last century, was for special cases imperfect and often apparently inconsistent. Whole groups of animals might suddenly disappear at the close of a geologic period, and be suddenly replaced by other distinct groups of closely related species, without the appearance of intermediate forms. Such facts were naturally insisted upon by the opponents of the evolutionary doctrine, and its supporters could make little retort beyond alleging the imperfection of the geological record. It was clear that the embryological gave partial general support to the idea of evolution, the records existing in the earlier half of last century were too scanty to afford that detailed evidence without which it could hardly be admitted as a cogent witness for the evolutionist. More recently, of course, the position is greatly changed; and the paleontological discoveries of the latter part of the 19th cent. have not only gone some way towards filling up existing gaps in the record, but in certain cases, notably those of the horse and the elephant, have brought to light very beautiful and complete series in which the evolution of an existing animal can be clearly traced back to a geologically remote and widely different ancestor.

(6) Argument from persistent types in geology.—Though the paleontological record exhibits on the whole a progressive series of animal forms through time, there are cases in which a species has remained constant over vast lapses of time. Crocodiles indistinguishable from those now living occur early in Mesozoic times, and the shrew-dog is an almost primitive mollusc and brachichopi still existing in the seas as far back as the Silurian. Though clearly not a positive argument for evolution, such facts as these are evidently not what would be expected on the rival theory of successive cataclysms and special creations; and, as such, they have carried weight in favour of the former alternative, had they been demonstrated.

(7) Argument from the Recapitulation Theory.—The study of comparative embryology was founded by von Baer in the earlier part of the 19th cent., and it was clearly pointed out by him that the forms of early embryonic development do to some extent remind us of the early stages of allied groups are far more alike than are the adults. Thus the early embryos of a bird and of a fish are to the human eye very much alike, and during the course of development the embryo of a bird exhibits such piscine characters as gill-slits. With the course of development the fish-like characters eventually disappear, until the unmistakable avian form is established. But the fact that the animal higher in the scale tends during its embryological development to recapitulate, as it were, the ancestral history of the race to which it belongs appears more natural on the theory of evolution than on that of special creation. Through the work of F. M. Balfour and others in the latter part of the 19th cent., the study of comparative embryology was largely developed, and many striking instances of recapitulation were added to those previously known. At the same time it must be stated that fuller knowledge has shown that embryological development is no sure guide to ancestral history. Nothing is more certain than this, on the evolutionist, that the ancestors of birds were toothed creatures. Yet in no case hitherto investigated in birds is there an embryonic stage in which tooth-gums are present; and numerous other examples could be given in which, during the development of the individual, no traces occur of structures which its ancestors, according to the theory of evolution, must at some time have possessed.

(8) Argument from rudimentary organs.—The researches of the comparative anatomists had revealed in many forms the presence, in an undeveloped state, of organs which in allied forms were obviously of use to their possessors. Small teeth had been found in the fetus of the whalebone whale, traces of hind limbs in certain snakes, small and imperfect additional toes in the split bones of the horse—all obvious imperfections in the general plan of the animal in which they were found. Chambers made use of these imperfect structures as an argument against the hypothesis of special creation. Their existence alone condemned the idea of a special creation, and in seeing that they, 'on such a supposition, could be regarded in no other light than as blemishes or blunders' (Vestiges, p. 262). Yet, though discordant with the idea of special creation, they became intelligible and instructive on the hypothesis of a genetic connexion between the different forms of animal life. For, on that hypothesis, horses must be descended from ancestors with more than one toe, baleen whales from whales with teeth, and snakes from reptilian forms with limbs. Not only was the rudimentary organ explicable on these lines, but it might even give a clue to the past history of the forms in which it occurred.

9. From all this it is clear that the idea of evolution had been fully and critically discussed during the earlier half of the 19th cent., and that the arguments for and against it were fairly set forth before 1850. Yet it had failed to take root. Nor was this altogether due to religious prejudice. A great obstacle in the way of accepting the evolutionary idea was the difficulty of conceiving a natural process by which it could come about. The suggestions of Buffon and the theories of Erasmus Darwin and of Lamarck all lacked compulsion, nor did the ascription of the process to an innate perfecting principle, as
with Aristotle, succeeded in investing it with more than a mere biological status. It was not until Darwin and Wallace jointly formulated their views in 1858 that a working factor was felt to have been found. In the following year appeared The Origin of Species, a work which has influenced human thought more profoundly than any other book of modern times. In that work, Darwin summed up the existing arguments for evolution, and at the same time clearly and convincingly demonstrated a working principle by which Charles would have been led to suggest. This factor was 'Natural Selection, or the Preservation of Favoured Races in the Struggle for Life.' The idea was not entirely new. It had been formulated by Wells in 1813 and by Matthew in 1831, but in both cases it had been thrown out rather as a suggestion in connexion with a small class of facts than as a principle of the first importance and of general application. The greatness of Darwin lay in his appreciation of the profound importance of the principle he advocates, in his patient accumulation of facts, and in his masterly handling of them when brought together.

To Darwin, as later to Wallace, the first hint of natural selection had come from the reading of Malthus's Essay on the Principle of Population (London, 1798). The main theme of Malthus was that stagnation in population would result from an unbalanced food supply, and stress was laid upon the inevitable struggle for existence that arose unless this tendency was somewhat checked. Malthus concerned himself solely with his own species. For him the struggle was an unpleasant fact, a source of human misery of which some mitigation was much to be desired. What was to Malthus a fact of mainly economic significance became to the wider vision of Darwin a phenomenon of deep philosophical import. For, with a struggle for existence once granted, the logical outcome was the working factor in evolution for which naturalists had long been searching in vain. But to complete the argument two further co-operative factors are needed, and these were demonstrated by Darwin in the Principle of Variation and the Principle of Heredity. According to the former, no two animals or plants are quite alike; but even the offspring of the same parent or parents tend to vary, in greater or less degree, both from them and from one another. According to the latter, the peculiarities exhibited by the parents tend to be repeated in their offspring, to some in greater, to others in less intensity. In other words, offspring are never exactly like their parents, but nevertheless tend to resemble them in greater or less degree the members of the same species or variety. If such is the normal condition of a population of living things, and if upon them is imposed a struggle for existence induced by over-multiplication, it follows necessarily that a progressive change will take place in that population. For, since its members are not all alike, some will possess variations through which they will be better equipped than others for survival in the competitive struggle for existence; and these will, therefore, tend to leave more offspring than their less advantaged brethren. These offspring will tend to resemble their parents in exhibiting the favoured variation in greater intensity than their parents; moreover, they will be still more greatly favoured in the struggle, and will tend to leave offspring of whom some will possess the advantageous variation in even greater intensity. The process is cumulative. Automatically, the struggle for existence leads to the more favoured variations surviving to become the parents of the next generation. And, as through the principle of selection offspring will show the advantageous variation more marked than the parents, it follows that this variation must become gradually built up by small degrees in each generation, until a definite change of type has been brought about. To this automatic process, by which those showing the more favourable variations were picked out for parentage, Darwin applied the term 'natural selection.'

In The Origin of Species Darwin's performance was twofold. First, he brought together once more the various arguments for evolution, supplementing them by great stores of knowledge, and making use of a new argument in the geographical distribution of animals. Secondly, he endeavoured to show how, through this newly discovered factor of natural selection, evolution might be brought about. That he succeeded in his endeavour, in spite of the most strenuous opposition, is now well known. A few years had to elapse after the publication of The Origin of Species before the new doctrine of evolution through natural selection was generally accepted by scientific men, and much vigorous controversy was at first engendered in the clash between the adherents of Lamarck and the new doctrine. But after a while the new doctrine rapidly won its way in spite of the prejudices it was bound to arouse; and the fact that it has already been accepted for some years in all schools of thought is not a little due to the pens of Ernst Haeckel, Germany, and of T. H. Huxley in Great Britain.

To Though Darwin himself regarded natural selection as the main factor in evolutionary change, he did not consider it to be the only one. He attributed some influence to the effects of use and disuse which he considered to be inherited, thus following the teaching of Erasmus Darwin and of Lamarck (cf. art. Evolution). Moreover, he was struck by a class of facts which seemed to present great difficulties in the way of explanation in terms of natural selection. For, to be affected by natural selection, variation must have a utility value, whereas this can hardly be supposed to be the case for a large proportion of those highly ornamental characters which are confined to the male sex, and are generally intensified during the breeding season. It is difficult to ascribe any value, in the struggle for existence, to the tail of a peacock or the plumes of a bird of paradise. Indeed, it might be fairly argued that the reverse is the case, and that such characters as these are actually an impediment to the animal's chance of survival. The difficulty was appreciated by Darwin, who eventually accounted for them on the hypothesis that the more brilliant and attractive males would be preferred by the females; and it was Darwin himself who said that some of the latter would gradually bring about changes in the males through a process of sexual selection (cf. Darwin's Descent of Man). This theory has not met with such general acceptance as that of natural selection, and has been definitely rejected by some authorities. Among these is A. R. Wallace, who regards the brilliant ornamentation found in certain males simply as an indication of temperamental vitality. He attributes the virtue of this extra vitality that such males would be more likely than others to mate successfully and leave numerous offspring. By associating this apparently useless beauty with the militaristic property of vigour, Wallace seeks to explain it upon grounds of natural selection alone.

11. The influence of The Origin of Species resulted in the production of vast quantities of literature on evolution during the remainder of the 19th century. In certain branches of biology, notably in those concerned with morphology, embryology, mimicry, geographical distribution, and palaeontology, great numbers of new facts were added; and, on the whole, they may be said to
have resulted in a strengthening of Darwin's position without contributing much of novelty to his argument. Perhaps the most interesting additions in this connection have been the views of Romanes and Gulick on the importance of isolation, whether geographical or physiological, in the formation of incipient species; and Pearson's suggestion of reproductive isolation. Darwin, however, had already pointed out that if any particular character was definitely associated with greater fertility, that character would tend to establish itself in a population without the help of, and perhaps even in spite of, natural selection. Darwin's work brought prominently forward, none attracted keener interest than that dealing with the transmission of the effects of use and disuse. Darwin always believed that such effects could be transmitted, and in this matter he was supported by Spencer, Haeckel, Copé, and many others. There were some, however, to whom Lamarckianism made no appeal, but who considered that natural selection and natural selection; for here was an almost transformation of species. Of this school, sometimes termed the Neo-Darwinian, Weismann has been the chief exponent, and he rendered considerable service to the struggle against the hotly disputed science of challenging the evidence upon which the alleged transmission of 'acquired characters' rested, and in showing that it generally broke down under critical examination (cf. art. Pangenesis).

13. Brief mention may here be made of a theory of evolution which regards inheritance as a form of memory; it was independently developed by the physiologist Hering and by Samuel Butler. Darwin clearly perceived that a true theory of evolution must be based upon an accurate knowledge of the facts of heredity and variation, nor did he less clearly perceive that such knowledge was in his time practically non-existent. In the 6th edition of The Origin of Species, the last published in his lifetime, we find him writing that the laws governing inheritance are for the most part unknown; and, again, that our ignorance of the laws of variation is profound. He himself never ceased to accumulate facts and to make experiments bearing upon these matters, and it was largely due to his intimate acquaintance with the great body of facts so patiently brought together that he owed his remarkable sanity of judgment on doubtful questions where direct proof was for the time impossible. But in this work he had few followers, owing largely to the very barbarous and objectionable suggestions by which he endeavored to make natural selection an acceptable factor through which the transformation of the species might be brought about. He had placed the idea of evolution in a firm basis. It was no longer an unsetting speculation but a definite theory which none in future could afford to neglect. And it was the doctrine of evolution that primarily seized upon men's minds, rather to the momentary extinction of natural selection; for here was an almost promise of a clue to that orderly arrangement of the vegetable kingdom which the students of natural history had long been searching for. It was a true story; it ought to be possible to build up a classification of animals and plants in such a way as to establish the genetic connexions among them. All living things, however aberrant they might seem, should find a place in this scheme of things. Darwin's book, and, whether anatomist, embryologist, or palaeontologist, this was the central thought in the mind of each. In the countless speculations that ensued as to the past history of living things, it was tacitly assumed that the necessary variations could have occurred and could have been transmitted; but, as different as the views of Romanes and Gulick were upon the origin of species, it was not unnatural that widely discrepant views were forthcoming as to the pedigrees of the various groups. The origin of the vertebrates, for example, was treated as though the polycheate worms, to the arthropods, and to the enteropneusts; and, as each author usually supported his views with much ingenuity and some little warmth of feeling, the time and labour occupied by these engaging controversies. As time went on, however, and facts accumulated, the doctrine of evolution became firmly established in spite of differences of opinion as to the exact course which it had taken. As the glamour of pedigree-making wore off, the minds of naturalists gradually turned to other problems.

Though the majority of naturalists at this time were testing the true theory of evolution, the facts of embryology and comparative anatomy, there were, nevertheless, some who attempted to test the theory of natural selection. In this case the attempt was by a study of the particular characters that animals have arisen through the operation of natural selection, it is evident that the theory demands that they should be of value to their possessors in the struggle for existence. If, on the other hand, it was found impossible to ascribe to them any utilitarian importance, the case for their formation through the operation of natural selection was obviously weakened. Through the observation of animals in their natural surroundings, supplemented, where necessary, by carefully devised experiments, it was hoped that light would be thrown upon this problem. In many cases these hopes were abundantly fulfilled. Numbers of creatures, more especially insects, which at one time looked so closely with some feature of their external surroundings as to become practically invisible—an obvious advantage, whether for avoiding over-crowding or for fulfilling some protective role in a fancied sense of security. The form and color of the leaf insects, of the twig-like 'looper' caterpillars, of the spiders which resemble bird droppings, and of a host of other creatures, it would be difficult to deny a utilitarian value, and, in suggesting that the natural selection an acceptable factor through which the transformation of the species might be brought about, he had placed the idea of evolution in a firm basis. It was no longer an unsetting speculation but a definite theory which none in future could afford to neglect. And it was the doctrine of evolution that primarily seized upon men's minds, rather to the momentary extinction of natural selection; for here was an almost promise of a clue to that orderly arrangement of the vegetable kingdom which the students of natural history had long been searching for. It was a true story; it ought to be possible to build up a classification of animals and plants in such a way as to establish the genetic connexions among them. It was a true story; it ought to be possible to build up a classification of animals and plants in such a way as to establish the genetic connexions among them. All living things, however aberrant they might seem, should find a place in this scheme of things. Darwin's book, and, whether anatomist, embryologist, or palaeontologist, this was the central thought in the mind of each. In the countless speculations that ensued...
idea was subsequently extended by Fritz Müller to include the many instances in which several nauseous species tend to resemble one another. Müller suggested that in such cases the toll taken by natural selection, if unrelieved by the advent of new varieties, by being distributed over several species, would fall more lightly on each separate one, and in this manner all would profit by exhibiting a common warning coloration.

With the ideas then current as to the nature of variation, natural selection offered the most plausible explanation of these remarkable cases of resemblance. A new note was struck by Bateson in 1894, when he pointed out that, while the results attained by the study of embryology and of adaptation could be brought into harmony with the doctrine of evolution and the theory of natural selection, they nevertheless offered no explanation of the origin of specific differences. Each assumed a vague capacity for indefinite variation on the part of living things—a plasticity through which natural selection was able to mould them in this direction or in that, according as what was best suited to the course of the author's argument. Bateson insisted on the importance of the study of variation, if further progress was to be made with the problem, of knowing beforehand the extent to which they might have themselves unlimited credit in dealing with variation, whereas they ought first to have inquired what variations actually did and what did not occur. By the systematic collection of facts Bateson was able to show that in many cases variation is certainly of a discontinuous nature. Definite variations are constantly found as part of a population living and presumably breeding together, in the absence of any intermediate forms. As examples may be mentioned the normal orange and the paler yellow form of clodded yellow butterfly (Colias edusa), the red and blue of the red underwing moth (Catocala supata), the blue and the scarlet varieties of the common pine-miller (Anagallis), or the ordinary brown and the violet-green valesina form of the silver-washed fritillary (Aglaia paphia)—examples which might be almost indefinitely multiplied.

The existence of such cases is difficult to explain on the view of evolution usually current. In the first place, it is not easy to account for the existence of both or of any intermediate forms. As examples may be mentioned the normal orange and the paler yellow form of clodded yellow butterfly (Colias edusa), the red and blue of the red underwing moth (Catocala supata), the blue and the scarlet varieties of the common pine-miller (Anagallis), or the ordinary brown and the violet-green valesina form of the silver-washed fritillary (Aglaia paphia)—examples which might be almost indefinitely multiplied.

of certain plants introduced into culture from distant habitats. Neither of the Chinese primulas (*Primula sinensis* and *P. obconica*) is known to show in its native wild state the profusion of form and colour that characterizes the cultivated forms. The historical evidence points to the different varieties having arisen as 'sports' from the wild forms when placed under cultivation in contrasting environments or habitats. This is the case with the sweet pea, which offers another instance of the same story. The original purple form first reached England from Sicily at the end of the 17th century. Not long after its introduction, a red and a white variety are recorded in addition to the purple, and by the middle of the 19th century, several other shades of purple and red were in existence. But the enormous number of varied forms, both in colour and shape, now to be seen are of recent origin, and in some cases, e.g. that of the dwarf 'Cupid,' it is certain that they originated in California, from seed sent out there to be grown on. Such examples as these are typical of the experience of the horticulturist. The new forms are produced by natural selection, and, having been suddenly and for no apparent definite reason. Once it has appeared, it is a matter of a few years only to fix it so that thenceforward it breeds true to type. Natural selection is now understood. The purple variety is evidently increased by a sharp change in the environment, such as is to be obtained by transferring it from one country and climate to another. Precisely why this should be is not at present known, but there is reason to suppose that the environmental change leads to abnormal divisions in the ripening germ-cells, and that these abnormal divisions are the starting-point of the new variety.

In a true breeding this process of cell-division by which the germ-cells ripen are symmetrical, and the germ-cells themselves are all alike, in that the factors contained by each are the same, both in point of number and of quality. Should, however, certain of the cell-divisions be abnormal, they must result in an asymmetrical distribution of the factors to different germ-cells, so that some contain one or more factors in excess of the normal, and others one or more factors less than the normal. If two germ-cells are each with a factor less than the normal come together, the resulting individual will be completely lacking in a factor possessed by the original form and will hence be true to type. And, indeed, the evidence from experimental breeding points to the majority of domestic races of animals and plants having arisen in this way (cf. art. HEREDITY). The new form comes into being by the loss of this or that character from the original wild, and this loss must be supposed to be dependent upon the elimination of the appropriate factor or factors somewhere in the cell-divisions which give rise to the germ-cells. Less commonly the new form must be regarded as possessing one or more factors in addition to those present in the form from which it sprang, and it is possible that this is due to the formation, through cell-division, of an asymmetrical division, of certain germ-cells with more factors than the normal, and to their subsequest union to produce an individual of a new type.

When once the new variety has arisen, natural selection decides whether it is to persist with or to replace the form from which it sprang. Since the difference between it and the normal depends upon a definite and clear-cut distinction, and since that distinction is respected throughout the hereditary process, the variety, having once arisen, cannot, as Darwin once thought, be swamped by continual crossing with the normal form. On the contrary, as G. H. Hardy has shown, a population mating at random with a variety that has been superimposed upon the original, would, after the first generation, be no different from the original. In the absence of natural selection, retain its constitution. Provided that it is equally fertile, the new form will hold its own even though present in very small numbers, and the population will remain in a position of stability. Positions of stability can be reached in two ways, or with two values of the equation $q^2 + qr + r^2 = 1$, where $p$ and $r$ are the numbers of the pure-breeding individuals of the type and variety respectively, while $q$ is their hybrid type. If, however, the variety be favoured by natural selection, though only in a slight degree, it will gradually supplant the original form until the latter is eliminated. Moreover, the process must be a rapid one. If a population contains 99 per cent of a new variety, and if that variety has even a 5 per cent selection advantage over the original form, the latter will almost completely disappear in less than 100 generations. Cases of this sort are not unknown to actual experience. Sixty years ago the dark double *dianthus* form of the common peppered moth (*Amphipysis betularia*) was known only as a rare variety. To-day it has almost entirely ousted the original form in many parts of England and of the Continent.

17. Considerations of this nature have a bearing upon a class of facts which at first sight are not easy to explain, and they may determine the fate of a species. Any species is distinguished by its homogeneity. Colour varieties are numerous in the domestic rabbit; in the wild rabbit they are rare. On a scheme of evolution based upon the mutational nature of variation, it is this homogeneity that offers difficulties in interpretation. But, if the wild form be supposed to possess even a slight selection advantage over the various other colour forms, the rarity of the latter becomes more comprehensible. They may arise, and, with the conditions adverse, though ever so little, they must tend to disappear.

18. There is another aspect of species which is not so generally taken into account. Most species—using the word in the Linnean sense—are seen, when examined closely, to consist not of a single form, but of a number of slightly different, though perfectly distinct, forms. This was clearly brought out in the middle of the 19th century by the French botanist Jordan and others. Jordan showed, for example, that the Linnean species *Draba verna*, the common whitlow grass, can be analyzed into a great number of forms, each more or less marked off from any other by habit, shape of leaves, etc., and can be bred true from seed. Such is also the case, though generally to a less extent, with many other species. Moreover, it has been shown by experimental breeding that in some cases these varieties—or 'elementary species,' as they have been termed—differ from one another in the same way that domestic varieties differ. They follow in heredity the Mendelian law of segregation, and the differences between them must be supposed to depend upon the presence or absence in their constitution of specific factors for the characters in which they differ from one another. When, as so often happens, many of these elementary species are found together, it must be supposed that no one of them has any selection advantage over the rest. Were the conditions of life to alter so that one form was favoured above the others, even to a slight extent, that form would tend rapidly to supplant all the others; and it is conceivable that this may already have happened in many cases of species which exhibit relatively few varieties.

19. The problem of what constitutes a species is one that has vexed the minds of many naturalists and philosophers; but, in spite of much that has been written upon the question, it is yet unsolved. The classification of species at present in vogue is an
extension of the Linnean system, and is mainly based upon external features either of structure or of color. In most cases these external differences are accompanied by the phenomenon of sterility between even closely allied species, though this is not necessarily so. There are cases, such as those of the horse x ass cross and the horse x zebra cross, in which the offspring is fertile, but in which the latter are themselves sterile. In some groups of animals, again, hybrids between acknowledged species have been shown to be fertile when intercrossed with any of the parent species. This is the case with various forms of oxen and buffalo, and especially with the duck and pheasant tribes, where crosses between birds classified as belonging to different genera have been proved to produce fertile offspring. For the systematist, however, whether botanist or zoologist, it is the external features that matter, for upon them he has to base his classifications. But instances are becoming more numerous in which it has been shown that two species founded in this way are fertile together. Whether they are to be regarded as one species or two depends upon the external features of the offspring or whether it is sterile. On the whole, it may be said that there is a general consensus of opinion in favour of the latter. If, then, the phenomenon of sterility lies at the root of the species problem, it becomes of the first importance to form a clear conception of the causes to which sterility is due. There is no doubt that in some cases it is due to mechanical causes, as, for example, where there is great disparity in size, or for some other reason. But the sterility that is associated with species is of a different nature. The germ-cells may come into intimate contact, fusion may occur, and development may even proceed for some way; yet the process stops short of the production of offspring. There would appear to be some incompatibility, probably of a chemical nature, preventing two healthy germ-cells from giving rise to a new individual. Everything seems to point to the problem of species resolving itself into a problem in chemistry, but the present state of knowledge does not permit of more definite statement. Darwin clearly recognized that the phenomena of sterility could not be explained in terms of natural selection. For the gradual acquisition of sterility on the part of certain individuals cannot be regarded as advantageous; rather is it likely to lead to the decline of those individuals or to the rest of the species. The most natural view of the origin of sterility is to regard it as having arisen through some abrupt physiological change in the organism—a change which at bottom must probably be conceived of as chemical. Sterility is of the nature of mutation; and, if we look upon it as the essential characteristic of species, we must also regard mutation as the bridge between one species and another. The mutational change upon which the sterility depends may become associated with other characters either before or after it first arises. Such associations of characters are not infrequently met with as the facts of heredity are coming to be more carefully studied. External features would then become transformed into not only characteristic but even essential features of the species. Without a species is defined as not out of which it had arisen, but its origin must be sought in the origin of the fundamental sterility which it shows towards the parent species. Beyond the fact that it is a process initiated in the germ-cells, almost any additional definition of the conditions under which a mutation arises. Until such knowledge is forthcoming, that most important link in any theory of evolution—the proof of the nature of species—must remain unsolved.

EVOLUTION (Ethical).—As its title implies, this article is concerned with ethics as explicable only by the principle of evolution. The application of the science of biology, psychologists, in seeking to explain the constitution of the human mind, assumed it to be different in kind from animal mind, and postulated certain innate ends and faculties which analysis would furnish a clue to character and to all mental operations. A history of the various theories of the nature and foundation of morals lies outside our province, but, as briefly indicating points of difference between them and the theory summarized in this article, it may be stated that they are mainly resolvable into what are known as the Utilitarian and the Intuitionist. Utilitarianism was first among the 18th cent. philosophers to formulate (the doctrine itself is as old as Socrates), and of which Bentham and the Mills are the chief modern exponents—defines virtue as that which is approved, and vice as that which is condemned, the sole standard of morality being utility, whose aim and end is 'the greatest happiness of the greatest number.' Spencer incorporated Utilitarianism into his Principles of Ethics, but held that it tends to become wholly altruistic, and modified it by giving play to the egoistic also. The Intuitional, of which Butler is the most famous exponent, and James Martineau is the modern upholder (see his Types of Ethical Theory, Oxford, 1866), assumes that there is in each individual a faculty of innate or immediate cognition and perception of what is good or evil, true or false, this intuitive faculty acting without the intervention of reason or the guidance of experience.

A death-blow was dealt to methods of introspective interpretation by the publication of Herbert Spencer's Principles of Psychology (London, 1855) and Principles of Ethics (loc. 1879-1892), and of Darwin's Descent of Man (loc. 1871), notably in its chapters on 'Comparison of the Mental Powers of Man and the Lower Animals. Extending the comparative method, which had justified its application in other directions, to the psychical. Biology has demonstrated fundamental relations between the mental apparatus of the lowest and highest organisms, and has shown, to quote Field- win's cogent words, that 'the development of mind in its early stages, and in certain directions of its progress, is determined at preschool in the conditions under which a mutation arises. Until such knowledge is forthcoming, that most important link in any theory of evolution—the proof of the nature of species—must remain unsolved.'
within, involving adaptation to needs, lies the explanation of processes linking man, animal, and plant. The higher the degree to which the activities are of fundamental and permanent instinctive impulses (inherited tendencies of which the nervous apparatus is the vehicle) which supply the driving power to the jealousy all the more the struggle is sustained. From these impulses the complex faculties of the most highly developed minds have their source.

They are the mental forces that maintain and shape all the life of individuals and societies, and in their interaction their central nucleus the life and mind and will' (W. McDougall, *Intro. to Social Psychology*, London, 1908, p. 44).

In the behaviour of the lower organisms there is manifest the potentially psychical 'faint copy of all we know as consciousness in ourselves' (Francis Darwin, *Presidential Address*, Brit. Assoc. 1908).

The glaukonic leaves of the *Drosera* or sundew, and the bladders of *Utricularia*, or bladderwort, entrap the luckless insect which alights on them, and assimilate it for their nourishment. The ameba withdraws its pseudopods when touched, and selectively seizes the thing it feeds upon. And thus the instinctive impulses might be traced along the entire line of psychical evolution, the instinctive yielding to the rational in such degree that, in Ray Lankester's phrase, the animal becomes more 'educable' (*Kingdom of Man*, London, 1907, p. 23).

They are the fundamental impulses of nutrition and sex, which, Wundt contends, men and animals alike possess 'to form the inalienable foundation of human society as well as of animal association' (*Ethics*, 'The Facts of the Moral Life', p. 129).

The classification of instincts lies outside the province of this article, and it suffices to refer only to the gregarious or social instinct as the essential factor in ethical development. Man, as a solitary animal, is unlike any other; 'It is not good that the man should be alone' (Gn 2:18), and Aristotle follows the writer of the Book of Genesis when he says that 'he who is unable to live in society must be regarded as not existing at all' (*Politics*, pp. 893 and 834). 'A man not dependent upon a race is as meaningless a phrase as an apple that does not grow upon a tree' (Leslie Stephen, *Science of Ethics*, London, 1882, p. 81); and individual and racial obligation and morality are as interdependent as the personal and the social are inseparable and correlate. The unending struggle for life—and there is no discharge in that war ('Ec 8:1')—is a dominant factor in bringing about, on the one hand, individual dependence at maturity in the case of solitary animals, as, e.g., the eagle, cat, and lion; and, on the other hand, collective dependence among social animals, as, among invertebrates, the ant and bee, and, among vertebrates, e.g. non-raptorial birds, sheep, horse, dog and man. Turning to the ant, as corresponding in position among insects to the position of man among mammals, there is, says McDougall, 'no trait in emin. character more interesting than the entire devotion of every individual, even unto death, to the welfare of the community' (*Ant Communities*, London, 1905, p. 81).

Animal morality thus begins with the maxim *salus populi suprema est lex* governs alike ants and men.

Speculating on the social habits of our earliest-known ancestor, *Pithecanthropus erectus* (see art. *Anthropology* in vol. i. p. 563 f.), who, in expert opinion, represents the stage immediately antecedent to the human, the author of *Evolution* has proceeded in advance of the simian,' we have only analogy to guide us concerning primitive human unions. Arguing from the strength of 'the feelings of jealousy all large social communities are governed', as from the analogy of the lower animals, more particularly of the anthropoid apes,' Darwin formulated the theory that aboriginal man 'lived in small communities, each with a single wife or, if powerful, with a harem'. The Bible 'calls them guarded against all other men' (*Descent of Man*, ch. xx. p. 901). Without question, in one form or another, the family is the social unit, impetus to personal and permanent association being given by the longer period of infancy in the human as compared with that period among the higher mammals. It may be remarked that the larve of the ant pass through a prolonged babyhood involving incessant parental care, because the condition of helplessness and dependence strengthens the self-sacrificing instinct of the parent, supremely that of the mother, who, in nourishing her offspring, feeds upon its excretions. John Fiske, who in this matter was preceded by Anaximander two thousand years ago, treats this fully in his *Century of Science*, London, 1899, pp. 100—122.) Hence, in the satisfaction of the physical needs of the child the child binds together solicitude, love, self-denial, courage, and—greatest of all—the sympathy out of which the morals of family life are woven, strands multiplying in number and strength until they bind together gentes or groups of the same blood-brotherhood, clan, or totem, these aggregating into tribes which are the foundation of the nation, the patriotism engendered by which is the family bond 'writ large.' One and all are the outcome of social heredity. 'Society is the school in which men learn to distinguish between right and wrong' (*Westermarck, MT* i. 9), and in this lies the key to the nature and origin of the judgments which make up the ethical codes of every age and race. These judgments are wholly subjective, being the outcome of emotions whose beginning and impulses are social. For Nature supplies no standard by which to govern conduct: from obedience or disobedience to her laws invariable consequences follow, but these have no element of the ethical; they are neither rewards nor punishments. The earth may be said to have 'dark places' may be 'full of the habitations of cruelty' (*Ps 73*), but 'seedtime and harvest, and cold and heat, summer and winter, and day and night shall not cease' (*Gen 8*).

Moral concepts have their basis in feeling, not in reason; moral emotions, as Westermarck argues, fall into the two classes of disapproval or indignation, and approval, each belonging to a wider class of emotions which he calls 'retributive,' disapproval being manifested in anger and revenge, and approval in 'retributive kindly emotion,' including gratitude (op. cit. i. 21). This assumes organization within which is turn demands an altruistic, rather than an egoistic, individual.

It is the extension of the application of natural selection to groups rather than to direct application to individuals that has given birth to morals. Morality has arisen because it is socially useful; says McDougall: 'the survival of the fittest' (*Baldwin, and the Humane Life*, London, 1910, p. 64).

As J. A. Thomson says, 'progress depends on much more than a squabble around the platter' (*Darwinism and the Human Life*, London, 1909, p. 92); and Darwinism recognizes that mutual aid has modified the rigour of the struggle in both the animal and the human. Stripped of a certain coat of exaggeration, the numerous stories of help
rendered by one animal to another are not to be dismissed as 'travellers' tales. For example, in his account of the hawk, the American ornithologist Hudson says that, when one of the barrows is destroyed and the viscachas are buried alive, other viscachas will come from a distance to dig them out ('Naturalist in La Plata, London, 1892, p. 190).

The degree in which the social and sympathetic impulses have been developed is the measure of the relative place in intelligence reached by man speaking. The unfettered and undirected strength of the community is made effective by restraint and subjugation of self-assertion to the interests of the community. An ethical code has warrant and permanence only in the degree in which it secures the healthy interplay of regard for self and for others, and, wherever this is defied in wilfulness or weakness, natural selection, extending its operation from individuals to groups, secures the survival of the fittest, who possess an ethical value in maintaining the health of the social organisms. The weak and wilful, those who detach themselves from the communal life, go under. The solitary animal fights for its own life; the social animal must be strong enough to maintain its tendacies towards self-regardfulness are restrained by communal action whose one end is the common weal. 'That which is not good for the worm is not good for the angel,' (V. 51).

Morality is the sum of the preservative instincts of a society, and presumably of those which imply a desire for the good of the society itself' (Leslie Stephen, "op. cit. 288). Society being possible only by the compliance of each member with what the community sanctions as necessary to its welfare, or abstinence from what it forbid's as inimical thereto, it follows that, in the prohibition or permission of certain acts, we have a fundamental constant, a moral quality in acts which, however much they vary in character, cumulative experience pronounces to be harmful or helpful to the community—in plain language, right or wrong. The means vary, but the end to be achieved is the same, and the achievement is by co-operation. Social acts have a quantitative, not a qualitative value, because man everywhere is psychically, as well as physically, fundamentally the same. His monogenetic origin, with good evidence, is assumed; so is his enormous antiquity, which supplies the explanations into varieties and for the different degrees of civilization to which these, be they white, yellow, red, or black, have attained. Man being, at the core, the same everywhere, observation of what, at first sight, seem his vagaries brings home how superficial are the changes which time has wrought since he came to express his philosophy—for such it was in the making—of things. He remains, in the main, as his intermittent outbursts of fury and savagery everywhere evidence, a creature of instinctive impulses inherited from his animal ancestry; as an emotional being, his antiquity is deathless, and a reasonableness he is a late and somewhat rare product. But whatever he has evolved in thought and put into action has justified its existence, because it has responded to some need. It has had, little as might be discerned, some 'soul of goodness' imputing the strength of the time being, seemed to secure the common weal.

Since both religion and ethics are social in origin and, therefore, institutions subject to the law of development, there is no state in man's history on which we can put our finger and say: Here he became a religious and a moral being. It is, therefore, necessary to recognize, as main factors, the impulses to social order which communal life postulates as the primal sources of moral codes. If 'society is the great agent of the human spirit,' (Ames, Psychology of Religious Experience, London, 1910, p. 131), 'custom is the earliest shape in which duty presents itself to the consciousness of the savage' (F. B. Jevons, Intro. to Hist. of Rel., London, 1898, p. 190). 'Little by little and, as it were, by stealth, custom creeps into our authority as the origin of her authority in us' (Montaigne, Essays, I. 335, Dent's Temple ed.). In their preference both 'ethics' and 'morals' witness to their origin. The one is from φυσική, a modification of φυσική, custom, usage, manners; the other from φοίτησις, morals, pertaining to manners, therefore to conduct.

Be man savage or civilized, the reluctance to defy or to depart from the usual, the fear of being called 'eccentric,' i.e. 'out of the circle,' is in his bones. Conservatism, or because, after all, we do think it is, with possible to overrate either the authority or the value of custom as a factor in conduct. Identity of belief and practice makes for unity and stability, and this is the source of tradition. To what particular and local causes the great body of customs, infinite in variety, and, not seldom, irrational or inconsequential, is due remains an insoluble problem, because of the multitude of good followings, which it was possible that they arose. We have only to observe how, among intelligent persons, some chance occurrence will excite or paralyze action, to see, a fortiori, how, among unintelligent people, some casual event, followed by fortune or the reverse, will cause this or that line of conduct to be made a rule of life, and obedience thereto to become a rule of conduct, a part of the customary law, of the community.

Imitation—this phenomenon of 'ethical and moral social life' (McDougall, p. 336)—whether in creeds, codes, or clothes, has been a powerful element in the conservation of the decrees of custom. To both savage and civilized are applicable the lines which Henry Sidgwick composed in his sleep:

'We think so because all other people think so ;
Or because—oh, because—after all, we do think it is,
Or because we were told and think we must think so ;
Or because we once thought so and think we still think so ;
Or because, having thought so, we think we still think so.'

Closely linked with imitation is the influence of suggestion in swaying judgment and conduct, sometimes for good, but, perhaps, as often for evil. The imitations he follows in a crowd, in seen what each member of it, detached from his fellow, would reject as a fable. Hence, frequently, the worthlessness of collective evidence and judgment; hence, too, often, the valuelessness of concurrent testimony even from men of scientific training as to the validity, say, of so-called spiritual phenomena when, expecting to witness the same, they meet in seances. Hence the aberrations when some dominant idea takes possession of the unphilosophical, with mischievous results akin to the epidemic delusions of the Middle Ages, or the corybantic displays of hysterical revivalists, or the terrorism of the Apaches of Paris and the hooligans of London and other crowded centres.

Travelling along the line of least resistance, the general attitude of civilized communities, in which the primitive is persistent, towards innovations explains the conservatism of the savages. At the death of the weight of the dead hand of custom that the nameless reformer who ventured to resist it must have been stamped in no common mould. For St. Augustine to insert the point of the wedge of disruption; it was to assume that he who defied was wiser than his fathers, or, committing rank blasphemy, wiser than the defiled ancestors, the traditional framers of the tribal
EVOLUTION

What long pro-rational ages of stereotyped acquiescence prevailed is well shown by the fact of the main reason still plays in content; the emotions as, primarily, the outcome of the instinctive impulses which are the bases of mental activities show themselves dominant and persistently, the same state as a "rare and an occasional exception"; and, where the wisest are not supreme, there stagnation rules (see Bagehot's "Physics and Politics", London, 1857, pp. 41, 211).

But an ounce of example is worth a ton of exposition.

Herodotus (II. 83) narrates how "Darius asked certain Hel- lenes for what price they would eat their fathers when they died, and they answered that they would do so.

After this he summoned those Indians who are called Callidians, who eat their parents, and asked them, in the presence of the Hellenes, for what payment they would burn the bodies of their fathers when they died; when they cried aloud and bade him keep silence from such words. Then those three were established by usage, and I think Pindar spoke rightly in his verse when he said, "Custom is the King of all."

Fifteen centuries later, a traveller in High Albania tells us:

For all their habits, laws, and customs, the people, as a rule, have not one explanation: "It is the custom of Lek," the law that is said to have been laid down by the chieftain Lek Dakub- ghi. Lek is said to have legislated minutely on all subjects. Of himself little is known. He has left no mark on European history—"is a purely local celebrity—"but that "Lek said so."" Old Custom is a great law. The teaching of Islam and Christianity, the Sheriff and Church law, all have to yield their place to "Lek's orders."" (A. W. H. Dukart, "A如的 Albania," London, 1909, p. 53). There is an Albanian proverb which says: "It is better that a village should fall than a custom (ib. p. 580); and another: "He who does not fear God, nor God's laws, nor the church, is no better than a dog.

A murderer, adulterer, or sodomite will obtain easy absolution from the Church, and even find favour with society; but a man who does not fear God, nor God's laws, nor the church, is avoided and abhorred as a monster of repulsion. How all the ages used in their assumption of moral qualities for use in acts which have no bearing on character—the confusion of mature in se with meritum proibitum—is further seen in comparing a passage which Atius Gellius (Notee, x. 28) quotes from Cicero, that it is for the husband to condemn and punish his wife if she has been guilty of any shameful act, such as drinking wine or committing adultery, with W. G. Palgrave's account of the Washaki moral code, in which the great sins are paying divorce honours, desertion, bigamy, murder, robbery, and murder, adultery, and false witness are 'merely little sins' ('Journey through Central and Eastern Arabia', London and Cambridge, 1886, ii. 370)

The literature of the subject of the tabu is en- ormous, and here it must suffice briefly to refer to the widespread institution as a continuous and effective factor, even among the civilized, often in unsuspected form, in human conduct. In "Psyche's Task" (London, 1899), Frazer has shown, in a series of cogent examples, how 'by virtue of his tabu-abilities' man secured stability for use in the fundamental bases of society, government, private property, marriage, and regard for human life. The belief that dire results will follow breach of rules as to things forbidden is the most powerful deterrent that superstition has begotten. Curses and charms, and all other appurtenance of the sorcerer, are more effective than the prosaic bogy. 'Trespasser will be prosecuted,' and the would-be evildoer is by the fear of some horror or disease will follow the stealing of his neighbour's yams; or that he may go mad-ridden for the rest of his life, if he stealthily removes his neighbour's branch of the banyan. The belief that irregular sexual relations will disastrously affect the fertility of the crops is a check on incontinence, and therefore an encouragement to the formation of orderly con- nexion. The belief that the ghost of a slaughtered man will wreak vengeance on the tribute to which the murderer belongs creates a feeling that shapes codes embodying ideas of the sanctity of human life. Orocues was driven from one land to another, not so much because he had killed his mother, as because of the peril to others brought by him who was pursued by the Erinyes.

In their later analysis the codes of every age and people are found to deal with human relations.

'Tis pure religion and undefiled before God and the Father is this, to visit the fatherless and widows in their affliction; not as 'a rare and an occasional exception'; and, where the wisest are not supreme, there stagnation rules (see Bagehot's "Physics and Politics", London, 1857, pp. 41, 211).

Society is looked upon by the Kaffir as the essential virtue.

The children play in great bands. To loaf about alone would be regarded as a highly penal offense, and every child regards eating in according to age and sex, as a natural appetite and there is no law that "thou shalt not steal." In the case of Teachers of the Ten Commandments, seven are concerned with such duties. In the first centuries older than the Hebrew code, the Instruction of Pitho Hotep, the author 'devotes his work entirely to the principles of charity and duty to one's neighbour' (tr. W. G. Mann, 1896, p. 33); and the essence of the teaching of Confucius, 'the purest of any in the world,' is—'Act socially' ('Confucian Analects' tr. Giles, 1897, p. 27).

In early social stages, acts of mutual help are restricted to the community. Among existing savage peoples, as the Comanches, Kalimbas, and others, the social code is held in reverence, their admission to higher rank. Speaking of the ancient Germans, Cesar says that 'robberies beyond the bounds of each community have no infamy, but are condoned as a means of exercising youth and lessening sloth' (de Bell Galli. vi. 23). 'Ought' was originally the preterite of 'to owe,' but moral obligations long remained intra-tribal, and the life-struggle which at the outset compelled this, among even the highest civilized communities, is yielded but partially and tardily to a wider sympathy and benevolence which are the fruits of a closer inter-course between, and therefore enlarged knowledge of, peoples—socially and materially. Hence the racial differences appear to be too deeply engraved to warrant hope that white, yellow, and black will ever be linked in a world-embracing sympathy.

For numerous examples of the distinction between intra-tribal and extra-tribal misdeeds, see Westermarck, H. K. 20-25).

There never has been, probably there never will be, a uniform, unalterable standard of right and wrong, applicable through all times for all men.

'The moral world is as little exempt as the physical world from the law of ceaseless change, of perpetual flux. ... We can as little ascribe to the march of nature the loss of population, and the still greater "sweep of the tides or the courses of the stars" (GB, London, 1901, vi. 20) the instinct of the fecund and the perishing.

Since the migration of primitive man from a common cradleland, the different environment has been operative in dividing the race into permanent varieties. Sociological differences have resulted, and, since each branch of society, there inevitably arise the contradictions, varieties, and, often, repellent elements whose presence would otherwise perplex the student of the astoundingly complex official customs of the world.

'The study of moral advancement is not tracing out of a single straight line, but rather the following of a very winding curve' (C. J. Robinson, "Moral in Evolution", London, 1906, i. 57).

In ethics, as in biology, there is not continuous progress, but adaptation, which sometimes involves retrogression, and adjustment on a lower level.
The sea-squirts, lancelets, and rotifers have their correspondences in degenerate races, in the decline and fall of civilizations whose types of manliness we cannot hope to excel, whose codes embody precepts which are sufficient rules of life, and whose art of living is the envy of the world, not because it surpasses, but because it gives hope to survivals. The moral standard is the measure of civilization in the highest; and that not a commercial, sense which a community has reached, and that standard advances with the growth of the race; and who was ever in the course of a few years, changes so momentously that what is approved or tacitly condoned at in one generation is condemned and punished in a later. For the code does not create the ethic; it can only embody what, after ages of sore testing, man has felt to be best for man—a result attainable only when acts have their foundation in sympathy disciplined by judgment. We must not travel out of the history of our own criminal code for examples of the relativity of morals, and of their advance along the lines of social evolution.

In the later part of the 16th cent. Sir John Hawkins, captain of a slave ship named the Jesus (1), gave some of his profits to the founding of Chelsea Hospital. He was made a larger gift, but he explained that 'so many of these wretched creatures are sold in Europe for spurious gold that it is only for God's sake that we are enabled to barter them.' It was not till 1807 that the importation abolished slave trade, and another twenty-six years passed before slavery was abolished in Britain. The punishment for the offense of piracy was by the 19th century 200 lashes and compensation. The collective conscience has passively acquiesced in what has gone on unquestioned for centuries; only as the moral tone has fallen has been a change made by a generation of lesser gods who were 'angry with the wicked every day' (Ps 7th AV) arrested the course of many an evil-doer. And to this day, wherever the moral tone is lower, and social conditions worse, the belief that it is a necessary and often, effective check. In the slow evolution of man from the ape and tiger stage, it seems probable that many ages will pass before the protective mechanisms will redress the wrongs of others, so that no one life shall be worse than the acts through the acts of another, will be the ruling motive of conduct. 'Evil is wrought' not only by 'want of thought, as well as want of heart,' but by the accompanying lack of imagination. It is the absence of this which prevents a man from putting himself in the place of those whose actions he may, without warrant, condemn, and deceives him of that sympathy which is the social cement. On the other hand, it is by this faculty of imagination that man has devised instruments of cruelty and torture, and methods of crime which have made him lower than the brute.

Viewed from the standpoint of evolution, the assumed dependence of morals on theology (which, as a body of dogma, is a different thing from religion) is injurious thereto, because the authority of an ethical code is weakened in the degree in which it is bound up with creeds whose truth is questioned, and which, as knowledge advances, become obsolete. Examples of this mischievous connexion are supplied by witchcraft, to give up belief in which, John Wesley contended, was to surrender belief in an infallible Bible, wherein is commanded, 'Thou shall not suffer a witch to live' (Ex 22:18, cf. De 18:10); and by the justification of the custom of determining guilt or innocence by ordeal given in Nu 5th. Moreover, the codes of both savage and civilized peoples show that the quality of actions which are held to be sins and punishments are determined by the conceptions entertained regarding those beings. On the lower plane of these sinful acts are omissions of ritual, withholding of offerings, and other omissions which have no relation to conduct. 'The gods of the Gold Coast are jealous gods, . . . jealous of the adulation and offerings perpetually due to them. They demand so much as to make the writer feel they respond so much as to make, whether intentional or accidental, which may be offered them' (Ellis, Tribes-speaking Peoples against his fellow believers, p. 1087, p. 1087. In Australian legend, the god Ankaus expelled man from heaven to
earth for neglect of his ceremonies. He made no moral law, but his ritual law as to circumcision and whirling the bull-roarer must be obeyed. In the Hitod (xxxiv. 66), Zeus says to Hera that he had sworn to him all moly, 'because he nowise failed in the gifts I loved. Never did my altar lack meanly feasts of animals, and the list of sacrifices; even the honours that faileth to our due.' Speaking of the modern Greek, J. C. Lawson says: 'In the mental attitude of the worshipper, there is little or no idea of reward or punishment. The words, 'sacrifices written, 'gifts win the gods' (Mod. Gr. Doul. and Anc. Gr. Ric., C.), in which the god gives, cost us nothing for nothing. Each blessing has its price. Health is to be had, say, for a calf; wealth, for a couple of yoke of oxen; a kingdom, for a horse. He is to be appeased.' General crimes against superstition being that of mentioning his name, or, per contra, as in the light of the sun or moon, without its blessing: it was innumerable importance to know the correct name (Warre Fowler, Religion of the Roman People, London, 1911, p. 119). How the nature of the offering available to the gods is ruled by the conception of the offerer is seen in the advance from sacrifices of 'thousands of rams' to the social acts of justly and loving mercy (Mie G5). For the highest moral law is 'expressed in the form, 'Do this,' not in the form, 'Do this' (Leslie Stephen, op. cit. ed. 188). The comparative method, to which reference was made at the outset of this article, has justified its application to inquiry into the evolution of the moral sense. It has imported order into a realm of speculation and inquiry, where hitherto confusion and chaos ruled. It has made clear the fundamental uniformity of human nature, showing by what motives the most unlike acts are prompted. It has thrown light on the darkling mysteries which invested what seemed the inescapable problem of the origin of evil and of the unending tale of human wrong, bloodshed, and tyranny. It explains what part, for the time being, institutions and customs which to the higher moral consciousness are repellent and arresting forces, such as slavery, infanticide, the exposure of infants, blood-feuds, polygamy, polyandry, duelling, torture, the killing of the aged and sick, and cannibalism, have played in social evolution, as subservient what the community believed essential to the welfare of the whole world. It has proved that our moral codes, like our theological creeds, are conditioned by the accident of birth, of heredity, and of surroundings. To the fundamental doctrines of Evolution—unity and continuity—it has brought its 'cloud of witnesses.' A survey of the codes and customs of all ages and peoples shows that they are man-made social products; that they are before all creeds and dogmas; that they derive their power solely from the proved utility, and that they have their origin as the outcome of social needs, increasing their force and securing their permanence because of their adjustment to altered social and requirements. Conscience has followed the trend of moral development, and the theory of a definite, rigid, and absolute ethic is a fiction. Montaigne puts the matter with his usual shrillness: 'The laws of conscience, which we say to proceed from nature, rise and proceed of custom' (Essays, i. 112). It follows that, except in the sense that sin is rebellion against, and attempt to thwart, the universal order, the term is inapplicable. Sin, in essence, is therefore the anti-social.

EXECUTION OF ANIMALS.

EXCOMMUNICATION.—See CURSING AND BLESSING, DISCIPLINE.

EXECUTION OF ANIMALS.—Belief in kinship between man and animals is universal amongst the lower savages. Their daily, close association with the untamed creatures of hill and jungle impinges upon them all multitudes pointing to community of origin and character. Animals move and breathe; they 'certainly seem even to talk' (Im Thurn, Among the Indians of Guiana, 1885, p. 301); they are moved by the same passions, secured by law, and controlled by strength and violence; they manifest the phenomena from which man derives his conception of spirit; they cast shadows and reflections; they are in the light of the sun and moon, and are merely 'true while they last,' but actual happenings affecting his waking life. Did space permit, a large number of examples of this primitive psychology should be cited, but the few that follow have the greater weight in evidence being drawn from races above the lowest plane.

One of the sects or sub-tribes of the Rachâris of Assam show traces of their belief that in animal descent he who was praised in the fastings, and performing certain funeral rites when a tiger dies (Kachris, Kachris, 1911, 232). The Rachâris call objects, animate and inanimate, seem exactly of the same nature except that they differ in the accident of bodily form, and have spirits which differ not at all in kind from those of men' (Im Thurn, 330). To the Blackfoot Indians the question 'whether animals have mind and the reasoning faculty admits of no doubt,' for they believe that all animals receive their endowment of power from the Sun, differing in degree, but the same in kind as that received by man and all things animate and inanimate' (McClintock, Old North Trail, 1919, p. 167).

Hence logically follows belief in the responsibility of the animal for its actions, and punishment for its misdeeds. The Bogos kill a bull or cow which has caused the death of a man; the Maoris killed the pig that strayed into one of their sacred enclosures, as 'in Mohammedan E. Africa, a dog was publicly murdered for having entered the sacred area' (Westerner, M.F. i. 253). Among the Malagascans the buffalo that kills a man is put to death, as under the Hebrew code: 'If an ox gore a man or a woman, then the owner of the ox shall stone, and his flesh shall not be eaten' (Ex 21:2). And surely your blood of your lives will I require; at the hand of every beast will I require it, and at the hand of man.' The animal, being regarded as a moral agent, is thus made subject to penal laws whose basis rests on the same motive as that determining all laws of the kind, namely, the resentment of society to acts inimical to its welfare and protection. In his Thurg and moral Sentiments (1857 ed.), Adam Smith remarks that the dog that bites, the ox that gores, are both of them punished. If they have been the cause of the death of any person, neither the public nor the relations of the slain can be satisfied unless they are put to death in their turn; nor is this merely for the security of the living, but, in some measure, to revenge the injury of the dead' (p. 137).

This explanation, which Westerner accepts in MI (ch. x.), largely accounts for the persistence of dealing with animals as criminals throughout medieval times, and even down to the present century. Sufficient warrant for the punishment of animals as criminals would be found in the belief that man, in his reverence for the sacred animal, sought to protect it from injury or mischief. 1

1The Echo de Paris of 4th May 1906 reported the condemnation of a dog to death for complicity in a murder committed at Delémont, in Switzerland.
EXPEDIENCY. See Being.

EXORCISM. — See Demons and Spirits, Magic.

EXPEDIENCY. — That character of an action which, in its positive aspect, combines practicability with effectiveness for the end sought, and, in its negative aspect, implies indifference to other characters, especially moral characters. Generalized, it denotes regard for the expedient as determining conduct or as a principle of action.

Expediency bears a threefold relationship to moral values: it may be indifferent to them; it may oppose them; it may be identical with them. The first relationship obtains only where there is a range of conduct recognized as neither moral nor immoral, as in the case of the lawyer or the business executive. The second relationship obtains when there is a range of conduct which is moral as well as expedient, e.g., the relationship between truth and utility. The third relationship obtains when the conduct is likewise expedient and immoral. In such cases expediency is the only rational governing principle; it becomes, in fact, identical with reason or sound sense. Where the moral value of a given range of conduct is unknown there often opened a similar opportunity for
resort to expediency. Indeed, the principle of probabilism is, in effect, nothing more than this. Even tutelaries upon a kind of expediency, though in this case, since the moral and not the \textit{apprise} or personal end is sought, it is a moral expediency—that is to say, the judgment as to moral safety amounts to a judgment that the conduct indicated is practicable and effective for the moral standard in the long run.

The antagonistic relation of expediency to morality can occur only in systems which distinguish the ethical connotation from the ethical good—that is, where the 'right' and the 'good' are not necessarily identical. For expediency in conduct only means adopting the most direct means for the end in view. Presumably that end is always (subjectively at least) the good. But, if no other obligation than the realization of this good be recognized, then the expedient means must necessarily be the right means. Intuitional ethics, however, recognizing a moral independence of invariable benefit, and a moral value in action apart from the end of the action, naturally distinguishes actions governed by the sense of right dictated by expediency practically.

The latter may (though they need not) conflict with the former; and the fact that there are many ends of human desire the attainment of which is not, \textit{per se}, immoral, yet which lend themselves readily to a through action, that is, the castration of righteousness, has given a derogatory connotation to the term 'expediency' as designating these means.

It is doubtless the failure on the part of the intuitionists to recognize the twofold regulation of conduct involved in their double reference to a moral sense and an objective good that has led to their reproach of single-principled systems, such as the utilitarian, as endeavours to moralize mere expediency. It is, of course, a fact that systems based only upon a recognition of the objective good as the governance of conduct do determine the righteousness of an action by its expediency to this end; but it is sufficiently evident that, recognizing no conflict between the sense of duty and the realization of the good, right conduct must always be expedient conduct. If the only moral value be the end in view, any means to its attainment is justified. Even Machiavellianism would be beyond criticism if there were no lurking incongruity in the difference of code assigned to purpose being.

It is but fair to note, however, that the utilitarian is forced in practice to resort to a kind of expediency differing from moral certainty as much as does the general rule of tutelaries. Such an end as the happiness of the greatest number can only be an object of approximative judgments. Every specific action must be gauged by a kind of calculus of chances of benefit, and in adopting any given estimate a problematical course is being pursued. Granted that the course chosen be the morally plausible one, still the lack of certainty makes its adoption a matter of expediency—moral, to be sure, in motive, but not necessarily so in result. It is, in other words, expedient for the individual to pursue a course which shall justify his moral sense even if it defeat the true moral good as a result of his ignorance. This is a kind of converse to the position in this intuitional ethics that the expedient course to the attainment of benefit is to be condemned if it run counter to the moral sense. Of course, in effect intuitionalism merely sets up an indirect likeness of the integrity of moral feeling—which is made paramount over its ostensibly end—the attainment of objective good.

\textbf{Experience (Religious)}

1. \textbf{Spiritual experience and subjectivism.}—It must not be assumed that this method involves a lapse into subjectivism. Experience is not the mere reflex of psychical states, whether intellectual, emotional, or volitional. It is grounded in reality, which attack of subjectivism that recognizes no action of the mind is unmade when a 'life-process' is examined, it is found that it is not merely subjective, but clothed with a trans-subjective character, inasmuch as the psychical states of the individual are unified and brought into relation with those of others (so that he realizes himself to be a member of a spiritual commonwealth), by the operation of a transcendent spiritual life which is immanent within him. The question has often been asked, Do we, when we speak of spiritual experience, mean that of the individual or that of society? It is possible to press the antithesis as to give rise to a false alternative. The individual cannot be separated from society, and treated as though he lived in \textit{vacuo}. On the one hand, one can interpret the spiritual experience of others except in the light of his own. On the other hand, the spiritual experience of the individual is closely linked up with that of others. That which seems to us to be our own peculiar possession has in great part come to us among many channels, e.g., heredity, environment, and education. Individual experience cannot, therefore, be one, or part of the influence of others as to become no more than the individual's own concern.

2. \textbf{Reality and independence of the spiritual life.}—Is the spiritual life truly the Divine life in man, or is it simply the fruit of ordinary psychological processes, extended, it may be, to loftier heights and deeper depths, but still self-originated, and wholly independent of any Power that is not ours? We shall endeavour to show that, while it manifests itself through, and utilizes, all the resources of the personality, yet its source is outside of us. For (1) it is a transmuting and unifying power. It is continually working the materials of our human nature into higher forms, creating a new reality out of the old, and resolving the inner antagonism of flesh and spirit. It holds forth new ends for our endeavour, and 'holds before us a regenerate view of the light of which it passes upon judgment on things as they are,' so that human nature is continually striving to rise above its own level, and to become a 'new creation' (Eucken, \textit{op. cit.} 7). It is differed in its operation—there is in man himself for the production of this result, the achievement of which 'demands from

\textbf{H. B. Alexander.}
us so much toil and sacrifice, such a complete revolution of our being, such a shifting of our life-centre, that it is impossible to think that any natural impulse towards happiness would have led us to it. To the higher nature by the lower we can attain, but that is the mutilation, not the redemption, of the personality. But to remodel all our impulses and passions—not merely to subdue or change their antagonism, but to bring them into the service of the life of the spirit—is a vastly different task, and one for which the natural man is unequipped. (2) History, properly interpreted, is a struggle for the supremacy of the spiritual life. Underlying all the external events and movements of history are spiritual forces which have provided men with their deepest motives and most potent energies, and linked them together in the fellowship of a hidden life. That inner antagonism which is found in the life of the individual is manifest also in history, and is being resolved by the gradual fulfilment of spiritual purpose. No merely naturalistic hypothesis is sufficient to explain this phenomenon. The evolution of natural forces will not yield the teleological unity of the spiritual life. If an immanent teleology can be traced in history, it is because of the interplay of spiritual forces, which brings reality and independence of its own. Thus, from the standpoint of the individual and of history, we are led to the conclusion that spiritual experience is not only the outcome of such psychological states, but has objective reality in fellowship with the Divine life. It is important to notice that the presence of the Divine life in man, as a controlling power, is not destructive of moral freedom, but rather enhances and enlarges it. The precondition of moral growth is voluntary self-surrender, which brings us increasingly under the liberating influence of the spiritual life. But self-surrender involves conflict and choice. Man is a personality, not an automaton, and has to win his way through to the freedom which chooses the good alone (Aug. de Civ. Dei, xxii. 30). Only by struggle and discipline can we attain to willing conformity with the Divine will, and a conscious and ever-increasing participation in the fullness of Divine life.

3. Personality and the spiritual life.—The conception of a transcendent spiritual life, immanent in man, raises very important questions affecting both Divine and human personality. Two dangers must be guarded against. On the one hand, the Divine must not be identified with the human as such, or all objectivity destroyed. On the other hand, the action of the Divine upon man must not be so conceived as to impair his moral freedom. Each of these antagonistic modes of thought ends in the obliteration of the line of demarcation between the Divine personality and the human. The transition from the idea of the Divine immanence to that of Pantheism is made with fatal facility. There can be no doubt that the Hegelian philosophy, in the hands of some of its exponents, tended in this direction, despite the safeguards which they have endeavored to set up. These tendencies have been specially characteristic of Mysticism, which is defined by Inge as 'the realisation in the human mind and feeling of the immanence of the temporal in the eternal, and of the eternal in the temporal.' Properly apprehended, it is neither irrational nor destructive of the will, but is the growth of our being, pushed to extremes, and has made for the destruction of the self by the absorption of the human personality into the Divine. Mysticism has indicated three phases in which, if man is to be what he is, he must attain, or at least come near to it: (1) Transubstantiation, (2) Transmutation, (3) Transformation. The Divine enters into us in ever-increasing fullness, as we are fitted to receive it, and union between God and man is not so much a consummated act as a transforming process. At the same time it is well to remember that, as Inge points out, all three views represent aspects of the truth:

‘If we believe that we were made in the image of God, then in becoming like Him we are realizing our true idea, and entering upon the heritage which is ours already by the will of God. On the other hand, we believe that we are constituted from original righteousness, and have no power of ourselves to help ourselves, but need, outside, an acquisition of a righteousness not our own, which is neither imparted nor bestowed on us. And, thirdly, if we are to hope for a real change in our relations to God, there must be a real change in our personality,—a progressive transmutation, which, without the continuity, will bring us to be something different from what we were’ (p. 365).

What is the authority of mystical states? For the mystic himself they have absolute authority, and he demands no further confirmation. For those who have not experienced them, they overthrow the pretension of non-mystical states to be the sole and ultimate dictators of what we may believe’ (W. James, Varieties of Religious Experience, 1902, p. 427).

4. Psychology of religious experience.—The attempt to connect religious experience with some particular faculty of the mental life has broken down. Faith, which is regarded as the organ of religious experience, is not a separate faculty, but the surrender of our nature to that in which it discerns the promise of the satisfaction of our deepest needs. To discuss adequately the process whereby this surrender is brought about would carry us far afield. It must suffice to insist that personality has the unity of an organism, not that of a bundle of sticks, and that, if faith is to be justified, it must be a unity of the whole personality. To ground faith only in the speculative reason is to impoverish the spiritual life, and to degrade religious belief into a mere form of intellectual knowledge. This leads to an attempt to explain away the phenomena of religious experience which cannot be rationally interpreted. At the same time there are elements of knowledge in faith. The school of which Schleiermacher is the chief representative, who makes faith the product of feeling, fails to solve the problem, because, as J. Caird says, ‘to place the essence of religion in feeling is self-contradictory, for a religion of mere feeling would not even know itself to be religion’ (Introductory to the Philosophy of Religion, 1880, p. 170). That feeling is a vital element in spiritual experience is undeniable, for the religious life finds its highest manifestation in the emotion of love. But, however blind love may be in its lowest forms, in its highest it must discover a moral ground for the selection of its object, and this cannot be done without the aid of reason.

There is a moment when God may seize the place of the will in religious belief, usually associating the will with feeling. This is the view of W. James, who contends that our beliefs
are the product of our 'willing nature,' including not only acts of will, but 'such factors of belief as fear and hope, prejudice and passion, imitation and partisanship, the circumpressure of our caste and sect' (The Will to Believe, 1897, p. 9). We must have faith in the world and the good, trust the great adventure of faith by deliberately willing to accept the validity of those religious impulses and feelings which work.' From James's standpoint, it is no objection to this theory that it leaves unexplained, and thus' does not even explain, the 'subliminal' interpretation of the universe. But an objection of another character is not so easily evaded. We are entitled to ask, What is the standard whereby we determine the 'workability' of our beliefs? To say that a belief 'works' is to presuppose a standard of 'workability'—which cannot be arrived at without the aid of reason.

The problem of faith can be solved only when the unity of personality is kept steadily in mind. The reason must gather its materials and sift them, deriving them from no narrow sphere, but from the whole range of knowledge, thought, and personal and spiritual instincts and intuitions. The judgment thus arrived at can be made effective only through the emotions and the will. Knowledge does not pass into belief without a decisive act of will, in which emotion is a powerful factor. The act of faith is one of religious adoration, fear, or love. Thus the whole personality is called into activity before the transition can be made from knowledge to belief. Even yet we have not fully traced the process whereby religious faith is reached. The belief which is the mere outcome of rational, emotional, and volitional processes falls short of faith. And here we are driven back once more upon the reality of that Spiritual Life which underlies all, and is not within, but immanent within him. To use the language of religion rather than that of philosophy, the Spirit of God entering into us illuminates our reason, purifies and quickens our emotions and intuitions, and strengthens our will, so that we are enabled to make a whole-hearted and whole-minded surrender to our beliefs, and all the consequences which come in their train. Faith is, therefore, of ourselves, yet not ourselves. It is not a person in so far as it is the product of the quickening activity of the Spirit of God; it is of ourselves in so far as it is the rational, willing, and loving response of our whole self to the presence of God. [62]

Religious experience and the subliminal self. Modern psychologists lay great stress on the subliminal self and, by some it is regarded as the organ of religious experience. James holds that the discovery of the subliminal self marks the greatest advance which psychology has made. Myers uses the term to cover all that takes place beneath the ordinary threshold... of consciousness— not only those faint stimulations whose very faintness keeps them submerged, but much else which psychology as yet scarcely recognizes— sensations, thoughts, emotions, which may be strong, definite, and independent, but which, by the original constitution of our being, seldom emerge into the domain of consciousness to which we habitually reside with ourselves... I conceive also that no Self of which we can here have cognizance is in reality more than a fragment of a larger Self, revealed in fashion at once shifting and limited through an organism not so framed as to afford it full manifestation (Humus Personality, 1917, ed., pp. 13-16).

James has proposed as a hypothesis that whatever it may be on its farther side, the 'more' with which in religious experience we work, our constructed is on its nearer side the subconscius continuation of our conscious life (Varieties, p. 62).

(a) Following up the line thus opened, Sanjay has laid it dawn: 'that the proper seat or locus of all divine indwelling, or divine action upon the human soul, is the subliminal consciousness' (Christianity, 1910, p. 109).

For criticism of James's and Sanjay's views, see REV iv. 60.

II. CHRISTIAN EXPERIENCE. In the NT we find ourselves in a very different atmosphere from that of philosophy. Its dominant note is not speculation but certainty, and its emphasis is not on the abstract but on the concrete. Spiritual religion is focused in a historic revelation. God has spoken to the world through His Incarnate Son, Jesus Christ, whose teaching, life, death, resurrection, and ascension, and the consequent outpouring of the Holy Spirit, are all shown to stand in a vital relationship to spiritual experience.

This connexion is not elaborated in the Synopsis of the Gospels as in the other NT writings. This is what might be expected, since the Synoptists set out to give a simple record of the earthly ministry of Jesus, and rarely yield to the temptation of reflection upon it. Nevertheless, even they afford sufficient material to establish the distinctive features of Christian experience. Jesus Christ is set forth as the Mediator of a new revelation and a new relationship to the whole of humanity as Father, and calls on men so to live that they may be the sons of their Father in heaven, and thus receive the Holy Spirit. Israel had already apprehended the Divine Fatherhood, in relation to the nation, and even to the individual Israelite through the mediation of the nation; but in the Gospels it is declared to be universal, and is represented as being actually manifested in Jesus Christ, in whom the filial relationship was perfectly realized and exemplified. The purpose of Christ is to reveal to and restore to men their sonship, and to initiate them into a higher spiritual order—the Kingdom of God. In this Kingdom He is the supreme Mediator. He bids men come to Him, take His yoke upon them, and learn of Him, if they would find rest for their souls (Mt. 11:29); He is 'the resurrection and the life' (John 11:25); and, though crucified and buried, He is risen from the dead, and is with His people even unto the consummation of the age (28); and will be the final Judge of all. It is not possible to trace here the development of this teaching in the other NT writings. It must suffice to indicate its main content and implications.

1. The Incarnation and Christian experience. The Incarnation is a concrete revelation of that which lies at the basis of spiritual experience,
EXPERIENCE (Religious) 633

union between God and man. It is the revelation of an eternal harmony between Being and Nature, between God and man. Some Unitarians, no less than Trinitarians, prefer the doctrine of Athanasius to that of Arius, on the ground that the former conserves the truth of a union of God with humanity. The NT, however, does not regard the Incarnation as a mere illustration of union between God and man, but as the ground of its realization. It is not simply the revelation of the affinity between the two, but the initiation of a new spiritual process, whereby that affinity is consciously realized by man—a process based not on imitation, but on fellowship in a hidden life, mediated to us by Jesus Christ. ‘The law of the Spirit of life in Christ Jesus’ liberates us from ‘the law of sin and death,’ endues us with a moral dynamic, begets in us ‘the mind of the spirit’ which in ‘life and peace,’ and leads us into the realization of an affinity with God, which is so close that we are called His sons (Ro 8:17).

2. Christian experience and the death, burial, resurrection, and ascension of Jesus Christ.—The death, burial, and resurrection of Jesus are related to the history of guilt, and guilt, and the birth of the new life in the soul. The sense of sin has always been a characteristic mark of Christian experience. Theories of the Atonement have been developed in the NT by theologians, and the NT sets forth the Cross as the ground of reconciliation, and as that which brings deliverance from the power of sin and the paralysis of guilt—short, that which makes fellowship with God possible. The Resurrection is regarded as the pledge of the perpetual presence of Christ in the world as the Mediator of the Divine life. It might, however, be contended that an ascended Christ is transcendent, but the Resurrection and Ascension are interpreted in the NT in the light of Pentecost. The Spirit is the ‘Spirit of his Son’ (Gal 4:4). ‘The Lord is the Spirit’ (2 Co 3:18). The ‘Living Christ’ is not a mere symbol for the posthumous influence of Jesus. He is present by His Spirit in the hearts of those who love Him, and the Christian hope of immortality is grounded not in speculation, but in participation in His inner life. The death, the Resurrection, and Resurrection are also taken by St. Paul as typifying certain inner experiences of the Christian.

‘We have crucified Christ; yet I live; and yet no longer, but Christ liveth in me’ (Gal 2:20). ‘We were buried therefore with him through baptism into death: that, like as Christ was raised from the dead through the glory of the Father, so we also might walk in newness of life. For if we have become united with him by the likeness of his death, we shall be also by the likeness of his resurrection’ (Ro 6:4).

This is not a mere description of a mystical doctrine of resurrection. The spiritual experience has its basis in historic facts, by the aid of which it is initiated. The crucifixion and resurrection of Jesus, and the resurrection to newness of life are achieved only by means of the spiritual energies liberated in the death and resurrection of Jesus.

3. The naiš consciousness, fellowship with Christ, and the indwelling of the Spirit.—The content of Christian experience may be variously described in these three ways, each of which emphasizes a different aspect of the truth. The change that is wrought in the old self and the resurrection to newness of life are achieved only by means of the spiritual energies liberated in the death and resurrection of Jesus.

4. The witness of the Spirit and the inner light.—The Methodist doctrine of the witness of the Spirit has been expounded in art. CERTAINTY (Religious), vol. ii. pp. 325-331. It may be well here to distinguish between it and the Quaker doctrine of the inner light. The witness of the Spirit is conceived of as operating ab extra, the inner light ab intra. The former is a development of Christian experience, the latter is its presupposition. The inner light has been compared with the Stoic σηπεμενη λογος and anima mundi.

‘By this seed, Grace, and Word of God, and Light wherein we say everything is enlightened, and hath a measure of it, which strives with him in order to save him... we understand not the proper Essence and Nature of God, precisely taken... but we understand a Spiritual, and Invisible Principle, in which God is Father, Son, and Spirit dwells: a measure of which Divine and Glorious Life is in all men, as a seed which of its own nature draws, invites, and inclines to God; and this some call Vehiculum Dei’ (Barclay, Apology, 1736, p. 127).

It is from this substance that the inward birth arises (Barclay, op. cit. 130). It is not to be inferred from this that Christ dwells in all men by way of union and habituation; ‘outward seed, and inward life; if ever it is nor can be separate from that holy, pure Seed and Light, which is in all men; therefore it may be said in a larger sense that He is in All’ (cb. 143).

Further, this light is not to be identified with any natural faculty such as reason or conscience. Neither is it subject to man’s control.

‘He must wait for it; which comes upon all at certain times and seasons, wherein it works powerfully upon the soul, mightily tends it and breaks it; at which time, if man resists, but closes with it, he comes to know salvation by it’ (cb. 141).

Barclay strongly denies that this doctrine is in any way dependent on the old self for its principal character, which they know nothing of Christ’s coming to the flesh, through whose obedience it is purchased unto them... The history then is profitable, but not comfortable with the spirit without it; but the Mystery is and may be profitable without the explicit and particular knowledge of the history’ (cb. 141).

5. Individual and collective truth.—The spiritual truth which is the relation of the spiritual experience of the
individual to that of the whole society of Christian disciples! The two extremes to be guarded against are, of course, both of which form part of the organic character of Christian experience, and the authority which eliminates individuality and variety by demanding conformity to a fixed type. Ritschl holds to the idea that the gift of the Spirit to the individual, but is mediated to him through his membership in the kingdom of believers. It seems to be more true to the NT to and to the facts of experience to represent the new birth as immediate fellowship with God in Jesus Christ, and as verifying or correcting his deductions, not merely by reference to the authoritative diet of the Church, but by spiritual fellowship with those who are partakers of a like experience.

'The basis principle of individual experience' is 'saved from excess by the correction given through the experience of others.'

6. Christian experience and philosophy.—The Ritschilians distinguish between theoretical judgments and judgments of value. The validity of Christian truth is no longer based on natural reason, but by test. Ritschl and Hermann deny that theology needs the sanction of metaphysics. They hold that religious knowledge has no need to be justified with the aid of theological knowledge. Kaftan, however, writes:

The sphere of thought peculiar to the Christian faith, and the corresponding world of the Church, must be identified with the religious knowledge of things, cannot be wholly apart from one another: it must be possible to combine them so as to make a whole' (The Truth of the Christian Religion, p. 11, quoted by Mosley, Ritschlianism, 1909, p. 27).

What Ritschl means by value-judgments may be stated in a statement that 'we know the nature of God and Christ only in their worth for us' (Justification and Reconciliation, Eng. tr., 1900, p. 212). There can be no ultimate divorce between theoretical and religious knowledge. Truth, though many-sided, must be one, and the spiritual and rational universes must finally coincide. But it is not to be assumed that Ritschl conceived of two kinds of knowledge, mutually exclusive and irreconcilable. His emphasis on value-judgments was due to the fact that his interest was practical rather than metaphysical. It seemed to him that they offer the one method of approach to religious truth. And as much as such method may be able to advance the Church in its work, it may be necessary for the Church to make sure that the use of this method is directed by an enlarged and deepening of our vision and deepening our sense of certainty. But it is necessary to go further than Ritschl, and to recognize that their authority is greatly increased if they are viewed in the light of all our knowledge, and verified or corrected thereby. The theory of value-judgments embodies, at any rate, two important truths. (1) Experience is a vital factor in the solution of the truth problem. The higher we ascend in the scale of truth, the more scanty does theoretical evidence become, and the more dependent are we on practical motives. (2) Speculation cannot yield an intimate knowledge of the nature of God. Such can be won only by experience—the realization of God's worth for us. The inner meaning of the Christian revelation can be apprehended only by those who have experienced its work in their own lives (cf. 1 Co 2:10-11).

To sum up, value-judgments stand for 'the recognition that proof cannot mean in theology exactly what it means in natural science, but that in theology knowledge must be a matter of personal experience arising from individual experience.' They are the 'assertion of the presence of a religious element in all knowledge, and protest against excessive intellectualism, the understanding that truth is perfectible and fallible, and as in our conceptions we have been inclined to represent it' (Mosley, op. cit. 110).

7. Christian doctrine and experience.—Christian doctrine is the outcome of the interpretation of the historical facts of the gospel in the light of Christian experience. The facts of the historic revelation are illumined and established in the light of experience, which of itself cannot prove their reality, but, once they are given, confirms and interprets them. Doctrine cannot be evolved out of experience alone. The birth, life, teaching, death, resurrection, and ascension of Jesus were dependent upon the attestation of history, but no adequate doctrines of the Incarnation, the Person of Christ, the Atonement, the mediatorial work of Christ, and indeed as some might consider all the facts are approached and interpreted by Christian experience. The doctrine of the Trinity is an outstanding instance of a dogma springing out of the necessities of the experience which is grounded in the facts of the Christian revelation. The eschatological doctrines of Christianity are in a different category. They are based not on historic facts but on revelation, and can be neither deduced from nor confirmed by experience, except in so far as the final principles of judgment are seen to be operating here and now. It is in the development of the doctrines which relate to the new birth in the experience of the individual and the church that the utmost potent influence. Conversion, regeneration, justification by faith, sanctification, assurance, are phenomena of the inner life, and, however fundamental their relation to the historical facts of the Christian experience, are also the development of the doctrine. Both the hope and the justification of theological progress lie in the advance which Christian experience is gradually achieving. Doctrines are not only a product of the Church but are the outcome of the Church's experience of Christian life. And it is in the light of this experience that the Church must judge the world, for it is the Church's life which is the standard of all life.

8. Christian experience and history.—As has been shown, Christian experience is based by the NT writers on the historical revelation of God in Jesus Christ. The Ritschilians distrust the mystical side of the religious life, and hold that the Christian knows God and communes with Him through the apprehension of the inner life of the historical Jesus. This view, while it places a necessary emphasis on the historical side of the revelation, does less than justice to the mystical side of NT teaching. The experience initiated by the apprehension of the historical Jesus is finally realized in fellowship with the living Christ, without any sacrifice of objective reality, or subservience to merely subjective processes. At the other extreme are those who separate the Christ of faith from the Jesus of history. In some instances the historicity of Jesus is denied, and it is held that the Gospel is but a representation of a wide-spread 'Christ-myth' which reflects humanity's struggle for God. The attack on the historicity of Jesus cannot be said to have met with any success, and many of the parallels, so confidently advanced, between the details of the Gospel narrative and mythology, break down on analysis (see Carter, The Historical Jesus and the Theological Christ, 1911, ch. i., and St. Clair Tisdall, Mystic Christs and the True, 1909). In other quarters the conception of the heavenly Christ is regarded as the outcome of the process of gnostic development, and certain of his sayings and acts have been taken place round the form of Jesus of Nazareth, who, as some think, was the embodiment of a Divine humanity, or, as others believe, merely a well-intentioned, but mere pious Jewish apologist. But such theories are not only impossible of justification, but are beset with difficulties that are insuperable. (1) They do not explain how the gnosticizing process came to centre in the crucified Jesus of Nazareth, nor do they help us to understand why from earliest
days Christian faith has sought its nourishment not in a mystic gnosia, but in the knowledge of the historical Jesus, whom it identifies with the heavenly Christ. (2) Facts of consciousness which are the product of speculation and reflection, however, are significant. H. P. S. Smith, of course, claims that the authority and certainty of a revelation which centres in a great historic fact. (3) Whenever the Church has treated the historic record with indifference, it has invariably fallen either into scholasticism or mysticism. . . Christianity, when scholastic, lacks inspiration; when mystical, it lacks reality and balance.' (Forrest, The Christ of History and of Experience, 1897, p. 335).

EXPIATION AND ATONEMENT

EXPIATION AND ATONEMENT (Introductory and Primitive).—The entire subject of expiation and atonement is inextricably involved with that of sin (q.v.), and with the propitiation (q.v.) of the Divine being or beings angered by such sin, whether the propitiation be by sacrifice, fasting, penance (q.v.), or any other means. The concepts of expiation and atonement are, however, neither synonymous nor even necessarily connected; the latter involves a far higher type of religious development than does the former. Even on the human plane, the desire to placate an offended fellow-man by no means implies of necessity a wish to be at one with him; the averting of wrath is not inherently prompted by love either for or in the offended. It is true that—from motives of fear as well as of love—there may be a desire not merely to appease, but also to win the favour of the one who appears to be such desire is accidental, not necessary, to the concept of expiation, whereas it forms the innmost kernel of the concept of atonement.

The broad principles motivating expiation may be summed up in the phrase 'fear of Divine anger' (cf. Anger [WRATH] of GOD) at sin, which, in the words of the Westminster Shorter Catechism (q. xiv.), is 'any want of conformity unto, or transgression of, the law of God—a definition which, mutatis mutandis, will apply to the lowest as well as to the highest systems of religion. In the lower stages of religion, what we may conveniently call sin' does not necessarily imply infringement of a moral law; it may be merely a violation of an un moral custom (q.v.) or of a non-moral tabu (q.v.); it may be one of omission as well as of commission; it may be voluntary, involuntary, or unwitting; it may be grave, or venial, or of any intermediate grade; it may offend various classes of worshipful beings—ghosts, godlings, deities, and the like; it may be entirely physical or ritual. In all such cases of innocence, some sort of expiation becomes necessary—some penance must be undergone to placate superhuman beings, just as some surrender of self is needful to appease others in human life.

It seems safe to conclude that, at its lowest level, expiation is non-ethical, and that non-ethical ideas remain connected with expiation, to a greater or lesser degree, in relatively advanced religious systems, while in some—notably in Buddhism (see 'Buddhist' section, below)—the concept is non-existent; while in others—as in Muhammadanism (see 'Muslim' section, below)—expiation degenerates into a crass question of guilt and credit. The non-ethical aspect seems to characterize the entire Polynesian and Melanesian area, where expiation appears to be simply an endeavor to placate offended ghosts and deities. Yet it must be remembered that, with the exception of the Australians, few of these peoples have as yet been studied with a view to ascertaining their ethical-religions principles—a failure particularly lamentable, since with so many of them the old system of beliefs has practically vanished for ever. Yet it is at least significant that even so competent an observer as Codrington makes no mention of any ethical feelings underlying such sacrificial acts as are made in Melanesia for the purpose of propitiation (Melanesians, Oxford, 1891, p. 127), though it is perfectly evident that the Melanesians and Polynesians had many ethical principles of a high order (see above).

In Africa, also, the non-ethical form of expiation is the more usual. As a type may be taken the Shilluk of the Egyptian Sudan. When a Shilluk is seized with a disease as a result of some offence that he has committed, a propitiatory sacrifice is offered, with an appropriately sad and humble frame of mind, to appease the angered worshipful being; and, should the sick man recover, his restoration to health is attributed to the intercession of Nykand (the apotheosized first king of the Shilluk) with Cuok, the 'Great Spirit' (Hotmayt, Anthropos, vi. 1911: 121).

In like manner, among the Bantu Walanga, a sick man inquires of his sorcerer as to the origin of his illness; and, if it be from an offended ghost, this is appeased, according to the sorcerer's directions, either with the sacrifice of a sheep, etc., or with a libation of honey, meal, milk, and the like (Pasemann, Anthropos, 1900, 189).

A distinct form of expiation is the rite of confession. Outside Christianity (see Penance), confession has been most commonly known from the Assyro-Babylonian, Egyptian, Hebrew; see these sections of Confession; and for a divergent rendering of the Egyptian confession—more accurately 'repudiation'—of sins, see above, p. 478;
EXPIATION AND ATONEMENT (American)

Parsi (see 'Parsi' section, below) religions. Yet it occurs elsewhere, as among the Eskimos (q.v.), the Atecs and Peruvians (see 'American' section, below; cf. also Vitel, Anthropophy der Naturvolker, Leipzig, 1880–77, iv. 129 f., 462 f.), the Denes (q.v.), and the Iroquois (q.v.). Here only the Hebrew and the Parsi, together with the Aztec and Peruvian confessions, are represented by real ethical considerations, from their earliest known history; but the Parsi patite are of very late date, while, in the case of the Aztec and Peruvian confessions, there is a possibility (though merely a possibility) that they have been formulated in too ethical a setting. The Assyro-Bab. confession is, at least originally, largely devoted to ritual offences; and the Egyptian 'repudiation' has no indication of any real sense of sin and repentance—at the most, only attrition is indicated by it (see also 'Egyptian' section, below).

Afri can also knows confession. Among the Kikuyu, east of Lake Victoria Nyamunit, sin is the violation of the moral law, custom, rite, or taboo, and consists of three parts: mography; noki; violation; and sanhu, punishment. Of this, Fr. Cayzac says (Anthropos, v. (1910) 211): 'Sin is essentially remissible; it is enough to confess it. Ordinarily, this is done to the 'sorcerer,' who expels the sin by a special prayer. The principal rite is a somnolent vomiting (kobokho, derived from t'okha, 'vomit').

There is also a private, non-sorcery confession; a man has just committed adultery; he is not connected to speak of it. If he has said nothing, the man would not have sinned; but, since he has voiced his thoughts, he is responsible; in this case, then makes a private confession of his act to some friend, and this confession renders him immune against death.'

Confession is also practised by the Mkalwulo (German East Africa), but only the raidds, who must perform the rite publicly, fully, and sincerely. Confession is made by all assembled in case of severe illness, or difficult delivery, or before crossing a dangerous stream; individual confession, when the father of the household is starting on a journey.

The confession for severe illness begins: 'The illness is grave. Let us see; perhaps there are sins among the kin. Let him who has sins confess them; let us confess well; let us not confess with double heart. Forgive me, gracious God! I have no other sins than that. (Adultery, breaking of vows, falsehood, theft, etc., as the case may be.) I have no other sins at all. I am poor; protect me, gracious God! All my sins are gone from me. I have no sin left in me. With this he says words of somnolent confessing: casts towards the west splinters of wood and bits of straw, that he has done wrong, and has sworn, and that he has dammed the sinks in the west, never to return. If the sick man mends, it is attributed to the perfection of the confession; otherwise, it becomes necessary to get a second confession, in order to discover who is concealing some of his sins, and thus rendering the recovery of the patient (Hamberger, Anthropos, iv. (1909) 303–312).

And yet, non-etrical as these African forms of expiation appear to be, it has been declared that the African possesses a real concept of conscience.

Thus Schenkel (Jottt. der afrikan, Naturk., Münster, 1891, p. 192) writes: 'The negro is guided at every step by religious consciousness (religiöse Gewissensfähigkeit), though, unfortunately, he is very often not guided by truth and morality; his morality is not based upon self-made, secular, and human principles, but upon religious, especially sin-consciousness, which may often be quite artificial. What bonds and binds him is not 'the categorical imperative of self-willed reason,' but another, higher will, which proclaims to him his religious duty.' With this, he knows that the sin-consciousness casts itself towards the west splinters of wood and bits of straw, that he has done wrong, and has sworn, and that he has dammed the sinks in the west, never to return. If the sick man mends, it is attributed to the perfection of the confession; otherwise, it becomes necessary to get a second confession, in order to discover who is concealing some of his sins, and thus rendering the recovery of the patient (Hamberger, Anthropos, iv. (1909) 303–312).

And yet, non-etrical as these African forms of expiation appear to be, it has been declared that the African possesses a real concept of conscience.

LOUIS H. GRAY.

EXPIATION AND ATONEMENT (American).—The conception of expiation is already fundamentally present in the primitive effort to placate the anger of gods and of propitiate the departed spirits. It may become unfriendly. Sacrificial rites of all sorts are designed to such ends, the notion being that the worshipper can purchase favour by his sacrifices. Where the sacrifices, in place of a mere offering of goods, involves physical suffering on the part of the donor, we may fairly regard the rite as expiatory—as an effort to make good the punishment which the propitiated power is wont to inflict.

Rites of this type are common among the American Indians. One of the most interesting examples is that given by F. F. Im Thurn (Indians of Guiana, London, 1893, p. 308). 'Before attempting to shoot a cataract for the first time, on first sight of any new place, and every time a sculptured rock or striking mountain or stone is seen, a man in the spirit of the gods of such places by rubbing red-peppers (Eupatorium) each in his or her own eyes... The extreme pain of this operation when performed thoroughly by the Indians I can faintly realize from own feelings when I have occasionally rubbed my eyes with tamarind leaves which had been ground with red-peppers; and from the fact that, though the older practitioners inflict this self-torture with the utmost stoicism, I have again and again seen the otherwise rarely petrified individuals, children and even young men, sobbing under the infliction.'

The same propitiatory notion underlies the severe tortures which the Plains Indians inflicted upon those who were accustomed to undergo on the eve of going to war, though doubtless here the ethical motive of putting to test the warrior's fortitude also bears a part. A typical description is given by de Smet (Life, Letters, and Travels, New York, 1805, p. 253 f.).

Among the Sioux, as among the Arois, warriors preparing for an expedition were subjected to a very rigorous system of severities. They have for this purpose a "medicine" lodge, where they spread a buffalo robe and plant a red-painted post: at the top of the lodge is tied a cage containing all sorts of devices. There, to obtain the aid of the Great Spirit, they pierce their breasts, pass leather cords through, attach themselves to the post, and dance several times around the lodge to the sound of the drums, singing their war-lie and flourishing their war-clothes over their heads. Others make deep cuts under their shoulder-blades, run corde through the gashes, and draw two great buffalo heads to an immense alent a mile away from the village, where they dance until they drop senseless. A last offering before setting out consists in cutting off little pieces of flesh from the ears, and throwing them to the wind; and, to offer to the sun, the earth, and the four cardinal points, to render the blazing, or tutulose, or tutulose spirity, of the different elements favourable.

From rites such as these, designed to compound the offence for which a sacrifice is made, and to render compensation for an offence already given is but the step of reason. Possibly an intermediate case is the acceptance of punishment not with a sense of having offended, but merely as a means of averting a calamity already falling—such as the case of Black Coyote who, after several of his family had died, in obedience to a dream sacrificed seventy pieces of skin from his body to save the remainder (4 RREW'T, p. 2 (1890), p. 119). In this instance, as with no apparent sense of fault; yet expiation readily develops into penance, with the penitential conviction of sin accompanying it, and sometimes into penance viewed as a sacrifice viewed as atonement. An excellent instance of this complex sort is the penalty for murder among the Huros as described by Father Brébeuf (Jottt. Relig. Infid.,更有199, p. 81). Not only must the murderer and his family give compensation, in the form of presents (as definitely determined as the Anglo-Saxon sergild), but he must also give satisfaction—probably conceived as a placation of the angry dead. Brébeuf thus describes it: 'The dead body was stretched upon a scaffold, and the murderer was compelled to remain lying upon it and to remain upon himself all the mitad which existed from the
corps; they put beside him a dish of food, which was soon finished, and then the corpse, to which little by little fell into it; and merely to get the dish pushed back ever so little would cost him a present of seven hundred porcelain beads. This was a custom restricted to the highest classes, as long as the relatives of the deceased pleased, and, even after the formal ceremony, the relatives had to make sacrifices.

War among the Indians was but an expansion of the primitive blood-feud, of which the above ceremony represents a sort of commutation, as is proved by the fact, noted by Brebeuf, that, 'if the relatives of a dead man should lay their own bodies into this injury by the death of him who gave the blow, all the punishment fell on them.' Much of the difficulty in maintaining an Indian peace lay with the relatives of the war-slain whose manus had not yet been appeased by the death of a foe. Thus the Assiniboins explained to Father de Smet (p. 1128) their horrible cruelty in slaughtering a whole encampment of unprotected women and children of their Blackfoot enemies, declaring that 'they satiated themselves with cruelty to satisfy the manus of their deceased parents and kindred.' Certainly, if captives were spared or adopted, it was usually because the losses of the captors had been negligible in the conflict.

The conception of pollution or uncleanness, with the corresponding need for ceremonial purification, obtains far and wide in the Indian world; but the framework of rules and ceremonies which marked the purifying are hardly to be regarded as in a strict sense expiatory; they are of the nature of a cure rather than of a penance. We find, however, that the Indian was more than receptive when the notion of penance, as expiation of sin, was once laid before him. At all events, there is a general unanimity of the Jesuit teachers to the effect that their aboriginal converts were singularly ready to confess their sins and to be absolved for them. It is often observed that the Fathers required of them the statement, 'they accused and condemned themselves, and pronounced their own sentence, which they carried out' (Thwaites, xxxii. 35), represents not a particular case but a common attitude.

Le Jeune in the Relation of 1640 (ib. xlvii. 173-177) describes at length one of the rather numerous instances in which a convert had exposed a pagan, and had later come repentant to the Fathers. 'We assembled the principal Christians to ascertain what their plan of things is,' he writes. 'They summarily decided that he should be driven away and forbidden ever to live again with the Christians.' To this severity the Fathers of the young man made a preliminary protest, publicly to confess his sins. 'This he did; but more than this, he came in front of the whole congregation, and, saying: 'My fathers, I have so deeply regretted my fault that I have not dared to approach any Christian since my return; I would not dare even to look at them. I wish you to tell me whether you would do the same if I returned to Catholicism, wealthy and a married man; but I have come, nevertheless, to see you. I assure you that, since I left this house, I have tasted every day —eating only one day and not more, —so much have I grieved for offending God. I have not dared to take shelter in the abode of the Christians; I pass before them in silence, with bowed head; I shall go and see them when I have confessed.' Le Jeune adds: 'I carefully examined his behaviour: I found him so little guilty before God that he shuddered within myself for some time with a holy horror. It is true that he had taken this young girl, having already given his word to another; it is true that he lived with her if they were married, and that was the offence. But it is also true that he was afraid of offending God and his respect for his baptism had prevented him from touching her, although he was urgently solicited to do so —desperation would have become Christian before showing her the evidences of his affection. This, in my opinion, is what passed wonder —to be in the fire, and not be burned; to do an act almost innocent before God, and patientiy to bear the punishment for it before men.'

Thus the Indians did not confess and do penance as is recorded by the Spanish friars in Mexico. There, moreover, the idea had developed independently before the advent of Christians, as is illustrated by the explicit account given by Sahagun (Hist. gen., Paris, 1882, ii.; cf. art. COMMUNION WITH DEITY [American], in vol. iii. p. 741). And, indeed, the whole temper of the Aztec religion is that of a deep and unescapable sense of sin —with which a reader of Mexican annals can hardly fail to synapo-
thize. Something very similar among the Peruvians is indicated by Garcilasso (Royal Commentaries, ed. Paris, 1830, xii. iii.) in the spirit in which the Inca laws regarded as Divine, the laws of the empire were viewed as Divine ordinances, the violation of which was sacrilege.

'Heck,' he says, 'often enough, those who knew themselves culpable, condemned by conscience, went voluntarily to proclaim to the judge their secret faults; for their belief that the soul condemned to a sacrilege could not be appeased by the cause of all the ills which befell the state—maladies, deaths; unrepentant sins; disorders, disgrace, general confusion. Therefore, the law itself ordained that they should send their lord to send other ills into the world, they wished to expiate their sin by death.'

There was, in fact, no distinction between crime and sin; every offence was an offence against the Inca, who was himself immune from faint simply by his Divine origin and sanction (cf. id. xii. xxv.).

Garcilasso (vi. xi.) records that in certain tribes the priests were accustomed to fast for the welfare of the community. This is a wide-spread custom among the Indians, being intimately associated with the mystical notion that dream-revelations of importance to the people were to be obtained by such means (see 14 REV, pt. 2, passim). The idea of vicarious atonement is so far beneath the surface in a society whose morals are still on the group basis, distributing responsibility to all the relatives of the offender. A quaint development of this notion is detailed in the Jesuit Relations (ed. Thwaites, xxxii. 395) by Père Lalemant:

'After the fathers and mothers have confessed, they make such of their children as are fit to receive the sacrament go to confession. But, as regards those who have not sufficient discretion, their elders bring them to the fast, where they fast and often detain them in their presence their petty acts of naughtiness, and make them ask for a penance, which they themselves perform for their little ones.'

For the final development of this idea of vicarious sacrifice, in its native form, we must turn to the mythologies of the Indians. There we find—among the Iroquois, the Algonquins, the Sioux, the Pawnees, and many others—various developments of the conception of a demigurge being modelling this world as a habitat for man after the plan of the world which is in the confinement and which was before the earth was. This being is at times (as with the Iroquois) a cosmic titan, slain in the making of the earth, so that its body becomes the source of the life of the vegetable and the animal realms, and thus of man, whose life is a reverence of the nourisher of life. At times (as in the legends of Hiawatha) an historical or legendary chieftain, conceived as a benefactor who has won for his people such some gift as the knowledge of agriculture, is identified with the cosmic sacrificial demigurge—thus giving a vicarious turn to the heroic life. Possibly the dominance of the theanthropic conception throughout Mexican religion is but a continuation of the same fundamental conception—of a god dying for mankind (see esp. J. N. B. Hewitt, 'Iroquoian Cosmology,' 21 REV [1902], p. 135; D. G. Brinton, Myths of the New World, Philadelphia, 1905; cf. art. INCARNATION [American]).

H. B. ALEXANDER.

EXPATRIATION AND ATONEMENT (Babylonian).—1. Personal gods and demons.—To understand the intricate system of purification from sin in Babylonian religion, it is necessary to start from the unique conceptions of the Sumerian 1 religion regarding the relation of the individual to the gods. The Sumer.-Bab. religion possesses a 27The cotyledon structure of fish, religion is essentially non-
pantheon extraordinary in its ability to represent every element of Nature in its hierarchy, and many abstract ideas as well. The earliest religious literature of the Sumerians represents the social aspect of religion as distinguished from the individualistic.

The public worship, in which the entire community joined to sing liturgies in the temples, in praise of the great gods, is apparently older than those forms of worship which touch more closely the individual, who is regarded as a sort of subsidiary of the realm of nature and were excluded from the temple-worship from first to last. But the individual who, by the socialist nature of early worship, felt himself lost in the sight of the gods in the great public liturgies expressed his need of a more personal religion by adopting a personal god, his protecting genius. Each man lived under the protection of his personal god, a good spirit which dwelt in his body, or whose Divine presence permeated his being. Proper names in both languages often refer to this idea.

The deity whose name figures in the proper name of any individual is not always his protecting genius. He felt free to choose some other. Usually each individual accepted a god adapted to his personal gods, so that the Babylonians spoke more often of 'my god and goddess.' So long as the personal god dwelt in a man, he felt himself in complete possession by divinity, but the evil demon (originally a ghost) often overpowered the protecting spirits and drove them from the body. His god is departed from his body, his thoughtful godhead stands afar,' says the priest of one who has fallen to the powers of evil. Ordinarily sickness or any trouble physical or spiritual is regarded as a sign of possession by the demons (see DEMONS AND SPIRITS [Assyr. Bab.]). It is likely that in the first stages of this religion the demons were regarded as taking the initiative without any cause whatsoever. Thus in the earliest known text of this kind we have the following:

'To his hand he has beaded,
To his foot he has extended,
This man is the son of my hand, son of my foot is he.'

2. Conceptions of sin.—But only the primitive stages of the religious attribute the flight of the protecting spirits solely to the hostile attacks of the demons, and himself becomes a factor, and begins to reflect upon his own conduct as a possible cause for the flight of his gods. The first notion of sin is here ritualistic, grossly materialistic.

'These streets, has he trodden upon a libation poured out? Has he set his foot upon improper water? The water of unclear hands has he seen? A woman of impure hands has he met? A maiden of impure hands has he seen? A woman of poisonous witchcraft has his hand touched?1

1 Ban by drinking from undercup cup (Gilgamesh Epic).
2 Ban by having touched a man accursed (Marduk) dissolve.
3 Food (unclean) I have eaten, waters incanted (I) I have drunk, refuse of my god, whether I have vowed, rash of my goddess unwittingly I have offended.

The ethical conception of sin and the moral element in religion begin to develop at an early period, if we may judge from the religious aspect in which injustice and violation of civil laws were regarded. Yet it may be safely asserted that ethics and religion were originally independent of each other in Babylonia. There is no moral transcendence about estrangement between man and his gods are mentioned at great length in the Surpu series:

3. Condition of the sinner.—Corresponding with the advance made in the conception of sin, there are distinctly different conceptions of the condition of the sinner in the various stages of the cults of expiation. The reader will have inferred from the preceding paragraphs that the earliest state of sin was regarded as one of demonic possession.

Whether diseases of sorrow, and the father's cure of the attacks of the demons, the machinations of witchcraft, the evil eye, or what not, the actual state of man was described as one of demonic possession. Thus in a ritual against a disease we have the curse:

'Evil ghost, evil spirit, evil demon, evil man, evil eye, evil mouth, evil tongue from the body of the man, son of his god, may they depart.'

The technical term for a man in demonic possession is paphalta = nuna(italik)u, lit. 'one losing to and fro.' Also what is often employed to denote the misery of a sinner. The fundamental idea of this root is 'unclean,' worthless. Sumerian, therefore, in each case employs a term based on the religious aspect of the case. A sinner is one cursed by the demons, made unclean by the evil spirits so that his gods can no longer dwell in his body. The sinner is often described as one who has a curse, for which the technical word is malama in Semitic. The root of this word, enu, Heb. מָכָה means 'to speak with a rumbling voice,' probably referring to the ventrilo-
quip. A demon or a witch casts the *mamit* upon a man, or the *mamit* falls upon him as the result of any kind of sin. The individual sometimes represents his condition in more ethical terms in the later stages of the religion. May the sickness of my body be removed, may the weariness of my flesh be driven away. Calling and no answer has encompassed me. From the days of my youth much have I been bound with torment. Food I eat not, weeping is my nourishment. Often the gods (both personal gods and others) are said to be with him, to have turned away from him. His god and goddess are enraged with him; the goddess has turned away from me.

### 4. Methods of expiation.

Since the fundamental concept of sin is essentially one of demonical possession or of a ban and curse, which enfold man like a great net, the method of overcoming the demons or the curse must be magic. It would be not inadmissible to say that no religion ever existed in which the entire scheme of atonement is so thoroughly based upon magic. No analysis of the ritual of atonement could possibly convey to the reader the true and comprehensive nature of the fundamental notion. It is essentially enfolded in the entire scheme of the atonement. It follows, then, that he will be restored to favour with all the gods. To free man from the demons, to loosen the ban cast upon him by the powers of evil, is the problem in the ritual of atonement.

Power to overcome the demons and the ban is obtained through the curse given to the priests by Marduk, the highest of the gods or the curse of the water of fresh water. Inherently there is no difference between the curse hurled upon man by the demons and wizards and the curse of salvation uttered by the priests in the name of the water-god. The superiority of the latter lies in the superior mystic power of the god himself.

### 5. The curse.

The technical term for the curse of expiation is *bīstum* in Semitic, a word borrowed from the Sum. root *kāb*. Ordinarily the rituals employ the term nam-sum-sub, lit. the casting, throwing. We do not possess material from the primitive period to give us an insight into the nature of the spell that is introduced by the mystic spell revealed by the water-god, but the act of casting a spell of Divine power probably consisted in uttering words attended by conventional movements of the hands.

This supreme magical formula was known as the curse of Eridu, and had power not only to overcome the bans of the demons, but also to consecrate any object whatever. As in the Christian Church the consecrating formula employed for the elements of the mass is preceded by the sacred history of its institution, so in the Babylonian ritual the curse of Eridu is employed only after the account of its legendary origin.

Still another technical term is arānu, curse; the verb is arānu Hebr. ënma. The Sum. for arānu is akī. Ilī-will; and the verb akī-ba, hurl the ill-will. Note the idea of hurling, casting, the curse of the water element in cursing in Sumerian. It is obscure (see Landson, *Sum. Gram.*, 1911, pp. 121, 250).

### 6. Curse without ritual.

Only in the later period do we find the priests of incantation depending wholly upon the curse to banish the powers of evil and bring about reconciliation with the gods. The process here may be described as purely intellectual magic. The priest proclaims himself as commissioned by Ea; and, after describing the demons at great length (it was necessary to obtain a clear idea of the nature of the ban before it could be cursed), finally utters the curse of Eridu, following it by an oath that the demon is cursed. This secondary curse, 'Verily, thou art named,' may be sworn to in the name of any number of gods or sacred objects, and serves not as an assertion that the priest has really discovered the name of the demon to be cursed.

### 7. The ritual elements.

In the ordinary ritual of atonement water, bread, grain, plants, and animal sacrifices are introduced. The terms used are described in the passages cited above. The reader will note the passage cited above in § 5, where bread and water are placed at the head and feet. In the primitive ritual, water was undeniably employed as a means of purification, and applied in one way or another before the curse of Eridu was uttered. The priest seeks to drive the demons into the water, the bread, the grain, or whatsoever element may be employed. When he utters the curse the evil passes into the water, which is then taken away into a 'clean place' or thrown in the highways. Such water, bread, etc., were regarded as unclean.

### 8. The institution of Ea.

Ea, the water-god, is said to commission his son Marduk with his own power over the demons. Marduk is represented in the person of the magician (yupu), whose words are, therefore, really those of the water-god.

The following passage is the earliest known source for the ritual of expiation, and is employed against hazzel, the demons.

Go, my son Marduk, this man the son of his god pacity. Bread at his head place, rain-water at his foot place. Sin the head of hazzel.
The words of the curse of Eridu utter.

Of his limbs, to have turned away from him. May the head face ascend to heaven like smoke.

Into the beneficent hand of his god restore the man.

The words of the curse of Eridu have not been recorded on tablets. It may well be that they constituted a sacred formula revealed only by oral instruction in the schools. The word *mamit* (Sum. *say-ba* and *nam-erim*), which, as we have seen above, often denotes the curse of the demons, may also be used for the curse of the gods. With the curse of the earth-spirits I curse thee, says the priest of incantation to the demon. A quasi-philosophical conception of the course of Eridu is found among the Sumerians. It essentially one of the twin concepts not to be transgressed. The consecrating, delivering curse belongs to the water-god only, or to the gods connected with fresh water, as Marduk, son of Ea, son of Enki, and Shukdut, Shukdut, the son of the curse was then personalized, and a hymn (King, *Bab. Magic*, 61) refers to the curse as created with the gods.
EXPIATION AND ATONEMENT (Buddhist)

EXPIATION. Faithfully look upon me, hear my supplication,' says the penitent in a prayer to the moon-god.\(^1\) 'May my sin be undone, my frivolity forgotten. May the good genius, the good spirit walk beside me. May evil mouth and tongue stand aside. Better be found not clear and sing thy praise.' So run the closing lines of a prayer to the god of the new moon.\(^2\) It is probable that sinners read a tablet of their sins before the gods, and that the ritual was broken in sign that their sins were forgiven. This form of the ritual finally freed itself from magic, and the sinner depended entirely upon confession and prayer in the so-called penitential psalms.

The significant act of atonement in this form is the appeal of the sinner to various gods to intercede for him with the god whose anger he wishes to appease. Forgiveness is here expressed by the phrase 'remove my sin,' or 'turn thy face unto me,' or 'may thine anger return to its place.'

It will be seen that Bab. religion identifies sin and disease in all its stages, and that atonement and reconciliation depend largely upon magic. The atoning power of sacrifice is a negligeable factor, and in any case is not original. The ritual tended to the production of a beautiful literature, and in many cases to symbolic acts of great spiritual meaning. The power of a magical prayer, in which appeal is made directly to the god.

S. H. LANGDON.

EXPIATION AND ATONEMENT (Buddhist).—In the sense in which these terms are used in Christian theologies, the ideas of expiation and atonement are scarcely, if at all, existent in Indian religions. This holds true especially of Buddhism, constructed without dependence on a deity, and profoundly influenced by the Indian theory of karma (\(\text{g.v.}\)). According to the theory of karma, as current, it is generally agreed, just before the birth of Buddha, the fate of each sinner in the next birth, was determined by the man's karma (lit. 'doing') in this birth. The soul was supposed, in this stage of the theory, to be a very minute creature residing in the cavity of the heart, and resembling in every respect (except in size and in the absence of a soul within it) the visible man. Like a man's, its outward form was material, consisting of the four elements and heart; like a man, it had anger, desire, quality, and other mental traits.\(^3\) This hypothesis of a soul was rejected by Buddhists; but in other respects it adopted and systematized the karma theory, and made it one of the foundation-stones of its ethical theory.

Karma becomes for it an inexorable law, working by its own efficacy, subject to no Divine or human interference, and resulting in an effect following without fail upon every deed, word, and thought. As to what effect followed on what deed opinions differed (see KARMA). But on the main fact of karma all Buddhist schools are agreed. They held that the karma and its vipaka (the act and its result) were inextricably interconnected by the law of either of expiation or of atonement was either possible or desirable; and that the contrary doctrine, an explaining away or denial of karma, was pernicious, immoral, a bar to religious progress.\(^4\)

EXPIATION AND ATONEMENT (Christian)

The passages in the canonical books in support of the above doctrine are so numerous that only a small selection can be given.

In Sutta Nipata, 606, the Buddha is reported as saying: 'Karma is the man does, be it lovely, be it evil, that is his inheritance, whatsoever it may have been done, that he must abide in it.' At Anguttara, 306, it is said: 'Of all woven garments, brethren, a hair shirt is known as the sword-hair shirt, but it is clumsy, in colour rather dirty; it is ugly, evil-smelling, grievous to the touch. Just so brethren, of all the doctrines commonly known among those of the religious, the doctrine of the Cittasamvara is the worst; for that foolish one is of opinion that there is no karma, no action, no energy.'

Yet, notwithstanding this uncompromising attitude as to the result of any act done, there are two cases in early Buddhism in which, at first sight, there seems to be some mitigation possible. The first is where a bhikkhu is forgiven for a breach of a by-law of the community; the second is in the matter of a patti-dāna, or transfer of merit.

The rules as to the first case are translated in Vinaya Texts, ii. 339 ff. and iii. 61-53. Stated quite clearly, they amount to this: if a breach of the rules had been reported to the local chapter, the chapter could, under certain conditions, suspend the offender from certain privileges. On his subsequent repentance, he could be brought forward, at least to a subsequent meeting of the chapter, for rehabilitation. By leave of the chapter the offender was brought in, and, on his acknowledging his offence, the chapter, through the mouth of the mover of the motion, 'took back' the offence (as the standing expression is). Sometimes the Buddha himself, without the matter being laid before a chapter, 'took back' an offence (see, for instance, Śanguttaya, i. 128). But in all such cases the offence, it should be noted, is purged only as regards the Order. The law of karma is not broken. The karma of the offence will work out its inevitable result independently of the fact that the offence, so far as the Order is concerned, has been expiated.

The other apparent exception, the patti-dāna, or transfer of merit, is interesting as showing development in doctrine. The belief is not found in the Nikayas themselves, only in the commentaries upon them. In the latter, however, it is taken so completely for granted that it must have grown up some considerable time before they were written in their present forms. In note, there is the idea (though not the technical phrase for it) must be as old as the Milinda, that is, probably, as old as the 2nd cent. A.D., 'attainment,' 'accomplishment.' To have done a good deed was to have attained the good result that would inevitably follow. By the law of karma that result would accrue to the benefactor (to him who has done the good act) either in this or in some future birth. The doctrine of patti-dana (lit. 'gift of the patti') was that the benefactor could so direct the karma that it would accrue not to his own benefit, but to that of some one else whom he specified. That this amounts to an interference by human will in the action of karma cannot, we think, be disputed. And, if the merit of a good action cannot be transferred, it would seem to follow logically that the result of an evil deed could also be transferred. All this brings us very nearly, if not quite, to the Christian doctrine of atonement, of the imputation of righteousness. The Buddhists might deny this; and would point out, quite fairly, that such transfer of merit was supposed possible only in the case of certain good actions of a minor sort. In fact, the patti-dāna is most frequently found in the colophons to the MSS, the copyist giving expression to the pious hope that the merit of his having completed the copy may redound to the advantage of all beings. And in other cases, the stories told in the commentaries, the act of which the merit is transferred is usually the gift of a meal to a bhikkhu, the placing of a white flower at the foot of the monument to a departed arahant, kindness to animals, or something similar and pious.

It is noteworthy that the transfer of merit is usually from a good Buddhist to a non-Buddhist, and that the latter is usually a friend or relation of the benefactor. There is no instance of a good Buddhist desiring or accepting any transfer of merit to himself.

EXPIATION AND ATONEMENT (Christian).—t. Scope of the article.—It is the purpose of this article to review briefly the development of the Atonement on Christian soil, to distinguish and classify its most important forms, to show their historical antecedents and relations, and to estimate their significance.

The word 'atonement' may be used in two senses: either as a synonym of reconciliation (at-one-ment), or to denote the 'satisfaction or reparation made for wrong or injury, either by removing some condition or by doing or suffering something which is received in lieu of an equivalent' (Cent. Dict.). It is in the latter sense that the term has been commonly employed in theology. By the Atonement is meant the satisfaction made by Christ for the sins of humanity, however that satisfaction may be conceived in detail. Since the purpose of Christ's atoning work is to reconcile sinners to God, it is not unnatural that some modern theologians should have returned to the original meaning of the word, and maintained that in theology also the true meaning of atonement is reconciliation rather than satisfaction. Such an identification, it is true, has been a departure from the historical usage; and in what follows we shall understand the word in its more technical sense as signifying the action taken by Christ to bring about reconciliation between God and man, rather than the reconciliation itself.

In the sense in which the Atonement has been commonly understood in later theology, both Roman Catholic and Protestant, namely, as an objective satisfaction made by Christ to the Father to secure the forgiveness of man, the doctrine was first clearly formulated by Anselm in the 12th cent. In his famous Cur Deus Homo. Long before this time, however, the death of Christ had been made the subject of explicit reflection by Christian theologians; and the answers which they gave to the question why Christ died on Calvary form the necessary introduction to the history of the doctrine of the Atonement. These answers begin within the NT itself, and the rich material which is there contained has proved the point of departure for later speculation.

2. The Biblical basis.—The conceptions which the NT writers bring to the interpretation of the death of Christ fall into five main groups.

(1) The simplest answer finds a sufficient reason for Christ's death in the fact that he took place in fulfillment of OT prophecy. This is the explanation given by St. Peter in Ac 3, where no attempt
is made to explain why the suffering was necessary. It is enough to know that it is in the sacred book in which the Divine will for man is revealed (cf. Lk 24:17—27).

(2) A more speculative interpretation is suggested by Jesus' own words in Mt 26:28. Here the mark of His acceptance to a covenant-sacrifice is sealing the relation between the disciples and God under the new dispensation, as the Paschal lamb marked the union between the Israelites and God under the old. This most fully developed in the Epistle to the Hebrews, where the death of Christ is regarded as at once the fulfilment and the abrogation of the OT sacrificial system. As the High Priest of the New Covenant, Jesus enters the Holy of Holies (i.e. the immediate presence of God), not with the blood of bulls and of goats, but with the perfect sacrifice of His own life-blood (He 9:20-21), and hence exhibits a type of the true spiritual sacrifice with which alone God is well pleased (13:15). This sacrificial conception underlies the Anselmic doctrine of the Atonement, though in association with other ideas drawn from a different source.

(3) A different interpretation, also suggested by Jesus' own words (Mk 10:45), sees in the death of Christ a ransom or purchase price by which His disciples are delivered from the bondage into which they have been brought by sin. The comparison is suggested by the provision made in the Law for the enthranishment of slaves upon the payment of certain specified sums of money, or by the familiar custom of the ransom of prisoners taken in war. What these money payments accomplished in delivering those in bondage from temporal captivity, that the death of Christ is conceived to effect in securing the deliverance of transgressors from the deadlier bondage of sin (cf. 1 Co 6:19, 20; 1 Pt 1:18, Tit 2:4, Eph 2:10). This idea re-appears in the later history, in the Patristic interpretation of the death of Christ as a ransom paid by God to Satan.

(4) A different explanation again is that which interprets Christ's death after the analogy of the bloody expiation exacted by justice from those who have been guilty of wilful sin (e.g. 1 K 21:1). The idea of expiation through suffering is a very ancient one. Where a wrong has been done for which the ceremonial system affords no remedy, atonement must be made by the death of the offender; this is the conception found in a striking expression in 2 S 24 (cf. 1 Ch 21), where David's sin in numbering the people is atoned for by a pestilence in which seventy thousand of the people perish. It is the pre-supposition of the well-known passage in Is 53, in which the stripes of the righteous servant are the means by which the wicked are healed. In the NT it has its most signal illustration in the Pauline conception of the Crucifixion as the voluntary acceptance on Christ's part, as a result of His self-identification with humanity, of the consequences in suffering, shame, and death to which their own sin had made them liable. This conception re-appears in the later history, in the various forms of the so-called Penal Theory of the Atonement.

(5) In the theology of St. Paul, however, this interpretation of the death of Christ is only one side of it. It is not the death conceived by itself alone which has redemptive significance to St. Paul, but the death as a part of the entire process of the Divine self-identification with humanity, which makes it possible for believers here and now to become partakers of the Divine life of the Christ, and so sharers in His triumph and resurrection. It is not simply the passive Sufferer; He is the conquering Lord, and the benefits both of His suffering and of His conquest are mediated to His disciples by the mystic union with Him which is brought about by faith.

The connexion between the death and the incarnation of Christ is made even closer in the Fourth Gospel. To St. John the suffering of Christ is but an incident in that self-identification of the Divine Word with humanity which constitutes His true redemptive work. It is not the death so much as the life of Christ that has saving power, and Calvary is important not so much for the specific function which it fulfils of itself, as because it is the supreme proof of the completeness of our Lord's subjection to all the conditions of human life.

The contrast just suggested is of importance for the later history. As we follow the interpretation of Christ's death through the centuries, we find two main types of thought predominating. According to the first, the death of Christ is an incident in His infinite love and infinite sacrifice, and forms a part. To the Greek, unlike the Latin, the supreme evil from which man needs to be delivered is not guilt, but corruption. Through sin, humanity becomes subject to the law of death. The mind is darkened through ignorance, and the entire nature, as mortal, is destined to destruction. What is needed for the salvation of man, therefore, is not simply forgiveness, but a new transforming power which shall enlighten the mind by the revelation of truth, and transform that which is corrupt and mortal into incorruption. Such a Divine and transforming power entered humanity through the Person of Christ, who was conceived of the Holy Ghost, 'He became what we are, that He might make us what He is' (Rom. 8:3, Preface [Ante-Nicene Fathers, iv. 55]).

This conception of redemption finds its classical expression in Athanasius' tract on the Incarnation of the Word (Eng. tr. in 'Nicene and Post-Nicene Fathers', 2nd ser., iv. 30 ff.). Discussing the problem of redemption, Athanasius says why it was necessary for man's salvation that God should become man, and answers that it was because 'He, that only could man receive the new life which was the indispensable condition of his salvation. If it were simply a question of guilt, forgiveness might suffice if there were adequate penitence, but forgiveness alone could not deal with the radical corruption of nature which had been produced by sin (cf. S. 4-5). For this the Incarnation alone was the remedy (xiii. 7). In the Incarnation, Christ became the partaker of a complete human experience. He shared our sufferings and limitations; He died the death which we due, and so opened the way for us to a share in His Divine and glorified life (viii. 3); A well-known king had his abode in a lowly village, all the houses share the honour which is conferred by his presence, so all humanity shares the benefit of the Incarnation, and for all a way of salvation and hope is opened (ix. 4). This way of hope in provided through the Resurrection service, in which the power of Christ's death is made manifest, and the promise of a like immortality assured to all who put their trust in Him (xxii.—xxvii.). The convincing proof of this is found in the fact that it is the weakest of them—no longer fear death, but 'leap to meet it,' preferring it to life on earth (xxviii. 1).

It is clear from this brief review that the death of Christ holds a very different place in this theology from that which it does in the later teaching of the Western world. To Athanasius, as to St. Jerome, the Incarnation is a conception that had its roots deep in the saving work. It is the Incarnation as such that is redemptive. The death takes place because it is a part of the common lot of humanity, which the Redeemer must have endured. In Biblical language, as the payment of a debt (xx. 2), but no theory of its efficacy is given in detail, nor is any of the analogies suggested in the Scripture pressed to its literal conclusion.

So far as we find explicit reflection upon the death of Christ in the Greek Church, it follows the line of the third figure above referred to. In the writings of Origen and of Gregory of Nyssa, as of Ireneus before them, the death of Christ is interpreted as a ransom paid by God to Satan in order to secure the redemption of humanity, which has been brought under his dominion by sin. The theory is differently developed by recent writers. Sometimes the right of Satan to the possession of his captives is admitted, and the death is interpreted as a ransom due to the devil on grounds of justice. This interpretation was abandoned, and the method actually followed is explanation of grounds of fitness, or of God’s graciousness in being unwilling to take by force that which was rightfully His.

Gregory of Nyssa regards the deliverance of man as having been secured by the redemption of God’s part, Satan being deceived by the humble appearance of the Redeemer into supposing that he had obtained a new to Christ, a man of too late date, for the Devil whose presence he had not perceived escaped his clutches through the Resurrection. This deception he justifies on the ground that it was only paying the devil his due, since he “effected his redemption for the ruin of our natures”; but God, “in love, he [Christ] took upon him a burden fit and good, and wise one, used His device, in which there was deception, for the salvation of him who had perished, and thus not only conferred benefit on the lost one, but on him, too, who had wrought our ruin” (Great Catechism, ch. 26, Eng. tr. ‘Nice and Post-Nicene Fathers,’ 2nd ser. v. 469).

Fanciful as this theory appears to us to-day, it exercised a great influence, and continued for many centuries to be the prevailing interpretation of the death of Christ. From the Greeks it passed to the Latins, numbering among its adherents such men as Augustine, Gregory the Great, Bernard of Clairvaux, and Peter Lombard. Often the present theories are a mere device to explain a fanciful conception. In the works of Gregory we see the Lord’s humanity to the bait placed upon the hook of His divinity (Moralia, xxiiii. 7, Eng. tr., Library of Fathers, Oxford, iii., 569), or what is the same thing, the Gospel is the monose in the soul of man, baptized by our Lord’s blood (Liber Sententiarum, iii. Dist. xiv. 1). Yet, it would be a mistake to regard this theory as a mere idle speculation. To the man who held it, it expressed a genuine conviction, and the fact is that it secured the endorsement of such teachers as Origen and Augustine shows that it had its roots deep in experience. It is the most signal illustration of the dualistic conception of the world which played so great a role in the early history of Christianity—a conception that had its roots deep in the realm of speculation, and appealed to the various mediating theories of a Demiurge or Logos, and in the world of practice to monasticism and the ascetic life. To the early Christian theologians, Satan was the source of all corruption, existence, and a redemption which delivered mankind from the power of the devil was the supreme need of man.

Yet, it is important as the place held in history by the theory of a ransom to Satan, it would not be true to say that it is the only point of view represented in the Greek Church. The Greek theology, like that of the later Church, had its different schools of thought, and no single formula can express the point of view completely. If there had been no other influence at work, the study of Scripture, with its varying interpretations of our Lord’s death, it would have invented uniformity of statement. So we find different theologians using different figures, and even the same theologian varying his language at different times. The gospels of the first centuries are found in Ireneus (ad. Hier. v. 1), and of the Incarnation Theory in Origen (in Num. hom. xxiv. 1; cf. hom. in Joann. xxxviii. 20). Tymanis finds in Gregory of Nazianzus anticipations of the Governmental Theory later developed by Grotius; while Origen, in his profound teaching, regards even the Incarnation itself as but a sort of picture-teaching, through which the Divine Logos prepared the way for that higher insight into truth which constitutes man’s true redemption. Thus all the points of view which reappear in the later history are found in germ in the Greek theology.

4. The Atonement in Latin theology—Latin theology took over from the Greeks the conception of salvation through incarnation; but, in contrast to the Greeks, the Latins found the evil from which man needed deliverance not so much in corruption as in punishment. Where the Greeks thought of God as the Ultimate Reality, the Latins regarded Him as the Supreme Lawgiver or Judge. Hence the death of Christ acquired in Roman theology an independent significance which it did not possess in that of the Greek Church. It was the Divinely appointed atonement for the guilt of man’s sin, and incarnation took place primarily in order that this atonement might be wrought. While this theory which first finds explicit expression in Anselm’s De Deus Homo, it has its antecedents in the earlier history. Among these may be mentioned Augustine’s development of the concept of original sin in his anti-Pelagian writings, and the application of the concept of satisfaction to the problem of forgiveness by Tertullian and Cyprian.

Augustine agrees with Athanasius in his concept of sin as inherited corruption. It differs from the Greek theologian in the emphasis which he places upon the guilt of this sin. It is not mortality, as such, from which man needs to be
delivered so much as the separation from God, which, while it is justly punished in his sin, is also rectified by his expiation.

Through the fall of Adam all mankind has become guilty in God's sight, and is justly exposed to his wrath and curse. So great was the guilt of this sin that it has involved all its descendants in a condition of condemnation. While Christ's redemption, even infants dying in infancy are justly condemned to eternal punishment.

A further preparation for Anselm is found in the development of the theory of satisfaction by the earlier Latin theologians, notably Tertullian and Cyprian. According to their teaching, it is possible for man by good works to make satisfaction to God for the sins which he has committed. Tertullian (de Baptismo, xx.: cf. de Oratone, xxiii.) holds that such satisfaction should precede baptism, while Cyprian contends that it is a remedy for sins committed after baptism (de Lapsis, 36). While they did not apply the concept of satisfaction to the death of Christ, their teaching undoubtedly prepared the way for Anselm's theory by making men familiar with the word. 

Anselm's theory, as is well known, is set forth in his treatise, DeUs Homo. The title explains the purpose of the book. The words "Deus Homo" should be translated, 'Why a God-man? not, as they are often rendered, 'Why did God become man?' It is the problem of Christ's Person that engages Anselm's thought. He wishes to know not simply why incarnation took place, but why God, who is infinite, should enter into a finite personal relationship. This is the question of the godhead and humanity, of God and man. Why could not God or man alone have answered the purpose just as well? Why was it necessary that there should be a God-man? The answer, in a word, is that it was necessary in order to make possible the Atone-ment. Only thus could a person be constituted who could render to God the satisfaction necessary for man's sin, and so make possible the redemption which he desired.

The work, which takes the form of a dialogue between the writer and his disciple Boso, begins with an examination of objections to the doctrine of the Atone-ment, as well as of earlier theories which Anselm rejects as inadequate. Among these is the theory of a ransom to Satan. Anselm finds no reason to believe in such a justification to Satan. In the case of man, which prevented him from redeeming him by his own power, he is necessary (bk. i. vii.). In contrast to this, Anselm maintains that Christ's Atone-ment concerns both God and not the devil. Man by his sin has violated the honour of God and defiled his handiwork. It is not consistent with the Divine self-respect that He should permit His purpose to be thwarted. Yet this purpose requires the fulfilment by man of the perfect law of God, by which his sin man has transgressed. For this transgression, repentance is no remedy, since penitence, however sincere, cannot atone for the guilt of past sin (bk. i. ch. xx.); nor can any finite substitute, whether man or angel, make this atone-ment. Sin, being against the infinite God, is infinitely guilty, and can be stoned for only by an infinite satisfaction. But this no finite creature can pay (bk. i. l. xxxii.).

Here, then, is the situation: either man must be punished and God's purpose fall, or else man must make an infinite satisfaction, which is impossible. There is only one way of escape, and that is that some one should be found who can answer to the two conditions, both of humanity and of infinity. This consummation is brought about by the

incarnation of Christ. In Christ we have one who is very man, and can answer to the satisfaction of his sins, and who is at the same time very God, and whose person by infinite goodness and will gives infinite worth to the satisfaction which He makes (bk. ii. ch. vii.). But why, it may be asked, the necessity for the death of Christ? Why did not the life of Christ suffice? Why then do we reach the most original part of Anselm's theory. The life of Christ, according to Anselm, however perfect, is not available for the purpose of satisfaction, because, as man, Jesus' duty is to do right, and, when He has done all, there is no merit to spare. So not with His death. This, which is the case of other men, is the judicial consequence of sin, in the case of Christ, the divine. The satisfaction of Christ is a supererogation—a voluntary offering or sacrifices not due to God, which He freely gives in exchange for the forgiveness of man. This death voluntarily borne when it was not due is the infinite satisfaction which secures the salvation of man (bk. ii. chs. x. and xi.).

The analogy between this theory and that of a ransom to Satan is obvious. In each case man's deliverance is secured by the acceptance, on the part of the one whose rights need to be conserved, of a substitute which he considers an equivalent in value. But, in the former case, it is the devil whose rights need to be protected; in the latter, it is God. In the former case, again, the satisfaction which is offered, while great in value, is not necessarily infinite, since Satan, as creature, is himself a limited being, whereas in the latter case it is the essence of the theory that the satisfaction rendered should be of infinite value. So far as the infinity of Christ enters into the former theory, it is as an element in the conception which is practised upon Satan. Had he perceived our Lord's Divinity, he would never have consented to the substitution.

Anselm's theory, on the other hand, it is Divinity which gives the atoning sacrifice of Christ the priceless worth in God's eyes, though which alone man's redemption is made possible.

There is so much in Anselm's theory which, from our modern point of view, is fanciful and unreal that it is easy to overlook its true significance in the history of doctrine. This is to be found in its clear perception of the fact that that which gives value to the death of Christ is not its penal quality as suffering, but its moral quality as obedience. Christ is not punished for our sins, as in the later Penal Theory; His death is rather a precious gift brought to God, having its value in the spirit of self-sacrifice by which it is inspired. Thus, in the history of the later connexion between Anselm's theory and the theories of the Reformers, this subject is divided into distinct types. Anselm's theory, as Ménegoz1 has rightly shown, is a development of the sacrificial theory of the Epistle to the Hebrews, and has close points of contact with the later ethical satisfaction theories. The Reformers, on the other hand, reject the alternative, which is the major premise of Anselm's argument, and deny that satisfaction can ever be admitted as a substitute for penalty. This fundamental difference has been obscured by the familiar usage which classes Anselm's and the Reformations together as theories of satisfaction.

Few treatises of equal length have exercised so great an influence on the history of thought as the DeUs Homo. Apart from its influence in Protestantism, of which we shall speak presently, it provided the theological basis for the prac-tices of indulgences, which in Anselm's time had already begun to assume substantial proportions. Through the death of Christ, there is laid up a store of supererogatory merit which is available for the remission of the penalties incurred for sins committed after baptism. The doctrine of indulgences is thus entrusted to the Church, and is exercised by her through the penitential exercises of the Church. The whole conception of supererogation, which fills so great a role in the theology of the later Roman Catholicism, has in its most significant illustration in the death of Christ. What Christ did in death was a death which was not His due, gives an example which the Church has used, and which, as the works increase the store of merit which the Master has begun.

In the later Roman Catholic theology the theory

of Anselm is modified at two points. In the first place, the conception of supernumerary merit is extended beyond Christ's death to take in His life of service. In the second place, the principle of strict justice which belonged to Anselm, is abandoned in favour of a theory which makes the efficacy of the Atone ment dependent upon the gracious acceptance of God rather than upon its own inherent dignity. The first of these changes means is us in the theology of Thomas Aquinas; 1 the second is characteristic of the Scotist theology, and gives rise to the so-called Aceptiation Theory of the Atone ment. Both changes have their parallels in the theology of Protestantism.

Contrasting the theology of the Roman with that of the Greek Church, we are struck by the greater prominence of the legalistic element in the former. The older realistic conception of salvation is not denied; it is, indeed, the assumption of the later development, but its significance is altered. Baptism and the Eucharist lose their central position as the sacraments of the Church, and of a complicated system in which penance and indulgence are the controlling elements. The Eucharist is no longer, as in the Greek Church, a mystic rite through which we become partakers of the incorruptible body of Christ; it is the repetition of the sacrifice of Christ upon the cross, and a means of increasing the store of merit which is available for the remission of sins.

Yet here, again, we must beware of too hasty generalizations. In the Roman Church, as in the Greek, many points of view were represented, and no single type of thought adequately expresses the wealth of teaching which its theologians present. In the theory of Soteriology, as in the historic teaching of Gregory of Nazianzus, we have a recognition of principles which reach their full development in the Governmental Theory of the Atone ment. Abelard, in his commentary on Romans, 8 antici pates, with a clearness which is remarkable, the later Moral Influence Theories; while in the writings of the mystics, as in Origen's teaching of old, all external media fall away, and salvation is sought and found in the immediate vision of God. 9

5. The Atone ment in the older Protestant theology. — Great is as the importance of the doctrine of the Atone ment in Catholic theology, its impor tance in Protestantism is even greater. To the Catholic theologian the Atone ment forms the basis of the whole system of ecclesiastical machinery upon which man's salvation is supposed to depend. To the Protestant theologian it is his warrant for rejecting this machinery as superfluous. Through the atone ment of Jesus Christ the price of man's redemption has been paid once for all, and henceforth nothing remains but to appropriate the benefits of this accomplished salvation through faith.

The central principle thus given to the doctrine appears in the language by which it is described. In Protestantism the Atone ment and regeneration are treated as identical. Thus the Westminster Confession (iii. 6) speaks of the elect who have 'fallen in Adam' as being 'redeemed by Christ,' whereas the context makes it plain that the reference is to the Atone ment. 1

1 Quot. xlvii. art. 1. 'From the beginning of his conception Christ merited eternal salvation for us.'— Cf. the following context. 'Thus the merit of the life is contrasted with the merit of the death.'

2 I.e. the theory that Christ's death owed its efficacy, not to any particular virtue which was inherent in it, but to its being an exact equivalent for the punishment due from man, but to the good pleasure of God, whereof he (Christ) was pleased to make a substitute. According to the Atomeut, cf. Seeberg, Die Theo. des Johannean. Denkwerke, Leipzig, 1869, p. 244 f.

3 Abelard. Der Cross is the supreme revelation of the love of God, and the means through which a corresponding love for God is to be fostered.

G. B. Stevens' work, entitled The Christian Doctrine of Salvation, is really, as an analysis of its contents shows, a treatise on the doctrine of the Atone ment; and James Denney, in The Atone ment and the Modern Mind (London, 1900), says of the Atone ment that 'for those who recognise its importance at all it is Christianity in brief; it concentrates the whole Christian gospel, as a gem of immortal beauty, in the wisdom, love, and power, and love of God mean in relation to sinful men' (p. 2). So much is this the case that, 'when we speak of the Atone ment we are speaking of the modern mind, we are speaking of the modern mind and the Christian religion ' (ibid.).

No doubt it is true that not all Protestants carry their egotism so far. But the mystic conception of Christ's humanity is made prominent, the older Greek thought, in which incarnation is the central reality, lives on. Thus, to Luther, as to Athanasius and to St. John, the death of Christ is only the culmination of that self-identification with humanity which through which we are freed from our bondage into the glorious liberty of the children of God. In Christ we see the revelation of the gracious Father, and are contrasted to become partakers of a complicated system in which penance and indulgence are the controlling elements. The Eucharist is no longer, as in the Greek Church, a mystic rite through which we become partakers of the incorruptible body of Christ; it is the repetition of the sacrifice of Christ upon the cross, and a means of increasing the store of merit which is available for the remission of sins.

Yet here, again, we must beware of too hasty generalizations. In the Roman Church, as in the Greek, many points of view were represented, and no single type of thought adequately expresses the wealth of teaching which its theologians present. In the theory of Soteriology, as in the historic teaching of Gregory of Nazianzus, we have a recognition of principles which reach their full development in the Governmental Theory of the Atone ment. Abelard, in his commentary on Romans, anticipates, with a clearness which is remarkable, the later Moral Influence Theories; while in the writings of the mystics, as in Origen's teaching of old, all external media fall away, and salvation is sought and found in the immediate vision of God. 9

We may illustrate this changed point of view in the case of Calvin. Calvin, like Luther, takes over many of the presuppositions of the Catholic view about the necessity on God's part for the death of Christ, he holds with Anselm that, if man is to be redeemed, it must be through the incarnation of the Church, and therefore the death of Christ became the central point upon which the thought of Protestantism was fixed, and in which the redemption love of God was seen supremely manifested. This central position was due to the fact that it was interpreted not only as satisfaction, but as punishment, and hence given a substitutional significance even greater than that attributed to it in the Anselmic theory.

This recognition of the wider aspect of Christ's redeeming work has never been altogether absent from Protestant theology. If there were no other cause, the Bible itself would have compelled a wider outlook. But a further cause was the recognition that in the death of Christ became the central point upon which the thought of Protestantism was fixed, and in which the redemption love of God was seen supremely manifested. This central position was due to the fact that it was interpreted not only as satisfaction, but as punishment, and hence given a substitutional significance even greater than that attributed to it in the Anselmic theory.

We may illustrate this changed point of view in the case of Calvin. Calvin, like Luther, takes over many of the presuppositions of the Catholic view about the necessity on God's part for the death of Christ, he holds with Anselm that, if man is to be redeemed, it must be through the incarnation of the Church, and therefore the death of Christ became the central point upon which the thought of Protestantism was fixed, and in which the redemption love of God was seen supremely manifested. This central position was due to the fact that it was interpreted not only as satisfaction, but as punishment, and hence given a substitutional significance even greater than that attributed to it in the Anselmic theory.

This central position was due to the fact that it was interpreted not only as satisfaction, but as punishment, and hence given a substitutional significance even greater than that attributed to it in the Anselmic theory.

We may illustrate this changed point of view in the case of Calvin. Calvin, like Luther, takes over many of the presuppositions of the Catholic view about the necessity on God's part for the death of Christ, he holds with Anselm that, if man is to be redeemed, it must be through the incarnation of the Church, and therefore the death of Christ became the central point upon which the thought of Protestantism was fixed, and in which the redemption love of God was seen supremely manifested. This central position was due to the fact that it was interpreted not only as satisfaction, but as punishment, and hence given a substitutional significance even greater than that attributed to it in the Anselmic theory.
take the place of guilty men, and so make possible a forgiveness which is at the same time consistent with justice.

It would be unjust to Calvin's views to ignore the ethical aspects of his teaching. Like Anselm, he refers more than once to the part which Christ's obedience had in bringing about mankind's salvation; but in his descending to death itself, he is following the teaching of St. Paul: in Ro 5:8 St. Paul teaches that the ground of pardon which excepts from the curse of the Law extends to the whole life of Christ. From the moment when, as a man, He assumed the form of a servant, He began, in order to redeem us, to pay the price of our sins. Thus, the more the doctrine of substitution is emphasised, the more the conception which看到了 death and its effects the whole life of Christ is already anticipated in the Institutes.

In the later Calvinistic theory the close connexion between the death and the life of Christ is no longer maintained. The obedience of Christ is separated from His suffering as having a distinct significance. It is the means through which Christ fulfils our righteousness, and so merits for us the reward which we are ourselves unable to earn; even as His death is the payment of our penalty, and so the means of securing our forgiveness (cf. Westm. Conf. viii. 5; A. A. Hodge, The Atonement, p. 144).

But it is in its view of the means by which the connexion is made between the atoning work of Christ and those for whose benefit it was accomplished that Protestantism differs most singularly from Catholicism. In Calvinistic theory this connexion is brought about by the Divine decree. God who, from all eternity, foreordained the atonement of Christ, determined also those who should receive its benefits; and in due course, through His Holy Spirit, created in them the new life which Christ has merited by His obedience. Infinite as is the value of Christ's atoning work, it is to it that we should look; and for those only, for whom, in the Divine plan, it was determined from the first (see, further, art. ELECTION).

With the rise of Arminianism (q.v.) this doctrine of limited atonement became a subject of increasing protest. Men who had no difficulty in accepting the Calvinistic doctrine of atonement as substitutionary punishment shrank back appalled from the conception of an arbitrary limitation of its scope. In order to reconcile their view of the limited effects of the Atonement with a belief in the universal love of God, they took refuge in a theory of the will which gave man himself the power to accept or to reject the mercy offered in Christ, and so by his refusal to accept it of his own destiny. This conception of a universal atonement, limited in its results by man's freedom, has become characteristic of Arminian theology, and has been without its influence in Calvinistic circles as well.

But the Penal Theory was subjected to even severer criticism by the Socinians. They attacked the entire conception of substitutionary punishment which was the premiss of the traditional theory. According to the Racovian Catechism (§ v. ch. 8), punishment and forgiveness are inconsistent ideas. If a man is punished, he cannot be forgiven, and vice versa. Under the theory of distributive justice, punishment, being a matter of the relation between individual guilt and its consequences, is strictly intransferrable. But if, for argument's sake, it be granted that this is not the case, then it is clearly unjust if, having received an infinite atonement, He does not forgive all. What kind of a God must He be, it is asked, who, when one drop of Christ's blood would have sufficiently atoned for a sin, yet suffered His own Son to endure such needless torture?

1 The Socinian view is most fully set forth in the writings of Paucaus and Ludius Socinus, collected in the Bibliotheca Pra- teosiana, (Amsterdam, 1629). Its official statement is found in the Racovian Catechism (1605, Eng. tr. by Rev. L. Beza, London, 1649).

2 It is interesting to note that a similar objection was made by William Pickton, a New England Puritan, in his Meritorious Price of Our Redemption (London, 1650)—a book which so far as their positive teaching was concerned, the Socinians held a form of the Moral Influence Theory. Christ's death being regarded as a declaration of God's love and an incentive to lead men to seek salvation through Him; but their great importance is more empirical rather than constructive. It was as a result of their criticisms that Hugo Grotius wrote his well-known work on the Satisfaction of Christ, in which for the first time the so-called Governmental Theory of the Atonement found sound expression. The work was exercised so extended an influence that it needs careful consideration.

Grotius himself is apparently unconsistent in any departure from the traditional view. As the title of his book indicates, he proposes to write a defence of the orthodox view of the satisfaction against Socinian objections; yet he introduces only a superficial survey of his work to show how profoundly he has been influenced by the arguments which he opposes. He begins by denying, with Socinus, the applicability of the category of distributive justice to the atoning work of Christ. But he differs from Socinus in substituting for the theory of public justice. God does not, indeed, deal with men as a judge, who administers strict justice in the individual case. It may be that with them as a governor who is obliged to circumscribe the interests of the common welfare. In the course of his rectoral sermons he may relax this rule; but for any case, provided it can be done without danger to the interests of public justice (ch. ii. Eng. tr. p. 271). This is what actually happens in Calvinistic theory. Christ may be substituted for punishment, a suffering inflicted by God and voluntarily undergone by Christ, which has been transferred by moral influence (cf. pp. 107-109) in order to secure the ends of righteousness. Such suffering on Christ's part is necessary, since forgiveness on the basis of repentance alone might be interpreted by men and lead to grave carelessness (ch. v. p. 182). It is more inconsistent with God's justice than any other suffering on the part of the innocent for the guilty. The Socinians themselves admit that such suffering is a part and a consequence of our common relation to one another (ch. iv. pp. 82, 85). The Governmental Theory simply draws the conclusion which naturally follows from this premise.

We have already pointed out the fact that certain features of the Governmental Theory were anticipated in the teaching of Gregory of Nazianus. In the Latin Church it has its analogues both in the Scotist theory of the Aceptatio and in the Moral Theory of Abelard. It agrees with the Scotist view in its denial that punishment is necessary to satisfy an inherent need of God's nature. It differs from it, however, in that it conceives God as governor, and as being under a constraint, as real as, if different in kind from, that of the one who is the governor of distributive justice. The governor, unlike the judge, may temper justice with mercy, but the motives which lead him so to temper it are never arbitrary, but are found in the state of society itself, in God's purpose and the rule of government. The Governmental Theory agrees with the Moral Theory in that it conceives the nature of the Atonement as determined by the moral effects which it is designed to promote; but it differs from the latter in the fact that the motive to which the Atonement appeals is conceived as fear rather than as love. In Christ's death, men see what will be their fate if they do not repent, and so are moved to repentance and faith.

In the extent and permanence of its influence upon Protestant thought the Governmental Theory is comparable with the Penal Theory alone. Among the most thoughtful Arminians it has practically supplanted the older Penal Theory, and is declared by Professor Miley 2 to be the only theory of the Atonement described as the first outbreak of the independent spirit of Congregationalism, and afterwards roused by order of the General Court, and Mr. Pynchon found it so unsatisfactory that he wrote: "See to it that you are not turned from the good word of God (Eccles. 1:18); and was reprinted in Andover in 1889.

EXPIATION AND ATONEMENT (Christian) 647

ment logically consistent with Arminian principles. But its influence is by no means confined to Arminianism. It maintains that God's voluntarily weakening his character, and his successors has passed over into Calvinism and has been widely held, not only by New England Congregationalists, but also by the New School Presbyterian, though they have been closely affiliated. Albert Barnes has left on record, in the introduction to his well-known treatise on the Atonement (Philadelphia, 1859, p. 4), the difficulty which he felt with the older form of the doctrine, and the relief which was afforded to his mind by the Governmental Theory. Those Calvinists, trained in the older orthodoxy, who have shared Barnes' sense of difficulty with the legal categories of the older theories have commonly found their relief where he did.1

6. The Atonement in modern Protestantism.—With the growing acceptance of modern critical methods we find an increasing disposition to emphasize the moral and spiritual elements in the atonement of Christ and, in particular, to relate His death more closely to the life-work of which it forms a part. While the older theories still live on in the schools, and are also the presuppositions both of the Penal and of the Governmental Theories have been written within the last half-century, the pre-suppositions upon which they rest in their older form have gradually under
dined. The conception of God as a being with whom justice is necessary and mercy optional, so characteristic of the older Calvinism, has been largely abandoned. The notion of atonement as satisfying some mysterious necessity in God, apart from the realization of the redemptive purpose which Christ has revealed as His supreme aim, appears increasingly unsatisfactory. Even where the interpretation of the Atonement is still heartily accepted and the death of Christ made central in Christian teaching, we find the effort to get a conception of it which shall relate it more closely to the principles and ideals that have made themselves controlling in other departments of Christian theology.

A potent influence in bringing about this change has been the new view of the Bible. It was characteristic of the older discussions of the Atonement that, whatever might be the particular view advocated, whether Legal or Governmental or Moral, it was identified without question with the teaching of the Divine word. With the breaking down of the old traditional theories of inspiration, such an easy identification is no longer possible. It is clear that what we have in the Bible is a series of parallel and, in part, differing interpretations, rather than a single consistent dogmatic theory: and no one of the later interpre
tations can claim exclusive Biblical authority for itself.

The recognition of this diversity of view-point has sometimes been made an excuse for abandoning altogether the attempt to frame a consistent doctrine. A distinction is drawn between the fact of the Atonement, faith in which is essential, and the theory, as to which men may differ without loss: and even theologians who along other lines would be the first to repudiate the Roman doctrine of an implicit faith have, in the case of this particular doctrine, declared themselves frankly agnostic.2 But such an attitude, however convenient as a temporary resting-place, is difficult to maintain for the minds of those for whom the Atonement is permanently to retain in Protestantism the strong hold which it has hitherto had upon the faith of Christians, it must be related to the world of thought in which modern men are living, and shown to be as capable of explanation and defence in the moral and spiritual terms which have become controlling for our modern thought of God as in the legal and judicial categories so familiar to the older theologians. It is characteristic of recent works on the Atonement that they attempt such a re-translation. This attempt is not confined to the members of any particular party or school of thought. It is as noticeable in the case of those who still hold the substance of the older theories as in those who reject them. An example in point is R. W. Dale's well-known treatise on The Atonement.3

Dale's book is interesting as the most serious effort which has been made in recent times to retain a penal significance in the death of Christ, while avoiding the artificiality and legalism of the older form.4 In his preface he gives a brief account of the author's discussion, but the essence of it consists in the fact that he conceives the death of Christ as the suffering justly inflicted upon Christ, as the representative of the head of the race, in order to satisfy the eternal law of righteousness which is one in essence with the will of God.

"The only conception of punishment," he writes (p. 333), "which satisfies me most, and seems most consistent, and which corresponds to the place it occupies both in the organisation of society and in the moral order of the universe, is that which represents it as pain and loss inflicted for the violation of a law."5

If the older theologians were at fault in their treatment of the Atonement, it was not, says Dale, in their insistence upon the penal element in Christ's sufferings, but in their arbitrary limitation of its effects, and, above all, in their failure to give adequate expression to the moral and spiritual side of the relationship which constitutes Him, not only the substitute, but the head and representative of the race (p. 433).

Even more striking, as an example of the effort to translate an older theory into modern terms, is Scott Lidgett's suggestive book, The Spiritual Principle of the Atonement, as a Satisfaction made to God for Sins of the World.6 Lidgett agrees with Dale in his conception of the headship of Christ, but he differs from him in finding the necessity for penal satisfaction in the very nature of fatherhood itself.

"Of course," writes Lidgett (p. 285), "the magnanimity of fatherly love raises it above the treasuring up and the exact vindication of merely personal wrongs. But, in the case of true fatherhood, what is personal stands for something that is more than personal. In dealing with a disobedient and rebellious child, the father has to do justice to his own character and will as an authority over the child—an authority representing the ideal of what the child should become, and guiding him on the way to its realisation. It has to assert the sanctity of the law which has been broken, and to secure its recognition. He has to bring home to the child the consciousness of wrongdoing. All this is the work of punishment, and it is most truly in the interests of the child himself. . . . The punishment which has been inflicted by the father is made the very means of uttering the conversion of the child."

Both Lidgett and Dale, in common with the older Protestant writers on the Atonement, agree that that which gives the death of Christ its saving power is His suffering, and what the sufferer's power is His suffering. But Dale, while he allows that suffering which Christ endured as our substitute or representative. This principle is, however, 1 So Horton, in Faith and Criticism, New York, 1955, p. 187 f.; cf. Dale, op. cit., pp. 273 f.; Scott Lidgett, op. cit., pp. 20 ff.
2The Congregational Union Lecture for 1875, 14th ed., London, 1892.
EXPIATION AND ATONEMENT (Christian)

to be repentance pure and simple, and in this contention he has been followed by not a few of the older writers on the doctrine who differ from him at other points. 2

To the question how the penitence of Christ avail for others, Campbell has a very simple answer. It is by the moral influence which the Atonement is in every one of us the conviction that we ought to repent if only we knew how. In Christ we have presented to us the ideal penitent. As He identifies Himself with our sin, so truly and truly we identify ourselves with His repentance, and through this self-identification there is gradually wrought in us that moral transformation which enables us in our turn to repeat Christ's supreme condemnation of sin, and so to enjoy that full forgiveness which God is ever ready to grant to genuine repentance (p. 153).

This conception of the death of Christ, as primarily efficacious through the moral influence which it exerts upon those who witness it, finds classic expression in the second of the books referred to, Bushnell's Vicarious Sacrifice. The problem which Bushnell sets himself is that of the possibility and the nature of substitution in religion; and the conclusion to which he comes is that in the case of a moral and spiritual religion, like Christianity, this is possible only in the sphere of the manifestations which is universal of the family rather than the law-court or the civil government gives us the most helpful example. In love, Bushnell discovers a vicarious principle, involving, on the one hand, the self-identification of the lover with the beloved, and, on the other, a corresponding transformation of the one loved through the response of his spirit to the new moral influences of which he is thus made the subject. This idea lays the difficulty in the way of God's forgiving sin is not that there is any barrier on His part to be cleared away which justice cannot remove, but that, as a matter of fact, men do not truly repent; and this, in turn, is due to the fact that no motive has yet been brought to bear upon them strong enough to overcome their existing sinful habits and desires. In this condition of things Campbell finds the key to the true nature of the Atonement. What is necessary, if man is to be saved, is that some man shall be found who shall estimate at its full heinousness the significance of human sin, shall accept in filial reverence and submission the moral consequences in subjection to which this sin has inevitably brought in its train, and so shall set in motion those moral influences by which other men, following his example, shall be drawn to a like repentance. This is, what happened in the atonement of Christ. In the spirit in which He met His suffering and death we have the supreme revelation of the true attitude which man should take toward sin. Christ on the cross identifies Himself by sympathy with suffering humanity. He utters in reverent submission His Amen to God's judgment of sin, and so, for the first time, exhibits in the most impressive way the condition upon whose fulfillment alone forgiveness depends (p. 117).

Campbell's critics have objected that in substituting for the older doctrine of vicarious punishment his newer teaching con-ceiving vicarious repentance, he has hopelessly replaced one difficulty by another. They argue that the conception of vicarious repentance is no easier to hold than that of vicarious punishment. Indeed, it is less easy, since repentance as a personal act of the individual is strictly untransferrable, whereas punishment, being inflicted on the individual, can be transferred to others, a substitute. Such a criticism, however, does not touch Campbell's main contention. He is not concerned primarily with the vexation how the benefit of Christ's repentance can be transferred to others, but rather with the question what condition must be fulfilled if man is to be forgiven at all. This he main-

1 The Nature of the Atonement in Relation to Remission of Sin, by American Tract Society, New York, 1849.
2 The Vicarious Sacrifice grounded in Principles interpreted by Human Analogies, 5 vols., New York, 1861.

1 E.g., C. H. Wesberry and W. L. Walker.
2 The Godward Aspect of the Atonement is more fully developed in vol. ii. of the Vicarious Sacrifice. Here Bushnell promises a study of the Divine nature, suffering in which the analog of human experience is used to illustrate the nature of God's attitude towards sin. The volume,
Both Bushnell and Campbell are concerned particularly with the Atonement as it affects the relation between God and the individual; but, from the first, it has been recognized that the work of Christ has a larger meaning. It was designed not simply to save individuals, but to redeem humanity as a whole, and to once and for all establish the Kingdom of God among men. One of the most striking features of modern thought regarding the Atonement is its emphasis on this wider scope. A proper appreciation of the doctrine of the Trinity, to which we have already alluded, this emphasis takes two forms. The first, which is more prominently represented among Anglican theologians, regards the Church as an institution, as the continuation of the Incarnation, and emphasizes the connection between the Atonement and the Sacraments. The second, more ethical in its conception of salvation, takes its departure from the social nature of personality, and finds the primary object of Christ's death in the creation of a community in which the bond of union is the acceptance of his principle of self-sacrificing love. We may refer to Moerberly's suggestive book *Atonement and Personality* (1886) as an example of the first type, and Ritschl's *Justification and Reconciliation* (1887) as an example of the second.

So far as his conception of the Atonement itself is concerned, Campbell—like Campbell in *Finding its essence in penitence* (pp. 110). Like Campbell, he maintains that a perfect repentance, if it could be found, would constitute an adequate atonement. Like Campbell, again, he denies that such repentance is possible to man alone. But what is not possible for man alone is possible for the God-man. In the sinless Christ we have one in whom God's ideal for humanity has been for the first time realized, and in His perfect obedience and penitence an adequate atonement for the sin of humanity has at last been made.

But how are the benefits of the Atonement to be imparted to others? It is at this point that Moerberly finds Campbell's view inadequate. The moral influence on which Campbell relies he finds not enough. There must be a real identity, if the atonement which Christ makes is to be really ours (p. 450). The identity Moerberly finds throughout his doctrine of the Holy Spirit. In the Spirit, Christ Himself enters humanity and becomes the basis of its higher life. *Spirit is the mediate Christ, [it is] made, through the Incarnation, the Spirit of Man* ('p. 203). *He is the subjective representative of ourselves with Christ, who was first manifested objectively and externally, for our contemplation and love, in Galilee and on the Cross. He is more and more, as the Christian consummation is approached, the Spirit within ourselves of Righteousness and Truth, of Life and of Love. He is more, indeed, than within us. He is the ultimate consummation of ourselves* ('p. 904). Only through this indwelling Spirit who is 'Christ in the man' ('p. 227) is it possible to realize, what true personality means.

But where and how do we actually find this mysterious union realized among men? Moerberly answers—in the Church. In organized Christianity with its sacramental system we find the sphere and instrument of the Spirit's influence, nay, more, the Spirit Himself become incarnate in the lives of living men.

One, the Church. Yes, in fact, the Spirit of Christ, communicative to the spirits of those who recognize, and believe in, His Person and work; it is in the disciples of Christ, made Christian in very deed by participation in the Spirit of Christ* ('p. 369).

Like Moerberly, Ritschl emphasizes the social significance of the Atonement; but, in place of the mystic bond of union mediated which was composed eight years after the first, was originally designed to take the place of its third and fourth sections, but this does not affect the salient point of the plan, and the two versions stand side by side as books 1. and lii.
7. Summary and conclusion.—As we look back over the history which we have briefly passed in review, we are struck by the great variety of opinion represented in our survey. Whether we consider the Atonement from the point of view of its nature, its object, its necessity, or the means by which it is made practically effective in men’s lives, we find differences of view so striking as to make any attempt at harmony seem hopeless. The atoning character of Christ’s death is now found to be a real quality of suffering, now in its ethical character as obedience. It is represented now as a ransom to redeem men from Satan, now as a satisfaction due to the honour of God, now as a penalty demanded by His justice. Its necessity is grounded now in the nature of things, and, again, is explained as the result of an arrangement due to God’s mere good pleasure or answering His sense of fitness. The means by which its benefits are mediated to men are sometimes mystically conceived, as in the Greek theology of the Sacrament; sometimes legally, as in the Protestant formula of imputation; and, still again, morally and spiritually, as in the more personal theories of recent years. In surveying differences so extreme, one might well be tempted to ask, with some recent critics, whether, indeed, we have here to do with an essential element in Christian doctrine, or simply to carry over our personal ideas whose presence in the Christian system constitutes a perplexity rather than an aid to faith. Yet, such an opinion, however natural, would be misleading. The differences which we have discussed are not greater than may be paralleled in the case of every other Christian doctrine. When we isolate any doctrine from its environment, it is easy to represent it as a record of inconsistencies and contradictions; but, when we look below the surface and consider the underlying causes of the changes in question, we find it necessary to revise so superficial a judgment. These causes have to do with the conception of God and of His relations in the world. Where God is conceived, as in the old Greek theology, in physical or metaphysical terms, as the absolute Spirit, immutable and incorruptible, who says man by making him par-taker of his own immortal life, the Atonement necessarily becomes a mere incident in the life of the Incarnate One, and the type of thought represented by Athanasius is the result. Where, as in the Nicene formulae and the earliest Protestantism, God is conceived primarily as Governor or Judge, dealing with men in terms of justice, either private or public, legal phraseology becomes the natural expression of religious faith, and the various substitutionary theories, whether, in the form of satisfaction or of penalty, are the result. Where, on the other hand, as in modern times, the ethical and spiritual categories are controlling, the Atonement will in like manner be given an ethical and spiritual interpretation; and the various questions as to its nature, its necessity, and its effects will be answered along the lines followed by the later Protestant writers whom we have been reviewing. We have noticed one way of conceiving Christ, and it is, on the whole, most adequate to express the Christian view.

W. ADAMS BROWN.

EXPiation AND ATONEMENT (Egyptian).—No certain trace of any rite or ceremony analogous to the Sem. atonement-sacrifice (kippa, "sin") is known in Egypt. At least two resurrection ceremonies can be found in Egypt, religion so long as it was influenced by Sem. observances. The close connexion with Palestine, which began in the time of the XVIIIth and reached its climax in the earlier dynasties, resulted in the temporary introduction of many Sem. deities into the Egypt. pantheon; and with them, no doubt, came many Sem. religious observances, among them that of the atonement-sacrifice. But the anti-Semitic feeling, which was brought about by the national resistance to the Assyrians in the 8th and 7th cent. B.C., resulted in the expulsion of the Sem. deities, at any rate from the official pantheon; and with them went their cult-observances. Any trace which may be found of the kippurim-rite in Egypt is probably to be regarded as of this Sem. origin (as was certainly the case with the rite of burnt offering), and would not have been allowed of Sem. religious influence. The main rite of atonement-sacrifice was probably rather that of wajib than of sin. The Egyptian conception of sacrifice does not even seem to have included any idea of expiation for sin. The Egyptian placed fruit, cakes, and cooked meat on a mat, before the sun, and rote, and poured out wine and libations. Sacrifice, sin, and burnt incense before it, in order to feed him, please him, and ward off his wrath in case the offerer had offended him by doing something wrong. In this rite we probably get something which is probably rather that of crine than of sin. The Egyptian does not seem to have had the same idea of sin as the Semite, and the sin-offering was, therefore, probably unknown to him originally. When he sacrificed from fear of the Divine wrath, it was
because he had committed a crime against the king's peace or that of the god, not because he had 'sinned' in the Rab. and Jewish sense, or even in the less emphasized Greek sense. Wickedness and the concept of sin are thus anathema to the ancient Greeks, like other primitive peoples, undoubtedly practised rites to drive away evil spirits, and that from these rites arose many later practices, the object of which was to remove some point of evil. In so far as the evil was the cause of the Divine anger and separated men from communion with the gods, it may perhaps be called 'sin,' and its removal the expiation of sin. The idea that evil itself is a substance which can be absorbed in a specially prepared decoe (dios kathos), or removed by some potent cleansing material like blood or clay, or instilled into a person who can bear it out of the city, is perhaps nearer to the facts than is our thought of evil spirits. In a period much later than the one under consideration, the Thargelias, a festival of Apollo at Athens, included a peculiar rite in which one or two men (sapaes) were first fed at the public expense, then when threatened by the Divine anger, though doubtless more stress was laid on a ceremony in time of famine or pestilence, when men felt that their gods were angry with them. It was primarily a means of removing any taint of evil which might bring danger to men or destruction to their ripening crops. Because rites of purification originated from the moral conceptions of the early Greeks, it is not surprising that purification took a very early period. In themselves they shed little light on the present question, except as they indicate that men feared the possible anger of their gods, and possessed means to remove the cause of such anger, if not to allay the anger itself. Still these rites of pardon (aporia) must be taken into account as the source of later purificatory rites, and perhaps as the starting-point of propitiatory sacrifices.

2. In the Homeric poems.—In contrast with the earlier ages, for which the evidence is largely based on inference, the picture of religion in the Homeric poems is that of a religion whose purity, safety, and moral purity, and it is necessary to consider the expiation of sin by rites of this character. Again, any disregard of what is due to the gods is an exhibition of man's neglect or self-assertion, which may be considered as sin against the gods. Such acts are a foie-majesté demanding purifying punishment, though sometimes the latter may at least be lessened by expiatory rites. It will be noted that this conception of sin goes with the belief that the gods have a moral code.
The concept of sin as an affront to Divine rulers which provokes their anger is illustrated by Ajax's boast that he had saved himself from the sea against the will of the gods (Od. iv. 504), whereupon Poseidon threatened the man who had found safety; or by the recklessness of Odysseus' followers in eating the cattle of Helios (Od. i. 7-9, xii. 379); or by the affront to Athene when the city of Troy was sacked. In this last instance Agamemnon thought to allay the anger of the goddess by sacrifices, for he did not recognize that the purposes of the gods are not lightly changed (Od. iii. 143 ff.). The omission of sacrifices that were due to the gods brought down their wrath on Calydon (II. ix. 533 ff.), and prevented the departure of Menelaus from Egypt (Od. iv. 489 ff.). In such cases it was necessary to make good the omission by highly-penalized sacrifices. Menelaus must go back and offer the sacrifices; Agamemnon must restore Chryseis to her father, the priest of Apollo (II. i. 89 f.). Often, however, it was impossible to undo the evil, in which case men might seek to propitiate the anger by giving the gods what little goods they had no hope of securing. So the companions of Odysseus foolishly thought to set right the slaughter of Helios' cattle by vowing to build him a splendid temple, and to dedicate many valuable votive offerings (Od. xii. 345 ff.). The sacrifices offered to the gods under these circumstances did not differ from the ordinary ones; but, inasmuch as sacrifice always expressed man's desire to gratify the gods by paying them remunerative propitiation, there was danger to his fellow-passengers; and, when sacrifices were offered to the gods, his presence made the worship unacceptable (Antiphon, Herod. 81-89). Purifications were performed before every religious festival, for any impurity would provoke Divine anger. The more dreadful the cause of the impurity, the greater the Divine curse, so that, for example, the murder of Cylon and his companions by Cylon's father demanded more severe purifications. Moreover, the rites themselves came under the worship of Zeus Mellichlos, whose statue, erected after great bloodshed at Argos, was distinctly an expiation for that sin (Pausan. ii. xx. 1). The ordinary practice of purification, however, was the removal of a possible cause of Divine anger, rather than the expiation of any sin.

It is clear that most of the rites of purification have nothing to do with any real sin. Contact with death, sickness, and birth demands a purification which has no moral significance. Probably the same is true of purification for manslaughter, though that, too, was considered a justifiable homicide. At the same time, all shedding of human blood must have been regarded as a kind of wrong, for which some expiation was welcome. The restoration of the murderer to his place in society involved two elements, viz., an adjustment with the family of the murdered man (often a money recompense), and a religious purification; both these demands would be regarded as expiation just in so far as the murder was truly to be a sin. Herodotus (vi. 139) tells how the Lemnian Pelasgians cruelly murdered their Athenian wives and children; and, when a plague came upon them, they were informed by the Delphic oracle that they must pay whatever sacrificial duty the Athenians might demand. A similar answer was made to the inhabitants of Apollonia when they sought relief from a plague which followed the blinding of Ennius (Herod. ix. 30 f.; also Pausan. i. 167, Herod. iii. 207 f.). From the standpoint of the Homeric poems, sin, whether moral transgression or direct affront to the gods, received its due punishment. It was not the sin alone that was to allay the anger of the gods, but there were two sanctions specifically for this purpose, and men had no assurance that their efforts in this direction would meet with any success. The only expiation for sin, strictly speaking, lay in the effort to set right the wrong that had been done. 3. In later Greek history.—While all three conceptions of sin and expiation are found in the later and better known periods of Greek history, the first to develop seems to have been the thought of sin as a pollution which demanded purification. In connexion with the spread of the worship of Dionysus early in the 6th cent. B.C., a new emphasis was laid on purification. Undoubtedly rites of this character originated in the effort to free men from the taint of evil—in other words, from the dangerous influence of infecting evil spirits. It seems that the Dionysian religion, like the more organized Orphic religion, developed these rites to secure release from those gods which seemed to stand between man and the divinity. In the 5th cent., some of the rites had been adopted by the State religion, while others were branded as superstition. The question with which we are now concerned is whether the evil banished by purificatory rites ever gained a moral content, which certainly it did not have at first, or whether impurity in itself provoked the anger of the greater gods, so that its removal could in any sense be called expiation. The second point is more easily answered than the first. Although rites of purification originated quite independently of the greater gods, a connexion was established before the 5th cent. B.C., so that these rites became a part of the State religion. The murderer was banished because he was hated by the gods (Sophocles, Ed. Tyr. 95 ff., 236 ff., 1519; cf. Antiphon, Tetraf. i. 3 and 10; Thucyd. iii. 50 ff.). The same might have been the case with danger to his fellow-passengers; and, when sacrifices were offered to the gods, his presence made the worship unacceptable (Antiphon, Herod. 81-89). Purifications were performed before every religious festival, for any impurity would provoke Divine anger. The more dreadful the cause of the impurity, the greater the Divine curse, so that, for example, the murder of Cylon and his companions by Cylon's father demanded more severe purifications. Moreover, the rites themselves came under the worship of Zeus Mellichlos, whose statue, erected after great bloodshed at Argos, was distinctly an expiation for that sin (Pausan. ii. xx. 1). The ordinary practice of purification, however, was the removal of a possible cause of Divine anger, rather than the expiation of any sin.

It is clear that most of the rites of purification have nothing to do with any real sin. Contact with death, sickness, and birth demands a purification which has no moral significance. Probably the same is true of purification for manslaughter, though that, too, was considered a justifiable homicide. At the same time, all shedding of human blood must have been regarded as a kind of wrong, for which some expiation was welcome. The ordinary practice of purification, however, was the removal of a possible cause of Divine anger, rather than the expiation of any sin.
EXPIATION AND ATONEMENT (Hebrew)

was at times carried over into the ethical field. Most of the evidence for this view may be questioned, since it comes through Christian writers (e.g. Tert. de Passient. 40: 'diabolus lpsa ... expiationem a deo demonstravit'; cf. Cyprian, Ep. 5): yet it is probable that men did come to the mysteries with a feeling of guilt from which they sought relief (Diod. Sic. v. xlix. 6; Schol. ad Hier. Eclog. ii. 227; cf. Schol. ad Locr. 6. άξιόκεισθαι ... 62c.). Although rites of purification commonly had no element of expiation, sometimes the pollution involved a feeling of guilt for which these rites provided relief by expiation.

That it was a sin to neglect the gods or to offer them any direct atonement was recognized in later times as clearly as in the Homeric poems. And in later practice, as in the epic picture of society, the expiation of such sin consisted, first, in setting right the one's attitude toward the gods; secondly, in appeasing the Divine anger. A mythical example is found in the legend of the Trojan war: Agamemnon pursued a hind within the precincts of the Delphian oracle; in this case rich gifts were sufficient to appease Apollo's anger (Xenophon, Cyrop. v. ii. 19). A plague fell on the inhabitants of Phigaleia; the Delphian oracle explained it as the result of the neglected worship of Demeter, and it ceased when that ancient cult was restored (Pausan. viii. xii. 5). To kill Cylon and his companions at the altar of Athene was an atonement to the goddess for which it was necessary to seek an unusually potent means of atonement (cf. also Herod. vi. 91 f.).

Ordinarily, anything like an atonement to the gods was the act of some individual, while the anger of the gods was visited on the State; it was, therefore, the business of the State to deal with the matter, first by punishing the individual, and, secondly, by appeasing the Divine anger. Such acts were the mutilation of the herma at Athens, and the profanation of the mysteries. Regular courts existed to punish individuals who were responsible for the profanation of religious objects. And to appease the gods the State had recourse to special rites of propitiation [which will be discussed in the article under that heading]. Here it should be noted that the punishment of the individual and the expiation by the State were, as in the case of propitiation, distinct from each other.

The third point of view from which the Greek conception of sin may be regarded is found in the Divine government of the world. The Homeric conception that murder was the sanction of the gods is found in later literature from Hesiod (Erga, 333 f.) onwards. 'That old saying, "The doer suffers":' (Esch. Choep. 366) expresses the Greek view of the inevitableness of punishment (cf. Sophocles, Ed. Tyr. 863 ff.; Electra, 209 ff.; Euripides, Electra, 1165). For any expiation which should do away with inevitable punishment, Greek thought found no place. On the other hand, the punishment of murder was sometimes regarded as an expiation of the guilt. So the death of Laius' murderer was to 'loose', i.e. undo, the effect of the original deed (Sophocles, Ed. Tyr. 100 f.; the emphasis on the power in Delphic tragedies). Orestes may have 'loose' the blood of long past murders (Mes. Choep. 863 f.; c. Eurip. Her. Fur. 40). It is not difficult to see how this principle works out in the cases of Orestes and Agamemnon. In Sophocles the king is self-willed, quick to anger, relying on his own great powers; after years of suffering the same man appears in the Electus Colones, his temper chastened and brought into harmony with the will of the gods, for in the results of his unwitting sin he has made his expiation for it. More commonly, however, the penalty for a grave sin was death; but an excommunication was made, but at the expense of the man's life.

The idea of penance finds no place in Greek religion, nor are there any practices by which someone could take upon himself the moral consequences of sin. The word 'expiation' naturally refers to some process by which the sinner may free himself either from some of the results of sin, or from the sin itself, or from both. We have seen that the idea of sin was never clearly developed and unified in Greece. Along with other forms of pollution to be removed by purification there was included the pollution due to some evil deed; at times purification came to be a sort of expiation. An atonement to the gods was sin costly gifts might expiate such sin, though here it is simpler to speak of Divine anger and its propitiation. Finally, sin as morally wrong than atonement other than full punishment, since the sinning of was regarded as something unchanging and absolute.

AHRUR FAIRBANKS.

EXPIATION AND ATONEMENT (Hebrew).

1. In AV 'expiation' occurs only once, Nu 35* marg. ('and there can be no expiation for the land after a murder except by the blood of him that shed it'; see further below), and 'expiate' in Is 47* marg.: in this text of Nu 35* is brought into the text; to make expiation for occurs also in RV in Dt 21* and 'expiated' in the margin of 1 S 3* Is 6* 22* 27*. In all three passages the Heb. word used is kipper. 'Atonement' occurs in the priestly laws of the OT for kipperátm, an abster from sinning, to reconcile with the Divine, and 'to make atonement' regularly in the same laws for kipper. In AV of the NT 'atonement' occurs once only (Ro 5*), for karaLag; in RV it does not occur at all, 'reconcilation' being substituted for in Ro 5* on account of other compounds of ἀξιόκεισθαι being, even in AV, rendered by 'reconcile' and 'reconciliation' in both AV and RV, it should further be pronounced, 'atonement' means always, a remission or restoration, which is the sense the word has acquired in modern English, but at 'one-ment,' or reconciliation, which is the sense in both 'aton' and 'atonement' are regularly used by Shakespeare, and other writers of the same kind such as Othello, iv. i. 234; 'I would do much to atone', i.e. to reconcile them; and 2 Hen. iv. iv. i. 221, 'If we do now make our atonement (reconciliation) well done, our ained limb united, Grow stronger for the breaking'; Rich. III., t. iii. 36 (see further examples in Aldis Wright's Bible Word-Book, London, 1896, s. v.).

It will be noticed that the Pauline theory of reconciliation by which Zippah is the Heb. word corresponding to both 'make expiation' and 'make atonement' our first step, therefore, must be to examine this word,
EXPIATION AND ATONEMENT (Hebrew)

with its cognates, and try to ascertain what ideas are associated with it.

The precise meaning of kipper is uncertain, and, with our present knowledge, cannot be made the starting point of an investigation. In Arabic the corresponding word, kafar, means to cover, being used especially in the instance (Lai. 2929), of clouds covering the sky, or of the wind covering a trace or mark with dust; and formerly it was customary to derive the senses of kipper from this, as it would have been impossible to derive similarly (so, though with reserve, and allowing it to be uncertain, the present writer in 1902, in *HDB*, art. 'Propitiation'). In Syriac kēpār, and esp. the Pael conjag. kappăr, means to wipe, or wipe away (as to wipe the mouth, to wipe away tears, the stain of sin, etc.) and W. R. Smith (*OTJC* [1881], 438 f., more briefly *OTJC* [1892], 380 f.) explained the senses of kipper from this, supposing it to denote properly the wiping away of sin. Recent progress in Assyriology has, however, thrown new light upon the word. In its Assyrian form, koppurü (with a derivative, topkirtü), it is now known to occur repeatedly in a ritual connexion in Assyrian, and the word in Assyrian is usually shown to be a derivative of the term is still disputed among experts, it seems clear that in actual usage it expresses the idea of ritual purification: by certain specified ceremonial acts, the person who is affected, for instance, to 'purify' a king (tūra takopparr), a sick person, or a house. The ceremonies prescribed are largely, it should be noted, of a magical nature, and their supposed effect is to remove diseases, and especially to expel the demons who were regarded as the cause of both these and other troubles in those whom they possessed (see above, p. 638). The word is used in a much deeper sense in Heb. than in Assyr., and the applications in the two languages are sufficiently kindred to leave no doubt that there must be some ultimate connexion between them. Whether, in the remote age in which the Hebrews and the Assyrians separated from each other, the word had already acquired a ritual signification, which was afterwards developed along different lines in the two languages, or whether (Zimmern) the word was borrowed by the Hebrews from the Assyrians at a later date, or whether the ritual sense then attaching to it was afterwards modified independently by the Hebrews, it is hardly possible at present [1912] to determine; but, in one case at least, the Heb. and Assy. applications of the word must have sprung from a common origin.

It will be convenient in the sequel to indicate the action denoted by the verb either by the inf. kappär, or by the post-Biblical stem, kappārāth. 3. The following are the general ideas expressed by kappārāth. Either the guilt of sin or the stain of some ritual (non-moral) 'uncleanness' rests upon a man: the appropriate kappārāth expiates the guilt, or ritual stain, clears the offender, and at the same time appeases the Divine anger, which the sin has aroused, and effects the 'at-one-ment,' or reconciliation, between God and man. The means by which kappārāth expiates sin is usually named, 1

1 Zimmern (*Beiträge zur Kennniss der bab. Relig.*, 1896, p. 92; *KAT*, 601 f.) supposes its primary meaning to be to wipe away 'superstition' (not sanctity) and the notion is certainly present in the sense of 'wiping away' a fear in *KTB* vi. 75, 266; 186. If Langdon (*EBTP* xxi. [1011] 328 f.) contends that its primary meaning is to remove, C. P. Bury (ib. p. 325 f.) and C. J. Ball (ib. p. 475 f.) argue, largely from the evidence afforded by a syllable 'a,' that the word is properly to be bright, or, in the case of the kippârāth, to make bright, the 'theological' idea of the word, as used in the OT, is, however, unaffected by the question of the primary, physical meaning. In some cases it is doubly difficult if this was at present the Hebrews when they used it in a ritual or theoretical sense. 2

2 See the collection of passages given by Langdon, *EBTP* xxi. 328 f. and 290 f.; and the translations by Zimmern, *op. cit.* (see Index, s. v. 'Kippurü').
the surviving kinmen of the murdered man might decide which they would accept. The Gibonites choose the latter.

4. A murdered; i.e. a murderer cannot be traced; and the guilt of his blood rests upon land and people.

5. The elders of the city nearest the spot on which the murdered man was killed are to perform the symbolic ceremony, saying a cow (representing the murderer) cannot expiate by bleeding; they are to wash their hands, to symbolize their own innocence. The ceremony having been duly performed, they are to pray to God in these words: "Our hands have spilt this blood, neither our eyes seen [Expiate] (or Declare expiated), O Jehovah, thy people Israel, when thou hast slain an innocent blood in the midst of thy people," after which it is added, "And the blood-guilt shall be expiated for them." Jehovah does not say this is to be said by a priestly ceremony, but satisfied with the ceremony which the elders have performed, He regards it as 'expiated,' and no longer refers to His people, (De 23:2). (end of the Song attributed to Moses).

6. We now come to passages from the prophets. It is 67. In his vision, Isaiah's 'iniquity is taken away,' and his 'soul is restored like a sword, and the mouth of the serpent touched him with the hot stone from the altar.'

7. It is then their unimpaired in presence of the law, the prophet pronounces sentence against the people of Jerusalem in these words: 'Surely this iniquity shall not be expiated by you, day by day, saith Jehovah of hosts.' Cl. 1 S 31:4 above.

8. (addressing Israel). 'Therefore shall evil come upon thee, which thou shalt not know how to charm away; but accost probably נוח, to bribe off, for ינשע; and mischief shall fall upon thee, which thou shalt not be able to expiate (fig., for an expiation or expiation-price) (Cf. Jer 15:23).

9. In a prayer against his foes, 'Expiate not their iniquity, neither blot out their sin from before thee: but let them be made to stumble before thee; deal thou with them in the time of thine anger.'

10. (a promise of restoration of favour). 'When I expiate thee (clear thee from guilt), in regard to all that thou hast done.' The figure is suggested by the priestly terminology: Jehovah produces directly, and by His own free grace, an effect which the priest produces by means of a sacrifice.

11. (addressing his people). 'As for our transgressions do thou (emph., expiate) them.'

12. The messenger who is compassionate, he expiates his iniquity, and destroyeth not. Ps 79:4, 'And deliver us, and expiate for our iniquities, for thy name's sake.'

13. In the next two passages the term is used figuratively.

Ps 109:8, 'The wrath of a king is (as) messengers of death (i.e. it threatens death); but a wise man will propitiate it,' viz. by prudent and conciliatory behaviour.

2 Ch 30:18, 'The good Jehovah expiate (clear from guilt) everyone that setteth his heart to seek God, though he be not cleansed by purification of his soul.'

In 2 Ch 30:8, 'Seventy weeks are determined upon thy people and upon thy holy city, to finish transgression, to make an end of sins, and to expiate iniquity, and to bring in everlasting righteousness,' etc., i.e. to bring in an age free from all sin.

14. It is to expiate for the soul. کپر (L. and V. kipper, Kipper (L. except Am 5:23, always rasson) is the expiation-price for a life, the money offered for the life of a murdered man to appease his kinsmen's wrath, the ו-olds, or 'wergild,' no money being paid. The first of the semi-civilized nations (see BLOOD-FEUD, vol. ii. p. 720 ff.). As the allusions to it show, the kipper must have been an institution familiar to the Hebrews: but in Hebrew he is 'expiation of a life'; but, for the sake of preserving the connection, it is used here (and sometimes in the sequel) in its old sense, which it shares with the Lat. kipper, of paying a person from guilt or pollution—properly by religious ceremonies.

law, from the earliest period in which we know it, the principle, in the case of murder, was life for life (Ex 21:23). 'He that smiteth a man, so that he die, shall be put to death'; and in P the acceptance of a murderer's life in lieu of his own was regarded as an act of grace (Nu 35:21-23, no kipper to be accepted for the life of a murderer; v. 33, 'murder can be expiated only by the death of the murderer'); it was admitted only in the case of a man being killed by a vicious ox, in which case the owner of the ox was held responsible, but the owner might pay such a rvah as they might fix (Ex 21:30). 'If there be laid on him a kipper, he shall give for the redemption of his life whatsoever is laid upon him.' The kipper is also mentioned in the following passages:

1 S 13:8. "If a man's soul (life) is his riches." Ps 88:11. "He is a kipper for his soul, and his life is in the hands of the executioner, and the treacherous (cometh) instead of the upright." Is 43:2. "And I will give Egypt for thy price." Ps 49:8. "No man can redeem (notice, 'redemption' in Ex 21:30, above) a brother's life, or give God a kipper for it, (i.e. a price sufficient to save his life)." Ps 68:18. (said of the high priestly office, and our sacrifice); and he who will not accept its price will lose his life to the slayer (from their right)." Is 43:9. "As such kipper thou art, as such price; and for the estimation of thy life take account of thy sin." (v. 15, the kipper is said to be given to expiate kipper for their lives, and in v. 16 it is called expiation-money. Cf. the two other usages of κληρονομε, in which, though the word kipper is not used, the idea is present, and the verb kipper is used exactly as in Ex 20, just referred to."

Na 9:9. The Levites are 'given as a gift to Aaron and to his sons (i.e. to the priests) from among the children of Israel,' to perform for them menial duties about the sanctuary, and to make expiation for the children of Israel: that there be no iniquity among the children of Israel, through the children of Israel coming nigh unto the sanctuary. The Levites, in approaching the holy vessels, etc., would do so, according to a prescriptive law. The kipper, at the risk of the life of their children (Nu 18:33, v. 34, wvĩ). This, in the literal sense, is the 'kipper,' doing it in their stead, prevent Jehovah's wrath from manifesting itself in a plague (cf. Ex 34:11), and are therefore said to 'make expiation on their behalf.' Na 3:10. The army which had returned from the war against Midian without killing a man bring a man of the tribe of Levi before the jewels which they had obtained from the spoil, 'to make expiation for them.' But before Jehovah had pronounced the expiation is expiated; and by the fear of Jehovah men depart from evil.' Cl. the teaching of Ben Sir. Sir 22, v. 11, παντοι ἀποφασίζει εἰς τὴν καταφέρειν ἀνοσίαν, καὶ καὶ τὴν ἐνλευθεροποίησιν. Sir 32, v. 20, εἰς καταφέρειν ἀνοσίαν, καὶ καὶ τὴν ἐνλευθεροποίησιν τής πόλεως, ἀποστείλω ἡγεμόνιον ἄνδρα ἀνοσίας. Also 31:14 (Vista, 31 (40) 25, εἰς καταφέρειν ἀνοσίαν ἀναστήσω ἑαυτοῦ καὶ εἰς τὴν ἐνλευθεροποίησιν τής πόλεως)

15. 'The wrath of a king is (as) messengers of death (i.e. it threatens death); but a wise man will propitiate it,' viz. by prudent and conciliatory behaviour.

2 Ch 30:18, 'The good Jehovah expiate (clear from guilt) everyone that setteth his heart to seek God, though he be not cleansed by purification of his soul.'

In 2 Ch 30:8, 'Seventy weeks are determined upon thy people and upon thy holy city, to finish transgression, to make an end of sins, and to expiate iniquity, and to bring in everlasting righteousness,' etc., i.e. to bring in an age free from all sin.

16. It is to expiate for the soul. کپر (L. except Am 5:23, always rasson) is the expiation-price for a life, the money offered for the life of a murdered man to appease his kinsmen's wrath, the ו-olds, or 'wergild,' no money being paid. The first of the semi-civilized nations (see BLOOD-FEUD, vol. ii. p. 720 ff.). As the allusions to it show, the kipper must have been an institution familiar to the Hebrews: but in Hebrew he is 'expiation of a life'; but, for the sake of preserving the connection, it is used here (and sometimes in the sequel) in its old sense, which it shares with the Lat. kipper, of paying a person from guilt or pollution—properly by religious ceremonies.

We 8. Lastly, to consider the use of kipper in the priestly passages of the OT, i.e. in Ezk 45:11, and in 1 Ch 6:9, 2 Ch 29:20, Neh 10:19. In those the idea is always of a price paid to an individual (Lv 1:1711, and, in passages already considered, Ex 30:29, Na 31:20 25) offering of some kind;
The object is never the guilt (as in many of the passages cited above), and indeed, as a rule, is unexpressed, the usual expression being to make expiation for (or on behalf of) a person or (of) the soul (life), i.e., the means is a sacrifice, except in the few cases in which some other act, or offering, is regarded as having an expiatory force.

(2) Of the blood of the sacrificial animal containing the 'soul,' or life, Dt 12:20; Lv 17:11 (in the 'Law of Holiness,' I have given to you the altar to make expiation for your souls). Of the blood of the burnt-offering, Gen 22:18; Ex 29:12—20, the means is by the shedding of the soul of the life, which is in it.

(3) In the case of the burnt-offering: Lv 1 (generally): 'And it shall be accepted for him to make expiation for him'; 11:4—17 (on the Day of Atonement, after the principal ceremonies are over, when Aaron comes out of the tent of meeting, and offers a burnt-offering 'to make expiation' for himself and his people), also sometimes been sung in conjunction with a sin-offering (see § 6(d)).

(c) Most frequently of the sin-offering: Ex 30:16—20 (to make expiation for the altar of burnt-offering at its consecration) ; see Lk 5:26; Lk 7:50 (for the altar of incense, on the annual Day of Atonement); 30:17—21 (on a point of ritual; so 102f); 34 (for Aaron and his sons at their consecration); the sin-offering not expressly mentioned in Lk 17:1f (see verses 26—30 solemnly upon his duties, for himself and the people); 11:5* for (the 'un-sin' or un-leavened bread of the Levitical law); 26:2—8 (after purification for leprosy); 15:1—30 (after the cessation of unclean issues in man or woman); 16:18ff. 16:18—26f. (on the Day of Atonement, for the house of Israel, for the guilt-offering Azazel, for the Holy of Holies); 29:1* because of the uncleanness of the children of Israel, for the other priests, and for the whole people) ; 23:1f (on the Day of Atonement); Nu 10:1 (after the sin-offering of the sin-bearer, when rendered unclean by a person dying suddenly beside him); 18:1—19f. (on the day of atonement); 19:9—22f. (Materials); Lk 4:19 (on the first day of the first, and [LXX] of the 7th month—the two days of annual purification and atonement, prescribed by Ezekiel); 2 Ch 29ff (for all Israel, at the purification of the temple by Hezekiah, as described by the Chronicler). Neh 10:17—19f. (the people agree to make atonement, among other things, for the sin-offerings to make expiation for Israel); cf. 1 Ch 22ff.

(c) Of the 'ram of Installation' (2 Ch 29)?—a species of peace-offering, offered at the consecration of the priests (Ex 29:20—22, 23—24), a blood which was sprinkled upon the priests and their garments and seemingly, also, of the cakes of bread eaten by the priests with it (Ex 29:25). Cf. Driver, Exodus, Camb. 1911, ad loc.

(r) Of the 'boiled-offering' (Ex 26:28) to be sprinkled upon a house infected with leprosy, after it has been pronounced clean by the priest, to 'purify' it (Lv 14:36; see § 6(c) for expiation, for it (2). (g) Kipper is also predicated generally of the meat and peace-offerings, of the burnt and sin-offerings in Ex 29:20—27.

(1) Of Aaron, when, by kindling incense from the fire on the altar, and carrying it rapidly among the people, he approached Jahweh, and arrested the plague (Nu 16:25—33).

(c) Of Phinehas, when he slew with the sword two conspirators, and their 'ploy' 'turned away' Jahweh's wrath from Israel, and stayed the plague (Nu 25:7).

See also Ex 23:16; Nu 33:1 (cited in § 7), and Nu 35:12 (on the altar, and carrying it rapidly among the people, he approached Jahweh, and arrested the plague (Nu 16:25—33).

(9) The following facts respecting the use of kipper in Ezk and P ought to be noticed:

(a) Though the object of kipper is usually an individual or sacrificial community, or, in general, a material object, or an animal—perhaps in particular, the altar of burnt-offering (Ezk 43:25—28, Ex 29:22, Lv 8:16—20, 26, 27), the altar of incense (Ex 30:1—4), and the sacrament (Ezk 45:2; Lv 16:10, 20, 24), associated with leprosy and the occasion of its purification (Ltv 14:13), the goat sent to Azazel (Ltv 16:10).—(b) The verb is a denominative, meaning to perform an expiatory ceremony for (or on behalf of) a person or thing: the object follows in the accusative, only in Ltv 15:8—6; Ezk 45:24—65 (each time of a material object).—(c) It is followed by it and shall be for given him (them), in the case of the sin-offering, Ltv 4:28, 29, 30, 32, 33, Nu 15:26, 28, 29 (cf. v. 28); and in the case of the guilt-offering, Ltv 5:1, 2, 6f. 16—19ff.—(d) It is closely associated (but only when predicated of the sin-offering) with 'to be clean' (TV, or to cleanse') (Ezk 45:24, Ltv 15:26, 28, 29; Nu 8:7, 8, 17; 28:1; De 17:17).—(e) It signifies 'to be purified' (Lv 14:23, 27, 31, Nu 8:7, 8, 17; De 17:17).—(f) It is a verb frequently used in the Levitical system; but the term may have been applied to the 'mercy-seat,' as being the means of bringing the blood as near as possible to Jahweh on the Day of Atonement. Even if kapporeth did originally signify ltid, it is difficult not to think that the associations of kipper must have been felt to attach to it (King: Sukedekel). The word occurs in Ex 25:22, Lv 8:10, and elsewhere (but, except c. 24), as a proper name.

11. From all that is stated, or may be inferred, it is probable that the primitive ideas of expiation and propitiation among the Hebrews were very similar to those of other primitive nations (p. 255ff.), but that, as was the case with other primitive ideas and customs, they were developed by the Hebrews along their own lines, made the vehicle of important religious truths, and more and more spiritualized. Early passages implying the idea of appeasement are Is 52:10 (where David says, 'if it be Jahweh who hath in question, let him accept [Heb. smell] an offering' [v. 12]).—2 S 24:21, 22 (the burnt offerings offered to appease Jahweh's anger [v. 1] for David's census, and to stay the plague).—Gn 8:31 (where Jahweh 'smells with satisfaction the soothing odour' of Noah's offering, and promises no more to curse the ground for man's sake) but neither in these passages nor in Is 3:14:15 (v. 1. 'expiate forum.' (Cf. Phil. 1:30; p. Rob. 111.))

But whether it is literally true, the burnt offerings (see above) of the house, and rites, incantations to execute it; after this he carried as away the body, and cast it into the river Nidah (cf. Ltv 15:29—30).
EXPIATION AND ATONEMENT (Hebrew)

(Ex 29:22). Among primitive and semi-primitive peoples the human being, as member of the community and in absolute trust in God, possesses a mysterious potency, was, and still is, widely diffused; it may form a sacramental bond uniting men between themselves or with their God. It (Ezk. 312-20; 33:20-40) it is powerful, especially when shed in sacrifice, to protect against disease, misfortune, and death (Curts, Primitive Semitic Religion Today, Lond. 1922, p. 138 f.; cf. Driver, Exeg. CJ., 1911, p. 603). The whole idea of the sin and stain of the sin, and to restore to 'holiness' (see Blood, vol. ii. pp. 715-719, especially 719; Moore, in EBS, art. 'Sacrifice'), col. 421-7). Blood, as the seat of life, was too sacred to be used as food (Dt 12:16-23). But it was so much the more potent as a sacramental agency— as in the cases contemplated in Lv 17— by being sacrificed upon the altar, and especially when it was that of the sacrifice of atonement (symbolically) nearer to Jehovah than that of other offerings. No doubt, also, later the idea would arise that the 'soul,' or life, of an innocent animal involved in the blood was the more acceptable as an offering to God, as being the purest and most immortal gift that could be offered to Him.

13. The effect of the kippurah is a purification, usually from sin, but sometimes (Lv 12, 14, 15, Nu 6) from merely ceremonial defilement—ritual and moral defilement being not clearly distinguished by the Hebrews (cf. the use of 'kek' to 'un-sin') of the altar, a leprosy, or other material object (§ 9), and of a person after the purely physical 'uncleanness,' occasioned by contact with a corpse [Nu 19:15-22]. The aim of the priestly legislation is to maintain, by a detailed and comprehensive ceremonial, the ideal holiness of the theocratic community, and the kippurah is the primary means by which this is effected. Sometimes cleansing (moral or ceremonial) is expressly mentioned as the effect of the rite (see 16* and note esp. Lv 16*). On this day shall expiation be made for you to cleanse you; from all your sins ye shall become clean before Jehovah'). As prescribed in Lv 4* and 16* ritual, sacrifice for the Levites (Nu 8:2-29), before entering upon their sacred duties, it is a readily intelligible rite of preliminary expiation. Enjoined for a material object, the altar or the sanctuary (§§ 8, 9), its aim is to secure, or to preserve, its holiness; the altar prior to its consecration, as the work of human hands, is regarded as affected by a natural uncleanness, which has to be removed; the sanctuary, frequented by a sinful and unclean people, is contaminated by them, and requires periodical purification; the leprosy house is conceived as tainted by sin; and the 'scape-goat,' offered by the sinful people, must be purified before it can discharge the solemn functions assigned to it.

On the part of God, the effect of the kippurah is more particularly specified— at least in the sin- and guilt-offering— as forgiveness (Lv 4:14-21, Nu 15:23-31, Lv 16:10-22, and, after greater offences, 6:19*). In view of the constant teaching of the prophets that there was no merit or value in sacrifices as such, and that repentance and amendment of life was the primary effect of bloodshed by the death of the 'ram of installation' also

In the Amor. ritual, it may be noticed, blood is rarely mentioned in connexion with kippurah, and no stress is laid upon it (above, p. 604).
15. A few words must, in conclusion, be said with regard to the famous prophecy, Is 53:9-10, in which, though the term *kipper* is not used, the idea of expiation is nevertheless expressed. The prophet here draws a picture of Jehovah's Servant, ideal Israel, describing his exaltation after an antecedent period of humiliation and persecution ending in death; the heathen, who were astonished at his suffering, will be less bemused by his new and unexpected greatness (33:13) (see *startle for sprinkle*). As the Book of Job shows, suffering was to the Hebrews evidence of sin; and for a while those who witnessed the Servant's sufferings thought that he was suffering for his own sins (53:10); but at last the truth was borne in upon them that he was, in fact, suffering for their sins, and relieving them of the penal consequences which were their dues (53:6, v. 8). Ideal Israel's voluntary sufferings thus bring home to others the sense of their own guilt, and restore them to spiritual health (53:10); they show the truth of the sinfulness 'guilt-offering' ('âshâm, 53:10), he will rise again, see God's 'pleasure' (i.e. his religious mission to the world, 41:1-9) prospering in his hand, and, as a final reward for his voluntary submission to death, be honoured with accessions, of a very great and good nature (23:9). The use of the word 'âshâm shows (see § 8 (d)) that sin is here regarded as a *sacrifice*, an invasion of God's honour; the 'âshâm is the expiation made for it, viz. the innocent life of the ideal Righteous Servant. The voluntary sufferings of the Righteous Servant are accepted on behalf of the wicked; and so the prophecy preaches at the same time the doctrine of vicarious suffering, or the idea that the righteous suffer in the place of others.

16. The theological importance of the ideas which thus had their centre in the *kappârâh* will now be apparent. The dim and at first confused ideas of the nature of sin, of its antagonism to the holiness of God, of its effect in arousing His punitive wrath, and of the need of allaying this, first gave rise to expiatory rites. Gradually, the ideas connected with them became clearer; ‘sin’ and ‘holiness,’ which were both at first intermingled and confused with non-moral elements,1 were seen to be exclusively ethical; and so in Israel, where, in the ancient world, spiritual illumination was greatest, expiatory and atoning customs of a ceremonial kind came to be connected with the holiness of God, and to the need of means for annulling the penal consequences of sin, and effecting ‘at-one-ment,’ or reconciliation, with God. As the *kappârâh* is a ceremonial side of religion, there was danger that its moral and spiritual side might be overlooked or forgotten; but the prophets guarded against this, by insisting strongly and repeatedly on the sufficiency and adequacy of the *zîr quân* of the forgiveness and favour of God. The ritual thus served as a great educational agency inculcating in the hearts and minds of participants and spectators the right conceptions of the nature of man, and the holiness and mercy of the just God’ (J. M. P. Smith, *BW*, 1908, p. 217). And so the way was prepared for the use made in the NT of the ideas, and terminology, and symbolism of the *kappârâh*. It is the first and highest and most perfect of atoning sacrifices, the death of Christ. See EXPIATION AND ATONEMENT (Christian).

1 The word ‘atonement’ is derived from the Greek *metatetos* and *metatetos* in the LXX, and from the Hebrew *shâbâqârâh* and *shâbâqârâh* in the OT. The word ‘atonement’ is used in the NT to designate the act of God in providing a sacrifice to meet the requirements of righteousness, and to signify that the sacrifice has been accepted and the penalty of sin has been paid. The word ‘atone’ is derived from the Hebrew *hâshâm* and *hâshâm* in the OT, and from the Greek *metatetos* in the LXX. The word ‘atone’ is used in the NT to signify the act of God in meeting the requirements of righteousness and paying the penalty of sin through the sacrifice of Christ. The word ‘atonement’ is used in the NT to signify the act of God in meeting the requirements of righteousness and paying the penalty of sin through the sacrifice of Christ. The word ‘atone’ is used in the NT to signify the act of God in meeting the requirements of righteousness and paying the penalty of sin through the sacrifice of Christ.
EXPIATION AND ATONEMENT (Hindu).

—Atonement or expiation (prajñasūtra) forms one of the three principal parts of the sacred law (dharma) of India, judicial procedure (vyanuhrata) and religious custom (dharma) being the other two. It is the third of the seven divisions of the Brahmans; for an offence was not originally devised by the Brahmans, as it goes back to the Indo-Iranian epoch, the penances ordained in the book Vendiddh, of the Avesta being closely analogous to the penances of the Sanskrit law-books. On Indian soil, the Śāmavādāhārā-brāhmaṇā of the Śāmaśeṇa seems to be the earliest work in which a somewhat detailed exposition of the system of penances is given, but it is to the law-books that we have to turn for a full description of the various modes of atonement prevalent in ancient India. The penances for deadly sins are very heavy, and extended. The culprit who has committed the mortal sin of drinking intoxicating liquor is to drink the same liquor when boiling hot; when his body has been completely scalded by the previous process is freed from guilt (Mann, xi. 91). The killer of a Brāhman will become in battle the target of archers who know his purpose; or he may thrice throw himself headlong into a blazing fire. A Brāhman who has stolen gold belonging to another Brāhman shall go to the king and, confessing his deed, say ‘Lord, punish me! The king himself shall strike him once; by his death the thief becomes pure (Mann, xi. 100 f.). In other cases, a penance is prescribed of astonishing extent. Thus the ‘lunar penance’ (chāḍayāya) consists in eating no more than fifteen mouthfuls on the day of the full moon, and diminishing this quantity of food by one mouthful every day for the ensuing half of the lunar month, until the quantity is reduced to nothing at the new moon, and then increasing it in the same way during the fortnight of the moon’s increase. This penance is required to be performed, for stealing men and women, and for wrongfully appropriating a field, a house, or the water of wells and cisterns (Mann, xi. 164). The cow being the sacred animal of the Hindus, no thing coming from a cow nor any cow-contaminated with, is supposed to be a means of purification. The five products of a cow (pañcagavya), viz., milk, sour milk, butter, urine, and cow-dung, have to be swallowed, as a part of various penances, e.g., of the penance called gopāraṇa, which consists in following and serving a herd of cows for a whole month, washing oneself with cow-urine, and abstaining on the five products of the cow during that time. Drops of water falling from the horns of a cow are declared to expiate all the sins of those who bathe in them, and even scratching the back of a cow is said to destroy all guilt (Vyaśñū \[50 f.]. 

The commentator of the Bṛhūṇ (c. A.D. 1030) mentions, as an expiation performed by Hindu slaves on their return from captivity in a foreign country, that they were buried in the dung, stale, and milk of cows for a certain number of days, till they went into a state of fermentation, and were given similar dirt to eat afterwards. The muttering of prayers, and the chanting of songs from the Śāmaśeṇa, consisting of the words of the gods. Some of these prayers and songs have special names indicating their purificatory effect. Religious gifts to the Brāhmans are also greatly recommended. A rich man would give his own weight in gold or silver to the Brāhmans; this is called ‘maṇiṣeṣṭha, ‘a man of great weight,’ and of this practice several instances are recorded in Indian history. Visiting one of the sacred places of pilgrimage (tirtha) in which India abounds is another favourite mode of atonement. Such pilgrimages, as an atonement for heinous sins committed, are very common even at the present day; nor have the older forms of expiation disappeared, though fines or dimers given to the caste are now by far the most common sort of punishment. Thus, e.g., when a man has been accustomed for travelling into Europe, crossing the sea in a vessel belonging to regia and violating the law, he may be admitted into his caste again if he gives a dinner to the entire caste. An offender, having been tried and found guilty by his caste, is still occasionally addressed with the old Sanskrit formula: Aṣṭāṅgīṣya labhasya priyāsūtra samāchara, ‘Take a spiritual adviser and perform a penance.’ In cases of difficulty, some learned Brāhmans are invited to send in a written declaration (vyatikā) in which their opinion of the case and of the particular penance to be inflicted is stated. The offender is re-admitted on performing the penance enjoined by the Brāhmans. This was done even in ancient times and is common in the times before British rule than it is now, and the spiritual power thus exercised by Brāhmans acquainted with the sacred law must have been considered of especial value, especially as they were consulted by the courts of Justice in cases of civil and criminal law. There never was in India a strict line of demarcation between religious and secular law. Offenders, after being duly punished, might be compelled to do a penance in order to obtain readmission into their caste. The kings did not inflict worldly punishments only; they dictated also the penances by which religious offenders were subject to in the Hindu kingdom of Kashmir the Mahārāja, as late as 1875, was in the habit of looking after the dence performance of the prajñasūtras ordained by the five learned jurists (dharmaśāstra) of the country. The readiness of the people to submit to the prescribed course of atonement for their sins was enhanced by a superstition proud of the tortures of hell and of the pains to be suffered by future births. Many diseases and natural misfortunes were viewed as the consequence of sins committed in a previous existence, lepers, for instance, being required to do penance in order to expiate the crime in which they had polluted the body, which was considered to be due, and to avoid being afflicted with the same illness in a future birth. Secret penances (vratasya-prajñasūtra) are also mentioned; they were, and are still occasionally, performed for offences not publicly known.

J. JOLLY.

EXPIATION AND ATONEMENT (Jewish).

—r. It is necessary, though somewhat difficult, to draw a distinction between penance, or repentance, and expiation, or atonement. This differentiation cannot be entirely rigid, for, in dealing with atonement, it is impossible to exclude all references to penitence, and vice versa. It may be laid down as a convenient axiom that penitence is the consciousness of sin; atonement, the desire or effort to be free from sin. Penitence must precede atonement, for penitence is an attitude of the mind, while atonement is a subsequent action. Atonement, however, is directed towards the realization of that attitude, although it may sometimes, as will be seen, penitence was nothing but an atonement. The question then resolves itself into an examination of the process which a Jew, guided by rabbinic ideas and direction, would adopt in order to free his soul from the
stain of sin, it being more or less taken for granted that the redemption of his sinfulness has already been accomplished in him.

The regular word for repentance is נַשֵּׂא, 'returning' (as opposed to נַשָּׁא, 'backsliding' [Hos 14]). This latter word denotes the act of coming back, which was probably 'to wipe out' rather than 'to cover up' (but see König, in Ezq T xxii. [1911] 332, 375), the ה, 'ransom,' 'bribe,' being the instrument. The ransom, to wipe out sin, and purify and atone for the sins of the blood of sacrifices, gradually gave way to a more spiritual idea. It would not be correct to regard this absolutely as progressive development. Sacrifice was but the outward form of the atonement, a concomitant of the ideal. In course of time it was found possible to maintain the inward process independently of the outward form, but this must not be taken to mean that the idea of physical sacrifice was condemned. In many cases sacrifices were brought without the intervention of penitence on the part of the sinner; this abuse was sternly reproved by the prophets (Am 5:24, Mal 1:6c; cf. JE xix. 610 and following). The commandment (xxi. 16), given, col., ed. Warsaw, 1868; see also Toshefta Babo Qamma, x. 18, cited by Abrahams in Camb. Bib. Essays, London, 1909, p. 189; Qimh on Jer. 52:20; cf. the commentaries. Nevertheless it is impossible not to see in the practice an attempt to purify the sinner. Nevertheless it is impossible not to see in the practice an attempt to purify the sinner.

On the other hand, the same doubt may be traced in Rabbinic writings and in the Liturgy. It is true that the Prayer-book of all the Land of Israel contains numerous expressions of repentance and prayer for restoration as a means of atonement for sin (Singer, pp. 255, 234, but contrast p. 267; see also JE xix. 639), and that the daily and festival services correspond to the Temple Office; nevertheless it must be remembered that most of these prayers were composed at a time when the overwhelming calamity was still fresh in the mind of every Jew, and that very often the return to Zion and the rebuilding of the Temple are but other expressions denoting the Messianic age. The thirteenth articles of the Creed, composed by Maimonides (1265), contain no reference to sacrifice, neither does the tenth and eleventh articles, which deal with God's cognizance of sin and with reward and punishment, naturally imply the doctrine of atonement, and the twelfth makes obligatory the belief in the Messiah. The substitution of prayer and penitence for sacrifice as a means of atonement, as taught by Iosea, Micah, Nahum, and Isaiah, was the keynote of the Rabbinic penitential theory; but this did not in any way condemn the sacrificial system of the Temple.

The Day of Atonement itself is, of course, the outstanding feature in the Rabbinic scheme of repentance, and its effects on the religious life of the Jew are magnified in the importance and cause many associations to gather round it. The Synagogue liturgy contains many an echo from the Temple ritual. The service of a Russian Ghetto confesses his sins in the identical formula used by kings and high priests. Penitence and atonement occupy so prominent a position in the life of a Jew, as conceived by the Rabbis, that their writings are full everywhere of the necessity of confession of individual sins to the great sins. In particular, the end of Mishna Yoma should be studied, but on the whole it will be convenient to examine the treatise on Atonement and Penitence of Maimonides (Tad., ccxxv 370) and to incorporate, where necessary, references from Talmud and Midrash, and finally to consider the Liturgy and Synagogue practices.

2. The Mishnaic atonement consists in a complete repentance, coupled with affliction of the flesh according to the prescribed requirements of the Day of Atonement. The sins brought against man, restitution must precede everything else. Atonement is also necessary. Death can atone in certain cases. Death-bed repentance is effective, but it is not the highest form of atonement. Fasting, on the other hand, is not a substitute for an act of submission to stripes—all these can atone; but all forms of atonement depend for their success on the grant of Divine grace.

The Mishna and Genara Yoma deal, in the main, with the ceremonies of the Day, but the concluding sections may here be cited, as referring more particularly to the abstract idea (Yoma viii. 8-9). The sin-offering (נַשֵּׂא) and the offering brought for sin (אָסָא) are similar to the first and second instances of the sacrifices of the Day of Atonement. The sin-offering is itself a means of atonement, the confessor of these sins, and also the sinner. Nevertheless, there is in the Day of Atonement a more adequate, if there is one, means of atonement; the sacrifice of the Day of Atonement is adequate, if there is any, for the sins of the people. It will be brought to those who are able to be benefited by it. Atonement is a means of atonement.

R. Abba (1 A.D. 135) said: 'Happy are ye, Israel; before whom are ye purified and who is it that purifies you? It is your Father in heaven, as it is said in Ezekiel 19:5: 'And I will sprinkle upon you clean water and ye shall be clean, from all your impurities and from all your abominations will I purify you'; and the verse (Lev 17:9) saith, 'O thou Mosech of Israel, O Lord []' (miṣpaḥ having the double meaning of 'hope' and of 'ritual bath'; the latter occurring in the latter sense in Gn 30:4 'Let the waters be gathered together'), Just as the miṣpaḥ purifies the unclean, so the Holy One be blessed be He, purifies Israel. See also Yoma 50, quoted in full in art. 1 'Atonement' in JE ii. 280 (this art. is very important).

In the treatise on Penitence, mentioned above, Maimonides summarizes all that is essential in connection with the subject. The tenth and eleventh articles, which deal with God's cognizance of sin and with reward and punishment, naturally imply the doctrine of atonement, and the twelfth makes obligatory the belief in the Messiah. The substitution of prayer and penitence for sacrifice as a means of atonement, as taught by Iosea, Micah, Nahum, and Isaiah, was the keynote of the Rabbinic penitential theory; but this did not in any way condemn the sacrificial system of the Temple.

The Day of Atonement itself is, of course, the outstanding feature in the Rabbinic scheme of repentance, and its effects on the religious life of the Jew are magnified in the importance and cause many associations to gather round it. The Synagogue liturgy contains many an echo from the Temple ritual. The service of a Russian Ghetto confesses his sins in the identical formula used by kings and high priests. Penitence and atonement occupy so prominent a position in the life of a Jew, as conceived by the Rabbis, that their writings are full everywhere of the necessity of confession of individual sins to the great sins. In particular, the end of Mishna Yoma should be studied, but on the whole it will be convenient to examine the treatise on Atonement and Penitence of Maimonides (Tad., ccxxv 370), and to incorporate, where necessary, references from Talmud and Midrash, and finally to consider the Liturgy and Synagogue practices.

2. The Mishnaic atonement consists in a complete repentance, coupled with affliction of the flesh according to the prescribed requirements of the Day of Atonement. The sins brought against man, restitution must precede everything else. Atonement is also necessary. Death can atone in certain cases. Death-bed repentance is effective, but it is not the highest form of atonement. Fasting, on the other hand, is not a substitute for an act of submission to stripes—all these can atone; but all forms of atonement depend for their success on the grant of Divine grace.

The Mishna and Genara Yoma deal, in the main, with the ceremonies of the Day, but the concluding sections may here be cited, as referring more particularly to the abstract idea (Yoma viii. 8-9). The sin-offering (נַשֵּׂא) and the offering brought for sin (אָסָא) are similar to the first and second instances of the sacrifices of the Day of Atonement. The sin-offering is itself a means of atonement, the confessor of these sins, and also the sinner. Nevertheless, there is in the Day of Atonement a more adequate, if there is any, means of atonement; the sacrifice of the Day of Atonement is adequate, if there is any, for the sins of the people. It will be brought to those who are able to be benefited by it. Atonement is a means of atonement.
Verily I have repented and am ashamed of my deeds, and I will never renew such an act. (H.T. i. 2.) The last sentence is, according to Maimonides, the integral factor of the whole confession; and every one who is profuse in confession (see also the footnote to this point) is accounted worthy of praise. The Divine name is, of course, omitted; סע just as in the Temple formula, representing the Tetragrammaton, which was uttered only by the high priest. No sin, occurring without repentance and confession, nor could the infliction of capital punishment suffice to wipe away guilt without these two adjuncts. Moreover, theft, even if restitution had already been made, could be forgiven only if the thief had made public confession and resolved to abandon theft for all time (H.T. i. 3). Confession is just as vital in the case of the community; hence the high priest, in sending away the scapegoat, made a public avowal, laying his hand on the head of the goat, because it was to be an atonement for all Israel. But, although the scapegoat was a general national atonement for the whole community and grievous unpunished sins, with or without avowal,—yet this was the case only if the sinner repented; without due repentance on the part of the individual the public atonement of the scapegoat was of no avail except for light sins. According to the legal definition, the difference between light and grievous (פסיו) transgressions lay in the penalty; in the latter category were all sins for which the penalty was capital punishment at the hands of the Beth Din, and exorsion (see CRIMES AND PUNISHMENTS [Jewish]); but vain swearing and perjury, although not subject to this condition, are included under Transgression of the Law (גרא). The destruction of the Temple has made repentance itself the means of atonement. So powerful is repentance that even on the death-bed of a lifelong sinner it is effective. Further, to those who repent, the Day of Atonement is itself the means of pardon. There are some sins which are forgiven as soon as repentance is exercised, while in the case of others pardon is deferred.

Four main distinctions may be traced (H.T. i. 7; Yoma 86a) (Gold. 1021, Roldk. 134). Thus, if a man repents of a ‘light’ sin of omission, his pardon is immediate. In the case of a man who repents of a ‘light’ sin of commission, his repentance suspends the penalty. For, if a man commits, say, theft, and the Day of Atonement brings his pardon. If a man has committed ‘grievous’ sins of commission, penitence and the Day of Atonement will suspend his condemnation and punishment, and the chastisement which will be inflicted on him will complete his pardon. In no case can complete pardon be obtained without penance or chastisement (טבש; see conclusion of art. DISEASE AND MEDICINE [Jewish]). The only exception is in the case of blasphemy. By blasphemy (lit. the profanation of the Name) more is understood than the English equivalent implies. It almost includes deliberate atheism (cf. the word מחלל foyer ‘suffer martyrdom’), and is the only sin to which the distinction of presumption (=ax) and ignorance (ןי) does not apply (סנה לֹא נָכוּ וְנוֹכֵּא הָאָדָם יִהְיֶה יִהְיֶה דֹּּדְיָּהָאָדָם דַּעֲקָדוּ: Abodaiv. 4; Singer, p. 196). In the case of a man who has ‘profaned the Name,’ repented and remained constant in his repentance, passed a Day of Atonement, and suffered the chastisements, his absolute pardon is deferred until his death; but by the effects of repentance, Day of Atonement, and chastisement, his punishment is suspended (H.T. i. 6-9).

The principles underlying these differentiations are clear. It is far easier to repair a sin of omission than a sin of commission (see also the footnote in Singer, p. 202); the reality of repentance in the case of a sinner who is guilty of evil practices is tested by time, for he must prove that he has had the power and opportunity to relapse and has not yielded. The greater the sin, the longer is the period necessary to attest repentance. Repentance in itself is also not a sufficient proof of the crime to have been effaced. If the element of chastisement did not enter into the question of pardon, it might lead to a false repentance to avoid punishment.

The question of the reality of penitence is discussed by R. Yehuda in Genara Yoma 86b (Gold. 1024, Roldk. 136), and repeated by Maimonides in H.T. i. 11. He concludes that he who repent the sin and complete opportunity to repeat the offence. With this is also connected the question of validity of death-bed repentance. Maimonides is very decisive. Even if a man has been a sinner all his days and repents in his old age, when all opportunity for sin is gone, in spite of the fact that this is not the highest form of penitence, nevertheless his penitence is a valid atonement. Even if he has sinned all his life and repented only on his deathbed, his sins are all pardoned, in accordance with Ex 12: (H.T. ii. 2). On the other hand, see Abodaiv. 15 (Singer, p. 199) ‘Repent one day before thy death’ (i.e. at once, since thy death may be to-morrow). The difficulty, of course, which the Rabbis felt was how to keep the gates of repentance open to the dyer-sinner, without, at the same time, making it any easier for a man to sin all his life, relying on his last hour to make his peace.

It has already been pointed out that penitence is itself held by the Rabbis to have been a means of atonement; consequently a warning is uttered against the doctrine of hypothetical atonement. Since the act of repentance had taken the place of sacrifices as the agency by which pardon could be gained, there must be no danger of the means once more being mistaken for the end. Any man who confesses his sins without the firm intention of abandoning them, is like one who bathes while holding in his hand an unclean insect (גח). His bathing will be useless until he abandons the contaminating insect. Repentance must be a real p SendMessage to: change of mind, and must involve a deep recognition of the heinousness of sin. A penitent should be continually praying and giving charity, according to his means. He should flee from temptation, he should even change his name, as much as to say: ‘I am now another person, I am not he who did so and so.’ He must change all his actions for good; he should exile himself, because exile is in itself an atonement and will involve him in humiliation and affliction which will cause him to become humble and meek in spirit (H.T. ii. 5).

It is also palsyworthy to make public confession; for, if a man is proud to reveal his transgressions, his penitence is imperfect. Here, however, a distinction is drawn. A man should confess publicly sins against his neighbour, but not those against God (H.T. ii. 7; Yoma 86b (Gold. 1024, Roldk. 137)). Penitence and confession, although acceptable at all times, are especially desirable at the period of atonement, that is to say, from the beginning of the New Year (אשורי) until the Day of Atonement. (For an investigation of the time and manner of confession, the formula of confession, the manner in which a man must reconcile himself with his neighbour, and the lengths to which he may go, see the last sections of H.T. ii. and iii. 5 ff.)

The question of punishment can scarcely be considered here, but eternal damnation requires treatment in so far as the idea of everlasting doom was utterly repugnant to the Rabbis; and, when it was limited to a very small number, great pains were taken to prove that almost every individual or class for whom there seemed to be no hope was, in fact, saved. There was always some mitigating circumstance which had been overlooked, some Scriptural authority to be found. In the end, there were but few, indeed, for whom there was no hope. Maimo-"
EXPLANATION AND ATONEMENT (Jewish)

gives much attention to the question, and also in H.T. iii. 11 ff.; it is in the latter passage that the famous words occur: יִשְׂרָאֵלָה יִשְׂרָאֵלָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה. These words are, however, without the common stress of expression. The most natural interpretation of them is to give the sense 'Do not only repeat the Shemoneh Esreh, and the Selihah, but also the Amidah, and the Kaddish, and every form of prayer and charity.' The moment we relinquish this interpretation of the passage in which we had the key to the entire subject, and look on Shemoneh Esreh and Selihah as a part of the Amidah and the Kaddish, we leave the door wide open to the strange and inadmissible statement that these prayers are the 'repetition of the first, or the universal Creator: who has a star, in order to have an intermediary between himself and the Lord.'

The Epicurean among the Jews is he who repudiates prophecy and inspiration in its widest terms ('he says that there is no knowledge from the Creator that reaches man's heart'); he who denies the prophecy of Moses and the Divine knowledge of human actions. The Jew who denies the Torah is he who says that it is not from God (even one verse or one word); or he who says that Moses wrote it on his own authority; so also he who denies the oral Law; who denies its exponents, as, for example, Zadoq and Balaam; who says that the Creator changes one demand for another, or that the present Law, though originally Divine, is now superseded.

All these sinners, as well as the others enumerated by Maimonides (H.T. iii. 16-23), but who cannot, through lack of space, be included here, are denounced from the very first by the Prophets. The plain and simple statement is at once mitigated by Maimonides: 'Under what conditions are the above-mentioned sinners precluded from doing penance? If only he has died in sin. But, if a man turns from his wickedness and dies (in repentance), then he is not a sinner, he is one of those who shall have a part in the coming world (and may even die without sin), and who will be saved from repentance. Even a man who has denied the cardinal principle (יִשְׂרָאֵלָה יִשְׂרָאֵלָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה וַעֲשֵׂה יְשִׂיאָתָה), and repented at the end, has a share, as it is said (Psalms 77:19). Peace, peace to the far and near, saith the Lord, and I will heal him. So too, all the wicked, the sinners and transgressors, when they return, be it openly or secretly, they are accepted, as it is said, 'Return ye backsliding children' (Jer 31:18); although such a man be still a backslider, since he has returned in secret without making amends, yet he is received by reason of his repentance' (H.T. iii. 24-25).

The obstacles to repentance are dealt with in H.T. iv., but in this connexion penitence is not the means of atonement itself, but a necessary preliminary to it; consequently the fourth and subsequent clauses are inadmissible, which deal with different subjects also, may be neglected here. It is important, however, to study carefully the Gemara at the end of Yoma 85a (Gold, 1019-1033, Rodt, 132-142) and ch. xi. of Sanhedrin, 113a, with the commentary of Maimonides (see Lit. at end), and also the other Rabbinic references given in J.E., art. 'Atonement.'

A number of Midrashic extracts are given by Rapaport in Tales and Maxims from the Midrash, London, 1907, p. 261.

1 It remains to consider the question of atonement from the liturgical and ceremonial point of view, apart, of course, from the Day of Atonement itself, to which special treatment is accorded (see FESTIVALS AND FASTS [ Heb.]). The keynote of the Liturgy is the theme of repentance, and that of the Selihah is the 'atonement of all nations have a share in the world to come.' It is noteworthy that, when Maimonides proceeds to particularize those who are eternally damned, he is careful to begin each section of Maimonides: 'because these beliefs which he stigmatizes are frequently held by other religions. Having stated that those of other creeds, holding these beliefs, who live a righteous life have a share in the world to come, he does not warn them again. After they have been warned the same time, there must be no excuse for any Israelite holding these beliefs. In such a case, a Jew may not rely on justification by good works. There is no atonement for the following classes, if they die impotent: the Epicureans; those who deny the Torah, the resurrection, the coming of the Messiah; those who cause the multitude to sin; those who separate themselves from the ways of the Congregation; those who sin publicly and with a high hand, like Jehoiakim; the betrayers; those who put the Congregation in terror, not for the sake of heaven; those who shed blood; the slanders of the Congregation in the presence of those who draw the' wars. Six kinds of Israelites are said to be repented: he who denies the existence of a God; he who says that the world has no guiding power; he who says that the world has two or more guiding powers; he who admits that there is a Lord, but affirms that it is a star or some being endowed with a likeness; he who denies that the Eternal was the first, or the universal Creator; he who worships a star, in order to have an intermediary between himself and the Lord.'

2 For it is on Thy mighty mercies that we rely, or some similar phrase, in order to lead up to the next Selihah, which is never varied and which begins, 'For it is on Thy mighty mercies that we rely, on Thy charitie, as we trust ' [Davis, pp. 252, 82, 189]. A similar prayer, or poetic decalogue, is the mention of the thirteen midrash, or Divine attributes (Ex 34:6), as means of atonement. As instances may be cited the two prayers יִשְׂרָאֵלָה יִשְׂרָאֵלָה וַעֲשֵׂה יְשִׂיאָתָה יִשְׂרָאֵלָה יִשְׂרָאֵלָה וַעֲשֵׂה יְשִׂיאָתָה יִשְׂרָאֵלָה יִשְׂרָאֵלָה יִשְׂרָאֵלָה יִשְׂרָאֵלָה יִשְׂרָאֵלָה יִשְׂרָאֵלָה יִשְׂרָאֵלָה], what is the name of God stoning 'for his Name's sake' (cf. Singer, pp. 57 and 160, near foot).
this idea is old; ‘God of Abraham, Isaac, and Jacob’ occurs in the ‘Amidah (Singer, p. 44, and Mt 22:32), and in the Pentateuch (Gen 24:31[32]). In the end great stress is laid on the merits of the Patriarchs, for they are a private fast in the name of grace and in imitation of salvation and atonement. If children are not to suffer for the sins of the fathers, it would seem that they may not benefit by their virtues. But in the Selihoth the refrain, ‘but we and our fathers’ (cf. Ps 106:43), subdues this mercy, stating a fact, not recording a feeling of helplessness at an accumulation of sin. In any case it is held very strongly that, by the Divine grace, the merits of the ancestors may be accounted to their descend- ants as atonement for sin (e.g. the Selihah מַעֲנַי יִשְׂרָאֵל [Proops, fol. 68b, no. 129]; cf. the Selihah beginning with almost the same words, in the Sephardic rite (Gaster, i. 99 or ii. 80)); the prayer occurs in the Ashamnu (Singer, p. 258), and is elaborated at the conclusion of every Selihah Service: שְׂאֶלֶת וְשָׁם לְךָ נַפְלָת (Proops, fol. 69), or Gaster, iii. 37). The second is the ‘al-Het (Singer, p. 230). This is not recited alone in its entirety. The third formula cannot be quoted so readily; it is the one intended for private use and silent meditation. Several examples of this kind of Widdadi exist. There is the beautiful composition of H. Isaac b. Israel in the Chagigah Mihev Service of the Kippur (Gaster, iii. 225). See also the Widdadi for Musaph by R. Shem Tov b. Ardentiel (Gaster, iii. 181), and the great Widdadi by R. Nissim of Babylon (ib. 125). For a confession for the reader alone, cf. ib. 125. In the long prayer (תִּפְרִיחַ) which concludes the Selihoth for ‘Erev Rosh hash-Shanah, a Widdadi has been interwoven (fol. 24 of Proops’s ed., Amsterdam, 1711). The former of the public con- fessions is repeated at all the five services of the Day of Atonement, the ‘al-Het, however, only at the first four; at Nefilah there is substituted for it a very beautiful prayer, מַעֲנַי יִשְׂרָאֵל (Singer, p. 130). Other fasts for atonement may be briefly noticed: the ‘Second and Fifth’ after the three festivals:

the private fast of the bride and bridegroom on the wedding day, because they begin a new life purged of sin (Jer. 31:34; fol. b, cols. c, d (ed. prince. =vol. ii. p. 386 of Schwab’s tr., Paris, 1875-79)); the fast of Yom Kippur, in order to atone for a sin; finally, on the historical fasts Selihoth are said, because the calamities which are commemorated were due to sin, and penitence may bring pardon and restoration. On the ninth of Av, although the fast is not mentioned, yet the recognition of sin and the prayer for atonement is implied in many of the Qiddush. The doctrine of vicarious atonement in the Christian sense finds no footing in Rabbinic Judaism, because the Rabbis denied original sin. Man had his two yeers, but there was no necessity or room for a Messiah suffering for the sins of his people. ‘Happy are you, Israel, God is he who purifies you,’ said Agiba (loc. cit.). Although passages could be produced which might seem to point to the vicarious idea, such a sense proves, on examination, to be un- tenable. Other means of atonement—study of the Torah, etc.—may be found in JE ii. 290, outer column.

Reference may also be made to punishment and death as means of atonement. Thus poverty (cf. Erubin 41a, fol. 135, Babylon, 1811, p. 370, suffering (Ber. 50c), can be cured if (see DISEASE AND MEDICINE (Jewish)). The death-bed confession (Singer, p. 317, based on Ber. 60b) is that ‘my death may be accepted as an atonement for my sins.’ In the Selihah we say (Iov. 159a, ed. cit. no. 131, fol. 68b; Davis, p. 224) by Moredeci b. Sabbattai, the poet prays:

‘May the words of my mouth be a sweet savour before Thee, Rock of Ages, accept my fat and my blood, diminished by fasting, instead of the fat and blood of the sacrifices; may the meditation of my heart that I have laid before Thee be lasting, a sweet offering, the trespass-offering, and the Minhash’ (Rab. i. 61).

Baptism can scarcely be said to have been a means of atonement in Judaism. On the eve of Kippur, after receiving ligation (see J. Caro, Shulhan ‘Arukh, ch. 607, §6) it became the custom to bathe; but ritual bathing was associated with rather than a means of atonement, though another water-ceremony has been introduced. On the New Year, after service in the place of worship, the congregation repairs to running water, and prays that God may cast our sins into the depths of the sea. The last two words of these prayers are, with other passages from Scripture, there recited; and it is from Micah that the cer- mony takes its name of Tashhı̂‘, ‘Mayest Thou cast’ (Abrahams, Festivals, London, 1906, p. 91; and JE xii. 66).

On the eve of the Day of Atonement the ceremony of Kapporet took place (see Oesterley and Box, Religion and Worship of the Synagogue, p. 445). It consisted in swinging a fowl, afterwards given to the poor as a symbolic atonement. (The origin of this custom, and also the objections raised against it, may be studied inJE ii. 282, and viii. 43). For the Selihoth see also Shulhan ‘Arukh, ch. 605.) Probably the original aim was charity—to provide poor Jews with a meal before the fast began.

EXPIATION AND ATONEMENT (Muslim).

—The formula whereby duties and rights are designated in Islam are identical with those used for debts and credits. Hence the acts prescribed by the Qur'an are regarded as debts due from man to God, incurred by acceptance of Islam; other duties may be incurred by undertaking obligations voluntarily or by violating prohibitions. In the third case expiation is necessary; in the second it may be permissible; in the first it has no place.

Man's debts to God are the five daily prayers, fasting in Ramadan, payment of alms, and pilgrimage. If he omit to pray at the right time, all he need do is to say an extra prayer at a later time; no 'expiation' (kaffārāth) is required. There is some question whether one who has temporarily apostatized and been re-converted to Islam ought to make up for all the prayers which he has missed in the interval, and whether the same obligation is incumbent on one who has ignorantly brought up, so to speak, all the prayers during the interval. The majority hold that this obligation is incumbent (Faddāl-i-Qādī, 1306, ii. 293). 'Payment' of prayer, i.e. saying it at the proper time (ada'), is distinguished from 'repayment' of this sort (qadd). Similarly, one who has for any reason omitted to fast should make up for the omission by fasting the requisite number of days out of season. Unpaid alms can also be given when the year in which they should have been paid has elapsed; or they may be taken out of the first month. An omitted pilgrimage can be made good by deputy, i.e. by paying some one to perform it in a dead man's stead. What distinguishes all these cases from those which follow is that there is no substitution of one performance for another; the identical act is performed, through out of the time, or by another person.

'Expiation' in the case of obligations voluntarily undertaken means the substitution of a different act for the act originally promised. This is not permissible in the case of a vow, but is so in the case of an oath (Ibn Qayyim al-Jauziyyah, Works, A.H. 1325, ii. 240). The Qur'an emphasizes the principle that an oath set down is valid until the interval between it may be broken on condition of some act pleasing to God being performed, such act being the maimmisation of a slave, the feeding of the poor, or, if these be beyond the means of the perjurer, fasting (Qur. vii. 21); the substituted act is called kaffārāh (a word borrowed from the Hebrew, and the proceeding itself is called 'profaning of the oath' (thahlib al-qayn (Qur. xlv. 2), otherwise interpreted as 'losing of the bond'). The theory is that it removes the guilt incurred is rejected by some jurists, on the ground that in many cases such perjury is approved. It does not appear that any oath or contract is ipso facto voided from this principle; and the discussions of the interval and the question of the form of the act which constitute 'oaths' and the amount of compensation to be paid by the perjurer. The Prophet is supposed to have said: 'Be mindful of something and afterwards find a better course, let him do what is better and make kaffārāh for the oath' (Yāsīt, Dictionary of Learned Men, vi. 116).

Although the case of expiation contemplated by the Muslim code are thus strictly limited, certain practices, involving the idea of expiation, survived from pagan times, and certain others are to be found in the Jewish code. In the case of various sorts can be cancelled by acts of supererogation. To the former class belong the sacrifices which the law permits rather than enjoins—such as the offering of two ewes for the birth of a male and one for the birth of a female child, where the number corresponds with the rule in the Law of Inheritance that the male counts as two females. The practice doubtless originally signifies that the life of the animal is to serve as a substitute for that of the child which the god may claim; but the jurists seem unwilling to formulate this theory. The sacrifice which forms part of the pilgrimage ceremony is regarded as winning favour rather than as expiating sin; but, according to a tradition, the weight of the animal is to be put into the scale of the sacrificer's good deeds on the Day of Judgment, and so will serve as an offset against evil deeds which have been done in the interval of another scale.

LITERATURE.—This has been given in the article.

D. S. MARGOLIOUTTI.

EXPIATION AND ATONEMENT (Pars).

—In the sacred and in later times, there were such religious acts as pahāt and āpārēt, 'expiation,' occur in the Vendād (ii. 21, vii. 52 [gloss in the Palavār tr.], iii. 38 f., vii. 107, xvii. 68) in connexion with the penalties prescribed for various crimes. Neither the Gāthas nor the extant Avestan texts have
of hell (ib. xlii. 8; Sad Dar, xlv. 10), and is given a place in Hamseshagahn, a place specially reserved for the souls whose good and evil deeds are equal (Riyûyat-i Dârîb Hormuzdâyâd, pp. 497, 498, Navsari, 1896).

1. In one of his communings with Ahura Mazda, Zarathushtra sees the soul of king Jamsked in the torments of hell. Jamsked becomes penitent before the prophet, and craves forgiveness. Zarathushtra then shows Ahura Mazda to show mercy to the fallen soul. The soul is then removed from hell and sent to Hamseshagahn, a place reserved of the thousand years, and, after further penance and expiation, is forgiven all sins and sent to Garomoun (ib. 498-500).

2. If a follower of Mazda who has sinned apostatizes to another religion and dies without expiation, his soul goes to hell, and remains there till the final Renovation (Dâtestân-i Dinik, xli. 5, 6).

3. The nature of expiation.—True repentance must bring about a change of will. The penitent must resolve to abstain from ever repeating the sinful act (Dinkart, tr. Sanjana, Bombay, 1874 f., bk. vi. ch. 50). Lord confession with the lips and bathing the face with a torrent of tears are of no avail, if the heart is not turned against Ahura Mazda, the Angâmî Spentas, or their respective creations; against parents or children, kinsmen or countrymen, friends or neighbours—in short, all sins that is possible for human beings ever to do.

2. Expiation absolves sins.—Fasting from food is prohibited; the only fast inculcated in the Mazdayasni religion is from sin (Sad Dar, ixxii. 3-5). The faithful should not commit sins voluntarily (Mainôgî Khorot, li. 16). Not to sin is better than to expiate sin (Dâtestân-i Dinik, xli. 11). But, if one has sinned through thoughtlessness or otherwise, he should take the first opportunity to expiate his sin. A quarter of the year in every dimension, whereas by atonement its growth is stunted, and it withers like a tree (Sad Dar, xlv. 5). Owing to a man's sins, he incurs the condemnation of Ahura Mazda; but sincere penance restores him again to the right relation to his heavenly father, and he is forgiven. The efficacy of expiation is such that, whereas the recital of every sacred Gândha ronts one demon, the expiation of one's sins routes every Índ (Shâyâyat ti Shâyâyat, xx. 11). The best time for making atonement for one's sins is during one's life (Dâtestân-i Dinik, xli. 10). It is said that men should make it a custom to expiate their sins every night before going to bed (Sad Dar, ixxiv. 1). For who knows but the Demon of Death may capture him while asleep, and he may not rise to atone for his sins in the right of the day? If an individual dies without expiating his sins, his way to heaven is blocked, for it is ordained in the religion of Ahura Mazda that the only means of entering heaven or to escape hell is the making of expiation while living (Dâtestân-i Dinik, xlii. 10). The religion of Mazda extinguishes all kinds of sins by means of atonement (Vendidad, ili. 41, 42, viii. 29, 30). As the sins already atoned for in this life stand cancelled in the book of life upon conviction or upon expiation, the soul approaches the seat of judgment on the dawn of the fourth day after death (Dâtestân-i Dinik, xiii. 2, 3). We are told in another place that such a soul does receive punishment at the tribunal of justice in the body's grave (Dâtestân-i Dinik, xxii. 33, 34), and translated by Spiegel. Acsacts übersetzt, Leipzig, 1858-63, iii. 293, that the soul is fit to chant the hymn of Zârâkshî Shâyâyat (Manuel du peuple, Paris, 1880, pp. 140-151), and in Pâzand by Antâî and translated by Antâî (pp. 212-232). Mention should also be made of the two other Pâzand expiatory prayers: the Pâzand Êrînîyag, edited by Antâî (pp. 131-140), and translated by Antâî (pp. 212-232) and translated by baron de barson (Zend-Avesta, Paris, 1862-63, iii. 107-189); and the Pâzand-Fêrûrûyag, or 'Shôra to the Dead,' edited by Antâî (pp. 125-134), and as yet untranslated.

3. Retributive expiation.—The penitent sinner has to perform other duties besides the recital of the Pâzonti, the confession of his sins before the high priest, and the sincere atonement wrought within his own spirit. When he sincerely desires
EXPIATION AND Atonement (Roman)

If a man during his lifetime is unable, for any reason, to recite Patët for the expiation of his sins, he should bequeath one of the priests to do so for him on payment. But in this case he should himself recite at least the shortest expiatory formula three times a day (Risivšt, p. 501). If he fails to do so, he is guilty of neglecting his sacred duty towards the dead, and should atone (Patët i Pashimíth, 11).

If a man dies, he must be prepared to undergo any corporeal punishment, or to pay any amount as penalty, or to perform any other deeds of righteousness that the Dostur may prescribe (Sad Dar, xlv. 6; Dâšt-i Dinik, lxv. 3). Bodily punishment in such a case would save the sinner from intramortis punishment. But if he does not submit to the penalty in this world, his soul goes to the abode of the Druj (Vend. viii. 107). The penitent is generally ordered either to arrange a certain number of marriages between the faithful and the poor, or to offer zerchur libations, or to carry certain loads of sweet-scented wood to the fire, or to consecrate barœsan twigs, or to throw bridges over canals, or to kill noxious creatures such as snakes, frogs, and ants, or to practise other good works as compensation for the wrong he has done (Vend. xiv. 1-18, xvii. 67-74; Dâšt-i Dinik, lviii. 17, 19, lxx. 10, 12; Mainuy-i Khî, i. 9). The pulling down of the dakhrou, wherein lie interred the dead bodies of men, or the killing of the noxious creature Zairim-yangura, which kills the creatures of the good spirit by thousands, is also a means of the expiation. The sin of having thought, word, and deed, and is equivalent to the recital of a Patët (Vend. vili. 51, xii. 5-7).

7. Inexpiable sins.—The sins of burning or burning corpses, eating dead matter, and solitude are of a kind which could not be expiated (Vend. i. 11, 12, vi. 27). The man who knowingly lets a corpse remain interred in the earth for a period of two years becomes guilty of anapórëta (ib. iii. 36-39). A barrier has seduced men into the cooking of corpses—an inexpiable sin, the penalty for which is death (ib. i. 16, viii. 73 f.; Strabo, p. 732).

8. Reciting Patët for the expiation of the sins of others. It is customary among the modern Persians to give his death a Patët before the dead body as long as it remains in the house. The recital of this expiatory prayer forms an important part of the ceremonials performed in honour of the dead, even after the removal of the corpse to its final resting-place. The relatives and friends of the deceased join in reciting the same prayers for the expiation of the soul which is now embarking on its journey to the next world. They generally keep up this observance daily for at least a month, or in many cases throughout the first year.

If one man has been requested by another to offer penitential prayers for him after he dies, and if the man who has this duty to do hastens to perform his obligation so soon as he hears of the death of the said person, or, at the latest, on the dawn of the fourth day after death, at the moment once period when the soul approaches the threshold of the celestial world. If the man sincerely recites the Patët as he has consented to do, the benefit of it reaches the soul of the deceased at the Bridge (Risivšt, p. 501). If he fails to do so, he is guilty of neglecting his sacred duty towards the dead, and should atone (Patët i Pashimíth, 11).

At the feriae Latinae, for instance, if in the distribution of the sacrificial meat to the priests another one of the participants, should omit the prayer (Livy. xxvii. 1. 9, xxxvii. 3, 4), or if in the prayer the name of one of the interested communities was omitted (Livy vii. 16. 11), it was enough to ordain that the whole community should partake of the meat which regarded the games, Cicero (ad Hirm. Resp. 23; cf. Anth. iv. 31) gives quite a list of the irregularities—manifestly of frequent occurrence—which necessarily entailed a fantáuturion of the proceedings. Thus, if a dancer suddenly stopped dancing, if the fistal, called bôîî, or Karâthu, the servant of the Caeli, refused to give the chariot of the gods let go the reins, if the preceding aedile made the speech of the games while praying, or if the priest of the bee libation—in all such eventualities, Cicero expressly tells us, not only had the games to be repeated from the beginning, but, in addition, a penalty was required: 'nuncque errata expiatur et nentes deorum immortalium ludorum instauratur placenta.'

Similarly, every breach of the rigorous injunctions against doing work during the feriae publicae
In order to form a proper estimate of the Roman practice of expiation, it is necessary to bear in mind the fact that there were laws and regulations concerning the case. Thus, if a priest gave judgment on a case de noua statu (Varro, de ling. Lat. vii. 30), if a general issued an order calling out the efficient troops on one of the days of the religious laws, or if a priest declared that public property was desecrated (Cato, de agri cult. 2. 4, Verg. Georg. i. 268 ff., Colum. ii. 22, xi. i. 20)—such actions had to be atoned for by a piaculum. There were also numerous possibilities of incurring guilt in the sphere of the insanium—the law relating to the dead and their tombs.

The provisions of this law were violated by such acts as the following: burying the dead within the city (Lex Col. Jul. vet. [Gell. xii. 4. 25; cf. Colum. ii. 24]; removing a corpse from its tomb (Paul. Sent. i. 3. 4; ed. Chim. 1884, x. 825), omitting to make the requisite purification of the funera permanent after a death in their house, or not performing the rites in the prescribed manner (Civ. ii. 4. 5), failing to perform the Alexioi by casting earth (ina quae placet) upon a corpse found unburied, or desecrating the deus of a stockbreeder (cf. Varro, ap. Nonius), or becoming responsible for disposing of the dead in a manner forbidden by the law (Liv. ii. 57: ‘in ede saepe necne, die deinde in mare nuncuti destine...porcum heredi esse contracta et habetibus istudern ferias et porco homina placentum pati; si in mari mortuus est, cadem praetor placetum et ferta’ i. 4766). If a Roman magistrate or a company of Roman soldiers desecrated the property of a temple, even the temple of a foreign deity, then not only did the actual perpetrators become liable to Divine punishment, but the State likewise had to purify itself, by numerous acts of expiation, of all complicity in the misdeeds of its officials or its soldiery. Thus, a contribution on the State’s behalf after the sacking of Proserpina’s temple at Locri by the legate Q. Pleminius in 294 B.C. (Liv. xxxix. 19. 9, 21. 4), after a theft committed by Roman troops at the same sanctuary in 200 B.C. (xxxii. 12. 4), and after the violation of sanctuaries perpetrated by the Censor, Q. Fulvius Flaccus, in carrying away the marble roofing of the temple of Juno Lucina in 173 B.C. (Liv. xili. 3. 10). But an expiation was no less necessary even when the proprietary rights of the gods were infringed without any evil intent. Thus, the pardon of a criminal who was under sentence of ‘consecratio capitis et hominem’ demanded a piaculum, because such an act of pardon deprived the deity of something that was legally his (as when absolution was granted to the Horatius who murdered his sister; cf. Liv. i. 39. 13, also Mommsen, Rom. Strafrecht. Lecit. 39, 294). A tree for the soldier who had been devoted to the gods but had survived the battle, as also for the loss of the lance on which the general had stood while promenading under the formula of devotion (Liv. viii. 12. 14, 14), is to be explained in the same way.

Of the numerous other contingencies in which satisfaction had to be made by acts of expiation, the following examples may be cited: if a man was caught again before the first day of the regular ten-months’ period of mourning (Plut. Xenod. 12); if a slave who, while being conveyed to the place of punishment, met the Flamen Dialis and threw himself at his feet, was nevertheless punished the same day (Gell. x. 15. 10); if a concubine (procurat) caught in a foul offence (C. c. dom. ii. 3. 31); if a person suffered the name of the goddesses Salus, Seminia, Selia, Sogstia, and Tulliusa (Macrobi. i. 16. 8, etc.).

Thus Cato the Elder (op. cit. 190) records the prayer which the farmer coupled with the expiatory offering called for by the operation of clearing a grove (symbol conburum), and we find here an interesting regulation to the effect that, if the work was interrupted, or if feast-days intervened while it was in progress, the sacrifice must be repeated (op. cit. p. 128). If the Arval Brothers invariably performed piaculum when they removed trees that had fallen from age or had been overthrown
Expiation and Atonement (Roman)

by a tempest (Hoenen, 136 ff.), though the great sacrificial rite of the bustrun maniuon, which they performed twice in special circumstances, and which Hoenen (p. 149 ff.) discusses under the term piaen, does occur under the head, not of expiation at all, but of lustration. The piaen was performed by the Arval Brotherhood in an open space, with trees of their growing season (\textit{hibi equoquinti et operis fidelum}), and corresponding to the sacrifice of the piaen, a sacrifice was offered annually on the second day of their annual festival, immediately before the principal oblation to Pros Dia (Hoenen, 136 ff.). But, as the season of the year in which the festival occurred—the month of May—seems the least suitable for the pruning of trees, there is much to be said for the theory that, as in the season of the annual festival, all operations of the kind required to be done during the year were enounced for by a single piaen (p. 23). Such precaution might find a parallel in the piaen of the piaentia, which was originally required of publicit 40 gratia (Coll. iv. 6. 8) only from one man (qui minister insta non fecisset) (Paul. p. 228; cf. Mar. Velt. p. 20 (Kell): qui hinc deposito non fercerant in faciendo pocorum lat. i., had in such way vio-

lating the decrees of the \
\textit{s}uovizara\textit{t}it (Liv. viii. 10. 14), Juno a she-lamb (Paul. p. 222; Gell. iv. 3. 3), the Muses a black sheep (Ulf. x. 8250); the cow in calf offered as a piaen by a widow whose husband in the recognized period of mourning (Plut. Numa, 12) would seem to have been assigned to Tellus, to whom fordoe box were sacrificed at the \
\textit{Forcideia} (Varro, de Ling. Lat. vi. 15; Ovid, Fasti, iv. 826 f.); while the rustic practice of offering a dog as an

atonement for breaking the law enjoining rest on feast-days (Colum. ii. 22. 4) finds a parallel in the immolation of a dog at the agrarian festivals of the \
\textit{Rigilaginis} (Ovid, iv. 908, 925 ff.; Colum. x. 34. 3) and the \ 
\textit{Aurignum Canarium} (Pest. p. 285; Philarg. on \
\textit{Verg. Georg. iv. 425}). But the animal most fre-

quently made use of in expiatory sacrifices—at once

the most ancient and the least ostentations victim

was the \
\textit{forca parenius.} Not only was it the \
\textit{poreo parenius} that was, as Cicero (de leg. ii. 22) puts it: \
\textit{si sacrum comminus, quod neque expiat poterit, impie comminus est.} But the words with which 
\textit{Cicero continues}, \
\textit{quod expiat poterit, publico sacerdotes expiato,\textit{ do not on a strict interpret-

ation harmonize with the religious practice of the Romans; for here expiation was not effected by the priest at all, but simply came about on the ground of the expiatory sacrifice presented by the offender in the name of the State and the magis-

trates. The sole function of the priests in this regard was, when consulted by the individual or by the community, to pronounce on the judgment as to the possibility of expiating a given offence (ib. 37: \textit{publici autem sacerdos imprum-
dentium consilio expiatam metu liberet, anesseim \ldots damnet et impiam indicet}), and as to the

kind of atonement required—and it is possible to see this sense in the \textit{expiantio} of Cicero (ib. 22) is to be understood. But they had no part whatever in the performance of the expiatory sacrifice offered in name of the community—the earliest excep-
tion to this took place in the reign of the Emperor \
\textit{Clundius,} who (according to Tac. Ann. xii. 8) in 49 a.c. directed \textit{sacra ex legibus Tituli regis piae-

unque spudd lineae Dansae per pontifices danda}\text{—} nor did it ever become the duty of the church to give

public judgment on any religious offences (cf. Mommsen, 36 f.). Nor could either priest or magistrate exercise any penal procedure against an individual who offended, or inflict punishment in connexion with religious offences (cf. Mommsen, 36 f.). Nor could either

offences (cf. Mommsen, 36 f.).
In course of time, however, the sphere of ritual transgression came to be encroached upon by the secular element, the ceremonial penalty ('piaclum') being conjoined with, or in part superseded by, the legal penalty of the fine ('multa'). Every offence committed willfully, and against the 'ius sacrum' (in a strict sense, accounted inexorable; thus, e.g., the praetor who had knowingly administered justice on a dies nefastus [godless day], longed, and even incurred by the Pontifex Maximus, Q. Mucius Scævola (Varro, vi. 30; cf. Macrobi. i. 16. 10); but in the law of the grove of Spoleto (CIL xi. 7766: 'benece locum non quasi violato ... si quis violat, love bovid, piaclum datate, sei quis seies violat dolo malo, love bovid piaclum datate et a(s)ses CCC moktai santo. eius picili multaque dictator[ei] exactio est(odd)') unconscious and conscious, or intentional, injuries are differentiated by the circumstance that, in addition to the piaclum incurred in all cases, the voluntary offence demanded also a multa, and to this extent the latter found its way even into the sphere of religious law, while the legally actionable character of the multa came to demand attention likewise to the piaclum. The juxtaposition of multa and piaclum, as found in Macrobi. i. 16. 9f. in connexion with the violation of the feast-day, reposes, is to be explained both by the municipal law of the Colonia Julia Genetiva (CIL ii. Suppl. 5439), cyp. 73, not only were those who interfered a body within the city obliged to pay a fine of 5000 sesterces—for which any citizen might take legal action—and threatened with the removal of the grave, but it was also ordained that, 'si adversus ea mortuus inlatus posset everti, expianto uti orportet,' i.e. a piaclum was required. On the other hand, the law of the Colonia Praetensis (CIL i. 3543) enjoined that one who had polluted the grove ('in hoc loco sacrum nec quis fundatid nee cadaver proiectus nee parentatis') should be punished either by a fine (which was recoverable at law by any citizen) or by a multa of the magistrates ('seis quis arvoris hæ facit, civi[um] quis velet pro iudicato[n] s[ensus] L manum inicet[is] estod. seivc mag[i]ster[ias] velet multare, [I[cetot]'], while by the ordinances of the temple of Poros (CIL ix. 3513) one who rifled the sanctuary was liable only to the multa of the aedile ('sei qui hic sacrum surrupuerit, aedilis multitio esto, quod velet'), nothing whatever being said of an expiation.

Since the Romans, as has been shown in the foregoing, regarded guilt in relation to the gods, and its remission by expiation, from the standpoint of mere legality, it is obvious that penitence in the sense of a repentant and contrite spirit, and of a course of conduct directed by such a spirit, did not come into consideration at all. This is seen unmistakably in the prayer accompanying the expiatory sacrifice for the 'lucum conticere' (Cato, 130), inasmuch as it contains no expression of regret or apology for the offence against the sacred laws or claims decrees: 'uti tibi ius est poreo piculo facere.'

G. Wissowa.

EXPIATION AND ATONEMENT (Teutonic).—Among the ancient Teutons expiation was the act by which peace was restored between the community and the wrongdoer, or his kindred on the other. An act of expiation prevented the outbreak of a feud, or put an end to one already going on. It was either a purely public act, as proclaimed inexpiably guilty by the co-operation of the legislative community, or in virtue of a legal judgment. In the latter case it falls within the sphere of criminal jurisprudence. That which was rendered by the wrong-doer for the purpose of expiating his violation of the peace was the 'boot' (O.N. and A.S. bêt, O.H.G. bôza, Germ. Bôse), 'redress,' 'indemnity,' 'atonement.'

1. Intervention of the Teutonic State. As hitherto times expiation and atonement must have been the concern exclusively of the families to which the doer and the sufferer of the wrong belonged. The period was till fine cases in which the families were reconciled without any intervention on the part of the larger community. Thus the Icelandic sagas tell repeatedly how the murderer made unconditional surrender to the slain man's next of kin, put his freedom and his life unreservedly into the latter's hands, and so made atonement for his crime. If, however, the man-slayer did not take this course, there ensued the family feud, which formed so important a feature of ancient Teutonic life. But, in general, even in the early historical period, the entire legislative community had a share in the business of reconciliation. For the rupture of a blood-feud between whom two families were affected not the injured family only, but also the community at large. It was the community, accordingly, which proscribed the wrong-doer, and thus made him incapable of the perpetration of further violence. Yet, that, when the outlawry was revoked and reconciliation effected, the community could claim a share in the indemnity, and even had the right to fix what the latter should be. In this way arose the practice of exacting fines, systematic regulations regarding which are found in the codes of all the Teutonic peoples. In the earlier period fines were paid in cattle (Tac. Germ. 12: 'equorum pecorumque usque ad imaginem sese') or in food, or other materials of general utility (corn, linen, etc.). This form was longest retained in Scandinavia, but was subsequently superseded—first of all in Southern Germany—by metals or monetary equivalents. Of such payments the injured party received the largest share, usually two-thirds, while the smaller portion was assigned to the public authority—in particular, to the ruler—or to the common good. The latter portion was the price of peace, the compositio, the recompense paid to the community for its share in the re-establishment of peaceful relations.

2. Feud and Outlawry.—Expiation presupposes a wrongful act. The party injured by such might be either an individual or a community (sacrilige, treason, desertion). In the former case the culprit was either the patrilineage with one of his fellows or with the kindred of the injured person; in the latter, with the community at large. The wronged individual and his kindred had the right of revenge. If the offender was caught in the act 'red-handed,' summary vengeance could be executed upon him; if not, the family of the person injured had the right of feud against the wrong-doer. The feud (O.H.G. fikida; A.S. feah) was a state of hostility between two patrilineages (see 16,000-blood feud [Teutonic), vol. ii. p. 337]. The earliest documents recognize the feud only in connexion with homicide; in later sources it extends also to such offences as the abduction of women, adultery, and gross violation of the laws of honour. The right lay entirely in the hands of the injured person and his relatives, and to them belonged also the right of fixing the expiation and indemnity. The usual method of this was the erection of an expiation-warrant, a 'wolf in the league,' who was at everybody's
mercy, and whose property any one might seize. This was also done when the cause of the wronged individual was espoused by the legislativo community—a practice found among most of the Teutons, particularly in the Frisian history of the period. Even then, however, the prosecution of the culprit—i.e. the proclamation of outlawry against him—was solely the affair of the injured party, and was considered as an adequate redress for the case of wilful injury. In cases of unintentional injury, the doer, according to the Scandinavian codes, had voluntarily and without delay to make satisfaction to the injured party, or, by the laws of the German tribes, to maintain an oath, and with the aid of a compurgator, that his act was really unintentional. But even outlawry was not usually permanent; it was circumscribed both as to time and as to locality, and could always be reversed by indemnity and expiation; while offences not involving feud and outlawry could also be absolved by the payment of compensation.

3. Conditions of reconciliation. The act of expiation involved certain formal conditions. To begin with, it had to take place within a given period, the length of which varied among the different codes. Thus in the Frisian code it had to be paid on the day that the wrong had been committed, or the act of the wrongdoer was considered as a suppliant before the person whom he had wronged, or his legal representative; and, finally, it had to be accepted on oath that, had he been the injured party, he would have been satisfied with the indemnity which he now offered. The two parties then took the oath of peace, i.e. declared the feud at an end, and sealed their reconciliation by a mutual embrace and the kiss of peace.

4. Compensation and fine. While the right of private vengeance and feud, together with the right to fix the indemnity, remained in force among the northern Teutons till far on in the Middle Ages, among the other Teutonic peoples proscription gave place at an early date to a system of fines. Outlawry was, in fact, resorted to only when such fines were not paid, and even then in a greatly mitigated form. In the earlier period it lay with the wronged individual to decide whether he would adopt the policy of vengeance and outlawry, or accept compensation; subsequently he was compelled to take the latter course. Thus the system of compensation was introduced in successive periods, but in all cases the extent and character of the injury, and the standing or family of the injured, were important considerations in its assessment. The indemnity for injury to any part of the person was estimated according to the utility of that part in earning a living. The legal tender of such compensation originally consisted of cattle. In this connexion, as was noted above, Tacitus mentions horses and small cattle; according to the Scandinavian codes, the standard of value in fixing compensation was the cow (kýgill, kjýgill). But we often find reference likewise to cloth (O.N. rísval, Fris. riswet), and also to corn, butter, and wax. It was only in a later age that animals and produce were superceded by the precious metals, and, among the southern Teutons, by coin. In North Scandinavia the pieces of metal were uniface, and were simply by weight in the form of rings (býggill, býggild). The nature and amount of the indemnity were not of course, matters of public concern in every case, but were sometimes arranged between the injured and the injured. The Frankish codes, in particular, made frequent mention of such private negotiations. Thus Gunni, having stunned the slave of a peasant with a blow, offered a mark as compensation to the master, who, though at first he thought the sum inadequate, finally accepted it (Lit. Siger, Fr. Fritse, the sixty histories of the period). Even then, however, the prosecution of the culprit—i.e. the proclamation of outlawry against him—was solely the affair of the injured party, and was considered as an adequate redress for the case of wilful injury. In cases of unintentional injury, the doer, according to the Scandinavian codes, had voluntarily and without delay to make satisfaction to the injured party, or, by the laws of the German tribes, to maintain an oath, and with the aid of a compurgator, that his act was really unintentional. But even outlawry was not usually permanent; it was circumscribed both as to time and as to locality, and could always be reversed by indemnity and expiation; while offences not involving feud and outlawry could also be absolved by the payment of compensation.

5. 'Wergeld.' A peculiar form of expiation is found in the wergild (O.H.G. werigold; Germ. Wergeld; O.N. manngild, mannbæotr), the sum of money which had to be paid for killing a man, and which came to be substituted for outlawry. The wergild, which was recognized by nearly all the Teutonic codes, might be doubled, or even trebled, in certain cases; it was, however, held in such esteem. The family of the slayer and that of the slain had each a part in the transaction. The former was required to produce the legal amount—a practice which was confined to this form of indemnity—while the compensation was likewise received by the relatives of the slain man in a body. Nor was this rule departed from when the man-slayer had fled or was dead. This fact suffices to show that the wergild was regarded not as a penalty but as an indemnification. The share which the individual relatives of the person slain had in the compensation was also regulated by law, but the mode of allotment was not everywhere the same. The custom of excluding women from participation was almost universal. The share of the male relatives was computed according to the principle that it must be directly in proportion to the nearness of kin to the slain man. According to the Icelandic sagas, which in this as in many other respects reflect older conditions, the amount of the wergild was arranged privately between the families of the individuals involved. When the money which carried the day, as we find it in the Leges barbarorum, and the Frisian, Anglo-Saxon, and Scandinavian codes. In the various nationalities the measure of the compensation was fixed in successive periods, but in all cases the extent and character of the injury, and the standing or family of the injured, were important considerations in its assessment. The indemnity for injury to any part of the person was estimated according to the utility of that part in earning a living. The legal tender of such compensation originally consisted of cattle. In this connexion, as was noted above, Tacitus mentions horses and small cattle; according to the Scandinavian codes, the standard of value in fixing compensation was the cow (kýgill, kjýgill). But we often find reference likewise to cloth (O.N. rísval, Fris. riswet), and also to corn, butter, and wax. It was only in a later age that animals and produce were superceded by the precious metals, and, among the southern Teutons, by coin. In North Scandinavia the pieces of metal were uniface, and were simply by weight in the form of rings (býggill, býggild). The nature and amount of the indemnity were not of course, matters of public concern in every case, but were sometimes arranged between the injured and the injured. The Frankish codes, in particular, make frequent mention of such private negotiations. Thus Gunni, having stunned the slave of a peasant with a blow, offered a mark as compensation to the master, who, though at first he thought the sum inadequate, finally accepted it (Lit. Siger, Fr. Fritse, the sixty histories of the period). Even then, however, the prosecution of the culprit—i.e. the proclamation of outlawry against him—was solely the affair of the injured party, and was considered as an adequate redress for the case of wilful injury. In cases of unintentional injury, the doer, according to the Scandinavian codes, had voluntarily and without delay to make satisfaction to the injured party, or, by the laws of the German tribes, to maintain an oath, and with the aid of a compurgator, that his act was really unintentional. But even outlawry was not usually permanent; it was circumscribed both as to time and as to locality, and could always be reversed by indemnity and expiation; while offences not involving feud and outlawry could also be absolved by the payment of compensation.

6. Indemnity and punishment. In cases other than the wergild, the compensation was graduated according to the damage entailed by the offence. Loss of property had to be made up by a reparation of equal amount, or by an equivalent in money; an imputation or a personal honour had to be made, and amends for a solemn withdrawal, etc. A peculiar form of reparation is found among the Franks from the 6th cent. A.D., viz. the 'banforfett,' or the 'king's ban.' This originated with the Merovingian kings, and forms a contrast to the other provisions of the Frankish tribal codes. Here the 'ban' was the sum of money paid to the king by those who did not comply with his decrees (670). Thus the 'king's ban' partakes of the nature of penalty rather than of indemnity. The latter, we must remember, was not originally a penalty, but simply a payment made in order to recover the protection of the law, and to indemnify the injured person. Thus, when the wrong-doer was no longer liable to
proscription, and the wronged was forbidden to avenge himself, that compensation was superseded by punishment and the right to demand punishment, including not only legal penalties but also the private vengeance of the community acted as the medium. Thereafter the injured party had merely the right to prefer an accusation, and the intervention of his family was disallowed. The penalty was thus a longer matter for the injured person to decide, but was regulated by law. Thus corporal and capital penalties were added to those which consisted of monetary fines.

7. Human sacrifice.—In the sphere of religion, expiation took a peculiarm form. When a man committed an offence against the gods, he was held guilty of a crime against the community as well, since the vengeance of the offended deity fell upon the community as a whole, so that— even in certain circumstances, as e.g. famine and storm, even many—of its members were put in peril of their lives. In such cases the deity could be propitiated only by the gift of a human life, and the practice thereupon to impute the crime to himself. Again, however, such a sacrifice was not a penalty, but an expiatory act. The criminal was first of all declared an outlaw, and thus excluded from the legal community, or, in Iceland, before the introduction of Christianity, we have the case of a man who was proscribed for sacrifice (Jal. Sognur. 11): he was thereby numbered among those who were unprotected by law, and could be dealt with as a sacrificial victim whenever such was required. But the sentence of outlawry by the community does not seem to have been pronounced in every case. One who had committed sacrilege was excluded from the legal community without any act of proscription or process of law, and was then treated as a slave or outlaw, by the offering of whose life alone the deity could be propitiated.

It is recorded, for instance, that King Olaf Trötelga of Sweden was offered up by his own people during a time of famine, because he had acted perfidiously as a sacrificial victim, and was thus a scourge of the gods. (Heimskringla. p. 37.) A crime against the gods, especially when their retribution manifested itself in storm or failure of crops, could be expiated by nothing less than a human sacrifice. If the anger of the gods broke forth at a time when the community had brought prisoners full of ease within its pale, or did not know of any, attempts were then made to assuage the divine wrath by an oblation of slaves or prisoners of war. Wherever such victims were not to be had, the person to be sacrificed was discovered by casting lots. It then appears that among the ancient Tenents of human sacrifice (q.v.) was not a punishment, but an expiation. Cf. art. Crimes and Punishments (Teut. and Slav.), vol. iv. p. 304, et passim a whole, so that same.

extreme unction.—i. Purpose and efficacy.—By the official teaching both of the Roman and of the Orthodox Greek Church the anointing of the sick and dying is recognized as one of the seven Sacraments. The Council of Trent (1545-1563) in its 14th Session deals with the subject at some length. It declares that the Redeemer of mankind, having provided all spiritual aids for the different emergencies of human life, wished also to guard the close of life by the Sacrament of Extreme Unction, as with a most firm defence. It urges the need of such help, on the ground that at the hour of death the assaults of the tempter are redoubled. Hence Christ, it is stated, instituted this sacrament as ‘truly and properly a Sacrament of the New Law.’ The rite, we are told, was foreshadowed in the anointing of the sick by the Apostles, spoken of in Mk 6:11, but it was ‘promulgated’ in Jn 19:30: ‘Is any among you sick? let him call for the elders of the church [i.e., the (Gr. πρεσβυτεροι; Vulg. presbyteros, AV and RV ’leaders’ of the church) and let them pray over him, anointing him with oil in the name of the Lord; and the prayer of faith shall save him that is sick, and the Lord shall raise him up; and if he have committed sins, it shall be forgiven him.’ In these words are indicated not only the matter, the form, and the proper minister of this sacrament, but also the effect.

‘For the “thing signified” here is the grace of the Holy Ghost, whose anointing cleanses away sins if there be any still to be expiated, and stays the remains of sins, and raises up and strengthens the soul of the sick person by exciting in him a great confidence in the Divine mercy, whereby the sick man being supported bears more easily the inconveniences and pains of his sickness, and more easily resists the temptation of the devil who lies in wait for his soul, and at times obtains bodily health when expedient for the welfare of his soul.

In the Eastern Church the principal stress is laid upon bodily healing. Thus the Shorter Russian Catechism simply states that the Church maintains ‘consists in this, that the sick man is anointed with oil, while grace is prayed for him. But the Longer Russian Catechism and the Canon of the Orthodox Church of Mosul, emphasizes also the spiritual effects, the last-named declaring (cap. 110) that, though health is not always obtained, nevertheless the forgiveness of sins is always most assuredly received.

To the Tridentine decree four anathemas are appended. The first condemns those who deny the Divine institution of the Sacrament and declare it to be only of Patriotic origin or a human signment. The third and fourth anathematizes those who maintain that the ritual of the Roman Church does not fully accord with the text of St. James, as well as those who would allow others than priests to administer the Sacrament. The second runs as follows:

‘If any one saith that the sacred anointing of the sick does not confer grace, or render sin, or comfort (either) the sick, but that it has now lost its efficacy, or that (though it were) a grace of working cures in bygone days, let him be anathema.

The view that St. James was not speaking of any truly sacramental anointing (cf. Loisy, Autour d’un petit livre, Paris, 1903, p. 251) was condemned in 1897 with other ‘Modernist errors’ in the decrees Lamentabili and Excommunication, Freiburg, 1898, no. 2948.

Speaking generally, it may be said that this account of the purpose and effects of the Sacrament is in close accordance with the teaching of Aquinas and the medieval scholastics. See, thus, the opinion there was between the Thomists and the
Scottish regarding the primary object (effectus principalis) for which it was instituted, the former maintaining that it was the comforting of the soul, the latter that it was rather the final remission of venial sins (see Kern, De Sac. Extr. Unctionis, pp. 219-221). It was a spiritual and metaphysical one and was without much practical bearing upon the popular conception of the Sacrament and its effects.

2. Ritual.—In the Church of Rome at the present day the rite of administration is brief and simple. Apart from one or two short and unessential prayers which preceede and conclude the ceremony, the rite consists in the anointing of the eyes, ears, nostrils, lips, hands, and feet of the sick person, the following formula being repeated at eachunction: 'Through this holy unction and His own most tender mercy, may the Lord pardon thee whatever offences thou hast committed quidquid deliquisti by right (by bearing, smelt, etc.).'

Formerly, in the case of men, the loins were also anointed, and the Ritual still retains the formula provided, but in practice this is now always omitted. Only a properly ordained priest can confer the Sacrament validly, and the oil used must be the unctionem infirmorum consecrated for this special purpose by the bishop on Maundy Thursday. If by some mistake a mineral oil should be used, or the oil of an other holy unction, or the unctionem infirmorum, should be substituted for the unctionem infirmorum, the validity of the Sacrament would be doubtful. Further, the proposition that in case of necessity, when episcopally blessed oil cannot be procured, a priest may validly use oil blessed by himself has been censured so far as concerns the Western Church. On the other hand, permission has long been accorded by the Holy See to the United Greeks to administer the ancient tradition of Eastern Christendom, according to which any simple priest who administers the Sacrament blesses the oil himself. That this was also, at least in some localities, the earlier practice in the West seems highly probable.

According to both the present and the former practice of the Western Church, the Sacrament is administered only to those who are suffering from serious illness, and thus at least remotely the danger of death. It may be reiterated, but not in the same illness, or at any rate not unless some new crisis has supervened. Among the Greeks and Syrians the latter proposition (it is not recognized by the Nestorians) the Sacrament of the Prayer-Oil (el Chiasm), as they call it, though a much more elaborate ceremony, requiring when possible the assistance of seven priests, is often administered in maladies of no gravity, and it is received on certain days of the year by persons in normal health as a preparation for Holy Communion. It is consequently very commonly administered in the church, and the forehead, nostrils, cheeks, chin, breast, and both sides of the hands are anointed with a brush or twig, the ceremony being repeated by each priest in turn. The form used begins as follows: 'Holy Father, physician of souls and of bodies, who did send Thy well-beloved Son our Lord Jesus Christ as the healer of every disease and our deliverer from death, heal also Thy servant X. from the spiritual and bodily infirmity that he may have life forever, through the grace of Christ, etc. After this, a number of saints are named, and amongst the rest the 'holy and moneyless physicians Cosmas and Damian' (see Malzow, Schranken, 492 ff). The oil used is commonly mixed with wine, and it is blessed by the principal priest present. In practice the Sacrament among the Greeks, as in the West, is often deferred until the sick man is in extremis, but the hope of a cure is always entertained. See, for example, Pataio, vol. Annae Karaman, bk. v. chs. 19-20. In both the Eastern and the Western Church an abbreviated form is sanctioned for cases when the danger of death is imminent.

3. Historic Remarks.—The unctionem infirmorum, of which oil was a primitive form of medical treatment (see Is 1:6; Jos. Bk. x. xxxiii. 5; Jk 10:9), and, like all other remedial measures, was peculiarly apt to be associated with religious observances (see Anointing, vol. i. p. 549 ff.), it is not altogether surprising that the early history of sacramental unction should be somewhat obscure. It was an observance which would not have provoked controversy by arousing the hostile criticism of pagans, and the faithful had no special reason to draw attention to it, since it was only the Christianized counterpart of customs, medicinal or magical, which every one recognized. Further, the existence of a non-sacramental use of consecrated oil is clearly deducible from the epistle of Innocent i. (ad Decentium, 8 [PL xx. 559]), from Cæcarius of Arles (PL xxxix. 2238), and from the Vita S. Genesii (ed. Kirschner, v. 2), the chrestian of the Holy Ointment, the unctionem infirmorum, to the sick by themselves or by a woman. Moreover, in other cases oil seems to have been employed in charismatical healing (Mk 6:8), under which we may include the instance mentioned by Tertullian (ad Scop. iv.), when Septimius Severus was cured by the Christian Proculus. Nor can we leave out of account the use of oil from the lamps in the basilicas, or oil sanctified by relics, etc. (see e.g. Chrysostom, hom. 38, to the Holy Ointment, III. 584); Cassian, Coll. vii. 26 (PL xiii. 706); Greg. Tur. Hist. Franc. iv. 36 (PL ixi. 299). But, just as the healing of Gorgonia after anointing herself with the sacred species of the Eucharist (Greg. Naz. Orat. vili. 18, and cf. JThSt xi. [1910] 275-279), a Western example of the same outward application of the Eucharistic species seems to be found in Cæcarius of Arles (PL xxxix. 2238) could not be cited as an argument against the sacramental character of the Eucharist at the same period, so this domestic use of consecrated oil does not seem to militate against the existence of an authorized and official sacramental use of the oil when recognized by the episcopal authority. In this light the letter of Innocent i. to Decentius, A.D. 416 (Denzinger-Bannwart, no. 99) seems quite intelligible. Decentius had doubted whether he, a bishop, was free to anoint the sick, seeing that only priests were mentioned by St. James.

Most certainly you are, the Pope replies in substance: 'even the simple faithful are allowed to use the blessed oil, and with much greater reason the bishop, who has power to consecrate it, has power to anoint with it and to bless the sick. But such anointing ought not to be administered to penitents (i.e. those undergoing penitential discipline), for it is an sacred rite quia genus est sacramentorum, and, if the other sacred rites are denied to penitents, why should this particular rite be conceded? (Quia quippe genus sacramentorum est, quandoque umnum genus patetet nostri).'

No doubt, this answer implies that the anointing was not then regarded as specially belonging to those in extremis, for penitents at the point of death would have been excluded by grace of reconciliation and the Eucharist. On the other hand, the formula for blessing the oil which we find in 'Serapion's Prayer-Book' (A.D. 556) is associated with a position in the liturgy of the rites of interment, though its terms clearly specify the restoration of health to both soul and body.

'Send the healing power of the only begetten upon this oil.' God is asked 'for his work which he has done in you by the grace and remission of sins, for a medicine of life and salvation, for health and soundness of soul, body, spirit, for perfect strengthening.'
The Vita S. Genoveca clearly shows that even then (c. A.D. 550) it was believed in Gaul that only a bishop had power to consecrate the oil (forte acedit ut Genoveca aevum non habert nec addeset in tempore pontifici qui ad praesens deo gratiam sanctificatoris infundere [c. 40]). Similarly the Vita S. Hypatius (AS, 17 June, p. 251) tells us how Hypatius, who was long inferior of his monastery, used, when any illness grew serious, to send for the abbot, ‘since he was a priest’ and Hypatius himself was not, in order that the sick man might be guarded against this Life. This Life was assigned by Bardenhewer to about the year 450. With the 8th cent. the evidence regarding the nature and rite of Extreme Unction grows more abundant. Bede, speaking in some detail in his commentary on St. James (P.L. xliii. 39), and St. Boniface (about 745) in his Canons orders priests to have the oil for the sick constantly at hand, and to instruct the faithful, when they feel ill, to apply for the Unction. Similarly in the 9th cent. many Councils, beginning with those of Chalons (813), Aachen (836), and Mainz (847), issue various injunctions on the subject, generally making allusion to the Epistle of St. James. Of all the Canons mentioned some seem to occur for the first time in the 15th of the Canons ascribed to Bishop Sonnatius: ’Extrema unctio deferator laboranti et petenti’ (Mansi, x. 599). These Canons may be as early as the 7th cent., but we have no certainty on this point. The name ‘Extreme Unction’ became common only at a considerably later epoch. It was in all probability suggested by its being the last in order of the sacraments, a man was prepared for, but no doubt the association of the Unction with the Pastourea and approaching death made the term seem specially appropriate.

HERBERT THURSTON.
without the House of Commons, and its emphasis is still upon persuasion.

For the first time, in a sharp encounter and the policy of indirect and detailed activity an analogy was found in the tactics of Fabius Maximus (surnamed Cunctator, on account of his seeming dilatoriness), and the groupings of the Society. The plan of campaign was indicated by the following motto, the latter part of which will not bear exact historical scrutiny:

"For the right moment you must wait, as Fabius did most patiently. Henceforward nothing may check your delay; but, when the time comes, you must strike hard, as Fabius did, or your waiting will be in vain and fruitless."

The policy of delay did not, however, mean inactivity, but preparation of plans, training of forces, and seizing of small opportunities. Having no belief in the efficacy of separatist communities apart from the ordinary economic and political life (cf. COMMUNIST SOCIETIES OF AMERICA), the Fabians turned their back on Utopianism, and declared that Socialism must be not a withdrawal from existing conditions, but a transformation of them. Rejecting also the naive faith of the revolutionists—that, after a sudden outbreak in which the proletariat seized possession of the坊, a scheme would somehow settle down into an ordered Collectivism—they undertook the more arduous task of educating themselves and others regarding the means by which that social transformation might be achieved.

The standpoint of the Society was explicitly stated in the following "Basis":

"The Fabian Society consists of Socialists.

It is the mission of the Fabian Society by the emancipation of Land and Industrial Capital from individual and class ownership, and the vesting of them in the community for the general benefit, in this way only can the natural and acquired advantages of the country be equitably shared by the whole people.

The Society accordingly works for the extinction of private property in Land and of the consequent individual appropriation, in the form of Rent, of the price paid for permission to use the earth, as well as for the advantages of superior soils and sites.

The Society, further, works for the transfer to the community of the administration of such Industrial Capital as can conveniently be managed socially. For, owing to the monopoly of the means of production in the past, industrial inventions and the transformation of surplus income into Capital have mainly enriched the proprietary class, the worker being now dependent on that class for leave to earn a living.

If these measures be carried out, without compensation (though not without some relief to expropriated individuals as may seem best for the community), a real and earnest interest will be added to the reward of labour, the idle class now living on the labourers' savings will be disfranchised, and practical equality of opportunity will be maintained by the spontaneous action of economic forces, with much less interference with personal liberty than the present system entails.

For the attainment of these ends the Fabian Society looks to the spread of Socialist opinions, and the social and political changes consequent thereto, including the establishment of equal citizenship for men and women. It seeks to achieve these ends by the general dissemination of knowledge as to the relation between the individual and Society is its economic, ethical, and political aspect."

This basis, to which every member is required to subscribe, sufficiently indicates the main objects of Fabian Socialism; but it is upon the detailed application of these generalizations to concrete problems on the day that the actual work of the Society has been concentrated. Unlike some other groups of Socialists, it has refused to take sides on subjects which it views as outside its special province, such as religion and marriage. It wastes no time on discussions as to the precise form of currency to be used in the future State. But, whenever a political or social problem is being discussed or seems ripe for treatment, it devotes itself to careful study, propounds the Socialist solution, and opposes any measure which it cannot be brought into harmony with the Socialist principles. Thus, it has rejected peasant proprietorship as a solution of agrarian problems, and co-operative production by self-governing groups of workmen as an alternative to capitalism, the former being simply an extension of landlordism, and the private appropriation of rent, while the latter is merely a form of joint-stock individualism.

Both perpetuate the conditions which the Fabian Society desires to extirpate, and, while granting that there are very many questions of Socialist organization that are as yet unsettled, it strives to set the current of reform in a definite direction. Opportunists in the sense of seizing the favourable moment for propaganda, and mathematicians of materials, he is not opportunist in the sense of accepting any kind of solution which comes first to hand. He acts on principle, by advocating measures that appear to be consistent with the Socialist consummation.

2. Forms of activity. — In carrying out this method of social transformation the Society has done an unusual amount of educational work of a very practical nature. It has, in the main, worked to bring about a closer relation of present-day problems and institutions than has any other group. Fortnightly meetings for discussion of the subjects held in London, where the majority of Societies, of which each branch or a group of members devotes prolonged study to some single social question, and presents the results to the Society, by which they are again discussed; and, when conclusions have been reached that meet with the general approval of the members, they are printed and widely circulated in the form of pamphlets. About 160 of these "Tracts" have now been published, and, being generally well-informed and severely practical in tone, they, along with Fabian Essays, may be taken as the text-books of Fabian Socialism. The educational work has also taken the forms of circulating libraries supplied to trade unions, workmen's clubs, co-operative societies, and similar bodies; of the publication of select bibliographies on social subjects; and of supplying lecturers to various societies and classes; while a small monthly News is sent to the members. In this department of its work the Society had no small influence in the foundation of the London School of Economics, now a constituent college of the University of London.

3. Influence. — As might naturally be expected, the Society has appealed mainly to the more educated Socialists, and its members are usually of the middle class; its demand for its own purposes, except by the encouragement of branches in the Universities; but since 1906, when there were about 1000 members, there has been a relatively rapid increase, until now (1912) there are over 2000, besides many associates who are not committed to the basis, but are interested in the work and subscribe to its funds. Yet its power has been quite out of proportion to its numbers, chiefly because of the high-mindedness, and pre-eminence of its leaders; and, besides spreading Socialist opinions among the educated middle classes who stood aloof from other Socialist bodies, it has had no small share in influencing the tone of the English Labour movement and has also occasionally had a marked effect upon political programmes and measures.

4. Demands. — The more immediate demands of Fabianism are summed up in the following: (1) nationalization or municipalization of the larger public services, such as tramways, railways, lighting, electric-power, liquor traffic, and land, with the gradual extension of the principle to other industries; (2) the re-occupation of all land that is not being used to its full capacity; (3) a reduction of the number of hours of labour, to a maximum of eight per day for men and seven for women; (4) the nationalization of the banks, and the liquidation of the foreign and joint-stock banks. These are by no means constitutive of the programme of the Society, but rather an indication of the true character and tendency of its demand.
than may be necessary to make the livelihood of the people and their access to the sources of production completely independent of both. Subject to this condition, the Government, through individuals, test the social value of new inventions; to initiate improved methods of production; to anticipate and lead public enterprise in catering for new social wants; to promote all arts, crafts, and professions independently; in short, to complete the social organization by adding to the efficiency of private activity. Adjustment to the market of public routine, is as highly valued by the Fabian Society as any other article in the charter of popular liberties' (Tract No. 47, p. 9).

(2) The organization and development of a trained Civil Service, capable of managing the industries and functions taken over by the State, including the co-ordination of the medical and sanitary services, poor-law and other hospitals, under an enlarged public health authority which shall replace much of the private practice by a State service. (3) The imposition of public burdens on the wealthy by such means as death duties and super-tax. (4) The expansion of public education, raising the age for leaving school, increasing the facilities for poorer children to obtain higher education and to enter the universities. (5) Enlarged opportunities for recreation, by means of public parks, playgrounds, and baths. (6) Extension of factory and mine legislation in such a way that it will provide not only a national minimum of sanitation and safety, but also a national minimum wage below which the standard of life shall not be permitted to fall.

On the negative side, as against some schools of Socialists, Fabianism repudiates the doctrine of the individual's 'right to the whole produce of his labour,' insisting that wealth is social in its origin and must be social in its distribution, since it is impossible to distinguish the particular contribution that each person makes to the common product. It also rejects doctrines of equal wages, equal hours of labour, equal official status, and equal authority for every one. Such conditions it declares to be not only impracticable, but incompatible with the equality of subordination to the common interest which is fundamental in modern Socialism. While most of the Tracts deal almost exclusively with economic questions, this ethical note frequently recurs; and the Society has issued a few publications on moral aspects of Socialism, besides insisting elsewhere upon the duty of the Fabian service to the common welfare. But it does not advocate Socialism as a panacea for the ills of human society, but only for those produced by defective organization of industry and by a radically bad distribution of wealth' (Report on Fabian Policy, 1896, p. 8).

5. Criticisms.—The Fabian Society has been subjected to much criticism by both Socialists and others. Objection has been taken to its indirect, insidious, and underground methods of permutation, which, indeed, were at one time more questionable than they now are. Mr. Shaw boasted in 1892 of the solid advantages they had gained by undermining Liberal and Conservative associations and adroitly pulling all the wires they could lay their hands on. This is denounced both by friends and by opponents of Socialism as sailing under a false flag; but latterly the artfulness has taken the more legitimate form of obtaining support for Socialist measures by attempting to convince people that the new reform is only an extension of long-recognized principles. So long as every one knows that the Fabian aim is Socialism, there can be little objection to enlisting even conservative instincts in the cause of a particular change. Indeed, there is much in the Fabian conception of utilizing existing institutions; and some of its leaders have such a dread of any form of destruction that they are censured by the more revolutionary Socialists. These not only condemn Fabian opportunism, but sneer at the Society as the cult of the Civil Service, composed of middle-class men, who may naturally be expected to decry the class-war and to work for a bureaucracy staffed from its own ranks.

Other criticism comes from moderate Socialists, who are much more sympathetic towards its aims, but are not satisfied with its methods. Granting that the waiting policy was defensible in the early years of the movement, these critics consider that the Society has retained it even when the time has come to 'strike hard,' and that now it should employ all its resources in furthering an open Socialist campaign in politics. Socialism, it is urged, will be more effectively achieved by making people Socialists than by insidiously attempting to get Socialist measures adopted without the electorate knowing that they are such. Indeed, it is pertinent to ask if there can be much real benefit in securing a few socialized industries, if the majority of the advocates of Socialist ideals. More nationalization or municipalization is not an end in itself; and, if it is to be of much social service, it must be accompanied by an expansion of the Socialist spirit, which is being balked by the wheel of one at a time. It seems at present to be no little difference of opinion within the Society itself in this respect. Some urge it to give whole-hearted support to the Labour party, and to exclude from its membership all who will not do so. Others desire the establishment of a Socialist party quite independent of the Labour party. But the dominant opinion remains favorable to complete liberty of the members to act as they please in party politics, and to the traditional policy of permutation, since it is a delusion that all reform must be effected through a single party.

It is also alleged that the habit of limited action has had an enervating effect, while hostility to revolution and the policy of utilizing existing machinery for new functions have tended to an excessive reverence for the present institutions. In particular, it has been complained by H. G. Wells, who was once a member of the Fabian Society, that its insistence upon continuity 'developed into something like a mania for achieving the old Socialist ideals with the aid of that ruling body' (New Worlds for Old, p. 298). This led to the advocacy of public operation of industries, even in small and unsuitable areas, under incompetent boards and councils, with effects which have sometimes tended to discredit Socialism. Hence it is urged that the socialization of industries cannot proceed much further without a reconstruction of administrative areas, and the typical Fabian policy of building Socialism is the foundation of the existing machinery of Government has almost reached its limit. The areas of local government were not created for the operation of industrial enterprises, and are not ill-adapted to many of them. Recently, however, the Society has devoted some attention to this phase of the Socialist reconstruction, and has issued a number of Tracts under the New Horizon Series, advocating changes in administrative areas to render them more suitable to the requirements of public trading.

LITERATURE.—The best known literary product of the Society is the volume of Fabian Essays on Socialism, London, 1890. Most of the Fabian Tracts may still be obtained from the secretary, 3 Chatsworth Inn, London, some of them have been grouped together and reprinted in the volumes of The Fabian Socialist Series. G. Bernard Shaw, The Common Sense of Municipal Reform, London, 1899, and Beatrice Webb, Industrial Democracy, do. 100, and Problems of Modern Industry, do. 108, 1899, show the influence of Fabian works. The following contain expositions or criticisms

**FABLE.**—Fable originally meant 'a thing said,' and thus a story or narration (as in Horace's 'Mutato nomine, de te fabula narratur' [Sat. I. 1. 70]); and Dryden wrote 'Fables' of men and women present in modern English usage the word is mainly restricted to Beast-Fables, or short narratives about animals, having a moral application which is generally expressed in an explicit 'moral' at the end. The fable in this more restricted sense has to be distinguished from the Beast-Ancedote, and especially from the Beast-Satire, in which beasts, by their antics and wiles, parody and satirize the worst qualities of men, as in 'Reynard the Fox' (see MacCulloch, CP, poem). There is one further quality inherent in the fable which should be emphasized at the outset for reasons shortly to be given; they appeal largely to the sense of the fun; the first thing George Eliot remembered laughing at was one of Asop's Fables (Life, by Cross, 1885, i. 20). A German might, accordingly, on the analogy of Tendenzroman, define the fable as a 'Moral-Tendenz Beast-Droll.'

In this strict sense, its independent and original production is practically restricted to two countries—Greece and India. Sporadic instances occur elsewhere, as in Jotham's (Jg 9-11) and Jehovah's (2 K 14) fables in the OT, or in the fable of 'The Belly and Members' given in Livy (ii. 32), and repeated by Shakespeare in Coriolanus, though even here the 'moral' is not explicitly given; but for any large body of fables we have to look to China and to India. If we associate them with the name of Aesop; in the latter they can, in many instances, be connected with the Jatakas, or birth-stories of the Buddha. The main problem suggested by the fable is the connexion between the two. This, again, is mainly a literary problem, though there can be no doubt that originally fables both in Greece and in India were current among the folk.

The fables known as Aesop's Fables, which have spread throughout Europe, can be traced back to a collection in Latin and German published soon after the invention of printing by Heinrich Stahnhaum and Anthonius Leister, about the year 1479. In some years, translated into Italian, French, Dutch, English (by Caxton), and Spanish. This consists of a Life of Aesop (connected with the legend of Abiqsar [g.v.]), four books derived from a medieval collection of fables known as Romulus, a selection of the fables of Avian, some from a previous selection made by Ramutio, others called 'extravagant,' and two collections of rather coarse anecdotes from Lucian and Peter Alphonse. The Romulus has turned out to be entirely medieval prose renderings of Phaedrus, a Greek freedman of Augustus, who flourished in the early years of the 1st cent. A.D. He gives survivals of Phaedrine fables which are no longer extant in verse form, such as 'The Town and the Country Mouse,' 'The Ass and the Lap-Dog,' and 'The Lion and the Mouse.' It may accordingly be said that our Aesop is Phaedrus with a mixture of English, in verse form, such as 'The Town and the Country Mouse,' 'The Ass and the Lap-Dog,' and 'The Lion and the Mouse.'

Besides these prose renderings of Phaedrus, which form the bulk of the modern European Aesop, there exist a number of Greek prose renderings which were composed after the original Aesop, but have been proved by Bentley and others to have been derived from a metrical collection in choriambics by one Valerius Babrius, tutor to the son of the Emperor Severus, who flourished about A.D. 255, and whose fragments were discovered on Mt. Athos by Minioles Menas in 1849. Babrius, in his preface, refers to two sources—Aesop for Hellenic fable, and Kylibes for 'Libyan' fable; and Jacobs has suggested that the latter collection ran to about one hundred in number, and was derived directly or indirectly from a Sinhalese emnassy which came to Rome about 1479. Probably Phaedrus refers (iii., Proteg. 52) not only to Aesop but to Anacharsis the Scythian, as his sources; and some of the Indian elements which he disregards may have come from this source; but there were such Indian elements in Phaedrus and Babrius as well as in Avian (who flourished c. A.D. 375) can scarcely be doubted after a glance at Indian fables.

In India, fables in the strict sense, i.e. humorous Beast-Stories with 'moralis,' are found not only in the Bipalit literature, but, much earlier, in the Jatakas. These were brought over to Ceylon in the 3rd cent. B.C., and are probably a couple of centuries earlier. They consist of a 'Story of the Present,' in which some adventure of Buddha is told, which reminds the Master of a 'Story of the Past,' which he proceeds to relate, summing up his moral in a Gatha, in verse, and with the connexion of the 'Story of the Past' with that of the 'Present' by pointing out that one of the characters was a previous incarnation of either a disciple or a king. In the Indian fables, there is a previous incarnation of himself. Now, several of these 'Stories of the Past' are fables in the strict sense of the word, and several are actually identical with some of the most familiar of Aesop's Fables. Jacobs in his History of the Aesopic Fables has pointed out thirteen of these, including 'The Wolf and the Crane,' 'The Ass in the Lion's Skin,' 'The Wolf and the Lamb,' 'The Fox and the Crow,' 'The Bald Man and the Fly,' and 'The Goose that lays the Golden Eggs.' Other parallels are given by the same writer between Greek fables and Indian ones that occur in the Mahabharata and in the earlier strata of the Bipalit literature. These include 'The Oak and the Reed,' 'The Belly and Members,' 'The Lion and the Mouse,' 'The Farmer and the Serpent,' 'The Two Pots,' and 'The Cat turned into a Maiden.'

The critical problem of the fable is to determine whether the Indian form is derived from the Greek or vise versa.

The solution to this problem is given by the thirty fables in the Aesopic form which he calls 'Moralistic literature. Except in three or four cases, all these can be paralleled either in Indian or in Greek fable or in both. In the last instance the Talmudic form invariably follows the Indian wherever it differs from the Greek. Thus in 'The Two Pots' the Talmudic proverb (Esther Rabbba 2a), 'If a stone falls upon the pot, woe to the pot; if the pot fall upon the stone, woe to the pot,' resembles the story of the Biped, 'I like a stone that breaks a pot, the mighty remain unhurt,' rather than the fable familiar to us. So too, in the fable of 'The Wolf and the Crane,' both Talmud and Jatakas have the lion as the animal with the sore throat, and the Jewish form of 'The Belly and Members' is closer to the Indian than to the Aesopic form. The Talmud itself mentions (Sukka 28a) that Rabbi Johanan ben Zakkai (c. A.D. 90) knew both the 'Fables of Kosis' and the 'Fables of Kohsm,' and it has been suggested by Jacobs that the latter is a misreading for 'Kubis,' and thus identical with the Kylibes mentioned by Babrius as one of his sources. It is possible that some Greek fables should have been translated into Hebrew and changed by the Rabbis and then taken to India. The process must have been in the reverse order, especially as the Jatakas are earlier than the first collection of Aesopic fables made by Demetrius of Phaleron, who founded the
Library of Alexandria about 300 B.C. and there collected Greek proverbs and the sayings of the Seven Wise Men, as well as Aesop's Fables—all from the mouths of the people (Diog. Laert. v. 89).

Quite apart, however, from the Talmudic evidence, the probabilities are in favour of India on general grounds. India is the home of incarnations and therefore, in the mythologies of the Hindus, to imagine animals acting as men, whose predecessors they were, whereas in Greece such a belief was at best a 'survival,' and was no longer living in the thoughts of the people. The existence of the 'moral' in the fable properly so called may be traced back to the Gáthás, which formed the nucleus of the Játakas, the two 'Stories of the Present and Past' being given as explanations of these metrical morals. In earlier Greek literature only eight complete fables are known, with a dozen others only referred to, the latter, however, including 'The Ass's Heart,' 'The Countryman and the Snake,' 'The Dog and the Shadow,' 'The Cat turned into a Maiden,' all of which can be traced to India, though the occurrence of these fables is in most instances earlier than Alexander's invasion.

The possibility of the same fable having arisen independently in the two countries may be at once dismissed. Two minds in different countries may hit upon the same story to illustrate a simple wile of woman or a natural set of revenge, but it is in the highest degree improbable that two moral teachers, trying to inculcate the dangers of the lowly with the proud, should express it by the imagery of two pots floating down a stream. In one case, however, there exists absolutely evidence of the direct derivation of classical fables from India. There is a fable of 'The Farmer and the Serpent,' in which the farmer receives benefits from the serpent, but he or his son strikes it, which brings the friendship to an end. This occurs both in Latin (Romæus ii. 10), derived from Phædrus, and in Greek (Halm, 1852, p. 96), derived from Babrius. Both forms, however, are imperfect, whereas the Indian, given in the Panchatantra (iii. 5), assigns the motive for every incident, and practically combines the Greek in the Latin forms, which are thus shown by Benfey (Pantchatantra, Leipzig, 1883) to have been derived from it. But, while the presumption is in favour of India, where both collections of fables contain the same stories with the same morals, it would be hazardous to assume that all the Greek fables came from India. Of those extant in Latin—running to about 290—56, or about one quarter, have been traced with more or less plausibility to India; the remainder, till evidence is shown to the contrary, may be regarded as originating in Greece and connected with the name of Aesop. Very little is known of the putative father of Greek fable. Herodotus (ii. 134) reports that he was, together with Rhodopis, a slave in Samos, which would fix his date at about 550 B.C.; he also reports that Aesop was murdered and that his master's grandson received wergild for him by direction of the Delphic oracle. As all this occurred within a century of Herodotus' period, there can be no doubt of its substantial accuracy. But it does not follow that Aesop was necessarily the author of the Greek fables passing under his name and referred to by the Jatakas, the latter of whom occupied some of his days in prison, while waiting for his end, in putting a few Aesopic fables into verse. The casual way in which references are made to fables in classical Greek literature would seem to imply that they were not a part of the moral month to month among the folk, and the problem connected with them in Greece is to account for their being associated with the name of a special person. This was probably due to their humorous colouring, since it is usual for folk-drolls to be associated with special names of persons, as in the case of Pasquill, John Bull, Punch, and Jack; the folk mind seemingly requires a jest to be associated with a name which has previously elicited guffaws. As Aesop's period was that of the Tyrants, hisconnexion with them is so evident as to prevent any direct derivation of the fable from political purposes. The only fable directly connected with his name by Aristotle (Hæt. ii. 20) was of this kind. The association of the name of Aesop with what was practically a branch of Greek (or partly Indian) folklore was thus due to its humorous character in the first place, and then to its political application. Wherever we can trace the introduction of the fable, it is almost invariably associated with political applications. Both the Biblical fables and that in Livy are applied politically. Rabbi Joshua ben Hananiah applied the fable of 'The Wolf and the Crane' to prevent a revolution of the Jews against the Romans (Gen. Rabb. xiv.), Kritoph and his followers made use of the fable in Russia to reflect upon the bureaucracy; and, when Aesop was first translated into Chinese, the officials soon suppressed the edition because they considered the fables to be directed against them.

Throughout the history of the Greek fable a distinction was made between the Aesopic and the 'Lybian' fable; Aristotle makes this distinction, as well as Habrius and the Emperor Julian. Hence it would appear that the Greeks themselves recognized that a certain section of fables had an exotic origin which, with our later knowledge, may be assumed as the percolation of these very fables into India, which has been already mentioned, the Aesopic fables current among Greeks were collected and written down by Demetrius Phalerus, and it was from this collection that Phædrus derived his fables, since he included among them an anecdote about Demetrius himself. His collection contains several that can be traced back to India, so that these must have percolated thence in the wake of Alexander's army, or even at an earlier stage, since 'The Cat Maiden' fable, ultimately derived from India, occurs in Greece, being quoted by the dramatist Strattis about 400 B.C. Whether the Indian forms started the practice of attaching a 'moral' to a fable corresponding to the Gáthás cannot be determined. The earlier history of the fable in India, before it was taken up into the birth-stories of the Buddha, cannot be definitely traced, though it is remarkable that almost all the Játakas containing fables begin with the formula 'Once on a time, when Brahmaddatta was reigning in Benares,' and the previous incarnation of the Buddha was in the person of Kásyapa, the son of this Brahmaddatta. It is possible, therefore, that a separate collection of Beast-Fables existed connected with this Kásyapa, which was incorporated in the Játakas by assuming him to be a pre-incarnation of the Buddha. It was thus easy for the Buddhist authorities to assume that these fables represented the experiences of the Master in his previous lives. Thus the lamb in the Játakas is no sooner the subject of the verse than the prattle of a young Brahmin, and the crane in the fable of 'The Wolf and the Crane,' are both incarnations of the Buddha. The stories, however, probably existed as Beast-Tales among the Jatakas before they were incorporated into the Buddhist canon.

Thus, both in Greece and in India the fable existed first as a piece of folklore in oral tradition, and was applied to moral purposes by the Buddhists, and to political purposes by the Romans. In India they were written down in order to form part of the Buddhist canon, while in Greece they
were collected by Demetrius in his search for the wisdom current among the folk, whether in the form of proverbs, sayings of wise men, or fables. Fables are thus an interesting and early example of the transformation of oral into written literature.

Very few additions were made to the original stock of fables current in the classical world—in Latin by Phaedrus and Avian, and in Greek by Babrius; the former being translated into poor Latin prose (Romulus), the latter into equally ineffectual Greek prose (collected by Neveletus, 1617). But towards the end of the 12th cent. a couple of sets of new fables made their appearance. Marie de France translated from the Middle English a set of 103 fables, a third of which are unknown to classical antiquity. Many of these also occur in a set of 107 fables with the Talmudic title Mille Shabb'atim ('Fox Fables'), written by one Berachjah ha-Nadgen, who has been identified with an English Jew known in the contemporary records as Benedict le Puncteur, mentioned as living in Oxford in 1294. Both these collections contain Oriental elements found in Arabic literature, but their exact provenance has not yet been traced. Stainshole inserted a dozen or so of them in the fifth section of his Esopo; other additions to the fable world are made by Fontaine, mostly from Oriental sources. These include the story of Perrette, who counted her chickens before they were hatched, which Benfey, and after him Max Muller, traced all the way from India to France. Gellert in Germany, Gay in England, and Krillof in Russia have imitated the Asopical fable, but their additions have not been accepted by the people, and the European Esopo to this day is practically identical with the collection of classical antiquity.

Fable with its explicit 'moral' is thus a highly differentiated form of the Beast-Tale, and it must not be considered remarkable that it occurs in full force only in one or two countries. Aesop's fables, and tales about beasts are found everywhere—in South Africa (Block) and among the American negroes ('Uncle Rennus'). An attempt has been made by Sir Richard Burton to trace the fable, properly so called, to Africa, and to suggest that it recalls reminiscences by man of his animal ancestors. The sole basis of this bizarre theory, however, is an Egyptian paraphrase of the fable of 'The Mouse and the Lion', followed in a late Egyptian papyrus, which also contains Copite versions of the 'Ritual of the Dead'; and it must, therefore, be summarily rejected. Wherever we find the fable with its distinctive moral, it can be traced either by derivation or imitation to Greece or India.

Yet the conceptions at the root of the fable are primitive enough; they contain almost the first moral abstractions, or at least personifications of the cruder virtues and vices; in them courage is personified by the lion, greed by the wolf, cunning by the fox, innocence by the lamb, etc. Early man may in this way have learnt his first lessons in moral abstraction; to him cunning was foxiness, moral acumen was lion-sense, and cruelty wolf-hood. Even to the present day we have no other way of referring to one of the ruling motives in a capitalistic society than by speaking of the 'Dog in the Manger,' the 'Cat and the Canard,' the 'Fox in the Hen's Nest.' The so-called 'primitive races' do dwell in the primitive mind of children, which is the more direct owing to the absence of any reference in them to the sex-motive. The touch of fun, which follows and often element of fables, is another attraction for children. The love, and cruelty, too, in other children, the morals they incite are not very lofty, since they are necessarily confined to animal qualities. The higher elements of culture—knowledge, love, beauty, consideration for others—are altogether beyond their parvus.

But the appeal of a fable to the mind of the child remains to-day as strong as ever, and the Asopical fable is probably, outside of the Bible, the only literature known to practically all Europeans. Cf. also art., Fiction, Folklore and Keynrdard the Fable.

LITERATURE.—The above account summarizes a somewhat elaborate History of the Asopical Fable, which forms the first volume of the edition of Caxton's 'Fables' (now in 1912. 3 vols.) by J. Jacobs, London, 1888. This contains a full account of the previous literature and critical investigations by Cruous on Babrius, Hervieux on French, Grose on English, and of the numerous collections of other nations, of which many have been translated by scholars; see, for example, S. Arthur Strong, Collected Fables, London, 1912. A more popular account will be found in Jacobs, Fables of Egypt, London, 1894. The following works may also be consulted: A. MacNeile, Folk and Fable-Tales from an Eastern Forest, London, 1891; J. Jacobs, in J.R. i. 2111, v. 234. Cf. The Bibliography in MacNeile, op. cit.

FA-HIAN.—The first Chinese traveller in India. As to his Book of the Buddhist Kingdom, see YUAN CHWANG.

FAIRY.—Fairies or elves may be described at this stage as a non-human race, the belief in whom is mainly known as it exists among the Egyptians, Greeks, and Teutons. There is little difference in attributes, characteristics, and actions between Celtic fairies and Tontonic or Scandinavian elves, dwarfs, and trolls; and much the same cycle of history and beliefs is common to both. But among other European folk, Slavic or Latin, there are similar stories told of fairy-like beings, while Arabs, Hindus, Chinese, and savages of all regions believe in more or less supernatural beings. Many things are told which offer a curious parallel to the Celtic and Tontonic fairy superstition. Thus, though the popular idea of fairies is that of a supernatural race existing in the fairy world of the Eastern and West Europe, a scientific explanation of the belief must take a wider sweep. And, while the popular idea mainly regards the fairies whose occupation it is to dance in the moonlight, our investigation must also include house fairies and fairies of wood, stream, or other parts of wild Nature.

From the abstract Lat. nauta fata, 'fate,' was derived a late Lat. or Italian personal noun Fata, equivalent to Fairee. Antiquus uses the word in this sense, speaking of Alar Fata; and Procopius (De Stat. Goth., 1. 25) mentions a Fata, which was assigned to the planets, and was said to have the name of the Roman equivalent of the Mopsa; hence in Romance languages the words for 'fairy,' Fal., Faute, Span. Sana, Portuguese Fata, etc., were derived, for constellations. From fata came in med. Lat. fatare, 'to enchant,' which became in Fr. fatare, with a p. fem. fatares, the common people's word for the 'fairy damsels, enchanted ladies'; and a 14th cent. passage, les fées ce septens doutez qui disent que les gens estes et en fées ses leus a bice, laissent a cor'. The same sense is found in Scots 'fay.' From fata was formed a noun faerie, faeria, 'enchanted,' Illusion, which was adopted into English, but with different senses—(1) the region of the fées, (2) the people of fairyland, (3) an individual fairy, with pl. 'fairies.' pl. 'elves.' El' comes from N. fyr, A.S. e; cf. M.H.G. elf, genius, pl. elben. It is generally connected with Skr. yuh, 'artistic spire.' The German word 'elf' was borrowed in the 13th cent. from the same English word.

1. Varieties of fairies.—In the Edda the Lioselfar ('light elves') dwell in Alheim, and are divided from the Dökkelfar ('dark elves') dwelling underground, who, again, are separated from the Dvergar ('dwarfs'), perhaps named Svartalfar, who originated as maggola from Ymir's flesh, and now, in later works, are the sons of the Dvergar. But the latter can hardly be distinguished from Dökkalfar, and are sometimes identified with them, or in their proper names the word elfar occurs. In folk-belief the distinction between light and dark elves is not clear, and elves are both light and dark by turns, while the widest class is an earth- or under-earth-dwelling race, though there are elves of air or sky. Other kinds are associated with the house, with the forest, with the mine (scarcely to be distinguished from...
dwarfs). Such a division generally holds good for all Teutonic, Scandinavian, or Anglo-Saxon lands, and it corresponds, on the whole, to the Celtic groups of fairies, though the chief class of the latter, the beanán, are not always a dwarf-like folk. The Celts have also their dwarflike fairies, as well as house, water, and (to a less extent) woodland fairies. But these divisions hold good in folk-belief all over Europe, both in ancient and modern times. Though it is also evident that the dwarfs strictly so called—vægor, vrege, drows, bhinn, nais, cluricauns—are metal-workers, but this is also true of elves in the Edda.

2. Characteristics.—Fairies are generally regarded as of a nature between spirits and men, or as spirit beings with the semblance of a body which, to quote Kirk (Secret Commonwealth of Elves, Fairies, and Fae) e, ed. Lang, 1893), is 'spurious, thin, and defective.' In many aspects they are like mankind. They have their occupations, amusements, fightings. They marry and bear children. But they have powers beyond those of ordinary mortals, yet like those attributed to mediciners, sorcerers, and witches. They are regarded as a separate race of superior beings, as many of their titles suggest—for still folk, 'the race of the fey.' O'Farrell states while in the Edda the Ælfar are a distinct class of beings. They have a king or queen, usually the latter, and the names of some of these are known—Fionnabh, Aine, Aoibhinn, Clodna, Midna, Gwien, Huldra, Oberon (=Alberon). There are also single fairies—the Irish leprechaun, the Brownie, etc.—not living in communities. In their dwellings, as seen occasionally by mortals, they have great splendour and luxury. But often all this proves to be mere glamour when the mortal comes to himself (perhaps one source of the fairy glamour conception is to be found in the rude awakening to the grim realities of life after a happy dream experience).

Separate fairy bands are sometimes at enmity; this is already found in old Celtic tales of the sid folk (RCD xvi. (1805) 275). Frequently fairies are regarded as a diminutive folk, but there is much contradiction on this subject, and many fairies (the feé of S. Europe, the Slavic sides, and the sid folk of Ireland) are hardly to be distinguished in size from men. Though the size of fairies may be tall, others pygmy, but the varying size is sometimes due to their power of changing their form. Once fairies were regarded as small, their smallness would tend to be exaggerated. Usually great beauty is ascribed to female fairies, but certain groups of fairies—dwarfs, kobolds, etc.—are ugly and misshapen. Their clothing is often of a green or red colour, though the Teutonic dwarfs are dressed in grey (cf. the 'elfin grey' in Tanlame). They are all intensely fond of music, singing, and dancing (as also are witches), as well as of feasting, and are often represented as spending the whole night in revelry, which has an inevitable attraction for mortals, who are lured into the dance to their own eventual discomfort or worse. No picture is more charming than that drawn by folk-belief of the nightly fairy revels on the greensward. The marks of these form the fairy-rings in which it is dangerous to tread or sleep, and which are also attributed to the witches' Sabbat. This feature may connect fairies with actual rites of an orgiastic character among the folk, performed for purposes of agricultural magic, or with folk-festivals in which music and dancing figure. In part the Sabbat is also

connected with these (see Grimm, Teut. Myth. 187, 470; Scott, Minstrelsy, 213; Delrio, Diso. Mag., 1599-1600, p. 179). The fairies disappear from their revels at dawn, or their power ceases then—a trait shared by many other beings by witches (MacCulloch, OF, 1905, p. 105). They dislike being seen by mortals, and he who looks upon them or their doings is usually brought within their power. They punish with blindness those who possess some knowledge of them when they are invisible to others, and again their look is of itself sufficient to bewitch. It is also dangerous to enter their domain without due precautions (see § 11).

But it is in their magical powers that the special characteristics of fairies appear. They have the power of invisibility, e.g. by wearing a magic cloak or hat, or by means of some herb, e.g. fern-seed (see 1 Hen. IV. Act ii. Sc. 1). This power they could also confer on mortals. Immortality is sometimes ascribed to them, especially in poetry (Ariosto, Orlando Fur. x. 47; Beaumont and Fletcher, Faithful Shepherd, etc.). The fairy glamour has already been referred to, and it corresponds with their power of making time appear long or short to those mortals who are lured into their company. They have also the power of making invisible or hidden things, or of divining where they are. Thus it is easy to see why powers of this kind (divination, second-sight) should be regarded sometimes as fairy gifts to mortals.

Yet, in spite of all their powers, fairies are curiously dependent on men. They seek to reinforce their own race by stealing human children; or they steal women who in child-bed, in order to unite with them or that they may nurse their children. In such cases the place of the stolen child or woman is often taken by a fairy (see CHANGELING). They compel women to come and assist at child-birth their females or those whom they have stolen. Or they may steal the infant of other mortals, or they steal men, usually by luring them into the fairy dance (cf. the luring of men into the Sabbat), or by taking them by fascination or force to fairyland (see an early instance in O'Grady, Tales Gaelilic, 1892, ii. 204 ff.). The purpose of these kidnappings and unions is to improve the fairy race, to obtain human strength or beauty, or perhaps to share in the spiritual benefits of the religion from which fairies are supposed to be excluded (cf. de la Motte Fouqué's Undine, Eng. tr., 1875). On the other hand, men often steal fairy brides. Cattle are also stolen by fairies, an illusory appearance being sometimes left in their place, which has an evident attraction for mortals, who are lured into the dance to their own eventual discomfort or worse. No picture is more charming than that drawn by folk-belief of the nightly fairy revels on the greensward. The marks of these form the fairy-rings in which it is dangerous to tread or sleep, and which are also attributed to the witch's Sabbat. This feature may connect fairies with actual rites of an orgiastic character among the folk, performed for purposes of agricultural magic, or with folk-festivals in which music and dancing figure. In part the Sabbat is also

1 Some folk-songs and lullabies are said to have been learned from fairies (see, e.g. Journ. of Folk-Song Soc. 3 (1891) 174, and passim).
them off by night and make them travel long distances, sometimes using them as steeds; the men when they awake in the morning are more or less conscious of this. The trick is also alleged sometimes as an explanation of paralytic stiffness. It is obviously connected with the phenomena of senes-

cambulism and nightmare, though the belief itself might sometimes be exploited by unscrupulous mortals to explain any mysterious absences of the young people. They say that they took men (cf. the Poltegeist and the house-fairy when insulted).

A favourite trick is to give men gold which turns into worthless articles (but worthless things offered as a reward for human services often turn to gold [Hartland, 48 f., 184; Simrock, Handbuch der deutschen Mythologie]; Bonn, 1897, p. 427]). They are easily irritated, capricious in their character, and given to resentment. More than this, they are dangerous and even cruel, especially when despised or ill-treated, causing injury, illness, madness, or death, usually by a 'fairy stroke' (§ 6). Hence the folk seek to placate them or to enlist their assistance by the gift of magic words, etc. But these objects are often stolen by mortals from fairyland. Supernatural and magic powers are also given by them to mortals (cf. the gift of prophecy—the tongue that could not lie—to Thomas à Becket; Lan, Demonology, 1898, Letter 5, Minstrelsy, p. 212). They also preside at birth, and confer talents on the child.

Thus the relation between men and fairies is a reciprocal one. Each seeks help from the other. Each harms the other. Men are now contemptuous, now afraid of fairies. Fairies are now friendly, now hostile to men. We may see here the survival of older religious ideas—of gods now kind, now evil, and of benefits rendered by them to men out of all proportion to the attention paid to them. This is an old aspect of sacrifice—du ut des.

Fairies in Christian lands are generally regarded as devils, demons, signs, and things kept at a distance, and they fear sacred days (see an early instance in Adamnan, Vita S. Columb., cap. 9), while a demoniac character is attributed to those beings whom the literature says are good people, 'guid neighbours,' 'gute Holden,' 'gentry,' etc. (see EUPHEMISM, § 2).

On the other hand, fairies often assist mortals, especially for local services (articles borrowed, advice given, etc.), and are very generous. This is especially true of the house-fairy, who is sufficiently rewarded with a little milk or food. They give gifts of great value (cf. stories of magic swords, etc.). But these objects are often stolen by mortals from fairyland. Supernatural and magic powers are also given by them to mortals (cf. the gift of prophecy—the tongue that could not lie—to Thomas à Becket; Lan, Demonology, 1898, Letter 5, Minstrelsy, p. 212). They also preside at birth, and confer talents on the child.

This was already hinted at by J. Crerie, Scottish Songery, 1808, by Sir W. Scott, following Dr. Leyden (see Minstrelsy, 189), Demonology, 1892), and by Grimm (p. 460), as a partial explanation of the fairy belief. Its main exponent in later times is D. MacRitchie, with his theory of an earlier pygmy race dwelling in what are now regarded as sepulchral mounds (see his Testimony of Tradition, 1890, Flans, Fairies, and Ficts, 1895, etc. and A. H. Heselton, FC, Feb. 1895).

But no one case can be alleged for the origin of the fairy superstition; and, taking into account the precisely similar characteristics ascribed also to spirits, ghosts, demons, witches, etc., in all parts of the world, we may trace it back to animistic beliefs modified and altered in different localities, but undoubtedly influenced also in various ways by traditions about older races, by beliefs in ghosts, and by the débris of older myths and religious ideas. We may find dreams, trance experiences, and psychic phenomena as formative and moulding influences. W. Y. Evans Wentz has recently sought to prove that 'fairies

memory, and the like, in which the person, when he comes to himself, takes up the thread of his life where it was left off, the intervening period being thus short to him. Exaggeration of such experiences—especially after sickness—has often led people to believe they had been in fairyland, the other world, etc.—would result in the incident of the supernatural lapse of time (see Hartland, 1883). The fairies of some fairy stories the opposite experience is found—the consciousness of having spent a lifetime during a moment as a result of a fairy spell. This, combined with the fact of similar trance or dream experiences, points to these as its true source.

3. The origin of fairies. The folk-explanations of the origin of fairies are various. Sometimes they are regarded as descendants of rebellions angels, cast out of heaven, and doomed to remain in sea-

land, air, or underground; or they are supposed to have stopped on the way to hell and remained in these places. This is a Celtic and Slavic belief (Curtin, Tales of the Fairies, p. 42; Sikes, British Folklore, 1880, p. 184; Ballinston, Songs of the Russian People, 1872, p. 106), and it may be compared with the Arabic belief that the jinn are a pre-Adamite race who rebelled against God and were driven to the earth (see Keightley, Fairy Mythology, 1890, pp. 295, 412; Wentz, The Fairies, Springfield, Ill., Oxford, 1911, pp. 147, 176). Or they are people who refused to accept Christianity and were cursed (Keightley, 432; Wentz, 169). The learned have seen many explanations. Many (Fées du moyen âge) found the fées in old Celtic and Teutonic Nature-goddesses, Matrona, Matronæ, akin to the Fates, Junes, Nymphs, etc., and in a folk-memory of 'druidesses' with magic power, who had been their priestesses. To these the people then gave the names fata, fées, 'enchanted ones,' etc. There is no evidence that such 'druidesses' were priestesses of these goddesses (see MacCulloch, Rel. of the Anc. Celts, Edin., 1911, p. 316). Others have seen in them the ghosts of a small and swarthy pre-historic race transformed in popular fancy into an actual supernatural people dwelling underground (G. C. MacClenan. Who Were the Fairies? London, 1891). Another theory is that which regards them as a folk-memory of a pre-historic small race, dwelling underground, with weapons of stone, and generally hostile to their Celtic conquerors.

This is rather clearly indicated by Dr. Layden, following J. Cririe, Scottish Songery, 1808, Minstrelsy, 1892, and D. MacRitchie, in his theory of an earlier pygmy race dwelling in what are now regarded as sepulchral mounds (see his Testimony of Tradition, 1890, Flans, Fairies, and Ficts, 1895; and A. H. Heselton, FC, Feb. 1895).

But no one case can be alleged for the origin of the fairy superstition; and, taking into account the precisely similar characteristics ascribed also to spirits, ghosts, demons, witches, etc., in all parts of the world, we may trace it back to animistic beliefs modified and altered in different localities, but undoubtedly influenced also in various ways by traditions about older races, by beliefs in ghosts, and by the débris of older myths and religious ideas. W. Y. Evans Wentz has recently sought to prove that 'fairies

1 The witches' aerial flight to the Sabbath and the aerial transport of their victims resemble this. But cf. also the alleged flight of medims (see MacCulloch, CP, 222).

2 In Ireland a trance is recognized as the presence of the entranced person in fairyland.

3 This resembles the myth in the Edna of elves of air, and of underground.

4 Cf. also J. Shaw, Province of Moray, 1775, p. 257.
exist, because in all essentials they appear to be the same as the intelligent forces now recognized by science (pp. 239-40), whether these are phantasmal of the dead or other orders of beings, acting on men, seen by them, or producing the alleged phenomena which the folk ascribe to fairies. But he attaches too much importance to the evidence that modern Celtic seers, and too little to the phenomena of hallucination. Similar evidence, if rashly accepted, would equally prove the existence of many other mythical beings. Fairies, whether seers, or mythical beings, creations of fancy utilizing existing beliefs, traditions, experiences, and customs. In the following sections the connexion of fairies with earlier divinities, ghosts, or actual races will be discussed.

4. Fairies as earlier divinities.—Fairies, as a race of supernatural beings, have many of the traits of earlier divinities; in some instances they may have been originally Nature-spirits or Nature-divinities. In Ireland this is especially true of the Daoine sidhe, still associated in popular belief with the Tuatha Dé Danann, the ancient gods of the Irish Celts. Dispossessed by the Milesians—in other instances possibly by Christian missionaries—of their land in Ireland—they retired to the sid, or mounds. This is the constant tradition of Irish story, and one class of fairies in Ireland are tall, handsome beings, much more divine than any other class of fairy folk (see n. 2). Specific earlier divinities—Fionnghar, Aine, Clodna, Aibell, etc.—are kings and queens of the fairy hosts of different regions. The pagan Celts or the pre-Celtic folk of Ireland may have believed in a race of sid-folk other than the Tuatha Dé Danann, with whom the latter were assimilated or became their kings and leaders (MacCulloch, Rel. of Anc. Celts, 65 f.). What is certain is that earlier gods, connected with agriculture and growth, have for centuries been regarded as fairies, while yet preserving some of their divine traits. Other Irish fairies are unconnected with the gods, and others again are lineal descendants of rivers, wells, or tree-spirits (MacCulloch, op. cit. 43, 173). The Celts of Gaul worshipped nisius and peisgi (groups of water-divinities), some of whom have personal names, and these are the nixes and perhaps the picnies of later belief (ib. 185). Sirens, mermaids, and other fairy beings haunting the waters, the Welsh fairy-brides who emerge from lakes, often accompanied by a venerable old man, and to whom offerings are made—are all alike精灵like beings haunting the sid, or sid-folk. Fairy diversities appear in later legend as fairy-like beings or fairy kings. So also in Italy, some of the older divinities are still remembered, and fairy-like characteristics are ascribed to them (Leland, Etruscan Roman Remains, 1892, passim), while the domestic Roman gods resemble the Brownie, as already noted by Reginald Scot; the Romans had also their misuti dei (Plant. Cist. ii. 45) and their divinities.

Offerings of food or milk are made to Celtic fairies to appease them; when this has not been done, vengeance is said to have followed. As with similar beings, it is the invisible essence of the food which is supposed to be taken by them—"the toradh—the outward appearance being left" (Campbell, Superstitions of the Highlands and Islands of Scotland, Glasgow, 1899, p. 32). The northern elf are coupled in the Edda with the Divine einur (cf. the A.S. connexion of es and eafa); the dark elves are allied with gods against their enemies, and work for them (Simrock, 424). They are divinities, and of great magical powers. The general impression which one receives from the older sources is that of the divine character of the

1 This is also true of fairy thistles of cows or corn; the substance is talon and the empty ensemble is left.
goddesses, e.g. the Roman Nymphae as worshipped in C giả the Roman Nymphae as worshipped in C. In popular Italian belief the Roman Orcus has become a wood-fairy or ogro (Grimm, 486; Leland, 78). All these were generally helpful, but occasionally hostile, to men. (Gayer, 12) The fairies may be said to be the love of fairies for music and dancing connects them with divinities in whose cult these were common, while the fairy moonlight dances may be a reminiscence of the cult itself, like the witches’ Sabhais in another direction. The powers of fairies—shape-shifting, invisibility, magic, etc. —also link them on to the world of the gods.

5. Fairies and the dead.—While the fairy belief cannot be derived merely from a belief in ghosts, since the two exist side by side, the latter forms one of the strands from which the former has been woven. It should also be observed how much is common to the two beliefs. Both fairies and ghosts can benefit or harm the living. Both steal children (see CHANGELING), while both fairy changelings and ancestral ghosts are always hungry. Both can cause death—usually by a ‘phantom draft’ (cf. ogro), or by means of sudden death. To see them often means death to the seer (see ERE iv. 739). Both can be avoided or repulsed by the same means (broom and iron tablet, running water, etc.). Both are associated by fairy and mortal, and both have offerings made to them. Both love the night for their revels (dancing on meadows, etc.; cf. Grimm, 890), but both must vanish at cockcrow (as must the witch and vampire [MacCulloch, Cf, 195]). Both possess enchanted objects of which daring mortals try to rob them. Both dislike untidiness and uncleanliness (cf. Curtin, 178). In fairyland and the world of the dead the time passes like a dream (see F. 454). The same holds true of the whole tabu with regard to eating fairy food or the food of the dead —in both cases dangerous to mortals—exists (see ERE ili. 501 f.; iv. 653, and add to roff. there Brown, Melanies and Polygenies, 1910, p. 194; Seligmann, Melan. of Br. N. Guinea, 1910, pp. 656 f., 734). The warning not to eat the food usually comes from a mortal imprisoned in fairyland or from the dead person whose rescue from Hades is sought. It may also be noted that in Ireland there is the whole superstitious regarding the dead is exactly like that regarding fairies, both there and elsewhere.

Fairy belief and Mährchen, fairies are associated with tumuli or burial-mounds. These are sometimes called ‘Fairy-hills,’ ‘Elf-hoves,’ ‘Albenbergen,’ etc.; but they are also believed to be haunted by the ghosts of those buried in them, or at least are associated with these. In certain cases fairies have succeeded the ghostly tenants of the tumulus forgotten by the folk—a natural result, since any mysterious structure tends to be associated with mysterious beings. In other cases they are merged with them, and it is hardly possible to discriminate rigidly between them, while both are regarded with awe. The Tontoncwi are unterirdische (cf. cognate names in other Northern languages [Grimm, 454, 1415]), as are the dead, the άνεμοθηον, οι κτώνερες or οντωριστά of Greek belief (see EARTH, § 8). The Haunui, who haunted the tumuli and was feared by the Scandinavians as a breaker of houses, is at once a ghost and a kobin, like the forest-bird or Pons Elyria near Mold, the hill of the kobin or fairy (Windle, Life in Early Britain, 1807, p. 113; J. Anderson, Scotland in Pagan Times, Edinburgh, 1886, p. 278). Such a being as this has been found in Madagascar, where the graves of the votozime (at once the aboriginal folk and a species of spirits) are re-
carded with awe (Ellis, Hist. of Madagascar, 1838, i. 424).

In many cases fairies and ghosts are one and the same in popular belief. This is true of much of the fairy belief in Ireland (see Wentz, 46, 58, etc.). The Welsh washer-women regarded as souls of the Druids (Keightley, 412; the Teutonic Dhvergar are closely associated with the nádir, or ghosts, and the afgar are probably in part souls of the dead (Grimm, 445 f., 1415; Simrock, 425, 570 f.; Visionus volk, Corpus Post., 2D, 118). In Brittany the fairy washer at the ford (kannezed noz) is now a revenant, and, like the Irish and Highland fairy washer (also associated with a woodland, used on the approach of death (Le Braz, La Légende de la mort, Paris, 1902, i. p. xili). It is interesting to note that Kirr (p. 10 f.) associates the ‘co-walker,’ or double, seen by second-sighted persons, with the fairies. The speech of fairies, like that of ghosts, civilized and savage, is said to be a kind of twitting (Kirk, 14; cf. Tylor, PCl. 457).

The dead house-fairies, CP’s associated with fairies in fairyland, and are seen there by those who visit it, and are warned by them not to eat or drink. According to Scottish superstition in the 16th-17th cent., witches were in league not only with Satan but with the water-fairies of fairyland, and they saw there many persons known to be dead (Scott, Minstrelsy, 207 f., Demonology, 106, 124 f.; Dalvay, Darker Superstitions of Scotland, Glasgow, 1835, pp. 536 f.). The same idea is found in the Romance writers and in Chaucer, who make Hades into fairyland and change Pluto and Persephone into the king and queen of Faery. Fairyland is also in close association with the Christian Other-world. So, already in early mediaeval Welsh belief, Gwyn is king of Faery, and is associated with Annwn (Elysium) in its later aspect as hell, and hunts the souls of the wicked (MacCulloch, Cf, 212). Similarly the water-fairy keeps souls of the drowned in his under-water-world (Simrock, 445 f.; Grimm, 490).

The demoniac spirits, with uncertain temper, in whom the West Africans believe, and whom they localize in the air or in natural objects, are ghosts of the dead (Nansen, Feticisms in W. Africa, 1894, p. 58), and the Arabic ‘qura, evil jinn, is a name applied also to ghosts (Lane, Modern Egyptians, 1846, ii. 40).

In Mährchen of the ‘Dead Wife’ cycle, in which a dead mother is recovered from Hades, there is the same incident as in tales of women carried off to fairyland. In both the mother re-appears to suckle her child, and in both she is recovered by her husband, who avoids certain tasks. In the latter case the wife apparently dies, but the ‘corpse’ is an adult fairy changing or an illusory appearance. Or, again, the changing is in effect a double or ‘co-walker’ (Curtin, 188; see also CHANGELING, 5 f.; Discovery to Heaves [Eidehick], 8). In Ireland the idea is widespread that people who are taken by fairies and there is also the belief that the soul is taken, leaving the body dead.

There is one species of fairy which is closely connected with if not in all cases actually derived from, ancestral or other household spirits—the house-fairy or Brownie, already mentioned as the Parnobe by Gervase of Tilbury in the 13th cent.

1 Dawkins, Early Men in Britain, 1880, p. 432; FJL v. [1887] 122; Hartland, 221; Kirk, 22.
2 For the various names and characteristics of the house-fairy in Germany and Scandinavia, Britain, etc., see Biirger-Fraud, i. 36 f.; Simrock, 450 f.; Keightley, 493.

He is the ‘house-friend’ of Milton.
who dwells in house or stable, and loves to do the work of either. He dislikes disorder or laziness; and, where either is shown or the usual offering is not made to him, he is disagreeable to the person rendering it, and milk and meal are turned out for him, and he usually receives an annual gift of a new hat or coat, though in some instances this causes him to leave the house. He is particularly associated with the hearth, and to some extent corresponds with the medieval and later familiar spirit who worked for his master and advised him (Calmet, Traité sur les apparitions, Paris, 1751, i. 249 f., 260).

His analogues are the Roman household Lar (see Plaut. Aulularia, prologue), whose worship culminated at the hearth; the Greek ϝ��φορος; the Italian lauto and attilio (Leland, 80 ff., 141 f.); the Slavic dedushka domoven, 'Grandfather of the house,' who haunts the stove; and the Tengticle and Celtic ancestral and household spirits. The close connexion of the ancestral spirit with the house is perhaps partly to be accounted for by the wide-spread practice of house-burial, found among many savage tribes, as well as among the ancient Semites (I S 25, 1 K 24); Jastrow, Rel. of Babylonia and Assyrca, Boston, 1898, p. 599), among the early Mycenean folk, and among the Celts and Teutonic tribes (Reinach, L'Anthrop. vii. 327; Plato, Minos, 315; Scruvin, on Ιν. vi. 151), among the Celts, and possibly the Slavs (Ralston, 326), and among the Hindus (see DOR). The practice may have arisen in the Stone Age, when men lived in rock-shelters and caves, and buried their dead there. In any case, the house-burial resulted in, and also guaranteed, the presence of the ancestral spirit in the dwelling. In modern times and in many ancient religions and belief systems there are certain religious and magical conceptions that the house-spirit has taken a more or less demoniac form. In some cases the Brownie appears as a small animal, snake, etc.—a trait common to ancestral spirits elsewhere. The main ideas of the house-fairy superstition and of the household-ghost belief, whether savage or more civilized, are the same—the house-haunting, the offering of food, the assistance rendered to the inmates. The relation of house-spirit and house-fairy is well marked in the case of the Slavic domoven, the shaggy, stove-haunting being, kindly when respected, dangerous when neglected. He is not only with the older and more primitive cult, regarded often as ghosts, who act and are treated exactly as the Brownie, may also be compared (Thorpe, Northern Mythology, 1832, ii. 93). Sometimes, in fact, the Brownie is regarded as the spirit of a former servant.1

The house-fairy becomes a malicious, noisy, tormenting sprite, when neglected or insulted, and is thus most often connected with phenomena which in the line between ghost and fairy is seen—those of the Poltergeist, in which furniture, etc., is moved or thrown about, and in which hands or hair, the touches of a tiny hand is felt, etc. Some of these are extreme forms of poltergeist—the movement of objects without apparent cause, in presence of a person, or of noise, or of frights upwards, in connection with coincident phantasmal appearances. These were early known to the Pagan, and were, like timeless and modern times, and they still occur among savages and civilized men.2 The phenomena, as yet unexplained, rest

1 Besides the house-haunting Brownie, fairies in general are often (very properly) used as doing household work for those whom they like.

2 See Burton, Anot. of Melancholy 99, 1636, p. 134.; Calmet, l. cit. 254; Scott, 'Tales of the Highlands,' ii. 277; St. John, Forests of Far East, 1862, i. 91; H. J. Bell, Goben Witchcraft in...
Such a pygmy race in Europe might well be connected in tradition with fairies. But this is not to say that in all respects they are identical with to the fairy belief. In any case, some characteristics are ascribed to pygmy races which resemble those ascribed to fairies.

The pygmies are often feared and pitied, and they are supposed to have magical powers—a trait shared by all aboriginal peoples. They barter with the taller folk (cf. Grim, 464, note), giving porridge, meat, or boiled fruit in exchange for cultivated food-stuffs (Lang Red, JAF xxiv [1906-07] 296; J. A. R. 259). They are shy of being seen, or of their dwellings being discovered or entered. Invisibility is ascribed to them—probably on the authority ofTESTAMENT (1588, p. 516). Their dwellings are unusual in shape, spirit-like in appearance, and of great strength (Rowland, p. 1582). They dwell in caves or concealed structures, suggesting underground residence. The dwarf people believed in by the Ainu are said to have hidden under large burrows—a habit recalling that of fairies hiding under mushrooms. Johnston says of the Congo dwarfs: 'Any one who has seen as much of the Central African Pygmies as I have, and has noted their merry, mischievous ways;—unseen, spirituous vengeance; quick gratitude;—and prompt return for kindness, cannot but be struck by their singular resemblance to character to the elves and gnomes and sprites of our nursery stories' (p. 516f.). At the same time he warns against reckless theorizing.

It is denied that many stories about fairies suggest an actual people (cf., e.g., the stories cited in Grim, 451, 469). The frequent reference to fairies as earth- or mound-dwelling may be the result of the fact in another case, especially when it is known that the Bushmen (dwellers not only in the bush but in subterranean caves) are also called 'Earth-men' (FABAS xvii. p. 1.). In many stories, fairies resent mortals building over their subterranean dwellings or mounds—probably a trait derived from actual experience of innocents being plagued by aborigines lurking in subterranean places over which they had built. On the other hand, they may be derived from the fear of aborigines haunting the mounds. In some cases, as in 'Childie Roundway,' the fairyland is surrounded by terraced circles—the markings of an earlier form of terrace agriculture still seen on hills (Jacobs, English Fairy Tales, 1889, pp. 117, 242; Gomme, Village Community, 1890, p. 75 ff.). In many tales it is obvious that fairies dislike the civilization of mortals, and flee from it (while those who are accused of much sordid care, though they sometimes take advantage of it. These facts suggest the dislike of an aboriginal race to the ways of their conquerors, yet their occasional desire to benefit by them. Similarly the incident in which fairies receive articles left out for them, which they replace by gifts of their own, points to actual methods of barter. Their thefts of produce, animals, etc., and more particularly their kidnapping of women and children, reflect incidents in the contact of conquered and conquering races. The occasional cannibalism attributed to fairies is obviously derived from primitive custom, while their shyness, their retiring before the approach of mortals, easily suggesting invisibility, give the impression of a conquered race avoiding its conquerors. Finally, the dislike of fairies to metal, especially iron, by which they are kept out of harm, they cannot pass, is significant, though this dislike is also shared by gnomes and other spirits, witches, jinn, etc. The dislike is primarily a human one; and, though the taboo concerns iron, it must first have concerned beings.

The mystery with which the working of metal was surrounded, and the suspicion which attached to it first came, as well as the superstition as to the spell- or magic-making power in the use, must have contributed to the curious feeling with which it is regarded. As iron is regarded as a protective element, Continental sagas prohibit its use in ritual; hence it easily came to be regarded as ominous.

Fairy traditions, as described above, might have existed between Paleolithic and Neolithic folk, these forming the basis of traditions which may have been handed on to metal-using races (to whom the Neolithic folk were probably hand-made by them, and then adopted by them with the necessary changes.

Some support is given to the theory of fairies as an actual race by the belief that in Polynesia, where there is a belief in fairies, the traditions concerning them are probably connected with the religions existing between as an ancient race, especially when it is known that the Bushmen (dwellers not only in the bush but in subterranean caves) are also called 'Earth-men' (FABAS xvii. p. 1.). In many stories, fairies resent mortals building over their subterranean dwellings or mounds—probably a trait derived from actual experience of innocents being plagued by aborigines lurking in subterranean places over which they had built. On the other hand, they may be derived from the fear of aborigines haunting the mounds. In some cases, as in 'Childie Roundway,' the fairyland is surrounded by terraced circles—the markings of an earlier form of terrace agriculture still seen on hills (Jacobs, English Fairy Tales, 1889, pp. 117, 242; Gomme, Village Community, 1890, p. 75 ff.). In many tales it is obvious that fairies dislike the civilization of mortals, and flee from it (while those who are accused of much sordid care, though they sometimes take advantage of it. These facts suggest the dislike of an aboriginal race to the ways of their conquerors, yet their occasional desire to benefit by them. Similarly the incident in which fairies receive articles left out for them, which they replace by gifts of their own, points to actual methods of barter. Their thefts of produce, animals, etc., and more particularly their kidnapping of women and children, reflect incidents in the contact of conquered and conquering races. The mystery with which the working of metal was surrounded, and the suspicion which attached to it first came, as well as the superstition as to the spell- or magic-making power in the use, must have contributed to the curious feeling with which it is regarded. As iron is regarded as a protective element, Continental sagas prohibit its use in ritual; hence it easily came to be regarded as ominous.
7. FAIRIES AS NATURE-SPIRITS. — There is little doubt that, in some aspects, fairies are derived from older Nature-spirits, or from the animistic beliefs which led to the creation of the latter in popular fancy. Thus, the ancient and widespread belief that the dead are not interred in the grave, but are carried off in the form of fairies (the idea is not without its basis in the old idea that the soul is invisible, as in the belief in the mountain spirit, or in the belief in the dead as spirits of the earth), has led to the idea of the fairies being the spirits of the earth. Thus, in many parts of Europe, the fairies are believed to be the spirits of the earth, and are often identified with the spirits of the dead. The idea of the fairies being the spirits of the earth is also found in the idea of the fairies being the spirits of the water, and is often connected with the belief in the fairies being the spirits of the sea. The idea of the fairies being the spirits of the water is also found in the idea of the fairies being the spirits of the earth, and is often connected with the belief in the fairies being the spirits of the sea. The idea of the fairies being the spirits of the water is also found in the idea of the fairies being the spirits of the earth, and is often connected with the belief in the fairies being the spirits of the sea.
have been experienced in hypnotic states, or in drunkenness. Here probably we have another of the roots of the fairy belief. On the other hand, all such states are fruitful of visions of beings already believed in by the percipient. Preconceived notions colour dreams, just as preconceived notions of hell or heaven have caused visions of these regions. Again, any belief in abnormal creatures which is strongly held is certain to produce the ideal images of them which are confused with reality.

The changeling belief, as far as it concerns adults, may have been partly shaped by the phenomenon of alternating personality. The person stolen by fairies is replaced by a fairy, who resembles, but acts differently from, that person. In one Irish instance, the father said of an afflicted daughter whom he believed to be a changeling that she had the ‘tongue of an attorney,’ the daughter herself being a ‘quiet, honest girl’ (Curtin, 157). Actual adult changeling stories often read like a transcript of this.

The one who can set fairies on his back has seen one (Rhyd, Celtic Folklore, passim), just as in Russian folklore, a dead man will place a sod cut out of the churchyard on the head of a living person, who then lives as one under the world (Rahlston, Russian Folk Tales, 1873, p. 900). The feeling is directed to the enjoyment of the kinship with the percipient with whom the精灵 together share the view of the world; this is also true of clairvoyance (Gurney, i. 189). Modern experience has shown that this increases the possibilities of communication, and cases are on record where the percipient of a phantom could cause another to see it by touching him (Parish, Hallucinations, 1897, p. 94). Thus, what is perhaps an actual psychic fact, experienced by the Folk, has been applied to fairies, and other beings.

9. Fairy-like beings outside Europe.—That no single cause peculiar to European lands has operated in the formation of the belief in fairies may be seen from the fact that in every part of the world there are to be found beliefs in a variety of beings, all more or less like the fairies of Europe, with similar qualities, characteristics, and powers.

The Battaks of Sumatra believe in mountain-dwars or changelings, who carry off men or women, or have amours with handsome mortals (L’Anthrop. iv. 851). In Formosa, tales are told of a mysterious little people to be seen in the forests, with houses which change into boulders, and in which gooblins live in caves, and causing famine, sickness, and death (FLJ. i. 143, 149). The Siamese phi are spirits dwelling in forests, etc., with many fairy traits (Hardinon, Rev. creul. pop. (1898) 297 f.; for Annam, see EEE i. 538, 539).

Turning to Africa, we find the Baganda believing in elves or sprites called ngegwe; and the W. African Bantu in asiiki seen at night wearing a comb, which, if a mortal can snatch it, will bring him riches (Johnston, 677; Nassau, 299). Callaway compared the Zulu belief in ghosts (amantongo) with the Irish fairy creed. They call the living to join them or produce disease or pain in men. They live underground, where the living may visit them and see their dead friends, as the dead are seen among fairies. There is also a belief in a ‘Little Chiefness’ with a troop of children, to see whom is fatal (op. cit. 226 f., 253). The Malagasy believe in dwarfs who come to houses to get milk, and who have a small voice like birds. Another dwarf, Kotel, resembles the Brownie. They also enter houses at night and eat rice; but it is dangerous to prevent their leaving before dawn (Ferrand, Contes pop. malagasy, Paris, 1860, p. 82 ff.).

Among American Indians, the belief in tiny sprites of rocks, streams, etc., resembling fairies, is wide-spread. They dance in moonlight; and, when seen, vanish at once. They assist or trouble men; e.g., among the Shoshones they steal infants, leaving a fox in its place. The Algonquins say the Ojibwas they attack poultry and cattle, which die, or throw stones into the Indian dwellings; among the Algonkis they cause sleep by striking men with their small clubs; among the Micmacs they tie people when asleep. The belief is that of tiny men. The Masquaque Indians believe in sprites produced by Mechee Manito-ah, who cause melancholy, quarrels, ill-health (Owen, Folk-Lore q. v.). The persistent belief is that of tiny men. The Eskimos believe in inngersuia, an underground fairy-like folk (Rink, 460).

In Polynesia the ‘Peerless Ones,’ daughters of Mirn, queen of Hades, come to the dances of mortals and leave at dawn. There are also fairies of sky and fountain, the latter sometimes meeting with men. Other fairies, ponatuus, dwell in the sea, appearing only by night, for the sun is fatal to them. Others carry off mortals, and are much dreaded (Gifford, 187; Clarke, 90). The Melanesian vu, a race of spirits, have many fairy characteristics, and many of them are ‘a lesser folk of dwarfs and trolls,’ with magic powers, yet easily deceived. In some tales they assist mortals, like our fairies (Coedington, Melanesians, Oxford, 1891, p. 152). In Torres Straits a mischievous female bogey called Dorgo seduces men, steals children, etc., but she can be outwitted and destroyed (Haddon, JAI xix. 121). The Fijians have a race of little gods of the sea, a timid race to whom a secret cult is paid, and who sometimes come ashore. They give immunity from wounds, and are fond of singing. Their songs, like those of some of our fairies, have been recorded (Williams, Fiji, 1978, i. 237, 240; Thomson, Fijians, 1998, p. 189). In New Britain an order of lebaran is called ingii, mischievous and annoying sprites. Others are friendly and live around men. They are a belief in a changeling, iv. 1379 among some mortals, or enter their bodies to teach them charms, dances, etc., by which they make a profit. There is also a belief in mermaids, and in their unions with mortals (Brown, JAI xii. 290, 292). The Atauros believe there is a belief in an underground folk, not the dead who may unite with mortals, and from whom men steal valuable things; as well as in other beings in the forest or swarm, shy of being seen, and with other fairy habits (Seligmann, 386 f., 646 f.).

The Arunta believe in irurtarintin, spirits of the Alcheringa (q.v.) age, living in winter in underground caves where there is sunshine, and wandering on earth in summer. They have each a double, the arumburuma, which, when the spirit is reincarnated, follows it or dwells with the others. These are not visible to all. The trurtarintin are very real to the native, and are dreaded for their power of placing pointing sticks in his body. They are visible only to medicine-men and children born with eyes open, and are like men, but thin and shadowy. They steal from men, and carry off women and use them in magic to those who can communicate with them they impart sacred ceremonies (Spencer-Gillen, 515-521).

The beings which most resemble fairies, however, are the Arab jinn or jin. They live underground, but also haunt doorways, and are usually invisible though they also appear 1See 1900 (1900), p. 1. 475; JR Ill. 497; Dorman, Orientalism, Super. Philos., 1897, p. 379. 2See Gurney, i. 119; County Folk-Lore, Suffolk, 1892, p. 189; Scott, W讲故事; Campbell, 90. 3Evelyn, 290; Campbell, Superstitions of the Scottish Highlands, 1900, p. 192.
in various forms. They travel about in sand- 
stones or rocks, and are found in the graves of 
their species, and are subject to laws like mortals. 
Many are evil and cause sickness, madness, etc., 
act like the Poltergeist, carry off beautiful women 
for wives or others as midiwives, or their females 
forced to remain in certain places. Some are 
friendly to men and even marry them, or by 
means of talismans men can obtain power over 
them. Iron, Divine names, etc., are all powerful 
against them, but for this reason, they are 
euphemistically called mukarakin, 'blessed ones.' 1 
Indeed, there is scarcely an article of the fairy 
creed which does not equally apply to them. 1

Faries and feés of all kinds—Celtic and Ten-
tonie, Slavic rites, Greek nereids, Arabian jinn and 
peris, Hindu apsarasas, and other supernatural 
males, like the dorgai of Torres Straits, or the 
awiri wife of W. Africa (MacCulloch, CE, 330), or 
the omangs of the Batuaks (L’Anthrop. iv. 80), or 
the swan-maidens and mermaids of universal folk-
belief—carry on amours with men, or marry 
and bear children, either on earth or by boring 
into them their abodes, as the Queen of Faery 
does in Yeats’ The Green Bough. Yet the 
most characteristic traits of female fairies 
are their seductive power over men, and the 
fatal results which follow from amours with them— 
’t he who loves, he’s undone.’ (Kirk, 258.)

This, however, is a feature found even in the case 
of fairy wives, whether captured by men or not, 
when the mortal husband breaks a taboo, and was 
already noted by Guyrave of Tilbury (Offa Imper. 
ch. 13; see MacCulloch’s CE, ch. xii.).

But what is important is illustrating the likeness 
of various ethnic supernatural beings to our fairies 
is the fact that precisely similar dangers await him 
who is caught by the naiads in modern Greece (Bent, Cycloades, 1883, p. 19; 
Lawson, Modern Greek Folklore, Cambridge, 1910, 
p. 142), as it is the case with him who is lured by the 
Hindu válikés or chured (Crooke, PSE, 1856, i. 
222; 1860, i. 486); or by the nenek by the 
monk, who takes the form of a 
lovely girl (Joly, Legend in Jap. Art, 1908, p. 45).

The Arabs have transformed the ka which haunts 
the pyramids into a beautiful nude woman, whose 
lovers become restless lunatics (Maupas, Études de myth. et arch. égypt., Paris, 1893, i. 79).

Similar beliefs are found in Melanesia regarding 
sea-snakes which take female form, or the tarakawak which appears as young or old to entice 
mortals of the opposite sex. In either case death 
or madness is the result. Another species of 
spirits, called in New Britain toltaf, inflict serious 
wounds on the sexual organs of their male 
or female lovers (Codrington, 172, 188 f.; Brown, 
197; Lang, in Kirk, p. xxxi; cf. Williams, Fiji, 
1870, i. 229).

The same ideas are found among the American 
Indians; e.g., the Ynroks believe in a seductive 
being who lures men into the forest, changes to a 
panther, and kills them (FUL v. 1882 90 f.); and 
the Mayas have stories of the xtabi and the xtab 
chak, who appear in the form of a thorn-bush when 
the pursuing mortal claps them. He then 
speedily succumbs to fever and delirium (FUL i. 
1883 355). These are the beliefs in the 
intercourse of women with nayagals, see Birton, 

Risks were also run by women who had inter- 
course with Hissis, Panisci, Satyrs, Fauns, Silvanis 
and in the incubus and succubus of medieval 
thought, the demons who had amours with women or men. 
They correspond to the Celtic dweti, shaggy demons 
who sought the couches of women to gratify their 
desires, and procuresses, they are 
epithetically called bhadaitis, ‘blessed ones.’ 1

something to reminiscences of earlier sex-festivals with music and dancing (see MacCulloch, CP, 223).

The wayfarer attracted to both, and often pays dear for it. He is forced to pipe or dance, and finds himself in the morning worn out, while all that so attracted him has vanished. Both revels and Subahyast marsh-towns and down-town cock-crow (see Reuss, La Sorcellerie, Paris, 1871, pp. 39, 43, 54, 56, and ref. there). Similarly the beliefs in bodily or spirit transportation through the air in invocations by women or witches—already the objective aspect of a trance or drugged condition (see MacCulloch, CF, 223; Wood-Martin, Elder Faiths of Ireland, 1902, ii, 8; 21; Nassau, 223 [W. Africa]; Seligmann, 401 [New Guinea])—in child-stealing (see Channing), in cannibalism (CF, 223; François, L'Eglise et la Sorcellerie, Paris, 1910, pp. 68, 119, 145; Sébillot, i, 229; Wentz, 128), in gifts of money which turns to rubbish, in shape-shifting and invisibility, in taking the substance of milk, nuk, or of an animal (cf. a similar belief in W. Africa [JAI xxix. 23], in E. Africa [Macdonald, Africana, 1852, i, 212]; and see Scott, Demon., 92, 228), in the power of killing cattle by nym of a forest-godd (Elias, 70); by having them forthwith at night, in the force of similar tabus against both—all apply equally to fairies and witches. Both the medieval Church and 17th cent. Presbyterian plagues and witchcraft under the same ban; and, in their trials, witches were accused of appealing or repairing to fairies and their queen (Dallyell, 536 f.; Scott, Demon., 129, 135, 260, Minst., 267). Witches used for their nefarious deeds elf-arrows, which were manufactured by fairies and the devil, and applied to them (Pitcairn, Criminal Trials, Edinburgh, 1833, i, 191 ff.; Scott, Demon., 135, 235). In popular Scots tradition the elf-queen or mother-witch, or Gym Carteine, are identical. The three Fées who are present at births are sometimes three witches, and both groups are associated with the earlier ‘wise woman.’ Finally, fairies and witches were supposed to ride through the air incited by a Hecate called Nic Neen (Scott, Demon., 111).

Beliefs similar to those associated with fairies are also elsewhere connected with the dead (5), or with other beings—in Japan, foxes; or, among savages, spirits of all kinds; in our own and other lands, the devil or demons, or vampires. But the best example is found in the belief in the ‘fairy eddy’—a sudden puff of wind or whirl of dust, leaves, &c., which fairies are supposed to be (Rhys, ii, 596; Rakstol, Songs, 382; Frazer, GB, i, 127). Among the Arabs the jinns (in India shaitan) cause, or travel in, such whirlwinds or sand-storms. In ancient Persia a demon caused the whirlwind (Bundakhi, xxviii. 24). In Brittany, the damned, who tried to carry off the wayfarer as fairies carried off men, were seen in snakelikes (Le Ira, ii, 20); among the Ainme, whirlwinds are embodiments of evil spirits (ER, i, 244); among the Baganda, a dust eddy is believed to be caused by ghosts at play (Roscoe, 282); among the Yoruba, an eddy of wind is a manifestation of a spirit (Mabogunje, 291). It is thought that Brewin travels in a whirlwind (Howitt, JAI xiii. 194); or, as in Fiji and among the Pawnees, the whirlwind is caused by ghosts (Fuller, 128). With all these peoples much the same methods of availing of the eddy or of overcoming the beings in it are found; while, comparing these customs with that of attacking a storm with weapons, we see that both eddy and storm were first personified and then believed to contain hostile beings.

Thus, considering the similarity of what is attributed equally to fairies, witches, ghosts, demons, and spirits of all kinds, it is obvious that certain primitive ideas easily attached themselves to all these objects; and that the original fairies must be sought in no one recent source, but ultimately in very ancient beliefs of man regarding the beings of his imagination. At the same time, we must not omit that which his poetic fancies have lent to the whole fairy belief, for to do so would be to omit what has always been a most vital element in all folk-lore.

The fairies who figure in the earlier romances and in the Renaissance and later poets are in part the creatures of folk-tradition, in part the creations of the poetic imagination, and concern us but little here.

II. Situation of fairyland. — Fairyland as a separate region is variously situated. Most generally it is a subterranean region, sometimes directly below men's dwellings, or within hills and mountains; and to the latter corresponds the medieval tradition regarding fairies. These are tabus to which ‘Venusberg,’ of which there were several (Venus here—a fay; see Grimm, 935). We may compare also the Irish tradition regarding the Tuatha Dé Danann and their relation to other women—this dwelling was through a cavern (or fairyland was in a cavern), crevice, pit, or wells on tops of hills: the oldest recorded example of this is found in Gervase of Tilbury's story of the Welsh Elidurns, who was taken by two small men through a subterranean passage to fairyland (Utan., Camb., i, 8).

In this aspect fairyland corresponds to Hades, as well as to Hell or Purgatory, the entrance to which is also often through a cave or cliff. Both in Tentonic and in Celtic regions, fairies are also associated with tmuli, or with old raths or forts, which are often seen lit up at night (for an early instance, see William of Newburgh, Historia, Oxford, 1718, i, 28). Fairyland is also within the waters, and accessible through wells or by diving beneath river or lake or sea (in this corresponding to one aspect of the Celtic Elysium; see Bliss, Anone of the Celts). This dwelling is both that of water-fairies and of other water-beings (7). It is also on islands in lake or sea, which sometimes are seen by the gifted seer (Wentz, 147; Davies, Mythol. and Rites of Brt. Druids, 1905, p. 150). Hill-spirits are associated with the island Elysium of the Celts (see ERE art. cited). Fairyland may also be all around, a kind of fourth dimensional region interpenetrating ours; 2 or it may suddenly be entered in a mist; or, again, it may be in the air. These various conceptions are connected with the original character of fairies, whether as Nature-spirits or ghosts; and in some instances the abode of older gods has become fairyland.

It is usually dangerous to violate any sacred fairy spot—tree, dwelling, etc.—as it is dangerous to enter the charmed fairy circle, or to cross the line of a night ride with fairies. These are tabus to which many parallels from lower and higher cultures, with respect to sacred places, abodes or haunts of spirits, gods, or ghosts, might be added (see Codrington, 177, 218 f.; Seligmann, 194; MacCulloch, CF, 64 xi.

LITERATURE.—There is no work covering the whole ground of the fairy belief, but T. Keightley's Fairy Mythology, new

FAITH (Christian).—Every act of religious faith shows two sides or aspects—a cognitive and a volitional. It is at once an affirmation of truth and a surrender to the truth affirmed. Apart from the first, it would be blindly; apart from the second, without practical significance. The fact that the emphasis is sometimes placed on the one and sometimes on the other leads to two relatively distinct notions of faith. When the volitional aspect is emphasized, we have the notion commonly denoted by the word ' trust' (q.v.); when the cognitive, that denoted by the word ' belief' (q.v.). It is with faith as belief that we are concerned in the present article. The notion of trust is, indeed, vital for religion, but it has played no part in theological controversy.

1. Scripture doctrine of Faith.—(1) In Jewish canonical and extra-canonical writings.—Although there are only two OT passages (Dt 32:28, Hab 2:4) in which the RV admits the substantive ' faith,' the idea is far from being infrequent. Every word of God contains a claim to be received as true; to believe it is an act of obedience to God, as unbelief is rebellion and a mark of hardness of heart (Ex 14:12, Dt 1:33, Ps 78:34, Is 7:18). At the same time, faith is not among the cardinal conceptions of OT religion. What God requires of men is less that they believe His word than that they fear, love, serve, obey, and trust Him. God's word is thought of rather as a commandment to be obeyed than as a message to be believed.

What first brought the notion of faith into the foreground was the loosening of the bond between religion and nationality, and the rise of a propa ganda. When Hebrew religion entered, with a claim to universal acceptance, into competition with other religions and became a matter of personal choice, the question whether a man believed in the God of Israel and received His laws and promises as true inevitably advanced into a position of cardinal importance. The initial religious act became one of belief; and persistence in belief, the presupposition of fidelity. We can thus understand the change from an act of trust to a notion of faith should be considerably more prominent than it is in the OT (En 46:58, Aproc. Bar. 54:12 16; Philo, de Abrah. 208; 2 Es 5:7 9). (2) In the teaching of Jesus.—Evidence for the increasing importance that was being attached to faith will hardly, however, be discovered in the teaching of Jesus. Often as He uses the word, it is nearly always with the meaning of trust in the prophecies of God (Mt 16:20; Mk 8:11). This is the meaning even when He speaks of faith in Himself. What He has in view is not belief in HisMessiahship or in any doctrine, but trust in the Divine power that works through Him (Mt 8:26 15). Though He is conscious of bringing a new message, He lays the stress not on the acceptance of His word, but on the doing of it. ' This do, and thou shalt live ' (Lk 10:17). The message is so simple and self-evidencing that the question of believing it hardly comes into view.

(3) In the writings of Paul.—It was with the Christian proclamation that the idea of faith really entered on its great career. From the first the gospel was preached, not primarily as a law to be obeyed, but as a message to be believed (Ac 2:44 45); and the cardinal article of belief, that which includes all others of doctrine, is ' faith in Christ. The doctrine of salvation through believing was, therefore, not introduced by Paul; in his controversy with Peter at Antioch he could assume it as common Christian ground. None the less, he marks a decisive stage in its development. He was the first to establish it on a reasoned basis, and to bring the Church to a clear consciousness of the new significance which faith had acquired. This he accomplished by demonstrating the congruence of faith with the nature of the Christian gospel. Since the gospel comes as a revelation of Divine grace and of a righteousness freely offered to guilty man, the fitting response on man's part can only be that of humble and thankful acceptance of the gift. Putting away the proud thought that he can stand on his own merits, he must believe in Him who justifies the ungodly (Gal 3:4, Ro 4). It is evident that faith as here conceived is a thing of the heart rather than of the intellect. It implies moral earnestness, the sense of sin and need, submissive ness and openness towards God, and is indistinguishable from the trust of which Jesus speaks. Doubtless the Apostle included in his notion of faith the acceptance of what we should describe as doctrine (Ro 10:9). The grace of God had no meaning for him apart from the redemption drama in which it presented itself to his imagination and thought. Nevertheless, Wrede's assertion (Paulus, Tüb. 1904, p. 67), that what Paul means by faith is nothing more than the obedient affirmation of the preaching of redemption, is wide of the mark. In his doctrinal constructions, Paul has no other object than to set forth the sin-forgiving, salvation-bring ing grace of God; and at bottom it is this grace he asks men to trust and believe in.

In vindicating the title of faith to be regarded as the sole and sufficient condition of salvation, Paul considers it exclusively in its relation to justification. What he establishes is justification by faith. Does he think of faith as also the inner spring of the new life? In two or three passages he approaches this idea. He speaks of faith as working by love, and declares that what is not of faith is sin (Gal 5:6, Ro 13). His activities of the new life are traced not to faith, but to the transcendent working of the Holy Spirit. The Christian virtues and graces are fruits of the Spirit (Gal 5:2, Ro 8). Our modern method of psychological derivation is foreign to his thought.

Much more important is the question whether faith, as defined in Ro 4, is an adequate description of the religious relation as Paul habitually con-
receives it. Is the bond that unites the believer with Christ nothing else than trust in the Divine grace manifested in His Gospel? The truth is that it is only in connection with justification that the Apostle thinks of it in this way. In general, the union with Christ appears as something more intimate and close than can be described in ethical terms. He is, for him, the object of spiritual union, and risen with Him; He is in Christ, and Christ lives in him. While this has for Paul a strongly ethical meaning, to interpret it in purely ethical terms, as signifying the relation of faith to sin and resurrection to righteousness, a reproduction of Christ's mind or spirit in the believer, is to miss its secret. The union he has in view is a mystical union. Like all mystics, he finds the idea of faith inadequate to express the religious relation. Whether he regards this mystical union as onely a deeper interpretation of faith, or as something that follows on it, is not easy to decide (Gal 2:20, Eph. 2:15).

(4) In the Fourth Gospel.—As compared with that of Paul, the conception of faith found in the Fourth Gospel is distinctly more intellectual in character. The writer shows unmistakable allusions to the higher forms of faith ascribed to the Greek thinkers, as a result of the impression made on the enquirers, not so much by the grace and truth manifested in Christ's words and deeds, as by His miracles. His whole earthly career is presented in the light of a series of Divine attestations of His claim to be the Son of God (Jn 10:25). Knowing and knowing are brought into the closest connection with each other, are, indeed, treated as identical. Like the Grecians and Philo, the Evangelist attributes a saving significance to knowledge. At the same time, it is far from his intention to exhibit faith as a mere intellectual assent to the proposition, 'Jesus is the Son of God.' Everywhere the ethical factor, perhaps in conscious opposition to Gnostic tendencies, is strongly emphasized. Knowledge is not understood as a predominantly intellectual function; it includes sympathy and kinship with its object, a personal relation to Christ, and is morally conditioned (Jn 6:44 51 8:37).

Like Paul, the writer of the Fourth Gospel knows of a deeper relation of the soul to Christ than that of faith or knowledge. Everywhere the mystical union is in the foreground: 'I in them, and they in me, that they may be perfecled into one' (Jn 17:11) — that is the profoundest secret of his piety. It is in view of this mystical union that the statesman and Divine Hs which belong to Christ as His native possession is imparted to the believer, 'He that abideth in me, and I in him, the same beareth much fruit' (Jn 15:5). The mystical vein of piety, which passed into Christianity from the Oriental religions, runs side by side with the Hebrew vein, and is suffused with the ethical spirit of the latter.

(5) In the Epistle to the Hebrews.—In the Epistle to the Hebrews we find a conception of faith which is modelled on that of Philo. Faith is the vision of the eternal realities of the unseen world—God, His righteousness, His salvation, the better country— the vision of these realities and the conviction that they are more enduring than the things we see and touch (He 11). As such it is the spring of all heroic action. Christ is related to it as its author and perfecter. He is the great example of faith, and through Him the saints of old time could only gain from afar has been a realized fact (vv. 32-36). Of all NT conceptions of faith, that of Hebrews is perhaps the broadest.

2. Catholic doctrine of Faith.—We have seen that, from the outset of the Church, and even of Christ's Person and work, always implied belief in His power and dignity as Messiah and Lord, and in the reality of His redemption. If, notwithstanding this, the NT cannot be said to show, except in the most feeble forms, any reflection of the intellectualizing of the notion of faith, the explanation is to be found in the fact that doctrine was still sufficiently simple, ethical, and elastic to serve as a vehicle of the Gospel. It still made its appeal less to the intellect than to the heart and conscience. But a time speedily arrived when this in large measure ceased to be true. The passing of the great constructive thinkers, and the Church's experience of Gnosticism of the dangers incident to unfettered speculation, led to the fixing of doctrine as an authoritative norm, the fitting attitude to which was intellectual submission. Nor was this all. More and more, doctrine was elaborated in a direction that removed it from the domain of the heart and conscience into that of the speculative reason. In determining the inner relations of the Trinity and the constitution of Christ's Person, the Church doctrine was sought to define and safeguard what seemed to it vital religious interests. At the same time, such determinations were far removed from the simple truths of the Gospel, and the importance attached to them had the result of throwing the latter into the background. Faith was superseded by speculation. It was made a condition of salvation, it was inevitable that faith should come to be understood as fundamentally an act of the intellect. By Augustine it is defined as 'cume seacione cogitari' (De Pract. Sanctor, 5), and by Aquinas (Summa, II. 2, qu. 2, art. 2) as an act of the intellect which is moved to assent through the will. Three elements were distinguished in it—notitia, assentio, and fides; the first two being purely intellectual, and the third having but the slenderest claim to be regarded as ethical. Not only was faith intellectualized; it was conceived in the main as an act, not of insight and independent conviction, but of intellectual submission. The highest mysteries of the faith, being inaccessible to reason, could be received only on the ground of an external authority. Early Scholasticism, it is true, proceeded on the assumption that the doctrines of the Church were capable of being demonstrated to the reason; still the doctrines were first, and reason second. Moreover, the attempt to justify this assumption was in the end abandoned. Faith, in the Catholic conception of it, is authority-faith. And the authority that guarantees the truth of the doctrines is, in the last resort, the Church: 'Evangelio non ereterem, nisi me estatitur de Fide et Ratioe' (Aug. contra Ep. Manich. 6). The Church, therefore, is the real object to which fides implicita, the practical element in faith, is referred. The notion was still further eviсerated when the Church came to recognize that an intelligent assent to its doctrines more than could be expected from unlettered people, and to accept a fides implicita, or readiness to affirm these doctrines, though not precisely known, as sufficient for saving graces which the Church dispensed to her children.

It is not to be denied that there were
currents of thought in the Catholic Church. It would be easy to quote from Augustine and Aquinas passages in which faith is based not on authority, but on inner apprehension of Divine truth. Divine things, Augustine asserts, cannot be understood except by the pure in heart, and Aquinas, against the idea that faith is an arbitrary choice. It presupposes a certain amount of natural trust and natural grace. Still the main drift was as described.

2. Luther. — Luther restored faith to the place it occupied in the theology of Paul. Against the Roman doctrine of justification by works he set the Pauline doctrine of justification by faith only. In the act of believing, the sinner has full assurance of salvation; his assurance is not contingent on the good works he has done or may do, much less on any ceremonial observance. For salvation is a Divine promise; and, as 'without a promise we have nothing to believe, without faith the promise is useless, since it is through faith that it is established and fulfilled' (de Captiv. BabyL. Evol.), Luther defines it as a 'certain fiducia cordis et firmus assensus quo Christus apprehenditur' (Commentary on Gal. i.). It is nothing else than personal trust in the sin-forgiving grace of God; and it is the product not of reason, but of the impression which the Divine word makes on the heart and conscience.

This conception of faith sets up a new standard for doctrine. If doctrine is to be the object of faith, it must embody the gospel, must exhibit Christ in the characters that render Him our Saviour and awaken our trust. Of this Luther was dimly conscious. He saw that we apprehend Christ only in our experience of His merciful will: 'Christus certe non est Deus aliis qui non posseant misereri, eum sint misereri;igitur qui miseretur et bonus est, Deus est.' But, though in these words Luther criticized the metaphysical formulae of the Greek creeds, he did not seriously raise the question whether they fulfilled the requirement he had proposed. They imposed themselves upon him as something sacred; and he was content to leave them unaltered, and to read into them as much evangelical meaning as they could carry.

2. The Reformed Church after Luther. — Far from working out Luther's epoch-making ideas about faith, the Protestant Church after the Reformation reverted in large measure to the Roman view. The traditional dogmas, supplemented by that of justification by faith, were elevated to their old position. In the object of faith the sum of the articulis fidei was included. As a consequence, the existence of a purely intellectual element in faith was again emphasized. We are to regard faith merely as a decisive for salvation, notitia and assensus were described as necessary preliminary steps. More and more the ground of assent was again sought in authority, with this difference that for the authority of an individual there was substituted that of an infallible Bible.

4. Modern discussions. — In the modern period of theology, which may be dated from the Illumination, discussions regarding faith have turned mainly on two points — its cognitive character; and its relation to the historical facts, above all to the fact of Christ. (1) Every act of faith involves a judgment, an affirmation of truth or of what is regarded as truth. Faith is thus in one aspect a cognitive process. What is the nature of this process? On what ground are the affirmations of faith justified? Are the grounds on which we affirm the justice or the goodness of God the same in kind as those on which the affirmations of science are based? The question is one which has far-reaching significance for theology; it is, one may assert, the only epistemological question with which theology has any deep concern.

For its theory of religious knowledge, Protestant orthodoxy was indebted to the theologies of the Catholic Church, above all to Aquinas. It distinguished between the knowledge of God which comes to us through the exercise of our natural reason, and our knowledge of supernatural things communicated by the Church, or the Bible. Eighteenth-century Rationalism, while it allowed the first, rejected the second. For Rationalism, all religious truths were truths of reason. But neither Protestant nor Catholic theology dreamed of subjecting what it called reason to critical analysis.

(a) It was Kant who first undertook this task, and his account of reason forms one of the great landmarks in epistemological investigation. As the result of his analysis, Kant distinguished a twofold process in knowledge — that of the theoretical, and that of the practical reason. As theoretical, reason is for its domain the world of sense-experience, and for its instrument the categories — above all, the great category of causality. Within this domain it moves with logical certainty, rising from effect to cause and connecting fact with fact as parts of a single, ordered system. But there its competency ends. When the theoretical reason attempts to transcend the phenomenal world of sense-experience, and to explore, by means of its categories, the ultimate reality which lies behind that world, its incompetence is at once demonstrated by the paradoxes in which it finds itself involved. The transcendent objects with which religion is concerned exist in a non-theoretical way. To reason as theoretical they are inaccessible. Only through reason as practical, i.e. as imposing itself upon us as the law of our conduct, do we attain to any knowledge of the unconditioned. Our religious knowledge comes to us as postulates of our moral consciousness, and the certainty with which we hold it is not a logical but a moral certainty. If our consciousness of being under obligation to obey the categorical imperative of our reason is not to be stultified, we must assume that our will is free, that beyond death there lies an opportunity for approximation to the moral ideal, and that the ultimate power in the universe is on the side of the good.

The Kantian account of knowledge has the great merit of bringing out the fact that our religious affirmations, unless those of science, are morally conditioned. In other respects, however, it is open to grave objections. It leaves room for no knowledge of God unless as a postulate. Communication with God is possible only in the form that as we fulfill our moral duties as God's commands, the divine theory which so limits the range of religious experience cannot be regarded as adequate.

(b) Fruitful as the Hegelian movement proved in many ways in theology, on the side of epistemology it represented a reaction in the direction.
of Rationalism. For Hegel, religion was but the
founder of philosophy, and religious apprehension
but an undeveloped form of philosophical. Firm
ground is reached only when the highest truth is
logically developed from the idea and recognized as
a necessary conclusion. The distinction drawn
by Kant between the theoretical and the practical
reason completely disappears.
(c) Meanwhile the problem of knowledge was
being attacked from another side. Herbert
drew attention to himself as a new factor.
De Wette showed that in such judgments
what we predicate of an object is not existence
but worth. We arrange the objects of our experi-
ence in a scale of values, rising from hedonistic
values to spiritual, the morally good forming the
climax of the series. The idea of 'value-judgments'
was taken up by Lotze, and still further developed.
More definitely than De Wette he established
their basis in feeling and connected them with
religion. He held that feeling is the most
appreciative of values (Microcosmus, Eng. tr. 2
241 f.). Through our feeling for values we reach
a knowledge of things as authentie as that given us
in science. Nay, it is precisely such faith-knowledge
that the highest good in the heart of reason; for it is not
in the world of forms with which science deals, but
in the world of values, that the inner nature of
things comes to expression.
(d) It belongs to the epoch-making significance
of Albert Ritschl that he was the first to intro-
duce the 'value-judgment' into theology, and to
explain by it the character of faith-knowledge and
faith-certainty. According to the Ritschlian view,
all our judgments of value, or value-judgments,
rest on such. They have their ground not, as in
the case of theoretical judgments, in the compulsion
of perception and thought, but in our feeling for
values. Our belief in the personality of God, for
example, rests on the fact that we rank ourselves
above Nature and claim dominion over it—rank
the personal above the impersonal. We proceed
on the principle that the highest in rank must be the
ultimate in being. The impulse to set the good
on the throne of the universe has behind it a
feeling for the claim which the good makes on our
will. In proportion as we seek the good, we are
compelled to set our will in accordance with that
it is the fundamental law of things, and must
assert its right against all resistance. It is the
same feeling for values that lies at the basis of the
affirmations which faith makes about Christ. The
assertion that in Christ God meets us has no other
ground than a valuation of the ends for which He
lived and of the spirit that breathes through His
every word and deed. His holy love authentifies
itself to us as the love of the Father for this single
reason, that it is the Divinest thing that has come
within our experience. Always faith is concerned,
not with causal explanation, but with values.
(2) The doctrine of value-judgments is put forward
as an analysis of the actual process of faith-
knowing. It rests on the assumption that the cer-
tainty of faith is different in kind from the
certainty with which we hold a scientific hypothesis.
In this assumption justified, certainly the objects
of faith—God, the Divinity of Christ, the immor-
tality of the soul—do not present themselves to
the religious mind as hypotheses, the validity of
which has to be tested by fallible, arbitrary
scientific canons. The assurance with which we affirm
them is not measured by our ability to fit them into a
causal or logical scheme of things. On all hands
it is admitted that a complete theoretical demon-
stration of their reality is out of the question.

From the conservative side we have, indeed, ever
renewed attempts to establish Christ's Divinity in
a theoretical way, by an appeal to such facts as
His miracles, His sinlessness, His superhuman
consciousness, and His bodily resurrection. But such
demonstrations have always been vain. They rest
on the fact that faith is not a logical certainty,
but a moral certainty. It is rooted not in the
intellect, but in the heart and conscience, and is
morally conditioned. Its measure is the force of
our affirmation of the Good, the Fair, and the True.
Faith is the soul's everlasting yea to the Divine
realities that appeal to it. If it sets these realities
on the throne of the universe, it is because a
universe in which they were not central and supreme
would be morally intolerable. In the value-judge-
ment theory of religious apprehension the radically
moral character of faith-certainty is brought, for
the first time, to clear scientific expression.
That justification of faith, which is so closely
linked with among our cognitive processes is now widely
recognized—even by logicians like Sigwart as well as
by theologians. Where the Ritschlian episte-
nomology encounters the strongest opposition is
in its scepticism about the speculative reason, and in its demand that the knowledge
of faith be kept free from all admixture of specu-
native elements—in its demand, that is to say, for
the exclusion of speculative metaphysics from
theology. To many this has seemed equivalent
to setting up a double truth, and to a denial of
the unity of truth. W. R. Inge, for example,
while recognizing the significance of value-judg-
ments for the development of our concept of
value, can never prove that our valuations are anything more than
subjective, maintains that there must be a unifying
principle in which the different activities of our
nature are harmonized as activities of one person,
directed towards one satisfying end, and that it is
in this unifying experience that faith for the first
time comes fully into its own. In other words,
faith is securely established not in the 'proof
sacrifice', but in our value-judgments, with
all our other knowledge, into a single, coherent
system. That the human mind will never cease
from the attempt thus to synthesize its knowledge
may be regretted, in vain, but that will not
assist to the assertion that the syntheses which philosophy offers
are without significance for faith. It cannot, how-
ever, be admitted that faith is dependent on
the constructions of any philosophy. In our
Christian religion it is precisely those elements which have
been imported from philosophy that have proved
themselves the least stable. Christian faith, as
distinct from speculative theology, really moves
among a few grand, simple, and relatively constant
truths; and these truths owe little or nothing to
the speculative reason, but are the affirmations
of the heart and conscience. While philosophy can
render to religion, particularly in the domain of
apologetics, a service that is real and indispensable,
the idea that it will some day succeed, as Edward
Caird hoped, in transforming the moral certainty
of faith into logical certainty is purely fantastic.
(2) To seek in faith定了factos historicos a historical
facts, particularly on the fact of Christ? To state
the question in a more general way—What is the
medium through which God reveals Himself to the
soul? How is the object of faith given?
Traditional theology has always distinguished
between a general revelation and a special. The
former it regards as given in Nature and in the
moral order visible in the life of man.
Nature we can rise, by the exercise of our natural powers, to the idea of an almighty and intelligent Creator; from the moral order in human life to that of a righteous Lawgiver and Judge. To general human thought this is as an idea which has been reached through a process of thought. Special revelation, on the other hand, is regarded as consisting in certain 'saving facts' of history and facts into our world of one who was the Son of God, the Second Person in the Trinity, and the atonement for sin He accomplished on the cross. In this specifically Christian faith has its object. While, however, the Incarnation and the Atonement are thought of as facts of history, it is evident that they are not of a kind that can be established by purely historical evidence. They come to us as a speculative construction or interpretation of the Person and work of the historical Jesus, the truth of which is guaranteed in the last resort by inspired Scripture. The immediate object of specifity of Christian faith is thus, for traditional theology, not the historical facts of Jesus' life, but a doctrine or series of doctrines; and only when the doctrines have been accepted — whether on authority or as speculatively established — does the historical method of historical revelation be given in the form of doctrine.

(a) It was against a historical revelation so conceived that the Rationalism of the eighteenth century directed its attack. Rejecting the traditional doctrines of Christianity, it put in their place the simple and self-evident ideas of reason as the one valid content of religious faith. These ideas, the chief of which are God, freedom, and immortality, are independent of Christian history, indeed, of all history; they are in their nature timeless, the same for every age and every race. For the significance of history, whether in religion or in any other department of human life, Rationalism had little feeling. In this respect the Kantian philosophy of religion marked no advance. For Kant, too, the content of religious faith is given in ideas that are timeless and necessary. The conception of a revelation — whether in Nature or in history — was barred for him by his doctrine of phenomenalism. The world of our inner and outer sense-experience, being merely phenomenal, can yield us no knowledge of the hidden power behind it.

(b) In the Hegelian philosophy the significance of history seems, at first sight, fully recognized. The entire bulk of patristic speculation or of the contingency of historical facts. History is exhibited as controlled by the immanent law of reason, and as the medium of a self-revelation of the Absolute. Of this self-revelation, the historical religions constitute a particular mode. Nature, art, and philosophy forming kindred modes. Christianity — which has as its characteristic that Christ is contemplated as the God-man, the human — is established as the culmination of the series and the sole absolute religion. But what Hegel gives to history with one hand he takes away with the other. The religious way of envisaging the oneness of the human spirit with the Divine, the finite with the Infinite — as realized, that is to say, in the Person of Christ — is for him but a step on the road to the philosophical. Firm ground is reached on the side of the world, the higher and the highest truth is developed from the idea itself and recognized as a necessity of thought. Ultimately we are left with a rational idea as the sole content of the Christian religion. To make this clear was one of the motives that led Strauss to write his Leben Jesu. He believed that in resolving the Gospel-narrative into a tissue of myth he was doing Christianity a real service, by compelling it to advance from the history-faith of popular religion to the higher faith which receives its object from thought alone. In this epoch-making book he took himself as an example of a man who, basing his work on what has been learned from human testimony, and human testimony is fallible. How can we build our faith on a foundation that criticism may stir to destroy, if it has not already destroyed it? This objection bears with particular force against the traditional conception of a historical revelation, since it is precisely the miraculous facts on which it relies to prove the significance of Christ that are most open to critical attack.

(c) Orthodoxy, Rationalism, and Idealistic Philosophy, widely as they differed in many respects, were all agreed in one fundamental assumption, that it is the nature of a doctrine or of doctrine that religion arises. Faith was made dependent for its object on a process of thought. Schleiermacher's importance for theology consists in no small degree in this, that he was the first to break with the method of psychological analysis, he sought to demonstrate religion as a function of the Spirit, independent alike of philosophy, ethics, and dogmatics. Religion, he taught, is the immediate response of the Soul in feeling to the Divine reality which besets it behind and before. This reality is not, however, found in Christ or in any historical fact; it is not even anything moral as such. It is the Infinite, the Eternal, the Whole of things. Religion is the inscrutable sense of the Infinite in the finite, of the Eternal in the temporal, our feeling that our time-life is a manifestation and organ of the eternal Whole and absolutely dependent on it. Significance is attributed to Christ only as a prototype of a new mode of such 'God-consciousness.' That Schleiermacher gives an adequate account of the content of Christian faith, few would now contend. None the less his demonstration of religion as an immediate experience of Divine reality, and as independent of the constructions of theology and philosophy, stands for all time.

(d) Ritschl learned from Schleiermacher that faith springs up as the result of contact with Divine reality, and that its object, therefore, is not to be sought in any idea or doctrine. But, holding a definitely ethical theory of religion, he could not regard the Whole of things as the field where the soul finds Him. Not in Nature, but only in the historical life of man, can God reveal Himself in His moral working and as the God of our salvation. And, among the facts of history in which He approaches us, Jesus Christ possesses a significance that is not only supreme but absolutely unique. What gives to Christ such significance is not the miraculous facts on which rationalist theology relies to prove His Divinity, but the moral and religious traits of His character as they manifest themselves in word and deed. In contact with His moral life and holy love, we feel the hand of God laid upon us, and know that He has drawn near to us to forgive and overcome our sin and to call us into His fellowship and service.

The historical Jesus, and not any doctrine of His Person and work, has been brought into the faith. What then is doctrine? It is a product of faith, and intelligible only as an expression of what the soul has found in Christ. This need not be taken as denying to the doctrine of the Church any religious value. We know that for countless thousands the doctrine of the Atonement has been the one great medium through which they have
Faith

1897); Can Is 83 Christian Psychology, 694 ITiat and mankind, denies such be community when certain but one living the of Divine, its experience. It is ideal of Christian life and charity and progressiveness of revelation and at the same time to escape the menace of historical criticism, Loisy and Inge, among others, have sought the ground of of Jesus. He was alive in the living Church. He manifested Himself in the Church and the individual soul, rather than in the Jesus of history. The significance of the latter they find in this, that He introduced the movement which in its entirety will constitute a theology in the life of humanity. It has to be said, however, that the problem which such writers attempt in this way to solve is not that which Ritschl had before him. About the progress of faith in the early church, Ritschl was not concerned. His one concern was with what he regarded as the fundamental Christian experience, the assurance, namely, that we have a gracious, sin-forgiving God. How can such an experience be reached? In attaching it exclusively to the person of Jesus, Ritschi does certainly give ground for the charge that he denies any other channel of revelation. It would be difficult to deny the fact that many have reached the living experience he has in view in other ways through contact with the historical Jesus. The love of Jesus meets us not only in the written Gospels and in the preaching of the Church, but also in men filled with His Spirit; and, wherever we find this, a kind of spiritual life of faith, which, before it, it points to us as something Divine, and has power to produce within us the assurance that the God of our life is a God of grace. But, while this must be admitted, the history of the Church has made it abundantly clear that Christianity loses its vitality when the Person of its founder is forgotten or obscured. The men and women who have been the driving forces in the Christian community have drawn their inspiration from no secondary source, but from Christ Himself. That in a Christian community there is a power at work which with a certain fitness can be described as 'the living Christ'—as 'the living Church'—as 'the living God,' and that it has shaped itself in the modern mind—is not to be denied. And such a power cannot but possess immense significance for religion, for this among others is what in this very word means to us in the language of to-day. But can it be accepted as a substitute for the Christ of history? One may assert that the Christ of history, while a child of His time with respect to the forms of His thought, in its essence was a child of His centuries and this stands above time. A wealth of significance belongs to Him far transcending that of our richest ideals, and a power to awaken and sustain faith in the living God of salvation such as meets us in no other fact of our experience.

FAITH (Greek).

In this article we propose (1) to give some account of religious experience, and (2) to indicate the relation between faith and knowledge in Greek philosophy.

1. Faith as a religious force. (1) Its nature.

By religious faith we understand belief coupled with trust in a Divine power. Both these elements enter into the words πίστις and πιστολογία, although the moral rather than the intellectual notion is prominent in each, especially in the verb (W. R. Inge, Faith and其 Psychology, London, 1909, p. 3 f.). But, to see the distinctive character of Greek faith, we must turn to its objective aspect. The Greek faith was polytheistic. Its deities were beautiful, and often sublime, conceptions. At the same time— we speak of the national religion rather than of local cults—they were but glorified types of humanity, beings who inspired confidence rather than awe, to whom the artistic imagination freely played.

(2) Its history. —The faith thus described was a living force in Greece till about the middle of the 5th cent. B.C. It is true that of the 8th and 7th centuries 'the figure of Zeus dwarfs and obscures all the other divine personalities' (J. Adam, Relig. Teachers of Greece, Edinburgh, 1908, p. 83; cf. F. P. Mahaffy, Social Life in Greece, London, 1892, p. 451); but in the heart of Greece there is no revolt against the old national faith. The lyric poets 'never advanced even to the most distant hint of atheism, or to a denial that the gods could and did interfere in human affairs'.

Polytheism, gradually purged, indeed, of its grosser elements, was the accepted creed of the Greek poets from Homer to Sophocles. It inspired the masterpieces of the greatest period of Greek sculpture. It was at the heart of every great movement in the formative period of Greek history. Of this, two illustrations may be given. The first is the Apolline cult. The worship of Apollo was, directly or indirectly, involved in the intellectual, social, and political development of the Greeks (for details, cf. L. R. Farnell, in HDB v. 145 f.). To take but one instance—the Apolline cult was largely instrumental in introducing and in gradually deepening the vital ethical conception of purification from sin. Our second illustration is from the Persian war. Plato (Laws, ii. 609) expressly mentions trust in the gods as one of the great causes of the Greek victory. And the truth of his statement must come home powerfully to every reader of Herodotus. It was faith in the gods that kept Leonidas at Thermopylae, and the fleet at Salamis (vii. 220, 145). It was this that moved the Athenians to reject the overtures of Mardonius (viii. 143). And accordingly, when the Athenians appealed to Sparta for aid, they referred to this faith as their own supreme advantage—'evening Zeus Hellenics, and fearing to betray Hellas, have not accepted the offer of the king' (ix. 7). Finally, Themistocles, addressing his captains after the battle of Salamis, emphatically declared to them that we do not owe this to ourselves, but to the gods (viii. 109), which he would certainly not have done unless he had been sure that he was expressing the uppermost thought of all (E. E. Muller, Hellenica, London, 1893, p. 539). For the above view to as}

the power of the traditional faith, cf. also Mahaffy, p. 358.

As Greek faith rested on polytheism, it flourished as long as the latter remained credible. But, about the middle of the 5th cent., rationalism, which had arisen in the Greek colonies of Asia Minor, began to play havoc with traditional belief, and the age of faith was succeeded by the so-called age of illumination (J. Adam, 270 f.; L. Campbell, Retig. in Greek Liter., London, 1898, pp. 208, 209). This corresponds, roughly speaking, to the latter half of the 5th century. On the other hand, the rapid spread of Christianity made the most notable incident of which was the condemnation and death of Socrates (399 B.C.). Did the national religion ever regain its old vitality? Malan argues (p. 355 f.) that Grose and others have greatly exaggerated the scepticism of the last period of Greek history. But even he does not maintain that the old polytheistic creed ever again expressed the prevailing religious attitude of thoughtful minds. There was, indeed, much earnest religious life in the following centuries. This is especially true of the Stoic and the Mystic. But their belief does concern us here, both because it was not profoundly religious, and also because, being polytheistic, it could hardly be said to embrace the element of trust which belongs to a genuine religious faith.

4. Knowledge. — According to our definition, faith is an act at once intellectual and moral. But such a mode of conceiving man's knowledge of God is foreign to Greek thought. Reason alone, according to Greek philosophy, is adequate to the knowledge of God. This view forms an essential part of Aristotle's teaching, but it is in the Republic of Plato (511, etc.) that the superiority of knowledge to faith is most distinctly laid down. According to Plato, πίστις is but a stage in the pathway to knowledge, a stage in which the visible and oplicable is regarded as true. 'With Plato, Knowledge and not Faith is 'the assurance of things hoped for, the test of things not seen' (J. Adam, 407).

On the other hand, the opposition between knowledge and faith in Greek philosophy is not so absolute as may at first appear. For knowledge, while ascribed to reason alone, is often brought into closest relation with the moral nature. Thus, Pythagoras viewed the pursuit of knowledge as a means to spiritual emancipation (J. Adam, 193 f.); Socrates, again, viewed knowledge as 'a certain overmastering wish' that lays hold primarily, indeed, of the intellect, but through the intellect of the entire personality (ib. 329). And, similarly, Plato taught that in the conversion wrought by knowledge the character also is involved. It is a revolution in which the whole nature shares (τον δαχτυλικον τον ναον, ib. 412; Plato, Rep., 518 C). Lastly, the figure by which, in the Symposium, Plato sets forth the knowledge of God is that of the soul's marriage with her ideal. It is still knowledge, an amor intellectus, with which he professes to deal. But it is obvious how near the conception brings us to the standpoint of Christianity.

Lit.
that, as all believers, even the most perfect, have committed some sin or other, they must enter hell for such shorter or longer time as each case may require, and be finally burned for no Muslim, even the most wicked, can suffer eternal punishment, or be annihilated. Paradise is the final goal of all believers. Thus, speaking generally, the most important element in faith is the intellectual foundation on which the religious edifice of the protagonist of a believer, whether the moral results of his belief be good, bad, or indifferent.

There are other definitions of the term imān, framed with reference to the grounds on which it is based, or the means by which it is formed. Traditional faith (imān fi taqdis) is based on the authority of a teacher (taqdis), without any attempt being made to prove its correctness. This is the faith of the unlearned, who have not the ability to search out things for themselves. Those who have the leisure and the necessary intelligence to investigate religious matters, and who then believe, are said to have imān fi 'ilm. Faith which rests on the inner vision (imān fi a'yan), or intuition of the mystic, is progressive in its nature. The last stage is attaining to a fixed devotion to which is so absolute that the soul is absorbed in God, the great Reality.

Another point round which many controversies have raged is whether imān and Islam are the same. The orthodox view is that they are synonymous, and that a Muslim is a mu'min, a believer. By others, Islam is looked upon as a larger term than imān. It is said that Islam signifies belief with the heart, confession with the tongue, and good works done by various parts of the body. Imān refers to the first of these, and, is, therefore, only a component part of Islam. The believer who confesses his belief and practices what he believes unites Islam and imān; he who does not so confess and practise possesses imān only. On the other hand, he who confesses and acts, without having any real belief, is not a true believer. Those who hold that confession and action are both essential would not consider assent to the teaching of Muhammad made on a death-bed to be of much value, as the opportunity for confession of belief and action on it would be gone. The term Islam, however, lays great stress on such action. The Muslim is a man who is resigned to the will of God as regards the performance of the five practical duties. It is not so much resignation to the providential dealings of God with a man as such, that Islam implies, but confidence in, and order to fulfill certain duties. So far, this seems to support the views of those theologians who teach that Islam and imān must be kept quite distinct. They say, for instance, that works cannot be a part of faith, for a man who believes and confesses and dies before he does good deeds is a believer and enters Paradise, even if he die before he makes open confession of his faith.

Another question in dispute is whether faith can decrease and increase. Some say that it does not change, and is not affected by sin, or by the omission of religious duties, though such shortcomings will be avenged. Others admit that, in the case of the Companions of the Prophet, faith did increase, for new revelations brought fresh truths to them; but, now that the dogmas of Islam are fixed and there is no further development, faith cannot increase. Abu Shafi'i, the philosopher, held the latter view. He maintained that, if religious duties were neglected, faith would decrease; to this the reply is made that, at certain times, women do not say the stated prayers, or give alms, yet their faith is not thereby decreased.

The view of Ash-Shafi'i is not supported by a verse of the Qur'an, revealed to encourage the Muslims when an attack on them was imminent: 'Who, when men said to them, 'Now are the Meccans mustering against you; therefore, fear them' —it only increased their faith' (ii. 167). The following further distinctions are made by those who agree with Ash-Shafi'i: the faith of men and of the jinn increases and decreases; the faith of prophets increases only; the faith of angels neither increases nor decreases. It is usual to assign a position in the middle between those who believe in the teaching of Muhammad, and so have faith and are mu'mins, or believers; those who do not so believe, and are, therefore, kāfars, or infidels, who class all non-Muslims not as unbelievers. These, if they reject the truth after investigation, are not so blameworthy as if they had declined to accept it through sheer obstinacy. Muslims may have defective faith, but can never be called infidels, though they may be called heretics. In this category the orthodox place all those who have tried to bring reason to bear on religion and have striven to put away the incumbrance of traditions, or knowledge of an intuition of the mystic, (imān fi a'yan), or intuition of the mystic, is progressive in its nature. The last stage is attaining to a fixed devotion to which is so absolute that the soul is absorbed in God, the great Reality.

FATH (Roman) — FAITH-HEALING

The reflected eye of the Roman people, which by virtue of its power, was able to influence the decisions of the state, was the object of much study by historians and philosophers. The concept of faith was closely tied to the Roman state, and was seen as a crucial element in the maintenance of social order.

Faith is a concept that has been central to human civilization for millennia. The Romans, like many other cultures, had a complex and multifaceted understanding of faith. In this essay, I will explore the role of faith in Roman society, and how it has shaped the development of Western thought.

In the 2nd C. B.C., eagerly studied by many Romans, we can see the effects produced by these and other causes. In the last age of the Republic, while many sought religious satisfaction in new ways—in Pythagorean mysticism, for example, or in oracular foreign worship, and in many forms of asceticism and superstition—there was no Roman religion worthy of the name. The ancient forms no longer expressed a genuine belief either among the people or among their rulers. The state was toward the close of the war in a fast decaying. Old cults and old deities fell into partial or complete neglect. Old priestesses fell into abeyance, or became mere steps in the ladder of political ambition, while on every side the temples were crumbling into ruins (Hor. Od. iii. vi.; Propert. ii. 6. 53 f., etc.). And, lastly, the age was as conspicuous for immorality as for unbelief (cf., e.g., Mommsen, Hist. of Rome, tr. W. P. Dickson, new ed., 1894, bk. v. ch. xi.). But the national conscience was not dead. We in writings of the age a profound sense of national ill-being—here the sense of national guilt, there of misery entailed by neglected duty to the gods (Livy, iv. 35, 42 f., Hor. Od. iii. vi. 35, Exper. iv.; Virg. Ec. iv.; etc.). The superstitions extravagances above described were themselves a symptom of spiritual unrest. No, it was to such feelings that this god-like man appealed, wherein he reminded the Roman people of their high destiny, and of the way to its attainment—through a pietas like that of his hero, the service of the State with the help of the State's deities. And it was to this task that Augustus, the original of Virgil's hero, devoted himself. His revival of the State religion is described by Fowler as 'the most remarkable event in the history of the Roman religion, and one almost unique in religious history' (op. cit. p. 429 f.). He did all in his power to reinstate the old religion in the faith and affections of the people, chiefly by the revival of ancient cults, and by a vast work of temple restoration (Mon. Ancyr. iv. 7; Livy, iv. 20, 7; Ovid, Fast. ii. 50, etc.), while he sought to strengthen his own dynasty by linking it at many points with the restored religious order (cf. esp. Hor. Carm. ii. 5). Finally, the religious policy of Augustus was continued by his successors. If, now, we seek to estimate the general importance of the old Roman religion in the early Empire, we may point, among other evidences, to the curious fact that gradually incorporated into the philosophy of the Oriental worship of their time that the Christian Fathers directed their keenest ridicule. If we ask, on the other hand, whether as a spiritual force the Roman faith had any real renascence, the question is not so easy to answer. Here it must suffice to add that both in Rome and in the provinces 'the old religion continued to exist for at least three centuries in outward form, and to some extent in popular belief' (Fowler, 429).

See, further, art. ROMAN RELIGION.

Literature.—An ample bibliography will be found in the works of W. Warde Fowler above referred to, and especially in its introductory chapter.

FAITH-HEALING.—A term used to express a belief that in the curing of disease the faith of the sufferer (or of others) is a contributory factor. This faith puts its trust in the immediate action of a super-normal being, acting with or without means. In the strictest sense, therefore, faith-healing may be said to exclude the most valuable means of healing; but, in the wider sense—in the sense, that is to say, in which 'faith-healing' occurs as a historical phenomenon—it admits such means as one factor in the process of healing. The prin-
cical species are named mental healing, magnetic healing, spiritualistic healing, and spiritual healing. In all, suggestion plays a healing part. The most widely spread and widely used method of spiritual healing is that known as Christian Science (q.v.), and the strongest form of suggestion is called hypnotism (q.v.).

1. History. - Faith-healing is the oldest form of healing in the world, for as early as 1503 B.C., in the early days of the Hebrews, faith was practiced as a means of healing, as is shown in the Bible. The first instance of faith-healing was recorded in the Old Testament when the prophet Elisha healed a leper, as recorded in 2 Kings 5:22-25. In the New Testament, faith-healing is a common theme, with numerous instances of Jesus Christ performing miracles through faith. For example, in Mark 9:14-29, Jesus heals a boy possessed by a demon, and in Mark 8:10-13, Jesus heals a blind man.

2. In the earliest documents of the Christian Church, faith-healing is frequently referred to, and is a dominant factor in the acts of healing wrought by Jesus Christ. The centurion's servant was healed because of the faith of his master (Mt 8:5); a paralyzed man was healed on account of the faith of his friends (9); the woman with an issue was made whole by her faith (9:20); and so were the two blind men (9); and so was the daughter of the Canaan-Itish woman (15). On the other hand, the lunatic boy's cure was delayed through want of faith (17:18); and it is significant that the sins of the woman who was a sinner were forgiven because of her faith (Lk 7:38). Moreover, it is expressly recorded that on one occasion Jesus did not (Mt 19:11), and could not (Mk 6:5), put forth His power because of the want of faith of the people. The inference is necessary that what He did by His power was done by Jesus was of the same general character as that practiced by the priests of Asklepios, that is to say, it depended partly on a power put forth by the healer, and partly on the active faith of the sufferer. This, again, corroborates the definition given above of faith-healing, viz. that it consists, as a matter of historical fact, not so much in the power of faith (or of auto-suggestion) as in the power of faith acting in conjunction with some external agency, visible or invisible.

In the Apostolic age the passage 1 Co 12 is classical for its conception of faith-healing. According to it, the power to heal was a gift of the Spirit (v. 9); it was one among other gifts (v. 11); it was given not to all (v. 30); it was one of the greater gifts, and as such was to be sought for (v. 28); its chief object was the common good (v. 7), and the royal road to its attainment was love (v. 7). An instructive comment on this passage is supplied by Ac 3, where Peter and John are said to have healed a lame man by calling on the name of Jesus Christ. The healing of Zaania by Peter (Ac 9) and the raising of Tabitha (v. 40) both imply the same process, while it is expressly said of the cripple of Lystra that Paul healed him because he saw that he had faith to be healed (14). In Ja 5, to the invocation for faith for the recovery of the sick, is added: 'The prayers of the righteous are mighty in their effect.' (v. 15). In all cases the implication is that, as cases of faith-healing, they are the joint product of the work of an invisible agent, Jesus Christ, and of the faith of the sufferer. (On the form and power attributed to the invocation 'in the name of Jesus,' see Heitmillar, 'Im Namen Jesu,' in Forschungen zur Rel. u. Lit. des a. u. N. Test. i. [1905] 2.)

As illustrating the nature of faith-healing as practised in the early Church, the ceremony of exorcism is instructive. It is constantly the third with prophecy and healing, as in the case when the activities of the pagan sancta are described (Bolde, Psyché 4, 337). The name of exorcism is but another name for the driving away of disease, wherever the diagnosis in general starts from the postulate that all disease is the work of malignant spirits. For example, Israël Eikes (ed. Del. et ali. 4) says of his own times and of his own fellows:

'Some do certainly and truly drive out devils, so that those who have thus been cleansed from evil spirits frequently both
believe, and join themselves to the Church. Others have fore-
knowledge of things to come: they see visions, and utter pro-
phetic expressions from others, again, heal sick, by laying their
hands upon them, and they are made whole."

He goes on to say (§ 5) that Christians work their miracles merely by calling on the name of Jesus Christ, and by faith, and by virtue of the Spirit, or, in other words, by faith (cf. Just. Mart. II Apol. 6, I Apol. 30, Trypho, 39, 76; Tert. Apol. 25, 37, 43, de Idol. 11, de Pud. 21; Origen, c. Celsus, i. 11, ii. 21, 24).

Perhaps the most vivid description of the faith-healing of the Patriarchal Church is that given by Augustine in his De Civitate Dei (xxi. 14). There, among many stories, the story of a man at Carthage who had been operated on for fistula with partial success only, but who was cured by prayer, and so saved from the necessity of a further threatened operation; and also of a leading Carthaginian lady, named Innocentia, who was healed of an incurable cancer in the breast through the sign of the cross being made over her. The union of divination and faith is here again exemplified by the fact that Innocentia was told in a dream how her curse could be effectuated. Another man, a doctor, was, at his baptism and after a dream, cured of gout; and of the eyes and paralysis: a paralysis youth was cured when brought into contact with some earth from Jeru-
salem. The most graphic story of all is that of a brother and sister being healed of St. Vitus' dance at the tomb of the martyrs in the church where St. Augustine was ministering—the sister, indeed, while he was preaching. He adds many other examples of cures wrought by faith-healing and the agency of the martyrs, and records the case of a man who gives it as sure and sample of miracles that cures wrought within the two years preceding the writing of this volume—he knows, he says, seventy such cases.

(1) The history of faith-healing is full of instances of no artificial divisions, but runs on unchanged, so that what is true of one age is found true of another.

The phenomena of pre-Christian days recur under Christianity, whether in its earlier or in its later forms. The Middle Ages brought a rich collection of instances of faith-healing, or miracles of healing, as these were then considered. A few typical examples must suffice, it being understood that these cases are quoted more as an argument to the belief in faith-healing than as in every case beyond suspicion.

St. Bridget cured a blind girl named Daria (Les Petits Ecol. ill. 1584); and two lepers were cured in the sign of the cross (Lanzenus, Martyr. Rom., Antwerp, 1550). The works of healing power of St. Francis of Assisi are numerous, and were recited in the hymn of his cantillation. Another St. Francis (of Paulia), three cen-
turies later, was a still greater wonder-worker: "He gave eyes to the blind, hearing to the deaf, speech to the dumb; he made the halt to walk, the cripple to have the use of his limbs, and recalled six dead persons to life again" (see Les Petits Ecol. iv. 1554). Similar instances are told of Sts. Germaine of Pontoise (S. 1. 100), of St. Germanus, 'the father, physician, pastor, and love of his people'; of St. Adrian, a wonder-worker (Les Petits Ecol. iv. 227); of St. Carlo Borromeo, of St. Cuthbert, St. Pat-
rick, of all great saints indeed, and of numberless lesser saints.

The religious movements of the 16th cent., able to crush out faith-healing. The saints, it is true, fell out of favour where the Reformers' spirit prevailed; but the witches remained, and Satan remained as an ever-active power of evil. In one striking case, at all events, faith-healing was able to hold its own. English kings since the days of Edward the Confessor, and French kings apparently from Clovis onwards, had touched for scrofula, or 'the king's evil.'

Queen Elizabeth touched, but omitted the sign of the cross; Charles I., lingering by proclamation had to come to him to be touched; Charles II., touched 92, 107 persons; William IV., touched without success; Queen Anne touched 290 persons, including Dr. Johnson when thirteen months old; George I., discontinued the practice.

A case of cure by faith-healing which seems well authenti-
cated is that of the "holy water bottle" of Fort Royal, in 1685, who was cured of a persistent lachrymal fistula by the application of a small drop of water from the Savoy, written down of Thomas (see E. H. Hutton, Essays Theol. and Lit., 1877, vol. i. pp. xxiii-
xxvii)."

But, though faith-healing fell into disrepute in proportion as the spirit of rationalism prevailed, the belief underlying it found defenders contin-
ously. Paracelsus, Gianvill, Valentine Great-
rin, van Helmont, Robert Fludd, Magnetici magi-
orum curantium (1621), the Cambridge Platonists, and John Wesley all set forth that philosophy of life on which faith-healing depends. Moreover, Martin Luther, the Moravians, the Waldenses, the German Pietists, the English Baptists and Quakers, the famous healer of the last century, Prince Hohenlohe-Waldenburg-Schillingsfurst, Father John Wesley, and his famous Pious Society, are recorded to have heale all sorts of diseases by "faith and word," and the "wonderful work of faith" has been practised the art. Our own days, moreover, are witnessing its revival, under the in-
fluence of the renaissance of Theosophy and Animistic, Orphic, and Hermetic modes of thought.

2. The means employed.—(1) Foremost among these, though the least important, we must place some of the ordinary articles of the pharmacopoeia. The majority of these, it is true, such as iron and arsenic for the blood corpuscles, strychnine for the nerves, and pepсин and bismuth for the alimentary canal, call for little or no faith as a co-operant. But, in many cases where the mind reacts on the body through a depressed nervous system, through fancy, in epilepsy, or in some cases of hysteria, the medical man will use drugs, or other media, not for their own efficacy, but as a means of calming the nerves, or of making the via medicatrix naturae may be stimulated into action. Nor can the therapeutic value of confidence in the medical man be easily overrated as affording that restfulness of the soul which is one necessary condition for faith-healing.

(2) In Roman, Greek, and Christian times alike, great use has been made of the hand, and especially the right hand, as an instrument of healing. Blindness, child-birth, lameness, abdominal troubles, snake-bites, and strokes of any sort which were attributed to Divine or demonic influence were all treated as curable by the magic power of the Divine or human hand; to these must be added the touch of the foot, or of the dress as healing agencies, and also kissing any-
thing which was thought to possess healing power (Weinreich, Antike Heilungswunder, 14 ff.). But, to make such magic power effective, there was ob-
viously needed a co-operant as well as a prevenient faith.

(3) The so-called 'temple-sleep' of the pagan temple was used as a species of faith-healing. The patient was put to sleep, and in the state of hypnosis he was either operated on or received suggestions that he was healed, which (if the inscrip-
tions may be trusted) were found, when the patient awoke, to have effect ed their purpose. Modern hypnotism is aware of the part that faith plays in its activities, and is agreed that patients of low intelligence make bad cases, through their in-
ability to make any continuous or sustained imagination, i.e. through their lack of a living faith. The ancient temple-phenomena repeat themselves in many of the miraculous healings performed by Christian saints.

(4) Miscellaneous objects used in faith-healing are: blood, oil (St. Cuthbert), spittle (St. Hilarian), hair, the sign of the cross, baptism, holy water (St. Willibrord), or water in which a saint has washed (St. Amaund), the hand on which a saint has died (as in the case of St. Vincent Ferrier), the medal of a saint (St. Francis Xavier), a tooth (St. Matrin), a shroud, relics, indeed anything which has in any way come into contact with a saint. In fact, nothing is a stronger argument for the validity of faith-healing in some sense and to some extent than the predominant place it took in the first 1500 years of our era. When all deduction has been made for charlatanism, imposture, and the desire to edify, there still remain a large number of healings which must be regarded as genuine, and must be accounted for either by the faith or by the power of the saints, or by a union of both. The last probability is in favour of the last solution. That such wonder-
works began to die out from the 16th cent. is
hardly to be accounted for by a supposed cessation of activity on the part of the saints, but rather by the want of inner and potent subconscious belief in the Divine essence of the faith-healing. Whether in the narrower or in the wider sense, characterized the West for 1500 years; it became sporadic for the next 400 years, and is now once more raising its head. The inference is that, were an unquestioned faith and, as is the Divine man in man; that the human mind in its finiteness is too weak a power for the work thus demanded of it; and that such results as mental healing seems to be better assigned to spiritual healing. In this form of possession or hallucination (la contagion mentale) (cf. W. von Bechterew, Die Bedeutung der Suggestion im sozialen Leben, Wiesbaden, 1905).

3. The species of faith-healing.—For the sake of clearness, the principal species of faith-healing may be described as magnetic, mental, spiritualistic, and spiritual.

(1) Magnetic.—This is described by its supporters as a special case of the use of a primordial and universal force which displays itself in a balance between pairs of allied opposites, e.g. magnetism and anti-magnetism. Its therapeutic use was familiar to antiquity and is seen in the use of the hand (Weinreich, I-66). It appears in the miracles of Jesus (Mk 2:5, 5). The power was practised by His followers (Ac 5:15-18), and was used in the methods of Paracelsus, van Helmont, and Robert Fludd. It is long before Mesmer in 1775 gave it wide currency. Afterwards the theory of a 'fluid' was discarded by the researches of Puységur and Farin, and Frère-Jean. The result has been undeservedly to neglect the unquestionable actuality of a force of some kind known as animal-magnetism, in favour of another known as hypnotism. The mental power has ousted the physical. In both the appeal is made to the nervous system, whether by way of establishing or disturbing its equilibrium; and it is claimed for magnetism that it effects its therapeutic results by the natural use of a force radiating from the operator, which is cognate to a universal force in which the nervous system of all living beings is bathed at its periphery. The chief method of magnetic healing is by passes, by touch, especially at neural centres, and by the application of objects which have been in contact with the operator. But, through the favour shown to hypnotism, magnetic healing has fallen comparatively into the background, though there is a little doubt that it masks a real force of some kind.

(2) Mental.—Mental healing is both active and passive. As active, it consists in the reception and assimilation of such suggestion. The healing proper, however, is sought in the consequent mental activity of the patient himself. He has been enjoined, for example, to fix his thoughts by an effort of attention, continuous or repeated—on such virtues as joy, peace, contentment, or love; and, by implication, to exclude their opposites. The soul, it is assumed, will be put by this means in a more favourable condition for the activity of its inherent capacity for health. By some, indeed, faith-healing is identified with this auto-suggestion, on the ground that thought in man is distinguished by its presence in the mind and required for the maintenance or restoration of health is the free play of this inherent Divinity. The phenomena of telepathy, moreover, have been invoked to support the contention that 'absent treatment' by faith is as effective as that given in the presence of the patient. The difficulties in the way of accepting this whole theory of mental healing lie in the facts that suggestion has less to do with the conscious mind than with the subconscious; that there is no ground for regarding faith as a power propelling the Divine man in man; that the human mind in its finiteness is too weak a power for the work thus demanded of it; and that such results as mental healing seems to be better assigned to spiritual healing. In this form of possession or hallucination (la contagion mentale) (cf. W. von Bechterew, Die Bedeutung der Suggestion im sozialen Leben, Wiesbaden, 1905).

4. Suggestion.—It is necessary to say a word on the part suggestion plays in the many theories of faith-healing. The word is used frequently as if it were coterminous with the influence exercised on us by our whole environment, or with any influence exercised by any person on another. Or (Lefrère) is applied to all ideas which impinge on the mind without apparent motive and are unconsciously assimilated; or (Ponsot) to alteration, by word or gesture, of another's nervous system by which entrance is afforded to the desired idea; or (Wundt) as a psychical act which blocks up all association-tracks of the nervous system other than the one suitable for the presented idea; or (Binet) as a moral impression which one person exerts on another; or (Sidis) as the invasion of consciousness by an idea without criticism or opposition. It is the latter, however, that Bechterew (p. 10), to distinguish between perception-activity in which the will takes an active part, and that in which the will is passive. The will is passive in a twofold manner: (a) with regard to all objects which lie beyond the circle of the field of consciousness (attention being concentrated exclusively on the one object at the centre); and (b) when the nervous system is depressed and, therefore, the power of attention is lost, that is, the latter condition of twofold passivity, suggestion proper belongs, and its proper place in our classification would be under the head of mental healing. Closely connected with suggestion in general is hypnotism, being described as effectual which ensures an enhanced power to suggestion in a state known as hypnosis. In hypnosis two factors work
jointly—one physical and one psychical. The physical consists in a partial dissociation of the neural dispositions or systems, in such a way that, while some are depressed, others (or one alone) work with increased vigour. In a state of concentration or depression the full flow of nerve currents (ideas) in the patient is arrested, so that the one current which the hypnotizer desires to keep open works with unusual force. The psychical factor is that of a co-consciousness, or secondary stream of consciousness, which is to the waking consciousness as the stars are to the sun.

When one sets, the other rises (see Carl du Prel, Philos. of Mysticism). Mental dissociation of tracts of ideas and physical dissociation of groups of nerve processes seem to be the two poles between which all the phenomena of hypnotism swing.

5. Another question must be touched on. Faith-healing, as we have seen, obeys the same law in its activity as thought does when it depends on subject and object. It is the product of two factors, not of one only. The power which actually heals may be latent and native in the sufferer himself, but it is not called forth except through some stimulus. No account, therefore, of faith-healing can be adequate which omits either the one or the other of its two components.

In faith-healing the suggestion is that cure will be worked by spiritual or Divine power, especially if this power be appealed to in a religious setting, a church, a place of worship, the feet of an idol, a fountain, or pool of water, the resting-place of some sacred relics, such as the bones of a saint, or it may be in presence of the Eucharistic procession, or during High Mass, or the administration of the Holy Sacrament. This Divine power is supposed to be neutralizing or over-coming sickness, disease, and the ill consequences of accident. The faith-healer does not doubt the reality of matter or of diseases, but believes that he can draw upon a spiritual force to subdue or annihilate an existing evil (Henry Morris, in Brit. Med. Jour., 15th June, 1910, p. 1453).

**FALASCHAS.**—1. The narrative of Gn 3—

By 'the Fall' is meant that first act of disobedience to God which is narrated, with its consequences, in Gn 3. If this chapter were in the proper sense history, its interpretation would be easy: it would mean just what it says. But the beginning of human life lies beyond the reach of history; there neither is nor can be anything akin to tradition or recollection in a story which deals with the origins either of knowledge or of conscience. Such stories are the fruit of reflection and imagination, which may be more naive or more philosophical, more childish or more spiritual, more gross or more refined, according to the minds in which they originate, but they are never his- torical. This is the case with Gn 3. It is a mythical explanation—charged with moral and religious lessons of the highest importance—of some phenomena in human life which especially impressed the writer. In his eyes life was an un- certain term of penal servitude, under the shadow of capital punishment. Both for men and for women it was under a curse. It could not always have been so. God could not have destined man to this misery from the first. There must be some expla- nation of how man came to be in this condition, and the explanation is given in the story of the Fall.

This view is adopted with practical unanimity by modern scholars, but agreement as to the char- acter and purpose of the narrative does not neces- sarily result in agreement as to what it means.

The further question whether the theory of faith-healing is that man's organ is self-contained, like a perfecta societas, or that it is like an Aeolian harp played on by outside forces—in other words, whether as a discrete mass it contains within it all that is necessary for health and wealth, or whether other agents, such as animism and the doctrine of angels postulate, supply its needs—may remain here undetermined for want of a volume. The complex psychical factor is that of a co-consciousness, or secondary stream of consciousness, which is to the waking consciousness as the stars are to the sun. When one sets, the other rises (see Carl du Prel, Philos. of Mysticism). Mental dissociation of tracts of ideas and physical dissociation of groups of nerve processes seem to be the two poles between which all the phenomena of hypnotism swing.

5. Another question must be touched on. Faith-healing, as we have seen, obeys the same law in its activity as thought does when it depends on subject and object. It is the product of two factors, not of one only. The power which actually heals may be latent and native in the sufferer himself, but it is not called forth except through some stimulus. No account, therefore, of faith-healing can be adequate which omits either the one or the other of its two components.

In faith-healing the suggestion is that cure will be worked by spiritual or Divine power, especially if this power be appealed to in a religious setting, a church, a place of worship, the feet of an idol, a fountain, or pool of water, the resting-place of some sacred relics, such as the bones of a saint, or it may be in presence of the Eucharistic procession, or during High Mass, or the administration of the Holy Sacrament. This Divine power is supposed to be neutralizing or over-coming sickness, disease, and the ill consequences of accident. The faith-healer does not doubt the reality of matter or of diseases, but believes that he can draw upon a spiritual force to subdue or annihilate an existing evil (Henry Morris, in Brit. Med. Jour., 15th June, 1910, p. 1453).

**FALASHAS.**—2. The narrative of Gn 3—

By 'the Fall' is meant that first act of disobedience to God which is narrated, with its consequences, in Gn 3. If this chapter were in the proper sense history, its interpretation would be easy: it would mean just what it says. But the beginning of human life lies beyond the reach of history; there neither is nor can be anything akin to tradition or recollection in a story which deals with the origins either of knowledge or of conscience. Such stories are the fruit of reflection and imagination, which may be more naive or more philosophical, more childish or more spiritual, more gross or more refined, according to the minds in which they originate, but they are never his- torical. This is the case with Gn 3. It is a mythical explanation—charged with moral and religious lessons of the highest importance—of some phenomena in human life which especially impressed the writer. In his eyes life was an un- certain term of penal servitude, under the shadow of capital punishment. Both for men and for women it was under a curse. It could not always have been so. God could not have destined man to this misery from the first. There must be some expla- nation of how man came to be in this condition, and the explanation is given in the story of the Fall.

This view is adopted with practical unanimity by modern scholars, but agreement as to the char- acter and purpose of the narrative does not neces- sarily result in agreement as to what it means.

When we say that the writer gives his explanation in the form of a myth, the question immediately arises how far he was conscious of what he was doing—that is, how far the writer, who certainly did not make the myth out of nothing, was literally bound by its very terms, so that his work is simply one of stating the results of a rationalizing or spiritualizing the myth, or feeling that it had significance in the rational and moral world, even if he could not use much liberty with what was probably a more or less sacred form. The various answers which have been given to these questions have issued in different readings of the whole story. Broadly, these may be illus- trated as follows:—

(1) Gunkel tries to keep strictly within the limits of the myth. The one false path is that of modernizing. Eden is a garden which is the abode of God. Adam and Eve live in it on the fruit of the trees. They are in a state of childlike innocence, knowing no more than children know. That is the state in which God intends to keep them, and so they are forbidden to eat of the tree of the knowledge of good and evil. This has no- thing to do with conscience. To know good from evil, or good from bad, means in Hebrew to know one thing from another; it is to have risen from the age of childhood to that of responsible experience (Dt 17 v., 2 S 19 v., Is 7 v.). The tree is quite accurately described when it is called the tree of knowledge, and the aim of God in forbidding it to man is to keep man in his place. He is not to
become like God—to enter into His secrets and to share His sovereignty. The cunning serpent (who in a more primitive form of the myth must have been an evil god or demon) reveals God’s purpose, and God punishes with His curse all who have had part in the presumptuous action—the serpent, the woman, and the man. But there is no connexion, rational or moral, between the act and the miseries which God inflicts. They are the revenge of a jealous God on an impious invasion of what He had reserved to Himself; and this invasion and revenge are the mythical explanation of the miseries. Such an interpretation may do justice to the myth used in Gn 3, but it does not do justice to that use of it. The author of the chapter was himself a modernist, compared with the original myth-maker, and it is not modernism that prevails in which the chapter was written if we lift the whole to a higher level both of reason and of morality.

(2) It is a higher level which is reached in Wellhausen (Prolegomenen, 1886 seq.). He reads the story in connexion with Gn 4 and 11, which tell of the invention of the arts, the progress of civilization, and the building of the Tower of Babel. This whole process is a mistake from the beginning: man was fatally misled when he first tasted of the tree of knowledge. Civilization with all its triumphs is labour and sorrow; we build Babylon only at the cost of losing Eden. Gn 3 is thus an early anticipation of modern moods in which men speak of the bankruptcy of science, the strain of civilization, the happiness of the simple life. But the tragic fact is that the mistake is irreparable. Eden is closed against us with cherubin and a flaming sword, and we can never get back to the idyllic world again.

(3) It will hardly be questioned that thoughts like these were present to the mind of the author, but not to the extent that he is here thought to mean. While the knowledge of good and evil is undoubtedly in Hebrew the same thing as knowledge or intelligence simpliciter, its moral reference is not to be denied. It is not identical with conscience, or the knowledge of right and wrong, but it includes conscience. The Hebrew would not say that a person who could not tell right from wrong had the knowledge of good and evil. And, when we take the story as a whole, and particularly the account of the temptation of the woman by the serpent, and the judicial examination of the man and the woman by God, marked as both are by extraordinary psychological fineness in the derivation of conscience, it is very difficult to deny that the centre of the author’s interest lay here. Whatever may have been the original motive of the myth, the main concern of the writer who used Gn 3, it has not the light of science on the beginnings of civilization, but the beginnings of sin. Of all human origins the origin of the bad conscience is for him the most fateful. It is sin which has robbed man of his primal felicity. All that is necessary is to say that the trunk of the tree has been cut off, and with creeping poisonous thoughts within, till he returns to the dust from which he was taken. There is no indication in the text that the victory will come at last to man’s side. Nothing is said but that, as long as there are men and serpents in existence, they will be at war with one another. But even for the writer of the chapter (it is suggested) this literal truth did not exhaust the meaning.

With many variations in detail, this is the line of interpretation followed by most students—not from a vicious habit of modernizing, but from a conviction that it is what the writer of Gn 3 had in his mind. It has the corroboration of conscience, not, of course, in the sense that conscience turns the myth into history, but in the sense that conscience is directly appealed to in the main matter which interests the writer, and can only assent to his teaching that disobedience to God is that which brings life and works death. The chapter does not contain history or dogma, but ethical experience expressed in a mythical narrative. It is not the story of the first man, but of every man; and, if the key to its form is to be sought in comparative mythology, the key to its contents can be found only in the soul.

It is hardly necessary to inquire into the antecedents of the myth. While we find in other moderns references and reminiscences of Eden (see FALL (Ethnic)), to the tree of life, and to the streams which water the garden, nothing has been discovered analogous to the tree of the knowledge of good and evil. This is not parallel in Babylonian mythology to the story of the Fall as there is to the stories of Creation and the Flood; the Chaldean Genesis, so far as known, is quite defective here. Nor can it be doubted that, if such a parallel were found, it would be as much inferior as those others, in religious and moral respects, to its counterpart in the Hebrew Scriptures. Neither need we inquire how the writer would have conceived the moral history of man to take shape had Adam resisted the temptation and refused to eat of the forbidden fruit. What he has to do is to explain the actual world, with its suffering, toil, and death; but whether or how he imagined an alternative world without sin and its curse we cannot tell. Probably a mistake is made when we try to deduce from the narrative a conception of man’s original state or nature and not describe it to us. In any case, in his story, we must not make the author responsible for more than he says. The eating of the fruit of the tree of knowledge was forbidden under pain of death; but it is vain to argue from this as to what man’s relations to evil were. If we try to deduce from the story as it were science; and it is not doubtful that, when Gn 3 was written, such a view was no longer possible, even if it had once been so.

2. Apocryphal and apocalyptic literature. Apart from the reference in some passages to the Fall in the OT. The garden of Eden is mentioned in Jl 2’., Ezk 36’; Eden the garden of God in Ezk 28’; and the tree of Eden in Ezk 31’., 16. 18; but, though Ezk 29 has various mythological features (including the cherub) which recall Gn 3, there is no allusion to the events of this
chapter. The margin of the RV is to be preferred to the text in the two passages (Hos 6, Job 31) in which the sin of Adam is directly recalled. But, at a later period, the story of the Fall conceptually goes back to the beginning of human history, and we are not entitled to ignore this earlier account.

In Sirach and Wisdom, and still more in the later apocalypses known as 2 Esdras and Baruch, it is a focus of theological speculation. The poetry of Gn 3, 1 its position in the worthless

It is connected with Adam certainly, but there is no longer either a serpent or a devil in the case.

A grain of evil seed was sown in the beginning, and how much wickedness has it brought forth unto this time! and how much shall it yet bring forth till the time of redemption come!'

Who sowed the grain of evil seed in the heart of Adam ab initio he does not tell; but it originated apparently one continuous self-propagating life of sin in its world. It has been said before that it is, before he is tempted, and to be, if not the source, the ally of temptation and the cause of the Fall.

For the first Adam, bearing a wicked heart, transgressed and was overcome by the greatest temptation, which was born of him. Thus disease was made permanent; and the law was in the heart of the people along with the wickedness of root; so the good departed away, and that which was wicked abode still (25:18).

Man, as he is, has two things in him—the wicked heart, which he has inherited from Adam; and the law, which God has given him as a guide to Himself. This does not solve the problems of theodicy; it only raises them. How can man be responsible for his wicked heart if he has inherited it—that is, if it belongs to the natural, not to the moral, world? And how are we to understand the cor maligetnum, the 277 77, in Adam, before he had transgressed at all? What does this theology say? The story of the Fall is part of 'the sinfulness of that estate wherein man fell,' but the cor maligetnum or malignitas radiea is inherent in Adam before he falls. It is part, apparently, of the constitution of his nature as he came from the hand of God (ab initio, 2 Es 48:1, 2).

It is not, however, the ultimate origin of evil or the idea—which a Jew would not seriously have contemplated—of ascribing it to God that really disturbs the author; it is the fact that all men are involved somehow in the sin and doom of the first:

'This is my first and last saying that it had been better that the earth had not been made; that it had not been made, nor does He delight in the destruction of the living. He did not make man for death, but for immortality; this is included in 'His own proper nature,' in the likeness of which man was made. This is an idea, if of Greek origin, peculiarly congenial to the Greek mind, even when Christianized. The serpent has disappeared, and is replaced by the devil: the idea of a close connexion between the two, whether it be that the devil makes use of the reptile, or that the reptile is regarded as an incarnation of the devil, first emerging here, became common (cf. Rev 12:2, 3).

This, as Gunkel observes, may be one of the points at which in the last stage of the myth a return is made to the beginning, the serpent having been originally a demon or evil god. The author of Wisdom does not explain what he means by the envy of the serpent: the idea was variously expanded in later haggadic treatment of the Fall, sometimes man, with his Paradise and immortal prospect, being the object of envy, sometimes God (Bonnet, Relig. des Judenmens, 2, 469). The main point is that the author finds in Gn 3 an explanation of how a being constituted for immortality lost that high destiny, and became what we see man to be.

A deeper and more despairing kind of reflection is found in 2 Esdras. The writer of this apocalypse, who lived through the terrible events of A.D. 70, is a pessimist in a profounder sense than the author of Gn 3; but he finds in the Fall of Adam there recorded the explanation of all the sin and misery of the world in his own age. These are universal.

'It is true there is no man among them that he born but he has death wickedly: and among them that have lived there is not which hath not done amiss (24:21).

But the purely mythological element disappears from his speculations on the origin of all this evil.
in the Book of Jubilees (3176) and the Apoc. Mosis (11), but in ways that have no new interest for thought (Bousset, 411; Conard, Die religiösen u. sittl. Anschauungen der altestl. Apokryphen u. Pseudepigraphen, 113) cf. also Enoch 68.

As we say in the apocryphal books just examined were, no doubt, familiar to many Jewish minds in NT times; but, apart from St. Paul, there is little trace of their influence in the NT literature, save for the Synopspic Gospels Jesus nowhere alludes to Gn 3; and in Jn 8:7, we find the devils alluded to Gn 3, but rather to its scenerv than to its incidents; the end of history returns to the beginning, and Paradise is restored (7:5-12, 13-19) with the tree of life. The old serpent, who is the devil or Satan, is cast down from heaven and chained (12:20).

There is no speculation or reflection on the Fall. The same may be said of some of the allusions which we are led to expect, and which we are probably borrow from a recollection of Gn 3. In 2 Co 11 there may be a reference not only to Gn 3, but to an idea current in certain Jewish circles, that the second coming of Jesus, was a second marriage, the resumption of a previous connexion with the circle of ideas in which the authors of Sirach, Wisdom, 2 Esdras, and Baruch move. The interest of both is that St. Paul draws them in a parallel, which is in other respects a contrast, between Adam and Christ.

(1) In the earlier passage (1 Co 15), as in Wis 2:25, death is in view rather than sin. 'As by man came death, by man also shall all be made alive.' Adam is the head of the old humanity, which (whatever its original constitution or destiny may have been) is, in point of fact, mortal; this is what it is, and it is so in virtue of a connexion with the first man. Adam is the head of the new humanity, which (in spite of the mortality due to Adam) is destined at last to triumph over death; it is really immortal in virtue of its connexion with Him. The fact that in the two cases the connexion is quite different in nature is disregarded by the Apostle. The connexion with Adam, which involves us in death, is an affair of heredity; we are descended from him in the ordinary course of nature, and stand where we do, liable to death, apart from any choice of our own. But the connexion with Christ is not a matter of heredity, but of faith; it is only those who believe in the Apostle's word who will share His triumph over death. There is nothing in the fuller reference in v. 40-47 which enables us to say more. In particular, there is no reference in them to sin. What to us is Paul's mind is that the creature made of the dust of the ground, the ἄνθρωπος οὐκ ἐγενότος, cannot as such be immortal. Flesh and blood cannot inherit the Kingdom of God, not because they are sinful, though that is true, but because they are essentially corruptible, and the Kingdom is incorruptible. There can be no such thing as immorality in nature; if there is to be immortality at all, it must be in another mode of being—not that mode of being with which we are familiar from our connexion with Adam, but that which has been revealed to us in the resurrection of Christ. Immortality, in other words, is strictly supernatural. A connexion with the kind of body that is needed to ensure our participation in immortality, just as our mortality is ensured in virtue of a connexion with Adam. It is needed to ensure it; and it does. 'As we have worn the image of the man of clay, so shall we wear the image of the heavenly man.' An analogy, which is an evolution in which our being rose to a higher level, rather than the reversal of a doom, might seem to justify the terms here employed; but, congenial as this might be to a modern mind, it is improbable that it represents St. Paul's thought. Even if we set aside v. 46 as a marginal comment which interrupts an inspired text, it is shrewdly to the purpose, and thoroughly in keeping with the other passage in which the Apostle treats of the same subject.

(2) The other passage is Ro 5:12-19. St. Paul is not dealing here, in the first instance, with immortality, but with resurrection (the ζωήν τοῦ θεοῦ); it is this which is referred to in 15:19, when he again draws a parallel between the first and the second Adam, the emphasis falls not on death and life, but on sin and righteousness. Death comes, no doubt, through sin (4:25); but Adam reigns through righteousness unto eternal life, but sin and righteousness are here the primary interests. 'As through one man sin entered into the world and through sin death, and so death extended to all men, for that all sinned;' so, we might suppose the Apostle continuing, by one man righteousness entered into the world, and through righteousness life; but we should find it difficult to provide a connexion between the two. There is scarcely any connexion here. These last words themselves (ἐν δύναμιν ἡμῶν, ἐγενναρον ἄνθρωπον) have been taken very variously. (a) Some have ventured to identify Adam and his posterity in such a way that his responsibility became immediately theirs—that is, theirs without any action on their part which meditated it from him to them. As Bengel puts it, 'Omnis peccatorum Adamo peccante.' This seems to agree with the fact that the individual is involved in the moral responsibilities of the race, awful as these are, without his consent being first asked and obtained; he is born participant in the guilt and doom of mankind. Whether St. Paul would have shrunk from this or not, it raises more serious difficulties than it solves. (b) Others would make the ἡμῶν apply to voluntary individual sins. Every man is his own Adam, and the author of his own fate. Within whatever limits this may be true, to say that it is true absolutely is to ignore the solidarity of the race in sin and its consequences, with which the Apostle is specially concerned at this point. (c) The interpretation which appeals for relief to the doctrine of heredity, and assumes that man inherits from Adam that which, when it is morally appropriated, reveals itself in consciousness as sin, is perhaps not unfair to the passage, but cannot directly appeal to anything in it for Christ and St. Paul is concerned that men are somehow one in sin; but, though he knows that only the faith of the individual unites him to Christ and makes him a partaker in the righteousness and life, he never raises the question whether there is anything analogous to faith—an individual and voluntary appropriation of the inherited cor malitium, gravis num malum minium, malitigatus radice, χεὶς γάρ, or however it is to be called—in virtue of which he is mostly involved in the responsibilities of the first man.

While the solidarity of the race in sin and death is an immediate datum of experience for him, which he connects (without defining how) with the entrance of sin and death into the world through
Adam's disobedience, he gives us no means of constructing a doctrine of man's original state, or of the origin of evil. Adam, as the head of the old humanity, and as a foil to Christ the Head of the new, is just what we are before we are united to Christ. The superman, the demi-god, or of those holy, of their place, or of those more sinful, weak, mortal; an Adam before the Fall, in a state of original righteousness, may seem to be logically implied in what St. Paul says of 'the disobedience of the one,' but is a conception of which he makes no use.

It is quite futile to think that a Pauline doctrine of the origin of evil can be deduced from Ro 7:15. There are undoubtedly allusions here to Gn 3, so far as the expressions are concerned, but no historical doctrine can be based on this piece of generalized and ideal autobiography. If we say that in 1 Co 15:24-26, the mortality of man is made to depend on his inheritance of Adam's nature, and that in Ro 5:12-21 the condemnation of man, with all its fatal consequences, is conceived as dependent upon his being involved somehow in the transgression by Adam of God's express command, we are far from the truth. This does not transcend theoretically the problems presented by 2 Esdras. He makes no use of the serpent or the devil in explaining the origin of evil. He speaks of sinners, sin given in the stock and has been from the beginning; it is deep, virulent, constitutional, no hurt to be healed slightly. But St. Paul's theodicy is not in a doctrine of its origin, in the act of Adam or otherwise; it is his doctrine of redemption. Such in its unity and universality may be taken for granted, and it may also be overcome; but not even on the basis of the Bible—OT or NT—will its origin ever be overcome.

FALL (Ethnic).—1. ORIGIN OF THE BELIEF.—1. Man's curiosity regarding the things around him, itself the source of numerous Nature-myths, must necessarily be increased by the condition in which he found himself. His speculative faculty had caused him to ask questions regarding the origin of the world and of mankind, and to these questions his cosmogenic and creation myths supplied answers. Hence it is not surprising that he should have sought an explanation of such things as appeared to him evils in his lot—hunger, his battle with the forces of Nature, the difficulty of obtaining food, the existence of disease and death, and, so far as his moral faculty had been awakened, the opposition of good and evil in himself, the struggle he had to follow the law he felt to be right, perhaps the testamentary laws of his tribe. These questions gave rise to innumerable myths, found among many races and at all levels of civilization, which suggest as the answer that in the distant past something had occurred which reduced man to the sordid condition in which he now found himself, or that some disaster, perhaps anterior to his appearance on earth, had affected his destiny, or that some being, hostile to man, had moulded him physically and morally, or that man had gradually deteriorated from some earlier existing state of happiness. Such occurrences may be comprehensively included under the title of Fall, as used in Christian theology, while the stories which embody them are called Fall-myths. As a rule, the form and contents of such myths have been moulded by man's experience of the things which have happened to him, or of descent from a sinful, weak, mortal; an Adam before the Fall, in a state of original righteousness, may seem to be logically implied in what St. Paul says of 'the disobedience of the one,' but is a conception of which he makes no use.

It is quite futile to think that a Pauline doctrine of the origin of evil can be deduced from Ro 7:15. FALL (Ethnic)

The existence of death was one of the clearest indications of a serious disorder in human life. Ethnological evidence from all parts of the world proves that man's thoughts about death had everywhere taken much the same form. To man, with his intense love of living, death appeared unnatural; hence his firm belief in a life beyond the grave, or in the possibility of the renewal of life on this earth. The unnaturalness of death from the savage point of view is shown by the universality of the idea that disease and death are due to demonic and magical influences, and that if men were only wise, or in all mythologies, they would always live on. Death from any natural cause is inconceivable. But, if death is unnatural, the question arises, How was it first introduced into the world? Answers were always given, all tending to show that a time had been when death did not exist, and in some of these we see distinct traces of the idea that its coming was due to man's disobedience or folly. Other causes are alleged, e.g., the wrong delivery of a divine message, or a compact between an evil being (e.g., Death personified) and the divinities, or the misuse of an evil being, or the first man's death establish precedents. Traces of such myths may be found in some of the higher mythologies, but they are most common among lower races. We are here concerned only with those in which the origin of death and other evils is due to man's own fault, as in the Hebrew account of the Fall.

(1) In some cases the fault is man's stupidity or carelessness, as the following myths will show. The Dog-rib Indians say that after the Thunder-bird had made all things, he gave the Indians a large arrow which they were to keep with great care. But it was lost through the stupidity of the Chipewas, and the creator was so angry that he left the earth for ever, and now men die (Bakeroff, Nat. Res. p. 166). Similarly it is said that there was a time when men could walk on the ocean or restore life to the dead (here death already exists, but is vanquished), but they lost the privilege through carelessness (Schoedlack, Ind. Tribes, 1857, iv. 255). In Jap, mythology, death is introduced because, when the deity Great-Mountain-Possessor sent his ugly elder daughter as wife to the savior for his younger daughter's hand, he sent her away. Had he not done so, their offspring would have been immortal; as it is, they are as frail as the flowers (Kojiki, xxxviii. 115). Where the performance of religious rites according to ancient custom is all-important, myths regarding any breach of ritual are sure to arise. Among the Maoris such a breach is the cause of the entrance of death into the world. When the culture-hero Mani was baptized, his father committed part of the korakias, or prayers to the gods. For this reason men became mortal. As yet there was no death, nor would there ever have been if Maia had been able to pass through the body of Himinut-epe; but because of this omission he failed and died, and now all men must die (Grey, Polynesian Myth., 1857, p. 16). In the Admiralty Island version, death is due to the fact that a certain child could not recognize that his spirit, and not his body, which had fallen from a tree, was the real man, so that he makes his spirit return to the dead body, and thus perish (Anthropos, iii. [1908] 194 f.).

(2) In other cases, death results from a quarrel (cf. the death of Abel), or from man's wickedness. An Eskimo myth (cf. Story 1, p. 5) relates: "One day, the wife of a chief in a far distant land quarrelled regarding human immortality. The one who advocated men's dying gained the victory; hence arose death (Nansen, Eskimo Myth., 1893, p. 278). Among the Hare-skin Indians death is said to have come from a quarrel between the session of a screech-owl. An old man fell with it, but was pursued and killed; a relative of his killed the chieft murderer; he was in turn slain, and thus death and war arose (Petitot, Trad. nat., 1886, p. 186). The Aleutians say that formerly men, as they grew old, plunged into a lake and renewed their youth. But a woman who had a divine lover made him angry by her peevish complaints. He killed her brother, and so made all men subject to death (Farrer, Primitive Manners and Customs, 1878, p. 13). In Blackfoot Indian legend also the folly of woman introduced death (Grinnell, Blackfoot Lodge Tales, ii. 5). An old man's wife died and wept. Her daughter promised to make her send her. As a consequence of this evil wish, agitated by her, the old woman re-dons her skin, and has been the death has been in the world (Anthropos, i. 1908) 193).

(3) In others, that death is attributed to man's disobedience, e.g., eating some forbidden food; and myths of this nature have very naturally arisen among people who believe that breach of tabu, or eating a totem animal or plant, is inevitably followed by punishment, especially by the death of the tabu-breaker. Wherever such a custom or belief existed, it would be easy to found a myth upon it as the following myth relates: The origin of death and other evils. Some of these myths may have been influenced by the account of the Fall as told by missionaries; on the other hand, they are so comprehensive with savage mythology and methods of thought that they bear marks of originality. A Dog-rib Indian myth relates that the first man, Tesapawih, gave his children two kinds of fruit, black and white, forbidding them to eat the former. They were obedient for a while but he was absent to fetch the sun, but disobeyed him when he went away a second time to obtain the moon. He was angry with them, and, 187, that the death of the earth would produce only bad fruit, and men should be subject to sickness and death. His family bewailed their lot, and they then relented so far as to say that those who dream of the dons should have all the power of curing sickness (Klehn, Culturgeesch., 1845-52, ii. 155). The tabu is often connected with the idea that eating the fruit of any strange country or people makes one belong to it; hence arise myths that mortal men are immortal beings who were condemned to earth because they ate of its fruits. A Tonga version of such a myth makes certain immortal gods journey from Boloito (Hades) and land on earth only to recognize that his secret spirit, and not his body, which had fallen from a tree, was the real man, so that he makes his spirit
FALL (Ethnic)

Hence arose the race of men, subject to decay and death (Mariner, Account of the Natives of the Tonga Islands., 1818, ii. 115). The same idea occurs in Semitic cosmology: the immortal beings of the fifth period of creative energy were of a certain plant and so became subject to mortality and lost the power of returning to the heavenly mansions. At the same time arose the division of the sexes (Beardmore, Eth. of Bengal, 1872). But make tabu! Slie a view the and Some such foods, they became subject to death (Dalloul, Eth. of Bengal, 1872). There is an Australian myth to the effect that the first pair were forbidden to go near a tree on which lived a bat, which was not to be disturbed. Gathering firewood, the woman approached the tree; the bat flew away, and death arrived (Brong Smyth, Abor. of Vict., 1878, i. 429). Elsewhere the disobedience is not connected with a tabu. Another Australian myth makes death result from men refusing to fear to carry the fierce dogs of Buhllo (the Moon) across a creek. 'If you had done what I had asked you,' said he, 'you could have died as often as I die, and have eaten as much as life' (K. L. Parker, Aust. Legent. Tales, 1896, p. 8). In Uganda it is thought that death was introduced because when Kinta, the first man, was sent down from heaven, he was told that if he forgot anything he was not to return for it, since Venereal disease (death) would assuredly go with him to earth. He forgot miltlet, and, contrary to his wife's advice, returned for it, with the result predicted (Johnston, Uganda Produceante, 1905, ii. 704). The Basutos say that Matomeo, the first man, came out of the earth with his sign Matoomya, who had a life-preserving medicine and told him to lead their cattle in one direct descendobeyed her and she, in a rage, went 1. be earth with her medicine. Thus death freques came into the world (Campbell, Travesses de Afir., 1822, i. 306). The following myth was told by a native of Tumelat (Cent. Africa). 'Til made men deathless, and forbade them to kill the beasts; they broke his command, and were all destroyed save one. Til now changed a gazelle into a woman, who bore the survivor four children, two white and two black. These were also deathless; but the frog complained to Til that it was unfair to make harmless animals subject to death, and guilty man immunity. He suggests that Til banish all men subject to old age, sickness, and death (Ausl. land, Nov. 4, 1847). In Togo, death is due to the petition of a frog, who reached the Supreme Being before the dog, who sought that man might live again after death (Anthropos, B. [1907] 226; cf. ill. [1908] 277); and in an Admiralty Island version, death comes from the ingratitude of a man who sought to deceive the tree which had saved him from a demon (ib. ill. 194). The Melanesians account for death by various myths, one of which turns on an act of disobedience on the part of a woman made by the divine hero Qat. She was stolen by Marawa; Qat urged her to return, but she refused; therefore, while the pair were sleeping, he pulled their teeth, shaved their hair, and covered their eyes with spiders' webs so that their sight became dim. Thus old age and death became the lot of men (Coffington, Melanesians, 1881, p. 256). In New Guinea (Mowat), death came upon all men because the mother and grandmother of the first man who died, instead of obeying his injunction to remain until returned to them as before, went in search of him (Beardmore, JAI xix. (1890) 465). An American Indian myth reported by the Jesuit missionaries in 1634, and apparently quite original, has a curious resemblance to the Greek Pandora myth (see below, 2 (3)). After the world had been recovered from the Deluge, the divinity Messon gave a Montagnais Indian the gift of immortality enclosed in a nest of box, subject to the condition that he should not open it; for, so long as the box remained closed, he would be immortal. His curious and incredulous wife opened the box to see its contents. And thus all Indians became subject to death. This myth is the only one of its kind in the parts of Canada (Relazione de la Nouvelle France, 1836)—among the Ojibwas in 1857 (Hind, Labrador, 1863, i. 61).

These myths of the origin of death and kindred evils through a 'Fall' form the most concrete answer to man's questionings about his evil plight—death being taken as typical of evil generally—while they approach the series of the more complete Fall-myths current among many peoples, which must now be considered.

2. Myths of a Fall.—(1) Some myths of this class bear a striking resemblance to the story of Genesis, and may have arisen as a result of missionaries' teaching, or through the gradual diffusion of the Hebrew story in the same way as Mørchen have been diffused over a wide area. In others, the idea of immortality seems to be derived from the original myth with pigments borrowed from outside sources. Each myth of this kind must be judged on its merits, and with a full appreciation of the possibility of similar stories arising through similar circumstances, and psychic conditions, in more places than one. Many others are undoubtedly original—even a few which might seem at first sight to be borrowed. Especially is this the case where, in many of the myths which follow, as in some already referred to, the Fall is due to the eating of a forbidden food. This need not necessarily have been borrowed from Genesis, but shows how emphatically the system of tabus, especially with regard to foods, was connected with punishments meted out automatically to the taboo-breaker, and how naturally all this was reflected in myths of the origin of evil. Man accounted for the latter by that which appealed most easily to his imagination, and of the danger of which he had seen many evidences. His Fall was a punishment visited on him for breaking a divine taboo. Such a view might easily become current among the lowest races, since it is found that the creative beings of, e.g., the Andamanese, Australians, and Bushmen are also moral governors, pass judgment, and give commands. The Batutsi say that the Fall was due to Nyinakigwa's breaking of the divine prohibition to tell how, being steril, she had three children, the gifts of the deity Imana (Anthropos, ill. [1908] 2 ff). Where it had become customary not to eat of certain foods at certain seasons, it would be easy to form a myth suggesting that men had been told by a higher Being not to do so, and that, when they had done so, much evil had resulted. Thus the Andamanese, whose remarkable theology, according to the best authorities, is independent of Christian influence, believe that Puluga, the creator, gave the first man, Tono, various injunctions, especially concerning certain trees which grew only at one place (Paradise) in the jungle, and which he was not to touch at certain seasons—during the rains, when Puluga himself visits them and partakes. Later, some of Tono's descendants disobeyed and were severely punished. Others, disregarding Puluga's commands about murder, adultery, theft, etc., and becoming more and more wicked, were driven out of the jungle. Two men and two women survived, and, in revenge, wished to kill Puluga, who, telling them that their friends had been justly punished, disappeared from the earth. But even now these trees are strictly
tabu during the rainy season when Puluga visits the island; and it is firmly held that, if any one dares to trespass with them, a new deluge will result (Man, JAI xii. [1882] 164, 166 ff., 154). Here, a native system of tabus has given rise accidentally to a series of myths resembling those to the Genesis story, and this may, quite conceivably, have happened elsewhere. An Australian myth, which might easily have become a Fall-myth, points to this conclusion. When the divine Baiame sought earth, the flood wavered and died. Three trees alone were left which none dared touch, because Baiame had put his mark upon them. When he saw that no one touched them, he sent a kind of maize upon the earth (K. L. Parker, More Aust. Legend. Tales, 1890, p. 84). A Fall through breaking a divine tabu regarding food or some other divine orders will be found in several of the myths which follow. Such myths, involving a catastrophe to many, should be compared with Morehen, in which an individual comes to grief through disobedience, i.e. breaking a taboo. Here, too, the incident reflects actual customs.

A myth, current among the Maidu Indians, may possibly owe some of its details to missionary teaching. The good-world-maker, Ko-do-yam-peh, sends animals to all the earth, but the animals were tame and the soil fruitful. He bade them take all things freely, but always to bring his food home and cook it, never to kindle a fire in the woods. But the evil Hel-lo-kri-eh told man to cook his game in the woods. He did so, with the result that the smoke made the animals wild, as they now are; the ground was changed, and man had only roots and worms to eat; frost, rain, and tempests arose, and such introduced evil into the world (FLTR v. [1882] 118 ff.; cf. the 'Bushman myth,' §3). In Pentecost Island (New Hebrides) a woman, become the wife of the sun-god, is violated by the moon-god, who enters the tabued precipices of the happy land; she is accordingly driven away, and bears two children, one black (the son of the sun-god) and the other white (the son of the moon-god); they engage in conflict, and the black son, the ancestor of the natives, expels his half-brother, the ancestor of all white men (Anthropos, vi. [1911] 902-905). A kind of dualism runs through all American Indian mythology (see DUALISM [American]). Evil here, like evil being acts the part of the tempter, but the myth, like many others, can no truths be borrowed, is in the main original. Similarly in a Blackfoot Indian myth, when Napi the creator makes the first pair out of clay, death is introduced through the folly of the woman, and all later misfortunes arise through disobedience to the creator's laws (Lang, Making of Religion, 1889, p. 250). Another myth which, according to Leland, 'gives the fall of man from a purely Indian standpoint' traces all human evils to that idle loquacity which is, above all other things, most contemptible in Indian eyes. A child was born of an Indian girl by a spirit of the mountain. She was hidden never to tell her people of his origin. The child fed them miraculously, and would have made them of a mighty nation, but they never ceased to ask his mother whence he came, and she told them. 'It shall be to you exceeding sorrow that ye ever inquired.' She and the child disappeared, and thus the Indians, who should have been great, became a little people (Leland, Algonguin Legends, p. 217). The dualistic idea of the origin of evil reappears in a myth current among the Khonds of Orissa. Boora Pennu, the god of light, had a consort, the Earth-goddess, the source of evil. In jealousy of her husband's love for his creature man caused her to introduce physical and moral evil into the world. Such men as rejected her influence were defiled; all others were condemned to suffering, moral degeneration, and death (MacPherson, Mem. of Service in India, 1863, p. 273). Compare with this the old Mexican belief that the Golden Age of Anahau came to an end through the sin in resemblance to the Genesis story, and this may, quite conceivably, have happened elsewhere. An Australian myth, which might easily have become a Fall-myth, points to this conclusion. When the divine Baiame sought earth, the flood wavered and died. Three trees alone were left which none dared touch, because Baiame had put his mark upon them. When he saw that no one touched them, he sent a kind of maize upon the earth (K. L. Parker, More Aust. Legend. Tales, 1890, p. 84). A Fall through breaking a divine tabu regarding food or some other divine orders will be found in several of the myths which follow. Such myths, involving a catastrophe to many, should be compared with Morehen, in which an individual comes to grief through disobedience, i.e. breaking a taboo. Here, too, the incident reflects actual customs.

A myth, current among the Maidu Indians, may possibly owe some of its details to missionary teaching. The good-world-maker, Ko-do-yam-peh, sends animals to all the earth, but the animals were tame and the soil fruitful. He bade them take all things freely, but always to bring his food home and cook it, never to kindle a fire in the woods. But the evil Hel-lo-kri-eh told man to cook his game in the woods. He did so, with the result that the smoke made the animals wild, as they now are; the ground was changed, and man had only roots and worms to eat; frost, rain, and tempests arose, and such introduced evil into the world (FLTR v. [1882] 118 ff.; cf. the 'Bushman myth,' §3). In Pentecost Island (New Hebrides) a woman, become the wife of the sun-god, is violated by the moon-god, who enters the tabued precipices of the happy land; she is accordingly driven away, and bears two children, one black (the son of the sun-god) and the other white (the son of the moon-god); they engage in conflict, and the black son, the ancestor of the natives, expels his half-brother, the ancestor of all white men (Anthropos, vi. [1911] 902-905). A kind of dualism runs through all American Indian mythology (see DUALISM [American]). Evil here, like evil being acts the part of the tempter, but the myth, like many others, can no truths be borrowed, is in the main original. Similarly in a Blackfoot Indian myth, when Napi the creator makes the first pair out of clay, death is introduced through the folly of the woman, and all later misfortunes arise through disobedience to the creator's laws (Lang, Making of Religion, 1889, p. 250). Another myth which, according to Leland, 'gives the fall of man from a purely Indian standpoint' traces all human evils to that idle loquacity which is, above all other things, most contemptible in Indian eyes. A child was born of an Indian girl by a spirit of the mountain. She was hidden never to tell her people of his origin. The child fed them miraculously, and would have made them of a mighty nation, but they never ceased to ask his mother whence he came, and she told them. 'It shall be to you exceeding sorrow that ye ever inquired.' She and the child disappeared, and thus the Indians, who should have been great, became a little people (Leland, Algonguin Legends, p. 217). The dualistic idea of the origin of evil reappears in a myth current among the Khonds of Orissa. Boora Pennu, the god of light, had a consort, the Earth-goddess, the source of evil. In jealousy of her husband's love for his creature man caused her to introduce physical and moral evil into the world. Such men as
through to the remotest parts of Africa (see the Egyptian Golden Age myth, § 3 (v)).

The Madagascar myth of the Fall producing a different sex may be compared with the Sinhalese myth, above, i. s (v).

(2) The idea of a Fall occurs in various forms in the mythologies of several higher races. Among the Hindus, who more than any other people have brooded over the problem of evil, various reasons were alleged to account for man's evil plight. A Fall or Captivity was a favourite method of accounting for it; in other cases it was regarded as the inevitable consequence of the association of the soul with a material existence; again, the doctrine of emanation, as in the Gnostic view, suggested a gradual deterioration, keeping pace with the increasing distance of souls from the divine; while, as in Greek mythology, a series of successive world-ages, each growing worse than its predecessor, was also postulated.

In the earliest writings (the Vedas) there is no Fall-myth; the story of the incest of Yama and Yami (Rigveda) affords no real parallel to the Genesis story, as is sometimes supposed, but is a crude explanation of origins. In later times the more philosophical views occasionally give place to a conception of a God or nature, treated of by the first man Mann Sväyambhuma, and Sara-tāpā, Manu's wife, the equivalent of the creative principle. Siva dropped from heaven a blossom of the sacred rose, or Indian fig—the bhūdhīkrana, or tree of knowledge of Brahman and Buddha alike. Ensured by its beauty, Brahmā gathered it, thinking it would make him immortal and divine. While still existing in this thought, he was punished by being consigned to an abyss of degradation, whence he could be freed only after a long term of suffering. His wife, adds the myth, had urged him to take the blossom, and on their descendants was the curse entailed.

This myth, which has very frequently been cited as a parallel to Gn 30, owes nothing to the latter, is of late origin, and possibly is derived from a Buddhist myth with several variants. One form, cited by Hardy (Man. of Bud., 1864, p. 66), tells how the Brahmans who were born into this world were happy, and peace reigned everywhere. A peculiar form occurs on the surface of the earth; one of them tasted it, found it palatable, and devoured it greedily. The others followed his example, with the result that the glory of their person was faded and necessitated making the sun and moon. Their skins grew coarse; they deteriorated morally and physically; and the world became filled with passion and evil. The Tibetan form of the myth is similar. Men lived to 60,000 years, and were invincibly nourished and able to rise at will to the heavens. But, through covetousness and the consequent eating of a honey-sweet substance or herb) produced by the earth, they lost these gifts, became victims, and were forced to practise agriculture for the sake of food (Pallas, Reise, 1771-76, i. 334). In the Nepāl version, earth is uninhabited, but visited occasionally by the dweller in the heavenly mansions (Abhāvāra), who were innocent, and androgynous. But desire to eat arose in their minds; they tasted the earth, lost the power of return to Abhāvāra, and were cut off from the fruit of the earth for ever (Hodgson, Buddhism, p. 63). The Sinhalese version resembles this, but after eating earth for 60,000 years these visitors became covetous. Earth lost its sweet taste, and brought forth a kind of mushroom of which they ate in excess. Thus they proceeded from food to food, till their spirits nature was lost, and they became men, filled with wicked ideas (Uplahm, Sacred Books of Ceylon, 1833, iii. 156).

(3) However lightly the Greeks may have estimated moral evil or veiled it under aesthetic forms, they were by no means blind to it, and myth and philosophy alike tried to explain its existence. The early legend of Prometheus and the theft of fire shows that the Greeks were at least aware of the evils of human life by the fact that the hero, in stealing fire from the gods, was trespassing the limits set to human knowledge and power by them. Hence their resentment. It thus exhibits that respect for moral law. Mythology, as the Hebrew, of the gods' jealousy of men, of men becoming their equals, while the idea of man's enroaching on something forbidden is paralleled with the Semitic Tree of Knowledge and other forbidden things. Hesiod (Works, and Days, 52 f.) brings the story into connexion with that of Pandora, fashioned by the gods to bring evil to Prometheus and the whole race of man. Within her breast were infused falsehood and guile by Hermes, following the counsel of Zeus. She was received by Epimetheus, in spite of the warning given him by his brother Prometheus. And now evils came into the world, because Pandora removed the lid from a vessel in which they were contained, and so dispersed them among men. In a story mentioned by Pseudo-Aelian, Prometheus himself had deposited this vessel, called the ship of the soul, with the gods, with Epimetheus. Contrary to warning, Pandora opened it, thus showing her nature. But according to Philodemus, Epimetheus himself opened it, bringing evil and death upon his fellows. Hesiod's intention is to teach that woman is the intermediate cause of human ills (cf. Gn 3). Better had it been for man to have remained alone than to have joined himself to this god. For, in the later creation of the gods. A similar duplication of the idea of human ills being brought about by rash desire for illicit knowledge as well as by woman occurs in the myth of the Sirens, who say they will send men who listen to them on their way the wiser. For they 'know all things,' 'all that will hereafter be upon the fruitful earth' (Odyssey, xii. 191). The close approach of these leading ideas of the Greek myth to those of the Semitic story is remarkable; but, in spite of possible points of contact between early Greeks and Phoenicians on the one hand, and Phoenicians and Hebrews on the other, we need not suppose that the two are interdependent or have any common source except in the similarity of man's psychic conditions and environments leading him to formulate his conception of the world on more or less necessary to make the sun and moon. Their skins grew coarse; they deteriorated morally and physically; and the world became filled with passion and evil. The Tibetan form of the myth is similar. Men lived to 60,000 years, and were invincibly nourished and able to rise at will to the heavens. But, through covetousness and the consequent eating of a honey-sweet substance or herb) produced by the earth, they lost these gifts, became victims, and were forced to practise agriculture for the sake of food (Pallas, Reise, 1771-76, i. 334). In the Nepāl version, earth is uninhabited, but visited occasionally by the dweller in the heavenly mansions (Abhāvāra), who were innocent, and androgynous. But desire to eat arose in their minds; they tasted the earth, lost the power of return to Abhāvāra, and were cut off from the fruit of the earth for ever (Hodgson, Buddhism, p. 63). The Sinhalese version resembles this, but after eating earth for 60,000 years these visitors became covetous. Earth lost its sweet taste, and brought forth a kind of mushroom of which they ate in excess. Thus they proceeded from food to food, till their spirits nature was lost, and they became men, filled with wicked ideas (Uplahm, Sacred Books of Ceylon, 1833, iii. 156).

In the story of Pandora later theological animos may be detected. In mythical ideas, they seem to have been a great Earth-goddess, mother of all things. The triumphed over may have been supplanted by the grave-pithecus from which primitive Greek belief inferred the keres of death (see above, 110, 111, 112). See J. E. Harrison, Prolegomena to Greek Religion, 1903, p. 284. For a comparison of the Semitic and Greek stories, see Symonds, Greek Poets, 2d ed., 1879, p. 115.

(4) In the Persian sacred writings a myth occurs which some think have been borrowed from Jewish sources, while others suggest its influence on the Hebrew story. A careful examination of
the myth (which, possibly through earlier faulty tradition, had supposed to have taken a resemblance to Gn 3 than it really possesses) shows that it may have been quite independent in origin, while it need not have exerted any exterior influence. It occurs in the Bundahish, a Persian work, in its present form from the 9th cent., but doubtless enshrines material of a vastly older date. There is no reason to suppose that the myth is not archaic, and its contents suggest an exceedingly primitive view of things. Thus the Bundahish describes the covenant made between Ahura Mazda and Ahriman (after the discovery of the former by the latter, towards the end of the first three thousand years) that Ahriman's power should last only nine thousand years. In the first three thousand Ahriman is caused to remain in confusion; in the second, he is triumphant; in the third and last, he is gradually overcome (see Ages of the World [Zoroas- trian], vol. 3, p. 205). At the beginning of his triumphant career Ahriman is said to have made a rush at the creatures, 'springing like a snake, out of the sky down to the earth.' He first destroyed the primeval forest, and seed various plants and animals proceeded. Next followed the destruction of Gâyomârt, the archetypal man, but from his seed sprang a human pair, Mâshya and Mâshyôti, who existed first, apparently, as plants, and out of the earth they were distinctly changed into human form. To them Ahura Mazda said: 'You are men, you are the ancestry of the world, and you are created perfect in devotion by me; perform devoutly the duty of the law, think good thoughts, speak good words, do good deeds, and worship no demons!' After having washed themselves they acknowledged the power of Ahura Mazda, but now 'antagonism rushed into their minds, and declared the evil spirit to be the creator. That false speech was spoken through the will of the demons... through it they both became wicked, and their souls are in hell until the future existence.' At first they drank only water and were clad in herbage; but after thirty days they drank the milk of a goat, expressing their delight in it, and by this second false speech enhancing the power of the demons. Thirty days later, they slaughtered and ate a sheep, roasting it with fire 'extracted by them out of the wood of the lote- plum and box-tree, through the guidance of the beastly spirit, and probably by friction.' The skin of the animal served them for clothes; later, they wore woven garments. They dug iron out of the earth, hammering it with a stone, cut down wood, and made a shelter from the sun. Their gracelessness increased; the demons became more oppressive; and they fell to fighting with each other. At the end of fifty years they were moved to desire of each other. A pair of offspring were born to them, but, 'owing to tenderness for off- spring,' they devoured them. This 'tenderness' was taken from them by Ahura Mazda, so that their succeeding children remained alive. Here, as in the Hebrew and other Near Eastern, advance in culture is associated with a lapse from righteousness, but temptation is merely hinted at, and we learn only by inference that the drinking of milk and eating of flesh were forbidden. On the whole, the differences are greater than the resemblances, and we may have here an original and ancient myth, which at a later date may have received some colouring from Hebrew sources, but obviously is entirely Persian in its teaching (Bundahish, chs. i. xvi., in West's Pahlavi Textes, pt. 1. SBE v. [1880]). In other parts of the Bundahish it is clear that Ahriman seduces human creatures to evil, rather than that evil comes from within themselves. So he announces his intention to the creator: 'I

will force all thy creatures to dissatisfaction and a love and affection for myself' (Bund. i. 14) and Ahura Mazda says he cannot rest at ease, for he must provide protection for his people against the seductions of Ahriman, who 'casts into this the thoughts of every one of them. All is said to be a lie; it is sought, and it is not necessary to be steadfast in it' (xxviii. 3-5). It is not clear that a taint of evil is inherited. At all events, king Yima, sixth in descent from Mâshya, appears to have lived in righteousness, for reason (Bund. xxxiv. 4): when this happened he took a she-demon for wife through fear of the demons, and gave his sister Yimak to a demon as wife. 'From them have originated the tailed ape and bear and other species of degeneracy' (xxiii. 1). Yima is the Yama of the Vedas, who committed incest with his sister Yami, just as, in a later Pahlavi text, Yimak pretended to be Yima's demon- wife, and lay with him (SBE xviii. [1882] 419). Yima appears in the earlier Iranian writings (Vendâdîd, ii.), as a righteous king whose reign was a time of innocence, without cold, heat, age, disease, death, and seed; the power and prosperity (Yâsna, ix.; Yast xv.). Here, too, it is said his 'glory' departed through his lie, when he began to delight in falsehood (Yast xix. 34). First, in the 10th cent., says Yima, the gods were made to be a god. Yima is not here the first man, though he may in an earlier myth have had that position; this, however, is rendered unlikely by the fact that he is through all the sacred writings placed in a later generation. Disease and death, too, were in the world before his time. He may, therefore, have simply been the ideal righteous king, who at last fell, like all other men, through the seductions of the beastly character. Yima, the first and only, he also bears this righteous character, but is taken as an example of apostasy, apparently because he sinned through flesh-eating after having lived on vegetable food. The interpretation of the passage Yâsna, xxxii. 8 is much disputed, and Tiele and others do not accept this rendering. There is no doubt, however, that the Iranians believed the earliest state of men to have been one of innocence and prosperity, when they lived on imperishable food and were free from the ills of life, and that all this came to an end through the envy of the dàvèna, who corrupted men (Yâsna, ix., xxxii. 5).

(6) The idea of man's hapless plight as a punishment is also suggested in myths which refer it to a wrong choice (like the choice of Plato's pre-existing souls, see § 5) made in the beginning of things. The Ashantis trace all their woes to the folly of their ancestors. In the beginning there were three white and three black men and women, who were told by a divinity to choose either a box or a piece of sealed-up paper. The blacks chose the box and found in it gold, iron, etc.; while the whites chose the paper, which contained wisdom. After their choice the blacks worshipped 'fetishes' instead of their high god (Huston, fabric. in the T'ou-nan, chs. 293, 299). The Navahos assert that their ancestors chose a richly decorated jar which contained rubbish, and hence they are now poor and miserable; the Pueblos chose a coarse jar full of flecks and herbs, and now enjoy plenty of children, reason (Kroeber, 1890). The Ashanti myth probably existed before the appearance of the whites, and would then have referred to some other race, to judge by the analogy of the Tongan and Fijian myth, alleged to be archaic, and also to have received its present application after contact with Europeans, to the effect that the first-born of mankind was disobe- dent to the Creator and grew black, while the second-
born, by virtue of a higher obedience, remained fair, and was the ancestor of the white race (Hale, Exploring Expot., Philadelphia, 1846, p. 177).

The choice of a worse object and the obtaining of many benefactors, such as the齐的 prize, and the choice of a better object which produces nothing but evil to the race, is a favourite theme of Marduk, in countless forms and in all parts of the world, civilized and savage (cf. § 3).

3. Myths of a Golden Age.—Combined in some cases with the myth of a Fall, and always predicated on the earlier man, innocence, and happiness, is the legend of a Golden Age, or the more philosophic idea of a series of recurring world ages.

(1) Even among the lowest races, especially after contact with a higher civilization, such a conception is not wanting. The Bushmen tell how once they could 'make stone things that flew over rivers' (Lang, Myth., Kit., and Rel., 1899, i. 169), while their myth of origins relates that once men and animals (who could speak) lived together till men made fire, which they had been forbidden to do, and so startled the animals that they lost the power of speech and fled ever afterwards from man. Cf. the Amer. Indian myth, ii. (1), and the idea (as in the Prometheus legends) that fire is illicit. In Samoa, as elsewhere, we hear of a primitive Golden Age when all things could talk. The idea of a Golden Age in the past, lost through man's fault, took shape in various ways, but it was more immediately suggested by the almost instinctive conviction (common to old races as to old individuals) that things must once have been better than they are, just as men generally hope that things will be better in the future. In some cases a people dwelling in comparative comfort and plenty in some part of their native country, and driven out to a less pleasant region by a stronger race, would easily shape to themselves a legend of a happier state of things long ago, and with each generation the mythic happiness of that state would be increased. All migrations would tend to do the same, just as in some cases the dim memory of rivers and mountains crossed, joined with the desire to be buried in one's native place, suggested the idea of the journey of the soul over a perilous way to the land of the departed. Occasionally the memory of such migrations appears to be mixed up with myths of human origins; men came from heaven or descended from the skies (see § 4). In the latter case the myth usually took root in the form that men and gods then lived together, or that there was intercourse between heaven and earth; this ceased through some act of human folly (cf. the Tongan myth, ii. r (3)). Finally, the idea of the Golden Age may have been suggested to men by observing the happiness of the child, and by thinking that all men were thus happy in the childhood of the race.

(2) The most typical form of the Golden Age myth is the Greek one given by Hesiod in his Works and Days (following upon, but distinct from, his myth of Pandora), where we learn that a new race was formed in each of the series of successive ages, gradually deteriorating. The first age was that of the golden race of men, who were prosperous and happy, and passed from life as in a sleep. The second was the silver age, in which began sorrow; men could not refrain from injustice, and refused worship to the gods. The third was that of the race of bronze—a race of warriors who fought away life with their own hands. Then came the fourth age, that of the men who fought at Thebes and Troy, now in the Isles of the Blest, where Kronos reigns; and, lastly, the iron age, that of the present, full of toil, wretchedness, and corruption. The Attic Cronus, like the Sатур-
virtuous and happy reigns of such kings as Wan; while, according to the *Shu King* (pt. v. bk. 27, 2), Kuo Ch'ing first to avert any ill-starred order, which spread among the people. But, as this rebel is held to have lived about 2700 n.c., the Chinese Golden Age is thus brought within historic times. A verse sometimes quoted from the *Shi King* (iii. 448), while adumbrating the fall of the gods, as proving that the fall was due to a woman who overthrew her husband's wall of virtue, does not refer to a primitive fall, but only describes in general terms the fall and overthrow of the best of men.

(5) Some trace of a myth of the Golden Age appears in ancient Egyptian religion. Maspero says:

'Certain expressions used by Egyptian writers are in themselves sufficient to show that the first generations of men were supposed to have lived in a state of happiness and perfection' (*Dawn of Civ.*, 1896, p. 158). They recalled the earthly reign of Ra in the beginning as a Golden Age long ago passed, perhaps from the time of Adam and Eve, the cause of its ending, and of Ra's leaving the earth and causing the death of its people at the hands of a goddess. But with the survivors a compact was made that they would not make the land desolate. Men looked back to that happy time with longing, and expressed it by the phrase 'the times of Ra,' while of anything which was superior of its kind they said that its like had not been seen since the days of Ra (cf. *op. cit.;* Lenormant, *Les Origines*, 1889–91, i. 448).

Connected with the legend of a Golden Age is the myth of a Paradise, not always, however, inhabited by the first human pair, as in Genesis, but by gods, or supraindividual beings, or deathless men. Among the Greeks there is the conception of Elysion and the Islands of the Blest, as well as that of the Garden of the Hesperides, a home of the gods, in which Hera's golden apples grew on a tree guarded by a dragon which Hercules alone of mortals could slay. Some have seen in the last an echo of Genesis (Lenormant, *Origines*, i. 94). But beyond the seductive beauty of both gardens and the mythis tree there is no real parallel: the dragon acts differently from the serpent, and Hera's apple is not even in Genesis, while there is no temptation or 'fall.' The Hindu sacred Mount Meru, with its gardens and four rivers, unapproachable by sinful man and guarded by a dragon, has its counterpart in the Iranian Alborz (Hara-berezaiti), the seat of Mithra, where there is no night, darkness, cold, putrefaction, or uncleanness (Feist x. 50). A similar garden mountain, moistened by water flowing from the fountain of immortality and forming four rivers, and guarded by an animal called Kaiming, appears in Chinese mythology, and possibly was suggested by Buddhist influence. The fabled earthly Paradise is the counterpart in space of what the Garden of Eden is in time. Both are equable, paradise and nether inaccessible. Possibly the idea that Paradise with its Golden Age had been lost to men in the last leading to the idea that it still existed, was developed by adventurous or favouring mortals. The idea that gods dwelt with men in the past suggested that an ascension of an earthly house of gods, while it doubtless helped to form myths of a Golden Age. That divine earthly home perhaps became also the inaccessible Paradise.

(6) World-ages.—Among various races cosmogonic speculation, in the attempt to conceive in beginning of things, has imagined a series of world-ages, in which some mythologies end each in a catastrophe, and are occasionally connected (as in Hesiod) with the Golden-Age myth. The Hind world-ages are also connected with the theory of a Golden Age and of the gradual deterioration of mankind. In the Kta age all was perfect, men were innocent and happy, they had found their place in the world. In the next age, Kali, age, doubt and atheism flourished; while in the present, or Kali, age, evil of all kinds predominates in human life. These four ages are but divisions of the life of the human people, with the Bhagavadgita, and their division may correspond to the seven cycles of the modern world. In this, the Bhagavadgita, and their division may correspond to the seven cycles of the modern world. The Bhagavadgita, and their division may correspond to the seven cycles of the modern world. The various races of men were created and then destroyed as being unfit for survival, and inadequate to their surroundings. The existing race is thus a survival of the fittest. We find this in Brahmanic myths, in the Quiche Popol Vuh (with the further idea that some of the earlier peoples degenerated into apes), and among lower races (Lang, *op. cit.* i. 202). This view also resembles a widespread mythological conception of the ancestor of the race being ignorant of the arts and given up to various evil practices, e.g. cannibalism, until they were taught better by a god or a divine culture-hero. The race thus improved instead of deteriorating, as with the ancient Greeks in the *Iliad* (in line with the teaching of modern science) instead of a descent from better things. The idea of Aristotle (Pol. ii. 8) was that men were at first on a level of ignorance and darkness; and that of Zosimus, that men lived in caves and were wretched till enlightened by Prometheus. The latter may point to a Greek myth differing from that of the Golden Age, just as in Egypt a myth, contrary to that already noticed above (5), told how Osiris weaned the first people from a condition of bestial savagery. In Babylonia, according to Berossus, Uanna taught men, who till then had lived as beasts, while the Babylonian epic of Gilgames makes Enlil live with beasts as a beast till the sacred prostitute, Ukh, shows him a higher life (cf. Jastrow, *Relig. of Bab. and Assyr.*, Boston, 1888, p. 476 fl.). The story was thus an attempt to focus in the most diverse myths—producents, in certain cases, of different tribes or races which have amalgamated—without any thought of their incongruity. Yet even in such cases of fusion, so long the hero remains among the people whom he has taught, there is for them a kind of Golden Age. Then he takes his departure, promising to return; but till that time men must live in toil and pain.
This was a frequent myth among all branches of the American Indian race.

The Greek myth of Saturn's reign and the Egyptian of Ra's booth postulate the presence of a divine being with men during the state of infantility.

4. Myths of a lost intercourse between gods and men.—Analogous to the idea of the divine culture-hero dwelling with men for a time in a kind of Golden Age is the belief (related to that of a Golden Age), found among many races, that at the earliest period of human existence there was free intercourse between gods and men, heaven and earth, either by some method of reaching the sky or by men having actually dwelt with the gods. This is usually part of a myth explaining the origin of man, who, as sometimes thought, came from that glad upper world. Various reasons are assigned for that intercourse having ceased; occasionally it is human curiosity, weakness, or error which caused this happy state of things to end; but it may also arise through ancestor-worship, especially where the ancestors worshipped have become gods, from whom the people or their rulers trace their descent. In Andanian mythology, the high god Pulma lived with men till they tried to kill him. He answered that he lived with them as they were, if they persisted in disobeying him he would destroy them and the world with them. This is the last occasion on which he made himself visible (Man, JAI xii. 167). Among the Kurnai of S. Australia it is held that a great being, Mangan-mana, once lived on earth and taught them all the arts they know. He instituted the Jeraell (mysteries), but some traitor once revealed the secrets of these mysteries to the women. Mungan went fire between heaven and earth so that men went mad with fear; then the sea rushed over the earth, drowning all save a few, who become ancestors of the Kurnai. Some of these were changed into animals. Mungan then left the earth and now remains in the sky (Howitt, Nat. Tribes of S. E. Aust., 1894, p. 630). Among the Negroes of Fernando Pó it is held that once there was a ladder from heaven to earth by which the divine beings descended to men, until a cripple started to ascend. His mother chased him, and the gods, horrified at the sight, and at the possible intrusion on their domain, threw down the ladder (De Bary, G. Histoire de l'Antiquité, ii. i. 159). The Fantis have a myth which tells how the first men lived in a lofty and desirable land, but were driven out of it in order to learn humility (Smith, Nouveau Voyage du Guihne, 1744, ii. 176). The people of Guiana hold that their forefathers once lived happily above the sky, but curiosity tempted them to descend to earth by means of a rope-ladder and to taste its food. One of their number (in one of the variants, a woman) stuck in the hole in the sky, thus preventing all possibility of return. There are several variants of this myth, some of which tell of men longing to return to heaven, and their condemnation to remain below in spite of their pleading (Brett, Legends of B. Guiana, 1880, p. 103 f.). A myth of the same kind, found among the Kirghiz, is also connected with the earlier Golden Age. On the top of Mt. Mustagh-at a is an ancient city built in the days of universal happiness. Since that time ceased there has been no intercourse between its inhabitants and the people below. A happy, and the fallen race of men (Sven Hedin, Through Asia, 1895, i. 221). Instances of divine beings descending to earth and thus losing their immortality have therefore been borrowed from the Hindu, Tibetan, and exemplify this conception, which is also met with in the myths of various tribes of the Algonquin stock. A divine woman, for some reason which varies in different myths, but which is occasionally said to have been disobedience or immorality, is banished from heaven to earth, and falls on the back of the turtle, who then sends another animal to earth (Brinton, American Hero-Myth, 1882, p. 54).

5. Myths of the Fall in a former existence.—This latter notion of a fault committed in a higher state leading to banishment to the earth is the basis of those myths and beliefs which trace man's Fall and his present misery to his wrong-doing in a previous state. Metempsychosis, wherever it is held in an ethical form, presupposes the idea of a Fall. In Hindu belief, the souls which departed from the primal essence were condemned to existence in the body within a purgatorial world, and each life is now conditioned by its conduct in the former. The misery of life is thus a direct penalty for the primal Fall as well as for the sins of all succeeding existences (Manu, vi. 77, 78). This idea of human life as a purgatory, whether borrowed from Egypt or not, appears sporadically in Greek religious and philosophical thought. Pythagoras and his school postulated the guilt of the soul in a higher state as the reason why it was placed in the body, and its divine and its imprisonment in the body, through one or several existences (Zeller, Pre-Soc. Phil., 1881, I. 48), and Empedocles taught that mundane existence was the doom of souls hurled earthwards from the heaven of which they had proved unworthy. This, too, according to Plato, was the Orphic doctrine—the soul expiated in the prison of the body the sins it had committed in a previous existence. Plato himself, while sometimes teaching the belief in a Golden Age, lays stress on pre-existence and a Fall in that earlier state, due either to indolence, weakness, and perverseness, or to a wrong choice of the destinies of life (cf. the Ashanti myth above, 2 (5) ; Phaedr. 246 ; Repub. x. 2. 614). A similar doctrine of the Fall appears in Philo and in Origen, and has been upheld by later Christian philosophers, e.g. Müller in his Christian Doctrine of Sin, Eng. tr., 1883 (see PRE-EXISTENCE).

6. Myths of a divine Fall.—A more profound thought is reached in the occasional myths which tell of the Fall of a god. In most of these myths there is a concern to show the sin is conceived as almost more than human—the first man is sometimes a creator, or, when he dies, he becomes king of the dead. It has been seen, too, how immortal man in order to become the first of men through descending to earth and eating its fruits (see ii. i (3), 2 (2)). Wherever dualism prevails (and it runs like a coloured thread through the stuff of most mythologies), the divinities are usually subject to the attack of evil beings—titans, giants, wicked divinities, serpents, etc. —and are frequently defeated by them. Though this defeat is not, strictly speaking, a Fall, yet it shows a strain of weakness in the gods, such as is also adumbrated in the thought of an immutable fate to which the gods must be subject, e.g. the divinities of Scandinavia could not avert the death of Balder. Again, that strain of weakness is seen in the idea, a prominent in Zoroastrianism, and which occurs even in savage mythologies, that the works of the good creator, and especially man, are subject to, and frequently overcome by, the attacks of the evil divinities. Though not a Fall of a divine Fall exist, they occasionally show how it affected for the worse the lot of man. In a Hindu example, Brahmā was seized with a guilty passion for his daughter (2 (2), Tougou, Hindu, Tibetan), and exemplify this conception, which is also met with in the myths of various tribes of the Algonquin stock. A divine woman, being
proud of his works and wishing to make himself equal with the supreme Being, he was sunk by him in matter, followed by all his creatures (B. Con-
stant, De la Religion, iv. 116, 117). A genuine example of the myth exists in the Tezcatlipoca, and their brethren were gods in heaven and passed their time in a rose-garden until they began plucking roses from the great rose tree which grew therein. Therefore Tenoch-tecutli, in his anger at their action, hurled them to earth, where they lived as mortals (Brint-
on, Amer. Hero-Mysfs, p. 95). Two curious Scandinavian myths in the Edda, both ancient, and the first of them certainly dating from heathen times, suggest a fall of the gods. In the Völuspá we read, 'The Æsir met on Ida's plain: They altar-steads and temples high constructed. Their strength they proved. All things tried, Furnaces established. Precious things forged; Formed tongues, and fabricated tools; At tables played at home; Joyous they were; To them was naught the want of gold. Until there came Thurs-maidens three, All in one case it is a separate event. Finally here is suggested weakening of the gods and an end of their happy state on Ida's plain, through the seduc-
tions of these female giants, just as the seductive Paimon (or a serpent) caused the fall of man. (Dasent's Seemund, 1866, 3’ Völuspá,’ stanza 7 and 8). The other myth, which occurs in ‘Bragi’s telling, relates that Loki was seized by a eagle (a giant in that shape) who would not let him go till he took oath to bring to him Þunor, guardian of the gods' apples of immortality, out of Asgard. Loki agreed, and hurred Þunor into a wood under pretence of comparing her apples with others which he had found. There he was seized by the giant, who fled with her. Loki would have been punished by the sorrowful gods had he not agreed to go and seek her in Jötunheim. Thence he brought her, pursued by the giant, who was slain by the gods (Dasent’s translation of Edda, p. 86). The seduction of the goddess is involuntary on her part, but the story resembles Loki’s final revolt against the gods, of whom he was one, as a result of the giant nature which was in part his.

A war between two classes of supernatural beings, and the utter ruin and banishment of one of them to a lower state, is the subject of various myths in the gods and Titans. Scandinavian myths of gods and giants: Hindu, gods and demons, etc. (for other examples, see Baring-Gould, Legends of OT Chor., p. 51). Some such idea, connected with that of a fall of higher powers, underlies the various versions in the Bible, where the fall of the angels, so much developed in Rabbinical and Muhammadan lore (cf. Book of Enoch), while it forms a central doctrine in various Gnostic systems and in Mithraism.

The Fall and the Flood. In some cases peoples who have a myth of the Fall have also a Deluge-myth. Sometimes this is directly brought into connexion with the Fall as its punishment; in other cases it is a separate event, thereby resulting as the punishment of further human wickedness. Or, again, it is merely a catastrophe ending one or more of the successive world-ages. In some myths all three stages are supposed, and a new race of men is formed; in others, a few survivors who re-populate the earth. Andamanese myths are examples of a flood as a direct punishment of a Fall (see ii. 2). The idea that men at first lived in happiness and to a great age, until they became wicked and a flood came and swept them away (de la Borde, Reise zu den Corasien, 1864, p. 390).

See DELUGE: Baring-Gould, Legends of OT Chor., i. 116–153; Lenormant, Les Origines, p. 382 f. iii. COMPARATIVE STUDY OF FALL-MYTHS.

1. With few exceptions, the surveys of Fall-

myths have been uncritical. Anxiety to prove the truth of the Biblical story of the Fall has led several writers to find echoes of it in myths and legends from all parts of the world. It was enough for them to show that Quetzalcóatl, the Tezcatlipoca, and their brethren were gods in heaven and passed their time in a rose-garden until they began plucking roses from the great rose tree which grew therein. Therefore Tenoch-tecutli, in his anger at their action, hurled them to earth, where they lived as mortals (Brinton, Amer. Hero-Myth, p. 95). Two curious Scandinavian myths in the Edda, both ancient, and the first of them certainly dating from heathen times, suggest a fall of the gods. In the Völuspá we read, 'The Æsir met on Ida’s plain: They altar-steads and temples high constructed. Their strength they proved. All things tried, Furnaces established. See DELUGE: Baring-Gould, Legends of OT Chor., i. 116–153; Lenormant, Les Origines, p. 382 f. iii. COMPARATIVE STUDY OF FALL-MYTHS.

1. With few exceptions, the surveys of Fall-
serpent or dragon became the symbol of darkness or evil (as in the myths referred to above), or elsewhere remained the enemy of man, keeping back the most valuable treasure, water, from him. The mythical, animal, and human nature of the serpent would easily make it the vehicle of man's mythic fancies, sometimes his fabled enemy, but also possessor of a higher wisdom and occasionally maker of his happiness. Genesis may have had in the earlier forms of the story (see Barton, Sem. Origins, 1902, p. 93). On the other hand, the myths which speak of woman overcoming the serpent by being confused with the Biblical story in its present form—a woman tempted by a serpent to evil. The latter, however, may have some connexion with a whole series of myths and Mārechen in which the serpent has a mystical relation to woman—her lover, seducer, or husband. These stories arose from the general animistic and totemistic idea that men and beasts had much in common, and that the qualities of the one were reflected in the other. But the persistent appearance of the serpent rather than other animals in such stories may have some other significance besides, and, taken in connexion with a series of myths showing that the serpent or the fish is sometimes having been bitten by a snake, that significance is possibly phallic.

Ch. Schoebel, in Le Mythe de la fémme et du serpent, 1878, seeks to show that the story of Genesis and its supposed correlative true friends, have a phallic significance. As soon as man, until then bi-sexual, became two, male and female, the serpent was thus having been forbidden. It is man thought to himself on a level with the creator and to equal his creative power by the force of the flesh. This fall: hence his shame and also his punishment.

LITERATURE.—Most writers on the subject have written either from the apologetic or from the destructive standpoint—to prove or disprove the truth of Genesis. Their studies are useless and forced. In the best commentaries on Genesis some parallels are usually cited, but frequently these are exaggerated, especially that from the Bundahish, where it is doubtful whether the demon had the form of a serpent, as is asserted. The reader may refer to Kalisch's, Dillmann's, and Driver's Comm. on Genesis. C. Geikie, Hours with the Bible, London, 1851, vol. 1, ch. 2; S. Baring-Gould, Legends of OT Characters, London, 1871, vol. 1, ch. 4; P. Lenormant, Les Origines du Livre de Genèse, Paris, 1868, vol. 1, ch. 2; B. Constant, De la Religion, Paris, 1882, p. 46; E. Cowell, Christ and Other Moderns, Cambridge, 1882-1888; F. R. Tennant, Sources of the Doctrines of the Fall and Original Sin, London, 1903, ch. 2; and also other authorities cited in the article.

FALL (Muslim).—The Fall (hubbit) of Adam and his wife from Paradise is repeatedly epitomized in the Meccan and Medinan narratives, with slight variations. The temptation is ascribed to Iblis (Djibablos, the D being mistaken for the Syriac sign of the genitive), determined to injure Adam, before whom he had declared to proscribe himself when commanded to do so. Adam, intended by God to be His deputy on earth, is told that he and his wife are to dwell in the Garden, and eat thereof where they will, only not to approach the tree, "as a time when their quality was identical. But the persistent appearance of the serpent rather than other animals in such stories may have some other significance besides, and, taken in connexion with a series of myths showing that the serpent or the fish is sometimes having been bitten by a snake, that significance is possibly phallic.

FAMILY (Primitive).

Primitive (E. N. Fallaize), p. 716.
Celtic (E. Anwyl), p. 728.
Egyptian (H. R. Hall), p. 783.
Greek (A. Fairbairns), p. 735.

FAMILY (Primitive).—1. Rudimentary forms of family life among lower animals.—Traces of the generally recognized permanent, of parents and offspring usually understood by the term 'family' are found among the lower animals: among birds, companionship of male and female after pairing, the sharing of labour in building the nest, of incubation, and of the care of the young while they are unable to look after themselves, present close analogies to the essential functions of the human family. On the other hand, among some mammals, especially the non-hunters, a protection which the family organization would demand from the young is lacking, and the offspring sometimes become, or would become but for the protection of the mother, the prey of the male. The quadrupeds, especially the anthropoids, in the relation of the parents to one another and to their young, seem to approach more nearly to the human type. It is recorded of the gorillas that they move about in bands consisting of females and one male, while the male builds a nest for the female and sleeps at the foot of the tree to protect her and the young at night. The chimpanzee is said to act in the same manner, and the evidence (Wallace, Malay Archipelago, London, 1869, ii. 283) points in the same direction in the case of the orang-utan.

The essential features which make it possible to speak of family life among the lower animals are the provision for the needs of the female and of the young, and a protection of both the female and the young, by which the family becomes an organization directed towards the preservation of the species. The human family is organized upon the same basis, the chief difference being the greater permanence, due in the first instance to the longer period during which the children require the care and protection of their parents.

2. Functions of man and woman as members of family group.—(a) Man.—Subject to certain qualifications, it may be said that among primitive races the functions of the senior members of the family are defined. The duties of the male are to protect the female, to supply her with a habitation, and to provide food, sometimes by agricultural labour, more often by the chase. Instances may be quoted of the views of primitive peoples on these points.

The Patwin of California held strongly that it was the duty of the father to support his family (Powell, 'Tribes of California,' Contributions to A. Amer. Ethnology, Washington, 1877, iii. 222). Among the Iroquois, during the first year of marriage, the husband, the wife, and the child were subjected to the care of his wife's mother, and subsequently were shared equally with her (Herries, Travels through the Canadian, London, 1857, p. 230). Admiral Fitzroy (Voyages of the Adventure and Beagle, London, 1839, ii. 152) records that among the Fuegians a youth who desired to marry must show that he was capable of supporting a wife by hunting and fishing. Among the Botocudos, girls were married at a very early age, but after marriage remained with their father until middle life; but, according to Cabot, when required to support his wife (J. von Tschudi, Reisen durch Südamerika, Leipzig, 1866-69, ii. 283). Among the Kurnal, a man was required to support his family with the assistance of his wife (Howitz, Festa, Raininari, et culti, Leipzig, 1869-70). In some cases it was considered the duty of a man to support and protect his wife, and the absence of the wife to obey her husband and to wait upon him and upon any visitors (Brown, Polynesians and Melanesians, London, 1910, p. 43). In Thurn records that among the Indians of British Otago a bridegroom could do a day's work and support a family before he was allowed to marry (Indians of Otago, London, 1886, p. 175). Prowess in fighting as well as in hunting was also required. The head-hunting Babos of Borneo, as well as the Nagas, make marriage depend upon the number of heads taken by the aspirant (Bock, Headhunters of Borneo, London, 1881, p. 216; Dalton, Deserip, Ethnol. and Ethnol. Sav., London, 1876, p. 49). Among the Kafirs and Bechuana of S. Africa, the bridegroom must have killed a nilgossor (Livingstone, Miss. Travels and Researches in S. and E. Africa, London, 1857, ii. 147). In Burma, failure to support constituted a ground for divorce (Fytche, Burma Past and Present, London, 1878, ii. 72). The obligation to contribute to the support of a wife was even continued after the marriage had been dissolved; and, when the husband died, the duty of supporting her devolved on the husband's relatives.

(b) Woman.—The provision towards the support of his wife and family made by the male parent naturally varied according to the character of the community. Where the staple of life was obtained by hunting and fishing, the provision of food fell largely to the father; and among pastoral peoples the care of the flocks and herds was also his duty. Agriculture originally fell to the lot of the woman, as is still the case among the majority of the Bantu peoples of Africa. In Melanesia, where both men and women work in the plantations, the duties of women are not strictly defined. The woman was also responsible for such domestic duties as the collecting of fuel, the cooking, the making of pots, weaving, and the care of the children. The position of the woman was not safeguarded by the complete subjection to her husband of the Australian gin to the supreme authority of the woman in the long house of the Senecas. The customs attendant on exogamy and the tracing of descent through the mothers tended to place restrictions upon the power of the husband, while vesting in it the woman's male relatives: but even in the exogamous and matrilinial societies of Melanesia the husband and father was supreme in authority in his own kinship group, and the wife's authority, so far as dependent on status, did not exist. In Africa, among the Bantu races, even where, as is still largely the case, matrilinial descent prevailed, the authority of the husband and father was paramount except in certain matters, in which traces of the authority of the kin remained. Among the Baganda, for instance, the wife's kin hold the husband responsible for negligence, and in the event of the wife's death, the care of the boys was under the care of their father; but in a matrilinial society of primitive type the claims of the kin cause them to pass to the care of their

}
maternal uncle, who is also sometimes responsible for their preparation for initiation. In the Torres Straits this claim is also to some extent recognized in the maintenance of the house; where the child arrives for their initiation, they are handed over to their maternal aunts for instruction and preparation (Haddon, *Head-Hunters*, London, 1901, p. 135). As a rule, however, husbands and children live with their parents until their marriage; or, in the case of boys and where the institution of a man's house is recognized, until their initiation, or attainment to the age of puberty.

3. The dwelling-place and the family.—One of the urgent needs of human existence is some form of shelter against the inclemency of the weather. The dwelling-place, as the centre which, through early habit and by custom, has come to be recognized as the gathering place for those who are closely connected by birth, has played an important part in the development of the family and of the acknowledgment of the common obligations and privileges it entails. In the early stages of human society, a camp-fire, with at most a screen of boughs or some natural hollows in the lee of the rock as a shelter against the wind, served to give warmth and comfort to a mother, her children, and their common protector. As the group increased in numbers by the birth of children and the accession of husbands for the daughters, owing to the desire for a change of scene and the prospect of contiguity, the tendency would at first be to enlarge the shelter rather than for the group to split into a number of smaller groups, each with a shelter of its own.

The Rock Veddas of Ceylon, who live in caves and rock-sheltered haunts, are descended to the Palaearctic, and the inhabitants of the Magdalenian epoch of Europe, are an example of a community stage in the development of the communal house inhabited by the members of one family or kin. The Veddas reckon descent through the mother, and the husband on marriage joins his wife's family group, of which the head is his maternal uncle, his wife being his cousin. Each group, consisting of husband, wife, daughters, and daughters' husbands, is recognized as the owner of a cave. Within the cave, however, each of the smaller groups within the kin group, i.e. the families, has a fire of its own, around which the members sit at night. No family ever usurps the place of another (Seifmann, *The Veddas*, Camb., 1911, p. 235 ff.). This represents the beginnings of the large communal houses which have been found in various parts of the world, the best known examples, perhaps, being the long houses of the New American Indians, which sheltered never more than a few kin. Among the Orang Manu of Sumatra, the head of the clan is the owner of the house of the community (Wilken, quoted by Hartland, *Primitiae Paternitatis*, London, 1910, p. 294). The communal house has reached its most elaborate form in Borneo in the Lahad too, where as many as 35 families may live under one roof, each in separate apartments, with doors opening on to a common pavement (p. 311). The largest of the communal houses of the clan found in Kioal Island in the Torres Straits resembles the Vedda cave-dwelling in internal arrangement, each family having its own entrance (Haddon, 1907).

The men's house or club house of Melanesia—found wherever Melanesian influence has penetrated, as, for example, in Fiji—in which all unmarried men live between the time when they leave their own family on attaining puberty and their marriage, is a relic of the communal house. The separate hearth for each member is a record of the distribution of the occupants in families in the earlier stages. A reminiscence of the communal house also exists among the Bontoc Igorot of the Philippines, but in this case the club house belongs to the gifted of the village. When it is realized that the secret society to which the club house belongs has in Melanesia taken the place of the social group, the tribe of which young men were introduced by initiation ceremonies which conferred upon them the status of men, and then went (with their tribe, their relation to the communal house and their position in relation to the development of the family and family life become clear. The custom in Fiji is, if a man leaves his tribe and family and returns to the club house for a lengthy period after the birth of a child, it is not his mother's choice but a ceremonial reunion to a earlier stage.

The extension of the dwelling, if local circumstances are favourable, is an obvious method of accommodating an increase in numbers, as well as the necessity for imprinting upon the children the importance of the kin. The Pueblo value daughters more than sons, for the reason that they add to the power and importance of their family by the introduction of their husbands into the group; instead of the newly married pair seeking a home of their own, more apartments are added to the already elaborate cliff-dwellings characteristic of the case. As this happens, the communal house, the communal house, however, is not the only one, indeed, the more usual result of the expansion of the family or the kin. Its construction presents no material difficulties for the parents until their marriage; or, in the case of boys and where the institution of a man's house is recognized, until their initiation, or attainment to the age of puberty.

FAMILY (Primitive)

Africa, the free wife stayed in her own village; her husband did not necessarily remain with her, as the men, especially the Angoni, spent much time in hunting, in which may also be unusually on traditional occupations. He had more than one free wife, he divided his time between their different villages. The men also had slave wives, who either followed the husband in his village, or, in the sense of a group, took up residence permanently with his chief wife in her village, his slave wives followed him, lived in his wife's hut, and acted as her servants (Werner, Eiknol.

5. Early form of the family.—Widely divergent views have been held as to the origin of the family. One school of anthropologists, of whom Morgan, McCleland, and Bachelot may be taken as the representatives, have maintained that in the earliest stages of the development of human society the family as such did not exist. They hold that within the group individual marriage was non-existent, and that the widely used custom of tracing descent through the mother, the close connection existing between the mother's brother and her children, and the nomenclature of primitive relationship point to a state of society in which primitive uncertainty of paternity was a rule, and the children were regarded as belonging to the group and not to a particular family. The family, it is maintained, is a comparatively late development, which has spread within the larger group. On the other hand, it has been held (Atkinson-Lang, The Primal Law, London, 1903) that the primitive horde was a single family, from which the young males were driven by the jealousy of the elders, and as such it had attained to maturity. Westmarck (Hist. of Hum. Marriage, London, 1891, p. 40 ff.), arguing that man was not originally gregarious, largely on the ground of the difficulty of obtaining an adequate food supply, quotes a number of instances in support of his view that the family and not the group is the original basis of society, and that, even where a group of a few families are found in association, they tend to separate in times of stress.

The Wild Veddas of Ceylon, one of the lowest races in the scale of social organization ever described, were said by Frohlich (Amm. Anthropol., London, 1848, p. 146) to live in single pairs, building their huts in trees, while the Wild, or Nilugas, Veddas in Ceylon live in 4 to 5, new ser. (1863), 2 pairs in pairs or families in caves. Seligmann (p. 62) says that the social group among these Veddas usually consists of the father, mother, children of both the sexes, and sometimes of the father's daughter and daughter's husband. The Fuegians recognized no relationship outside the family (Stir- B JM, 1881, p. 193). The Tasmanians, (H. B. von Temichl. ii. (256), the Botocudos of Brazil recognized the family as the only tie, while the same thing is stated of other Indian tribes of Brazil. Among the Bushmen, for instance, each family is said to dwell in its own solitary hut (H. W. Bates, The Naturalist on the River Amazon, London, 1868, ii. 370). Petrow records of the Esquimaux of Alaska that they live in families or groups of families without cohesion, and that a young man will wander away from his family on a hunting expedition, marry, and settle, without regard to his native place of origin, or his original group (Population, Industries, and Resources of Alaska, Washington, 1884, p. 135). The Australian tribes of Victoria used, in times of scarcity, to break up into their different families, the head of each betaking himself to the last, which had been carried by his father (Brough Smyth, Tribes of Victoria, London, 1878, i. 146). Schoolcraft, in his account of the Indians of North America, speaks of families becoming widely separated in times of scarcity.

It would be possible to extend the number of quotations from the observations of travellers to show that the family is widely recognized among primitive peoples as the social unit, whether the group consists of one or more families. When, however, the position of the individual and its relation to its social environment are examined, it must be conceded that the evidence, even if it does not go to uphold the group theory of primitive society in its entirety, does demonstrate in many cases a transition from one fundamental basis of social organization to another. The group, in the earlier form of social organization, has undergone a change of composition. It is only in the later stages that the family, in the strict sense of a group, has become the social unit. But the importance of the kin in the early stages does not involve a negation of the existence of a rudimentary family in the strict sense. At this stage, however, certain privileges and duties connected with the disposal of property and the right to control the lives of its members, which later are recognized as essential features in the organization of the family, are vested in the blood relatives or kin. The substitution of patrilineal for matrilineal descent, which would seem at one time to be another to have existed among almost every people, has been accompanied or preceded by a re-adjust-ment of the organization of the social unit; and from this re-adjustment has evolved the family of civilized type, of parents and offspring, with full recognition of relationship on both sides of the family.

6. Relative importance of father and mother, in the early stages of development.—The prevalence of mother-right and the organization of society on a basis of female kin, is best illustrated in the kin through the mother, while ignoring the father and his connexion with his children, whether it existed in its logical entirety, as has been inferred from the evidence, or not, necessarily renders the origin of the family obscure. The marriage customs and social organization which accompany matrilineal descent, as well as the use of primitive terms of relationship, have led some writers to deny that the father in the earliest stages of primitive civilization had any place in the family group at all. There is ground for maintaining that the physiological facts of paternity were not fully recognized, even if in the earliest stages of human progress they were recognized at all. The beliefs as to conception and pregnancy current among the Arunta of Australia, as reported by Spencer-Gillen, appear incompatible with any such recognition. A part from this, the importance of the mother's brother, upon whom devolved the duties which at a later stage fell upon the father, shows that it was he, and not the father, who was regarded as head of the group. But the position of the father does not begin to be recognized at a very early stage, although he does not attain his full share of family authority, rights, and duties until the patrilineal stage of social development is reached. At the same time, in the stage prior to paternal authority, the existence of a small group of persons, closely related, living more or less in close association, and recognized as forming a unit within the kin to which the term 'family' might be applied loosely, is not only highly probable, but is clearly indicated by the fact that the functions which at first fall to the kin are gradually assigned to the mother's brother, and not to the kin as a whole. Upon this and the mother's brother fall all the rights and duties which under fully recognized father-right fall upon the father. He is the nearest relative of his sister's children, he is responsible for their well-being, he provides for them, and is most important of all in a primitive society—they inherit his property.

The preponderating importance of the mother in primitive social organization is shown by the fact that in the earliest stages the children belong to the mother's kin and not to that of the father. In a society in which mother-right is the rule, status depends upon the mother; the status of the father...
7. Position of the husband and father as a relation to the wife's kin or family. Any further stage in the development of the family is reached when the father, instead of being a temporary visitor, lives with his wife's kin.

The Orang Maman of Sumatra are organized into a subu, or clan. Each family of the subu lives together, and, as no members of the same subu can marry, husbands and wives are kept from the same subu, but, when they do, the man goes to the woman's clan. His position, however, as regards authority is not affected; the children of the marriage are called the wife's children, the husband's son.

The women of Jhililay had the right to dismiss their husbands at will. In reference to Saracen marriages he also quotes Amissan Marcellus (iv. 4), who says that the wife gives her husband a tent and some food. Robertson Smith interprets this as meaning that she provided her husband with a home, and that he was under an obligation to fight for her kin (Kinship and Marriage, Lond., 1903, p. 79 f.).

Among the Syntegen of Assam, although the husband only stays with his wife and his mother's house and himself lives with his own mother, yet, if he dies, his widow keeps his bones after his death, on condition that she does not remarry. If she marries again, the man's children have no claim to his estate, but may build a house in the village where he may never enter, and among the neighbouring Khasis, however, the husband goes to live with his wife in her mother's house, and may after the birth of one or two children remove her (Gurdon, The Khantis, London, 1907, p. 82). A similar juxtaposition is found in Sumatra among the Menangkaben Malays: the husband is only a visitor, and each party lives in his or her birthplace; but among the Tag Logweeng the husband goes to live with the wife, or may build her a house in the settlement of her clan (Wilken, quoted by Hartland, ii. 108 f.). Here the children belong to the mother's clan. A further development is also found. Lower down the river, among the mother's clan, residence is the stronger, whether he is the clan of father or of mother; and descent follows residence.

FAMILY (Primitive) 719

is of no consequence. In the Congo, even legitimacy is of no consequence; the fact of birth gives the child status as a member of his mother's family (Darinskii, op. cit., i. 218). Among the Fantis of the Gold Coast, it is stated, the father is hardly known or is disregarded. Although it is not probable that among many peoples at the present day the father is absolutely unknown to his children, numerous instances are recorded where he does not live regularly with the mother. In the Torres Straits Islands men of one island frequently marry women of another; these women stay in the island, and the husband returns periodically to his village to cultivate his own land (Haddon, 100 f.). In early forms of polygamous union a man may have wives in several villages, the custom being that the wife should not dwell in the husband's village. At this stage the family, as an association of both parents and their offspring, can hardly be said to exist, and, as already suggested, its place is taken by the unit consisting of mother and offspring more closely associated with a male head—the mother's brother—within the kin.

8. The blood-feud. The blood-feud (g.v.) throws much light upon the early stages of the evolution of the family, particularly at the point at which it passes from an organization based upon kinship to one founded upon the marriage tie.

The supreme influence of the relationship traced through the female line is shown in many customs and practices. In the Caucasus, whereby, if a man murdered a brother by a different mother, the blood-feud arose between himself and the surviving brothers born of the same mother as the murdered man. In Daghestan the murderer of a wife paid blood-money to his own wife's brother. In some cases, however, the children as well as to his wife's relatives (Darinskii, quoted by Hartland, i. 372). A number of customs among various tribes of Africa are peculiarly significant in this connexion. A husband among the Kushe, and did not avenge his wife's death, departs with the daughter of the man who murdered in his presence; this duty fell primarily on his wife's brothers or her eldest son. Nor was the murderer necessarily responsible in case of his own violent death, while the duty of avenging his children's death should beThis is a question that has been discussed from the earliest times; and those whose connexion has been brought into existence by marriage.

9. The power to pledge the members of the family. A similar conception of family ties and the right of the husband to his wife's brother, or uncle, the mother, not the father, is responsible for the children's debts.

10. The bride price. The institution of a family independent of the bride's parents is not infrequently made to depend upon payment of the bride price, and in these cases the line of descent of the children is changed when the conditions of the marriage bargain have been fulfilled. 'In the Laung Sermata group of the Moluccas, the payment of the bride price gives the right to reside with the wife, but does not entitle the husband to carry her off. Bat on the islands of the Ambon and Uliase, on the payment of the bride price, the bride is handed over to the bridegroom, and she is conducted to his dwelling. Side by side with this custom there exists another form of union. Proposals of marriage having been made by the man's relatives, if he is accepted, he establishes himself in the bride's dwelling, and becomes proprietor of the messing of his wife's parents, acting the part of the secret lover. All children belong to the mother's family. In Wetar, in the same group, although the married pair live at the wife's home until they get a separate dwelling, payment of a bride price secures his children to the husband. On the island of Serang, when the wife enters her husband's family, payment of the bride price is followed by constant gifts to
the wife's parents, to keep alive his right in his wife and children (Riedel, quoted by Hartland, ii. 27). Torres Straits Indians, as the birth of the first child of each successive child involves payment to the wife's parents. On the other hand, in the islands of Mab- ning and Badu, although the husband took up his residence with his wife, he paid, and the bride price was to be paid, to her father or her family, except that in the case of the re-marriage of a divorced woman part of the compensation given to him was handed over to him in cash (Haddon, 159, 161). Thus we see how different systems exist side by side on the Walli-bela Islands. Here, in the case of the man who lives with his mother's family, payment of the bride price gives him the right to marry her as children. If his mother had formally been handed over to him in the first instance. Marsden (Hist. of Sumatra, London, 1811, p. 225 ff.) states that, in Rejung in Sumatra, on payment of the bride price, the woman became the slave of her husband; but, except in case of a quarrel, a small part of the bride price was never paid, in order to keep up the relationship and the family interest. The eldest child of the husband becoming a member of the bride family was also found. In this case he and his wife might emancipate themselves by payment, but this was made difficult if there were daughters, as their value belonged to the family. Thus the practice, according to Titford (ib. xxxv. 225), is quite interesting, if we may say so, custom by which, for every twenty-five dollars in the bride price, the parents have to support the bride for one year, the husband giving her only a small monthly present (Hargrave, The Achehnes, Leyden, 1906, i. 295). A right would here seem to have been transformed into a duty. The Belugene of Timor have a double system; the home and the children follow the marriage price, but this is payable by either the man or the woman, the descent being determined accordingly (Wilken, quoted by Hartland, ii. 57).

11. Residence. Throughout Africa, among various tribes, residence with the wife's family is common, whether for a shorter or a longer period, among the Dinkas the period of residence ended with the birth of the first child (JAI xxiv. 1904, 151). Among the Bambala a man will be required to fight for his father-in-law's village against his own (Titford, ib. xxxv. 1905, 399, 410). Both Bushmen and Hottentots required the husband to reside with the wife's parents; among the former it only applied to those who go into trade. When among the S. Americans, among the Bakairi (Fritsch, 445), the husband worked in the father's clearing, and on the death of his wife he was bound to marry his wife's sister. This custom was common elsewhere. The Luaga of the Paraguay Chaco sometimes compromised in the matter of residence, the man and wife spending half their time in the homes of the parents of each (Grubh, Indians of the Para-gayan Chaco, London, 1904, p. 61). The husband among the Aravak worked for his wife's brother (In Thurn, 186, 221); when the family became too large to be accommodated in the husband's hut, the wife was asked to build a hut for herself near by. When the head dies, the several fathers separate, and build houses for themselves, thus each forming the nucleus of a new settlement. Settlements of the same kind are found in Melanesia.

In Oceania the father's kin is, for the sake of the reference has already been made to the absence of influence of the father in the primitive family, and the vesting of parental rights over children in the mother's kin, and especially among the Australian tribes the mother's. The gradual recognition of the father as the person responsible for the well-being of his children, and as the holder of the rights to dispose of them and to exact obedience from them, has only very slowly ousted the older conception—by stages which are fairly clear.

The customs of the people of the Lower Congo may be taken as typical of an early, if not of the earliest, stage. There the uncle, who is addressed by the children as 'father,' exercises paternal authority over the children of his brother, the father is without voice over her of her child. If the husband and wife are separate, the children go with her as belonging to her brother. The children, as they grow up, go to live with their uncle (Benity, Pioneering on the Congo, who, 1900, ii. 389, and H. Kingfisher's Travels in W. Africa, London, 1897, p. 224). Among the Bambala in the family is beginning to develop its form; there are two types of marriage. In the case of child-marriage, or, more properly, child-bridal, the boy lives with his chosen bride's parents until he is of marriageable age, and any children of the marriage belong to the maternal uncle. In the case of marriage of the first child, the bride price is paid to the father or maternal uncle, and any children then belong to the father. But a father has little authority, and any property he himself has is inherited by his eldest son (Haddon, i. 189), if he has no son, then any property he has over no power over his children, the case is different when the mother is a slave; among the Kunbunda they are reckoned his children, and can inherit from him. The customs of some negro tribes exhibit instructive peculiarities. Among the Ewe of Anglo in Upper Guinea, the nephew accompanies the uncle on trading journeys and acts for him, accounts to his uncle for all that he takes, and receives a share of the profits. But it is the uncle and the father together who negotiate for his marriage; and the father is also consulted as to the marriage of his daughter, and receives a share of the price (Ellis, Eve-speaking Peoples, London, 1890, p. 207 ff.).

Among the Fanti a further step in the organization of the family has been taken. The Fanti are patrilinial; the head of the family is usually the eldest male in the line of descent, and he is compoun dwell not only the younger members of his line of descent, but also his own wives and children. His power is limited, however, by the fact that he is not a despot, and the consent of any members who have left to live with their maternal uncle are out of his power (Sarbah, Fanti Customary Laws, London, 1897, passim). Among the Kukana of Abyssinia the right of the father has been extended to cover the son's earnings, but not his life and liberty, which remain in the power of the maternal uncle (Munzing, 477 ff.).

The position of the mother's brother and his relation to his nephew are of great importance in Melanesia, and especially in Fiji. But even in this region has it begun to give way to a recognition of the father's head of his family. On the island of Muralug, Torres Straits, patrilinial descent is recognized, but the bride's brother still arranges the details of a girl's marriage, although the father receives the bride price, and his consent to the marriage is not required. But the father exchanges a daughter for his promised wife; and, if he has no sister, he gives a daughter of his maternal uncle (Rep. Camb. Exposed. Torres Straits, v. 145, Camb. 1910).

Among the Polynesians the position of the children is very slight, but it rests with the father, so far as boys are concerned, until the time of initiation, when it is vested vaguely in the elders of the tribe. In the case of girls, the
authority is concerned chiefly with the right of betrothal, while after marriage the power of the husband, who usually also has control of what exists is vested mainly in the girl's or her mother's brother. Among the Dieri (Howitt, *Native Tribes of S.E. Australia*, London, 1904, pp. 177, 167, 195, 215, etc.), the mother, after the death of the mother, who acts with the concurrence of her brothers. The Wallaroi exchange their sisters without the intervention of their mother.

13. The inheritance of power and property.—The gradual growth of the feeling of solidarity in the family as opposed to the kin, i.e. in the unit in which the relation of father to offspring is more potent than the connexion which is traced through sister or mother, can be seen in the customs connected with the disposal of power or property. Where the feeling of kinship is predominant, at a man's death his property would be divided among the members of his kin, with whom he was connected through his mother. The "potlatch" of the Haida of Charlotte Island in N. America, to which the whole kin contributed or in which they shared, is an instance of an analogous character, which shows the originality of the connexion to personal property. A parallel instance may be quoted from Samoa, where all the relatives contribute to the dower of the *tapuau*, or village maid. As the connection of wives with the kin increases, it becomes generally recognized that the direct heir is the sister's son rather than the kin as a whole. At this stage of development it is usual for the chieftainship to be elective, and the tendency is for the honour to fall on the wealthiest or to the one who is possessed of the greatest amount of traditional knowledge. A further stage is reached when a man's affection for his own children is not sufficient for him to endeavour to break through this restriction. The evidence from Melanesia is of importance in connexion with the evolution of the family, as it offers numerous examples of a transition from one set of customs to another. The peoples in the various islands are divided into exogamous clans, and for the most part trace descent through the mother; husband and wife belong to different sides of the house, and neither at marriage passes over to the side of the other. It is clear that at one time the heir in all cases was the nephew. In Bogotó the chief is the head of the predominant *kema* or clan. But, it is seen, a change is becoming predominant, because a chief, in order to secure the chieftainship to his children, transfers what he can of his own property to his sons, who are not of his own kin (Cochrington, 32ff.). Property is frequently transferred to the son, or used to secure the son's advancement in the club house during the father's lifetime. In the New Hebrides, the chieftainship tended to become hereditary, as the chief handed on his traditional knowledge to his son. At Motu the headship had become hereditary. In the case of land a distinction was recognized. Land in long occupation, which, it would be assumed, had originally been cleared by the kin, would descend to the sister's son, but land cleared by a man himself—a task in which the sons would assist—would descend to the children. Further, this land would continue to descend from father to son; but, should the fact of its clearing by an individual, and not by the kin, be forgotten or overlooked, it would descend to the nephew. Trees, in which property was recognized as apart from the land, naturally passing to the planter or on that of another, also descended to the sons. Strictly speaking, personal property was inherited by the nephew, but might be secured to the children. Another stage would be, when the children were hidden in the owner's lifetime for the benefit of the children; in Florida a canoe might be given to the son by the father's direction; or the direct heir in a tribe. If the child, however, was regarded as a vessel, his interest in the land and personal property might be inherited by this method.

14. Conclusion.—A general review of the evidence relating to the inheritance of the family—considered around which in its various aspects much controversy has arisen—would suggest that many of the theories which have been put forward have been based upon superficial observations and imperfect evidence. Early travellers, and even the men who have seen much that belonged to the civilized conditions with which they were familiar, while by the use of ill-defined terms of relationship, which did not correspond with the native connotations, they have misled those who relied upon their evidence. If the precise meaning of a group consisting of father, mother, and offspring is to be attached to the term 'family,' it must be recognized that in the early stages of civilization the family as a group, though not necessarily non-existent, as has been maintained, is not so closely knit an organization as it becomes at a later stage. The economic and social factor in the production of material comforts and utilities, as a source of the accession of strength from outside, and as the mother of future members of the tribe, was recognized at an early stage; and this accounts largely for the fact that many of the functions of the family of which the father was recognized as the head in a later development were vested in those related to the woman by blood—at first the kin as a whole, later the smaller group within the kin consisting of her immediate male relatives, or, using 'family' in a looser sense, the family connected by blood ties. It is only by gradual stages—through the bride price, the compensation, whether it be the husband's service for his life or a term of years, the exchange of another woman (a sister) for the bride, the loss of all or some of his children, or a payment in goods or money, or through forcible abduction—that the husband has been able gradually to secure independence of the unit of which he becomes the head, in location, in the disposal of property, and in the ordering of the lives of its members.

LITERATURE.—This is given in the article.

FAMILY (Assyro-Babylonian).—The three meanings usually given to this word were also present in Assyro-Bab.: (1) the head of the household, with his wife, children, and other relatives; (2) a group of people connected by blood or by marriage; (3) the same, including the tribe or clan. The commonest word for 'family' is, perhaps, *qinnu*, from *qinnū*, 'to build a nest,' though this may not have been its original meaning. The word occurs in the Assy. historical inscriptions; 'his brothers, his family (qinnu-su), the seed of his father's house' (Assur. ii. 10); 'his wife, his sons, and all his family' (*qinnatu-gabti*; Assur. K. 13, 1. 8); '300 families (qinnātē) of the criminals (implicated in the rebellion)' (Tiq. vi. 31). A synonym of this word is *kimtu*, which explains (WAI ii. 29, 72-74,9) the cognate forms *kīmu*, *kimatu*, and also *kimu*, all meaning, probably, something collected—a group, or the like. *Kimtu* is the Bab. rendering of *hammu* in the name *Hammu-rābi*, which the Babylonians translated as *Kimta-rēpatum*, 'my family is wide-spread,' or the like; and of *ammu* in *Aminī-qqadu* (*qqadu*), rendered as *Kimtu-w-kēttē*, 'the righteous family'—to all appearance they did not recognize in *hammu* or *ammu* the Assyro-Bab. *kimtu*. These examples show that *kimtu* was regarded as the equivalent
of the Arab, *hamm*, or *hāmnat*, and, though it could be used in the restricted sense of *ginū*, a wider meaning was sometimes present: *kintu ṭur.qa.Pl, sainta lāqīhār, pitʿī laquntāl*, 'may I speak of my father, may I mention my relatives, may I extend my offspring' (Meissner and Rost, *Belt. z. Assyr.*, Leipzig, 1893, pp. 254, 255). *Bitu*, 'house', also became a synonym of the *abū, bābī, bābīt*, with the addition of servants and dependents (*Cun. Texts*, xviii. p. 16, 26).

All these expressions naturally belong to the period following that of the early nomadic times of the Sem. tent-dwellers. The word *abū* probably denotes the Heb. *āḇê, *āḇī, 'father', the Heb. *āḇi, *āḇîh, 'family,' with transferred meaning, implying that the inhabitants of the early centuries of population were as one large family. The character expressing *āḇîh, however, seems to be rather a large house than a tent.1

The members of a *Bab* family were the husband (*muṭa, ṣaḥārm*), the wife (*ṭāʾalātu, ḍātītu*) or wives, and their children.2 More than two wives seem to have been unusual, and, in the case of a double family of this kind, both were expected to interest themselves in their common offspring. A wife might give her maid-servant to her husband (*Code of Hammurābi, § 146; Gu 161*), but in that case he could not himself take a concubine. The maidservant thus honoured was not equal with her master, and every part might result in her being relegated to her old position, even though she had borne children. If the wife were childless, the husband might take a concubine (*§ 145*); and, if a malady had stricken the wife, the husband might marry again, but the sick wife could not be divorced (*§ 148*). That there may have been transgressions of these laws is not improbable, but they seem to indicate the composition of the families of the well-to-do. A second wife appears to have been taken sometimes to provide a servant for the first (Pinc hes, *OT in the Light*, p. 175). An ill-treated wife could claim her freedom (*Cod. Ham.* § 142).

Descent was always traced through the father, and the Sumerian, custom of mentioning the female sex first in certain cases may have had merely a mythological origin, due to the teaching which made Tiamat, or 'Mother Hubur,' the first creator. Her offspring, who overcame her, however, were all gods, not goddesses. Even in the purely Sumerian pantheon, it is nearly always the divine husband who is the more prominent, and in many cases the wife's part might result in her being relegated to her old position, even though she had borne children. If the wife were childless, the husband might take a concubine (*§ 145*); and, if a malady had stricken the wife, the husband might marry again, but the sick wife could not be divorced (*§ 148*). That there may have been transgressions of these laws is not improbable, but they seem to indicate the composition of the families of the well-to-do. A second wife appears to have been taken sometimes to provide a servant for the first (Pinc hes, *OT in the Light*, p. 175). An ill-treated wife could claim her freedom (*Cod. Ham.* § 142).

The descendants of a man were called his 'seed' (Sumer. *ühûnum, Assyr.-Bab. šarru*) or 'progeny' (Assyr.-Bab. *nummab*). To indicate his parentage, and thus identify him legally, his father's name was given, and generally, in later times, the founder of his tribe, e.g., *Marduk-naṣir-ibī*, son of *kudītu ša*; *Itti-Nabû-balātu*, the first creator. Her offspring, who overcame her, however, were all gods, not goddesses. Even in the purely Sumerian pantheon, it is nearly always the divine husband who is the more prominent, and in many cases the wife's part might result in her being relegated to her old position, even though she had borne children. If the wife were childless, the husband might take a concubine (*§ 145*); and, if a malady had stricken the wife, the husband might marry again, but the sick wife could not be divorced (*§ 148*). That there may have been transgressions of these laws is not improbable, but they seem to indicate the composition of the families of the well-to-do. A second wife appears to have been taken sometimes to provide a servant for the first (Pinc hes, *OT in the Light*, p. 175). An ill-treated wife could claim her freedom (*Cod. Ham.* § 142).

The father was supreme in his house. It was he who gave his daughters in marriage, whether

---

1 This, however, would merely imply that the Sumerians were at this time when they came into contact with the Semitic Babylonians.

2 Synonym of *šarru* are *šarrus, ṣālī, šalitn*, those of *mūṣā* or *mūṣāt* being *mūṣāt*, and *mūṣā*. Other forms are *mūṣāru*, 'husband,' and *ḥarrat*, 'wife,' (*WA* II, 30, 39-40c). The *mūṣā* itself is called *mūṣišu* in the *čarrātu* of *Tammuz;* the wife of *ū-năšši* the Babylonian Noah, is called *nāššu*, 'woman,' and *mārtašu*, 'wife.' There was apparently a distinction between a divorce and a divine and earthly spouse.

3 This is naturally a remnant of the old days of wife-purchase. For details provided by selling the consented maidens by auction, see Herod. I. 190.
the husband could divorce the wife, upon paying her divorce-money. She retained her dowry.

Whether women were looked upon with more respect in earlier (Sumerian) times than in later is uncertain, but the ideogram for 'mother,' ama (also, probably, age), is written with the sign for 'divinity' within that used for 'house' or 'dwelling-place.' This has led to the suggestion that the Sumerians thought of her as the divinity within the house, and the more likely, however, that a mother was herself regarded as the dwelling-place of some divinity—probably one of the manifestations of Zerganiitu.\(^1\) who, as Aruru, created the seed of mankind with Merodach, and was possibly conceived as acting within her (see Birth [Assyr.-Bab.], vol. ii. p. 643).\(^2\)

The mother occupied a high place with regard to the children in the family. If she said to her son (or foster-son), 'Thou art not my son,' he had to forsake the house and the furniture; and if, on the other hand, he denied his (adoptive) mother, he was first marked by having his temple shaved, and then, having been led around the town, was expelled from the house.

Wives were at liberty (no doubt with the consent of their husbands) to carry on business, and also to appear as witnesses to contracts.

In the case of the last (i.e. eldest) son, if old enough, took his place, and administered his property. Otherwise the mother became head of the family, and administered the property for her son, as is shown (Cod. Hamm. §§ 29, 25). In the death of the father, his children divided the property according to the usual custom, and engaged not to bring actions at law against each other with regard to the sharing (Pinches, 178 ff.).

To parents a son was apparently willingly given by their children. In a letter from Elmesis\(^3\) to his father, of about the time of Hammurabi, he prays that Sama'a and Merodach may grant his father enduring days, that he may have health and life, and that his father's protecting god may preserve him. He hopes that his father will have lasting well-being. In the body of the letter, he seems to have regarded the direct pronouns 'thou' and 'thee' as too stiff, so he substitutes the words 'my father' wherever he can, sometimes along with the pronoun required.

The nature of later dates, given in the history of Bumunnû and her lawsuit with her dead husband's relatives. She had married Abil-Addu-nahaans, bringing with her a daughter. The latter had an elder pair of twin daughters. They traded with the money of her dowry, and borrowed a large sum of money, with groundсолving a sum of money to complete the purchase. In the 4th year of Nabonidus she made an arrangement with her husband, and he willied all the money to the eldest daughter and the dowry and the fact that they had always acted together. The next year they adopted a son, Abil-Addu-alakına, and made known that their daughter's dowry was two murrus of silver and the furniture of a house. After her husband's death, her brother-in-law laid claim to all her property, including a slave whom they had bought. The judges decided in her favour, and decreed that, according to their tables, Bumunnû and Abil-Addu-alakına, her adopted son, were the rightful heirs.\(^4\) The lender was to receive the money which he had advanced, Bumunnû was to have her dowry back, and her share of the property be increased.

The daughter was to receive the slave (Pinches, 469 ff., 469 ff.).

The private letters belonging to the period of the latter Babylonia show the same courteous spirit between members of the same family as of old.

Anything is the letter of a father to his apparently more successful son, in which he tells him that there is no grain in the house, and asks him to send some. He prays to Bel and Sin for the preservation of his son's life. The letter tells him that his mother greeds him (ib. 450). Affectionate letters between father and son are not often found, as well as others showing that brothers were not always on good terms. Among the last may be mentioned the letter of Maraduk-nir-biš to Sultu his brother, protesting against the later's capacity to sign documents (ib. 451). A noteworthy fact is that of Nabû-nir-biš to his four brothers, protesting against the plundering of their brother Bel-špānu (ib. 452). Of the few of the later dates, that of certain of these slaves may be quoted to show in what manner the enumerations in such cases were made:

1. Uha, Nabû-nir-biš, his brother, 1 suckling (ib. 'child of milk'), 2 women—total 5; Papil-ak-hina, his brother, 1 child (4 years), 2 women—total 5; Zastu, 1 child of 1, 2 women, 3 daughters—total 5; Harrāru, the Haranite, Aman-bēl-humur, a child of 6, 3 women—total 5? (A. Smith, Keilschriften aus Assur, Leipzig, 1887-89, pl. iii. p. 63.2 and (pl. 3)).

For the family of the slave Uha (Hubašu, see Johns, Assyrian Deeds and Documents, Cambridge, 1898-1909, iii. 41).

It is to be noted that the word 'wife' (āšābītu) is not used in these cases, but simply 'woman' (sinnititu), implying either that slaves were not regarded, at least sometimes, as regularly married, or that their wives were not held worthy of the more honourable term.

From life-long association and intercourse, slaves or vassals were probably only occasionally regarded as members of a man's family; and, when the women of that class were favoured with the attention of the master of the house, this quasi-membership became a reality. The children of a free man and a slave, however, were regarded as the natural children unless he acknowledged them during his lifetime (Cod. Hamm. §§ 170, 171). The best way to ensure their freedom and inheritance of his property was apparently by emancipating the mother.

T. G. PINCHES.

FAMILY (Biblical and Christian).—Here is a social group which, in its present form, is by no means an original and outright gift to the human race, but is the product of a vast world-process of social evolution, through which various types of domestic unity have been in turn selected and, as it were, tested, until at last the fittest has survived (Peabody, Jesus Christ and the Social Question, New York, 1901, p. 134).

1. IN THE OLD TESTAMENT.—There are not wanting indications that the Hebrews, like all the other Semites, passed through the stages of exogamy, totemism, and reckoning descent in the female line. But in the earliest historical times the patriarchate was a superseded and un questioned possession. The family is constituted under the headship of the father; the woman passes over to the clan and tribe of her husband; kinship, tribal connexion, and inheritance are all determined by the man. The Hebrew historians assume that throughout the expansion of the family all the wider groups are evolved, and the attempt to derive the tribes of Israel, and ultimately all the races of mankind, by male descent from a common ancestor. The Hebrews were always remarkable for the intensity of their family feeling; the strength of their nation lay in the depth, variety, and richness of the characters which were created in their homes; and their moral and spiritual progress is largely the evolution of their domestic life. In their Scriptures the imperfect relations of husband and wife, parent and child, brother and sister, master and servant, host and stranger, were displayed with a fine healthy reality; but, we may hold permissively, slowly but surely developed an ethical ideal which is the preparation for the perfect Christian type of the family.
1. The father.—The reverence paid to the head of the family was due not so much to his superior wisdom and strength as to his position as priest of the household. His unlimited authority rested on a spiritual basis. The family was a society bound together by a number of religious observances. Even those who were among the sons of the old covenant, and who were born into it, were used to various acts of reverence, as a matter of course, its social cult, in which the worship of ancestors seems to have been originally the distinctive feature. The two forms of sacrifice (Gen 33:19, 18:21, 1 Kings 1:51, etc.) are usually understood to have been images or symbols of ancestors. The family lying-place was holy ground, and many of the famous old sanctuaries probably owed their sacredness to their being regarded as the graves of heroes. Ancestor-worship was, of course, family worship. The father was the guardian of the traditional cult, which he passed on to his eldest son, thus securing the continued prosperity of the family. According to the earliest documents, the patriarchs erected altars and offered sacrifices (e.g. Gen 12:7, 13:3, 22:2 [Abram; Gen 26:25 [Isaac] 35:7 [Jacob]). The father presided at the passover, which was a family rite, observed in the name of Jacob (Ex 12). In the days of Saul, when the tribes had long been united in the worship of Jehovah, each family, or clan (mishpōthākh), still had its saica gentilica, and every member was beholden to the tribal observances (1 Sam 25:21-28). Any one who cut himself loose from the authority of the father debarred himself from the protection and favour of the ancestral aumena. As the strength of the family was thus rooted in spiritual causes, it became a matter of sacred duty to secure its continuance. The cult must be handed down from father to son, from generation to generation. Cibility was at once an impiety and a misfortune, for it involved the exclusion of the recipient from the society of worship. When a family became extinct, it was a cult that died.

2. Husband and wife.—The position of woman is the touchstone of civilized society. In ancient Israel the husband had a proprietary right over his wife. He was the owner or master (b'atāh), she the owned or mastered (b'ēdēhā). In the Deuteron law she is mentioned as part of his wealth, along with his house, slave, ox, and ass (Ex 21:10). To betroth a woman was simply to acquire possession of her by paying the māhar, or purchase-money. A 'betrothed' was a girl for whom the māhar had been paid, while the transaction was unnecessary, all the arrangements as to the marriage, and especially as to the purchase-price, being carried through by her father or guardian. So long as this commercial idea of marriage prevailed, certain blessings marred the beauty of family life. (a) Polygyny was common. If a husband regarded his wife simply as a valuable asset, his power of multiplying wives was limited merely by his purse. It was the ambition of most men of rank and wealth to possess a large harton. In addition, any of the female slaves of the family was at his disposal as a concubine. Sometimes the legal wife took the initiative in suggesting this arrangement, as in the cases of Sarah (Gen 16:2), Rachel (Gen 30), and Leah (Gen 30). Of course, the approximately equal number of the two sexes placed limits to polygyny. In the middle classes placed inferiorly in the social scale, the probability of the practice was slightly increased (1 Sam 1), it was probably the ordinary course to have two wives. (b) A rival (1:71) was the technical term for one of the two (1 Kings 14:2), and in the OT a wife with whom the rival was not beloved and the other hated. In the nature of things, a large proportion of the poorer classes must have been monogamous. (b) The woman being an asset, he had the right to divorce her at his pleasure (Dt 24:1). He could at any time send her back to her own kin, provided he was willing to return the māhar with her. No moral stigma of any kind attached to her from the mere fact that she had been divorced. (c) While the husband was allowed a wide sexual liberty, law and custom dealt very strictly with the wife. Adultery was not only punishable by stoning (Dt 22:21), and the same sentence might be passed on the wife who at her marriage was found not to have been a virgin (22:22). (d) Being herself a part of her husband's estate, the wife was treated as of inheriting property. Her right of ownership was confined to presents. She was the mistress of the servants whom she received as personal attendants on leaving her home. But even these were ultimately the property of her husband and his heir, since they could not revert to her own kindred. (e) The husband's authority over the wife easily degenerated into tyranny, and in the lower ranks of society her lot was, doubtless, often hard, since she had not only to fulfil the arduous menial tasks of the household, but might be required to engage in field labour or tend the flocks and herds.

Various causes, however, conspired to improve the position of women, and so to elevate family life. (1) Marriage was not always an affair of the market. Sometimes the heart obtained its rights. In some places, all ranks of society, even the kings (e.g. Solomon), legislated for intercourse between the sexes, and the spirit of romance was not to be quenched. In a simple pastoral society, men and maidens naturally met at wells, and love-matches were sometimes the result (Gn 29:25-29). The Song of Songs celebrates a rustic love that is strong as death; and in kings' courts, marriages were not always conventional (1 Sam 18:18). (2) The māhar tended to lose its original meaning of purchase-money, and thus the position of the wife devolved on the husband's sister. Laban's daughters complained that he had sold them as slaves and wasted their māhar (Gen 31:25). (3) While an injured wife could not divorce her husband, she was not without redress. She always had claims on the protection and aid of her blood-relations, who were ready to defend her if she had any just cause of complaint. The women of the family were its most sacred trust, and any insult offered to them was sure to be avenged. The aim of legislation was also to restrict the man's freedom of divorce. By requiring him to give his wife a bill of divorce, it enabled her to resist and delay the transaction, and so the right of divorce was in principle taken from him, and in some cases was limited or altogether abrogated (Dt 24). If a man falsely charged his wife with unchastity before marriage (22:21-24), or if he had seduced her and been consequently obliged to marry her (vv. 25-27), he was deprived of the right of divorce. (4) The typical 'mother in Israel' was far from being the morally and intellectually stunted creature who is often met with in Eastern lands. If she was a person of rank, she was too powerful and independent to be treated as a mere chattel. If she was a woman of character and ability (Pr 31:2), she knew how to increase her husband's affection and to improve her own condition. Once again in the interest of Hebrew history centre in the action of some brave and noble woman. (5) The whole prophetic movement was towards monogamy. Gn 20:24 makes woman the helpmeet of man, and the love of one man for one woman the normal relation of the sexes. As the prophets regard marriage as the symbol of Jehovah's covenant with Israel, and adultery as that of idolatry, they think of monogamy as the ideal. Hosea was one wife to his one wife, and when he tells the story of a love which does not lose its lustre and rekindles a prodigal wife, but cherishes and seeks to redeem her. Malachi (2:10-16) proclaims the Divine detestation of divorce. The Hebrew Wisdom makes marriage problems in the family life of the nation, and there is
abundant evidence that Israel ultimately began to realize the folly and sinfulness of sexual licence on man's part as well as on woman's. Yet the law of monogamy was never placed on the Jewish statute-book; and Justin Martyr (Dial. c. Tryph. 134) states that, even in his time, the Talmudists allowed every common man to have four or five wives, while kings might still have as many as eighteen. But by that time humanity had heard the voice of the final Lawgiver. See, further, MARRIAGE AND WIFE.

3. Parents and children.—(a) To have a numerous progeny was the universal desire in ancient Israel. Children were a heritage of Jehovah, and happy was the man who had his quiver full of them (Pr 12:7). The honour paid to the wife was dependent on her having a son. If she was childless, she endured a reproach; for barrenness was regarded not only as a misfortune, but as a Divine judgment. 'Give me children, or else I die,' was Rachel's heart-cry (Gen 30:1; cf. 1 S 11). The husband who had no son dreaded the extinction of his house. His fear was probably rooted in ancestor-worship: and children would have been the only one to pay the needful dues to his manes. Therefore, if his first wife had no son, he was his sacred duty to take a second or concubine; and, if, after her, another child was born, it would be an heir of piety on his brother's part to marry his widow and raise up children in his stead (Dt 21:5).—(b) The first desire of parents was for sons, the defenders of the hearth and the main support of the home. It was the first-born son who was dedicated to Jehovah (Ex 22:27). But daughters were also welcome, and that not merely because they were required for the labour of the household, or because a mother could be assured of an heir and a successor to her throne. The sons were desired and their chastity honoured alike in kings' courts and shepherds' tents (Ps 45, Canticles, passim). There was none of that contempt for girls which has always marked many Eastern races. Female infanticide, which was practised among the Arabs, was apparently unknown among the Hebrews. —(c) The patria potestas was, however, almost absolute. Abraham's readiness to sacrifice Isaac (Gen 22), Jethro's sacrifice of his daughter (Jg 11:31-32), and the practice of offering children to molech (2 K 23:10, Jer 32:35) rest upon this authority. The father had power to cast out a bond-woman with her child or a concubine if she bore him no son (Ex 21:11), and he could sell his daughter into bond-service (with concubinage), though not to foreigners (Ex 21:11). He could not, on any account, sell her into prostitution (Lv 19:29). He might cast away a prodigal son to be stoned to death (Dt 21:15-16), or a prodigal daughter to be burned alive (Gen 38:34). Children were required to render the utmost respect and obedience to both their parents (Ex 20:12, Lv 19). Any one cursing his father or his mother was put to death (Lv 20:9).—(d) The early education of the children was mostly in the hands of the mother. The sayings of Lemuil were taught him by his mother (Pr 31). Proverbs contains many references to the instruction (ma‘asir) of the father and the teaching (torah) of the mother. Schools are never mentioned in the OT. —(e) The solidarity of the Hebrew family was so complete that grave injustice was often done to the children. The sin of Achan was expiated by the destruction of his whole household (Jos 7:21-22). It was the task of the prophets to preach the doctrine of individual responsibility. The self-sacrifice of the son 'from the soul of the father' (Ezk 18:13).—(f) The stress which the OT lays upon the family is indicated by its closing words, which contain a promise to turn the heart of the fathers to the children, and the heart of the children to their fathers. A strong and pure domestic life is to save the earth from a curse (Mal 4:4). See, further, ARTS. CHILDREN AND EDUCATION.

4. Brothers and sisters.—(a) Polygyny divided a man's family into sub-families, each presided over by a mother, whose personal jealousies were apt to be shared by the children. Talmudists regarded the full brother as the natural guardian of his sister. Laban takes precedence of Bethuel in the arrangements for Rebekah's betrothal (Gen 24:2). The sub-families were so distinct that in early times brothers were permitted to marry their half-sisters (1 Co 7:12). Tamar, Absalom's daughter, thinks that David will certainly allow her to marry her half-brother Amnon (2 S 13). Ultimately, however, such unions were forbidden by law (Lv 18:21).—(b) There was no difference of legitimacy, in the Greco-Roman sense, between the sons of wives and those of concubines. Even Jephthah, though a prostitute's son, is brought up in his father's house, and rightly complains of his expulsion as an act of violence (Jg 11:7). The claim not unnaturally made by the wife, that the son of the bond-woman should not share the inheritance with her son (Gen 21:10), was never sustained by law. The children of Israel were descended from the sons of Jacob's concubines. A man's acknowledged children were all legitimate, irrespective of the status of their mother. The bastard (mamzer) was excluded from the Jewish community, but the offspring of an incestuous union (Dt 23:1).—(c) The domestic word 'brother' had a wider application to the clan, the tribe, and the nation. Israel and Judah (2 S 19), Israel and Ishmael (Gen 16:12-13, 25), Israel and Edom (Nu 20), were brethren. But those who were not kin were not always kind. The Prophets have to ethicize the ideal of 'a covenant of brethren' (Am 1), the Psalmists to denounce the pitying of their beauty which was desired and their chastity honoured alike in kings' courts and shepherds' tents (Pr 45, Canticles, passim).

5. Master and servant.—The Hebrew slave was a true member of the family. He was part of his master's wealth, but he was not regarded as an inferior being. He was circumcised, and kept the passover. He was admitted to the family cult. He prayed to the God of his master (Gen 24:32). In the Deuteronomistic law his humane treatment is rooted in his master's remembrance that the Hebrews themselves were once slaves in Egypt (Dt 15:11-12 etc.). It was a still higher consideration that the same master who could sell his daughter into bond-service (with concubinage), though not to foreigners (Ex 21:11), could not, on any account, sell her into prostitution (Lv 19:29). He might cast away a prodigal son to be stoned to death (Dt 21:15-16), or a prodigal daughter to be burned alive (Gen 38:34). Children were required to render the utmost respect and obedience to both their parents (Ex 20:12, Lv 19). Any one cursing his father or his mother was put to death (Lv 20:9).—(d) The early education of the children was mostly in the hands of the mother. The sayings of Lemuel were taught him by his mother (Pr 31). Proverbs contains many references to the instruction (ma‘asir) of the father and the teaching (torah) of the mother. Schools are never mentioned in the OT. —(e) The solidarity of the Hebrew family was so complete that grave injustice was often done to the children. The sin of Achan was expiated by the destruction of his whole household (Jos 7:21-22). It was the task of the prophets to preach the doctrine of individual responsibility. The self-sacrifice of the son 'from the soul of the father' (Ezk 18:13).—(f) The stress which the OT lays upon the family is indicated by its closing words, which contain a promise to turn the heart of the fathers to the children, and the heart of the children to their fathers. A strong and pure domestic life is to save the earth from a curse (Mal 4:4). See, further, ARTS. CHILDREN AND EDUCATION.

6. Host and guest.—The Hebrew family was scarcely complete without the 'stranger' or guest (ger, p’son~), who, segregated for some reason from his own kindred, put himself under Israeli protection, and then was included in the sacred bloodbond. As Jehovah was 'the protector of strangers' (Ps 146; cf. Zens Xemnos), hospitality rested on religious sanctions. There are many exhortations to deal justly and generously with the ger (Ex 22:21 etc.), who worshipped the God of the land in which he sojourned, shared the privilege of the sabbath, and was perhaps admitted to the show of his patron. This family tie between host and guest was also to be perfected in Christianity.

'The Christians looked upon themselves as a body of men scattered throughout the world, living as aliens amongst strange people, and regarded the kinsfolk of one another as the members of a body, as the brethren of one family. The practical realization of this idea was the demand that wherever a Christian moved from one place to another he should find a home among the Christians in each town he visited' (Sandy-Headlam, Roman, Edinburgh, 1902).

II. THE CHRISTIAN FAMILY.—Jesus had personal experience of the privilege and obligation of

FAMILY (Biblical and Christian)
home life. He spent many quiet years in the Holy Family at Nazareth, which was to His a shrine of moral culture, a temple of Divine communion. His whole thinking was influenced and inspired by the experience. He came to regard the sacred relation of the family as the upwards and devout will of God and man. He had an intuition of the essential oneness of these relations. He saw that of all the immense forms of love none is so beautiful, so pure, as the love of husband and wife, parent and child, brother and sister. He grasped this force as the key of all future moral and spiritual progress. By consecrating marriage, by emancipating womanhood, by sanctifying childhood, by expanding brotherhood, and making the domestic group the type of the Divine social order which is to be, He created what may distinctively be called the Christian family.

1. The consecration of marriage.—Both in the lower and in the higher aspect, the union of two personalities is the beginning of family life. Jesus recognizes its physical aspect (Mk 10), which He never regards as an impurity, a fording of one flesh (10:8). It is scarcely possible to overestimate the importance of the change which He effected by His law of marriage. On many of the burning questions of His age He positively contended for Himself, but in regard to the institution of the family He repeatedly expressed His mind with the utmost emphasis. To the last of the time He opposed an austere purity, which startled even His own disciples, and probably seemed to the ordinary intelligence fanatical. It is true that, in spite of the technical lawfulness of polygamy, the Jews had become to a great extent monogamists. But divorce was scandalously common, and the discussions on the subject had fallen to an extremely low level. Between the two great Rabbinical schools of the period there was a standing dispute (based on Dt24), not whether divorce was permissible, but for what reasons. The school of Shammai wished to restrict them to acts of unchastity, but the school of Hillel inferred that a divorce was warranted when a woman burned her husband's food in cooking, while Rabbi Akiba thought that a man might lawfully dismiss his wife if he found another more attractive (Mishna, Gittin, ix. 10). In opposition to these licentious trifling, Jesus categorically denies the righteousness of divorce (Mt 19, Mk 10, Lk 16:18). In His teaching He does not uphold the law, which can merely recognize and protect it, but an institution based on a Divine creative act. Its true significance is to be sought, not in human customs, but in the law and teaching of Christ, who, indeed, allowed divorce (Mk 10), but only as an expedient, as the lesser of two evils, regulating what He could not prevent, reducing anarchy to law, while by a legislative compromise He violated human nature. From temporary ethics Jesus passes to absolute morality. He sees that marriage in its true nature is not a legal status, a social contract, a licensed partnership for mutual help and support, but a real union of consubstantial, unchangeable, loving one flesh (10:6). In His view the question is not, May a man divorce his wife? but, Can he? and the emphatic answer is, He cannot. The sacred bond is essentially indissoluble. It is not to be violated even by a look or a thought (Mt 5:32), and, except as a formal recognition of an already broken union, divorce is impossible. Jesus discerned the Divine ideal of the institution, and made that the law of His Church. He directed His legislation to the perfecting of the home in the interest of the Kingdom. It was not so much that He changed the family (which till then had only a civil importance, no spiritual significance), as He brought to the essential nature of both the man and the woman. It was, therefore, not in the spirit of a purist or a fanatic that Jesus thus put a final seal upon divorce, but in that of the ethical and social philosopher (Shaler Mathews, The Social Teaching of Jesus, New York, 1910, p. 90).

2. The elevation of womanhood.—Jesus' lofty conception of the family involves the emancipation of woman. Astonishingly free from Eastern prejudices, He ascribes the idea of equality to the standing of women rights in his wife, and liberates her spirit from the last trace of servility and abjection. He never commands her to be in subjection to her husband (contrast Eph 5), and never traces the concession of mankind to the womanhood (1 Ti 2). He simply teaches woman as an equal—equal in the matter of marriage and divorce, equal as a companion (Shaler Mathews, op. cit. 97). St. Paul's teaching on this head is not quite self-consistent, but he clearly has the mind of Christ when he enumerates the principles that in Him there can be no male and female (Gal 3:28); and Augustine, while he gives celibacy and virginity the exaggerated importance of a more perfect virtue, teaches that the natures of man and woman are equally honourable, and that the Saviour gives abundant proof of this in His being born of a woman (Sermo 190, § 2). In a recent work the Fathers teach that the wife must equally honour the sanctity of the home. Errors which are condemned in the one cannot be condoned in the other.

In consequence of Christian respect for reinstated woman, it is no longer she alone who is thought capable of committing adultery. The doctors of the Church vigorously attacked the pagan pride which held that the husband alone could be free. Henceforth the unfaithful husband was held to be as guilty as the wife who violated her duty (Schmidt, op. cit. 200).

3. The dignity of childhood.—The family exists especially for the child. Jesus was Himself the Holy Child, reared in the shelter of an earthly home, meeting parental authority with filial submission, growing in favour with God and man. His profoundest teaching was coloured by thoughts of family life, and He has left words which have for ever hallowed childhood. He made the spirit of a little child the type of Christian character (Mk 9:3), and gave children a share in His kingdom (10:14). He used to describe in details for the conduct of parents and children. In general it was His part not to legislate but to inspire. He entrusted to others the task of inculcating His principles in the midst of imperfect human conditions. Under the influence of His spirit paternal authority ceases to be an arbitrary tyranny, and the scrivile dependence of children is replaced by the truer and gentler dependence of love and gratitude (cf. Eph 6, Col 3:20). Christianity vitalizes the fine Roman saying, 'Maxima debeta puero reverentia' (Juv. xiv. 47), and gives it the sanction of a far higher faith.

4. The expansion of brotherhood.—In the original condition of mankind, blood was the single tie which bound men together, the family was the sole basis of rights and duties. Everyone who was not a brother was counted an enemy. Only the life and property of a kinman were safe. We have seen how the idea of brotherhood was gradually extended to the tribe and the nation. It was reserved for Jesus to place all men in the relation of brethren to each other. In Han's St. Paul exhorts Philemon to receive Onesimus 'no longer as a servant, but as a brother beloved' (Philem 10). The thought of 'the brother . . . for whom Christ died' (1 Co 8) has been the inspiration of the noblest society of the human race. The Saviour's hope for the world is to be fulfilled through the expansion of those affections which...
are naturally born and nurtured in the sanctuary of the home. The family is His microcosmic kingdom. He makes the first social unit also the last. His entire theology may be described as a transfiguration of the family' (Peabody, op. cit. 147).

'Domestic selfishness is as disastrous as any other form of selfishness. Just because the devotion of kindred is so intense, it is apt to be exclusive. When Jesus entered on the work of His vocation, and, again, when He began to call men to be disciples, He came into collision with the claims of the family.

Then and only then did He seem to deprecate it. He 'that loveth father or mother more than me is not worthy of me' (Mt 10:37). Whosoever shall do the will of God, the same is my brother, and sister, and mother' (Mk 3:35). The family exists for the sake of ends beyond itself; it is the preparation and equipment of personalities for the service of God and man. It is the very tragedy of Jesus' life that He was not understood by His own brethren, and that He had to assert, in unequivocal language, His independence of the interests and obligations of His former home. The pain of separation from His kindred, and especially from His mother, was proportionate to the tenderness of His love. By example as well as by precept He taught the rule of duties into conflict with the claims of affection, the former must prevail. It was not that He loved the family less, but that He loved the Kingdom more. As Bengali notes on Mt 12:5, non spernit matrem, sed apontit Patrem.'

6. The ultimate social aggregate. — Though the best institutions may easily become the most mischievous when they are perverted and mismanaged, that does not affect their intrinsic value. The character of the teaching of Jesus on the family has never been so adequately appreciated as to-day, when science and politics are concentrating the attention of the educated world on the crucial problems of the domestic group. Many anti-Christian attacks are being directed against the domestic group, but 'it is clear that monogamy has long been growing innate in civilized man, and this relationship is manifestly the ultimate form' (Spencer, Principles of Sociology, London, 1876-96, i. 673, 753). The Christian family is the germ of the yet higher civilization of the future. It enforces in itself the promise and potency of all social progress and pure human happiness.

'It is the mature opinion of every one who has thought upon the history of the world, that the thing of highest importance for all times and to all nations is Family Life. ... Not for centuries but for millennia the Family has survived. Time has set its stamp upon it; it has imprinted upon it; nor discerns discovered anything more lovely; nor religion anything more edifying. (H. Drummond, The Assent of Man, London, 1904, pp. 378, 407.)

FAMILY (Buddhist).—In the 6th cent. B.C., when Buddhism arose in the valley of the Ganges, the family had already been long constituted, and its every detail settled, in accordance with the tribal customs of the Aryan, Dravidian, Kolarian, and other inhabitants. Spiritual in the beginning, when the precepts put into the mouth of the Buddha in our earliest documents, was any attempt made to interfere in any way with those customs; nor afterwards, of course. The bond of moral teaching, so do we find any decree of a Buddhist Council, or any ordinance of a Buddhist king, prescribing a change there in family relations. When Buddhism was subsequently introduced and more or less widely or completely adopted in other countries, the Buddhists evinced no desire, and probably had no power, to reconstitute the family according to any views of their own on the subject. It is possible, therefore, to speak of the family as Bud-

This is here addressed to the bhikkhus. Afterwards the same story was included in the popular collection of Jatakas (Faussbill, Lond. 1877-97, l. 217-220); and it was well known to the Chinese pilgrim, Yiian Chwang (Watters, On Yuan Chwang's Travels in India, do. 1905, l. 54). A similar sentiment is found in the Nandasutta, the Dhammapada (verse 109, a celebrated verse found also in other Buddhist anthologies, and repeated, in almost identical words, by later Sanskritic authors).

In the Sigaevada Suttanta the Buddha sees a young man worshipping the six quarters, North, South, East, West, the nadir, and the zenith, and shows him a more excellent way of guarding the six quarters by right conduct towards parents and wife and children, and teachers and friends and dependents.

'In five ways the son should minister to his mother and father, who are the head quarters; in five ways show their affection to their son. They restrain him from evil, and train him to follow that which is seemly, they have taught him a craft, they have educated him in letters, in a season they give him his portion of the inheritance....

In five ways they command the elder brother, who is the West quarter. He should treat her with reverence; not belittle her; never be false to her; acknowledge her authority; and provide her with a wheel and a seat in the house. The wife should in five ways show her affection for her husband.

1 Vinaya, II. 161, tr. in Vinaya Texts, iii. 104 (BBE xx.).
2 Manus, ii. 121; Makkhāṭāra, v. 1521.
FAMILY (Celtic)

She should manage her household well; carry out all due courtesies to relatives on both sides; never be false to him; take care of his property; and be able and active in all she has to do.

Passages of similar tendency are found in other parts of the Nitiyâs addressed to beginners or householders. The principles set forth in them may certainly be said to be Buddhist, since they have been adopted in the Dhamma. But it is probable that they are a selection from the views as to family and sexual relations already current among the Aryan clans to which the Buddha himself and most of his disciples belonged. What is Buddhist about it is the selection. For instance, we know from the later law-books that the pre-Buddhist Aryans performed, at a marriage, magical and religious ceremonies which bore a striking resemblance in important details to ceremonies enacted at a similar date by other Aryan races in Europe. Other religious ceremonies were performed at the name-giving, the inauguration, and the marriage of the children of the family. All these are, of course, ignored and omitted in the exhortation. Buddhist could not countenance practices which they held to be contrary to religion. And they put nothing in their place. There are no Buddhist ceremonies of marriage, initiation, baptism, or the like. Marriage is regarded as a purely civil rite, and the Buddhist clergy, as such, take no part in it. This is probably the reason why Asoka, in his edicts on religion, does not mention it. He considers marriage, and the observance of family customs, a civil affair.1

In pre-Buddhist times, divorce, but without any formal decree, was allowed. So Isidâs, for instance, explains how she had had to return twice to her father's house, having been sent back by successive husbands owing to incompatibility of temper (the result of her evil deeds in a former birth).2 No instance is recorded of similar action taken against the husband. In countries under the influence of the Thera-vâda (the older Buddhism) there is divorce on equal terms for husband or wife on the ground of inidelity, desertion, or incompatibility of temper. This is, however, infrequent. Fielding estimates it, for village communities in Burma, at two to five per cent of the marriages; and the present writer, while not able to estimate any percentage, for which there are no statistics available, is able to testify to the very low number of divorces in Ceylon.

The marriage, retains her own name, and the full control of all her property, whether it be dowar or inheritance. Property acquired by the partnership (of husband and wife) is joint property. There is no niririm system; marriage is monogamous (that is, among the people; kings often follow the Hindustani custom); women go about, engaged in business, can sign deeds, give evidence, join in social intercourse, and have just such liberty and importance as their menfolk think expedient. Fielding, who has given the facts for Burma in considerable detail (chs. 13-17), does not discuss the question how far this state of things is due to the influence of Buddhism and how far to the inherited customs and good sense of the people. But, when we call to mind that the same or closely related races have, under other influences, much less advanced customs, and that in early Buddhism a remarkably high position was allotted to women, it is shaming for a boy to be present before the face of his father in public, until he was of age to bear arms. He also tells us (v. 14. 4) that in

we may conjecture that the influence of early Buddhist teaching was not without weight.

LITERATURE.—The authorities are given in the article.

FAMILY (Celtic).—1. The evolution of the Celtic family is wrapped in considerable obscurity, and it is by no means easy, from the evidence that has come down to us, from both Christian and pre-Christian sources, to conjecture what changes it had passed before the dawn of history. In the case of Celtic countries, too, it has always been remembered that the Celtic-speaking inhabitants were comparatively late-comers, and that the previous inhabitants had for ages their own social institutions, which may or may not have undergone a similar evolution to those of the invaders of Indo-European speech. Nor can it be supposed that the institutions of the invaders would necessarily supplant those of the earlier inhabitants, especially in the remote districts, where the indigenous population would be most likely to hold its own. But while, therefore, some cases, the institution which survived was neither that of the invaders nor that of the previous inhabitants in its entirety, but a working compromise consisting of elements from both sources, the development is almost by no means easy to follow. It may well be, for example, that the curious system of fosterage, which played so large a part in Celtic family life (see art no CHILDREN [Celtic] and FOSTERAGE), was long after, its origin to some such fusion of Celtic and pre-Celtic institutions, but it is now, at this distance of time, a fruitless task to speculate upon the matter. Further, it must be borne in mind that, in the documents which describe the social life of the Celts, our information relates almost entirely to the higher circles of the population—that is, to the free members of tribes (doubtless in the main sprung from men of Indo-European speech) who at the earliest did not reach the British Isles before about 1800 B.C. and the West of Europe some centuries before. What the institutions of the "unfree" tenants of Celtic countries may have been, involved in great uncertainty, and their social organization may well have developed on lines distinctively different from those that were characteristic of the Indo-European conquerors of Gaul and the British Isles, through the influence of the kinship of these conquerors in other countries of cognate speech.

2. A study of the various treatises which embody the ancient law of Ireland, together with the documents which describe the social and religious organization of the Scottish Highlands, make it abundantly clear that the family basis was patriarchal, and, at any rate in Christian times, essentially monogamous. In Gaul, too, as Cesar (de Bell. Gall. vi. 15) tells us, the family structure was of the same type, and the family groups had attached to them groups of ambacti ('clients')—a word of Celtic origin, which is the exact phonetic equivalent of the Welsh amact ('farmer'). Nor is this development of Celtic institutions to be wondered at, because the type of family in question is the natural correlative of the kind of military and semi-nomadic life which ultimately brought the Celts into a dominant position (until Rome conquered them) in Celtic lands. At the same time, there are indications that there were, at any rate in some of the Welsh lands, certain unusual features of family life, which impressed some of the observers of the ancient world. For example, Cesar (vi. 18) acquaints us with the curious fact that, in Gaul, it was considered to be a shameful thing for a boy to be present before the face of his father in public, until he was of age to bear arms. He also tells us (v. 14. 4) that in

1 Tr. from Dhâra, i. 189 ff.; also tr. by S. Gogerly, Ceylon Buddhists (ed. Bishop, Colombo, 1905), p. 382 ff., and by R. C. Childers, Ch. 187.

2 There is a conference to doctilly towards parents in the 3rd Rock Edict. See T. W. Rhys Davids, Buddhist India, London, 1899, p. 160.

Britain ten or a dozen men had wives common to the group, and that in this matter brothers mostly joined with brothers. Strabo (iv. 5. 4), following Posidonius, speaks of a rumour that the Irish had no definite system of matrimony, but he could not verify for the truth of it with Din Cestín (lxxvi. 12. 2) says that the Caledonii had wives in common (τας γυναίκας τεκνοὶς χρίσοντο).) and, in his description of Thule (derived from Pytheas), Strabo, Polybius, ch. (Polybius), ed. (Polybius) of the king-system, which island had no wife of his own. These statements regarding the inhabitants of Britain appear to have gained a wide currency in antiquity, and we find Bardesanes in Eusebius (Præpar. Evang. vi. 10) repeating the story that several persons jointly had one wife in Britain; while Jerome (adv. Jovin. ii. 7, p. 333) says of the Scotti:

Sæctorum natio uxorum propria non habet: et quod Platonis politiam legerit et Catonis sectaer quam exemplum, voluit apud eum coniunxi propria est, sed, ut cuique libitum fuerit, pecunia more lasciviunt (see, further, above, pp. 456 f., 460 f., 462 f. 463).

It has been thought that the absence in Welsh of any word for 'son' as distinguished from 'boy' (nadd), or for 'daughter' as distinguished from 'girl' (merch), points to an analogous situation in remote times in that country; but this absence of separate terms may easily be one of the accidents of an early period. 

The system, whereby the Pictish crown descended from the reigning king to his sister's son, has been thought to have had its roots in a remote matriarchal system; but the criticism of this view by d'Arbois de Jubainville, in La Famille celtique (p. 88) makes it hazardous to accept it. Nor would it be safe to attach undue importance to certain cases of illegitimacy, such as Conchobar mac Nessó (Conchobar, son of Ness) and Cwydion fab Don (Gwydion, son of Don), where the hero is called after his mother's name. The prominence given also to the grouped goddesses called 'Mátras' and 'Matronae' (on whom see EEE iii. 290) in certain regions cannot, in view of the scantiness of the general evidence, be regarded as of any significance in this connexion.

3. Still, notwithstanding the rumour of antiquity, which it would be rash to say were entirely devoid of foundation, at any rate in the more backward districts,—the evidence of Cæsar as to Gaul, and the abundant testimony of the Irish and Welsh laws shows that there is in the matter, in the whole of the countries where the male head of each social group is in unmistakable prominence. Of the patria potestas enjoyed by the husbands in Gaul, Cæsar says (iv. 18): 'Vir in uxore, sicuti in liberos, vitae necisque habent potestatem,' and both the Irish and the Welsh laws show us that women could not be members of the recognized tribes. The organization of the Celts was everywhere based on the tie of blood; in Gaul the tribe, in Ireland the clan under its chief, and in Wales the ceneddi (kindreds) under its penceneddi ('head of the kindred'), were all governed by the idea of a common ancestry. The family proper was the smallest subdivision of the social organization, and was founded on the principle of monogamic marriage. The organization of the family had at one time a very important practical significance, since it was closely connected with the tenure of land and the occupation of the dwelling-houses built upon the land—in other words, with succession, and also with responsibility for the land. This may often have been so strongly connected with the tenure of land and the occupation of the dwelling-houses built upon the land—in other words, with succession, and also with responsibility for the land. This may often have been so strongly connected

4. The Irish legal documents, such as the Senchas Mór, with its commentary, the Book of Aídal, and other treatises, unfortunately do not present us with a very clear account of the structure of the Irish family, and the descriptions therein contained have given rise to much discussion; see d'Arbois de Jubainville, op. cit.; also the 'Introduction to the Book of Aídal,' in Ancient Laws of Ireland, vol. iii. p. exxxix, and especially the Introduction (by Alexander George Richey) to the Brehon Law Tracts, 6th. ed. vol. iv. p. xlix. The latter introduction, which cannot be said to have been written most thoroughly, may be supplemented with advantage by a study of R. Atkinson's Glossary to the Ancient Laws of Ireland (vol. vi. in the Rolls Series). Both the Introduction in question and the Glossary show how little can be gleaned with certainty from the Irish laws as to the precise significance of their fourfold classification of the Irish family into the gelfine, the dorhine, the tarféine, and the tarfree. Of these family-groups it is evident, from the account given by Atkinson in his Glossary, that the gelfine was the most living and vigorous form of the family in the times to which the Irish Law Treatises belonged, though this form may, even then, owing to the settlement of a large part of the land of Ireland, have lost something of its earlier raison d'être in the occupation of new territory. According to Atkinson, it can be stated that the following class of family can be distinguished by his three varieties: (1) the gelfine tar melbicic ('frontwards'), and (2) the gelfine tar culath ('backwards'), the former denoting five men of the direct line—father, son, grandson, great-grandson, and great-great-grandson; the latter denoting the similar descendants in the direct line from the father's brother. Of these two varieties it would appear that the former was the more important, and the gelfine, and Richey in his Introduction has ingeniously suggested that it began with the occupation of new lands, when the father would hold the original dwelling, and, if he had five sons, four of them would during their father's lifetime occupy each a homestead on the land, while the fifth son would in time succeed to his father's homestead. The view held by Whitley Stokes and d'Arbois de Jubainville, that goî in gelfine means 'a hand,' and that it is cognate with the Greek χιός, is improbable; and, consequently, there appears no warrant for the view that the gelfine was essentially a 'familia in man.' Of the other names for family-divisions in community ('tribes'), Richey suggests that it may have denoted what was for a time a rival classification with some of the other divisions, and the present writer is inclined to hazard the opinion that these terms, which have given rise to so much ingenious discussion, are in reality surviving traces of different family arrangements, which prevailed at different periods, and that the Irish, instead of discarding the old classifications completely when the gelfine came into favour, allowed them to remain as names, and regarded them as being forms of family arrangements which were in reserve in case of need. The process of evolution has doubtless occurred here, and has left some of its traces, as in the case of other social institutions.

5. The Scots who carried with them the Gaelic tongue into Scotland brought also their own organization, but, as Skene (Celtic Scotland, iii. 320) points out, the original clan-organization of the Gaelic-speaking invaders from Ireland appears to have been of a very strong character, and it came to appear as a distinct and prominent feature in the organization of the Gaelic population. The basis of the clan-system was, however, essentially the same as in Ireland; and, just as there were in Ireland certain settlements that there were, side by side with the clans of kinsmen corresponding to the Irish 'free' tenants, other
FAMILY

In Wales, the family organization within the tradition of fostering ( pageable), namely, that corresponding in the main to the gelfine of Ireland. It consisted of the ancestor, his sons, his grandsons, and great-grandsons. So far as the occupation of land was concerned, the corresponding territorial division was the geudy, upon which a body of members of the same family were settled, occupying the supplementary tydlynod ('homesteads') which were built upon the land to accommodate the sons as they married. This family organization among the Welsh was responsible for the payment of the gaelnas ('blood fee') in the case of the commission of homicide by a member of the family (see Crimes and Punishments [Celtic]). It will thus be seen that in Wales, as in Ireland, it was the practical questions of land-tenure and responsibility for the actions of kinmen that made the family as such so important a factor in social life, with the result that pedigrees were kept with remarkable care. With the introduction, however, of the English manorial system and English law, the pressure of practical considerations, which stand in the way of less urgent; but, nevertheless, the sense of kinship, even to the recognition of distant relatives, has remained far stronger in Wales than in corresponding circles in England at the present day; and this recognition of kinship shows itself in a marked way in the sense of obligation which most Welshmen feel to attend the funerals even of distant kinsmen—a feature of Welsh life which generally appears strange to Englishmen who come to reside in Wales.

7. The various terms which express family relationship, in spite of their common Indo-European origin, are somewhat different in the two great branches (the Goidelic and the Brythonic) of the Celtic tongue. For example, the term for 'father' in Irish is atbair, the phonetic equivalent (with the regular loss of Indo-European 'p') of the Latin pater, while, in the Brythonic group, the corresponding Indo-European term of endearment, tata, has entirely supplanted the more formal Celtic term for 'father,' giving the Welsh and Breton form for the term, tada, while in Welsh, Breton, and Cornish, the place of poed (the equivalent of Lat. mater, Irish maithair) has been taken by the analogous term of endearment maen from maime. Likewise in Brythonic (cf. Welsh taill, 'grandfather,' rain, 'grandmother') we have survivals of Indo-European terms of endearment. In Ireland, too, the terms for 'father'—uaidh and 'foster-father'—uaidh and 'foster-mother'—muain are, in origin, both survivals of terms of endearment.

The Irish word mac, like the Welsh nab, can mean both 'boy' and 'son'; and the Irish term ingen ('daughter')—a word meaning literally 'one born into the family' (for uis-gena)—has the same dual meaning as the Latin virgo. In the Celtic speech, too, the words which originally meant 'grandson' and 'granddaughter' have come to mean 'nephew' and 'niece.'

8. In modern Welsh the term in regular use for 'family' is teulu, but the reader should be on his guard against assuming that in Welsh medieval documents this word had the same meaning as it now has. It is true that, in the general use of the word (from try, 'house,' and llw, 'host'), was the retinue or bodyguard of the head of the household; and, in the case of the king, this retinue had a special head, the pen teulu, and a special bard, bard teulu, who sang of the deeds of their lords. The social meaning of the word now survives only in a South Welsh term for a 'phantom funeral procession' (pronounced tolw-i teulu).

9. The treatment of children among the Celts, as well as the interesting practice of fostering, is discussed in the artt. Children (Celtic) and Fosterage, the place of the foster-mother and the foster-father in the family, together with the conditions of marriage (including the question of marriage gifts) will be considered in connexion with the subject of Marriage (Celtic).

FAMILY (Chinese).—Introductory. The analysis of a Chinese character is not always a reliable guide to its primitive meaning. The usual form of the character for 'family,' i.e. those under the roof of one paterfamilias, is a pig under a roof; and the Shuo Wen (c. A.D. 100) says that, as that, originally meaning a pig-sty, it was afterwards metaphorically used for a human home. It is just as likely, however, that originally the part of the character which stands for pig was of less value; and in any case the Liu Shu Ku (between A.D. 1250 and 1319) sets aside this derivation, and analyzes another form of the character into three persons under one roof, and day.

The institution of the family is ascribed to Fuh-si (2832-2736 B.C.). Before this time the people were like beasts, knowing their mothers but not their fathers, and pairing without decency. Fuh-si established the laws of marriage, organized clans, and introduced family surnames.

Society in China is predominantly patriarchal. The family is the social unit and the norm of social organization (Williams, Middle Kingdom, New York, 1876, i. 296). A mandarin is the parent of his children people. 'The Empire is one family.' 'To the Son of Heaven there is no stranger; he regards the empire as his family.' In accordance with this idea, he sets up, the duty of a child, and the duty of a younger brother, are the fundamental social virtues. 'Esteem most highly filial piety and brotherly submission, in order to give due prominence to the social relations' (Suser, Secul. Edict [A.D. 1670], 1). A typical Chinese family might consist of father, mother, sons, daughters-in-law, and grandchildren.

To have four generations alive in one household is marked felicity; if five are alive at the same time, many are the congratulations, and special announcement of the fact is made in the temple of the City-Guardian.

1. Husband and wife. Marriages are arranged by the parents of the bridegroom and bride through the agency of a 'go-between.' 'In taking a wife, how do you proceed? Without a go-between, it cannot be done' (Shi-King, xv, 6). Betrothal is considered binding, and often takes place at a very early age. In some cases the future daughter-in-law is brought as an infant into her future husband's family, and grows up as a member of it. The custom, however, is not of high repute, and is particularly objectionable where, as in at least one district, the future husband and wife cohabit from their earliest years, and there is no formal marriage. For convenience with its derivation (from ty, 'house,' and llu, 'host'), was the retinue or bodyguard of the head of the household; and, in the case of the king, this retinue had a special head, the pen teulu, and a special bard, bard teulu, who sang of the deeds of their lords. The social meaning of the word now survives only in a South
man may marry his cousin but not his aunt. Otherwise there is no restriction. In practice, of course, regard is paid to equality of social status; in China, to one's own 'animal' weight for half a pound'; and the horoscopes of the parties are often taken into consideration. The bride brings her trousseau; but the husband's family have to pay a dowry for her, although among the wealthy this is somewhat of a formality. Marriage arranged in this way is not of affection, and in many cases, at least in the humbler ranks of life, is as much providing a help for the mother-in-law as a wife. But it is evident from popular tales that romance is not unknown in Chinese life, through love stirred by favourable report or accidental glimpse. Doubtless, too, in many cases, however affection may be lacking to begin with, it springs up in the course of years. The virtue of a husband is to be 'a just person,' and of a wife to be obedient. Conjugal harmony is recognized as the foundation of successful family life, and finds its emblem in mandarin ducks—types of conjugal modesty and fidelity (cf. Shi-King, i. 1).

Owing to the low status of women and the excessive desire for offspring, the wife is too often regarded as not supporting the birth of son. The lower ranks of life, where it is her function to 'boil rice' as well as to 'bear children,' it is desired also that she be a capable housewife. Theoretically she is to keep at home; her husband refers to her as the 'person within,' with the addition of various depreciatory epithets. Whatever the origin of foot-binding, it is popularly regarded as a salutary check on women's productivity to gadding about and to worse evils. Foot-binding, however, is by no means universal; and among the lower classes, especially in certain districts, women are allowed great freedom, and take even too large a share in heavy outdoor work. Owing to the lack of female education, a wife can seldom be a companion to her husband. Nor is this looked for; and a household is apt to fall into two sections, male and female, the women and girls taking their meals apart from and after the men-folk.

Besides the normal form of marriage, in which the bride goes to live in the home of her husband's parents, there are other forms, in which the husband joins his wife's family. This may happen when the wife's parents have no sons, and, instead of marrying their daughter out, bring in a son-in-law to marry her. In this case the husband does not take a wife but some arrangement is come to, such as that the first son of the marriage shall take the surname of his mother's parents, and carry on the succession for them. A second class of such marriages is where a husband is called in to marry a widowed daughter-in-law. In such cases the wife retains the surname and even the name of her deceased husband, and the children of her second marriage carry on his succession and not that of their own father. In this case the second husband leaves his own clan and is merged in that of his wife, and is regarded with a certain measure of contempt.

Re-marriage of a widow is usual; and re-marriage of a widow is not infrequent, though to remain faithful to the memory of her husband is considered most estimable, and a second marriage is celebrated with 'maimed rites.' The arrangements for the re-marriage of a widow are made by her parents-in-law; but more regard is paid to her will in the matter than would be paid to the wishes of the first husband. To this end, in regard to the disposal of a widow's children; but it may be taken for granted that not all her sons at least would be allowed to accompany their mother to her new home.

**Concubinage.**—Chinese law recognizes only one wife, but concubinage is legal. The practice dates from ancient times. Of Yao (2556 B.C.) it is recorded that he took 80 concubines, and each was worth for him half a pound. Concubinage is common among the wealthy classes. Among the poorer it is less common, and usually only for the purpose of securing a male succession. There is no legal limit to the number of concubines that may be taken.

**Divorce.**—According to law there are seven reasons for which a husband may divorce his wife; but the law recognizes no right of the wife to divorce her husband. The seven legal reasons for divorce are unfaithful conduct (towards the husband's parents), adultery, jealousy, loquacity, theft, grievances concerning the wife or her family, e.g., barrenness, are not recognized by custom. To these legal reasons must be added poverty, which is the commonest cause of all. It is difficult to estimate the percentage of divorces, but divorce is said to be not uncommon. This is more so in the case of the repudiated woman as a precaution. The repudiated wife is married by the aid of a 'go-between.' This is not so difficult as it might seem; for the desire for children is strong, and concubinage is largely a mercantile transaction, in which a woman whose reputation is damaged may be had at a cheaper rate. The husband's somewhat despotic power over his wife is limited in practice, not so much by legal restraints as by public opinion, and in particular by the fear of his wife's relatives, especially if they are of a powerful clan. Short of divorce a man may, if his wife offends, send her back to her parents, as a hint that their family discipline has been defective. This is regarded as a disgrace to them; and it is for them, if the wife has been in the wrong, to place her husband and persuade him to take her back. In practice, though not in law, a concubine has little protection against her husband, and can be sold at his pleasure.

2. Parents and children.—In the family the father is the head of the family; but rules with many qualifications according to the ability and force of character of other members of the family group. A woman is not supposed to rule; as a girl she should obey her father, as a wife her husband, as a widow her grown-up son. But, while it is true that the status of women is low, it would be a great mistake to infer that they can have no influence. Of the twenty-four examples of filial piety, more than half are instances of piety towards mother or stepmother; an aged mother is usually treated with much deference. The duty of a son to his parents takes precedence of his duty to wife or children. The eleventh of the examples of filial piety is a man who, being in his means, was insufficient to maintain his mother and his child, says to his wife: 'One may get another child, but it is impossible to get another mother,' and proposes to economize by burying his child alive. As he is digging the grave, he is rewarded by finding a pot of gold. According to the same principle, to put away a wife because she is displacing his mother or sister is disloyal, and to the right to subordinate the wife's interests to the mother's. The object of having children is broadly stated to be that parents may in old age enjoy their ministrations; and 父母 has been defined
as to serve parents with propriety, to bury them with propriety, and to sacrifice to them with propriety (Analects, bk. ii. ch. v.). A parent's birthdays are times of congratulation, particularly from the younger members, whether on their sixty-first birthday or their fifty-first, sixty-first birthday, and so on, when women observe their fiftieth, sixtieth, etc. A coffin is considered to be an appropriate gift for a parent on his principle date, and to provide a sepulchral structure is a ceremonial act of the utmost importance. The importance of the practice of ancestor worship is a matter of natural and adopted reason, and is known to be carried on at all times and places, without exception. The question is one of constancy, of the order of duty, and of the maintenance of the relationship between the living and the dead. The question is one of duty, of the order of duty, and of the maintenance of the relationship between the living and the dead. The question is one of duty, of the order of duty, and of the maintenance of the relationship between the living and the dead. Sisters are appropriate to a certain generation, and form part of the name of all the males belonging thereto. Mutual responsibility is a marked feature of Chinese life; senior relatives for their juniors, and the oldest a cin in its members.

4. Servants and slaves.—In the lower ranks, servants or hired workers are treated very much as being of the family, and take their meals with it. According to the higher classes, this is not so. There, on the one hand, servants show to their masters a ceremonious deference; on the other, they often exercise a freedom of intervention in their master's affairs, both civil and spiritual. Indeed, in Western manners, servility is by no means a prominent feature of Chinese life; though, even where it is unknown as such, there may be those who through stress of poverty have been sold, or have sold themselves, into service. A much more usual type of slavery is seen in the slave girls of well-to-do families. They are the property of their owners, and dependent for their happiness on the goodwill of their mistresses. They are distinguished from daughters of the house by not having their feet bound, and by some differences of attire. When they have grown to womanhood, they may remain in the family as female attendants, though this is rare, and considered as a dishonorable position, to be disposed of in marriage, or as concubines to others. Eunuchs employed as slaves are unknown outside court circles.

5. Social changes.—China is in a state of transition, and the family also is sure to undergo change. Among the influences which may modify her social system are education, increased knowledge of other social systems, female education, changes in industrial conditions with the rise of manufacturing, and, of course, greater facilities for travel, the general shock of the current revolution, and last, though not least, the spread of Christianity.

FAMILY (Egyptian).—The Egyptian family presents many points of contrast both with the Semitic and with the Greek. Its most interesting characteristics are a distinct preservation of matriarchy, the prominent position of the woman, and a comparative prominence of sexual relations.

We may, therefore, regard it as in some ways more primitive than the family in other countries of the ancient world. The peculiar position of the women in the family led generally to a prominence of women in Egypt much greater than that allowed to them either among the Semites or in later Greece, and analogous to that apparently enjoyed in a greater degree by the women in early (Myce- nem) Greece. There also, among a people probably racially connected with the Egyptians, a matriarchal idea of the family may be assumed to have been held as furnishing prominence even more pronounced than in Egypt. It was no idea of the equal intelligence of women and men that in Egypt placed the two sexes almost on the same level, and in Myce- nem Greece, the women made the women quite as important as the men. This equality arose simply from the matriarchal idea that descent is absolutely certain through the mother, but not through the father, so that the family centres in the house-mother rather than in the house-father; and the woman, instead of being the man's slave, as among the Semites, is in many respects his equal or even superior. But this view of family life makes at the same time for that we should regard as sexual immorality. Thus, at any rate in the royal family, the Egyptians, in order to secure the succession of the mothers in the same family, often married their own sisters. In Roman times we find this practice common among ordinary people.

The most important person in the family was the father. The mother was the house-ruler, the nebt-per, the focus of the family. Nevertheless, she was the inferior of the man, her husband, in that he was known by his name, whereas she was always spoken of. He was the head of the family, and the wife (hemet) of the man, he is never the husband (zat) of the woman. After all, she could not become nebt-per unless she were first hemet, and that, when all was said and done, depended on the pleasure of the man. So far the man dominated, but never as the Semitic man did, who was the ba'al, 'lord' of his wife, his b'r't'ah, 'chattel,' or as did the Greek man, who, like Hesiod (Works and Days, 408), regarded a wife simply as a necessary possession on a level with his ox and his plough; at Athens only the hetairai had any freedom or influence. But, on the other hand, the Semite distinguished from his master's slave women their part in the family, and the wife, with the result to the Pharaohs, but the indefiniteness of the relations of the women to the family is shown in the fact that the word hemet, 'sister,' was used not only for the real sisters of a man, but also for his concubines, and even for his hemet, or wife. Similarly 'brother' might mean 'husband.' The woman who sits at the side of a man in some funerary sculptured groups may be described as 'his sister, whom his heart loveth,' or as 'his beloved wife.' He might have many of these 'sisters' together with one wife (rarely two), or no wife at all; in that case there was no properly constituted nebt-per; for this only a wife could be. If there were two wives, one was the nebt-per; if two nebt-per are mentioned on a man's tombstone, it means either that the one succeeded the other in the dignity of house-mother, or that the man had maintained two separate establishments, which had no link save the fact that the same man maintained and fathered both. This a noble might do, and besides the regular 'houses' of his 'wives' he might also possess a harim of concubines. But these had nothing to do with his family or families proper, however much he might favour his natural children. The man's son is his heir, but this was somewhat opposed to usual custom, which, in accordance with the matriarchal theory, preferred that property should descend in the female line. Thus, ordinarily, it was to the eldest son of the man's eldest daughter that his goods went, and a man's maternal grandfather was considered more closely related to him than his own father. Naturally this elaboration of primitive custom was as far as a general parental affection, and so the men constantly broke through it; those in high station, and, above all, the kings, consistently did so. It was rarely that a dead monarch was not succeeded by his own son.

The maternal line of descent had the effect of confusing families, so that the Egyptians had little idea of family history, of genealogies and pedigrees, and never developed the surname or 'patronymic.' Even tribal names were unknown. The ordinary man was the son born of his mother So-and-so. Only the man of better class is such-and-such a man's son, the son of him who legitimated what we should regard as sexual immorality. Thus, at any rate in the royal family, the Egyptians, in order to secure the succession of the mothers in the same family, was con-
FAMILY (Egyptian)

seions of her great age, that she became interested in her past, and her children reckoned back the generations.

Marriage was effected by means of a properly drawn up legal contract, but of these we have none till the Greek period. There may have been, as in later times, a stipulation year, after which, by certain payment, the marriage might be annulled. The concubine, if free, no doubt was taken by force or came of her own accord; if a slave, she had no voice in the matter, and therefore her son by her master might legally be made a full wife we do not know. The king was subject to the same laws and customs in this regard as his subjects. In contract to Assyria, where only one queen appears on the monuments, and only two or three are even mentioned during the whole course of the empire's history, the queen of Egypt is always mentioned, and always appears with her consort, who not infrequently derived his sole right to the crown from her, as in the case of Thutmose I. She is called the 'king's wife' simply, or the 'great king's wife,' to distinguish her from other and inferior wives; often she is bored 'the king's wife,' 'the king's mother,' (hemet-nsw useret, and met-nsi). The 'king's son' (si-nsi) might, were he the son of an inferior wife, conceivably have in his veins not a drop of the blood of his father's predecessor on the throne. In this case, his succession could only be assured by force if necessary. Thutmose III. was related to Amonhatpe (Amenhetep) I. only through the female line, and was actually the son of an inferior wife, if not of a concubine. This last fact rendered his right to the crown so weak that, in order to give him a good claim, it was necessary to marry him to his aunt Hatshepsut, who was wholly of the blood of his eldest daughter of a 'great king's wife' (but whose father, Thutmose I., was not of royal blood at all). She kept her nephew in the background, herself assuming the royal dignity, not as queen merely but as actual 'king.' In spite of the pre-eminence of the nebd-her in the family, there was no precedent for Egypt being directly ruled by a woman; so, as Hatshepsut would have no lord and master in the kingdom, she was obliged to assume, officially, the dress and state of a man. The husband-nephew considered himself wrongly entirely from his rights, for, though the son of a concubine or inferior queen, his marriage with his aunt had at once legitimized his claim to the throne. The custom of the ancient world with regard to deceased saved Hatshepsut undoubtedly became in law and custom an usurper, and Thutmose was legally justified in the punishment which he meted out to her adherents after her death.

Difficulties of a similar kind must have repeated themselves indefinitely in the homes of subjects, and yet Egyptian family life was very close and very affectionate. On his tombstone a man's immediate relatives, whether gone before him or surviving him, are all represented bearing the offerings to him and praying that the gods of the dead will give him the kingly funeral meats. The words 'love' and 'beloved' recur more frequently in Egyptian months than in those of any other ancient nation, for none, whether father, mother, brother, sister, son, or daughter, seems to have been unbeloved by the rest of his family, judging from the inscriptions of the tomestones. This must at times have been an artificial convention, of course (we may be sure that Thutmose III. did not love his aunt Hatshepsut), but at the same time the convention would not have grown up had not the reality been there, and we obtain the impression in old Egypt of a very close and very loving family life. It is so still: the modern Egyptian is usually a fond father, though Islam has turned his relation to his wife into a tyranny (albeit often a kind one) which his forefathers did not know. In ancient Egypt the woman was the legal object in marriage than the possession of children by both man and wife in common; children came normally to all, whether prince or peasant, as one of the best of gifts. It was only on a very high plane, though not necessary to his soul's health after death, it was at least desirable that a man should have sons to make the funerary offerings and pray for the safety of their father's spirit in the under world. We have not, even in the preceeding of ancient Greece, such constant insistence on family solidarity and affection as we see in the Egyptian gravestones, especially those of the Middle Kingdom; and in later times the same spirit is revealed in the repeated bas-reliefs in the tombs of el-Amarna, which show the heretical king, Akhenaten, with his sister-queen Nefertiti and their little daughters, always together and represented as exhibiting the closest mutual affection.

From Babylonia and Assyria we have nothing of the same kind; king Assurbanipal is shown once feasting with his queen (with the head of his enemy, and an elephant at his feet), but no sign of marital affection appears, and the king's children are never represented. The greater harshness of the Semitic nature and the more 'human' character of the Egyptians are very apparent when we compare them. The reason of this difference is the absence of a body of princely parasites for centuries; reasons of policy would forbid such reckless conduct on the part of later monarchs. As in all societies in a similar stage of development (e.g. India and China to-day), pesty- lience and war served as the natural checks on a too prolific increase of the race.

Death took early toll then, as it does now, of the Egyptians; and, though we have many instances of very aged persons, yet the funerary stels show how enormous a proportion of the ancient Egyptians after death, never to be seen again, no longer go with them. The usual equivalents of our 'deceased,' after its name. These representations of children, one often a head taller than the next, and so on, remind us of the rows of sons and daughters shown on the brasses of the 16th to 17th centuries in our churches. Of course, as in these modern brasses, all the children or other persons shown on an Egyptian stele are not dead; the whole family is shown, dead and living together, bringing offerings to the tomb of the owner of the stele.

The large number of children often caused confusion in family consanguinity. After the death of a child bearing a certain name, another might be born to whom the same name might be given, and both appear on the same stele of their parents. But very often two, sometimes many more, children living at the same time might bear the same appellation—a fact which makes the ancient genealogies often very difficult to unravel.

Children in ancient Egypt were differentiated
from their elders by a special mark—the manner of dressing their hair. Whereas, with the exception of the soldiers and often the peasants, the Egyptians always shaved their heads. Women wore wigs, the boys either shaved or close-cropped, only part of it, leaving on one side a long lock, which was always carefully plaited in a pigtail hanging down to the waist. Sometimes the whole hair seems to have been worn gathered into this single thick pigtail over the ear. Rarely, and only under the Old and Middle Kingdoms, does the tail appear to have been worn at the back of the head. Aspasia—she was often so named—sometimes we find portrait-figures of young men who wore both the natural pigtail and a wig, the former coming out of a hole in the latter! In later times the princes seem all their lives to have worn this lock, which marked their position as 'royal children' (in their case it seems sometimes to have been a representation of the lock rather than natural hair). The girls wore the same lock, but often in a worse form, sometimes in small braids or not plaited at all, whereas that of the boy was always a single plaits. And very often the girls did not shave the rest of the head, but wore the rest of their hair hanging down, the 'lock of youth' being simply tied separately at the side. On reaching womanhood a great wig was often worn on the top of the natural hair, though sometimes the women seem to have worn both their hair and hat, or their hat shaped like the men, always, of course, wearing their long wig over it.

Children of both sexes usually wore nothing but a slight girdle. The mother was assisted in their care by the nurse (mena't), who was an important person in the family, and is commonly represented on the tombstones as a member of it. The ideograph of her name shows that she was primarily a wet-nurse or foster-mother. The name was transferred to male nurses (like our 'nurse'), and we find the great nobles who acted as tutors or governors of royal princes bearing it as their official title ('royal nurse').

We thus see that the love of the Egyptians for their children, the important position of their women, and their interest in their families and dependants enable us to give a very full idea of the ancient Egyptian family and its life.

for citizenship was limited to men of legitimate birth; and the preservation of the reputation of the family in the State was a very strong incentive to good citizenship. In Sparta the fines for men who did not marry (Stob. Flor. lxxvii. 16), in Athens the wedding ban, and in Spartan and gener- 
ally marriage (Dein. in Dem. § 7), and the disgrace of 
dughter who did not find a husband (Soph. 
Ed. Tyr. 1500), illustrate the importance attached to 
this duty, which was naturally emphasized in 170, the body of the State. Religion also 
demanded that a man marry and raise up sons to 
continue his line. The worship of the State-gods 
was carried on by legitimate citizens, and on this 
ground also Plato restates the duty of marriage (Leg. vi. 
773 E). Further, certain forms of religious 
were the duty and privilege of particular families, 
which must be kept up in order that this service 
may be performed. Finally, the wellbeing of the 
deal (of a man's ancestors, and his own well-
being after death) depended on offerings by his 
descendants (Isoc. xiv. 60; Plato, Hipp. Maj. 
291 E), so that actual or adopted sons (Isaeus, vii. 30) 
were necessary to perform this important service.

3. The choice of a wife depends on this conception 
of marriage as a duty to the State, to the gods, 
and to one's self. A man's wife is ordinarily chosen 
by himself and his father-in-law, his best friend or 
the father of the proposed bride, and there is little or no opportunity 
for romance or individual choice, since ordinarily the 
girl has had no opportunity of seeing her future 
husband before betrothal, and hardly any opportu-
tunity before marriage. Even the consent of the 
parties themselves need not be asked, for the girl 
has no occasion to object, and the youth can have 
his income cut off if he does not agree. The 
picture of the Hymen and Antiope in Sophocles' 
Antigone is evidently an exception to the rule, 
even in literature. That marriage was conceived as 
a duty and arranged by the parents does not, of 
course, mean that in ancient Athens (any more 
than in modern countries where marriage is 
arranged by parents) the husband did not often 
come to have real regard and love for his wife. 
The woman chosen for a wife must, of course, be 
the daughter of an Athenian citizen, for only the 
children of such a marriage would be legitimate. 
She might be, and often was, a near relative of 
his future husband. Usually the bride would be 
a girl between fifteen and twenty, unless, indeed, 
she was older, and her husband would be thirty 
years of age. Her beauty would count for something, her skill in 
the feminine arts, such as spinning and weaving, for marriage 
was certainly not the most important thing; rather than 
her social position and her dowry should be com-
parable with the position and wealth of her future 
husband. The reason for this is simple, in that a 
woman with small dowry would often fail to win 
his husband's respect, while a wife with a very 
large dowry might make her husband very uncom-
fortable by interfering with his financial manage-
ment of the property, if not with other sides of his life (cf. Plato, Leg. vi. 774 D. Plut. de Educa. 

5. The relation of members of the family. — The 
 effort to ascertain from Greek literature the 
 meaning of the family as an ethical institution is 
 complicated by various difficulties. Pictures of 
 private life, such as that of Diogenes (Plut. de Educa. 
See further, Marriage (Greek).

4. The family a religious institution. — While 
 marriage and the family were definitely legal 
institutions, the religious side must be clearly re-
ognized. Like every other human institution, 
the family needed the divine blessing, and religious 
rites to obtain this blessing were not neglected even 
in times when belief in the gods became vague or 
insincere. Indeed, they could not well be neglected, 
for, in so far as the family was recognized by the 
State, it was a duty to the State to follow the 
customary rites in invoking the blessing of the 
gods. So far as the marriage ceremony was con-
cerned, the religious rites attending it resembled 
in principle the religious rites attending an im-
portant undertaking. They consisted in sacrifices 
to the patron gods of marriage on the day before 
the wedding, and again in connexion with the 
marriage, if the gods were pleased. The gods whom 
these sacrifices were offered, rather than the charac-
ter of the sacrifices, was significant. Zeus and 
Hera, who, with local deities, were honoured in 
the preliminary sacrifices, were not only the patrons 
of marriage as a human institution, but also the 
gods whose relations represented the type of the 
family human in the Olympian circle. Similarly, 
the gods of the household and Aphrodite, who 
were honoured at the marriage feast itself, were 
the gods who watched over the relations of the 
new family. Just as the religious character of any 
Greek institution finds expression in the gods with 
whom it is associated, so the religious character of 
the family is seen in the nature of the gods invoked 
in the marriage ceremony.

Further, Greek religion was a matter of social 
groups like the family or the tribe or the State, 
before it passed to the idea of a personal 
relationship with the gods. The recognition of the 
worship of the family centre in Hestia (Vesta), 
the personified earth-flame. At her round altar, 
hung with fillets, in the main room of the house, 
libations were made at each meal, and she was 
recognized in connexion with every sacrificial 
act that took place in the home. Other gods also were 
worshiped—Apollo the Guardian, whose symbol 
or altar stood outside the door; the patron gods 
of their race, whose shrine might be in a room on 
the main hall; Zeus Herkoios, whose altar stood in the 
court; and the gods of property like Zeus 
Ktoios; even gods from different shrines in the 
city might be represented still images in the 
home. At all the events of family life, such as 
the birth of a child, the coming of age of a son, or 
in cases of sickness or death, the gods of the home 
were worshiped. On home anniversaries such as 
birthdays, and often on the occasion of public 
worship in the city, sacrifices were offered in the 
home. In a word, the Greek family was a religious 
institution, because every social institution in 
Greece was essentially religious.

If we go back to the Homeric poems, we find 
charming pictures of the intimate relations of 
husband and wife, in particular of Hector and 
Andromache (II. vi.), of Alcinoos and Arete (Od. vi. — 
Hesiod, Erg. 702), *There is nothing mightier and nobler 
than when man and woman are of one heart and mind 
in a house, a grief to their foes, and to their friends 
great joy, life in their own hearts it best * (tr. 
Butler and Lang).

In later literature the references to this subject 
are few but striking. It is Euripides who describes 
the chaste wife who makes the home life happy, so 
that the husband rejoices when he enters, and calls 
himself fortunate as he goes out (Iph. Ant. 1158 ff.). 
Euripides also speaks of the sweet deceit of a wife 
who softens the trouble and cheers the illness 
of her husband (Iph. 819). In her husband's absence
it is her lot to suffer (Aesch. Agam. 581 f.); in his presence there is such complete trust and understanding that burdens are lifted off their shoulders (Soph. Eid., Tyr. 760 f., and passim). By the time of Aristotle the entire community of life between husband and wife is emphasized (Arist. Eth. Nic. vii. 14, p. 1162z, B. 19-20; cf. Protag. 65 f.) and the name P. (names 59 f) names her to the wife as one of the essential families.

While these references in literature can hardly be considered as the inspiration for philosophical theories of philosophers, we must not fail to recognize the conditions which limited the development of such relations. In general it is clear that the possibilities of intellectual companionship were limited by the very restricted opportunities of the wife for any intellectual development. Where books hardly existed in the home, and where women never came in contact with any one but slaves, even if the latter were sometimes educated persons, they could not be expected to meet their husbands on common ground intellectually. Certain pleasures belonged to husband and wife in common—pleasure in the comfortable, well-regulated home and in the family, and the sound and pleasure of music. Common purposes and ideals they certainly shared so far as the sons and daughters were concerned. Of affection between husband and wife one cannot write. It seems hardly possible, however, that the pictures of affectionate husbands and wives in Greek tragedy could have been appreciated by the Athenian audience, or even conceived at all, if they had no counterpart in the actual life of the day.

The relation of parents to children is frequently referred to in literature. Three similes in the Iliad (iv. 130, xv. 302, xvi. 7) express the tender sympathy of the poet for his mother and for his children. The joint of Jason in his son Jason and of Telamon in his son Ajax is described by Findar (Pyth. iv. 120 f., Isthm. v.) the love of Creon for Haimon, temporarily blinded by passion, in Sophocles' Antigone, the mother's joy in Cleobis and Biton (Herod. i. 31), and the pain Medea inflicted on Jason by killing their children (Iur. Medea), are examples that might be multiplied indefinitely. The reverse of the same thought is found in the pain which children turn out badly (Isoon. v. 39; Theog. 271 f.); and, when this feeling of tenderness to children seems to be lacking, as in the case of Diogenes who regarded the insolvency of the State above his personal loss in his daughter's death, it is a typical subject for public reproach (Aesch. in Ctes. 77).

The visible record of parental affection is preserved to us in the representations of mother and child on Attic vases, and in various representations of the family on Attic grave-reliefs. The duty of parents to bring up their children in right ways, and in particular to develop honour to the State and respect for parents, is ordinarily presupposed rather than stated explicitly (cf. Demost. Koron. 22-25; Eurip. Antiope, fr. 219). This training in earlier years was supervised by the mother; and, as girls never passed out of the mother's immediate care till they were married, the relation developed between mother and daughter must have been an intimate one. The son early passed from his mother's care to the school of the training slave (paidagogos), and, in lesser degree, to the father. As to any intimate relation of father and son, we know little except from the evidence of tradition. It is clear, however, that both sons and daughters were trained strictly in the feeling for the unity of the family, with the duties and privileges which this imposed.

The relation between brothers, and between a brother and a sister, is not infrequently mentioned from the Homerics onwards. The account of Agamemnon and Menelaus in the Iliad (iv. 148 f., vii. 107) only gives particular importance to the brother (Od. viii. 546). The affection of a brother and sister is best illustrated by the story of Electra and Orestes as it was developed in literature and in art.

The duty of children toward their parents is first a material one, namely, to care for them in their old age (Lyseus, xiii. 45; Isaeus, vii. 30). More broadly it is described as honour towards parents (Lyseus, Lond. p. 89; cf. I. 223 f.). Plato goes so far as to say that pious towards parents is the best worship of the gods (Leg. x. 930 E.); and the absence of such pious was at Athens a legal bar from public office (Dein. ii. 17). For the Athenians the most repulsive phase of the Sophistic attack on moral ideals concerned this point (Aristoph. Clouds, 394 f.; Xen. Mon. iii. 5, 15), and the problems which arose for sons, when one parent was turned against another, as in the story of Eripyle or of Clytemnestra, proved extremely interesting to the Greeks.

Judged by the only data at our disposal—those of myth and in the later laws and customs—there was a fundamental conception of Greek society and Greek morals. When the hold of other social and political institutions had begun to weaken, the family still retained its solidarity, and duties to the family were observed with care.

Cf. also the 'Greek' section of artt. CHILDREN, EDUCATION, MARRIAGE.

FAMILY (Hindu).—1. The family in India is of the joint-family type, and it is chiefly for this reason that the Indian family law differs so much from that of Europe. Its main principles were early reduced to writing in the well-known legal Sanskrit treatises called Dharmasastras or Smritis, all the more important of which have been published in English. This so-called Hindu law is still applied, throughout British India, in all questions relating to the inheritance, succession, and marriage of Hindus, to caste, and to Hindu religious usages and customs. All these questions are considered in the Civil Procedure Code, 1908; the Code of Civil Procedure, and the Indian Evidence Act of 1872.

2. The state of a family living in union implies a common habitation as well as community of property, of meals, and of customs. It may be described, with H. Maine, as 'a group of natural or adoptive descendants held together by subscription to the eldest living ascendant, father, grandfather, or great-grandfather. The head of such a group is always in practice despotic' (Early History of Institutions, London, 1875, p. 116; cf. Ancient Law 19, do. 1907, p. 123). It should be added that, if the family chose to continue united after the father's death, the eldest son would generally become its head, as stated in the lawbook of Nārada: 'Let the eldest brother, by consent, support the rest like a father.' The position of such an eldest son managing the family estate is also a very influential one, though not equal in dignity to that of a father, whose power resembles the potestas potestatis of the paterfamilias in ancient Roman law.

Thus 'a wife, a son, and a slave, these three are declared to have no property, and whatsoever wealth which they possess is required for him to whom they belong' (Manu, vii. 416). 'That is declared a valid transaction which is done by the senior or head of a family. That is declared a valid which has been contracted by one who does not enjoy independence' (Nārada, l. 46).

Even nowadays the manager (karta) does not confine himself to the financial part of the household; there is not a single domestic affair of any
importance which may be undertaken without his consent or knowledge; and he is even expected to watch over the spiritual needs of all the members, and to check irregularities of all kinds by his sound discipline. The evidence in the facts that married sons in India, with their wives and children, generally choose to remain under the paternal roof, as they marry very early, and avoid the responsibility and expense of a separate establishment; that adopted and of illegitimate sons may have to be added to the legitimate sons; that polygamy and concubinage are not forbidden, whereas the re-marriage of widows is objected to; and that a respectable Hindu is often obliged to support indigent relatives together with their families, as well as a hereditary family-priest and other hangers-on. It should be remarked, however, that the general body of an undivided family extends further than the consanguineous, which consists of the three generations next to the owner of certain property in unbroken male descent, and possesses a right of survivorship to under the descent also advanced in it.

3. The eldest son is not infrequently allowed by the father to manage the affairs of the family under his direction, and he may even himself become the karta during the lifetime of the father, if the other sons or male members are unwilling or unable to continue to concern himself with matters of a secular nature. After the father's death, the eldest son, as mentioned before, will generally succeed him, though this is no invariable rule. The precept of Narada is still occasionally followed, that even the youngest brother may govern the family if specially capable, because the prosperity of the whole family depends on ability. It is seldom, if ever, that a minor or female member of a family takes part in the management, though there is nothing to prevent such democratic methods of family government. The karta is, however, liable to render an account; it has been so held by a full bench of the Calcutta High Court.

4. The wife of the manager, called ghimni, also occupies a responsible position, as she has to look after the inner department of the household, to exercise a mild and prudent sway over her daughters and daughters-in-law and over the domestic servants. She has her daughter married at an early age, and have their nuptials properly celebrated. As for the task of educating her children, it would be a mistake to expect too much from a mother whose main interest in most cases is unconnected with the barest elements of knowledge, entirely governed by religious notions of the crudest kind, and given to superstitious practices.

5. The daughters and daughters-in-law, whose attitude towards another is not always that of strict harmony and peace, are not only subject to the control of the female head of the house, shut up as they are in the family zenana; they also have the charge of the household and hardships incidental to the difficult position of females in an Eastern country. Thus a young daughter-in-law in a gented family is regarded as modest and unmannerly, if she should happen accidentally to enter into a room or uninvited in the presence of her husband's relatives. For fear of being offended, men take their meals with the others, and the choicest part of the food is first offered to the males, and the residue kept for the females.

6. Most women in India are strictly religions; the ghimni in particular, as the representative of the household, to go through her morning service in the domestic place of worship, at the close of which she invokes the blessing of her guardian deity. All the inmates of the house, both male and female, are expected to present at the daily puja performed by the header of the family, and of which her obedience is binding on the stone or metal image of the tutelary god of the house. In rich families, a sufficient endowment in inalienable landed property is set apart for the permanent support of the idol.

7. From a legal point of view, the subject of maintenance is important, especially as this includes defraying the expense incurred for the nuptials and other religious ceremonies, or sanahars, of the younger male members of the family. Those who, owing to some bodily or mental defect, are disqualified from inheriting under the Hindu law have a claim to maintenance against the head of the house. Illegitimate sons and conubines are also entitled to be maintained.

8. Partition is another important subject. According to the 11th cent. Mitakshara (a well-known authoritative Sanskrit commentary), partition is the adjustment taken by the family to stipulate the property of the several members of a joint-family, i.e. the ascertaining of individual rights which during the joint condition—where the members share in food, worship, and estate—are not enough. Partition, according to the same authority, may take place at the desire of a single male member, who is therefore at liberty, as far as he is concerned, to terminate the joint-tenancy, the other copartners having to submit to it whether they like it or not. In Bengal, however, real partition may take place only after the father's death, when any co-sharer is at liberty to demand it. Such is the law as laid down in the 15th cent. Bāyānadhya, an authority, which is supposed, in the Maharastra, to have deprived the latter of the right of enforcing partition against the father's wish. It appears probable that throughout India partition against the father's will was, down to very recent times, considered very much contra bonos mores, even where it was not forbidden.

9. The early Sanskrit lawbooks contain long lists of secondary sons who may be used to supply the place of a legitimate son, if the latter should happen to be wanting. This topic of the secondary sons (gurupaputra) is also treated in the learned Sanskrit commentaries of later times, though all the various suggestions and theories as to adoption and illegitimacy which have become obsolete except the device of adoption, which has remained a highly important and vigorous institution down to the present day (see ADOPTION (Hindu)). Of the other auxiliary sons, the swetra, or son of the wife, was the son begotten of one man's wife by another, after express authorization, the legitimate husband being childless and impotent, disordered in mind, incurably diseased, or dead.

Thus, in the Sanskrit Epics, King Sandian is reported to have induced the sage Vasiṣṭha to beget for him a son by his queen; and the two brothers Bharata and Prayū, the ancestors of the chief hero of the Mahābhārata, are said to have been begotten by the sage Vyāsa for King Vichitravirya. This custom corresponds in part to the tretāra of the Jātakas, and has been found to prevail among many nations of antiquity and recent times in all parts of the globe.

A son secretly born (sahaja) from adulterous intercourse, is not entitled to become the son of his mother's husband: if a pregnant woman marries, her son belongs to the husband, and is called a son received with the bride (akṣotkha) and the son of a girl (samāja); if she marries after her husband's son; whereas, should she remain unmarried, he is reckoned as the son of her father. The latter principle is equally applicable in the case of the purikaputra, or son of an appointed daughter, who is married or married, if the latter had no male issue. Somewhat peculiar
is the case of the pausharbhava, or son of a woman twice married in succession, the second and younger sons, because women, under the Brahman law of marriage, are not permitted to marry more than once—a prohibition which has only been removed by the English legislation of the last century.

On the other hand, the social exigencies, as evidenced by the recognition of these various substitutes for a real legitimate son, seems to have originated in the exigencies of a primitive state of society when marriage by a widower was the property of a family used to depend on the number of hands able to cultivate the family property; and the very existence of a tribe surrounded by enemies depended on the number of its male members capable of bearing arms. The happiness of a man even in the next world was connected with the existence of a continuous line of male descendants capable of making the customary offerings to deities, and the chastity of women was valued very highly.

11. It is not necessary, on the other hand, to extend this to the early family law of the Brahmanas from a supposed universal practice of polyandry in ancient India, and to connect them with the polyandrous practices which are no doubt widely extended among the primitive races in India. The well-known tale of Draupadi in the Mahabharata, who became the joint-wife of all the five Pandava brothers, is the only instance of an Aryan woman said to have been the legal wife of several men, and the Mahabharata itself records the match of Draupadi as unusual and shocking. As for polyandry among non-Aryans, it exists, according to Risley and Gait's Census Report, but in no way, as a woman forms alliances with a plurality of men not necessarily related to each other, and succession is therefore traced through the female, and in the fraternal, where she becomes the wife of several brothers.

Thus, among the Kambayas of Madura, a woman may legally marry any number of men in succession, and may bestow favours on paramours without hindrance. Among the carpenters and blacksmiths in Malabar, the four or five chosen husbands are said to be in the habit of celebrating their polyandrous marriage openly with much pomp. In the Malabar and Canarese tongues generally, a woman may freely associate with as many men as she pleases to each other, so that the only family group is that of the mother with her children. The family is perpetuated by the female members only, and the person occupying the position of the mother is called the sister. This is the mahasarvagandharaka law, lit. descent in the line of a nephew of the oldest son, who is nowadays confounded with the Nayams and other castes on the Malabar coast, and in Travancore, but even there is falling into disrepute, and gradually passing into the fraternal form of polyandry or monandry. The great facilities for divorce which exist in some parts of the Madras Presidency may also be viewed perhaps as a relic of, or akin to, matriarchal polyandry. The fraternal system is still widely spread along the whole of the Himalayan range, including Kashmir, as well as in some parts of S. India, e.g. among the Todas in the Nilgiris. In Kashmir the woman is regarded as the wife of all the brothers, as in the case of Draupadi, and the children call them all father.

12. In the Aryan marriage system of India, what strikes a European observer most is the well-nigh universal prevalence of the married state, which is brought about by the custom of infant marriage (see Child Marriage [in India]). This custom, the gradual growth of which may be traced in the Sanskrit law-books, has gone on spreading from the Hindu to the Mohammedan, to the degree that in almost universal. There is no greater opprobrium, at least in a gentle family, than to have a daughter unmarried at the age of puberty; hence no father dares assert the right of deferring his daughter's marriage till she is grown up. It may be supposed that the patriarchal power of the kasthā was adverse, from the outset, to the female members of the family retaining the right of choosing their husbands for themselves; it may be hoped that

the movement against infant marriage will gradually gain ground in India, though hitherto it has made but little progress.

13. The prohibition of widow re-marriage, which is said to be the social complement of infant marriage, is also a custom of ancient standing which has been spread over the higher castes by the lower. Among the latter, however, it often meets with strenuous resistance, women being more of a power than in the higher castes, and naturally prone to set their interest above the prosperity of the family. The upper classes, also, social reformers have been constantly advocating the propriety and necessity of widow marriage.

14. Polygamy, though permitted in the Sanskrit law-books, is rarely practised nowadays, the excess of wives over husbands not amounting to more than 8 and 7 in the thousand respectively among Hindus and Buddhists. It is quite unusual to take a second wife, unless the first wife should be barren or afflicted with some incurable disease; and, even then, a man has often to obtain the consent of his first wife, or of his caste panchayat, or of both.

15. The Sinhalese contain many rules regarding prohibited degrees in marriage, the principal rule being that bride and bridegroom should never belong to the same gotra, or clan (see Castes, §§ 12 and 14). These are founded on the endogamous principle, under which intermarriage between persons differing in caste is strictly forbidden (see Marriage [Hindu]). In practice, any marriage may be said to be valid which has been celebrated in the presence, and with the presumed assent, of the relatives and leading members of the caste.

16. It should be observed, perhaps, that the otherwise strict rule against intermarriage between different castes is relaxed in the case of what has been called hypergamy, or 'marrying up,' i.e. the custom forbidding a woman to marry a man of a lower group than her own, and compelling her to marry into a group equal or superior in rank. This custom is both wide-spread and ancient, the Code of Manu styling marriages between men of a higher class and women of a lower class as according to the order of nature, while marriages of the converse type are unnatural. Social reformers have endeavoured to check the operation of the general rule against intercastes by a proposed fusion of the existing sub-castes.

17. The universally prevailing custom of celebrating the nuphals with great pomp, and often lavish expense, may be cited as a proof of the importance and sanctity of marriage in the eyes of the people. Some of the ceremonies customary at a wedding are extremely ancient, and seem to have come down from Aryan times. It is true that concubinage is tolerated, both the concubine or female slave and the illegitimate son being mentioned in the Sanskrit Commentaries as members of a joint-family. Since the abolition of slavery, however, public opinion on this head has greatly changed; and it is only in the case of holders of riyās, or large estates, or among very low-caste peoples, that concubines living as members of the family of the man keeping them may now sometimes be found. See Concubinage, Male, and Female.

FAMILY (Japanese).—The earliest family system in Japan was that known as uji. This word is of the same origin as the English "society," "commune," or "household"; but from the earliest times it had been used exclusively in the sense of "name," especially the name of a clan. Uji existed from the remotest times and constituted the first units of Japanese society.

The organization of the uji was quite complex. It was not a matter of blood relationship alone, but of social, economic, and political interests as well. Originally but a few noble families possessed names and received recognition as uji. These uji included all the members of the given family, and were named after the favour of the Royal uji, the occupation of the family members, or the place of residence. As the numbers within the family increased, the branches were made subdivisions, called ko uji, or lesser families, under the authority of the central uji, o-ujii, while the uji were governed by its kawoi, or superiors. Each central uji, with its various branches, formed a social body, for the most part sufficient unto itself; and its chief interest became that of preserving and self-perpetuation, along clear and distinct lines.

As early as the reign of Suzihime (29 B.C.), there were laws governing the names of uji; and the court carefully looked after their preservation, not allowing names once fixed to be changed except by special arrangement; and, later, establishing such historic uji as the Fujiwara, the Minamoto, and the Taira. As the offshoots of the various uji still further multiplied, they took various family names, often from the locality, such as Higas, Ashikaga, Tokugawa, etc. These names were known as miyaji (the name of a descendant), as distinct from uji; but the use of even the miyaji was not allowed to the common people until after the opening of the Meiji era in 1868.

As economic groups the uji were important. Occupations, trades, and professions were considered hereditary; and, while each caste system in the strict sense never existed in Japan, very real bonds held a man to the calling of his father, whether that was the making of swords or the teaching of mathematics at the Government University of the time.

As political factors, the uji constituted the very material and machinery of government. Theoretically, the people of Japan were all included in the various branch uji of the central uji, of which the Emperor was the head; and the national administration, such as it was in those early days, was carried on for the most part through the uji. In course of time the large uji became very powerful, holding many in a kind of serfdom, and defying the central authority of the Court. Such a state of affairs led to the Taikwa reformation in A.D. 645, which sought to strengthen the Imperial authority, and to the overthrow of so-called uji, and the organization of provinces and prefectures as political units in their place. This system, copied from China, was not adapted to conditions in Japan at the time, and soon gave way before the influence of Buddhism. But during those years the uji underwent modification, which led, by the latter part of the 12th cent., to a more complete development of what may be termed the uji archal system.

In the uji the family, as including the members of one household merely, was merged to a great extent in the larger body of the clan, and possessed no real social influence; but in the patri-
the most essentially Japanese of the faiths, developed at a time when the worship of ancestors was strong and vital. The deified spirits of ancestors, uji-gami, protected the home and made it a holy place dedicated to the maintenance of harmony.

Loyalty to the family of the past required that the family of the present should take thought for the family of the future. This perpetuity of the family was attained through the perpetuity of the family head. The eldest son and his eldest son preserved the family name, and so preserved the family. Thus the heir to the family headship was obliged to marry; and for him to die without a male descendant to continue the family and pay due respect to the spirits of the departed was a grave offence against the most sacred law of filial piety. Divorce of the barren and the taking of concubines were honourable if intended for this purpose.

Heirship in the family was not so much a matter of property as of birthright to the position of family head. From this fact grew the system of adoption, when no son was born to succeed to the family name. The adoption was preferably of a relative; but, if circumstances required, it might be of a stranger. The obligation which rested upon the head of the family, in representing the deceased past, and as respectable for the present and the future, was great; and hence it was most important that he should be a man of real character and ability. From this consideration arose the custom of retirement, eijyo, by which one resigned his position as the head of a family to his son or another who should succeed him. This was very common, for various family reasons; and, in the case of individuals or families, to take place, for political reasons, at the age of fifty, or even much earlier.

With the entrance of Western influence at the dawn of the Meiji era (1868) great changes began in the social and family, as well as business and political, life of Japan. Social changes, to be made safely, have to be made slowly; and many elements of the old patriarchal system are strongly operative to-day; but gradually the principle of individualism is gaining ground. The present Civil Code was compiled, after years of careful study in comparative legislation, by scholars and lawyers. It is modelled in many particulars on the German law, but is of greater due consideration. It became operative on 16th July 1898. In the section concerning the family the old calculation of relationship is abolished; and relatives by blood to the sixth degree, husband and wife, and relatives by affinity to the third degree are recognized as forming a family. An adopted son is recognized as related to the other members of the family as a natural son would be. A 'house' is declared to be the sphere of its headship without regard to personality; and, with a view to putting an end to the objectionable custom of early retirement from active life, it is provided that the headship of a family shall not be resigned before the age of sixty. Furthermore, marriage is recognized as an act requiring formality, and is legalized upon report to the proper Government registrar. Mutual consent and judicial decision are recognized as conditions, one of which must obtain, in securing divorce. A legal agreement may be made concerning the property of husband and wife; but the legal heir of a family may manage the property of a wife—or of a husband if the head be a woman—unless a special arrangement be made. The wife is regarded as the representative of her husband in the ordinary domestic affairs of the home.

In spite of the spirit of the new laws and the changes which are taking place, it must be said that the country people and farmers still follow, in large measure, the old system in all matters of personal family influence, the young being fettered by the family authority of generations living and dead. Among the educated and the cream of the young generation, there is a growing ambition to express individualism; but beneath the apparent calm a bitter struggle is going on. Two principles are contending for supremacy: the principle of communism within the family—personal absorption in its interests; and the principle of personal freedom—the right of personal initiative and realization. The young men and women who have received a modern education are at present the greatest sufferers from the strife if, as often happens, they are forced by old customs into an uncongenial marriage, or, on the other hand, if they break too thoughtlessly into rebellion. Nevertheless, the old order changeth, yielding place to new.

See also 'Jewish' sections of Birth, Education, Marriage.
off their garb of shame and resumed the royal attire of freemen. The home was the place where the children began to learn the world; she grew up in the place he was perhaps hard and sometimes ignoble; in the world he helped his judges to misunderstand him; in the home he was himself' (I. Abrahams, Jewish Life in the Middle Ages, London, 1890, p. 68). See also Ch. VII.)

I. ABRAMS.

FAMILY (Muslim).—The constitution of the Muslim family is very different from that of the Christian family; it is more indefinite, involved, and complicated. Marriage has not the same binding force; the ceremony is far less solemn—in fact, it is scarcely a public ceremony at all. A first marriage does not depend upon the consent of the parents. Polygamy being quite legal; and, outside the married state, the husband is allowed to cohabit with an unlimited number of slaves. The status of the children is regulated by the consent of the husband and without the consent of the parents. Thus even marriage does not precisely decide the question as to the legitimacy of a child. Furthermore, a Muslim marriage is precarious: divorce is more easily obtained than in any Christian sect. Properly speaking, it is not really divorce that is admitted by Islam—it is the husband's right of repudiation, which he may exercise almost as he pleases. Muslim custom does not give the same social importance to marriage as we do; the wife, always secluded in her apartments, or veiled, does not appear in society at all. A guest or a host must never speak to a Muslim about his wife, or ask any news of them. The education of the children, which is the great family duty in Christianity, is reduced almost to vanishing-point in Islam, and is hardly a subject of interest at all to the parents. Finally, the family makes no effort, such as is made among Christian races, to perpetuate or increase its prosperity and glory from generation to generation; it is, especially in despotic countries, at the mercy of the prince's whims, and may pass in a day from wealth to poverty.

The rules controlling the constitution of the Muslim family are supposed to be laid down by the Qur'an; but they are not found explicitly stated them. The motive is a remote and abstract custom. Muhammad formally sanctioned polygamy—for himself in particular, since he had several wives (nine, according to some traditions; fourteen, according to others), all of whom he regarded as legitimate; and he always had a revelation to justify these various marriages. But he did not approve of this large number of wives for the general mass of his followers. It is generally said that he forbade them to have more than four legitimate wives; the verse containing this rule, however, is not quite precise: 'If ye fear, says the Prophet (Qur'an, iv. 3), 'that ye cannot do justice between your wives, then marry two of them, or three, or four.' that is, do not marry too many wives if you are not sure of being able to bring up the children. Tradition has set this limit of four wives for ordinary believers, and has authorized the Khulifas and Sultans, as successors of the Prophet, to have nine. Muslims are also allowed, according to the most generally accepted tradition, to have as many slaves as they choose, to use as concubines at a moderate fee. Lower slaves are often among the women in the service of their legal wives, and hence arises a situation somewhat painful for the latter. This custom of unlimited concubinage does not appear...
to be formally sanctioned anywhere in the Qur'ān: certain Muslims, indeed, do not think it conformable to the pure teaching of their religion. It is, nevertheless, a custom that has always had wide vogue in Islam, and is, I think, mostly a survival of the ancient Persian origin. A large number of wives is one of the luxuries almost forced upon a personage of high estate by his position.

By legitimate wives are meant women of free or certain barbarous origin—e.g., among the Turks, the daughter or wife of a Turk. Slaves would include the Circassians, Georgians, and at one time even the Hungarians, Poles, and Muscovites, bought as a rule through the Jews; and also prisoners of war. The husband has the right to free a slave and take her as his legitimate wife.

Marriage with a woman of free status, which is marriage properly so-called, takes place by means of intermediaries; the husband and wife do not see each other until their union is consummated. Friends of the two families meet together, a matron visits the girl and gives the young man as exact a description of her as possible, and, if the description pleases, the dowry is fixed. The latter is paid by the man; this is not only a custom, but a Qur'ānic law. The Qur'ān says: 'Give women their doweries freely;' says the Qur'ān (iv. 2), and, 'if and when they are good enough to remit any of it to you of yourselves, then enjoy it at your ease.'

A dowry really represents a purchase: it is the price paid by the man for his wife, and is handed over to the parents of the girl, who give her up. The wife has full control of the dowry—at least after the necessary furniture has been bought. Certain parts of the marriage contract legally constitutes the marriage; as may be seen, it is scarcely more than a simple declaration. After the contract, the parties go to the mosque, with the bride (velled, of course) and a few relatives and friends, and the imām blesses the marriage. The woman is then taken to her husband's house; the wedding is celebrated by two feasts—one for the parents in the husband's apartment, and, at the end of the feast, the husband enters the nuptial chamber and sees his bride for the first time.

Muslim girls are married very early—usually at the age of from twelve to fourteen; sometimes they are betrothed when they are only three or four years old. Their parents are very anxious to have them married, and also remarried as soon as possible after being widowed or divorced. The state of celibacy, either for men or for women, is scarcely a possibility in the Muslim world.

The Qur'ān (iv. 29 f.) indicates what classes of women it is unlawful to marry:

1. Unlawful for you are your mothers, and your daughters, and your sisters, and your paternal aunts and maternal aunts, and your brother's daughters and your sister's daughters, and your foster mothers, and your foster sisters, and your wives' mothers, and your step-daughters who are your wards, born of your wives to whom ye have given in marriage, and that ye form a connexion between two sisters... and do not marry women your sisters-in-law.

It will be noticed here that foster mothers are regarded as real mothers; as to the prohibition against marrying mothers, daughters, and sisters, it must have been necessary in consideration of the teaching of the Jewish religion. Adultery, fornication, and the customary upon his words says that he must cohabit with them at least once a week.

Polygamy is a very costly luxury. The four legitimate wives cannot be for a long time united to one another; each one has her house, or at least her apartment, table, and domestics. Economical reasons are a check upon polygamy, and it is only the rich who can practise it. Men of moderate means and peasants usually only one wife; there are even men who prefer not to marry at all, and are content with the commerce of their slaves, the latter being
regarded as legitimate wives once they have borne a son. This method of procedure is in agreement with the spirit of Qur'an, iv: 3:

'It ye fear that ye cannot be equitable (i.e., that you will not be able to do your duty to the children), then marry only one wife.'

The Muslim woman's life appears to us as a very pitiable condition. She takes no part in the society of men; she seldom goes out, and is always veiled when she does go out. The same amount of seclusion is forced upon her by the Qur'an. The custom of veiling is also found in ancient Greece; it existed likewise among various Arabian tribes before the time of Muhammad; it was meant to protect the dignity of free-born women, and scarcely applied to any others. It was only the women of high social rank that Muhammad had in view when he imposed the rule of covering the face with a veil; his words did not apply to slaves or women of low station. The precept, however, has been put in practice by all Muslims, and peasants and even nomads wear veils; the latter, it is true, do not have them so well cut or so often washed; they hang loosely around their necks and are lowered only when passing a stranger. In Constantinople, after the revolution (A.D. 1909) which dethroned the Sultan Abdul Hamid, women have gone out un- veiled; and the shah of- al-sultan had to make a fated commanding them, on pain of imprisonment, to return to the observance of the law.

Women of high position go out very little; they pay visits to each other, and sometimes visit the shops, but rarely the mosque. Their chief amusement is going to the baths; but in the larger harims there are very elegantly built bathrooms, and so the women are not deprived of this motive for going out. The Turkish lady passes her day on a sofa, smoking, singing, spinning, embroidering, or sleeping. Many of them have had keen intellects in their youth, and have received instruction and even learned a little foreign literature; but their intelligence is apt to become dull in their seclusion, and their occupations are of necessity childish. Their chief concern is to please their husband; and they become expert in the arts of dressing and toilette.

In the larger harims the musical and dancing slaves have to give festivals from time to time.

Neither the Turks nor the Arabs are a prolific race; and the multiplicity of wives does not increase the numbers of children. The seduded life must be unfavourable to fecundity, and the desire for luxury gets the better of that of producing children. Many young women, slighted by their lord, pass the latter part of their lives in a kind of forced sterility in the women's workshop; and the keeping of these, besides, entails the sacrifice of a certain amount of virile force, for it is necessary to make a great number of enemics to keep in the paths of chastity a multitude of pretty slaves who are tormented by their sensual appetites and the ennui of the harim.

Children are brought up, to the age of seven, by the women, in the father's house; they are swaddled for eight or ten months, and are exclusively nursed by the mother, who suckles them for twelve or fourteen months (the Qur'an [xli. 14] says thirty months). If a nurse has to be requisitioned, she is treated with the greatest respect; she is called 'the foster mother,' and is generally a young slave who becomes free and is then regarded as a member of the family. The child is laid in a fine cradle and, in rich families, rocked by slaves. A fête is held to celebrate the day when it is put into short clothes, or has its hair cut for the first time, and another when it begins to walk. At about seven years of age, boys are circumcised and pass out of the women's care. This ceremony, which they like to perform for a fairly large number of children at a time, is the occasion of great rejoicings. The boys after circumcision may be seen walking in the streets of Muslim towns, dressed in rich clothes, and wearing turbans embroidered in gold and silver and surmounted by plumes, and their families also give gifts to the people at the door. See, further, CIRCUMCISION (Muhammadan), vol. iii. p. 677. Among the Arabs, this is also the occasion for giving the boys horses. Boys from the age of seven upwards go to school, where they learn reading, arithmetic, and a little of the Qur'an. In towns where there are Christian missionary schools the young Muslims sometimes attend them; even the little Muslim girls go to the schools managed by Christian priests. Sometimes the richer parents employ governesses to come to their houses, and they may be Europeans. All the girls learn to sew and embroider; they do not take the veil until puberty. See, further, EDUCATION (Muslim).

Muslim children have the greatest respect for their father and mother. This veneration is joined in several verses of the Qur'an (xlvii. 16–18, xvii. 241). A Tatar boy never sits down in presence of his father; and a Turkish boy always comes for his father's blessing at the festivals and chief events in his life. In important Arab families the father is a veritable king. The chief of a rich family is able to maintain a housekeeper and a servant, and to keep no less than twenty; he gives them houses of their own and finds them wives; this first marriage is arranged by the parents, whom the young man cannot but obey.

The Qur'an lays down some regulations as to wills; but they are not quite clear. The disposable portion is not stated in figures. It is said that 'men should have a portion of what their parents and kindred leave, and women should have a portion of the same, and kindred leave, whether it be little or much, a determined portion' (iv. 5); but it is not stated what portion. A son has a right to twice the portion of a daughter. A husband gets one-half of what his wife leaves if there are no children, a quarter if there are children. A widow gets a quarter of her husband's possessions if there are no children, an eighth if there are children. Thus we see that testamentary legislation is ruled by the idea of the woman's inferiority—an idea which dominates the whole system of Muslim family life. See, further, LAW (Muhammadan).

LITERATURE.—It is impossible to select a bibliography on this subject. All books on Muslim religion and all accounts of travels in Muslim countries contain information on the subject. Besides the Qur'an itself, it may be useful to consult d'Ossas's Tableau général de l'empire othoman, Paris, 1757–1803, which gives an account of Turkish customs at the end of the 18th century—"that is, at a time when the Turks had not yet been influenced by European thought;" the general works and memoirs recently published on Muhammadanism, e.g., by O. Houdas (Unislamisme, Paris, 1908) or M. Hartmann (Der islam, Orient, Berlin, 1899 ff.), and the present writer's La Doctrine de l'islam, Paris, 1909. There are numerous interesting details regarding life in the Seljuk harem in J. A. Guer, Histoire et mœurs des Turcs, Paris, 1745 (a very fine work); and a charming description of family life in the castle of an Arab nobleman is found in Emily Fages's Mémorial d'une princesse arabe, Paris, 1905.

108 Carra de Vaux.

FAMILY (Persian).—Pride in an honoured lineage has always been as characteristic of the Iranians as of other peoples. Thus Darins i. traces his descent to Achaemenes (Bakht. i. 4–6), and from his father, Hormozd, he derives the Persian Iranian term for 'family,' tanumā (ib. i. 8, 28, 45, etc.), lit. 'seed.' There are, however, only meagre data on the various degrees of relationship, except the case of those between kinsmen and between father and son (ibid. and ibid. by zēr, 'seed, family' (cf. Heb. yṣ, 'seed, offspring'); and the plural of Av. asman, in the sense of 'kindred,' in Vend. xii. 21).
FAMILY (Persian)

child, and for this reason we must especially regret the loss of those portions of the Avesta Hāspāram Nāsk which treated of it. This is well illustrated by the variety of it, and the fitness of a man for it. About one's own family, and whatever is on the same subject. About the income of wife and children, however, we have a variety of it, and fitness for it; the violation of adoption, the sin of the son who is the next of kin for levirate.

The next of kin for levirate. A (heer) may be his wife, if she has no children by her first husband, who in any case has her in the future world; she is also a sister wife. A child orphan is not considered to be without the consent of her parents, from whom she inherits no property 

Apple apparently an orphan girl without uncles on either side was unmarried as (Dīnk. viii. 13). Polygamy was common, at least among the rich, among the Persians (Herod. i. 135; Strabo, p. 738; Ammian. Marcell. xxi. 76; Agathias, ii. 30) and Medians (Strabo, p. 526); and it also appears to have flourished among the Zoroastrian Iranians. As Geiger points out (Ostirān. Kultur, pp. 244, 247), there are Avesta passages, such as V. 22.7 (in the house of the righteous, women and children are present in rich abundance—frāpitvāu nārīkās frāportvȋ o aperenāqā), which imply this, while in Yasna xxviii. 1 there is plainly a reference to the women (doubtless the wives) of Ahura Mazda himself (yāsā tā ganahā māzād), and Zoroaster is represented by tradition as having three wives, two of whom were 'privileged' and the third a 'serving' wife (Bun. xvi. 182, 183, 184, 185, 186, 187; Tahkīn, xvi. 182, 183, 184, 185, 186, 187). In the later period, when the Mātigāz-t-Haḍar Dīštāt in was written, polygamy was expressly recognized (West, GT-P i. 17), but in India it was permitted only when the first wife had a husband. An example of this is given (Axonu Perrett, i. 501).

In regard to concubinage, it would seem that there was a sharp distinction between Zoroastrian and non-Zoroastrian Iranians. The Avesta contains no allusion to the concubine, and the chief references in Pahlavi literature seem to be Sāyāst tā-Sāyāst x. 21, xii. 14, the latter passage reading: 'It is well if any one of those who have their hands (tāwar) in cohabitation (zānī), and offspring is born of her, she shall accept all those who are male as sons; but those who are female are no advantage, because an adopted son is requisite, and there are many who do not appoint an adopted son with this idea, that: "The child of a handmaid may be accepted by us as a son."'

Among the non-Zoroastrians, on the contrary, concubinage was very common, at least among the wealthier class (EBC ii. 85; see also the evidence for the sasanian period, where there is to-day, a strong disapproval of marriage outside the Zoroastrian community (Dīnk. iii. 50, tr. Sanjana, pp. 90-102; the particular consideration is the marriage of a Zoroastrian to a Jewess, the marriage being largely those of lack of racial and religious sympathy. On the other hand, the marriage of princes from foreign lands was very frequent throughout Persian history, even in the sasanian period (Spiegel, Erdn. Alterthumskunde, iii. 679 f.).

When Zoroastrianism was still a proselytizing religion, a non-Zoroastian might be wedded after having embraced the Zoroastrian faith; but the modern Parsis have not merely abandoned proselytizing, but object strenuously to receiving converts, so that the problem of intermarriage has become more difficult than it was centuries ago.

The dowry of a widow who marries a second time is less than that of a virgin bride (Dīnk. v. 17, tr. Sanjana, p. 857), and, as already noted, half of her children by her second husband really belong to her first husband, as does she herself in the future world.

There was, besides the forms of marriage already mentioned, a quasi-levirate. According to al-Bīrūnī (India, tr. Sachau, London, 1885, i. 109), quoting Tansu:

'If a man dies without leaving male offspring, people are to examine the case. If he leaves a wife, they marry her to his nearest relative. If he does not leave a wife, they marry his daughter or the nearest related woman to the nearest related
male of the family. If there is no woman of his family left, they
wo, by means of the money of the deceased, a woman from some
marriage is considered as the offspring of the deceased. Who-
erness, if woman or girl is willing to stay and reared there,
sons, since he cuts off the progeny and the name of the deceased
to all eternity.'

The desire of the Iranians for children and their
their education have been considered elsewhere (ERE iii. 544, v. 207 f.). As
mentary to CHILDREN (Iranian), it may be noted that
childlessness is a curse (Yast xvii. 57), but special respect was paid to mothers

The principle of filial obedience was implanted by
and (Yasna xvi. 7), and the
Yast. xxxv. 6; cf. iv. 5.) that

'some teacher to a son reverence unto his father has also
appropriated the reward for reverence unto the creator for
teachers; hence, for this reason, because of reverence unto parents and service to them are connected
reverence unto the Creator and service to him.

The death of one's parents and other relatives, one is to celebrate the sacred feast (myazd), the consecration of the sacred caked (dhrin), and the benefactions (ofringin) for the
child's beneficiaries. There is a doctrine from the living (Sad Dar, xiii.; cf. vi. 2, xiv. 9).

Naturally, the father had certain duties toward his child (Dink. viii. xxxii. 21, xxxiv. 41); but, if
the principle of filial obedience was not shown, those
the man's suffering, his wife and mother, and asked no absolution and forgiveness
from their father and mother in the world,' had, in hell, 'their chests plunged in mud and stench,
and a sharp sickle ever went among their legs and other limbs, and they ever called for a father and
mother' (Artk-Vinr Namaq, ivx.)

In the Pahlavi Dastatán-i Dink, elaborate rules are given for inheritance, adoption, and guardianship.

The regulations for inheritance are as follows (ibid., 6):

'When there is nothing otherwise in the will and private
property of the deceased, who is a privileged, or if one gives
her anything by will, then she does not obtain the share pertaining
radical and in the order of descent; this share is not provided by this
every one has so much, and the wife may be a privileged
one has twice as much; and the share of that one of the sons,
or half-woman, or who is blind or is not capable of giving
in both feet, or raimed in both his hands, is twice as much as
the son of one who is sound; if there is no son of that man,
and if there be a daughter or wife of his, and if some of the
affairs of the man are such as render a woman not suitable for the

As a guardian to a family guardian; if there be, moreover, no wife or daughter of his, it is necessary to appoint
an adopted son.' The adopted-sonship and guardianship
ability to a family of the deceased, and is called
the adopted-sonship; and he is to be appointed to it who is
the nearest of the same lineage, who can manage and keep
the property united in its entirety. The guardianship is of
that when a guardian has to be appointed in that manner over
the property, if it is in the hands of those who are old, or infant, son
not fit for their own guardianship, so it is necessary to ap-
potent one.' Those who are suitable for such adoption
are a 'grown-up man of the good religion who is intelligent, a
complete ruler of a numerous household, expert in managing,
and the man being eligible,

'even when he has accepted either one adoption, or many adop-
tions.' Any woman, or even a child, is suitable for
one adoption, but when adopted in one family she is not suitable for
another adoption. A woman requiring a husband—though
a commoner, she cannot be adopted, but if infed, or one
having a sister worthy of death, is unfit for adoption; so also
those who are chosen by the neighbors, she who is untrustworthy (khosn
mتن) or courteuse, and she who is menstruous are unfit.
by its extensiveness, and the very superficiality of the matter. Thus the gods were interested in the fulfillment of the duties which attached to each of these four above-mentioned relationships. The divine duties of a man as a citizen of the State formed a part of the whole 'private,' or sacra familia; the duties connected with the worship of the Deities, those which he owed to the State, were called 'private,' or sacra publica; the divine duties connected with the other three relationships were included under the term 'private worship,' or sacra privata. Of these three relationships, the worship of the Gods, or gens sank so soon into insignificance that our knowledge of the sacra gentilicia is extremely scanty, and the subject need not trouble us here. The divine duties of the family form the theme of this article, but the individual was so involved with the family that we cannot eliminate him from our discussion. As a matter of fact, those elements which later assumed the characteristics of individualism were in their original state merely phases of family worship, expressing the relations of each individual to the family.

Our sources for a knowledge of the history of the family and of family worship in Rome are relatively scanty. The history of the State and of the State religion. Official documents, calendars, etc., which are so valuable for the history of the State religion, are of almost no service in the study of family worship, as they are exceedingly numerous, but they are almost all fragmental, and are therefore valuable only for our study of the cult of the dead. The very homeliness and familiarity of the subject from the standpoint of contemporaries is the cause of our ignorance; very few people take the trouble to speak about what everybody knows; hence our sources are largely incidental, e.g., among the poets, especially Plautus, Horace (Satires), Tibullus, Horace (Satires), Tibullus, besides a few late antiquarian writers, and the scholiasts and commentators on the poets. We might well despair of ever obtaining an adequate picture, were it not for one psychological fact, namely, that, though all religion tends to conservatism, there is no part of it which is more conservative and less subject to change than the religion of the family. Hence, though our sources are fragmentary and widely separated chronologically, they can be placed side by side to form a mosaic picture.

The deities worshipped by the family may be divided for convenience of treatment into two classes. One class consists of those deities whose cults have been more or less completely absorbed by the State, and for which we have only scattered references. The other consists of those deities which have remained intact; and the two groups of deities, the Dei Manes and the Di Penates, are the only ones with which we shall deal.

1. Deities regularly connected with the family.

The deities regularly connected with the family were either not included in the State cult at all, or, if included, were worshipped there as an imitation of the cult of the family, a symbolic representation of the State as merely an enlarged family. Chief among these deities are the Genius (and the Lares), the Lar, the goddess Vesta, and two groups of deities, the Di Manes and the Di Penates.

(1) The most important element in the worship of the family and the supreme duty of the individual was the worship of the deified ancestors, or Di Manes (literally, 'good gods'). At death each individual was conceived of as losing his individuality and becoming immortal merely as a part of his family, i.e., as one of the deities, or genii, of the family. Thus the prime duty of the head of the family was the regular and scrupulous fulfillment of the ancestral sacrifices; and it was also his paramount duty to provide for the welfare of the adopted son who could take up the burden of the sacrifices after he had laid it down at death. For further particulars, see DEIFIED ANCESTORS AND CULT OF THE DEAD, Roman.

(2) Quite distinct from this worship of the deified dead en natae was the cult of the protecting deity of the living; the guardian of each member of the family. This deity was called a genius, or 'priest of a man the Genius, in the case of a woman the Juno. The connexion of the individual with the family is shown very clearly in the original meaning of the name Juno: the deities who were thought of in a purely materialistic way, as the physical force employed in the maintenance of the family, the Genius (cf. genitors, and Censorinus, ii. 1) as the procreative power, and the Juno as the protective power. By degrees these ideas became more and more spiritual, until during the empire the Genius and the Juno stood for a sort of guardian angel. The Genius (we use the word here and onwards to express both Genius and Juno) was thought of as co-existent with the individual, born with him, passing through life with him, and finally dying with him. Hence the birthday of the individual was the chief festival of his Genius. On this day he worshipped his Genius (Latin natalis, or merely natalis or simply 'Natalis' (cf. Tibullus, ii. 2, iv. 5; Censorinus, ii. 1; similarly 'Juno natalis,' Tibullus, iv. 6. 1); and sacrifice of wine and milk and cake was made. The feasts connected with these birthday celebrations was naturally that of the master of the house, the paterfamilias. Slaves and freedmen often erected dedicatory inscriptions in honour of this event (cf. CIL vi. 297-299, 1919, v. 1868, x. 800, 801, ii. 356; and, for the Juno, i. 1324). From the time of Augustus the Genius received an additional emphasis from the fact that the Genius of the living household was no longer a god, but the first for the State at large, and afterwards for each family. The use of the Genius as a protecting deity of corporations, cities, buildings, etc., lies outside of our present discussion.

(3) But the religion of the family did not content itself with the cult of the deified dead and the worship of the Genius of the living; it paid homage, in addition, to the deities who protected those material things with which the family had to do—the house itself, the store-closet, and the hearth—viz., the Lar Familiaris, the Di Penates, and Vesta.

(a) The origin of the Lar Familiaris, or protecting deity of the family, is lost in the obscurity of the early phases of Roman religion; but the most likely view is that the cult of the household Lar (in the singular) is merely a branch of the general cult of the Lares (in the plural) at the cross-roads, the so-called 'Lares Compitales' (for a different view, cf. Samter, Familiengesetze der Gr. und Röm., Berlin, 1901; cf. also ERE iv. 336). The Lar Familiaris was thus the protector of the house and its inhabitants, especially the slaves (the familiae in the technical sense). The venerable farm-almanac of Cato directs that the husband's wife, the villicia, should place a wreath on the hearth on the Kalends, Ides, and Nones and set out on those same days a sacrifice to the Lar Familiaris for plenty (de Agric. 143). The Lar Familiaris formed the sentimental centre for all phases of family life, and offerings of wreaths, incense, and wine were made to him on all family anniversaries, and the Lar represented the primitive concept of home, and was the ideal figure about which the associations of the household clung. Before undertaking a journey, before entering the Roman house, the Lar represented the primitive concept of home, and was the ideal figure about which the associations of the household clung. Before undertaking a journey, before entering the Roman house, the Lar represented the primitive concept of home, and was the ideal figure about which the associations of the household clung. Before undertaking a journey, before entering the Roman house, the Lar represented the primitive concept of home, and was the ideal figure about which the associations of the household clung.
wreath was put on the Lar; and, when a member of the household died, the ceremony of purification which followed included the sacrifice of sheep to the Lar (Cic. de Leg. ii. 53). When a son put on the toga praetexta, the Lar Familiaris, and the amulet, the bulba, which the boy had worn up to that time, was hung about the neck of the Lar (cf. Pers. v. 31; Petron. 60; Prop. iv. 1, 15). At the birth of a child, the house of his husband, she placed one copper coin on the hearth as an offering to the Lar Familiaris, gave a second to her husband, and placed a third on the altar at the nearest cross-roads in honour of the Lares Compitales (Varro, in Nom. p. 331). Finally, various votive offerings were hung on the wall near the hearth in honour of the Lar, e.g. the weapons of the veteran soldier (cf. Ovid, Trist. iv. 8. 22; Prop. iii. 30. 21 f.; Hor. Sat. i. 5. 63 ff.).

(b) One of the most important rooms in the old Roman house was the cella penaria, or store-closet, corresponding to the room which in modern Italian houses is called the dispensa, containing the reserve surpluses and interests of the household, carefully distinguished from the pantry, where the day’s supply of food was kept after it had been taken out of the store-closet. It is characteristic at once of the independent practical nature of an early Roman religion that a group of gods who were supposed to be in charge of this store-room, and who received their names from it, formed one of the most important elements in the cult of the family. These gods were known as the Di Penates (penusae’, store-closet’), where Penates is not a proper name like Lar, Lares, but merely an adjective in agreement with Di; hence it was frequently a theme of discussion among the antiquarians of Rome to whom the Di Penates were, and whether any particular deity, e.g. Vesta, belonged to them or not. The real state of affairs seems to have been as follows.

The Di Penates originally were a group of otherwise nameless gods, and Vesta was not included in their number, though she was very closely associated with them, since the hearth, Vesta’s altar, was the place where sacrifice was made to them also. When Vesta was worshipped by the State in the forum, this relationship was recognized, and the Penates of the State, the ‘Di Penates P.R.Q.,’ were worshipped at the same altar. Later the Penates received their own State temple, and Homer and other poets record that Vesta and Penates entered the temple of Vesta, so that both they and Vesta preserved their independence. In private worship the reverse process took place, and the original association of Vesta and the Penates was never broken, but, instead, Vesta gradually lost her independent position, and was included under the title of the Penates. This explains the apparent neglect of Vesta in private worship. But, apart from Vesta, there was a constant tendency to abandon the group of nameless deities, and to include certain well-known gods among the Di Penates. The choice in such cases was governed by the particular circumstances and interests of the individual; hence we have many varying combinations, as may be seen in the frescoes on the kitchen walls of many of the houses of Pompeii (cf. Helbig, Kleine Abhandlungen über Vesta’s Tempelkomplexe, Leipzig, 1869, p. 19 ff.; de Marchi, II Culto privato, 1896, i. 79 ff.).

2. Deities occasionally interested in the family.

—Apart from those deities whom we have already mentioned, and who were constantly protecting the individual himself and his permanent surroundings, his house, his hearth, his store-closet, etc., many others of the gods of Rome were occasionally concerned in family life, so that it literally true that human life was hedged about by them from the cradle to the grave. Practically every one of the gods of the State came into contact with the family at some time during the life of the individual, and we shall speak here only of the more important of these temporary associations.

(1) The family was crowned with an aureole and the amulet, the bulba, which the boy had worn up to that time, was hung about the neck of the Lar (Cic. de Leg. ii. 53). From his standpoint a fair enough expression of the part which a host of minor deities was thought to take in the life of each household seemed to be that of a human being. The exact names of these deities, however, and the part which each took, are by no means certain (for further details, cf. the article Indigimenta’, by Peter, in Roscher’s Lexikon; and de Marchi, II Culto privato, i. 185, note 3); but the chief of these deities was Juno, who, under the cult name of Lucina, was invoked as the goddess of childbirth (cf. ll. 649). Another long list of deities cared for the child in its cradle, taught him to walk, protected him from the evil eye, and developed him to young manhood (for these deities, who also are uncertain, cf. Peter, i. 1, and de Marchi, i. 186 f. and notes). Certainty attaches, however, to the notion that a child was brought up in the cradle on the ninth day after birth in the case of a boy, and on the eighth day in the case of a girl (cf. Marquardt, Privatleben der Römer, Leipzig, 1888, p. 83), when the child was brought from the cradle to the cradle and the god of a sacrifice, and probably a banquet. One of the greatest proofs of the essential difference between Roman religion and Christianity, and of the absolute foreignness of Roman religion to our habits of thought, is found in the matter of the training of the child. We miss any act resembling in meaning either baptism or confirmation; religion and the State are so identical that the child as a citizen was necessarily partakes of the religious life of the State without any formal act of inclusion. Further, since religion consists so entirely in ritual acts and is so barren of theology, no formal religious instruction is necessary, but the child grows up learning by imitation when and how the ritualistic acts should be performed. The myths he learns partly from his nurse, partly in the schools, but principally by being surrounded by them in wall-decora- tion, literature, etc. The transition from boyhood to manhood was marked by the putting on of the toga virilis, and the offering of a sacrifice. The youth, accompanied by his family, ascended the Capitol, sacrificed to Jupiter, and was enrolled in the money-box of the goddess Juventas. The usual day for the performance of this rite was the Liberalia (March 17), the festival of Liber.

(2) From the standpoint of the preservation of the family, the most important act in the life of the individual is marriage; hence it is not surprising that it, too, was under the protection of the gods. But, while we see traces of religious observances surrounding all forms of Roman marriage, it is difficult to state exactly in what these ceremonies consisted. Of the three forms of marriage in Rome—conforrario, usus, and coeptio—only the first was attended by any special religious act, while the last two were affected by religion only as much as were all the acts of life. Common to both conforrario and coeptio was the avoidance, on religious grounds, of certain days for marriage. (Usus, being the condition of the Statia, or the day at the end of a year, did not permit of the choice of a special day.) The days thus avoided were: the Parentalia, or the feast of the dead, Feb. 15–21; the month of March, because of the festivals of the Salii and Mars; the month of May, because of the Lenanias—May 9, 11, 13—and because of the procession of the Argei on the 15th; June 7–15, because the temple of Vesta was being cleansed; the three days in the year when the lower world was thought to be open (mundus patet)—Aug. 24, Oct. 5, Nov. 8; in general the
FAMILY (Teutonic and Balto-Slavic).—When the Aryan peoples, including, of course, the progenitors of the Teutons and Balts, spread over Europe in pre-historic times, the connexion among many of the aboriginal tribes of our continent, certain forms of family life quite different from their own. Of these the most notable was the so-called patriarchal, i.e. that family organization—still surviving, as ethnologists tell us, in certain parts of the world—which, while it recognizes a marital relationship of longer or shorter duration, does not recognize the paternal relationship, as the children belong, not to the father, but to the mother, and inherit property, not from the father or paternal uncle, but from the mother, and especially the maternal uncle or grand-uncle. In connexion with the patriarchal family we frequently find, on the one hand, that women are held in high honour and even possess supreme power, and, on the other, that sexual life is marked by an astounding laxity and polyandry, of the marriage of blood-relations, and even of complete sexual promiscuity. A signal contrast to such conditions of family life is presented by what we know of the Aryan or Indo-Germanic stock, in which the existence of the so-called patriarchal or agnatic family is attested by the fact that the words express of family relationships are essentially the same in the various cognate languages.

Thus, for example, Goth. fadar corresponds to Lat. pater, Gr. πατήρ, Skr. पितृ, O.H.G. waster, O. Slav. mati, to Lat. mater, Gr. μητέρ, Skr. मातृ, Goth. éazna, Lith. tētā, to Gr. πατρίς, Skr. पत्रि, Goth. zemnis, O.H.G. waster, 'uncle,' to Lat. patruus, Gr. πατρος, Skr. पत्रो, Goth. sôter, 'grandmother,' to Lat. anna, A.S. ðēgna, 'grandchild,' Lith. nepeto, to Lat. nepos, Skr. नेपत, O.H.G. waster, 'daughter-in-law,' O. Slav. edelka, to Lat. nura, Gr. νύμφη, Skr. सुती, O.H.G. wehr, 'father-in-law,' Lith. æstari, O. Slav. výstar, to Lat. soror, Gr. ἥρων, Skr. jñātī; Goth. svistar, 'mother-in-law,' to Lat. sover, Gr. ἥρων, Skr. jñātī; O.H.G. fahēzen, 'husband's brother,' to Lat. leucri, Gr. ἱδρωτ, Skr. žūkr; O. Slav. struk, 'sister,' to Lat. gēla, Gr. γυναῖ, O. Slav. jetry, 'husband's sister's wife,' Lith. bate, to Lat. jœdicula, Gr. ἐδριακές, Skr. jñātī, etc.

These examples of the terms applied to family relationships show incontrovertibly that the foundations of the modern family were already laid in primitive Aryan times, and it is the object of the present article to treat of this institution in fuller detail, more especially as found among the Teutons and Balto-Slavs. We do not propose to deal separately with these two ethnological groups, as it will be seen that in many cases the bearing of the subject in one group becomes fully intelligible only by reference to the other. The subject-matter will be arranged according to the three headings of (1) marriage, (2) husband and wife, and (3) the other inmates of the household.

1. Marriage.—From the earliest times we find in either group two forms of marriage, viz., marriage by purchase and marriage by capture. As regards the ancient Lithuanians, we have the following item of information in Michalonia Lituan i de moribus Tartarorum Lituanorum et Moscorum (Part I: 171-173; Part II: 489-490), by Ch. Kasus (Basel, 1615): "The Lithuanian women arranged men in a modum et in nostra olim gente solvahab paterni- bus pro sponsis pretium, quod krieno (purchasemoney': Skr. kriēṇā, 'I buy') a Samagiits vocatur." The ancient Prussians, Peter of Dulsburg (in Script. Maguncia, Hortus Eboracensis, Leide, 1608) writes: "Secundum antiquam consuetudinem loco
habent Prutheni adhibe in usu, quod uxorres suas emunt pro certa summa pecuniae. With reference to the ancient Slavs, see below. In Old Russian a man whose name was called a "marten," from *arme* (<Arminius) "marten," because her parents might exchange her for marten-skins, the usual medium of payment in ancient Russia, just as Homer speaks of a maiden and their "scutum," a marten-skin, saying that she brought her parents a bride-price in the form of cattle. To this day among the Russian peasantry, the first act of the nuptials is the suit or proposal (vsetiane), which is a purely commercial transaction. The father of the suitor, the suitor usually accompanied by a relative, visits the girl's parents and says, 'We have a purchaser; you a commodity: will you sell your ware?' Then follows the bargaining, which is, in our informants state, differs in no respect from a negotiation about the sale of a cow.

The well-known reference of Tacitus to the marriage customs of the ancient Germans (German. hist. 3: 18, non uxor maritii non uxor maritus offerat. Intersunt parentes et propinqui ac numerus probant [i.e., marriage was an affair of the whole family-group], non ad delicacies multihabes quasitas nec quibus, non patria conatus, sed boves [cf. *darta*, *darta*] de fringibus et scutum commissum gladique. In hae munera uxor recipit) can hardly refer to anything else than a commercial transaction of similar character. For the fact that marriage by purchase is commonly practiced among the Teutons till a much later period is shown by numerous passages in the vernacular records.

Cf. e.g. *te thena gilhas giboth lit te brudil* (O. Sax.); *die lordel ehalt cae dawe e gift, baimo and baumg* (A.S.). The Teutonic term for the bride-price appears in Old English as *wifgeat* and in Old Saxon as weston, words in which in some cases to some extent changed their meaning (cf. N. H. O. wittum, "widow's estate"), but which, alike in form and signification, were originally equivalent to the Homeric *fiev (cf. *flevon*, "gift to the bride's parents." If we assign to this word a root with a double termination (e.g., *feb*), we can trace the A.S. *wifgeat* and Gr. *heson* to the oldest term for marriage in the Aryan tongues: Lith. *vedai*, O. Russ. *vedeti*, lit. "to lead" (sewedai, "wife"), Skr. *veda*, "wife," Avest. *wedas*, "woman," *vedaryga*, "marriageable"; so that A.S. *wifgeat* and Gr. *heson* mean literally "the price for taking home the bride." 

Side by side with marriage by purchase is found marriage by capture. The co-existence of the two forms is seen most clearly in eastern Europe. Thus, according to the Chronicle of Nestor (ed. Mikielievs, Vienna, 1600), cap. 10: "they (the ancient Slavs) had their customs and the law of their marriage, and their marriage, and their marriage customs, and for their fathers, were said to be, before their daughters-in-law and their sisters, their mothers and parents, and showed great respect for their mothers-in-law and sisters-in-law. They had a marriage (bridegroom) system... but the Devil's (forest) folk lived in bravish fashion; they lived like wild beasts; they killed one another, ate unclean things, and had no marriage (bridegroom), but abducted (inmyshksti meshes) the young woman. And the Radimici (sons of Radim, on the Ori, the Vistula (sons of Vistula), on the Oka, and the Seres (people of the North), had all identical customs: they lived in the woods like wild beasts, and ate all manner of unclean things; they carried on levirate conversations before their parents and daughters-in-law. They had no marriages (bridegroom), but captured the women between the woods, in these games, dances, and all kinds of devilish sportings, and these women were carried off the woman with whom he had come to terms. Each man, moreover, had at least three wives."

Among the Baltic tribes likewise—the Lithuanian, Livonians, and Curétes—as also among the Muscovite and Ruthenian, as we learn from the *Historia de gestis agricultarum Rusinorum* (Rome, 1555) of Archbishop Boleslaus Magnus, marriage by purchase or by capture was quite common. Of the Lithuanians in particular, Lasciuinus (de Dileta Sanguisgerum, cap. 56) writes as follows: "Nece ducuntur (puellae), sed rapuntur in matrimonio nocturno et uterque a Lycegro instituto. Rapianur autem non ab ipsio sponso, sed duxus ejus cognatis." Cf. also M. Protectorius, *Deliciae Prusacae*, ed. W. Pierson (Berlin, 1871), p. 69: "Eranus Franchini, in his *Mirror of Mirth*, lib. 5, c. 3, p. 508, speaks thus of the Prussians: "In many localities their marriageable daughters were little hells or cymbals, which were offered to the bridegroom by a ribbon and little bit of the marriageable, so as to give a sign to suitors that the fruit was ripe. Nevertheless, they did not offer themselves directly, but allowed themselves to be courted and mated by the suitors. They were carried off, however, not by the bridegroom himself, but by his two syni (birds)."

Among the Russian peasantry the two forms of marriage referred to, viz. marriage in the recognized sense (bridegroom)—which, as we saw, was simply marriage by purchase—and "predatory marriage" (vsetiane), marriage by capture (magykande), or whatever else it may be called, still exist side by side, though the latter has receded farther and farther into the wooded country to the east of the Volga. For a fuller discussion of predatory marriage in Russia, see Schrader, *Sprachwgrl. u. Urgesch*, ii. 326 ff.

In the Teutonic area, marriage by purchase was much less in vogue than marriage by capture, but that it prevailed there not merely in isolated cases but as a general practice is rendered probable by its existence among related peoples, such as Indians, Greeks, and Romans (Schrader, p. 321).

Further, with reference to the Teutonic peoples, times, we have the witness of Tacitus (Ann. i. 45) to the predatory marriage of Arminius and the daughter of Segestaes, who had been betrothed to another—a proceeding that led to a deadly warfare between the two family groups, and was finally concluded by Olaus Magnus (see above), family feuds were rife among the peoples of the North-east, 'prepiter rapsitas virgines et arripiendas.'

2. Husband and wife. Marriage by purchase or by capture, then, the young woman passed under her husband's authority—a state which the Roman-Teutonic legal documents speak of as *munidion* (O. H. O. munt, 'hand'); in other words, the woman became the man's property. The idea that in the married state the man and the woman enjoyed equal rights in relation to each other, as regards the Teutonic and Slav peoples in primitive times, absolutely baseless. A specific confirmation of this is found in the fact that originally the man's act of marriage had quite a different terminology from the woman's. This phenomenon has been preserved most faithfully in the Slavic dialects. Thus have we, e.g., O. Russ. *zentaja, zentaja* (with a wife), as predicated of the husband (Lit. *in matrimonium ducere*), and ystizum ("to walk behind the man," i.e., when the woman is taken in marriage). Further, terms like Fr. *mariage" and Ger. *heiraten* (O. H. O. *kwerti*, marriage, Lit. *choosing*), as used of either the man or the woman, are of relatively late origin.

In the original Aryan language the man to whom authority the woman was thus subject was styled *poti* (Skr. *pati*, "poti", domestic sway," i.e., 'married life," 'lord and master.' This term may still be traced in the Goth. *beidja*, bridegroom, Lit. *maiden's lord,* and appears also in the Slavic compound *vost-poti*, Russ. *gospodi*, lit. *master of the strangers who come into the family* (O. Slav. *gost*). At a still earlier stage of Aryan speech the word *poti* was not simply "himself" (cf. Lith. *pati*, and Avest. *vasti-poti, himself," but it is a singular fact that over wide tracts of the Slavic and Teutonic area the master of the house is to this day habitually referred to as "himself." Thus, among the Russian commercial class, which maintains the old built Russian marriages with remarkable fidelity, "himself* (in relation to the woman and the household generally), and *st*, "herself* (in relation to the children and the home), are the usual designations of husband and wife respectively. Os- trovskij, the brilliant delineator of this old Russian commercial class, has in his stage given numerous instances of the "poti" ("some authority," 'self-loving,' cf. Russ. *sam, sent,* durak, "fool") of the ancient Moscow merchant, whose wife and children were treated as mere *poti*. Thus, among the Muscovite, Lithuanian, Czech, and Poles, as also throughout the Scandinavian Peninsula, corresponding designations are popular; the husband of a peasant and his wife (Norweg. *han, stje*, *hjord), while in many parts of Britain ('hiself' and 'herself' are popularly used in the same way.

We proceed to a more detailed account of the relations between husband and wife in the earliest
times. It is beyond question that as regards the Teutons and Balto-Slavic we must start from the stage of polygamy. It was not until A.D. 1249 that the ancient Prussians formally bound themselves to abandon the custom of having three or four women as wives, and to marry only with one (cf. Hartknoeh, Das alte u. neue Preussen, Frankfort and Leipzig, 1854, p. 117). Polygamy, according to the Chronicle of Nestor, was practised also by the ancient Slavs. We must likewise assume that polygamy was originally prevail'd in the case of the Teutons, among whom, and especially among the Norsemen, a wide-spread practice of polygamy was long maintained (cf. Adam of Bremen, iv. 21); here, indeed, we find that a man might have as many as nine wives. Among the Germans, however, as referred to by Tacitus in Germ. 15 ("man proprie soli barbororum singulis uxoribus contenti sunt, exceptis adnominand. parcii, qui non libidinem, sed ob nobilitatem plurimis nuptis ambitur"), there seems to have been a marked leaning towards monogamy. But the concurrent existence of an extensive system of concubinage is proved by the fact that the term kobies ("concubine") is found in all the Teutonic dialects.

The strongest possible contrast to this sexual freedom on the husband's part is seen in the position of the wif. Theateful penalties wreaked upon the unfaithful wife among Teutons and Slavs are indicated in art. CHASTITY (Teut. and Balto-Slav.), vol. iii. p. 490ff. That article emphasizes the fact that the erring wife was punished not so much for unchastity in the proper sense as for yielding her person to another without the knowledge and consent of her husband and owner. This may be safely inferred from the two institutions discussed in the article referred to, viz. various promiscuous prostitution and lending a wife to a guest, both of which are found in the Teutonic, and the former also in the Slavic domain. And in another respect the patriarchal family system was everywhere associated with the depreciation and servitude of women. The idea that a woman is in some way a creature of inferior rank prevails to the present day in rural portions of Eastern and South-eastern Europe. The wife of the Russian peasant could not well conceive of a mode of life without the uelit ("discipline"), i.e. flogging by the husband. If, when she did wrong, her husband did not have her scourged she would think that he no longer loved her. Nor, except by reference to similar practices, or at least, to the vestiges of such practices, among the Teutons, is it possible to explain what, according to the writer of the German Nibelungenlied, Queen Kriemhild, after her wrathful insults to Brunnhild, says of her husband (xx. 904):

"Das hat mich getreneue — sprech das edel wip—
Souch hat er mi zeltenowen dar umwe mien hlp;
Das ich le bewerte ir mit rede den men.
Das hat vil wol erdenchen der helt kleine nade gut."

Of no less significance for the position of women was the universal custom which forbade them to eat with the men, and compelled them to take their meals by themselves. Thus, when the Nibelungs came to Beochelaren, they were met by the Margrave Ruediger and his wife, and then, as we are told (xxii. 1671):

"Nach gewonheit dà schleder si sich dà —
In many districts, as, e.g., in the island of Spjalland, the men sat, while the women stood at table, the wife taking her position next to her husband, and then the daughters and maids to her left. In Sorbo, as recently as the reign of Milosh Obis it is admitted that the somewhat sombre picture of women's position among

FAMILY (Teutonic and Balto-Slavic)
the Teutons and Slavs of archaic times is here and there relieved by brighter touches. Women were regarded as prophetesses (Tac. Germ. 8: 'misce quin etiam sanctum aliquid et providum putant, nec aut occulti aut responsa negligunt'; for their horrible modes of divination, see art. Aryan Religion, vol. i. p. 54); and Divination [Tent., vol. iv. p. 527], as physicians (Tac. ib. 7: 'ad matres, ad coniuges vulnera ferunt; no illis coniuges aut exergae plebes parentis'), and as helpers in war (Tent. loc. cit.: 'elbossa et hortamina pugnantibus gestant'). These various traits are found also among the Slavs, and especially the sons of a sort called 'master of the house', the specific term for the Teutonic house community (cf. O. Kauffmann, Worter und Sachen, Heidelberg, 1911, ii. 26 ff.).

The epoch in the system by which a son left his father's house at his marriage and founded a home of his own, superseded the house-community on Teutonic soil (where the change occurred earlier than among the Slavs) to that which awaits further investigation. But it is beyond question that at some time the same conditions existed among the Teutons as we saw above to have prevailed among the Slavs.

We must now turn to speak of the persons who thus lived in separate families, and indeed, which is the earliest traceable form of the family among the Aryans and, derivatively, the Teutonic and Slavic peoples.

(a) Parents and children.—Possibly the term that comes nearest the primitive conception associated with the former word is the Gothic, faðrain, lit. 'fatherhood,' which Ulfilas uses for 'parents,' and which, in its derivation from the word for 'father,' is but a late form of a root *h₂₃r₃₃, 'father.' The absolute authority of the father over his children began from the moment of birth, as it lay within his option either to recognize the newly-born infant by the symbolic rite of 'lifting' it, or to doom it to exposure. With the former act was associated a kind of baptismal initiation, the child being immersed, immediately after its birth, in the waters of the Rhine, a practice that seems to have been adopted from the Aryan. It is worthy of note that an abulutionary ceremony of similar import is found also among the Babylonians (cf. ZERV xxii. 1900 434 ff). The right of exposing infants, which, notwithstanding the averments of Tacitus (Germ. 19: 'numerum liberorum finire flagitium habetur'), was frequently exercised among the Teutons, doubtless bore most heavily upon females, the birth of whom was in ancient times so frequently regarded as a calamity. Even to-day, indeed, if a Lithuanian, whose family numbers five, three sons and two daughters, is asked how many children he has, he will answer 'Three,' as he looks upon the males as adults and the females as children. What Caesar (de Bell. Gall. vi. 10) says of the Gauls ("Viri in uxoribus, sicuti in liberis, vitae necisque habent potestatem") holds good without qualification also of the Teutons, Letts, and Slavs. Of the Fririans, Tacitus (Ann. iv. 72) writes: 'Ac primo boves ipso, max agros, postremo corpora coniugum aut liberorum servitio tradebant'; while the Russian peasant, as depicted in folk-song and village tale, could exercise, even down to modern times, the same unlimited authority (patria potestas) over his family as was enjoyed by the paterfamilies of ancient Rome.

(b) The aged.—The family circle of the house-community would, of course, in like manner, include grandparents.
and grandmothers, grand-uncles and grand-aunts, and even great-grandparents, living in the 'old people's quarters.' Their lot would scarcely be a happy one, for the temperament of primitive peoples, especially of the Teutonic tribes, was hard and unsentimental. In point of fact, we know that among the Teutonic and Baltic tribes, as in Europe and Asia generally, it was a common practice to abandon the aged, with the consent of their kinsmen, cf. with reference to the Teutonic Heruil, Procop. de Bell. Goth. ii. 14: ἑνδικα ταῖν ἡγὼ ἡνόγ ὁλη ἐπινάκει ὁ εἴγεντος τοῖς συγγενεῖς αἰτείςδα δηγάτα ἐν ἄνθρωπον οὐν ἀφιέται; and, with reference to the present Prussians, Harknoch, op. cit. p. 181: 'At the order of the wiedelevanti (i.e. priest) they smothered their own parents when they became old or fell into a severe illness, so that they should incur no unnecessary expense in their regard.'

(c) Brother and sister.—Of the relationships among the younger members of the house-community, that of brother and sister merits special notice. Among Teutonic and Baltic tribes, as among the Aryan peoples, the brother might be designated the moral sponsor of his sister, and, after their father's death, her guardian in general. It was the custom among the Slavonic peoples to find on the marriage night not to be a maid, to hang a halter around the neck of her brother, and to compel him to wear it throughout the marriage feast. In Russian folk-song the brother is represented as taking a prominent part also in the transactions regarding the bride-price. We find an indication of the Teutonic practice in a verse of the Nibelungenlied (i. 4):

Among the Letto-Lithuanians the strong bond of affection between brother and sister forms at once a special feature of common life and a favourable theme of popular poetry.

(d) Uncle and nephew.—It was noted above that the Aryan term for 'father's brother' can be traced in the O.H.G. futruo, Lat. patrus, Gr. πάτρος, Skr. patrena. We find no corresponding Aryan term for 'mother's brother,' who, of course, was not a member of the agnatically constituted house-community; but it is worthy of note that the Teutonic term chorda (cf. chorda Slavonic, Old Prussian (awiso), and Slavie (awio)) forms for 'uncle' are all derived, though in quite different ways, from the Aryan root for 'grandfather' and 'grandmother' (grandu and granda). The Latin 'uncle' has not as yet been satisfactorily explained. It is beyond question, however, that in several of the Teutonic dialects, as in the Celtic group throughout, the Aryan word for 'grandchild' (Skr. nayot, Lat. nepos, etc.) has by a corresponding linguistic process come to mean 'nephew' in the sense of sister's son. Now, these two more recently formed correlates, uncle and nephew (i.e. mother's brother and sister's son), acquired great importance among the Teutonic peoples, as appears not only from the remarks of Tacitus (Germ. 29): 'Sororum filies idem apud avunculum qui apud patrem honor. Quidam sanctiores adiremone bene nuxam sanguinis arbitrantur,' but also from the fact that in Old English and Old Danish poetry uncle and nephew on the female side are represented as being most intimately associated alike in peace and in war. This is not to be explained by the matriarchal system among the primitive Teutons, as the ancient law of succession there was of the agnatic form (Germ. 20). But it is a possible conclusion that the Teutons were influenced in this respect by non-Aryan peoples who reckoned by female descent, and that among the former the mother's brother thus came to enjoy what was rather a position of honour than a strictly legal status.

(e) Mother-in-law and daughter-in-law.—As we have seen, the son brought his bride (O.H.G. bried, briedes, as's bride) to his father's house, and he lived with her in the circle of his own kindred. The converse case, i.e. where the bridegroom joined the wife's household and became an 'adopted one,' or 'incomer' (Russ. статский сын, Stepson, or a 're-heater' (Lith. for one who marries a widow), is also, as these terms indicate, to be met with in all parts, but was certainly of sporadic occurrence, and must not be postulated as a characteristic feature of the earliest times. The young wife's residence with her husband's parents was at first no pleasant experience for her. As the Russian folk-songs indite, with abundance of concrete detail, she was an object of mockery, and the hardest drudgery was laid upon her. She suffered most, however, at the hands of her mother-in-law, who often resorted to the knot; and, indeed, as the house-community was the nursery of patrie potestates, and of the tutelage of women, so was it the source of the old popular notion of the 'wicked mother-in-law.' That expression applied in ancient times to the husband's mother only, not to the wife's mother; for the bride was found on the marriage night not to be a maid, to hang a halter around the neck of her brother, and to compel him to wear it throughout the marriage feast. In Russian folk-song the brother is represented as taking a prominent part also in the transactions regarding the bride-price. We find an indication of the Teutonic practice in a verse of the Nibelungenlied (i. 4):

In ancient times, the husband's mother only was regarded as the woman to whom the eldest son was to be married; the younger sons were to marry women of lesser rank. Thus, Rovinskij, vol. iii, p. 501)

(f) The widow.—The melancholy fate of the average Teutonic widow in the days of pagan times has not as yet been satisfactorily explained. It is beyond question, however, that in several of the Teutonic dialects, as in the Celtic group throughout, the Aryan word for 'grandchild' (Skr. nayot, Lat. nepos, etc.) has by a corresponding linguistic process come to mean 'nephew' in the sense of sister's son. Now, these two more recently formed correlates, uncle and nephew (i.e. mother's brother and sister's son), acquired great importance among the Teutonic peoples, as appears not only from the remarks of Tacitus (Germ. 29): 'Sororum filies idem apud avunculum qui apud patrem honor. Quidam sanctiores adiremone bene nuxam sanguinis arbitrantur,' but also from the fact that in Old English and Old Danish poetry uncle and nephew on the female side are represented as being most intimately associated alike in peace and in war. This is not to be explained by the matriarchal system among the primitive Teutons, as the ancient law of succession there was of the agnatic form (Germ. 20). But it is a possible conclusion that the Teutons were influenced in this respect by non-Aryan peoples who reckoned by female descent, and that among the former the mother's brother thus came to enjoy what was rather a position of honour than a strictly legal status.

(g) The bachelor.—The house-community was characterized by the rarity rather than by the frequency of bachelorhood. It cannot be doubted that the primitive Aryan race regarded marriage as an obligation from which there was no discharge (for the grounds of this idea, see art. Aryan Religion, vol. iii, p. 515). Hence, even when she was not forced to follow her husband in death she would doubtless be prevented from marrying again (cf. Tac. Germ. 19: 'melius quidem adhaesce civitates in quibus tantum virgines nubunt et eumque vocant uxorius semel transigatur'). It seems to have been the ancient practice that the son, after his father's death, should take possession of his stepmother or stepgrandmother; cf. Prus. de Bell. Goth. iv. 20:

Thus, F. A. Rovinkski, an eminent authority on the social life of these regions, writes as follows of the Russian and Lithuanian customs: 'The idea of marriage is insisted upon still more emphatically: a man

VOL. V.—43
can be designated as a human being (ζωή only) when he is married, for by this he will always be spoken of as but "youth," lit. "child" (δίπετον). In Servia and Bulgaria likewise marriage is held to be a duty absolutely binding upon all.

Similar views prevail in certain rural districts of Germany. A man who had died unmarried was still an object of the survivors' solicitude. The Arabic tradition has been that the Phoenicians, two visitors to Asia in his commercial journeys, writes thus of the people as he saw them:

They cremate their dead, laying their weapons, their bearts of the dead upon the same pyre. When a man dies, his wife is burned alive with him; but when the enclosure-owner, and was originally the technical term for the peasant who had no allotment in the communal land of the Teutonic settlements, but was restricted to a small fenced-in portion of the soil, quite insufficient for the support of a family. The Sanskrit word for 'bachelor,' 

(h) Slaves.—In the lower stages of civilization there is never any marked outward distinction between bond and free. What Tacitus records of the Germans in this regard (Germ. 20: 'Dominum ac servum nullus educationis deliciis dignocebat: inter cadem pecora, in cadem humo degunt, dune actas separat ingeniosus; virtus agnoscet) is proved by the evidence of language to have been true of the Slavs no less than of the Teutons, as the Teutonic and Slavic designations of male and female slaves (e. g. A.S. Aiwon [pl.] 'domestica'; O. Slav. semipf. 'mancipia'; Lthic. sewinyena, 're-tainers') are in many cases derived from the already noted terms for 'house-community,' *hieva and simiefu, thus showing that the slaves likewise were reckoned among the inmates of the house.

LITERATURE.—In addition to the literature given throughout the art., cf. O. Schrader, Ueber die indogermanische Hl. Blgg., 1901 (2nd ed. in preparation), Die Schoneggermutter u. d. Hagestolz, Brunsvik, 1904, Tonenhöchst, Jenia, 1904, Brunsvik, Q. Cognates, S. Jena, 1907 (esp. ii. 300 ff.), and Die Indogermanen, Leipzig, 1911 (esp. p. 74 ff.).

O. SCHRAEDER.

FAN (Anglo-Sax. 'fann,' from Lat. vanus 'wet-nosed')—A instrument for purifying grain by throwing it into the air. Cognates of vanus are ventus, 'wind,' 'winnow' (see Walde, Lat. etymol. Worterbuch, Heidelberg, 1910, s. v. 'Vanus'). For variant English forms of the word and historical steps in meaning, see OED and the English Dialect Dictionary (s. v.). The Gr. equivalent of vanus, λισσόν, and its by-form, ϵέλλο, go back to a root *noloi, 'to clean' (cf. sīs, 'to wash'); the L anglicized in German as- into the sense of cleaning 'grain' (see J. Schmidt, Kritik der Sonantentheorie, Winnaar, 1895, p. 107 f.). The Gr. word for the fork or shovel form of fan, πτέω, is related from an onomatopoeic root ρέω, meaning 'to spit out.' The Gr. and Lat. words for 'sieve,' λισσόν and crinitum, mean simply 'separator.' Normally they are used for perforated instruments, but Pilato's λισσόν τερπέων (Gorgias, 403 B) may point to a time when the sieve, like the fan, was not perforated.

1. Shapes of fan and methods of use.—Two principal forms obtain. (1) A long-handled instrument, which may be a fork, a toothed spade, or a shovel. It is used like the modern hayfork. After the grain is threshed, the mixture of broken straw, chaff, and corn is turned full circle, so that the wind may blow away the lighter material. The 'fan' and shovel of Is 30:24 are instruments of this kind, such as are still in use in modern Palestine (see infra). In the latter, the fan is designated by the Hebrew word, 'shovel,' where specimens are figured), and, indeed, all over the world. Such instruments lent their symbolism to religion, e. g. Lk 3:3 'whose fan is in his hand,' and he will thoroughly purge his floor'; but, so far as we know, they were not employed in Palestine in actual ritual. But on the steatite vase of Hagia Triada in Crete (JHS xxiv. [1904] 249, fig. 7; see Literature, infra) pronged forks are carried in what seems to be a ritual harpoon procession. On an Egyptian sculptured slab of the XVIIIth dynasty, now in Bologna, a winnowing-spade is seen erected on a heap of corn offered to the serpent-goddess of the granary, RWN! About it are grouped two pairs of handle scoops, a pair of sweepers, and a three-pronged fork (JHS, loc. cit., fig. 1). The custom still prevails in Teneiree of erecting the winnowing-spade when the work is over. But it seems to have no ritual association. Among the Greeks the winnowing-spade (πτέων) was set up in honour of Demeter. Theocritus at the end of his Harvest Idyll (vii. 155) prays:

'O once again may it be mine to plant
The great fan on her corn heap, while she stands
Kneeling with sheaves and poplars in her hand.'

(2) It is the second form of winnower, the winnowing-basket, that is of cardinal importance in ancient ritual and mysticism, and this for a reason offered to the serpent-goddess of the granary, RWN! About it are grouped two pairs of handle scoops, a pair of sweepers, and a three-pronged fork (JHS, loc. cit., fig. 1). The custom still prevails in Teneiree of erecting the winnowing-spade when the work is over. But it seems to have no ritual association. Among the Greeks the winnowing-spade (πτέων) was set up in honour of Demeter. Theocritus at the end of his Harvest Idyll (vii. 155) prays:

'O once again may it be mine to plant
The great fan on her corn heap, while she stands
Kneeling with sheaves and poplars in her hand.'

(2) It is the second form of winnower, the winnowing-basket, that is of cardinal importance in ancient ritual and mysticism, and this for a reason offered to the serpent-goddess of the granary, RWN! About it are grouped two pairs of handle scoops, a pair of sweepers, and a three-pronged fork (JHS, loc. cit., fig. 1). The custom still prevails in Teneiree of erecting the winnowing-spade when the work is over. But it seems to have no ritual association. Among the Greeks the winnowing-spade (πτέων) was set up in honour of Demeter. Theocritus at the end of his Harvest Idyll (vii. 155) prays:

'O once again may it be mine to plant
The great fan on her corn heap, while she stands
Kneeling with sheaves and poplars in her hand.'

(2) It is the second form of winnower, the winnowing-basket, that is of cardinal importance in ancient ritual and mysticism, and this for a reason offered to the serpent-goddess of the granary, RWN! About it are grouped two pairs of handle scoops, a pair of sweepers, and a three-pronged fork (JHS, loc. cit., fig. 1). The custom still prevails in Teneiree of erecting the winnowing-spade when the work is over. But it seems to have no ritual association. Among the Greeks the winnowing-spade (πτέων) was set up in honour of Demeter. Theocritus at the end of his Harvest Idyll (vii. 155) prays:

'O once again may it be mine to plant
The great fan on her corn heap, while she stands
Kneeling with sheaves and poplars in her hand.'

FAN. Its shape is seen in fig. 1, a modern winnowing-basket (or fan) from France, now in the Ethnographic Museum, Cambridge. The method of its use, now rapidly becoming a lost art, is seen in fig. 2; the essential feature in the winnowing-corb, as for cleanliness and brevity we shall call it, is its shovel shape, one side being left open. The distinguishing point in its use is that, in the winnowing by the corb, as contrasted with the fork, though the mixture of grain and chaff

FIG. 1. Fan from France.
is in a sense ventilated, the wind plays no part in the process. By a particular knack of jerking and working the basket—a knack difficult to acquire and almost impossible to describe—the chaff is gradually propelled forward and out of the basket and the grain left clean. Columella (1st cent. B.C.) knew that the wind played no part in the use of the *vannus*. He says (ii. 21): 'If the wind be low in all quarters, let the grain be cleaned by fans ( *vannus expurgentor*). Broadly speaking, the fork or spade was used for rough preliminary work, the basket for finishing cleaning. Some further confusion in terminology was caused by the fact that not only were winnowing-fork and winnowing-basket confused, but winnowing-basket was later writers identified with winnowing-sieve ( *ovibrum*, *klwava*). All had, of course, in common this factor only, that they were grain-cleaners: identity in function led to confusion as to form. That the winnowing-basket was called a *fan* or *van* in England, and was of substantially the same shape and use as that in fig. 2, is happily certain from a 14th cent. brass in the Church of Chartham (C. Bontell, *Monumental Brasses of England*, London, 1849, p. 35). On the sarcophagi, shields, and of Sir Robert de Setvars are embellished the family arms, the seven *fans* or baskets.

2. Ritual use and mysticism of the winnow-corb ( *vannus*, *liknon*) among the Greeks and Romans.—The *lucus classicus* as to the sanctity of the winnow-corb is, of course, the passage in the *Georgics* of Vergil (i. 165):

> *Virens praeterea Celos vitignem sulpelac,
Arbutae crateo, et mystica *vannus* lacchi.*

It is clear that to Vergil the *vannus* is a light agricultural implement made of wicker-work. He assumes its mysticism as known; but Servius in his commentary, though very confused as to forms, (1) makes clear that the *vannus* is our winnow-corb, and (2) gives some cause for the epithet *mysticus*. A portion of this long note must be quoted:

> 'The mystic fan of Iacchus, that is, the sieve of the threshing-floor. He calls it the mystic *vannus* of Iacchus because the rites of Father Liber had reference to the purification of the soul, and men are purified in his mysteries as grain is purified by fans. . . . Some add that Father Liber was called by the Greeks *Lakites*. Moreover, the *vannus* is called by them *liknon*, in which he is currently said to have been placed after he was born from his mother's womb. Others explain it being called "mystic" by saying that the *vannus* is a large wicker vessel, in which peasants, because it was of large size, used to heap their firstfruits and consecrate it to Liber and Libera. Hence it is called "mystic".'

The Latin *vannus* being the same as the Greek *liknon*, we can elucidate *vannus* from Greek usage. Harpocrater (c.e. *liknon*) has left us this remarkable statement:

> 'The *liknon* is serviceable for every rite of initiation, and every sacrifice.'

We begin with sacrifice. The *liknon* was serviceable for sacrifice, simply because it was a convenient basket in which to pile up firstfruits. It was not made to be a carrier—that is clear from the open end, which could only serve the purpose of winnowing—but it could and did serve to hold fruit or grain.

In a fragment of Sophocles (760 [Nauck]) the Athenians are addressed as 'Ye who pray

To Erasae, your bright-eyed child of Zeus,

With service of your winnow-corbs set up.'

In a Hellenistic relief (fig. 3), now in Munich ( Glyptothek, no. 601; T. Schreiber, *Hellen. Reliefbilder*, Leipzig, 1899, Taf. 50c), we see such a service: a little circular shrine, past which a peasant is going to market; in the middle of the shrine an ornamental pillar surmounted by the shovelf-shaped wicker-basket from which hang bells to scare away evil influences; in the basket are fruits, leaves, and the phallos, the sign of fertility. Servius is confirmed by this and many other monuments.

---

**Fig. 2. Fan in use.**

**Fig. 3. Hellenistic relief: liknon holding firstfruits.**

The *liknon*, Servius tells us, was used as a cradle. For this the shoe-shaped basket was obviously convenient; the cradles of to-day are of similar shape. Diomysus as a child was called *Liknites*, 'He of the Cradle.' On the Pashley sarcophagus, now in the Fitzwilliam Museum at Cambridge (fig. 4), we see 'Him of the Cradle' carried by two men bearing torches. The *liknon* as cradle is closed in at the end, lest the child fall out. About this simple and convenient use of the *liknon* as cradle, a primitive mysticism of the 'sympathetic magic' kind speedily grew up.

The scholiast on Callimachus ( *Hymn.* i. 45), in telling of the *liknon*-cradle of Zeus, says:

> 'In old times they used to put babies to sleep in winnow-corbs as an omen for wealth and fruit.'

The child was put in the winnow-corb for what we should call 'luck.' Another scholiast (op. Aratus, *Phen.* 268) says that this was done immediately after birth (τὰ γὰρ βρέφη τα πρῶτα γενόμενα, κτλ.).

The same magical intent, dwindling gradually into mere symbolism, explains the use of the *liknon* in marriage rites. The pseudo-Plutarch ( *Prog.* Alex. xvi.) says:

> 'It was the custom in Athens at weddings that a boy, both of whose parents were alive (τῶν ἐνπάθων πατέρων), should carry a *liknon* full of loaves, and thereon pronounce the words, "If have I feed, better have I found (ἀνοιχτὸν καρδίν, εἴρην διδώνω)." The loaves of bread (ἄργυρον, fermented bread) have
FAN

The winnowing-fan in India. — The Indian equivalent of the fan, the winnowing-basket (śārpa), also merits attention in this connexion. It is one of the concomitants of the wedding ceremony in the period of the ēkāraṇa, and on that occasion the śārpa, containing four handfuls of roasted grain mixed with āgni leaves, is placed before the wedding fire (Hillebrandt, Ritualistik. [=GIAP iii. 2], Strassburg, 1897, p. 65 f.). Among the modern Baiswar, after the clothes of the newly-wedded pair have been knotted together, they do the usual five revolutions round the cotton tree, while the bridegroom holds a winnowing-fan (fanam) into which the bride's brother pours a little parched rice each time as they go round. The bride sprinkles the grain from the ground out of the fan, and both retire into the retiring room (Crooke, TOI. 129).

The winnowing-fan is also used among the Kols and Oraons in selecting a new village priest, since by its magical power it drags the person who

briefly to resume: in the mysticism of the 'fan' two elements are distinguishable: (1) purification, and (2) magical promotion of fertility. Any form of winnower, be it fork or basket, might have served as the symbol and vehicle of purification; but, as a matter of actual fact, mysticism gathered only round the basket, not the fork. Hence it is probable that the main element of the symbolism focused in the notion of fertility, and that the idea of purification was at first subsidiary. Later, when the idea of sin and release from it became prominent, the fan as purifier was more and more emphasized; and its symbolism was still further developed in relation to its perforated successor, the sieve. It must, however, always be remembered that, alien though it is to modern thinking, to the primitive mind purification and fertility charms are never far asunder. Fertility is largely induced by purification, i.e. by the purging away of all evil influences hostile to birth and growth. The other element in its induction is the bringing of things into contact with the source of growth or other living things, plants, fruits, running water, or whatever is supposed to be charged with life and grace, or, as the Polynesians call it, mana. The liknon was the vehicle of both procedures, and its use shows very clearly how the highest spiritual mysticism of New Birth and Regeneration may have its source in a rudimentary magic. You lay a child in a winnow-corb, you put a corb of fruits on a boy's head at a puberty rite, you carry a corb of grain and fruits in a marriage procession, and the winnow-corb becomes at once the symbol and the sacrament of the whole physical, moral, and spiritual field covered by the formulary (būrgos kākē, ēkāraṇa).
holds it towards the individual on whom the sacred mantle has fallen (Crooke, PL II. 189).

But, if the winnowing-baskct, through its association with grain, is often associated with ritual, a political function that has been so essentially employed to separate the evil from the good, so that Matangi Sakti, a form of Duraga (q.e.), 'carries a broom and winnowing-fan with which she sifts mankind (PL I. 133); and the essential difference between the two cases is that the sifting is not only a Sakti ('philosopher') that Greek philosophy was a unity, he laboured to reconcile Plato and Aristotle, and with this idea wrote treatises on The Aim of Plato and Aristotle, and The Agreement between Plato and Aristotle: the former title is that of his book. He also discussed certain interpretations of Aristotle proposed by Galen and John Philoponus, and composed an Intervention between Aristotle and Galen.

In the sphere of science, Farabi wrote commentaries on Aristotle's Physics, Meteorology, The Heavens, and The Universe, besides commenting on the Almagest of Ptolemy. To him also is due an essay explaining some difficult propositions from the Elements of Euclid. The occult sciences interested him, and he left writings on Alchemy, Geomancy, Genii, and Dreams.

This great philosopher was also a talented musician—a fact which accounts for the most explicit work on the theory of Oriental music. His musical talent excited the admiration of Saif ad-Daulah.

Farabi's style is somewhat peculiar. It generally takes the form of aphorisms which always appear condensed and profound, but sometimes become obscure by failing to maintain a methodical sequence. Farabi is indeed a difficult author, and it is to be a great study to be able to intelligently attempt to interpret the details of his system.

In the main body of his teaching he belongs to the so-called 'school of Philosophers,' i.e. to the school which represented the Neo-Platonic tradition in his time; his position in this school is between al-Kindi (older than Farabi, though not so well known) and Avicenna (a younger philosopher, who is very lucid and easy to study). Following Kindi, he prepares the way for the theory that we find explicitly formulated in Avicenna. His system, or at least his style of thought, is, however, more mystical than that of Avicenna. Mystical ideas and terms appear nearly all through his writings, and seem to be woven into the fabric of his system. Avicenna treats mysticism as a sort of supplementary chapter or a climax, quite distinct and separate from the rest of his system. The Orientals called Farabi the 'second master,' Aristotle being the 'first.' In giving this title to the Muslim thinker, it was especially his importance as a logician that they had in view.

2. Doctrines.—It is possible, by making a methodical arrangement of his sentences, to disentangle the principal theses of Farabi's doctrine and present them in a coherent form. This has been done by M. H. de Boor in an important work (see Lit. below) devoted to this philosopher and his writings. Isma'il al-Farabi (pp. 496-491). It is easier to recognize, under his arrangement, the teaching of Oriental scholasticism. The chief subjects of discussion are as follows. (a) In Logic: cognition, conceived as a resemblance of objects; perception, a means of cognition; representation, the first stage of cognition; the concept, assimilation and union with the object; the qualities of the objects; substance; and being; the qualities of bodies and the accidents; causality and the relations in the physical world. (b) In Psychology: the principle of life, breath; the faculties and their objects; vegetable, animal, and intellectual faculties; the soul, capable of desire, fear, anger; the external senses; the internal senses; common sense (in the
scholastic meaning of the term) and memory; imagination, cogitation, instinct; human intelligence, with its logical faculties; and the active intellect which receives illumination from God. (c) In Metaphysics: being, the source of being, non-being; the proofs of God's existence; the necessary and the possible; potentiality and action; species and individual; substance and accident, causality, God, the origin of causes; the chain of causes; the principle of causality—that every effect produced upon an object is produced by causes than by its nature comes from the cause exterior to it. (d) In Theology: God existing by His very nature, proved by the causal series, and by the consideration of multiplicity and unity; comprising all creatures; being at the same time unity, truth, love, and light (as in Plotinus), pure being and the source of being, endowed with an interior activity and a personal life; knowing Himself and knowing the world, but always maintaining His unity; the causes by which man can understand free actions in man; both visible and invisible; knowable by man as cause, and through ecstasy or revelation. (e) In Cosmology: the first being sprung from God, Divine knowledge and power; the World of Ideas and the act of creation, the second being sprung from God, the 'Commandment' or Word (Κόσμος, Arab. amr) the celestial spheres and the sublunary world. (f) In Ethics: happiness, the end of life; the soul attained by union with God, the return of all things to God.

The following passages are taken from the treatise Gems of Wisdom, and will give an idea of the philosopher's style. The work, consisting of 59 articles in a very brief form, was much admired and extensively used in the schools; it has been edited by Dieterici and translated by Horton.

There are two worlds: the world of created things—our world—and the world of unseen, invisible things, which is the celestial kingdom and the region of Ideas. The latter is also called the world of the 'Commandment'; the 'Commandment' is the eternal will in relation to created things with their perfection. Farabi further distinguishes the 'Commandment' (amr) from the Spirit (pirit); we may take amr as corresponding to the Logos, or Word, of the Neo-Platonists, while the Spirit corresponds to the Logos.

How does the multiplicity that is in evidence in the world arise from a God who is Unity? By a sort of intermediary hyposissis between the absolute One and the world: 'You regard Unity, and it is Power; you regard Power, and it becomes second knowledge, which includes within itself multiplicity; for the first knowledge of God can know nothing but the One. 'There is the horizon of the world of Sovereignty—the purely Divine world—which is followed by the world of the Commandment where the reed-pan runs along the table.' This refers to the tablet on which, according to Qur'ân eschatology, the deeds of men are inscribed. 'Unity becomes multiplicity at the point where the shadow of the heavenly Lotes falls, the Lotes which shades the Muslim Paradise, and where the Word and Power are one; the eternal Word of God inspired by the Spirit and preserved in the Qur'ân. 'There is the horizon of the world of the Commandment, followed by the Tabernacle and the Throne, the seat of God and envelope of the world, then the heavens and all that they contain. Every creature sings the praises of God; the heavens revolve according to the principle,' according to the imprisoned soul, the dominator, and there is the world of the Creation, whence one comes back to the world of the Commandment, by which all once more become one. 'You regard the world of the Creation, you perceive the nature of what is created; when you regard the world of your Father, you know that there must be something existing by his essence. 'If you know truth first, you also know its opposite; but if you regard error first, i.e. the contingent world, you regard the creator, and there is the world of the Creation, whence one comes back to the world of the Commandment, by which all once more become one.'

God, conceived as supreme Unity, is also thought of as necessary Being, existing by itself.

'Necessary Being has neither form nor kind nor difference . . . it is the principle whence all else proceeds, and by the same time interior and exterior, manifest and hidden; this manner of speaking is that of which it is said that its essence, and in virtue of being exterior it is interior'; i.e. the brightness when He appears is so great that it blinds, and the Divine unity can only be seen externally by means of His, i.e. everything is visible in Him, as objects in the light of a lamp are visible.

God has a two-fold manifestation: first, the manifestation of unity; He shows Himself as unity either to the human intelligence, which seeks after the absolute, or to the heart by means of mystical illuminations and manifestations taken by means of signs, which are the wonderful creations scattered throughout the world. 'This second manifestation is connected with multiplicity, and proceeds from the first manifestation, which is that of unity.'

Does God know the world? According to Aristotle, God can have only an abstract knowledge of things. Farabi does not agree with this view. According to him, God knows things in their causes, and this kind of knowledge does not lead to any change in His being, because the causes, viz. Ideas, are eternal. Moreover, His knowledge is active, and becomes confused with His power to create; it does not, as a result in the impression made upon Him by the objects: 'We cannot say that the First Truth comprehends the things that spring from the first decree of God; He comprehends them, because things of sense are perceived by the fact of their presence and comprehension they manifest things by its essence; for, when it regards its essence, it sees the lofty power therein, and in the power it sees what is decreed; it sees all, then, and the knowledge it has of its essence is the cause of the knowledge it has of all other things.'

This theory is dangerous for free will; for, if God knows all the details of the world's life as consequences of His power and His decree, there is not much room left for liberty.

The creation is not conceived as an action analogous to human actions, which would be accompanied by desire and effort; it is merely the immediate expression of the Divine thought. As soon as God imagines a thing to Himself, the existence of that thing follows. According to this conception of the act of creation, it seems absolutely necessary to admit that creation is eternal; for God's thought of the world must have been eternal, and He did not require to wait until a need or a desire brought it to realization; the world must then have been formed from His thought eternally.

This conclusion, however, is not so inevitable as one might think: the Oriental scholastics, like all the ancients, did not have quite the same conception of time as we have. For time began when the world was set in motion, and was measured by the number of revolutions performed by the heavenly spheres. Before the movement of the spheres there was no time, but only a sort of fixed duration not susceptible of measurement.

The Creator is therefore placed outside of time; and produces it all at once along with the world. Similarly, according to the Oriental conception of the Middle Ages, measurable space did not extend beyond the limited sphere of the world.

On the idea of substance, Farabi expresses interesting but contradictory views. He applies the term to both individuals and species. Species and genera, though real substance, require individuals to actualize them. They become actualized and individualized gradually with the passage from the general to the particular. Material substance is the cause of bodies; bodies are the cause of plants; plants, of earth, matter; earth, matter, of the heavens, and so on you will perceive the stars which suffer eclipse; this is an allusion to a passage of the Qur'ân (vi, 76), and that turn your eyes towards the face of Him whose throne, and now on earth, is eternal.

God, conceived as supreme Unity, is also thought of as necessary Being, existing by itself. 'How it is asked, are we to conceive the order of substances which are supported by one another? The first substances are
the individuals; nothing else is necessary to their existence.

The second substances are species and genera, which in order to exist, have not individuals. In this sense, are therefore anterior in sublimity, and have more right to the name of substance than species. But, from another point of view, universals, as being fixed, permanent, subsisting, have more right to the name substance than perishable, accidental, individual, things. Again, "the notion of existence in action; they exist only by individuals, and their existence is then accidental—which does not mean that universals are not individuals, but that their existence in action can take place only by accident.

Munk, in his art. on Fārābī in the Dict. des acad., in the article Fasting, says that the philosopher Tim Tufail tried to accuse Fārābī of denying the immortality of the soul. But this accusation lacks support. Fārābī's doctrine on this point is the same as the Bahāshī's. For, while in the Bahāshī the soul, on accomplishing the end of its destiny, must enter into communication with the intellect at work (the philosophical form of the doctrine); or it returns to God (the mystic form). But the fact that the soul is destined to become united with God does not necessitate, according to Fārābī, the annihilation of its personality; nor does it follow, from the fact that the human intellect must receive illumination from outside in the world of Ideas, that the human person must lose all idea of particular things. Fārābī's conception of happiness and the other world is similar to that found in the mystic part of Avicenna's works.

There is a curious passage in which Fārābī speaks of bliss in the other world; it is in The Ideal City, the work in which he explains that the end of government on earth ought to be to make souls happy in the other world. The souls of the inhabitants of the city assemble, generation after generation, and their happiness increases as they become more numerous:

'The joy of those long dead increases at the arrival of the newly dead, for each soul then comprehends its essence and the essence of the other souls similar to itself; thus the intensity of its feeling, and the satisfaction in which the soul is washed by the number of times it practises writing. The addition of souls to scale corresponds, as regards the progress of each soul's happiness, to the scribal's repetition of his work, by means of which he progresses in facility and skill.'

This passage assumes that each soul is endowed with individual feeling and perception in the other world.

Fasting (Introductory and non-Christian).

1. Purposes and origin.—The purposes of fasting as a religious, magical, or social custom are various. It may be an act of penitence or of propitiation; a preparatory rite before some act of sacramental casting or an initiation; a mourning ceremony; or a series of purificatory rites; a means of inducing dreams and visions; a method of adding force to magical rites. Its origin has been sought in the act of the most holy sacrifice, and it is not improbable that, as a rite, it may have originated differently in different quarters. But behind all there was first man's frequent periods of enforced fasting through scarcity of food or difficulty in obtaining food. His experience of this as well as of his bodily, whether on body or on mind, would come in course of time to be used as suggesting the value of voluntary fasting.

Thus, when men wished to obtain vivid dreams, the recollection of the fact that enforced abstinence from food was conuced with such dream experiences would suggest recourse to fasting in the hope of obtaining them. Again, when men began to believe in the presence and activity of supernatural beings, or would propitiate, higher powers, the unpleasant experience of enforced fasting would also point to it as a satisfactory form of suffering. Over and above, a rite might originate both from man's incapacity for eating food when he was seriously distressed—this is leading to become a conventional sign of mourning—and from a real desire to suffer pain on occasions of bereavement. The custom of avoiding certain foods, sometimes for a whole day, at certain times might readily be extended into a disciplinary practice; or might resort to fasts to gain the impress upon the body, and this might then come to be regarded as a magical way of increasing the latter, the fasting being now more strictly observed (see ASTURIES, § 6). In the lower stages of culture all these various origins and methods may be taken for granted, but it is mainly at higher stages that fasting becomes a part of the religious practice of self-mortification and discipline or of propitiation.

Fasting may be complete or partial, and in either case for a longer or shorter period. Sometimes, generally upon magical grounds, though often upon grounds of health, only certain foods are abstained from on particular occasions, but these foods occasionally cover many which are liked by necessity to the savage at other times. Again, in many instances certain foods are not eaten by tabu to women, or to youths and children; but, while this may be invested with some supernatural sanction, it is probably due to selfish causes.

Among the Ba-Taek, almost every form of flesh as well as fish is tabu to women and all children below the age of eighteen and yet, if visited by supernatural punishment (Jaf xxvii, 1900) (61). Among the Wagogo of Uganda, the persons suffering from diseases of the kidneys, heart, etc., are prohibited in childhood (Cole, Jaf xxv. 1932) (27). In New Guinea, young people may not eat certain foods, under pain of certain undesirable fast's happening to them (Seligmann, Melanesians of Brit. N.G., Cambridge, 1910, pp. 130, 336).

Generally speaking, this is true among most savage tribes with respect to women and to youths before initiation; and, though it does not necessarily amount to fasting, it points to abstinence from certain desirable foods, this abstinence being generally enforced by tribal customary law or by the power of fear. Thus, fasting or abstinence, more or less complete, may be regarded as a well-nigh universal practice among lower races at certain times of the year, and the Boardmore asserts that the natives of Mowat, New Guinea, that they never fast (Jaf xix. 1889-90) (402), but these exceptions are very occasional. The attitude of the Church to such practices and religions to fasting will be considered later.

Probably no single cause can be alleged as the origin of the practice of fasting.

W. R. Smith explains it as: 'primarily nothing more than a preparation for the sacramental eating of holy flesh,' (Rel. Surv., 1884, p. 443); Tyler, as a 'means of producing ecstasy and other moral exaltation for religious ends' (Sp. xxv. 410; and Wundt, Volkspsychol., Leipzig, 1904, II, 5, 351). Herbert Spencer suggests that the sacrificial food to the dead causes a lack of food and so produces hunger, and that fasting arises as a necessary result of such sacrifices (Principles of Sociology, 1876, i, 283).

The complex nature of its origin is amply vindicated when the various occasions of fasting, among both savage and higher races, are considered. But in no case should it be thought that fasting is a strictly religious or spiritual discipline, or that fasting occurs as a necessary result of such sacrifices. It is used for a multitude of purposes, and to very different ends, and it is not improbable that, as a rite, it may have originated differently in different quarters. But behind all there was first man's frequent periods of enforced fasting through scarcity of food or difficulty in obtaining food. His experience of this as well as of his bodily, whether on body or on mind, would come in course of time to be used as suggesting the value of voluntary fasting.

Thus, when men wished to obtain vivid dreams, the recollection of the fact that enforced abstinence from food was con
Fasting is a purely magical one, and was probably not of early or immediate origin, as in the history of mankind, it has been so common that it is of importance in any discussion of the principle of fasting. It helps to show, how, for certain definite purposes, man is willing to renounce the enjoyment of the foods which are so essential and agreeable to him at all ordinary times, in order that he may prevent certain contingent results following upon his indulgence in them.

Among the Melanesians, this method of abstinence is of general occurrence. Thus, among the Koita of New Guinea, a woman during pregnancy must not eat bush-cod, eel, certain kinds of fish, and sago; and the husband must observe the same food tabus. Among the southern Massim, the mother must abstain and, show tabum (Tylor, JAI xii. 189). Similarly, Codrington says of the Arapesh, that both father and mother refrain from certain foods before and after a birth (Melanesians, Oxford, 1891, p. 289). Fasting is expected of the Andamanese. The parents must abstain from pork, turtle, honey, iguna, and paradoxurus; while the husband abstains from the two last (Tylor, JAI xii. 189). Among the Arawaks, among most Australian tribes, a numerous list of forbidden foods applies to the expectant mother, fewer to the child born, and those of danger to the unborn child, or occasionally to the parents (Spencer-Phillips, 614). The husband and wife among the Coroados of Brazil fast every Saturday for a birth (Spix-Martius, Travels in Brazil, 1834, p. 247). The father, among the Xinga and other tribes, must avoid fish, flesh, and fruit; and among the Bororo both parents eat for two days after the birth, while among the Paraesst and other tribes, for five days (von den Steinen, Unter den Naturkauern Central-Braziliens, Berlin, 1894, pp. 341, 342). The father must fast for five days after a birth, and at the end of that time has to undergo other austerities (Tylor, Early Hist. of Mankind, 1866, p. 284).

Among the Andamanese a special restriction is observed in fasting to prevent the occurrence of contagious diseases, and some of the customs and results of fasting have been described by Codrington (see also Westermarck, History of Human Marriage, p. 253). If a woman shows herself to be pregnant, she is required to fast upon entering the town. She is further forbidden to eat or drink while within it; and if she is discovered to be in the act of breaking this law, she is cast out, and her nurse is severely punished. This prostration, which is necessary to induce a certain spirit to enter into her and to prevent her from injuring the child, is observed in all parts of the world, and is known under different names.

2. Fasting as an act of mourning.—The origin of this rite has been explained on various grounds—as a prohibition of the foods eaten by the dead, in accordance with ordinary practices and actions, and the results of the action of the dead, which differ from those of this earth (see AEW xii. 1909), as a prevention of the ghost of the dead man from entering the body with which it was identified (Frazer, JAI xiii. 204), and as a conventional practice arising out of the actual starvation consequent upon the destruction or sacrifice of food-stuffs at a death (H. Spencer, i. 285). Western European customs that the ox may be found in the fear of swallowing food polluted with the contagion of death—the custom of not preparing or eating food in a house where there is a dead body pointing to this (FL xviii. 405). But, while this or the other causes of fasting may have been being assigned to it, the time during which the fast endures varies considerably, and in some places the fast is absolute, while elsewhere only certain foods are abstained from.

In the Andaman Islands, fasting is made from pork, turtle, and luxuries (Man, 142). Among the tribes of New Guinea, various foods are abstained from, and in some instances a man voluntarily gives up entire classes of food, which he would eat at other times (Spencer-Phillips, 70). Among the southern Massim, the widow may not eat the kinds of food eaten by her husband in his last illness until after the funeral feast— with the result that she is often reduced to a state of starvation (Seligmann, 617, and passim). In Fiji, fasting is observed during the day when the family is mourning for a member (Paisley, 169); and, in Aurora, many foods are abstained from, and what is eaten is usually non-prodigious in the bed (Codrington, 253), just as in the Solomon Islands the mourners live on cocoanuts and a few bananas (JAI xvi. 96). In Samos, mourners abstain from fish only on the night before the funeral, and for a period long after a death (Watts, Anthro., Leipzig, 1872, ii. 199). Among South African tribes, fasting is observed after the death of a relative or of a chief, in the latter case by the whole tribe for a day or longer (Macdonell, JAI xix. 1898-99). The Andamanese and other high Tibetan families fast for a girl must fast for four days; and also throughout the whole lengthy period of her seclusion she must abstain from fresh meat, because this would harm her sex, and she would remain barren if she took offence (Hill Tout, JAI xxxv. 1905 160). Among the southern Massim, girls were secluded at this period and had to abstain from all flesh food (Seligmann, 498). For fasting before marriage, see ASTERTITIES, vol. ii. p. 290. The same custom was ordained in ancient China in the Li Xi, along with various purifications (SBE xxvii. 1885 78). Food-tabus are also observed during sickness, as among the Waggo of E. Africa, with whom the medicine man forbids certain foods (Cole, JAI xxxii. 1902 317), and among the Ten's of Alaska, where, after a cure, certain forms of abstinence—from hot food and drink, or from certain kinds of food—are imposed temporarily or for life (Jetté, JAI xxxvii. 1907 172).

In many cases, tabus are placed upon certain foods for a shorter or longer time, generally for practical purposes, so that having really the intention of a 'close season.' This may be done by the chief, or by some society, or by general consent (see Brown, 126; Seligmann, 290). But sometimes a religious use is given to this taboo, as among the Andaman Islanders, who also forbid certain fruits, edible roots, etc., at certain seasons, because the god Pulunga then requires them, and would send a deluge if the taboo were broken (Man, JAI xli. 154, 326). These prohibitions correspond to the magical food-tabus which are observed by various peoples, to prevent the piercings of the animal eaten from entering into the eater.
In connexion with fasting after a death, it is interesting to notice—as showing that the fear of death or of incurring a revengeful ghost has influenced the practice—that in many instances those who have slain a man must fast, besides undergoing other rites of a purificatory order.

In New Guinea (southern Massim), the killer or captor of a man who was to be eaten would go at once to his house and remain there, living on roots and betel nut; he did not join in the cannibal feast because he was afraid of the news of the dead man. Among the Moeke tribes the warriors are sealed and must eat but little. Among the Roro-speaking tribes, homicide during their purification must always fast, and that must not handle the food (Seligmann, 287, 333, 557; cf. also, for the Fijian practice, Thomson, Fijiinus, 1886, p. 90). In the Peler Islands, young warriors after returning from a fight must eat only cocoa-nuts and syrup, other food being taboo (Kohary, Die sozialen Erscheinungen der Feiern, 1867). Hence, a rite of mourning.

4. Fasting as a rite of preparation.—As food may convey evil influences into the body, according to savage belief, and as fasting would, in any case, be useful in connexion with the body void of impurities, it is often resorted to as a ritual preparation and as a purificatory act.

Thus, before slaying the eagle, a sacred bird, the professional eagle-killer and the Chepke hunters had to undergo a long vigil of prayer and fasting (Mooney, 19 RBW, pt. i., 190, p. 298). Among the Pima the men at the festival of the sun fasted in the recollection, after a death a girl fasted for eight days, unless she was married, when half as many sufficed. In the former case the fast was for four days, rest for three days, and then for the remaining four, as a preparation for the spiritual incarnation which was brought about by fasting (Mooney, 19 RBW, p. 439). For similar reasons the Egyptian fasted and performed abulations before entering a temple (Wiedemann, Rel. of Ancient Egypt, 1897, p. 206) and, for the purpose of purity, fasting was resorted to before sacrifice in the cult of Isis (Herod. ii. 49), just as the sorcerer among the Laagu prepare himself by fasting for the offering of a sacrifice (G. von Gosen, Über Laylapland och Lappl. jäm, Stockholm, 1873, p. 256). Hence, before eating food, the firstfruits of the harvest, etc., fasting is commonly practised, the food possessing a kind of sacramental virtue. Before the year, feast in New Guinea the chief was kept without food for several days (Brown, 433). Among the Cherokees, at the dances at which the new corn was eaten, only those could eat who had prepared for it by fasting, prayer, and purifications (Mooney, 424 R.; and among the Creeks, at the festival of the breastplate, the young men fasted before the breastplates were put on) (Frazer, G.E. ii. 380). Similarly among the Natchez, at the festival of the sun (a festival preparatory to the new year), the people fasted for three days and took an emetic, after which the festival began (Chateaubriand, Voyage en Amérique, Paris, 1827, p. 356). Hence, receiving food which is to all intents and purposes sacred, the body must be purified—this being also seen in the use of spirit in connexion with fasting, found among the Masai (Thomson, Through Masai Land, 5, 1887, p. 430). Among the Iggada the person who drank milk fasted for several hours before eating certain foods tabooed in connexion with it, and vis versa (Bosse, 418). The Mexicans, before eating the sacrament at the Reformation, ate no food for a day, just as modern Jews fast from 8 a.m. before eating the Passover. Among the Western Chippew, before the festival known as Bagwa Feast, certain members of the community who are set apart as holy must fast from boiled food, mango fruit, etc., and a number of women are employed to prepare cakes of corn meal which are given. In these cases there is clearly seen the aspect of fasting as 'a preparation for the sacramental eating of holy flesh,' whether we regard this as its origin (Cumont, Le sacrement de Mithra, 1893, p. 141, 160). In other instances fasting is a preparation for festival rejoicing. The third day of the Thesmophoria, called πορήσια, was observed by fasting amongst the Athenians. It was the sick, seated on the ground ("l'Init. de Is. et Oisr. 69.")

This also was explained as an imitation of Demeter's mourning. In the Roman cult of Ceres, the ritual of which was very largely Greek, there was introduced in 486 B.C. the festival of Eleusis, which corresponds to the Attic πορήσια. Similarly in the ritual of the Mater Magna, the 24th of March, Dies Sanguinis, was a day of fasting and mourning, recalling the history of the Mother for Attis, and was succeeded next day by the Hilaria, a great day of festival rejoicing. The taurbolium sometimes took place on the Dies Sanguinis. Though these fastings are connected with mythic events, they are in origin preparatory, purificatory, and festive in character.

5. Fasting at initiation.—This, along with the whole complex ritual of initiation to manhood and its privileges, may also be regarded as a preparation for the latter and for the reception either of foods hitherto prohibited, or of the best reaf the olden days and at the same time inculcating upon the youths the habit of strict obedience. Such food restrictions are also found in the Andaman Islands, where, as a test of self-denial, until the tabus are removed at initiations (or, in the case of girls, at marriage), young people must not touch certain favourite articles of food for months or years—turtle, pork, fish, honey, etc. (Man, 94, 129). In the Beka Island, as a fitness to the secret societies or clubs, a period of fasting has to be undergone. In the New Hebrides the novices at initiation are kept in an enclosure for 29 days, and are fed on a restricted diet of copra, vegetables, etc. (Frazier, G.E. ii. 380). Similarly in the Natchez, at the festival of the sun (a festival preparatory to the new year), the people fasted for three days and took an emetic, after which the festival began (Chateaubriand, Voyage en Amérique, Paris, 1827, p. 356). Hence, receiving food which is to all intents and purposes sacred, the body must be purified—this being also seen in the use of spirit in connexion with fasting, found among the Masai (Thomson, Through Masai Land, 5, 1887, p. 430). Among the Iggada the person who drank milk fasted for several hours before eating certain foods tabooed in connexion with it, and vice versa (Bosse, 418). The Mexicans, before eating the sacrament at the Reformation, ate no food for a day, just as modern Jews fast from 8 a.m. before eating the Passover. Among the Western Chippew, before the festival known as Bagwa Feast, certain members of the community who are set apart as holy must fast from boiled food, mango fruit, etc., and a number of women are employed to prepare cakes of corn meal which are given. In these cases there is clearly seen the aspect of fasting as 'a preparation for the sacramental eating of holy flesh,' whether we regard this as its origin (Cumont, Le sacrement de Mithra, 1893, p. 141, 160). In other instances fasting is a preparation for festival rejoicing. The third day of the Thesmophoria, called πορήσια, was observed by fasting amongst the Athenians. It was the sick, seated on the ground ('l'Init. de Is. et Oisr. 69.")

This also was explained as an imitation of Demeter's mourning. In the Roman cult of Ceres, the ritual of which was very largely Greek, there was introduced in 486 B.C. the festival of Eleusis, which corresponds to the Attic πορήσια. Similarly in the ritual of the Mater Magna, the 24th of March, Dies Sanguinis, was a day of fasting and mourning, recalling the history of the Mother for Attis, and was succeeded next day by the Hilaria, a great day of festival rejoicing. The taurbolium sometimes took place on the Dies Sanguinis. Though these fastings are connected with mythic events, they are in origin preparatory, purificatory, and festive in character.

Corresponding to these initiatory forms of fasting are the prolonged fastings and other austerities which the American Indian youth undergoes in seclusion at puberty, in order that by means of a vision he may see the guardian spirit which will be his for the remainder of his life. This form of fasting is a preparatory act, and is generally combined with the purificatory use of strong emetics, and of ablations, although there is a physiological connexion between the fasting and the visions which are induced in the brain of the youth weakened by hunger and worked up to a pitch of excitement. This connexion has probably been discovered for himself by the savage. This form of fasting is found among all the American Indian tribes, or of higher or of inferior and, in many of the instances recorded, the discipline, whether self-imposed or not, is of most rigorous kind. A few examples will show this. Boys among the Tuskequah Indians go through a "ears training," which becomes steadily more severe. "The facts that at first were deprivation from one meal lengthen, till they
Fasting (Introductory and non-Christian)

stretch over days and nights of abstinence from both food and water. Finally comes the nine days' fast, during which the lad wanders in the forests and has severest fastings, in one of which he learns at what his 'medicine' is to be (Owen, Folk-lore of the Mwagwage Indians, 1901, p. 67). Charlevoix (vol. 67) describes the same process among the Algonquins and others: 'They begin by blackening the boy's face, then the rest of his face and body, without giving him e'to eat.' This induces dreams which are carefully interpreted into. 'Nevertheless the fast often ends before the proper period is elapsed,' says Jones; and Djlawa Indian, describes his own experience of fasting: 'I well remember the fifth day when I fasted my face and fast, in order to obtain the favour of several familiar gods, that one day, being thirsty, I took a sip of water. The moisture which thus seeped into my face, I thought, and supposed acted filled me with sorrow, and I wept the greater part of the night. I was never afterwards in a vision, and hence never obtained a manton (Hist. of the Ojibway Indians, 1901, p. 87 f.). The fasting, sometimes for a fortnight, would ordain and fast for some time in order to make him keep alive by the tamanous or manton (Kolla, B. R., pi. 1, 880, p. 514). For many other Leda, see the works of Brescett, Schoolcraft, etc., and those cited by Frazier, Tidemans and Espouzay, 1916, iii. 377 f.; also art. COMMUNICATION WITH DEAD.

In certain mystery cults of the ancient world, fasting was one of the conditions of initiation. Apuleius describes the three-repeated ten days' abstinence from all kind of animals and of wine—'reverential abstention'—which the candidates had to observe before being fully initiated into the mysteries of Isis (Metam. xi. 23, 25, 30). See also § 4 above.

Similar with the use of long ommites, narcotics, hallucinations, etc., are undergone in many regions by those who wish to become medicine-men. Here too the act is preparatory to the reception of higher knowledge, but it also leads to induce dreams, which are regarded as a necessary part of the medicine-man's means of obtaining revelations. The Ekkono youth who wishes to become an angakot must retire and fast for some time, during which the spirits are supposed to visit him (Crauz, Hist. of Greenland, 1832, i. 210). The young Zulu had to fast strictly (Kienem, Culturgesch. Leipzig, 1836–38, ii. 85). In Brazil, the youth who desires to be a paei dwells alone and fasts for some time in order to receive the visions, in which the spirits are supposed to visit him (Martin, Von dem Reichtumswande unter der Bru, Munich, 1838, p. 125). Among the Abipones, the postulant for the position of kobol had to sit on a tree overhanging a lake for some days, fasting, until he began to see into futurity (Debrisch, Abipones, 1832, i. 66). Similar methods obtained among the N. American tribes for becoming a medicine-man. These included very severe and prolonged fastings, followed by vivid dreams. So also among the Zulus, diviners became qualified for their work and for intercourse with spirits by a severe discipline of fasting and economy of food and libations, forming a very rigorous fasting. Thus the youth becomes 'a house of dreams' (Callaway, Rel. System of the Amorites, 1884, p. 257).

In the case of the divinatory function of fasting, it is clearly a natural power, which becomes larger and other discipline methods, and dreams, visions, or revelations, is well established everywhere. Hence also, in order to induce such dreams or to receive communications from supernatural spirits or for becoming a medicine-man occupied so important a place, it is very commonly resorted to as an ordinary means of acquiring hidden knowledge or messages from the spirits ininal or higher powers.

The hunting fasts have been very commonly resorted to both among savages and among more advanced peoples, as well as in higher forms of religion. Among the American Indians, with whom fasting as a preparation for the acquiring of a guardian spirit and for becoming a medicine-man occupied so important a place, it is very commonly resorted to as an ordinary means of acquiring hidden knowledge or messages from the spirits ininal or higher powers. The hunting fasts are resorted to until the hunter, whether his hunt will be successful or not; the husband fasts until he dreams whether his hopes of becoming a parent will or will not be gratified. The greater the power of fasting, and the more wild and numerous the consequent dreams, the more was the sieer held in reverence and the greater power did he acquire. Even the Great Spirit might appear as a handsome youth to him who has the almost supernatural fasting—vision believed to be of peculiar efficacy. And as a preparation for the state of ecstasy in which the spirits speak through the medicine-man, he fasts much and often and undergoes other austerities (see Schoolcraft, Indian Tribes, Philadelphia, 1852, passion; Relation des Jésuites, 1672, p. 38; Matthews, Ethnog, and Philol. of Hadada Ind., Washington, 1877, p. 51; Warren, Hist. of the Ojibway Nation, St. Paul, Minn. 1885, p. 202; Dunn, Hist. of the Ojibway Tribe, 1895, p. 225 f.).

The Zulu diviners also make use of fastings fasting over several days, in order to have visions. For, 'as their proverb runs, 'The continuous fast is a sufficient body and that which agrees with Galen's saying that dreams produced by fasting are better and clearer than others (Callaway, 1883, p. 125). The Sanatal priest also fasts for several days; the result is a wild ecstatic state in which he utters oracles by the power of the god possessing him (Jones, 1814, p. 155). The Chinese custom of fasting before a sacrifice to the ancestral spirits may have been originated from the Zulus, through their visions, as the person had at the same time to fill his mind with thoughts of them (SBE iii. 304, xxviii. 290).

In one of the texts of Tholom a method is described for fasting in order to become of concentrated mind, and after several days a man has forgotten all other words, he is now fit for Divine revelations (SBE xi. 191 (290). Such fastings were not unknown in the mystic aspects of Greek religion. At the grotto of Acharna, the vapours of which had a medicinal virtue, and which was therefore the seat of an oracle, the sick received baths and fasts, and which was subsequently the seat of an oracle, the sick received baths and fasts, and it was during the fasts that the revelations were given. Hence also the Hebrews, to judge by certain references to it in connexion with revelations, or visions, or communications from God. For these there was preparation by fasting as well as by keeping the Law. Thus, while Mosas was with Jehovah on the Mount and received the Law, he fasted forty days and forty nights (Ex 34:36, cf. Dt 9:4). Daniel, also, before his communion with God and the visions which he experienced, fasted only one case entire day, and part of another, 'bread, flesh, or wine for three months' (Dan 9:16). It is also noticeable that Elijah's revelation on Mt. Horeb comes after he has gone in the strength of the food provided by the angel of the Lord over many nights (1 K 19:8). Latter Jewish writers define a neermomaker as one who fasts and lodges among tombs in order that the evil spirit may come upon him (H. Spencer, i. 281). This purpose of fasting also passed over to Christian custom (see Fasting [Christian], and cf. Tertullian's opinion that fasting gives rise to dreams [de Anima, 38], and Chrysostom's saying that it makes the soul brighter and provides it with wings to mount and soar in [cf. 1. Gen., xix. 2]).

6. Fasting in magical ritual. —Here also the power of fasting as a preparation for sacred or ritual actions may be seen. The man who fasts makes his magical act more likely to succeed by his being in a purer state of body for it.

In Banks Island, fasting adds power to the charms used for causing the death of an enemy, and would a man fast that, when the day arrived on which he was to use the charm, he was too weak to walk (Coddington, 250 f.). Among the Korrup-speaking tribes of New Guineas, a sorcerer who wishes to obtain a magical snake-stone fasts for two weeks, eating merely a few roasted bananas. Then he dreams of the locality of the snake and sets off in pursuit. Before a hunt, the hunt is ritually initiated, and this is itself preceded by abstinence from many customary foods (Chapman, 265, 290). Among the Zulu tribe, those who remain at home must abstain from eating certain foods, else a devil would be sent to punish them (Jones, 1814) 330). Maori sorcerers, using magic with a victim's hair to cause his death, remained fasting for three days. During all those at home had to fast strictly while the warriors were in the field, the magical effects acting through the sympathetic connection of the two. Before the expedition no food was cooked on the previous day until the priest had gone through his divinatory rites (Old Jena, a plains, by B. K. 314). In Java, the rain-doctor observes a fast as part of the ritual for the prevention of drought (Batien, Old Joi, Singapore, 1894, p. 69 f.). Among the Sandites, on the other hand, those who visit a sacred hill to beseech the god found go there fasting (Talise, 945; True, 1858, 35). Among the Natchez, also, wizards fasted and danced, and those of white in their most sacred (Lettres et traductions, Paris, 1780–87, vii. 294 f.). Similarly the body of a priest-priest among the Zulus had the special duty of fasting and praying for rain (Stevenson, 25).
1904, p. 390). The Halda Indian fasts in order to obtain a fair wind; indeed, of these and other tribes it is true that, 'whether a man is sick or not, he could not suppress his physical powers, or obtain property, success in hunting, fishing, war, etc., by rigid abstinence from food and drink, by remaining away from his wife, bathing in the sea, fasting, or sleeping in the sun. He would drink warmed salt water often, and take fresh water afterwards, when all the contents of his stomach were ejected, leaving him so much the "cleaner"' (Swanton, *Contrib. to the Ethnol. of the Haldas*, 1906, p. 40). In Alaska the wife must remain fasting for a week, and while her husband was fishing, in order that he may have a good catch (Holmberg, *Jcta Soc. Scientiarum Fenniae*, 1904, p. 157). The Tsimshians (Boas, *Coming to B.C.,* pp. 427, 435) believed that he is a hand of God. They were gathered with a due ritual and after fasting (Pliny, *HN* xxiv, 1). For the Cetios custom of "fasting against a person," see *E.J* vi, 411.

Fasting as an act of penitence.—While some of the methods of fasting discussed above may have had a penitential aspect, especially those connected with initiation to mysteries, they were not said to be a penitential act. Rather does fasting as an act of penitence form a development from them. The person who fasts suffers inconvenience or pain, and he may well have come to think that by so suffering he would humiliate himself before higher powers who would be moved to forgive him, and would thus gain their pity. At the same time, his suffering was a self-inflicted punishment for sin, which might have the effect of warding off other or further punishments inflicted as extra. As regards the origin of this aspect of fasting, it is admitted that it was variably combined with prayer. The relation between fasting as a penitential act and fasting as a more or less magical method of forcing the hand of the gods is perhaps to be seen at lower levels of culture.

The Tsimshians think they can force the deity to perform their wishes by strict fasting. Hence they lie in bed for seven days without food, observing also continence (Boas, in *Frazer, Totemism*, ii, 172). In the Aztecs of Mexico they fasted in order to obtain the help of their deities, they fasted and observed continence for several days (Ternaux-Compan, *Essai sur l'anc. Cunimacharco*, Paris, 1842, p. 44 f.). Here there is no penitence, but it is easy to see how such fastings might become penitential if it were the forgiveness of the deity that was sought. Among the ancient Mexicans, fasting as a penitential act existed, and it tended to assist in purifying the conscience. These fasts varied much in extent,—from one day to several years,—and they were observed either by individuals or by the whole nation on particular occasions, arising by the priests after due confession of sins or for special offences.

The high priest fasted and prayed, practising also severe austerities in seclusion, for months at a time, on occasions of public calamity (Claviger, *Hist. of Mexico*, i, 397 f.; Torquemada, *Monarckia Indiana*, Madrid, 1723, ii, 212 f.). In Egypt, fasting as a method of expiation for sin, either occasional or at fixed times, was recognized. All luxuries had to be abstained from, as well as every form of gratification of the passions. It is thought that fasting is alluded to in the 'negative confession' (Wilkinson, ii, 398).

As many of the Babylonian psalms show, fasting had become a regular ritual act of penance, accompanying these mournful expressions of wrongdoing: The penitent describes how he has neither eaten food nor drunk clear water. But there were also days of fasting appointed in periods of distress and calamity when the people gave themselves up to sternest fasting and other acts of penitence (Zimmern, *Bab. Dispsalsmen*, Leipzig, 1881, p. 172). As many of the psalms show, fasting was regarded as necessary to the welfare of both the soul and the animals. They were covered with sackcloth, wept and fasted, and prayed to God for forgiveness (38:4).

Among the Hebrews, fasting as a form of penitence was well known from comparatively early times. Originating as a means of exciting the Divine compassion, it came to have a more ethical colouring, and was the outward expression of a real inward penitence. At that time there was a contrary tendency for the practice to be resorted to in a conventional manner whenever calamity threatened, and as a mere means of keeping it off (a view against the Copts, maniacs, and heretics). Individuals fasted on account of their sins or for some special object (1 K 21:7, Ezr 10). On various occasions a general fast was proclaimed as a recognition of sin—the occasion of any public calamity being a proof that the people had sinned (1 S 14:2, 2 Ch 29:2, 1 K 21:7, Jer 36:2, 1 Jl 152). Or it may have been resorted to spontaneously (Jg 20:6, Neh 9). Fasting, if the accompaniment of a due penitential state of heart and the token of humility, was certainly approved by the prophets and regarded as agreeable to God, the reverse being abhorrent to Him and them (Jl 2:19, Is 58; 33:12). The act of public fasting might take place on the occasion of any calamity on which the case, the lack of autumn rains; but fixed times of fasting are also found. Of these the most significant is that of the Day of Atonement (Lev 16:27), which is a penitential act, but also a religious rite. On the 10th day of the 7th month the people were to 'afflict their souls.' This may be the fast referred to in Neh 9 as taking place on the 4th day of the month. Four yearly fasts, in the 4th, 5th, 6th, and 7th months, are mentioned in Zoc 30 (cf. 79). These had reference to events in the Chaldaean conquest of Jerusalem. Another fast-day of later origin was that of the 13th of Adar, supposed to be commemorated for the fast of the Jews at Est 4:16, when the food and the fasts of the people commanded by her (Est 4:16). It immediately preceded the Feast of Purim, and may have been of Bab. origin (see *Frazer, Gt* ii, 176; Zimmern, *ZATW* x. [1901] 187 f.). Private fasting was also much multiplied during and after the Exile, strict Jews fasting on the 2nd and 5th days of each week in the year (cf. Lk 18:23; *Matt., 8; Tz'amah, 126*). These were also days adopted for special public fastings. Such fasting was done as openly as possible,—a sign of its non-spiritual nature,—and this was rebuked by our Lord (Mt 6:6). At such times it varied from inactivity to eating only bread and water for a period of 12 or 24 hours, and according to the omission of various usual actions. Private persons no doubt added to these occasions of fasting, taking no wine or flesh or pleasant food for many days or even over a period of years, as a sign of mourning for sin or as a help to living chastely. This is reflected in the Apocryphal and other writings (Jth 9*; Test. xii, Patr. [Heb. 9]; Sim. 9*; Jud. 10*; Isaach. 7, Jos. 9*; 9f). Indeed, so characteristic did fasting as a Jewish custom become that Augustus boasted that he had fasted more earnestly than a Jew (Tac. *Hist.* v. 4). In Muhammadan ritual the principle of penitential fasting is recognized and highly commanded by Muhammad himself. The Qur'an recommends fasting as a penance, for three days on a pilgrimage, and for seven on returning (ii, 185). The believer who kills another believer and cannot find the blood-money must fast for two months as a penance (lv, 94), and the oath-breaker who cannot as a penance feed ten poor men must fast for three days (v. 91). Fasting may be performed from before sunrise to sunset, and it is one of the recognized duties of the Muslim. Hence there are many stated times of fasting, some of which are obligatory, and others may be regarded as optional. There are also days of fasting taken by the devout. Chief amongst the latter classes is the fast of the 30 days of Ramadán, rigorous and
strictly observed, in which no water is allowed between dawn and sunset, and from which only the sick and infirm, travellers, idiots, and young children are exempt (ii. 189 ff.). Devout Muslims seclude themselves in the mosques, and those who observe this fast receive pardon of all past venial sins (Michæli, vii. 7, p. 217). It is a great festival of rejoicing, to which it may be regarded as in some sense preparatory. The 13th, 14th, and 15th days of each month are also generally observed as fasting days, also the day As hârâr, the 10th, and further Monday, which Muhammad said he hoped it would cover the sins of the coming year. Strict Muslims fast also on the Monday and Thursday of each week. While Muhammadanism is a religious principle, it may be viewed as a dualism between body and soul—the former evil, the latter pure— is not recognized, although, in some of the religions referred to, this dualistic view came to prevail amongst individuals or sects. But, wherever asceticism is based on this view, fasting is a more or less recognized ascetic practice, since by observing it the evil body is not pampered by excess in food or drink. Fasting as a penitential practice would make no sense between body and soul—the former evil, the latter pure—fasting is it true, that even where the strictly dualistic view does not prevail, fasting may be practiced in order to combat the grosser desires of the body, or by way of preparing it for some sacred occasion. This view has already been found in considering fasting as a preparatory act, and in certain instances it very closely approaches strictly ascetic fasting. This is also true of cases where excess is regarded as too luxurious—a conception perhaps originally based upon earlier food tabus.

Thus Plutarch says that the Egyptian priests (of Isis) committed the sin of eating fish on fish, the priests abstained from it, one reason being that it was an 'unnecessary and over-luxurious article of diet.' For a similar reason they abstained from garlic (de Dea et Ostre, § 8). Abstinence from luxurious food, flesh, and wine was necessary for him who was initiated into the mysteries of Isis (Apuleius, Metam. xii). The Orphic prohibition of animal food was based on the fact that it was used in sacrifice to the dead, though it became an ascetic practice (on this aspect of abstinence generally, see Porphyry, de Abst. ab Epicureis Animantibus). In Greece, the native religion was opposed to the idea of the acceptableness to the gods of a maceration of the body, this dualistic view leading to a true asceticism is found in Orphism, and here, accordingly, fasting had its place (Ib. vii. Ein orphischer Demeterchymus,' in Festschr. für Th. Gomperz, Vienna, 1902, p. 61). Pythagoras also recommended frugality in diet, and commended fasting. These, however, are the temples to pray for some days should not take food all that time—perhaps an example of preparation for Divine revelations rather than of ascetic fasting (Porph. Vita Pyth. 34; Iamb. Vita Pyth. 27; Diog. Laert. viii. 19). The gods are too holy to be sated with the realization of bodily desires, gluttony, drunkenness, etc., is also continued by Plato (Phædo, 69-71).

Reference has already been made to the abstemiousness of the Egyptian priests. In the Maxims of Any (XIXth dynasty) the same principle is recognized—'Be not greedy to fill thy stomach, for one knows no reason why he should do so' (Petrie, Rel. and Conscience in Anc. Egypt., 1898, p. 113). This, however, is not ascetic fasting, but self-control, and followed by a great festival of rejoicing, to which it may be regarded in some sense preparatory. The 13th, 14th, and 15th days of each month are also generally observed as fasting days, also the day Ashihrâ, the 10th, and perhaps Monday, which Muhammad said he hoped it would cover the sins of the coming year. Strict Muslims fast also on the Monday and Thursday of each week. While Muhammadanism is a religious principle, it may be viewed as a dualism between body and soul—the former evil, the latter pure—fasting is it true, that even where the strictly dualistic view does not prevail, fasting may be practiced in order to combat the grosser desires of the body, or by way of preparing it for some sacred occasion. This view has already been found in considering fasting as a preparatory act, and in certain instances it very closely approaches strictly ascetic fasting. This is also true of cases where excess is regarded as too luxurious—a conception perhaps originally based upon earlier food tabus.

Thus Plutarch says that the Egyptian priests (of Isis) committed the sin of eating fish on fish, the priests abstained from it, one reason being that it was an 'unnecessary and over-luxurious article of diet.' For a similar reason they abstained from garlic (de Dea et Ostre, § 8). Abstinence from luxurious food, flesh, and wine was necessary for him who was initiated into the mysteries of Isis (Apuleius, Metam. xii). The Orphic prohibition of animal food was based on the fact that it was used in sacrifice to the dead, though it became an ascetic practice (on this aspect of abstinence generally, see Porphyry, de Abst. ab Epicureis Animantibus). In Greece, the native religion was opposed to the idea of the acceptableness to the gods of a maceration of the body, this dualistic view leading to a true asceticism is found in Orphism, and here, accordingly, fasting had its place (Ib. vii. Ein orphischer Demeterchymus,' in Festschr. für Th. Gomperz, Vienna, 1902, p. 61). Pythagoras also recommended frugality in diet, and commended fasting. These, however, are the temples to pray for some days should not take food all that time—perhaps an example of preparation for Divine revelations rather than of ascetic fasting (Porph. Vita Pyth. 34; Iamb. Vita Pyth. 27; Diog. Laert. viii. 19). The gods are too holy to be sated with the realization of bodily desires, gluttony, drunkenness, etc., is also continued by Plato (Phædo, 69-71).

Reference has already been made to the abstemiousness of the Egyptian priests. In the Maxims of Any (XIXth dynasty) the same principle is recognized—'Be not greedy to fill thy stomach, for one knows no reason why he should do so' (Petrie, Rel. and Conscience in Anc. Egypt., 1898, p. 113). This, however, is not ascetic fasting, but self-control, and followed by a great festival of rejoicing, to which it may be regarded in some sense preparatory. The 13th, 14th, and 15th days of each month are also generally observed as fasting days, also the day Ashihrâ, the 10th, and perhaps Monday, which Muhammad said he hoped it would cover the sins of the coming year. Strict Muslims fast also on the Monday and Thursday of each week. While Muhammadanism is a religious principle, it may be viewed as a dualism between body and soul—the former evil, the latter pure—fasting is it true, that even where the strictly dualistic view does not prevail, fasting may be practiced in order to combat the grosser desires of the body, or by way of preparing it for some sacred occasion. This view has already been found in considering fasting as a preparatory act, and in certain instances it very closely approaches strictly ascetic fasting. This is also true of cases where excess is regarded as too luxurious—a conception perhaps originally based upon earlier food tabus.

Thus Plutarch says that the Egyptian priests (of Isis) committed the sin of eating fish on fish, the priests abstained from it, one reason being that it was an 'unnecessary and over-luxurious article of diet.' For a similar reason they abstained from garlic (de Dea et Ostre, § 8). Abstinence from luxurious food, flesh, and wine was necessary for him who was initi...
also been seen that Buddha taught moderation rather than asceticism, that the Dharmapada the fasts of the Brāhmans are accredited as discordant with the moderate Buddhist discipline (SBE x. [1881] 21, note), and in another passage fasting and other ascetic practices are said to have no effect in purifying a mortal who has not overcome desire. Of themselves they cannot purify the passions (SBE x. 38). The ancient Parthi religion, although fasting occurred sporadically (cf. § 3), despised it. In its 410 the station of Barnabas see Pacta servanda. When and in its 742, Chionites, 10 (1890) 42) it is said that 'he who fills himself with meat is filled with the good spirit more than he who does not do so.' And the Sad Dar (83, SBE xxiv. [1885] 348) says:

'It is requisite to abstain from the keeping of fasts. For, in our religion, it is not proper that they should not eat every day or anything, because it would be a sin not to do. With us the keeping of fast is this, that we keep fast from committing sin with our eyes and tongue and ears and hands and feet. 'That which, in other religions, is fasting owing to not eating is, in our religion, fasting owing to not committing sin.'

While this expresses a valuable truth of spiritual religion, it is perhaps aimed at the excessive fasts of the Manichaeans. So, too, in one of the writings of the Taoist Kwang-tse, the question is asked:

'How have we drunk in proceeding water and eaten none of the prescribed foods, be regarded as a fast?' and the reply runs: 'It is the fasting appropriate to sacrificing, but fasting as a means of the purification of the soul, explained as a purely spiritual process (SBE xxxix. [1901] 201.f.).

10. It should be observed that fasting is usually associated with other acts of asceticism, e.g. continence, by numerous austere sects, and generally, in the higher religions, by prayer. Cf. the common Jewish phrase 'prayer and fasting.'

A reference is referred to throughout the article. See also E. B. Taylor, FOD, London, 1909, ii. 410; E. Westermarck, 'The Principles of Fasting,' II. xvii. [1907] 293 f.

FASTING (Christian).—I. THE FIRST TWO CENTURIES.—1. New Testament.—Two sayings of our Lord moulded the ideas of early Christianity about fasting: (a) that, though His disciples did not fast as the Baptist's disciples did (often,' Lk 5 33), because the Bridegroom was with them, yet the days would come when the Bridegroom would be taken away, and then they should fast 'in that day and in the solemnity of the Holy Ghost' (Lk 9 58), which was interpreted literally and led to a particular rule as to the duration of the Paschal fast; and (b) that fasting must be unostentations (Mt 6 17). Although He Himself fasted forty days before beginning His ministry, and probably, as a devout Jew, kept the one fast-day that was obligatory at the time,—the Day of Atonement,—He left no regulations for fasting; He gave the principles, and left His Church to make rules for carrying them out. This explains why the Church was so slow in developing a system of fasts and festivals. No rules on the subject could claim to come directly from the Master Himself. It is hardly probable that the first disciples initiated the stricter Jews in voluntarily adding to the Day of Atonement the two weekly fasts (cf. Lk 18 12) of Monday and Thursday (days which were chosen because Moses was believed to have gone up to the Mount on the latter and to have come down on the former), for there is no trace of these as Christian fasts in NT. But many Jews increased these fasts voluntarily, as did Anna (Lk 20), and even the heathen Cornelians, according to some MSS. (Ac 10 9); and so we read of St. Paul fasting (2 Co 6 12: 'fastings often' the mark of the Christian minister), and of the first Christians fasting before and after important events (Ac 14 25; 28). The Jewish Christians, doubtless, continued to keep the Day of Atonement, and St. Luke mentions it as an event (Ac 27 7: 'the fast'), but the Gentiles were almost certainly not pressed to observe it.

2. Second century.—We may now proceed to trace the growth of fasting in the Christian Church, and, in doing so, we must bear in mind the caution that customs varied much, and therefore we must be careful to pay attention to the particular age and country of which our authorities speak, without assuming too much, because we cannot mention in one of the older Fathers, it must have been characteristic of the whole Church from the beginning. A broad generalization of Hooker may, however, in the main be accepted. He says that fasts which were introduced by the church have as their object 'to temper the mind, lest contrary affections coming in place should make it too profane and dissolve' (Rheias. Pol. v. 72, last par.); and the former dictum is true of all but the weekly fasts (below (e)). When we review the century and a half that followed the death of St. Paul, we are at once struck by the want of regulations as to fasting; as far as we can gather from the scanty literature before the age of Irenaeus, Clement of Alexandria, and Tertullian (end of 2nd cent.), and from the writings of those Fathers, much was left to individual piety. The following facts, however, emerge from the study of this period.

(a) There was a general sense of the duty of fasting, and frequent warnings against making it a merely external act. Barnabas (§ 5; c. A.D. 100) and Justin Martyr (Dial. 15; c. A.D. 100) quote Is 58 in this sense; the same warning is given by Clement of Alexandria (Fest. iii. 12, Strom. vi. 12). Clement also wrote a separate treatise on fasting (Jerome, de Vitr. Illustr. 38). Earlier in the century, Polycarp, (§ 7; c. A.D. 110) urges fasting and prayer as a means of meeting temptation. Hermas (Sim. v. 1; written before A.D. 140) [3] says that he was fasting and praying 'a fasting and prayer' (weekly) fast) when he met the Shepherd, who spoke to him of fasting, warning him against the mere external observance: 'to do no evil in your life and to serve the Lord with a pure heart' is the true fast; fasting is very good if the commandments of the Lord be observed.

(b) Paschal fast.—We hear of this first from Irenaeus. He mentions it in his letter to Pope Victor on the Paschal controversy (written c. A.D. 195, and quoted by Eusebius, H I v. 24), and says that there was great variety in its observance, some fasting for one day, others for two or for several days, others for forty hours of night and day, and that this variety was not long standing: it existed 'long before, in the time of our ancestors.' This shows that the Paschal fast was known early in the 2nd century. The fast of the one day and that of forty hours would doubtless be absolute; the latter period would correspond to the time during which our Lord lay in the grave. Tertullian (de Orit. 18) says that the 'day of Pascha' (by which he means Good Friday, though the term Pascha has other meanings) [1] was a general and, as it were, public fast, on which the kiss of peace was not given. See also below (e).

(c) Weekly fasts.—It was a common custom in the 2nd cent. at least in some countries, to fast on Wednesdays and Fridays; see FESTIVALS AND FASTS [Christian]. 1 (b).

(d) Pre-baptismal fast.—This is mentioned in the Didache (§ 71); it was for a day or two days, and was observed by the candidate, the baptizer, and others. It is also mentioned in Justin (Apol. I. 61) and in Tertullian (de Bapt. 20, and perhaps de Imag. 8). Paschasius, bishop of Amasea, ordinarily administered at Pascha (Tertull. de Bapt. 19, and later writers passim), though it might be deferred to 'Pente-

1 In Christian literature, Pascha means Easter Day, or Good Friday, or Maundy Thursday, or Holy Week, or even the forty days before Easter; and similarly Pentecost means either the festival itself or the fifty days before it.
cost, i.e. the 50 days after Easter (ib. : "latiusinum spatum"), there was a very close connection between this fast and that before Pascha, and the authority may assume that the former is the real rationale of the latter.

d. The feeling of the non-Montanist Christians in the 2nd cent. with regard to fasting is clearly exhibited by Tertullian's Apol. treatise, de jejunii ratione, written c. A.D. 210, after he had become a disciple of Montanus; and it is curious that the great development in fasting which took place later was largely due to the way in which the Montanists kept two weeks of 'xerophagy,' i.e. partial fasts, in the year; but of these weeks the Saturdays and Sundays were excepted (de jejun. 15). It is not said at what time of the year they were kept. Both the name and the thing were opposed by the 'Psychics' (the ordinary Christians) as a novelty (§ 2). Xerophagies consisted in not eating flesh or anything juicy, not even succulent fruit, or anything with the flavour of wine, and in abstaining from the bath (§ 1). The 'Psychics' objected to the definite enjoining of 'stations,' as these should be voluntary (§ 10); yet (Tertullian says) they were inconstant, as sometimes they lived on bread and water, and in most cases in the fast. The name 'xerophagy,' i.e. 'when the Bridgework was taken away' (the Paschal fast, see above, I. 1), and Wednesday and Friday up to the ninth hour, or 3 p.m. (§§ 2, 10); they often fasted from sunset till noon. Tertullian says nothing that we should never be observed as a fast-day except at Pascha (§ 14); their bishops ordained fasts for their own dioceses, and there were fasts before Councils were held (§ 13). The Montanists kept on the bi-weekly fasts to a later hour (§ 10). With this we may compare Hippolytus' accusation against the Montanists, of 'novelties of fasts, and feasts, and meals of parched food and repasts of radishes' (fltr. viii. 12 [c. A.D. 220]; cf. x. 21, 'novel and strange [read παραβάσεις] fasts'). Thus the difference between the Montanists and the Orthodox seems to have been that the latter were less strict in the custom of fasting, and left more to voluntary observance, while the former made a settled practice of compulsory xerophagies and half-fasts in addition to the complete fast of the Paraskeue (Good Friday), or of Paschae and the following Sabbath. Tertullian's treatise shows how bitter was the feeling excited by a mere difference of observance.

II. PERIOD OF DEVELOPMENT (A.D. 200-500).—

1. Development after Tertullian.—From the 3rd cent. onwards the fasts were called Church Orders, became common, busying their injunctions in most cases on Supposed Apostolic Authority. What before was a matter of voluntary or customary observance now came under rule. Fasting accordingly was more exactly regulated, and the Orthodox became stricter than the Montanists, who retained the fasting customs mentioned by Tertullian till the 5th cent. (Sozomen, II. vii. 19). The term 'fasting' as in fact, and even well on in the 4th cent., we find only the two days before Easter named as fasts in some authorities (Egyp. Ch. Order, 55; Ethiopic Ch. Order, 41; Verona Fragments, ed. Häuser, Leipzig, 1900, p. 25); in the 4th cent. (so Apol. Constant. v. 18 [c. A.D. 357], probably to be dated A.D. 300-350]) the fasts end at midnight (Test. ii. 12). No other Paschal fast is mentioned in these works, and sick people who cannot fast on both days are allowed to fast on the Saturday only (so also Apos. Constant. v. 18 [c. A.D. 357], for which see below). In the above-named Church Orders, or at least in their sources, the Crucifixion and Resurrection were commemorated on the same day. Epiphanius says that the Quattuordecimana (c. A.D. 180, [§ 1. 1-3; Exp. Fid. 22]) But a greater development is found in the older Didascalia (v. 14. 18 [probably 3rd cent.]): a partial fast with bread, salt, and water is enjoined from Monday to Thursday of Holy Week, and an absolute fast on Friday and Saturday. Dionysius of Alexandria (Ep. ad Basiliam, can. 1 [early 3rd cent.]) mentions a Holy Week fast, during the six days of which some even ate nothing at all; but he limits them to the Montanist usage of some, fasting three, some two, some for four days, others not even one day. There was also a diversity (he says) as to the time of ending the fast before Pascha (cf. 'Pentecost,' which this seems to be an error); in Rome they ended it at cockcrow, elsewhere at nightfall. He mentions the Friday and Sabbath (Saturday) as rigorous fasts.

A forty-days’ fast is not found till the 4th cent., and made its way only gradually; a supposed reference in Origen (hom. in Juxta, x. 5) is due to Rufinus' 'translation.' In some countries the 'forty days' were observed as a solemn season for prayer, without being a fast, as Advent was observed in modern times. All the fasts are now to be regarded as voluntary, and are often mentioned as a well-known space of time, before which Synods were held (can. 5); and in the Test. of our Lord (c. A.D. 350) the people are told to fast 'in vigilia' to pray in the church; but there is no word of fasting (ii. 18). The name of the season instead was ἔφεσανε τῷ Πασχάδι, 'Quadragesima,' at first means the 'fortieth day' before Easter, on which the competentes, or selected candidates for baptism, were enrolled (Cyr. Jerus. Cat. Lect. Introd. 4); but soon the name was given to the whole season. An exact parallel is to be seen in the name 'Pentecost' (see above, I. 2 (b)). The next stage was that the partial fast before Pascha, of varying duration, was called ἔφεσανε τῷ Πασχάδι, irrespective of its exact length. Some moderns suppose that the name first arose from the forty hours' fast; others think that it has nothing to do with the fast, but only with the period of probation of the competentes, though it is not quite clear why this was forty days. For less probable reasons, see below.

The 'Fastis Lavorum' of Athanasius show that the 'forty-days' fast did not develop so soon in Egypt as in Rome (cf. also Egypt. Ch. Order above). In the first (A.D. 339) he speaks of the fast beginning on Monday of Holy Week, and extends it to Easter; the Fastis of Moses, Eliah, and Daniel were longer than those of Christians. So in the letters for A.D. 352, 353, Holy Week only is mentioned. In the intervening years there are fasts (and worst?) but only tentatively; Holy Week is the fast, and so in the letter for A.D. 314. In the year 340 (Ep. vii.), writing to Straton of Thmuis from Rome instead of sending a fasting letter, he persuades the people to fast all the forty days, as they did in Rome. In 317 (Ep. xiv.) he says that any one who neglects to observe the fast of forty days cannot celebrate Easter. Two points appear from these Letters: (a) Saturday and Sunday were not fast-days (v. 13; so A.D. 350 at Milan (Ambrose, de Ritu et Jejunnio, 18) and Antioch (Chrysostom, hom. x. in Gen. 25); (b) the Holy Week fast ended in Egypt late on the evening of Saturday, as in the days of Dionysius (see above). Like so many earlier and later writers, Athanasius warns his people against making the fast an external matter only (iv. 47). The forty-days' fast is also mentioned by Eusebius (de Pasch. 5), and in the Canons of Hippolytus (c. A.D. 235) as the 'fast during the forty days.' The latter prescribe bread and salt and water in Holy Week (can. xxii. 186-89); sick persons and those who neglect the fast by ignorance of the time should fast after Pentecost. The Edessæ Canones (c. A.D. 350 [v. 18, 255]) mention the forty days, but do not prescribe the reason for the 'forty-days' fast that our Lord and Moses and Eliah fasted for that period; at Edessa the 'forty days' included all or most of Holy Week (so Test. of Constance, which does not make the forty days a fast), and the Passion and Resurrection were apparently commemorated on the same day (see above). Another development is the
The prefixing of the forty-days' fast to Holy Week, as in the Apost. Const. (v. 13, 18, ed. Funk, Didascalia et Apost. Auctor., Paderborn, 1905); in Holy Week, before the Palm Sunday, and after. But in the two last days are an absolute fast if possible, or, at any rate, the Saturday (see above; the saving clause is an adaptation of the parallel Didascalia phrase 'in the week of the fast' (v. 20). 

Pseudo-Ignatius (Philipp. 13), who is perhaps the author of Apost. Const., likewise makes Holy Week separate from the ἄνθρωπον, as in the Eusebius (E. xxvi, 23; Ed. and Casdano, Gen. i. The Apostolic Canon, which at any rate are from the same school, do not mention this point, but make the forty days a fast for all, under penalties (can. 69 [c. A.D. 400]). The 'Pilgrimage of Silvia' (or 'Ethiopia') describes an eight-weeks' Lent at Jerusalem, with forty-one actual days of fasting (c. A.D. 385 [3]).

In the 5th cent. Socrates (HE v. 22) says that the Paschal fast varied greatly. At Rome three successive weeks before Easter were kept, except Saturdays and Sundays; but the accuracy of his statement that Saturdays were excepted has been doubted. In Ilyria and Greece and Alexandria they in the 4th cent. were called ἡ ἔναρξις. Others began the fast in the 7th week before Pascha, and fasted only for three periods of five days, and that at intervals, and yet called it τό ἀνατύπωμα, which somewhat surprised the historian. The mode of fasting also varied; some abstained from things that had life, others ate fish only, others both fish and fowl; some did not eat eggs and fruit; some ate dry bread only, some not even bread till the last week, then took any kind of food (this applies to the weekly fasts; see below, 3); there was no written command on the subject.

Sozomen (HE vii. 89) gives like evidence. In some Churches the fast was 6 weeks, as in Ilyria, the West, Libya, Egypt, and yet 7 weeks in Constantinople and the neighbourhood as far as Phocis. In some Churches people fasted 3 alternate weeks during the space of 6 or 7 weeks; in others they fasted continuously for 3 weeks just before Pascha; Montanists fasted only for 2 weeks. Earlier in the 5th cent. John Chrysostom remarks on the variety of custom with regard to the Lent fast (COMMENTARIVS. xxii, 34-29, written c. A.D. 419); he says that, though some kept it for 6 weeks and others for 7 weeks, both made only 59 days of fasting (this would depend on whether the Saturdays were fast-days or not); and the number 69 was one of the year. The 36-days' fasts for all, but some devout persons exceeded the number; the observance of Quadragesima was not primitive, and was not originally extended to the laity by the canonical legislation, but was a matter of gradual growth. The name was adopted because our Lord, Moses, and Elijah fasted for 40 days and nights (Exod. iv. 11, Mark vii. 24, and the observation of these reasons. The reference of the name to our Lord's fast is also given by Augustine (de Doct. Christ. r. 16 [257], Ambrose (Coment. 25), Gregory of Nazianzus (Orat. vii, 99), and Jerome (in Is. xvi, 28; in Jon. 2); Socrates (HE ii. 43) says that, in Constantinople, the bishop's office of Ambrose, who was condemned by the Synod of Gangra (c. A.D. 390), allowed the prescribed fasts to be neglected, and recommended fasting on Sunday (see also the Synodal letter of Gangra, summarised by Hefele, Concil. ii. 567, Eng. tr., Edinb. 1571-96).

During Lent, entertainments, horse-racing, and similar shows were forbidden (see DCA ii. 975). The Council of Laodicea (can. 51 [c. A.D. 360]) prohibited the keeping of the festivals of martyrs in Lent except on Saturday and Sunday; so (A.D. 699) the fourth of August, 7th of November, and 14th of Funk: 'omni tempere' seems to mean 'all the year round'), which hints at the reason for the fasts on these days, which is explicitly given at the beginning of the 4th cent. by Peter I. of Alexandria (Ep. xxvi, 15), which tells us that the fast on this day was the day of the conspiracy of the Jews, and Friday of the Crucifixion. Augustine (Ep. xxxvi, Benedictine ed. [alter lxxvi], 30 says the fast gives the same reason (for another explanation, see Clem. Alex. Strom. vii. 22). Eusebius (Vit. Constant. i. 18) tells us that Constantine enjoined on all his subjects the observance of Sunday and Friday; he does not mention Wednesday. But these 50 days were not universal. In the Test. of our Lord no fixed days are prescribed in the week, though the possibility of a fast-day falling in the week is allowed, for, in which case the Eucharist is to be celebrated then (i. 22); for in some countries a fast-day was chosen for the Eucharist (Tert. de Ora. 19—Wednesday and Friday). The Edessene Canons prescribe service on Wednesday and Friday, which may be a remnant of the 4th cent. speaks of the observance of these days as fasts, and seems to say that the Eucharist was celebrated on them at 3 p.m., except in Lent. The Hippolytian Canons mention them as fasts, and say that the more devout added other fast-days as well (can. xx. 164). These fasts are strictly enjoined in Cyprus towards the end of the 4th cent. (Epiphan. tib. 6; Exp. Fid. 22), who says that they were universal, and that the fasts of the 'stations' ended at the hour of the Lord's death, the 9th hour; also by the Apost. Const. (v. 14. 20 incorporating the Didascalia, and v. 23 incorporating the Diatases), with the same reason for the choice of the days as we find in Peter of Alexandria; and by Pseudo-Ignatius (Philipp. 13) and the Apost. Canons (can. 69).

In some cases the fast was prolonged to Saturday; the phrase was 'superponere' (ἐπεριστρεφεῖν), or, in Tertullian, 'continuare jejunium.' The Council of Elvira in Spain (c. A.D. 305) ordered these superpositions one month, except in July and August, and not every week (can. 26); though Saturday is not mentioned, that day is probably meant, but Hefele (Concil. i. 146) takes the phrase to mean an extension of the fast till evening on the Saturday (v. 40); and the custom in the West, especially at Rome (so expressly Augustine, loc. cit., though his words do not involve every Saturday in the year). But, in the East, Saturday was regarded from the 4th cent. as a festival commemorating Creation; and fasting on it, except on Easter Even, was strongly condemned (cf. Tertullian above, i. 2 e); so Apol. Const. v. 14, 20, vii. 23, viii. 33; Apost. Canons, 84; and, in fact, the second Trullan, which forbids fasting, as was practised at Rome, on Saturdays in Lent, can. 56). For this reason Saturday as well as Sunday was thenceforward regarded as specially suitable for a synaxis, with a Eucharist, as in the Test. of our Lord (i. 22, corrected text), the Arabic Didascalia (§ 38), the Apost. Const. (i. 59) by implication, and that the Council of Laodicea (can. 40, 51 [in Lent]); and in Socrates' time this custom was universal, except at Alexandria and Rome (HE v. 22; cf. Sozomen, HE vii. 19, who says that it obtained at Constantinople; see art. Agape in vol. i. p. 172). That the Saturday fast, however, was known much earlier as the beginning of the 3rd cent. appears from a remark of Jerome (Ep. lixi. 6 ad Lucinum),

1 But in the derived Arabic Didascalia (§ 35 [c. A.D. 400]) Wednesday and Friday are fast-days.
who says that Hippolytus discussed the question of the Saturday fast and of a daily reception of the Eucharist.

4. Prebaptismal fasts.—These are twice prescribed in the Canon of Hippolytus for the candidates for ordination. In one place (c. 104, 418*) it is laid down in the Canon of Hippolytus (can. xix. 150–2), xxviii. (305), in the Test of our Lord (c. 20, 25), in the Verona Fragments (Hanser, 1898, in the Eth. Ch. Ord. 44). In some of these passages, but not in all, the rule is insisted on: the faithful are enjoined to eat other food. The Can. of Hippolytus say that no one is to taste anything before receiving the mysteries, especially on the days of the sacred fasts: the last words show that the rule was not absolutely rigorous.

Though these passages are (probably of the 4th cent., their wording shows that they are derived from the common source of those rules, and therefore the rule goes back to the 3rd cent. Of writers of the 4th cent. who insist on the rule may be mentioned Basil (hom. de Jejun. i.), Chrysostom (hom. 27 in 1 Cor. etc.) and Greg. Naz. (Orat. xi. 30). The last treats the custom as universal, though (he remarks) Jesus gave the sacrament of the Passover after supper. Augustine makes it a Divinely established rule (it seemed good to the Lord and the Gentile Fastings, vii. 22) that it should be observed for a time, and says that 'for the honour of so great a sacrament the body of the Lord should enter into the nostrils of no one except at one time for canonical legislation, from 16 (16th).

The fact that this custom kept through the world, even although the disciples at the Last Supper did not receive fasting (Ep. liv. 8, Bed. ad Janu. [alter xvili. 6]). It is clear that in this matter an additional reason for fasting besides the observation of Lent before the ordination of the bishop, was added, and that (as is well shown that at the time when that manual was compiled the Pentecostal fast was not an ordinary observance. Athanasius alludes to a short fast (of a day or two [2]) before Pentecost in Apol. de fuga 6, c. a. 395. It probably began only in the 4th century.

6. Special and voluntary fasts.—Corresponding to the fast before ordination in NT is a special fast for bishops after their consecration in the Test of our Lord (i. 22) and the Arabic Didascalia (23, 38). In several of the Church Orders voluntary fasts are recommended to widows and, indeed, to all Christians (Test. i. 42; Egyp. Ch. Ord. 47; Eth. Ch. Ord. 57; Orat. Hipp. xx. 150). The bishop, however, according to the second of these, ought not to fast except when all the people fast. In some places Jan. 1 was in the 4th cent. observed as a fast with a view to counteracting the influence of heathen New Year's orgies (Ambrose, Serm. ii. 'de Cal. Jan.': Aug. Serm. xcviii. 2, Bedeine dicet, 'de Cal. Jan.'; but Augustine says that, if people cannot fast on that day, at least they should dine with sobriety. As monastic communities grew, from the middle of the 4th cent. onwards, special fasts became common in them. For monasticism and its discipline, see artt. ASCETICISM—MONASTICISM.

7. Fasting before and after Communion.—The fast before Communion corresponds in some measure to that before Baptism, but is not mentioned at so early a date. It is clear that, if the Agape was connected with and preceded the Eucharist (see the various views given in art. AGAPE), the latter could not have been received fasting; yet the feeling of reverence which dictated fasting before Communion would not be offended by the previous partaking of a sacred meal like the Agape in the same way as it would be offended by the partaking of ordinary food. But there is no evidence of the custom at the time when the Agape and the Eucharist were united.

The first writer who alludes to the custom is Tertullian (ad Uzor. ii. 6: 'quod secreto ante altum gustis'; the reference is to private reservation of the Eucharist by the Christian wife of a heathen husband: cf. also de Retr. iv. 2); but there is no hint that it was a novelty in his day. The next certain reference to the custom is in the 4th cent. It is laid down in the Canon of Hippolytus (can. xix. 150–2), xxviii. (305), in the Test of our Lord (c. 20, 25), in the Verona Fragments (Hanser, 1898, in the Eth. Ch. Ord. 44). In some of these passages, but not in all, the rule is insisted on: the faithful are enjoined to eat other food. The Can. of Hippolytus say that no one is to taste anything before receiving the mysteries, especially on the days of the sacred fasts: the last words show that the rule was not absolutely rigorous.
cluded among the canons of Agde or Agatha in South Gaul (A.D. 506; Hefele, Concil., iv. 76, 83). Thereafter the practice was common.

9. When fasting was forbidden.—On Sundays and in the season of ‘Pentecost’ (i.e. Easter tide, 50 days after Easter) fasting and kneeling were not allowed, both being considered unsuitable to a time of joy. The prohibition is found first in a fragment of Irenaeus quoted by pseudo-Justin, Quest. et R. ad Orth. 115 (kneeling); then in Terratullian, de Cor. 3 (fasting and kneeling) and de Orat. 23 (kneeling); in the latter passage Terratullian says that those some abstained from kneeling on Saturdays, and that on fast-days prayer should always be offered kneeling. We find the same prohibition in Peter I. of Alexandria (Ep. can. 15, kneeling), in the canons of Nicaea (can. 20, kneeling), in the Test. of our Lord (ii. 12, fasting and kneeling in Pentecost), in the Apost. Constit. v. 20 (fasting); the prohibition is not in the parallel Dioecesian, and in the canons of Saragossa (can. 2, Sunday fasting). Pseudo-Ignatius (Philipp. 13) says that one who fasts on these days is a ‘Christian spirit in a Christian time:’ and those who fast on Sunday from pretended asceticism (can. 18). Augustine is equally strong on not fasting on Sundays and in Pentecost (Ep. xxxvi. 18, or Peter lxvi. ad Caesalan). See also DC. i. 754ff.

III. MEDIEVAL AND MODERN PERIODS.—(A) THE WEST.—1. Lent.—Sundays in Lent were expressly ordered to be kept as fast-days at the beginning of the 6th cent. in South Gaul, by the Council of Agde (can. 12). Yet, even so, ‘Quadragasima’ consisted of only 36 fasting days, since Sunday was not a fast. At Rome, Gregory the Great (590-604) added a fast from Ash Wednesday to Good Friday, i.e. 36 fasting days (hom. 16 in Evang.). So in 853 the 8th Council of Toledo in Spain repeats Cassian’s language (above, II. 2) about Lent being a tithe of the year (can. 9). But in the 7th cent., before the Gelasian Sacramentary was drawn up, four days were prefixed to Lent, which thus began on Ash Wednesday, and consisted of 40 fasting days. At Milan the older custom survived; and, according to the Ambrosian rite, the Lenten fast still begins on the 6th Monday before Easter. In Scotland the four extra days were introduced by St. Margaret in the 11th cent. (Vita S. Marg. ii. 18); the Mozarabic Calendar 1570 (in Fullwood, Hist. of Eng. Lit. 1587; Dawden, Ch. Year and Calendar, p. 83). Gregory the Great recognizes sickness as a reason for not fasting (Epp. xxxii. xi.).

2. Advent.—This season, instituted in preparation for Christmas, is not heard of as a fast till just before the 6th century. Hence, from the fact of its once lasting six weeks no argument can be drawn as to the original date of the Western Christmas, as has lately been done by Kirkopp Lake (Guardian, 29 Dec. 1911). But the Council of Cesaragnosta (Saragossa) in Spain (c. A.D. 580; can. 4) appointed the days from Dec. 17 to Jan. 6 as a solemn season for prayer and daily church-going, i.e. when ‘no one may go with bare feet.’ It was not, however, a fast. This may indicate that Jan. 6 was then observed in Spain, as in the East at that time, as the Nativity (estival). The fast of Advent is first found in the Calendar of Perpetua, bishop of Rome, 491 (PL xxxvi. 566). It lasted from Nov. II (Martinsmas) to Dec. 25, and was for three days a week. The Council of Milan (A.D. 581; can. 9) appointed for Dec. 17 a fast lasting 12 days, i.e. when ‘no one may go with bare feet.’ This is, however, not a fast. For this reason Advent came to be known as ‘St. Martin’s Quadragesima.’ The Council of Tours (A.D. 567) appointed a daily fast for these three weeks for monks (can. 17). At Rome, Advent never lasted for more than five Sundays (so even in the Gelasian Sacramentary [7th cent.]; and usually only for four (so Gregory the Great). Advent fasting soon died out in the West, and the season became merely a solemn time for prayer, as it is at present. Bede, however, mentions a 40-days’ fast before Christmas and after Pentecost as being observed by some devout persons in the 7th and 8th centuries.

3. Pentecost.—The Council of Tours, A.D. 567, mentions a week’s fast after Pentecost for monks (can. 17). In the 8th, 9th, and 10th centuries we find a 40-days’ fast after Pentecost, sometimes called ‘the Quadragesima before St. John the Baptist.’ This is said by Theodore, Abp. of Canterbury (+590), in his Pientudentia, to be for all men. We find the same in Ireland c. A.D. 700, in Charlemagne’s Capitula, and in the canons collected by Burchard, bishop of Worms, A.D. 1006 (Dowden, 85). For Bede, see above, III. 2. But this fast soon disappeared in the West.

4. Rogation Days are a Western institution only. They are the three days before Ascension Day (Holy Thursday), and the Friday and Saturday before that festival. They are thought to have been instituted by Mamertus, bishop of Vienne on the Rhone, c. A.D. 470, at a time of earthquakes in Avignon. He introduced the ‘remonstrations’ or ‘protestations’ for supplication. The Rogation fast was enjoined by the first Council of Orleans, A.D. 511, indirectly by that of Tours, (can. 17), and perhaps by that of Mainz, A.D. 813 (can. 331; the fast not explicitly mentioned); in England by the Council of Clovesho, A.D. 747. It was enjoined by Leo III. at Rome, c. A.D. 800, as an intercession for the fruits of the earth. It is found in the Missale Gothicum (perhaps six weeks or 49 days); the procession still survives, especially in the form of beating parochial bounds; hence the names ‘gang days,’ ‘gang week,’ found in the Anglo-Saxon Chronicle and in the laws of Athelstan (Dowden, 87).

5. Ember Days are also found only in the West. They are the fasts of the four seasons (‘quattor tempora,’ Germ. Quattnerm, whence perhaps the English name, though it is more probably derived from A.S. ymbren, ‘recurring’), being (since the 11th cent.) the Wednesday, Friday, and Saturday after the First Sunday in Lent, Pentecost, Holy Cross, and Christmas. They are particularly interesting as being the relics of the full weekly fasts of the West (above, II. 3), which thus have survived in only four weeks of the year; otherwise, the Friday fast is the sole survival of the weekly observance, though, in and after the Middle Ages, Wednesday and Saturday were sometimes observed as fast-days (see Froeter-FreRe, Hist. of Bk. of Com. Pr., London, 1801, p. 583; and below, 3). Leo the Great (c. A.D. 440) refers to these fasts of the four seasons at Rome, held in Lent (Serm. 39-50), Pentecost (Serm. 78-80), the 7th (Serm. 86-94), and 10th (Serm. 12-20) months, i.e. Sept. and Dec.; and from Rome they spread over the West. But at one time they were held in some places only at three seasons, the sowing, reaping, and vintage; afterwards the Winter Ember fast was fixed. The exact weeks, however, have varied. The Gelasian Sacramentary mentions the 1st, 4th, 7th, and 10th month. At the Council of Mainz (A.D. 813, can. 34) they fall in the first week of March, the second week of June, the third week of Sept., and the third week of Dec., and Friday as the last. In the Leofric Missal they are in the first week of Lent, the week of Pentecost, and in the full weeks before the autumn equinox and Christmas. Pseudo-Callistus (Ep. 17), part of the rule of pseudo-Isidorus (Ante-Nic. Chr. Lib. ix. B. p. 292) advocates their being held quarterly, with reference
to the four seasons and the fruits of the earth. The Council of Chalcedon (A.D. 451) enjoins the fasting of the 40th and 10th months but does not mention that of the spring, probably because it was absorbed in the great Lenten fast.

The original Ember Days had no reference to fasting, but in the 7th century, Gelasian Sacramentary and in later authorities (though the custom may be earlier (Duchesne, Chr. Wor. p. 353)), it became the rule for bishops to ordain at these seasons, thus taking the form of a pre-ordination exercise; and this is the present aspect of the Ember Days. Minor orders, however, were conferred at any time. The present rule in the Roman Catholic and Anglican Churches is for ordination to the presbyterate and deaconate to be normally confined to these seasons, though the bishop has a discretion (see, e.g., the preface to the English Ordinal in the Bk. of Com. Pr. and the English Canon 31).

6. Vigils.—These are single fasting days before certain saints' days and other festivals; but as fasts they are purely Western. Originally a ''Vigil'' was a night spent in prayer, as often in the 4th century. The Anglican Rubric of Fasting and Absolution (pt. II., Pontius, Life of Cyprian, p. 15; Chrystos., hom. de Mart., ii. 608 D.; Socrates, HE vi. 9). The substitution of a fast-day for this ''penitentiao'' probably dates only from the 8th century. As Sunday cannot be a fast-day, if the day before a festival which has a Vigil be the Lord's day, the fast is kept on the Saturday.

7. Fasting and abstinence.—The Roman Catholics at the present day make a distinction between these. On a day of abstinence, meat is forbidden, but there is no restriction on the quantity of food taken; on a fast-day the quantity is also restricted. The distinction was originally in England modern; in the Anglican Bk. of Com. Pr. the two terms are used synonymously. The distinction was introduced among the English Roman Catholics in 1761, Fridays and Rogation Days being days of abstinence.

8. Fasts at the present day in the West.—The Church of England and the Church of Rome enumerate as fasts the 40 days of Lent, Ember Days, Rogation Days, all Fridays except Christmas Day if it fall on that day of the week, and Vigils before certain festivals. Roman Catholics in some countries relax the Vigils in favour of a stricter observance of Wednesdays and Fridays in Lent, and keep the Ember Days. In the Church of England, while fixing the fasting days, has made no rule as to how they are to be observed, leaving this to the individual conscience; but Acts of Parliament of Edward VI. and James I. and Proclamations of Elizabeth, vigorously enforced, ordered abstinence from flesh-meal on fast-days, and gave the curious reason for the injunction that the fish and shipping trades might be benefited; also, curiously enough, Saturdays are therein mentioned as fast-days (see remarkable instances of the enforcement of these injunctions in Hieroglyph Anglicana, London, 1902-4, II. 106 ff., cf. li. 2). The Anglican Rubric of Fasting and Absolution defines fasting as a 'withholding of meat, drink, and all natural food from the body,' and (pt. ii.) a 'restraint from some kinds of meats and drink'; it permits a fast on a fast-day (Hier. Ang. II. 106). A relic of the pre-baptismal fast is seen in the service for the baptism of such as are of riper years in the Bk. of Com. Pr., where the candidates are to be exhorted to prepare themselves with prayer and fasting (1st rubric). Fasting was also retained by the Protestant Reformers in Continental Europe; and the Fast Day (generally Thursday) before the Communion is a well-known feature of Scottish Presbyterian custom, observed with much rigour by the devout up to recent times. See also art. 'Fasting (Christian)' in vol. III. p. 79. In Roman Catholic countries the days before Ash Wednesday, called 'Carnival' (from Lat. carnem levere, 'to put away meat,' or carne levamen, 'solace in the flesh') are given to relaxation and enjoyment of food. Ash Wednesday is also permitted in Mid-Lent; the fourth Sunday in Lent, when the Gospel for the day narrates the Feeding of the Five Thousand, has long been called 'Dominica Defectus' or 'Refreshment Sunday' (but in French Mardi Gras).

(B) The East.—i. The Orthodox Eastern Church.—(a) Lent, the 'Fast of the holy and great Thursday before the Sunday of Pascha, is called the 'Carnival' (in Greek, έορτάζεται), autumn fast in popular language. In the Eastern Church, it is called the 'Sunday of cheese fare' (ετοιμάζεται τα τηρήματα έφερον). During this week cheese and eggs are permitted on Wednesday and Friday as well as on other days. The Sunday corresponding to the Western Sexagesima (that preceding the above mentioned 'fast of Easter') is called the 'Weekend of cheese fare' (ετοιμάζεται τα τηρήματα έφερον) and lasts one week. The Orthodox Church observes a week of fasting and abstinence (see, e.g., the Preface to the Orthodox Confession) before the Masses of the Lord's Last Supper, and these fasts are observed in the Eastern Churches, but not in the Western. The 'Carnival' is observed even in the Western Church in its separate Eastern rites, e.g., the Greek rite. (b) Advent and Christmas.—Advent begins on the Saturday after Quinquagesima, which in the Eastern Church is called the 'Fasting of the Apostles' (Peter and Paul) and lasts 40 days up to Christmas. Shem (408). This date from not before the 9th century. (DCA i. 926), and even then was only for monks. Theodore of Balsamon (A.D. 1200) says that there was in his time only one fast, the 'Fast of the Apostles' that before Pascha; the other fasts were of 7 days only (ib.). But now Advent is a fast of 40 days for all. The Greeks sometimes call it the 'Fast of St. Philip,' because St. Philip's Day falls on Nov. 14. The rule is applied to the Repose of the Virgin (Ang. 15); it perhaps once lasted for 40 days (DCA i. 622). The 'Fasting of the Nativity of our Lord' (Advent) begins on Nov. 15, and lasts for 40 days up to Christmas (Shem, 408). This date from not before the 9th century. (DCA i. 926).
2. The Armenians.—See Festivals and Fasts (Armenian).

3. The Monophysites. — (a) The customs of the Western Monophysites or Jacobites are less known to us than those of any other Eastern Church. Their Adorations, or Săbăo (Săbăo = ëasy-qa'alul), lasts for six weeks, as compared with 24 days of the Nestorians. — (b) The Christians of the Abyssinian Church.

The fasts as enjoined in Filothoas' Catechism of the Coptic Church (Eng. tr. ed. Bromage, London, 1892, p. 421.) are: 'The holy 40 days followed by the week of Easter' (they thus exclude Holy Week; see above, II. 2). Wednesday and Friday, the fast of Christmas, the fast following the day of Pentecost, the 'days relating specially to our Lady,' and the three-days' Ninféh fast. [For the three-days' fast (sic) of the Ninevites in OT, see Apost. Const. v. 20; but it is not there mentioned as a Christian fast.] In the fast, meat and butter are forbidden. Fasts are binding on all except 'infants, invalids, women in child-bearing, those worn out by captivity or exile, and the like.' We also learn that ordination among the Copts is followed by a 40-days' fast, and that between a death and burial all the near relatives fast (Fowler, Church Life, Eng. tr., London, 1897, p. 298, 212). The Abyssinian fests are still stricter.

4. The Nestorians (known also as East Syrians, Assyrians, or Chaldeans) are remarkable as fasting more strictly than their own Book of Canon Law, or Sănădăhă, requires. They abstain on Sundays in the fasting season, though the Sănădăhă forbids it because of the Manicheans. In some copies a savior law (it says) that a man may fast on Sunday if it is not from an evil and Manichean intention. The fasts observed by all are: (a) Adorations, called Săbăo, also 'The Little Fast,' Dec. 1-24 incl., though the Sănădăhă makes this a voluntary fast except for monks. (b) Lent, called 'The Fast' or 'The Great Fast,' lasting 50 days, including Sundays. The Sănădăhă mentions 40 days, but the Service-book called Kăthārā, or 'Cycle,' allows for 50 days (with the Sundays included). Mid-Lent is often marked by some entertainment, but the fast is not broken. (c) The 'Rogation' (bē'sīthā, or 'supplication') of the Ninevites, the three days following the 5th Sunday after Epiphany. (d) Every Wednesday and Friday, not excluding Christmas Day.

Other fests, not now universal, are the 15 days before 'Mart. Mariam' (St. Mary, Aug. 15), observed by many, the two 'Rogations' of Mar Zain and about the 4th of the year; three days following the 2nd Sunday after Christmas and the 1st Sunday after Epiphany; the shādawā' (or period of seven weeks) of the Apostles (beginning Whit Monday; this is the Pentecostal fast, ending with the festival of the Twelve Apostles, or Nawarudd, 50 days after Pentecost—thus the Nestorians, by 'the Apostles' in this connexion, do not mean St. Peter and St. Paul); the shādawā' of Elijah (beginning 99 days after Pentecost). These two are mentioned by the Sănădăhă as voluntary fasts, but are now almost, if not quite, obsolete, and the Rogations of Mar Zain and of the Virgin are nearly so. In the fast, meat, butter, milk, fish, eggs, etc., are prohibited; and the strictest Nestorians, especially those in the Kurdish mountains, will not eat, drink, or smoke in Lent till mid-day, except on Sundays. If the fasting seasons they may eat when they please, as long as they do not partake of the forbidden foods. In practice, the Wednesday and Friday fasts in most parts of the E. Syrian country begin in the morning, and are usually from Easter to Pentecost, butter, milk, and eggs may be taken on these days. The usual food in the fast consists of bread, beans, rice cooked with walnut or other vegetable oil; vine leaves stuffed with rice and raisins and cooked in vinegar; treacle, fruit, raisins, and walnuts. A curious rule about the end of the fast reflects the difference of custom in the 4th cent. (see above, II. 2). The Advent and Lenten fasts end at evensong on Christmas Eve or on Easter Even, if one has communicated at the Eucharist of the Even; otherwise it does not end till the Eucharist of the festival (the rule is not of universal application). On fast-days the Eucharist is celebrated before 11 a.m. or 12 m.—that all may remain fasting till then (see above, II. 7). Another rule (perhaps now obsolete) is that, if a person does not communicate at or about Easter, he is not to eat meat for a month; if he has communicated on Maundy Thursday, but not on Easter Even or Easter Day, then for a fortnight. (For the information in this section, see Maclean-Browne, The Catholics of the East, London, 1892, p. 340 f.) In this Church, as now among the Greeks (see above, III. (B) 1), there is no difficulty about a festival and a fast falling on the same day; as a matter of fact, most of the holy days fall on a Friday, but that day is, nevertheless, a fasting day.

All the Eastern Churches are strict about the fast before Communion. In some cases (e.g. the East Syrian Sănădăhă) Maclean-Browne, (p. 343), the clergy who take any part in the Eucharist or baptism or ordination must be fasting.

Cf. art. Festivals and Fasts (Christian).

FATALISM.—See Fate, Neccessitarianism.

FATE. — I. DEFINITION. — The idea of Fate is found only in conditions where some attempt has been made to trace all phenomena, and more particularly the phenomena of human life, to an ultimate unity. Fate, indeed, is precisely this unity apprehended as an inevitable necessity controlling all things; it is the absolutely inescapable power to which all men are subject, and may be either personified or represented as impersonal. It is a conception which prevails wherever the mind of
man is unable to frame the idea of rational necessity or of a supreme purposive will, and it survives so long as either of these, though within the field of consciousness, is imperfectly realized. Further, men tend to fall back on the idea of Fate when their more elevated level of interest fails, they begin to doubt of a rational order, or a rational end, in the universe. If any distinction is to be drawn between Fate and Destiny, it is simply that the former is the former regarded as operative in particular cases. The idea of Destiny, however, does not necessarily preclude the rationality of the thing destined; it merely implies that this rationality is not perceived. Destiny, in fact, being a somewhat indefinite conception, may even denote an ethical vocation, and may in that case be applied to the end which a higher will sets before a moral personality as an ideal to be realized in moral endeavour.

II. HISTORICAL SURVEY. — 1. Non-Christian religions. — In the course of history, Fate has assumed various forms. (1) In polytheistic or religious thought is as yet too incoherent to give definite Egyptian or Nir}er, anticipate a lot, as, e.g., in the 'Life-Dream' of the American Indians, amongst whom, however, the prevailing idea is of a chatelast, but not of a world-soul, in whose being these not being supposed to form a unity. An important place is certainly assigned to the Death god, the All-Father, or Great Spirit, but he is not figured as Fate, for the simple reason that the conception of necessity, or even of the necessary order of Fate, has not yet dawned upon the mind.

(2) A closer approximation to the idea of Fate is found in religions which recognize the uniformity of Nature. This is especially seen in the conception of the heavenly bodies, and which develop an astrology. This stage was reached by the Quichuas and the Aztecs, who, having various astrological beliefs, began to entertain surmises regarding the operation of Fate in human life, and, interpreting this as the will of the gods, sought to get into right relations therewith, and with its actual decrees, by means of magic, omens, dreams, and haruspications. Among the Aztecs, in fact, there was a special school of astrology, while full credence was given to the manifold evil omens which pointed to the downfall of their kingdom.

(3) We meet with the idea of Fate also in religions which regard the process of Nature as the dominant factor, such as the Egyptian, in which the leading motive is the antithesis of life and death; or the Babylonian, which is permeated by the thought of the uniformity of Nature, more particularly as exemplified in the movement of the stars. Yet we must not forget that these religions likewise show a high ethical development, however incongruous with their naturalistic tendencies this may appear.

(a) In the religion of Egypt, magic papyri are regarded as equally effective with good works in obviating the penalties of the final judgment. The Egyptians speak of Fate; they personify law in the goddess Ma'et, who in reality stands for natural order, but has also moral attributes; they find a place for Destiny in the authors, Shai, and Hemmnetet; and, in fact, as the system in its entirety, notwithstanding its ethical aspects, is dominated by the process of Nature, it exemplifies a stage of development in which Fate takes the form of natural necessity, as may be inferred likewise from the magical arts by which souls are to be delivered at the day of judgment. See, further, FATE (Egyptian) and ETHICS AND MORALITY (Egyptian).

(b) The Babylonians, on the other hand, have a profound sense of the anguish of the gods, as that which maintained not only the order of Nature but also the ordinances of the State, and in their penitential psalms the devout make sorrowful confession of their offences against both. Yet we find among them so much in the way of exorcism, magic, and astrology as to make it develop perhaps that, so far as their view the order of Nature was simply an all-controlling Destiny: the stars decide the lot of men. The Chaldean astrology, we should note, was still a power in Rome. See, further, FATE (Chaldean) and ASTROLOGY (Chaldean).

(c) Similar conditions meet us in China. The worship of spirits is there associated with reverence for natural law, of which, again, civil law is simply a particular phase. In the religion of ancient China, systematic knowledge of the order of Nature—an order believed to emanate from Heaven, from the Sovereign Deity—was obstructed by the belief in spirits, as appears from the respect accorded to soothsaying and astrology. Here morality really consisted in the due observance of class-precedence, i.e. in the recognition of that domestic and civil order which is at the same time the order of Nature. To this impersonal Fate, which Confinus was so far ethical that he laid the supreme emphasis upon practical obedience to the law, and supported his demands by examples culled from the history of particular spirits, he is convinced that obedience to the moral law is attended with the happiness which is organic to the order of Nature, he does not develop this view to its logical issues. The man who does right should have no anxiety regarding the result: 'If the wise man achieve something, it is well; if he achieve nothing, it is also well: he recognizeth Destiny.' The perfect man sees dangers, and yet hopes to Destiny.

Although Confinus sought to limit the sphere of sorcery and the belief in spirits, he did not identify Destiny with Providence; and, while he yields a certain recognition to Providence, he is, nevertheless, content to ascertain what the order of Nature prescribes; for him Destiny still remains the necessity to which he adjusts himself, though he does not directly assert that it possesses moral attributes. The natural order was recognized still more distinctly by Lao-tse, who actually idealized it as the metaphysical force that he calls Tao. Tao is the source of that economy which is manifested both in Nature and in the State. It shows no partiality. It is just; it is impartial; it is without desire, and in it, renouncing all passion, he must find peace. Lao-tse takes his stand upon the necessity of this self-adjustment. But Tao, notwithstanding all its ethical accretions, still remains a merely natural power, like Heaven itself. As a matter of fact, the ever-growing practice of soothsaying—the feng-shui, or geomancy—shows how firmly-rooted was the belief in Fate, in a country where men had an inking, but no concrete knowledge, of the order of Nature, and tried to fathom its mysteries by fantastic expedients of all sorts. In reality China is at that stage of development where order is felt to be morally determined; but, as this is the case with a natural order, it is neither more nor less than Fate. See, further, FATE (Chinese) and FENG-SHIU.

(d) The conception of Fate is found also in the Teutonic religions. Though the process of Nature is here combined with the ethical process which terminates in the Gotterdtummenung, the 'twilight of the gods,' yet guilt and impermanence—to which the gods themselves are subject—operate as tragic elements. The destructive elements, viz. the Fenris Wolf, the goddess Hela, and the Midgard Serpent, at length gain the upper hand, while Odin himself falls swooning from the world-tree. The cosmic process of its consummation as something destined. From
the beginning the winds are graving at the tree Yggdrasil. In the watery Life dwell the three Norns, daughters of Hela, goddesses of time—past, present, and future—who spin the threads of fortune; goddesses of Destiny, who are older than Odin. Thus the idea of Fate, especially in its tragic form, plays a part in this religion also. The moral element is certainly not absent, but the moral process is mainly one of dissolution. It is a moot point whether the anticipation of a new world under the influence of Vishnu and Siva, the original divinities of the so-called Vedic and Tentonic tradition. In any case this religion looks upon the transitoriness of Nature and human life as the decree of Fate. See DOOM, DOOM MYTHS (Tentonic).

(c) The Indo-Germanic peoples of India combined Fate and ethics in a somewhat different way. Brahmanism and Buddhism are both dominated by the doctrine of re-birth—the evil cycle from which no one can extricate himself. The Eta of the Vedas may be regarded as an analogue of the Greek Μοῖρα, since the ordered process it denotes is by no means thought of as purely ethical. In Brahmanism, the final deliverance is envisaged. Fate, as the true ascetics, seems to be something more than Fate. But, on the other hand, later Brahmanism possesses an eonianatal doctrine, representing in the Trimūrti the cycle of generation and dissolution in Nature; where, again, it shows itself fixed, the belief that the individual having been fixed by his birth, the system of caste is fostered also by the doctrine of re-birth. It is true that this doctrine contains the idea of a divine analogue of the endless cycle of worlds and the interminable suffering of life which it involves are, after all, a necessity of Nature, a decree of Fate. To wrench oneself free from the chain of re-birth is possible only for those who become absorbed in mystic contemplation and live as ascetics, i.e. those who belong to the two higher castes. In other words, the conception of Fate forms the substructure of Brahmism in its exoteric form. See, further, FATE (Hindu).

The same holds good of Buddhism, the basis of which is the doctrine of universal suffering in an infinite cycle of rebirths. In this religion, too, the idea, the idea of the infinity of Nature is represented as moral retribution; nevertheless it is predomi-

nantly regarded as an inherent Fate, in which man finds himself enmeshed against his will. Deliverance is, indeed, possible for those who renounce all life, all desire, all infatude, in order that they may enter Nirvāṇa; and the way is open to all. But Buddhism in its original form is so closely identified with a fatalistic view of the continuity of Nature that the deliverance which it profers involves the destruction of personality, the conception of Spirit as something which transcends Nature not having as yet been attained. The latter feature is reflected also in the various magical expediency by which popular Buddhism seeks to dominate Nature, as also by the mechanical formality of the popular worship. Exoteric Buddhism, in short, is destitute of any positive spiritual content. See, further, for a somewhat different view, FATE (Buddhist).

(f) Fate plays a considerably less important part in the dualistic religion of Persia, but it has not been without influence. Though in this religion the development of personality, the conception of Fate as something which transcends Nature not having as yet been attained. The latter feature is reflected also in the various magical expedients by which popular Buddhism seeks to dominate Nature, as also by the mechanical formality of the popular worship. Exoteric Buddhism, in short, is destitute of any positive spiritual content. See, further, for a somewhat different view, FATE (Buddhist).

The Indian system of religious thought is that which we have called the theory of rebirth. In it the idea of Fate is developed in a true fatalistic way. It is believed, indeed, that the conflict between the two powers will eventually eliminate the evil, and that man's part in the campaign is to obey the laws of Zartushtra; meanwhile, however, man is entangled in an evil world, beset upon every side by demons, from whose wiles he must guard himself; and become Deity himself, though sure of ultimate victory, is not as yet wholly free, but physically and spiritually circumscribed by the evil spirit. Now, as this evil spirit acts without reflection, and under the influence of a lower Fate, the original idea is supported by a whole host of demons, who shed abroad darkness and sorrow, temp to robbery and tyranny, stir up hatred and revenge, and disseminate evils of all kinds, including even the unsavouriness of food—men are clearly subject to an alien necessity, from which they may, indeed, with the help of the law gradually free themselves by a struggle, but by which their earthly existence is heavily trammeled. We shall hardly err, therefore, in saying that in Parsism the conception of Fate has not been fully transcended, though it has certainly fallen into the background. The dependence of the Norns, the Avestan (q.v.) Dāhūra, upon Fate, as represented in the later Avesta—even though that dependence be but temporary—bears an ominous resemblance to the idea that the gods themselves are subject to Fate. That Angra Mainyu appears as the great demon, who, if the fact that he and his demonic hosts alike are under the control of a blind will, thus resembling a natural force which acts in opposition to the highest god and compels him to struggle. The naturalistic limitations of Parsism are also shown in its fire-worship, and the partial worship accorded to natural deities. Furthermore, Asha, the Persian concept of Fate, though it represents a purely ethical order. The potent influence of the conception of Fate—an all-controlling factor in human life—in this system of dualism may probably be traced in the later theological idea of Zoroastrianism, or Infinite Time, which forms the apex of the system, and furnishes the starting-point of the dualistic process. Again, in the fraenschi (q.v.), the guardian angel of the good man, we recognize the belief that human beings are surrounded by friendly and beneficent spirits, as well as by assnants of evil intent; while the belief that the latter can be effectively counteracted by the frequent practice of good and magic—this is the mechanical debasement of religion, in fact, which corresponds to a naturalism not yet transcended.

Finally, the various systems of Neo-Gnosticism influenced by this religion, as also Manichaicism, are largely pervaded by the conception of Fate: thus, they regard mankind as divided by nature into pneumatic, psychic, and lylic groups, the lot of the individual being determined by the extent to which the evil principle intermingles with his being. See, further, FATE (Iranian).

(g) Nor had the religions of Greece and Rome quite outgrown the belief in Fate. As regards Greece, it is true that Homer places Zeus on the throne of Olympus; but, as the gods are still to some extent liable to envy and caprice, they are shadowed by Μοῖρα, or Necessity; and, although Destiny is spoken of as the 'decree of Zeus' (Δεσμὴ, etc.), yet it is Μοῖρα who, acting independently of Zeus, assigns the term of human life. In the tragic poems the idea of Fate was superseded by that of a just and final end; and the personified Fate was controlled by Zeus: Μοῖρα gives place to Δεσμὴ. They warn men against Ῥήδα, the temper which transgresses the limits of human power. The jealousy of the gods was repudiated by Pindar in favour of the idea of retribution. In the hands of the tragedians, Fate acquires an ethical significance: the Μοῖρα
combines with the Erinyes, who punish 695ps. While in Sophocles the distinction between Fate and guilt is frequently obscured, and guilt may sometimes fasten upon the innocent, yet he also envisages the opinions which will be visited with stern retribution, and that hardship and sorrow may lead to glory. In Greek philosophy likewise, the trend of which was towards materialism, the Supranatural Deity is subordinated to the supreme idea of the Good, as the supreme Reason, as Providence, though we still hear of 'Arrêges (Necessity) and Eubouleus (Fate). In point of fact, natural necessity and Providence are not as yet sharply distinguished, and, accordingly, the moral personality has not attained to complete emancipation from Nature. Nature, indeed, save where it was interpreted by reason from the aesthetic standpoint, was always a mystery; and, though the Stoics regarded the gods themselves as organs of Providence (not altogether free from natural necessity), we need hardly wonder that even amongst them the occult arts had a place. Nor was the necessity of Fate to the wise, the natural dualism in their view of matter; and, consequently, they too fell back upon magic and the After-life. Fate did not succeed in fully harmonizing moral reason and natural necessity; it either identified the two, or admitted a residuum of dualism, and, while the conception of cosmic unity became more and more clearly formulated, all the more persistently did some element of fatalism maintain its ground, asserting itself alike in ritual and in moral life. See, further, Eumenides.

The belief in Fate survived also in Rome, where it assumed a largely practical form, being associated with the Fata, or destinies of individuals, and with the practice of augury connected therewith and developed mainly from Etruscan sources. The Fata were primarily concerned with birth and death. The later period of Roman history was remarkable for its syncretistic tendencies, the city becoming a rendezvous for sorcery of all kinds, Chaldean astrology, Greek oracles, etc. Fortuna (rōs) was worshipped as the goddess of Destiny, as were also the Parce. The fatum, or lot, of the individual or the State was doubtless traced back to the gods, but taken with this the ascending belief in Fate as an independent power, manifesting itself in various prognostica, the interpretation of which was a craft by itself. Thus there was ever the Diva Necessitas hovering above the life of man. See, further, Fate (Greek and Roman). Fortuna (rōs) was worshipped as the goddess of Destiny, as were also the Parce. The fatum, or lot, of the individual or the State was doubtless traced back to the gods, but taken with this the ascending belief in Fate as an independent power, manifesting itself in various prognostica, the interpretation of which was a craft by itself. Thus there was ever the Diva Necessitas hovering above the life of man. See, further, Fate (Greek and Roman). Lord, or of the supernatural theism, such, e.g., as the leading faiths of the Semitic world. This, however, is by no means the case. We must not forget that in those religions the Divine will, being regarded as absolute sovereignty, really takes the form of inevitable necessity. In the last resort chance and necessity signify the sanctifying their irrepératos (super-existential Being), quite free from a natural dualism in their view of matter; and, consequently, they too fell back upon magic and the After-life. Fate did not succeed in fully harmonizing moral reason and natural necessity; it either identified the two, or admitted a residuum of dualism, and, while the conception of cosmic unity became more and more clearly formulated, all the more persistently did some element of fatalism maintain its ground, asserting itself alike in ritual and in moral life. See, further, Eumenides.

rational, and likewise identical with the all-wise Will, which the Will, being, as a most sublime stimulus to the freedom of man. Only when freedom and necessity are recognized as being one in the Deity is it possible for Destiny to give place to Providence; only when man realizes his freedom as that which carries with him the obligation of self-determination in the sphere of conduct does he cease to resort to the occult arts; and only as he knows that all things can be utilized for the highest good, the Foundation of Fate. These beliefs, however, constitute in essence the Christian point of view.

Nevertheless, it cannot be said that Christianity is even yet entirely free from the belief in Fate. For one thing, vestiges of the idea have worked their way into Christian doctrine; and, again, traces of it are actually found in Christian practice; while, finally, the Christian world shows a reincarnation of certain theories of the universe which, avowedly opposed to the Christian view, have rehabilitated the belief in Fate in one or other of its forms.

As exemplifying the first of these tendencies we shall speak of Origen and Augustine, the two greatest thinkers of the Patristic period; from the Medieval period we shall cite Aquinas and Duns Scotus; and from Protestantism, Calvin and Socinus.

1. Fate in Christian doctrine.—(1) Patristic.—(a) In so far as Origen regards the world as originating in a condition where all spiritual beings were of the same sort, and believes that, when the fall of spirits has reached its term, the world will be restored to its primal state, his doctrine is still capable of a Christian interpretation, since, in fact, mankind is being raised, under Divine tuition, from its present sinful condition towards perfection. But, as Origen also conceives of this world-process as eternally recurrent, he does not get beyond the idea of an endless cycle, and thus still retains something of the ancient conception of Fate. Again, while he holds that man may become one with the Divine Logos in virtue of his freedom and his rational nature, thus making Christianity the rational and ethical religion, yet his view of the Father, as supremely exalted above the Logos, and of man's incapacity for perfect oneness with the Father, practically makes God a super-ethical and metaphysical Being. Nor is Origen able to efface the distinction between the Logos and the Father, the Logos being sometimes spoken of as a natural and necessary efflux from God, and sometimes as a product of the Divine will; and, similarly, God is now the rational Will which reveals itself in the Logos as Love, and now a simple metaphysical Monad, which creates the Logos by natural necessity. This inconsistency repeats itself in Origen's view of the world: now he accepts providence, man's final unity with God, while, again, this unity is ceaselessly ruptured by finite free will—the irrational factor in the world. Finally, in Origen's theory, it is mere metaphysical caprice which excludes the creature from perfect unity with God and casts him again into the endless cycle of fall and restoration—a process which holds him in its grasp like inevitable Fate itself. The relapse into sacramental magic with which the early Greek Church is sometimes charged is, so far as the charge is valid, attributable to the fact that God is now not yet fully attained to an ethical conception of God.

(b) A similar inconsistency appears in Augustine. He interprets God, on the one hand, as a Trinity of conscious loving Will, manifesting itself in the gratuitous grace of love, and giving out of His own being some out of His mere grace and rejects others. Moreover, God works irresistibly in the elect as an impersonal gratia; and, just as these can do nothing to procure their election, so the prodigal likewise are under an absolute grace, shadowed as if by a necessity of Fate, and even children who die unbaptized are consigned to perdition. Such views present us with unmistakable vestiges of the belief in Fate, with the idea of Fate. These beliefs, however, constitute in essence the Christian point of view.

Nevertheless, it cannot be said that Christianity is even yet entirely free from the belief in Fate. For one thing, vestiges of the idea have worked their way into Christian doctrine; and, again, traces of it are actually found in Christian practice; while, finally, the Christian world shows a reincarnation of certain theories of the universe which, avowedly opposed to the Christian view, have rehabilitated the belief in Fate in one or other of its forms.

Nor is Origen able to efface the distinction between the Logos and the Father, the Logos being sometimes spoken of as a natural and necessary efflux from God, and sometimes as a product of the Divine will; and, similarly, God is now the rational Will which reveals itself in the Logos as Love, and now a simple metaphysical Monad, which creates the Logos by natural necessity. This inconsistency repeats itself in Origen's view of the world: now he accepts providence, man's final unity with God, while, again, this unity is ceaselessly ruptured by finite free will—the irrational factor in the world. Finally, in Origen's theory, it is mere metaphysical caprice which excludes the creature from perfect unity with God and casts him again into the endless cycle of fall and restoration—a process which holds him in its grasp like inevitable Fate itself. The relapse into sacramental magic with which the early Greek Church is sometimes charged is, so far as the charge is valid, attributable to the fact that God is now not yet fully attained to an ethical conception of God.

(b) A similar inconsistency appears in Augustine. He interprets God, on the one hand, as a Trinity of conscious loving Will, manifesting itself in the gratuitous grace of love, and giving out of His own being some out of His mere grace and rejects others. Moreover, God works irresistibly in the elect as an impersonal gratia; and, just as these can do nothing to procure their election, so the prodigal likewise are under an absolute grace, shadowed as if by a necessity of Fate, and even children who die unbaptized are consigned to perdition. Such views present us with unmistakable vestiges of the belief in Fate, with the idea of Fate. These beliefs, however, constitute in essence the Christian point of view.
It also follows from this that man can apprehend the will of God only by revelation through the Church, and must, accordingly, obey the Church's behests, because that will is not only beyond the power to comprehend in the same way as one more residual idea of Fate, for the Divine decree, while emanating from the free sovereignty of God, is, so far as the world is concerned, simply a re-creation of the world as it is, and thus that which for Aquinas is supernatural necessity and negation is for Duns Scotus the arbitrary determination of God, and, consequently, the idea of Fate is not fully surmounted by either.

(a) The same thing may be said in regard to Calvin; nor, indeed, does either Luther or Zwingle differ from him in the matter under discussion. It was Calvin, however, who most consistently developed the fundamental idea, and we may therefore take him as representative, more especially as his view is shared by some theologians at the present day, of whom we may instance Kuyper. It is true that, if we fix our attention apart, it seems that the world is not only the elect-namely, that God has chosen them in order that they may do His will, that He assures them by His Holy Spirit of their election, that the general grace of God which is given to all men, and that accordingly, secular callings have their rightful place in the Kingdom of God, while the State, as also science and art, may likewise subservire His glory—it may well seem that everything in the nature of Chance or Fate is excluded. But if, on the other hand, we bear in mind that, according to Calvin, everything is subject to the omnipotent will, and that a certain number of the human race are rejected from the outset, simply because God willed that they should be sinful and should persist in their sin, it is plain that the ethical purpose of God is subordinate to His arbitrary decree. God's horribile decreatum is thus, so far as the reprobate are concerned, neither more nor less than a Fate from which there is no escape. As, in fact, the Divine decree, once fixed, is carried out with absolute necessity, and as no man can do aught to procure his own salvation unless he is empowered thereto by it, it is clear that Calvin has so far failed to free himself from fatalism.

(b) Schleiermacher attempts to make good this defect in the doctrine of election by limiting the Divine decree exclusively to the particular time at which an individual shall come to participate in the Christian salvation. He seeks to show that the Divine plan of the world is a unity, and that the conception of it which is associated with the natural man is so realized in Christianity as to become the spring of moral conduct. From this it would appear that his belief in Providence embraces the whole world, and that the entire world-order is illumined by the Divine reason. On the other hand, Schleiermacher's idea of God as the absolute undifferentiated unity of all opposites, and of the world as the sphere in which these opposites fall apart, implies that the world is not only different from God, but permanently imperfect as well. As Schleiermacher has given no definite expression to his view of the world's final purpose, we may fail to see anything which is thought, but, in part of fact, his philosophy is still burdened with the ancient theory that the world is the realm of negation. The more perfect the world becomes, the more completely must its opposites disappear, and this may merely be that which is appropriate to the undifferentiated unity of God, i.e., cease to be a world at all. Further, the order of Nature, as a product of Divine omnipotence, stands at the centre of Schleiermacher's system, and it is in this way whether, on his view, the moral order takes precedence over the natural order and assimilates it, or, on the other hand, the ethical life is not seem to natural law as Nature itself. In short, neither the metaphysical conception of God as an absolutely simple Being, and of a natural uniformity to which the world adjusts, nor the idea that the world's imperfections rest upon its opposites, is calculated to dispel the suspicion of a fatalistic ingredient. Since good and evil, alike in a physical and moral sense, find their place in the world, on account of its difference from God, is doomed to permanent imperfection by God Himself, its absolute sovereignty, the lingering trace of the conception of Fate in Schleiermacher's theory is quite unmistakable.

ii. Fate in common life. It is also obvious that vestiges of fatalism are present in the everyday life of mankind, as, e.g., (1) in the manifold superstitions handed down from earlier stages of religion—observation of days, exorcism, astrology, oracles, drawing lots, etc.—as also in the use of amulets, escopolas, images, and miraculous preventive of the divine fate, which are to be met with in every country and in every age and in every epoch. Such notions are frequently associated with a pleasure-seeking and immoral spirit, as in those who look for success not to their own efforts but to extraneous influences, and are disposed to take what comes with resignation. Similarly, many extend the moral task of deciding questions for themselves, and have recourse to something of the nature of an oracle, which will give a decision by mere chance and without any rational connection with the matter in hand; or, again, they help themselves out of a practical dilemma by referring to some contingent natural phenomenon which is believed to exert a magical influence, but which has no ethical import at all. The power thus supposed to help or hinder is represented as working, not by rational or moral means, but through the blind mechanism of Nature; while, again, the belief in Providence as applied to ordinary life and practice frequently exhibits traits that really belong to fatalism.

(2) As another instance of the still surviving influence of the belief in Fate we may refer to poetry, and in particular to the drama, though it is by no means only the dramas of Fate strictly so called which exhibit the feature in question. The dramatist who would portray the tangled skein of life is at no loss for a thing which with the natural man is called destinatio necessis, seems to rule. He sees a human being held in bondage by ignorance, and that through no fault of his own; or immured from childhood in a narrow or uncongenial sphere, so that the wing of spiritual aspiration is lamed from the outset. In the drama, again, decisions of the gravest import are often brought about by events that seem purely accidental, so that the individual comes to feel that his virtues are a plaything of an inexorable power. His very ignorance of the larger concatenation of things prompts the thought that he is in the grasp of a blind destiny. But, even when he is somewhat enlightened, he may still feel compelled to bow before an all-ruling necessity, as something actually experienced, and it is this iron sway which the dramatic poet often makes it his task to bring to light. Such an immense and irresistible necessity, whose causal relations we may so far recognize, though their deeper significance remains inscrutable, must likewise fall under the conception of Fate.

(3) A recurrence of the conception shows itself also in certain recent philosophical ideas. Thus, those who find the sole regulative principle of things in the mechanism of Nature do not seem
very far away from the ancient belief. Herbert Spencer, for instance, if we regard him from the standpoint of the Unknowable everywhere in operation, and, while he recognizes a progressive movement in the world as it now is, yet he looks for an eventual disintegration, that is, he regards the inherent destiny of the universe in the merely mechanical cycle of becoming and dissolution. Mention may be also made of the Darwinian theory, in which he regards every phenomenon—progress as well as degeneration—to merely mechanical causes, though the actual progress ought to be something more than blind necessity. We may also instance J. S. Mill, who discards the idea of a God at once almighty and morally good, and regards it as most probable that there exists a Superior Being whose purposes of good are constantly thwarted by a hostile necessity—a theory analogous to that of Pantheism, though Mill's representation of the antagonistic power remains quite indefinite. Parallels to these views likewise appear in Germany, e.g. in the 'Evangelium der armen Seele.' Among a result of the diverse kind of philosophies towards psychology, with its consequent repudiation of the Ego and the Ego's independent action, and its tendency to explain everything by a psychical mechanism, this mechanism itself has become a new factor in Fates, the most important one.

Finally, if we take as our starting-point the manifold misery of the world, and survey, from the eudemonistic standpoint, the various forms of evil—the transitoriness of all things and the suffering associated therewith—we can hardly wonder at the rise of a philosophy which emphasizes the irrationality of existence, traces it to the impulse of a blind Will, and regards the extinction of this Will as the final task of the race. True as it may be that there is, as von Hartmann admits, a relative rationality and purpose in the world, yet, according to the general theory, the world over its existence to the persistent action of an unconscious volition, i.e., Chance, or to blind necessary impulse, the limits of whose action have not been clearly defined by von Hartmann, as there is nothing to show that the extinguished Will may not re-assert itself. In any case it is obvious that this Unconscious Will, as the source of all things, is simply a Fate, a Destiny which cannot be evaded till the Will is brought to extinction. Such is the latest presentation of the idea of Fate.

III. ANALYSIS, INVESTIGATION, AND CONCLUSION. From the above outline we see the wide diffusion of the belief in Fate among mankind, and the manifold forms it assumes; it is likewise that vestiges of the belief persist even where a radically different view of the universe prevails, and, further, that the idea is again in various shapes gaining a footing as a kind of reaction to the Christian view. Our survey, however, also indicates that fatalism takes root wherever men regard themselves as subject to an irresistible power thought of as incapable of rational or purposive action. When an all-controlling force is figured as immanent or as transcendent, whether it is regarded as a mechanical, physical, unconscious necessity, or is credited with a volition which, though unconscious, is absolute and arbitrary in its working—in every case it is to be recognized as inevitable Fate. Fatalism cannot be overcome by the assumption of an omnipotent arbitrary Will representing more than by his own physical pantheism or pan-cosmism; nor is an at-

dote to it found in the ability to grasp the law of Causality or the order of Nature, so long, at all events, as these are reduced to a mere mechanical necessity emancipating all intellectual super-
fore, no millstone, no incubus of Fate, weighing down the mind; on the contrary, in the very act of its being overcome it proves a powerful motive for re-consideration and further progress. Of all religions it is Christianity alone which, when rightly interpreted, rings the knell of the belief in Fate.

FATE (Babylonian).—By the Babylonians and Assyrians the abstract conception of Fate or Destiny was never personified as a separate deity, whose attributes might be elicited as evidence in this connexion. But they possessed a special word for 'Fate' (šimāt), and it is desirable to establish as accurately as possible the senses in which the word was used. Apart from such direct evidence it is clear that in Bab. thought a conception of Fate or Destiny may have existed which was not peculiarly associated with the word šimāt, or at any rate may not have left its traces on the passages or fragments in which the word happens to occur. Our inquiry thus falls into two main sections. In the first we shall examine the use and precise meaning of the word šimāt 'fate'; in the second we will be necessary to inquire whether at any time there may have existed a trace of a fatalistic conception in Bab. popular beliefs or philosophical speculation. The latter inquiry will be the longer of the two, as it touches some points around which a considerable amount of controversy has gathered during recent years.

1. The word šimāt, pl. šimātu, derived from the verb šimātu, 'to establish'; 'to determine,' is the feminine of the participle šimātum. It properly has a passive meaning, 'established,' 'determined,' but in a few passages referring to the šimātum of some of the greater gods it is clearly used with an active meaning, in the sense of 'the act of determining the fate. From the context of the passage in its passive sense the word is sometimes used as a synonym for 'death'; it might seem at first sight that death, and consequently, the length of life were events which were decided from the beginning. That care should be taken before drawing such a conclusion is suggested by a very interesting passage in the Cylinder-Inscription of Sennacherib, in which the premature death of Assur-Namahi, king of Elam, is said to have taken place by the command of Ashur on a day which was not his šimātu, or pre-ordained fate. From this passage it is clear that šimātu was not an irrevocable destiny, since, at any rate, in certain cases, it may be overridden by the special decretal of Assur, the national god of Assyria. By whom then was the šimātu, or 'fate,' determined, which could apparently be altered when the head of the pantheon? A study of the Bab. mythology enables us to answer the question with some degree of confidence.

In the legends the power of controlling the fates or destinies of all the gods, in other words, the various departments and parts of the universe, was symbolized by the possession of certain magical tablets, known as the dupšišmi, or 'Tablets of Fate.' In the Bab. Creation-legend, when the monster Tiamat, after the defeat of her consort Apsû, appointed Kingu the leader of her host, she gave them the Tablets of Fate and laid them on his breast; the Tablets were not merely the symbol of authority, but in themselves conferred the power to rule. So, too, in the 7th act of the conquest of Tiamat and her host, was taken from Kingu the Fate-Tablets, seal them, and place them on his own breast. 2 It is clear that he did this in order to acquire the power inherent in the Tablets which Kingu had hitherto enjoyed. The magical character of the Tablets and the manner in which their mere possession conferred supreme power upon the holder are well illustrated in the legend of the storm-god Zû, which recounts how he stole them from their rightful owner, Enil, the god of Nippur.3 The privileges their possession conferred may be gathered from Zû's soliloquy when contemplating the theft:

'1 will take the Fate-Tablets of the gods, and the oracles of all the gods will I direct; I will establish my throne and dispense commandments upon every one of the gods. 2 The legend relates how Zû waited for the dawn at the entrance of the hall where Enil dwelt. And, while Enil was pouring out the clear water for his morning ablution, Zû swooped down and seized the Fate-Tablets which Enil had laid aside with his diadem and other insignia on the throne beside him. Zû made off with the Tablets to his inaccessible mountain, where he enjoyed the power they conferred until the Sun-god caught him in his net and recovered them. 4

From these passages in the mythology it is clear that the ultimate arbiter of the fates of gods and men was the chief of the gods, and that he enjoyed his power by virtue of the Fate-Tablets which he possessed. But it is not to be inferred that the Fate-Tablets had any independent existence or any power apart from their possessor. It is also clear that they did not in any sense resemble a Book of Fate, for the whole or part was not recorded unchangeably upon them: nor have we any evidence that the Divine holder of the Tablets recorded his decrees upon them from time to time. They appear to have been merely magical insinuations, which enabled the god who possessed them actively to control and mould the course of events. The legends which have been recovered concerning them arose at a period when the Bab. pantheon was already in existence, and it appears that, before the rise of Babylon to power, the ultimate arbiter of Fate, was the head of the pantheon. Originally this god was Enil of Nippur, who retains his early privilege in the legend of Zû; with the rise of Babylon to power, and since the ultimate arbiter of Fate, was the head of the pantheon.
the attributes of Enlil, and in the Creation-series in its present form we are told how he became possessed of the Fate-Tablets. In Assyria, on the other hand, Ashur, the national god, inherited in turn the attributes of the supreme Bab. deity—usually the most important being the power to decree fate.

2. From an examination of the uses of the word limtu, and of the legends which refer to the Fate-Tablets, it can be seen that the Bab. belief, the fates, both of the universe and of individual gods and men, were not believed to have been fixed from the beginning, but were pictured as in hourly process of development under the influence of a dualistic or one-sided conception of deity. Thus it remains to inquire whether, apart from these legends and beliefs, we may trace evidence that the Babylonians of any period conceived of Fate and its implications in a considerable following in that country. For upholders of the theory claim that belief in a fixed Fate or Destiny, both of the universe and of the individual, did enter largely into Bab. thought of all periods, including the historical.

Perhaps the most characteristic feature of the theory is that, according to the Bab. conception of the universe, everything on earth was the result of a heavenly predestination. It is well established that the Babylonians, like the Hebrews, conceived the universe as consisting of three parts: the heaven above, the earth beneath, and the waters under the earth. Winckler, the chief exponent of the astral theory, and his followers elaborate this conception of the universe, and work it out in the threefold division of the heavens a parallel to the earth. Thus they would divide the universe, according to their view of Bab. belief, into a heavenly and an earthly world, the latter’s three divisions (the heaven being confined to the air or atmosphere immediately above the earth) corresponding to the northern heaven, the zodiac, and the southern heaven. The important point to note is that in these threefold divisions the zodiac and the earth occupy the second place and correspond to one another. Thus the movements of the sun, the moon, and the five great planets (which are visible to the naked eye) through the ecliptic constellations were held to have a peculiar connection with events on earth. It is a fact that in the later Bab. period the greater gods were identified with the planets and the lesser gods with the fixed stars, each god having his special house or star in heaven in addition to his temple on earth; thus the heavenly was reflected in the earthly. Their movements were the cause of events on earth; but the movements of the planets were not necessarily acts of independent deities. They took place in accordance with a cosmic law of harmony, inherent in the universe, and ordained from the beginning. In the case of the terrestrial planet earth, its movements are controlled by the signs of the zodiac fixed in the course of time. For a further description of the theory, we refer to the history of astronomy in the Bab. country.

Fate-Tablets. From the reasoning of the Bab. gods is the theory of the sun and its motions derived. The sun’s path throughout the year is attributed to the movement of the earth in its orbit around the sun; its movements are repeated every 12 months, and the same signs of the zodiac and the same constellations are occupied by the same stars. The various phenomena of the universe are thus viewed in a general picture of fate.

The purpose of placing the present article to do more than indicate briefly the false assumptions on which this theory rests. Most theories of interpretation have some historical basis to rest upon, and in making generalizations of this magnitude it is necessary to make statements which are not always true. But the necessary support for their thesis, they plant the roots of their theory in a purely imaginary age where evidence for or against it is ex hypothesis lacking. Thus the oldest monuments that have been recovered upon Bab. sites are not regarded by them as relics of the early stages of Bab. culture. It is assumed that in the periods behind them there existed a more elaborate and highly developed civilization, described as pre-historic and lying back in the darkness beyond the earliest existing records. In the total absence of material evidence it is not difficult to see how this assumption is made, and which is shared by no other early or primitive race in the world’s history. It is assumed that war and violence had no existence in this pre-historic time. Intellect dominated and controlled the passions of this primeval but highly gifted people, and, in particular, one form of intellectual conception, based on a scientific knowledge of astronomy. It is postulated that a purely astronomical theory or conception of the universe lay at the root of their civilization and governed their whole thought and conduct; and this was no secret teaching of a priesthood, but a universally held belief which permeated every phase of the nation’s life. These doctrines were the ineradicable part of their religious belief, the political ideas being the result of their work, and which is a fundamental element in the future of the universe. In this way the astral mythologist attempts to explain the unsatisfactory character of his evidence, from which he claims to be able to reconstruct the original beliefs in their entirety. So involved are they in the conception of an inexorable Fate or Destiny of the universe that, according to the upholders of the astral theory, the earliest Babylonians endeavored to be in a state of the future in its broader aspects. For it is asserted that they believed themselves able, by a mystical application of a remarkably accurate knowledge of astronomy, not only to disclose the origin of the world from its birth, but also to foretell its renewal in future ages.

To find evidence for their theory the astral mythologists are naturally obliged to rely on texts which have come down to us from the historic period. Assuming the close correspondence between the signs of the zodiac and the earth in early Bab. thought (an assumption to which reference has already been made), the Bab. mythologists, who believed the Babylonians divided the course of the world’s history into Ages according to the signs of the zodiac in which the sun stood each year at the vernal equinox. This is a most vital point of the theory, and it postulates on the part of the early Babylonians a highly accurate knowledge of astronomy; it assumes a knowledge on their part of the precession of the equinox, which could be based only on a very rigid system of astronomical observation and record. The course of Bab. history, from the pre-historic period onwards, was thus divided, according to the theory, into three Ages—those of the earth, the sun, and the moon. According to the signs of the zodiac in which the sun stood at the vernal equinox. Certain myths are supposed to have characterized each of these Ages, not only affecting religious beliefs, but so incorporating Bab. thought that they even influenced historical writings. As the sun at the vernal equinox gradually progressed through the great elliptic constellations, so, according to the theory, the history of the world—its story—is told in a series of events which harmonize with the theory. The sign of the zodiac in which the sun stood at the vernal equinox was the sign fixed in the skies by the Bab. mythologists as the beginning of a new period.

It would be of great benefit if the present article were to do more than indicate briefly the false assumptions on which this theory rests. Most theories of interpretation have some historical basis to rest upon, and in making generalizations of this magnitude it is necessary to make statements which are not always true. But the necessary support for their thesis, they plant the roots of their theory in a purely imaginary age where evidence for or against it is ex hypothesis lacking. Thus the oldest monuments that have been recovered upon Bab. sites are not regarded by them as relics of the early stages of Bab. culture. It is assumed that in the periods behind them there existed a more elaborate and highly developed civilization, described as pre-historic and lying back in the darkness beyond the earliest existing records. In the total absence of material evidence it is not difficult to see how this assumption is made, and which is shared by no other early or primitive race in the world’s history. It is assumed that war and violence had no existence in this pre-historic time. Intellect dominated and controlled the passions of this primeval but highly gifted people, and, in particular, one form of intellectual conception, based on a scientific knowledge of astronomy. It is postulated that a purely astronomical theory or conception of the universe lay at the root of their civilization and governed their whole thought and conduct; and this was no secret teaching of a priesthood, but a universally held belief which permeated every phase of the nation’s life. These doctrines were the ineradicable part of their religious belief, the political ideas being the result of their work, and which is a fundamental element in the future of the universe. In this way the astral mythologist attempts to explain the unsatisfactory character of his evidence, from which he claims to be able to reconstruct the original beliefs in their entirety. So involved are they in the conception of an inexorable Fate or Destiny of the universe that, according to the upholders of the astral theory, the earliest Babylonians endeavored to be in a state of the future in its broader aspects. For it is asserted that they believed themselves able, by a mystical application of a remarkably accurate knowledge of astronomy, not only to disclose the origin of the world from its birth, but also to foretell its renewal in future ages.

To find evidence for their theory the astral mythologists are naturally obliged to rely on texts which have come down to us from the historic period. Assuming the close correspondence between the signs of the zodiac and the earth in early Bab. thought (an assumption to which reference has already been made), the Bab. mythologists, who believed the Babylonians divided the course of the world’s history into Ages according to the signs of the zodiac in which the sun stood each year at the vernal equinox. This is a most vital point of the theory, and it postulates on the part of the early Babylonians a highly accurate knowledge of astronomy; it assumes a knowledge on their part of the precession of the equinoxes, which could be based only on a very rigid system of astronomical observation and record. The course of Bab. history, from the pre-historic period onwards, was thus divided, according to the theory, into three Ages—those of the earth, the sun, and the moon. According to the signs of the zodiac in which the sun stood at the vernal equinox. Certain myths are supposed to have characterized each of these Ages, not only affecting religious beliefs, but so incorporating Bab. thought that they even influenced historical writings. As the sun at the vernal equinox gradually progressed through the great elliptic constellations, so, according to the theory, the history of the world—its story—is told in a series of events which harmonize with the theory. The sign of the zodiac in which the sun stood at the vernal equinox was the sign fixed in the skies by the Bab. mythologists as the beginning of a new period.
will suffice to summarize the damaging criticism which the theory has sustained at the hands of an astronomer,¹ for which its supposed astronomical basis had been completely demolished. In the first place, it may be noted that there is no evidence that even the later Babylonians had a sufficiently accurate system of measuring the heavens to enable them to arrive at a knowledge of the precession of the equinoxes. But in complete independence of this fact, and assuming such a knowledge on the part of the Babylonians of all ages, Kugler has shown that the zodiac which is supposed to have been divided from the constant assumption by Winckler and his school do not follow. It is well known that the different ecliptic constellations which make up the signs of the zodiac do not each occupy thirty degrees of the ecliptic, but that some are longer and some shorter.

Also the constellations of the Bab. astronomers during the late periods do not completely coincide with ours. For instance, the most eastern star of our constellation Virgo was counted by the Babylonians of the Asaricad era as belonging to the next ecliptic constellation, Leo, since it was known as 'the hind foot of the lion.' But, fortunately for our purpose, not much doubt can be cast as to the eastern limit of Taurus and the western limit of the Ram, which mark the beginning and end of the three World-Ages of the astrological mythologists; for the two bright stars, Castor and Pollux, from which the Ram is reckoned from under the arched heavens, were undoubtedly reckoned in that constellation by the Babylonians, and the easternmost star of our constellation of the Fishes (a Piscium) was probably well beyond the Bab. constellation of the Ram. Working on this assumption, and assigning thirty degrees to each of the three intervening constellations, Kugler has calculated the years in which the sun entered these signs of the zodiac at the vernal equinox. He is consequently able to state accurately the years in which Winckler's World-Ages would have begun and ended, and his figures entirely dispose of all Winckler's claims to an astronomical basis for his system. The Age of the Twins, instead of ending, as Winckler and his followers hold, about 2800 B.C., really ended in the year 4383 B.C. Thus the Age of the Bull began fifteen hundred years before the birth of Sargon I, who is supposed to have inaugurated its beginning, and it ended considerably before the birth of Hammurabi, under whom we are told, the Bull-Age motifs were principally developed. Moreover, from the time of the 1st dynasty of Babylon, a.d. 3000 B.C., that is to say, during the whole course of her history, Babylon was really living in the Age of the Ram, not in that of the Bull. In short, all the motifs and myths which have been so confidently and with such ingenuity connected by the astral mythologists with the Bull sign of the zodiac, ought really to have been connected with the Ram. But even the astral mythologists admit that there is not a trace of a Ram motif in the Bab. mythology.²

¹ See F. X. Kugler, Im Rumkreis Babylons, Münster, 1919. Cf. also O. Bezold, 'Astronomie Himmelsachene und Astraltheorie bei den Babylonern' (Göttinger Beiträge zur Geschichte der eigenen und der Geschichte der Geschichtswissenschaften, 11, 1911, 19). For a scientific survey of the astronomical knowledge of the Babylonians, see especially Kugler's Sternkunde und Astronomie im babylonischen Weltalter, Münster, 1905-1912; and cf. also his Die babylonische Mondrechnung, Frankfurt, 1910, and Ernst Weidner, Die Astronomie und Astronomie der babylonischen Astrologie (A Beiträge zur Assyriologie, iv, Leipzig, 1911). Justrow's Die Religion Babyloniens und Assyriens, ii, 401-428 (1922), and his detailed description of the zodiacal representation, is most of the astrological material.

² According to Winckler's system, the Age of the Ram did not start till about the 8th cent. B.C., being inaugurated by a fresh revision of the calendar under Naram-Sin. But no account is taken of the time when the Babylonians first began to have any idea of astralism as such. It is therefore most extraordinary that Winckler should have been so far from the true idea of the nature of the mind. The nearest approach to one is found in the Libyan descent of the gods, which is represented by a head of a man and a falcon, and he is assumed to have been identical in his nature with Marduk. Thus the new reckoning is supposed to have passed Winckler's assumptions with regard to the astrological knowledge of the Babylonians, the theory is found not to support what is now considered Babylonian astronomy. It is at fault, and his three astrological World-Ages do not really correspond with his periods of history. It follows that the Babylonians did not divide the history of the heavens into five periods, no sufficient grounds for the further assumption as to their conception at an early period of a world-cycle, evolved through a succession of aeons, in accordance with an inexorable Fate or Destiny, are thus removed.

It remains to decide whether any part of the later Babylonian history we may not recognize a fatalistic conception in priestly, as opposed to popular, belief. The evidence of Diodorus, Philo of Alexandria, and other writers may certainly be cited in favour of ascertaining to the later Chaldaean priesthood the teaching of a religious and cosmic system closely associated with the idea of an impersonal Fate or Destiny. But their evidence is certainly not applicable to any period earlier than the Seleucid era, where it is impossible to separate the nucleus of native tradition from the essentially different form it assumed under Hellenic influence. It is certain that the Babylonian knowledge of astronomy from the 8th cent. B.C. onwards prepared the way, in the Achemenian period, for the recognition of law in the heavens as opposed to the earlier conception of a universe governed by the intervention of a personal God, governed by human passions. But it is doubtful whether the Babylonian astrologers themselves ever evolved a conception of Destiny, as existing apart from the gods, except under the direct influence of Greek speculations.

To sum up the results of our inquiry: it is probable that at no period much earlier than the Seleucid era had the Babylonians any conception of Fate or Destiny as a blind, impersonal, and inexorable law, whether as applied to the universe or to the individual. In their belief the fate, whether of a man or of a country (which was usually the limit of their speculations), was not irrevocably fixed, but was in continual process of development, under the supervision of the most powerful deity known to them at the time. In the earliest period the city-god was for his worshippers the Unchallenged Lord of Fate; he was the nucleus around which the growth of a federation of cities and the accompanying development of a pantheon, whose place was naturally taken by the head of the pantheon—at least as far Elil took the place of the chief god of Babylon; and as Assyra, Ashur, the national god. Before the Hellenistic period, Fate was never dissociated in Babylonian belief from the personal direction of the gods, and, when once it had been decreed, it was still capable, in extreme and exceptional cases, of modification.

LITERATURE.—For collections of passages from the inscriptions in which the Bab. word for 'Fate' occurs, see the references cited on p. 789, n. 1; and for passages bearing on the subject in the Bab. mythology, see p. 789, notes 2 and 3. The best and most detailed criticism of the so-called 'astral theory' of the Babylonian religion is Kugler's Im Rumkreis Babylons; and for scientific information on Bab. knowledge of astronomy, see the other works cited on p. 789, n. 1.

LEONARD W. KING.

FATE (Buddhist).—To Oriental thought in general, and more especially to a mind trained in Buddhist doctrine and possessed by the teaching and preconceptions of Buddhist ethics, the idea of Destiny or Fate presents itself in an entirely different aspect. In the first place, the concept of destiny or philosophy or history has given currency in the West to Egypt, while Babylon remained unaffected and continued to enjoy 'Bull motifs.' The only explanation put forward is that the idea of the fate of an individual was the core of the power of Babylon was on the decline. This example of constructive theory is quite typical of the case with which the astral mythologist is capable of clearing the most stupendous obstacles.
'Fate,' in the sense of an external compelling power, with universal sway and irresistible decree, is a conception entirely alien to the fundamental principles of either of the great schools of Buddhist thought, and is opposed to the exhortations to personal effort and striving in order to win salvation, which in the sacred books the Master is constantly represented as uttering. The disciple of the Hinayana works out his own deliverance by his own unaided self-striving and self-help, so none who help, so none can hinder in the great task. The kindlier and more liberal creed of the Mahayana puts at the disposal of the seeker after truth and rest, supernatural and effective aid, whereby his feeble endeavours may be seconded and supported, and brought to certain fruition. In either case the issue of life depends ultimately upon the individual, the determining factor being his own will and moral purpose, and neither is the result foreordained nor is he himself the plaything or helpless victim of an omnipotent force which he can neither influence nor resist.

The place which Fate or Destiny occupies in the systems of Greek and European philosophy and theology is in the East taken by karmic [q.e.] Karma, however, implies action with all its results or 'fruits,' so far from being an extraneous and independent cause. In the course of human life an irresistible control cannot be gainsaid or resisted, is the self-caused and internal constraint of the deeds of the individual in his transient existence upon earth. He is himself his own fate, in that he receives now the due and deserved recompense for what he has himself done, be it good or evil. And his life proceeds, not on lines determined for him from above or from without, but on lines he himself marked out and continues to mark out with irrevocable certainty and exactness, as long as a life of fruitful activity is prolonged. Only when his actions cease to bear 'fruit' is the control broken, the power of karma rendered ineffective, and he himself set free. Between the conception of 'Fate,' therefore, as defined in the teaching of Greece and the West, and its Buddhist and Eastern counterpart, there is a profound difference as well as a substantial likeness. In both the power is absolute, dominant, and irresistible; its movement can neither be stayed nor turned aside; the sphere of human action is limited, and leave only to say to it; he can only bow his head and submit. Fate regulates the course and issue of all, and man can only make the best of his own hard case. According to the scheme of thought of the East, man orders his own destiny. Once determined, it is in each part and at each moment as rigorous and unbending as the most absolute pronouncement of the Fates. What is done cannot be undone; the effect remains, and must be realized in the form of reward or suffering in his own personal experience and life. He may, however, or rather must, by his own actions and conduct determine what his future shall be. Its course and conditions are entirely laid down by himself. When these have been, as it were, prescribed, they have passed beyond his control and are unalterable and irreversable. But the future is in his own hands. At each moment by his deeds he is shaping his own destiny. The moulding thereof for good or for evil rests entirely with himself. He ordains and directs his own fate, which is then inexorable and self-operative. All his life long, it is under the dominion of karma, and cannot escape from its effects.

In a wider cosmic sense it may be said that the conception of Fate prevailed in Buddhism as much as Buddhist doctrine took over from Hinduism the conception of world-cycles, succeeding one another as the acts of an indefinitely prolonged drama of birth, florescence, decay, and death (cf. Ages of the World [Buddhist]). From the Buddhist point of view, each cycle was characterized by the renewed preaching of the true doctrine, which for more or less widely accepted amongst men, ran its course, and then fell into neglect with the increasing prevalence of unbelief and wickedness, and finally disappeared. In each cycle a Buddha would appear, as none who help, so none can hinder in the great task. The kindlier and more liberal creed of the Mahayana works out his own deliverance by his own unaided self-striving and self-help, as none who help, so none can hinder in the great task. The series of world-cycles, therefore, is independent of human will and endearour, and so far correspondent with the unalterable and almost mechanical, with supreme and absolute control of the destinies of all, moving forward resistlessly to a predetermined end. The doctrine, however, is purely cosmical, and does not concern itself with the career or fate of the individual, except in so far as the latter may chance to have been born at an age propitious or otherwise for attending to the preaching of a Buddha. This last event, of course, in which he landed place of his birth within the cycle, like all the other circumstances and conditions of his life, is controlled by karma. His existence is comprised, as it were, within the world-scheme, as an item or element in its progress. But it contributes nothing to its determination, and cannot affect its course. The revolution of the ages, the rise and fall of the true teaching, the destruction and resurrection of the universe, repeat themselves within assigned and unalterable limits, without cessation, and apparently without conceived or conceivable beginning or end.

It would appear, therefore, that from the Buddhist point of view, human life afforded the individual, is practically equivalent to a theory of strict and determinate causation, the merit or demerit of his own actions resulting in a proportionate increase of freedom and happiness, or involving him in renewed tribulation and punishment. Moreover, both of the great schools, the Mahayana and the Hinayana, taught the possibility of deliverance or redemption from the power of karma, in the attainment of nirvana, the state in which actions are performed without desire or clinging, and therefore do not entail any resultant consequences which must be worked out in a renewed existence. In reality, especially in the Mahayana, nirvana came to be equivalent to paradise or heaven; but it was originally attainable and attained here upon earth during the mundane life. And the broad difference between the doctrines of the two schools consisted in this, that in the endeavour to reach the goal, and to secure final release, the adherent of the Hinayana found himself dependent upon his own unaided exertions; while that of the first, as, for example, are enumerated in the Sukhavati-ayana, beginning with Utpalakara at the end of the past, in an innumerable and more than innumerable, enormous, immeasurable, and incomprehensible number before now! Elsewhere the predeceases of Utpalakara and Gautama are said to have 'received recognition' from twenty-four of these.

1 See art. Buddhas, vol. ii. p. 855

3 See art. Buddhas, vol. ii. p. 855
no external aid was either available or possible, and in the most absolute sense of the term he must work out his own salvation. The Mahâyâna, on the contrary, conceived man to be the object of the affection, or of human existence, thus regulated in each individual instance by karmika, was carried out and completed within the larger cosmical cycle, in which karma laid down the place. The life proceeded in a fixed and determined order, through scenes upon scenes of time. It represented, upon the broadest possible scale, the Buddhist or rather Indian conception of a mechanical and all-controlling Destiny, to which the entire universe was subject, alike in its origin, its progress, and its dissolution.

A. S. GEDEN.

FATE (Celtic).—As among all imaginative and superstition-ridden peoples, the belief in Destiny was strong among the Gaels. The whole of life was regarded by them as encompassed and ruled by an over-mastering Fate, from which there was no possibility of escape. In the older literature we find no expression given to this belief.

'If He be here that I am fated to die, I have no power to shun it,' says Diarmuid in the tale of the 'Pursuit of Diarmuid and Grainne.' It is probable to fly from death; and, though I should avoid the battle, flight never yet saved a wretch, exclaims Cormac, and through Rath (cf. O'Donovan, Irish Arch. Soc., Dublin, 1843). 'There are three periods of time that cannot be avoided—the hour of birth, the hour of death, and the hour of conception.' (p. 6.) In an old poem attributed to St. Columba we get the same idea of the reality of Fate.

'When once the fixed period of death arrives, there is no fortress which can resist it; . . . But the fortunate in life are protected; even in the front of a battle . . . Whatever God has destined for a man, he leaves not the world until he meet it.' (ed. O'Donovan, Misc. Celt. Soc., Dublin, 1840.)

In like manner the Teutonic or Scandinavian poet, when reduced to extremity by Cesar, thought that what was happening was not by the act of man, but by the will of the gods (cf. Bell. Gall. viii. 43, 5.)

Though this sense of falsity is as old as pagan times, it is probable that it had rather developed than been changed by Christian teaching. The passivity of mind and the inertia which mark the life of the Gaelic and Breton peasant arise largely out of this feeling that both the good and ill of life lie entirely outside of his control; his stoic acceptance of evil and death rests upon the same idea. The legends and folk-tales both of Britain and of the Gaelic-speaking peoples are filled with the same overpowering sense of falsity. Connected with this are the omens of death or ill-luck which we find penetrating all Celtic literature, and which are universally believed in at the present day; and, again, the belief in lucky and unlucky days and hours. In the old medical treatises, the cross or unlucky days are set down in order, and in Christian times Biblical events were made to coincide with the days or hours of pagan observance. It was customary to consult a Druid or druidess in the lucky or unlucky moments for beginning a journey, battle, or other undertaking.

King Domnach requires his Druid to 'let him know his destiny and that of his country,' for a twelvemonth from that day (O'Curry, MS. Met., Dublin, 1861, p. 254). Before the campaign of Domnach against Mag-nach, who laid a riddle on the life of the child, if not born before a certain day foretold by the Druids, would become a great king (S. H. O'Grady, Silene Galatia, London, 1892, ii. 382), the Druids were supposed to have given them to the Coligny Calendar (J. Rhys, 'Celts and Gauls,' in Proc. of the British Academy, London, 1905).

Regular horoscopes were drawn at critical moments in Irish tales, such as the battle of Mag-nach, and are mentioned in both Brughnáth and Cormac's Glossary (ed. W. Stokes, London, 1882, p. 94). Sometimes this knowledge seems to have been obtained by looking into a crystal. The prophetess Fedelm, who declares that she has knowledge of this art, is asked by Queen Medb to 'look for her' what will be the fate of her expedition. Then the maiden 'looked for it,' apparently into a ball or crystal (LU 555, 561). Another heathen method of divination was known as teimn thraghtha, which enabled an inquirer to discover such matters as to whom the body of a headless Cúchulainn belonged (Cormac's Glossary, p. 130). Both these methods of divination are said to have been suppressed by St. Patrick, on account of the idol observances with which they were accompanied (ib. p. 94 f.; Senesch Mór, vol. i. [Dublin, 1864] pp. 24, 44). But he permitted the use of a means of foresight known as diectaí dochenannah, which was gained from some incantations made with the finger-tips, and was not accompanied by offerings to idols. Instruction in these arts formed part of the regular course of the fully-equipped friar, or Druid of the higher ranks (cf. art. COMMUNICATION WITH DEITY [Celtic]). At times the decision as to who was to be elected king was reached by Druidical revelation gained in sleep, after a 'bull-feast' (Brughnáth Æfh Derga, ed. Stokes, 1862, pp. 14, 15). The stone on which the kings of Ireland were crowned at Tara was called the Lia Fál, or 'Stone of Destiny,' because it was believed to cry aloud when the rightful heir stepped upon it. In the before-mentioned poem, or 'Lóirea,' attributed to St. Columba, several means of divination are mentioned as practised by Druids:

'Our destiny is not with the sroéd, nor with the bird in the top of the tuig, nor with the pine, nor with the gnarled tree, nor with a sron, hand on hand. . . . I adore not the voice of birds, nor a sroéd, nor a destiny, nor this earthly world, nor a son, nor chance, nor woman. My Druid is Christ, the Son of God.'

In an old historical poem relating to the settlements of the Cuitheine, or Irish Picts, in Alba (Scotland), among the kinds of divination taught by evil Druids and necromancers were:

'The honouring of sroedhe and omens, choice of weather, lucky times, the watching the voices of birds, they practised without disguise.' (Irish Nunnin, ed. J. D. Todd, Irish Arch. Soc., 1845, p. 145.)

The exact signification of some of these terms of divination is not known, but the word sroéd is connected with són or són, 'good one' or 'luck,' in various passages; and in MS. Land, 615, p. 7, we read: ni h-a-g sroéd atá mo chuid, 'not for me is the luck of the sroéd.' Stóna-stóonna means 'augury,' or 'sorcery'; and in LL 101a we read of the 'power of the són and of the solad, next don t- stón agus don soid—evidently omens of good-fortune. A lucky moment called són in LL 555, and in MS. 648, it is possible that the sroéd or sroéd may be connected with sron or srocht, 'sneezing'—a form of augury known in early times, and frequently condemned by

The sense of Destiny surrounding each person of importance is expressed in the old tales by means of tabus (called in Irish *gessa* or *gesna*), usually laid in his birth, and which, when his doom is about to overtake him, are broken through by him, one by one, against his own will, fore- shadowing evil. Many of the Irish *gessa* were, no doubt, real tabus actually imposed upon kings and chiefs. We possess a complete tract giving the restrictions which had to be observed by the provincial kings of ancient Ireland (Leabhar na g-Ceart, ed. O'Donovan for the Celtic Soc., Dublin, 1847, pp. 1-23); but they are used in the old romantic tales, with the definite poetic purpose of representing the unescapable decrees of Destiny. They have all the Greek sense of over-mastering Fate. They are usually, especially the birth- tabus, laid on the hero at birth; but any one seems to have had the power of inflicting them, and they appear to have been equally binding, however they were imposed.

In the story of "The Tragic Fate of the Sons of Usnach," the tabu of Pergusus to refuse a feast resulted in the death of the three brothers; in the "Persuit of Diarmaid and Groleid", the death of the hero was due to his neglect of his tabu "never to hunt a boar"; the breaking of the *gessa* laid upon the hero Conchulainn resulted in the slaying of the sea by his own father.

Elaborate *gessa* were laid on each of the chief heroes of the older, or Cuchulainn, cycle of tales (see CUCHULAINN CYCLE), and it is in the gradual and inevitable breaking down of these *gessa* that the tragedy of their doom consists. The approaching end of each, and especially of the central figure of Cuchulainn himself, is surrounded by omens (cf. and compare the fate of the three brothers, p. 306 of § 62). The Ossianic tales, especially the more recent of them, stress less is laid upon the breaking of tabus, but great prominence is given to the omens of sickness or death, such as the howling of dogs, clouds red like blood, and foreboding dreams (Trans. of the Ossianic Soc.). These signs are still regarded as sure forewarnings of a fatal catastrophe.

Another remnant of a very ancient superstition is the belief that 'banishes,' or female fairies (see DEMONS AND SPIRITS [Celtic]), foretold by their wailings near a house the death of an inmate. The baniese is usually the early pagan goddess of the district of which she appears, but she appears as a weeping woman, mournfully bewailing the expected death. Many families have their own special baniese who always appear before a death in the family. Sometimes, instead of the presiding genius of the country, some woman who has met an accidental death acts the part of the baniese, and is heard crying and moaning. There are examples of the appearances of banisches in the old historical literature.

Queen Aschiball of Craig Liath, the presiding goddess of Clare and baniese of the Dalcaism race, appears to King Brian Boru before the battle of Clontarf to forewarn him of his death (War of the Gaedhil with the Goilti, ed. J. H. Todd, London, 1867, p. 201). The same goddess has been seen in recent times attended by twenty-five other banisches of Clare before an impending disaster.

In many of the ancient tales this forerunner of death takes the form either of a beautiful but weeping maiden or of a gruesome and monstrous hag, who is found in the path of a host going to battle, or of a chief who is doomed to death, stooping sideways like a miserly man, or sometimes in the form of a black mare; or a hedgehog; or a broom sadly wringing out bloody garments and weapons. She is called the 'washer of the Ford,' and she informs the doomed man or host that it is their own bloody garments that she is wringing out.

As late as 1318, Richard de Clare and his Norman troops met this hideous figure, 'washing armour and rich robes till the red-gold gleam was changed through her fingers' when they were on their way to plunder the O'Deas of Dyserg. She tells Richard that she is come to invite him to join her among the tribes of Hell. Next day Richard and his son and host lay dead upon the field near the fort of Dyserg.

A similar superstition is that of the 'death's coach,' with headless driver and black or headless horses which, if it passes by a house or through a village, must not be stopped on its way. If it meets with any impediment it will go on; if it is driven out of door, some one is sure to die next day within the house. These beliefs are firmly held in all parts of Ireland, and many apparently authenticated cases of recent years are recorded in the following within recent times (PL iv. [1895] 352. X. [1899] 119, 122; T. C. Croker, Fairy Legends, London, 1870, p. 250). In Brittany the same superstition exists; the 'Coach of the Ankon' is driven by a figure who is the forerunner of death, imagined as tall and lean with long white hair, or as a skeleton whose head turns about every way inspecting the country. His loch resembles a funeral cart with lamenting horses, and he is escorted by two companions walking beside the cart, who open the gates of fields or the doors of houses and pile the dead upon the vehicle. The 'Ankon' is the last person who has died in each parish during the year, and is replaced at the end of twelve months by a successor (A. le Braz, La Légende de la mort, new ed., Paris, 1902, i. 95-99).

LITERATURE.—What has been given in the article, Cf. also the literature appended to art. DEMONS AND SPIRITS [Celtic].

**FATE (Chinese).—I. Definition of the term.**—The Chinese equivalent for 'fate,' viz. *ming*, like the original of our English word, means primarily "something spoken or decreed." It is composed of the radical for 'mouth' and the symbol for 'law' or 'command.' Or, it may be understood as supplying the place of phonetic as well as supplementing the force of the radical. As *fatum* in philosophical language represents the eternal, immutable law of the gods, so *ming* is interpreted as the appointment of Heaven, the unalterable decree which determines man's lot; it is often used as synonymous with 'life'—regarded as the span of existence, whose limits are irrevocably fixed, so that a longfellow one's fortune. Owing to the fact that the *ming* is sometimes applied in connexions which seem to admit of a variety of interpretations, some of the circumstances under which the Chinese should be described as fatalists, but it may be said without hesitation that the weight of evidence is in favour of such a description. It may be sufficient to note, with regard to the contrary view, that there are circumstances under which it may be possible, according to Chinese theories, to escape one's destiny, which might seem to imply that *ming* was not considered as invariable; but it will be found, on investigation, that in such cases apparent failure of the decree was of the nature of a deprivation of the gifts which Heaven had in store, in consequence of the unwillingness or unworthiness of the intended recipient to receive or retain them, rather than merefence on the part of Heaven. From this point of view it might seem that man is regarded as the potential master of his destiny, but, on the other hand, it must be borne in mind, though he may fail to realize, or deliberately reject, the high position marked out for him by fate, he may by no means attain to a higher station than that which is destined for him.

2. Classical references.—In the Confucian classics the term *ming* frequently occurs, though, as we are informed, it was one of the subjects on which the Master was characteristically reticent. The word is sometimes qualified by the addition of 'Heaven,' i.e. 'Heaven's decree'; and sometimes 'Heaven'
alone stands for the decree of Heaven. The two terms are often found in apposition, as in the statement, 'Death and life have their determined appointment (ming), riches and honour depend upon Heaven.'

When a disciple named Po Niu was visited by Confucius, and found to be hopelessly ill, the Master said: 'It is the appointment (ming) of Heaven, also!' The expression is frequently used with regard to the ancient rulers: 'Heaven decreed him the throne.' We may call the head of the 'ancestor man,' the Confucian ideal, as 'walking, quietly and calmly, for the appointment of Heaven.' Is his destiny, in contrast with the 'interior man' who 'walks in dangerous paths looking for luck.' In another passage Confucius says: 'Without recognizing the decree of Heaven, I dare not to be a superior man.' He frequently refers to destiny as influencing his own life, e.g.: 'Heaven produced the virtue that is in me.' 'I think that I am the person of Heaven.' 'While Heaven does not let the cause of truth perish, what can the people of Kwang do to me?' 'If my principles are to advance, it is so ordered; if they are to fall to the ground, it is so ordered (ming).'; 'Heaven is destroying me.'

From statements such as these it may be argued, that to the mind of the Sage, ming meant very much what we mean by destiny or fate: something which he recognized as actively operating in the determination of man's lot, but which he refused to discuss or analyze, regarding it, in common with spiritual beings and the other extra- mundane phenomena, as the acts of the power of destiny.

3. Mencius.—The philosopher Mencius agrees with Confucius in regarding ming as Heaven's decree, in his references to the ancient 'Empires.' Yet ming is applied by him to the evolution from the Old to the new dynasty of Chow. When the prospect of obtaining preferment was suggested to him, he replied, in the words of Confucius: 'That shall be as Heaven directs.' He speaks of Heaven's gift of the kingdom to Shun, though he does not describe it as resulting from destiny, but rather as the duty to execrate, to which Heaven had appointed him. His pronouncements on the subject are much looser than those of Confucius, since he speaks in one place of calamity and happiness as being in all cases of man's own seeking, and endeavours to illustrate his theory by a quotation from the Odes: 'Study always to be in harmony with the ordinances (ming), so you will certainly get for yourself much happiness,' and again, in a passage from the Canon of History: 'When Heaven sends down calamities, it is still possible to escape from them; when we occasion the calamities ourselves, it is not possible any longer.'

He uses a phrase of his: 'That which is done without man's doing is from Heaven, that which happens without man's causing it to happen is from the ordinance (ming). There is, therefore, a destiny decreed for every man, there is an appointment (ming) for everything, and it is possible for each man to establish his destiny, or fail to realize the favours which Heaven wills to bestow on him. An early and apparently antiquity death may be ascribed to destiny, as encountered in the honourable discharge of one's duty; but a disgraceful death cannot be so attributed. Men should calmly await a fate which is decreed for them; but, should the 'situation' place them in needless danger, they may entail upon themselves a 'fate' which is not of Heaven's appointment.

Destiny and Nature are closely associated in the mind of Mencius, and seem to reflect what is said in ch. i. of the Doctrine of the Means: 'What Heaven has conferred (ming) is called Nature, the idea being that Heaven has decreed and Nature has decreed his death or success in realizing that destiny represents the extent to which his nature is in harmony with the ideal. He may attain to the highest honours, if such are indicated to him by the understood will of Heaven, as in the case of the ancient rulers; or he may, like some of them, be condemned, by his own moral delinquency, to undergo a decreed and determined punishment and suffering to which, humanly speaking, his former virtues entitled him. His ideal destiny may assign him a potential longevity, which he may reject by voluntary suicide. His idea is, that Heaven is so determined as to correspond with the ideal that he can fulfill his ideal destiny. He discovers his destiny by performance of the eternal law of Right, and thus Mencius, when asked 'Did Heaven confer its appointment on Shun with such intuitions?' replied 'No, Heaven does not speak, it simply showed its will by his personal actions and conduct of affairs.' By this means Shun was declared to be 'the man after God's own heart,' by the conferring of the Imperial Mandate upon him.

The ideal destiny is limited or determined, in the sense that none can reach a higher standard than that appointed for him. In the case of some, that appointed limit may not permit him to rise above the lowest levels of human attainment; in other cases it may allow the happy recipient to secure the proper appreciation of the limitations of his power. A recent pronouncement by a Confucian writer states that 'Confucius emphatically denies that all men may be made good' (Lim Boon Keng, in China, Jan. 1912, p. 515). Man may represent an early stage in the evolutionary process which, in course of time, may produce a sage; but, in his own person, he can have no hope of reaching that prud stage, though he may rejoice in the privilege of advancing the process by strict attention to the limited sphere of his own responsibilities. He may, on the other hand, inherit a noble destiny, and not only fail to attain it, but by his failure retard the evolutionary process, and bring about a condition of atavism.

4. The Chucuan school.—The reiteration of Confucic with reference to ming gave his later expositors the opportunity of elaborating theories of their own; and their materializing tendencies are reflected in the Doctrine of the Mean, attributed to Tsz-sze, a grandson of Confucius, who was also, to a great extent, the inspirer of Mencius. A further development is observable in the writings of Chu-lai (Chu-tai) A.D. 1130-1200), who deprives Destiny by explaining it as meaning simply Nature, and Nature as equivalent to Principle, whether existing in the natures of men or beasts. In other words, men and other creatures are different natures, which constitute each of them a law unto himself; but, since Nature, or Principle, may become deflected, an outside standard is necessary for correction of morals, viz. Tao, or the 'Way'; and X'eo, or 'instruction,' which is furnished by sages and teachers. It should be borne in mind that Chucuus was largely influenced by Buddhist opinions, and that the doctrine of karma, no doubt, affected his treatment of the subject; and, since Chucuus is admitted to be the most popular exponent of the Confucian school at the present time, it is not surprising that the Chinese should be represented as thoroughly believing in human destiny. To the latter fact has been credited the universal traffic in astrology, fortune-telling, clairvoyance, mesmerism, necromancy, palmistry, phycognomy, the phalene, and the use of nostrums and charms, all with a view to discovering and terting away one's own destiny. For, though the Chinese may sometimes appear to dissemble belief in a predetermined and irrevocable fate, and express contempt for the idea of men being supposed to be possessed or rendered helpless, in realizing that destiny represents the extent to which his nature is in harmony with the ideal. He may attain to the highest honours, if such are indicated to him by the understood will of Heaven, and the only way to
The inevitableness of Fate is tacitly accepted by the Chinese people, and finds constant illustration in their otherwise inexplicable carelesslessness in the control of fire, which sometimes inhumanly consumes their palaces and populous districts; and the neglect of proper precautions against flood, which has been known to inundate whole counties; and similar remissness in connexion with the outbreak of plague, pestilence, and famine, or even personal afflicts such as abnormal growths or deformities. The whole tendency of Taoism, which, though sadly degraded by its modern representatives, is, nevertheless, a powerful influence amongst the thinkers, may be well described as fatalistic, inculcating, as it does, that absolute compliance with the Tao, or 'Course of Nature,' which precludes the stirrings of ambition, and deprecates all restless striving in the direction of self-advancement, whether by virtue of one's individual merits, or by sedulous attention to the desires of the higher or even the highest powers, including the gods themselves.

In conclusion, it may be said that, on this subject, as in the case of many others, the Chinese appear to be able to harmonize what might seem to Westerners to be conflicting and contradictory opinions. They regard the 'by-the-way' as the predestined destiny, and yet speak of the possibility of evading that destiny, of a fate which is unaffected by outside agencies, whilst at the same time they seek by every means to anticipate the decree by recourse to horoscopes, fortune-tellers, etc. The explanation is supplied by the theory that the debased may surrender the good fortune in store for them, for Heaven has the right to annul a decree for the welfare of its intended recipient. The ignorant may be unaware of the destiny which Heaven intends for them, and thus neglect to qualify for their predestined lot. Only complete sincerity can attain to the foreknowledge of Heaven's appointment: only he who fashion his life in accordance with 'the Way' can hope to gain the highest places which benefit Heaven has to bestow. Death is unalterably fixed in the case of all men, and this belief gives rise to that extraordinary resignation with which the Chinese accept the death penalty; but one's lot in life is, to a large extent, in one's own hands; happiness may be secured, and calamity averted, by living in accordance with Tao, as set forth in the Confucian classics; for, as the proverb says, 'If Heaven should weary my body, I must set it off by putting my heart at ease.'

**W. Gilbert Walshe.**

**FATE (Egyptian).**—The Egyptians had a very definite notion of Fate or Destiny, which was personified as the deity Shai. The word for 'destiny,' sa, later Sat (shait), is derived from the verb sa, 'decide,' 'define,' the German bestimmnen; but, therefore, = was bestimmt ist, as in the verse, 'Es ist bestimmt in Gottes Raths, Dass man von Bosten was man hat, Muis schicden, ja scheiden'; Sat = what must be, unavoidable Fate. We find it in this sense always: even the heresy of Akhenaten did not erase it. Man proposes, Heaven disposes. 'Heaven decrees happy unions, etc., i.e. Marriage is Made in Heaven.' Everything depends on Heaven and Fate, and not on man. 'All the planning and schemes are unequal to the one fixed determination of Heaven.'

7. Popular literature.—The doctrine of Fate is very fully illustrated in such selections from Chinese literature as Strange Stories from a Chinese Studio (see Lit. below); and the 'Book of Fate' is frequently referred to as being consulted in order to discover the terms of one's lease of life.
Naturally, unavoidable fate was regarded as evil fate, and ἡδις can mean this without qualification. In the 'Israel-Stella' of Merenptah (1250 B.C.), which records the ravaging of Palestine by the Egyptians and the destruction of 'all Israel, the word is 'determined' by the ideograph of a devouring dog; an evil animal was destiny!

Death was the destiny of all, whether the rich man who built himself a pyramid, or the poor man who died of heat and labour on the canal-dyke or gisr, with none but the fish to see him die. It was an evil destiny, death, and, when one thought upon it, was a matter of tears, and the eyes of death, was pain and grief; never would one come back from the tomb to see the sun. So said his soul to 'Tired-of-Life' in the curious dialogue translated by Erman; but the man himself, seeking rest from the weariness of the world, saw in death no evil fate, but rather a glorious one, since, when dead, he would become a 'living God,' who would accompany RA, his sun-ship through the sky, as a guiding companion in his punishment after death, or πάνω ἁγγαρέους. So 'Tired-of-Life' rebuked his soul, and so the common fate of man appeared to the religious, then as now, rather a good than an evil destiny, and 'That-which-becomes (ἡδις) was desired.' He ceased to be the Devourer, and became, instead, the Benefactor. Shai now appears, in late times, as a popular deity in the form of a serpent, the animal which had become the emblem or image of any and every deity otherwise unprovided with an animal-form.

For religious reasons connected with the idea of death, as mentioned above, and for enonymous reasons too, no doubt, the idea of 'Tired-of-Life' naturally connected itself with the god Petnis, or Petpur, the 'Αγαθοδάμων (not the Μοῖρα) of Dendur. It is in its capacity of protecting demon that we find the serpent Shai, wearing the diadem of Hermes, Philephthon during the celebration of Hermes and the thysion of Dionysos (a true type of the Misch- kunst of the time), represented on either side of the inner doorway of the great family catacomb at Koun and Alexandria, which dates from the 2nd cent. A.D. In the 3rd cent. magical papyri we find Shai as the agathodaimon, the spirit of good rather than of bad luck: in a love-charm he is invoked as 'the great Shai who makes magic for the great (goddess) Triphis, the lady of Koun.' Triphis ('T—rific'), 'the princess,' was a form of Hathor, the goddess of love, who also from the earliest times had been connected with national apellation: thus we find Sapphia (the seven Hothors) foretell the destiny of a child at its birth as early as the 5th dynasty. The name of Shai was now very popular in compound personal apellation: thus we find Sappho ("Daughter of Shai"). Tapetis ('She who belongs to Shai'), Peterepis ('He whom Shai hath given'), and so forth. As the Good Spirit, he was now regarded as watching over the safety of the crops, and appears as a male counterpart of the corn-goddess Ermute (Thermuthis). Such is the history of an Egyptian godling. By this time the word ἡδις had probably lost entirely its original signification of 'what happens or comes to one, but is not destiny unavoidable.' It does not occur in this sense in Coptic, in which ἡδις (ἡδις) means 'good,' 'pleasant,' 'proper,' thus preserving rather the altered and later agatho-
demoniac signification of the word.

LITERATURE.—On the derivation of the word ἡδις, see H. Brugsch, Lith. 3, 12 (1863); H. Schubart, Leipzig, 1. l. c. 12 (1868); on the divinity, Book of the Dead, ch. cxv.; Book of Traveling 113-115 (Sai) (Sat.) 1190; G. Steindorff, ZA, 1890, p. 21; and H. R. Hall, PSBA xviii. (1908) §7-80, where references to inscriptions quoted are given, except that Amasis (Daresys, RT. Xvin. 19. 1, 2) Hall from Daresys's Egyptian text in Oldtest Civilization of Greece, 186, appendix. See also, H. R. Breasted, Social and Religious History of Ancient Egypt, 1907, ii. 906-907, and the 'Dialogue of the Man Tired of Life with his Soul, for which see A. Erman, 'Gespräch eines Lebensmüden mit seiner Seele,' ABA, 1909, 51 ff. For Shai in the magical papyri, see F. L. Griffith, Stories of the High Priests of Abydos, Oxford, 1898, p. 64; Griffith and Thompson, Magical Papyri of London, London, 1909, p. 188. On the Hothors, see A. Erman, Die Marchen der Papyri Westen, Berlin, 1901.

FATE (Greek and Roman).—Fate is the counterpart of Fortune (q.v.). They are two ways of looking at life; both are essentially connected with man. From the point of view of Fortune all is indeterminate; from the point of view of Fate all is determined. And Fate, like Fortune, attains to deity before our eyes during the course of Greek literature. From the first the idea of a predetermined order of destiny in the affairs of man was present to the mind of Hecale, and was fostered by the belief in oracles. That-manhood, "says Anger line (de Cur. ii. 110; A's. v. 9). Fate is by derivation 'that which has been spoken,' with the implication that it shall be fulfilled. The nearest verbal equivalent to this in Greek is τὸ κρόνος, since that is connected with the appropriate word for the answer of an oracle; cf. Eur. Hipp. 1256:

οῖδε τὸν κρόνος τοῦ χρόνος δ' ἀνάλλος.

But there is a great variety of ways in which the idea of Fate may be expressed in Greek, e.g., ἡμέρα, ἡμέρας ἔμπροσθεν, μόρφον, μόρφωμας, τοῦ μόρφου, μόρφωμα ἡμάς, αἰών μορφού, μορφών ἐκλάμα, εἴρισμα, ἐκλάμασις, ἐκλαμομένη, ἐκλαμομένου, τρέπομεν, τρέπομενον, τρεπόμενη, τρεπόμενα, τρεπόμενα, τρεπόμενον, τρεπόμενα.

1. Homer.—The idea of Fortune (τύχη), as Macrobius (Sat. v. 16) has pointed out, is unknown to Homer, but not so the idea of Fate. The latter is everywhere present both in the Iliad and in the Odyssey, though the three Fates as mythological persons are not yet to be found. Μοῖρα in Homer is always singular, except in II. xiv. 49:

τοῦ μοῖρον τοῦ χιόνιον ἵππος χρήσειν.

Μοῖρα is the abstract noun from µετερος, so that the idea underlying it is that of some Power which bestows fortune to man. We may conjecture that the same idea meaning attaches also to Λοχή, which is used convertible with Μοῖρα:

II. vi. 487. σ. ἐν τοίς μιᾷ ὀπόλιν ἀνήρ Πηροδρόμος.

But there are instances of the use of the word in the sense of ‘the lot’ or ‘the share’ of a person.

II. v. 113-115. ἕν γὰρ τοῖς ἀνάλλοις ἄλλοις τοις ἀνησυχίας ἑλέοι, ἐκ' ὑπέρ ἑκάστης ἄλλου τοῦ ἄλλου ἀλώνιος ἀλώνιος τοῦ ἄλλου ἅμοιρας ἅμοιρας ἅμοιρας.

Atymos occurs in II. xxi. 291:

ὅτε αὐτῷ τεντόνης γε ἑμφανίας αὐτοῦ τοῦτο,

and αὔερον ἤμαρ in II. viii. 72, xxi. 100.

Môros stands to Môpos in the relation of effect to cause, and is therefore less a word of primary signification:

II. xvi. 225. ἔν οἷς ἐκ τοῦ ἀνίκητος, ὡς μὲν ἄφθονον ἀδέλταις.

An example of µοῖρον in II. 674 ff.:

ὁ πρὸς Ὀλύμπιος μεταφρασθὲν µοῖρον δὲν ἔφευγεν ἀνάλλοις ἀλώνιοι τοῖς διαδόμεσι, ἡμέρας ἀλώνιοι τοῖς διαδόμεσι.

and of µοῖρον ἢμαρ, II. xv. 613; Od. x. 175. νέον ἔι λιπες ἃνευρέσθαι µεγάλης τινός ἄλωνις occurs in II. xxi. 281 and in Od. xii. 312.

Πέρατα and its cognates come from the root ρατ-, which is a form of ρατ-, and so convey the same idea as µοῖρον of something predetermined.

II. xviii. 229. ἀνθρώπος γὰρ πέρατος, δήμος γὰρ πέρατος.

II. iii. 305 ff. ἵνα τινὰ κρίνη τοιαύτα, τινὰ κρίνη τοιαύτης.

1 Cf. Herc. Prog. 311; Elect. 1303; Iph. Taur. 1400; Oec. 616.

2 Cf. oracle of Bacchus, in Herod. iv. 48.
In *II*. xvi. 441 f. (= xxii. 179 f.) πεπομενοι is used of the victim of fate, meaning ‘foredoomed’—

όλης θυρείς ένεται, σαλίς πεπομένων αλέγ

it is a personification of Fate. *Kρής* and *Κηρή* represent Fate on its sinister side, and are generally associated with death.

In *Od*. i. 322, III. 22—a sense in which it is personified in *II*. xvi. 533:

εις' έρημον, εν τω δέ Κοιμεαμών ομίλλειν, εις' ήλιον Κήρι

Δάφνων has affinities with both Fortune and Fate. common sense responds, *There are mountains still behind.* To derive it from δαίμων in the sense of ‘divide,’ ‘distribute,’ brings it into line with the conceptions already treated of.

In the *Iliad* there are a number of expressions, such as ὑπὲρ μήταρς (xx. 336), ὑπὲρ μήτας (xx. 30, xxi. 517), ὑπέρουρα (i. 155), ὑπέρ αἰσθ (vi. 487, xvii. 790), and ὑπὲρ δίως αἰσθανόμενον (xvi. 363); and ὑπὲρ τεθέν (xvii. 327), which seem to imply that man could occasionally pass over Fate. But except in xvi. 790;

καὶ τέλη δε ἔρημων ἴλαυν δέφερον δῶρον—

we are never told that he does overpass it. The rest of the passages are conditional, and some god always steps in in time to save the credit of Fate. The one passage, that which runs contrary to the rest, may either be set down as hyperbolical or referred to the same range of thought as displays itself in the *Odyssey* (i. 32-35), where a sort of compromise is effected between Fate and free will. Some evils, we are led to suppose, come from the gods, whereas there are others which men bring upon themselves by their own infatuation—for instance, the death of Agamemnon. This is a sound judgment, to which we are not accustomed. *There are mountains still behind* which no wisdom or virtue can guard, while there are others which are clearly traceable to one’s own fault. But even in the *Iliad* the fatalism of the poet is not rigid, but admits of alternatives. Had Patroclus heeded the warning of Achilles, he would have escaped the evil fate (ἐφίλη) of black death (xvi. 685 ff.); and Achilles himself has an alternative destiny—death and immortal glory at Troy or an inglorious old age at home (ix. 410-416).

As men in the *Iliad* are often on the verge of transgressing Fate, so Zeus now and again entertains thoughts of setting it aside, but never actually does so. He sheds tears of blood over his own son Sarpedon (xvi. 431-461), but leaves him to his fate; he pitied Hector, but does not save him (xxii. 168-185). The public opinion of the skies is against such an example. Fate is after all Δάφνων, and Zeus is true to himself. Even when he has been entrapped into an oath by Hera, he keeps it, though to his own cost (xix. 93-135). The general attitude of Zeus is shown by the impartial way in which he holds the scales of battle (viii. 65-74, xxi. 209-215), leaving the fates (αἰσθάνομαι ἡμάρ) of the combatants to decide the matter by their own weight, the heavier to go down to Hades. Vergil has caught the Homeric spirit when he says *(Aen. x. 1124 f.)*:

‘τεταυροκατήκοιν οἰδαμ. Fata vixam inventum.’

It was the metaphor of spinning the web of destiny to men at their birth which brought into being the mythological scene called the Moirai. But the gods in Homer do the work of Fate themselves. Zeus does the spinning in *Od*. iv. 257 f.:

δέν καθότι θηραίνοι γυναικεῖστα τε καθά τε θιτί

1 The line occurs also in *Itn. xvi*. 156 with φέροντων για τούτοις.
Moiragete's and Apollo Moiragete's. Again, in Plutarch (Mor. 474 B, Trans. Am. 15), where ἀντί τωτε... (Moiras) and ἔλθεν τέω... (Eileithia) are spoken of, the context shows that the reference is not to the Fates proper, but to the Greek and Evil Demon. The same author says (Mor. 385 C, de et amrh Delph. 2) that the two Fates at Delphi were intended to awake inquiry, since three were ever ready to represent (προσεχείσθεν). That the Fates should figure among birth-goddesses is only what might be expected. Pindar (Ol. vi. 71) couples the Μοῖρας and Εἰλεθία (Eileithia) at the birth of famous, and addresses the Μοῖρας as 'ανεμοίραες (Nem. vii. 1), while Euripides bestows upon the Μοῖρας the epithet of Χάος (Iph. Taur. 266), and Plato in his poetical way speaks of Μοῖρα and Εἰλεθία in the same breath (Symm. 200 D); an early poet of Delos, too, gave to Εἰλεθία the epithet of εὔφορος, indicating thereby her identity with Φατή (ῥήσατε τῷ Πειραμικῷ τῷ ἀργῷ), and declared that she was older than Kronos (Plat. viii. 21. § 2).

Pindar has Moira in the singular (Nem. vii. 84) and in the plural (Ol. xi. 65, Pyth. iv. 259, Isth. v. 25); also ἔτεος Μοῖρα (Ol. ii. 37); he has two mentions of Clotho (Ol. i. 40, Isth. v. 23), one of Lachesis (Ol. ii. 118), but none of Atropos, though he speaks of Κλωνθα and her sister Μοῖρα (Ist. v. 27.); he also enriches the vocabulary of Fate with some new expressions, such as τὸν ρησόμενον (Ol. ii. 29), πορρήσια ζωή (Pyth. iv. 454), χάομεν καὶ ὁ Ατρόπος (Ol. i. 70, of (Edipus), and lays down broadly το γε μοίρα τον οὐρανόν (Pyth. xii. 52).

3. The Greek tragedies, etc.—This gnome might be taken as the key-note of Greek Tragedy. Quite apart from the case of inherited sin, as in the house of Οἰλέως, man is represented in the Tragedies as the victim of some awful, unseen power, which forsook him to disaster. It has been said that there is less of this in Euripides than in Ἑσύλων or Sophocles. But it is from the Orestes of Euripides (976-981) that we take the following lines:

Ye tear-drown'd, toiling tribes,
Whose life is but a span,
Behold how Fate, or soon or late,
Upsets the hopes of man;
In sorrow still your changing state
Which fate, or can it be

'Pray not at all,' says the chorus in Sophocles' Antigone (1337 f.) to Creon, 'since there is no release for mortals from destined calamity.' Greek Tragedy is filled by many of the events in the Edipus Tyrannus, and there, too, the idea of Fate attains its zenith. Edipus is like a fly in a spider's web; the more he struggles to escape, the faster does Fate entangle him. 'Awful,' says Sophocles (Ant. 921), 'is the mysterious power of Fate.' It is perhaps a sense of this awfulness that makes the Tragedians, though they speak sometimes of 'Fates' in the plural, refrain from using the proper names of the goddesses. The thing with them is too serious for mythology. They were studying life as they found it, in the same spirit as that in which we study the laws of Nature.

In the Iphigeneia Vetus it is darkly hinted that Zeus himself is subject to Destiny, and that Prometheus knows a secret of Fate which will eventually affect his deliverance (511-523).

In Ἑσύλων the connexion between the Fates and the Furies comes out strongly. 'Who then,' asks the chorus, 'turns the rudder of Necessity?' to which the answer is (ib. 516):

And again in the Eumenides (922) the Μοῖρας are addressed as μητρακοσκυλία of the Furies—doubtless with reference to the account in Herodotus of both triplets being the unmothered offspring of Night. This sort of naming, which is rare in the Tragedians, occurs in Eumen. 335 in connexion with Μοῖρα.

The belief in oracles is assailed by Euripides, though in such a way as to 'save the face' of Lookias. EL. 399.1:

When the twain, the twain, the twain, will have the twain?

The logical tendency of this is to upset the belief in Fate, which is so intimately connected with prediction. But, as a matter of fact, Euripides, like other tragedians, is permitted through and through with a belief in Fate. Take, for instance:

In a place of punishment (Prom. Vinc. 936) and in the Iphigeneia, which the present writer believes to be the work of Euripides, a new power, bearing a close resemblance to Fate, makes its appearance upon the scene. This power is Αρδαστία. She is at first identified with Nemesis, in agreement with which it is the custom to propitiate her before dangerous utterances (Plato, Rep. 451 A; Eur. Eth. 492, 498), while others regard Ardasia as another name for Atropos (Schol. ad Plato, Rep. 451 A), and the philosophers frankly identify her with Fate in general (Plato, Theod. 248 C; Ar. Mund. viii. 5; Stob. Ed. i. 188). According to Callisthenes (Sud. xii. 588), the name is due to the accident that the first statue of Nemesis was set up by Ardasia; but the mere usual derivation is perhaps the true one, which takes the name to indicate the impossibility of escape from the goddess (ἀπεράταν τ' & τι αἰτητήν ἀπατήσατε, Schol. on Rep. 451 A).

Nemesis, herself a goddess of distribution (ῥεύμα), is akin to Μοῖρα (μερής), and has at the same time affinities with Fortune, who has managed to appropriate her wheel (see PTOLEMY [Gr.]). Herodotus, with his notion of 'a jealous god' (iii. 40), is full of the idea of some power which brings disaster upon men, not because they are wicked, but simply because they are not fortunate, like Polycrets, or because, like Creusus, they think themselves so (i. 34). In Herodotus (i. 91) we find a strong assertion of the omnipotence of Fate, where the Phthia declares to Creusus that it is 'impossible for a god to escape destiny' (τον πειραμικόν μοίραν αἰτητήν ἀπατήσατε καὶ κρατήριον). Yet, even so, there is a certain amount of elasticity allowed to Fate, for Lookias claims that he had induced the Μοῖρας to postpone the fall of Sardis for three years. How different is this theologian's acquaintance with the hand of God in history from the calm positivism of Thucydides! And how strongly does he recite his ready belief in oracles (vili. 70) strongly contrasted with the sceptical remarks of the later historian (Thuc. ii. 54) as to the way in which predictions get accommodated to current events!

The phrase used by Demostenes in a famous passage of the de Corona (p. 296, § 305)—τὴν ζωὴν καὶ τὸν αὐτοκρατορὸν δίκαιον—indicates the same mental attitude as that of the author of the Odyssey, in distinguishing between things which are due to destiny and those which come from the free action of man's free agency: 'He who regards himself as born only for his parents,' says the orator, 'awaits his appointed and natural end, whereas he who thinks that he is born also for his country will die rather than see her enslave. Cicero, in an equally famous utterance (Phil. ii. 10), has an echo of this, or of the ἐνδορ τῶν τῆς Ὀδυσσείας

1 On this title of Zeus, see Paus. v. 15. § 4, vii. 27. § 1. At Megara, the same Πίνδοι, with the Μοῖρας and Εἰλεθία, was worshipped by the Μοῖρας above the head of Zeus, on which Pannainias (i. 48. § 35) remarks: ἔνθα δὲ ἔχει τὸν πειραμικόν μοίραν καὶ προφητήριον,

2 For this remark the writer is indebted to Professor E. A. Sommerrich.
the prominence of Fate in Tragedy—*etd de ipso filio
calvi, filio de ipso tragico, ipso eiunperrejn.* In Gorg.
(512 E) his language leads us to think that sub-
mision to Fate was a sentiment peculiarly preva-
lent among women—συφέλεσαν τας γυναικος, σηθ θεο
εισπράξσ ϑαν ειν εξηγησ. In the bold myth
of the Politicus he identifies *eiunperrejn with the
connatural desire* of the universe, when left by
God to its own devices. This is a new light upon
the subject altogether.

It is with the Stoics that the interest in Fate
really begins. Heraclitus was before his time, and
we do not know exactly what he said. Zeno
identified Fate (eiunperrejn) with Providence (φρωσις)
and Nature (φυσις). 1 Chrysippus said that the
essence of Fate is a spiritual power (δοσιμα πνευμα-
terpe) arranging the whole in order. 2 He declared
also that Fate is the reason of the universe. 2

The unwary reader must not be deceived by Chrysippus
speaking of Fate as a 'spiritual' power. We mean by spirit
something that is not matter; the Stoics meant by it some-
thing that is matter. Augustine uses *spiritus* in its sense
'spirit' in our sense—that something, itself isolate, which
creates all things.

Posidonius made Fate third from Zeus, Nature
being intermediate between them (Stob. Eel. i.
178). Antipater said simply that Fate was God.

With regard to what we have just said, it is not
accurate to say that the word 'Fate' because of the connexion
that had been established by his time between
Fortune and astrology, says Chrysippus, is the same as
Fate the will or power of God, 'sententiam tenet, lingam
corrigat' (De Civ. Del, v. 1).

Pope's 'Universal Prayer' is instinct with the
spirit of Stoicism:

Yet gave me in this dark estate
To see the good from ill,
And binding Nature fast in Fate,
Left free the human will.

That is the position on which Epicetus is always
insisting. God's will is certain to come about,
whether we wish it or not. What is in our power
is to make ourselves happy by a cheerful assent to
it, or miserable by a futile resistance. There
is no doubt that the Stoics held this position.
How they made it good by argument it is not very
easy to see. But Chrysippus, who was the brain
of Stoicism, seems to have reasoned in this way.
Everything has its antecedent causes; but we
must distinguish between two kinds of causes:
(1) those which are complete and primary, or, in
one word, efficient; and (2) those which are adja-
cent and proximate. If all causes are of the
first kind, there would be no room anywhere for
freedom; but, as some are of the second, there is
Sense cannot be stirred except by an object striking
it; but the causes here are of the latter kind, and
and do not affect freedom. A cause is an object
of itself. If a man gives a kick to a cylindrical
stone, he sets it rolling; but it goes on rolling
because of its own nature. Bad minds, according
to Chrysippus, rush into errors voluntarily; and
it is part of the order of Fate that they should
do so, as being a natural consequence of their bad-
ness (Cic. de Fato, §§ 41–43; Aul. Gell. v. 2).

This does not sound very satisfactory as a vindica-
tion of the freedom of the will. Cicero, who had
the works of Chrysippus before him, and who was
a good judge, did not think that he had made
out his case. Neither did he think Epicurus suc-
cessful, who, in order to leave room in the universe
for free will, had recourse to the hypothesis of a
slight deviation from the perpendicular on the part
of single atoms.

Cicero himself, in his fragmentary de Fato, fol-
 lows Carneades and the New Academy in denying
Fate altogether. If there were no such thing as
Fate, things would still happen as they do. Nature
and Chance are enough to account for them. The

stone which fell in a cavern on the leg of a brigand.

Feudus (Hindu).—The Sîá language has various equivalents for what we call fate, such as, e.g., kâla, lit. 'time,' as leading to events the causes of which are imperative to the mind of man; vidi, 'ordinance,' 'rule;' dâsa, 'servitude,' 'chance;' dharma, 'divine power of evil,' 'destiny,' 'fate,' 'chance; adhyaya, 'what is not seen,' i.e. that which is beyond the reach of observation or consciousness, the acts done by each soul in former bodies, which acts extant then that soul an irresistible power called adhyaya, because felt and not seen; karma (karma), work done in a former existence and leading to inevitable results, fate. Kâla, 'time,' is perhaps the earliest of these, occurring, as it does, in hymns of the Athrâveda (xii. 53) on the power and Divine nature of Time, which is akin to Destiny or Divine Ordinance. It is 'he who drew forth the worlds and encompassed them. Being their author, he became their master. There is no other power superior to him.' In a subsequent period, Kâla was sometimes identified with Yama, the judge of the dead, or represented, together with Mârtyn, 'Death,' as a follower of Yama, or invoke of the great epic of India, contains various tales tending to illustrate the relative importance of the various agencies of which Fate may be said to be composed, none perhaps finer than the apologue of the snake (xiii. 1), relating how a boy was killed by a snake, and the snake, after having been caught by a hunter, was released by the boy's mother on the ground of her loss being due to Fate alone.

First, the snake declares its innocence of the boy's death, Mârtyn, the god of death, having used the snake as an instrument. Thereupon Mârtyn himself makes his appearance and exonerates himself, asserting that Kâla, 'Time,' has in reality killed the boy. 'Guided by Kâla, O serpent, sent thee on this errand. All creatures, mobile or immobile, in heaven or earth, are pervaded by this same inspiration of Kâla. The whole universe is with the same influence of Kâla.' But Kâla in his turn explains that neither Mârtyn, nor the serpent, nor he himself, though he has killed the death of any creature. 'The child was met with death as the result of its karma in the past. We are all subject to the influence of our respective karmas. As men move from a form of day to another, from one to another, men attain to various results determined by karma. As lifetimes are related to each other, so are men related to karma through their own actions. Therefore, neither art thou, nor am I, nor is Mârtyn, nor the serpent, nor this old Brahman lad, the cause of the child's death. He himself is the cause here.' On Kâla expounding the matter in this way, the child's mother became convinced, and asked the fowler to release the snake.

The conception of karma is closely connected with the celebrated Indian theory of transmigration or metempsychosis, which pervades all post-Vedic religious and philosophical systems of India, and has exercised down to the present day a powerful sway over the popular mind. As observed by Barn (in General Report of the Census of India, Calcutta, 1865, p. 364), it is a mistake to suppose that the ordinary Hindus have no belief in the doctrine of transmigration. 'The doctrine of karma is one of the freest beliefs of all classes of Hindus, and the fear that a man shall reap as he has sown is an appreciable element in the average character.' It is in S. India, according to Stuart (ib. p. 364), that the influence of Animism is prevalent, the villagers' real worship being 'paid to Mârinman, the dread goddess of smallpox and cholera, and to the special protected by himself during a previous existence and regarded as the work of evil spirits or devils who must be propitiated. In the same way, a native observer, G. Sarkar, in his well-known work, Hindu Law, an attempt to show that the power of the mysterious but irresistible power of the acts done in previous lives, is universally held by the Hindus as a fundamental article of faith. 'The theory of karma is a supplement of all good and bad deeds, of all meritorious and demeritorious acts and emolument, done by a person in all past lives and also in the present life. This is the adhyaya which determines the condition of every soul, i.e., in the cause of his happiness or misery; the state of a living being depends on his past conduct' (G. Sarkar, Hindu Laws, Calcutta, 1805, p. 230). And so it is stated by Dussehn in his History of Philosophy that the doctrine of metempsychosis has governed the Indian mind from the epoch of the Upanishads down to the present time, and is still of eminent practical importance, as affording a popular explanation of the cause of human suffering and operating as a spur to moral conduct. He quotes a blind Indian Pandit, whom he met in his travels through India, as replying to a question put to him concerning the cause of his deficiency in vision, that it must be due to some fault committed by himself during a previous existence (Dussehn, Allgemeine Geschichte der Philosophie, vol. i. pt. ii. p. 282).

Historically speaking, the belief in metempsychosis and the beliefs of karma, or action, as determining the fate of man, makes its first appearance in one of the Brahmanas, and, in a more developed form, in the Upanishads. These philosophical treatises preach a strict determinism, except in so far as a man, by recognizing his identity with the eternally free Atman, may be released from the bondage of karma. The germ of this theory, as supposed by Oldenberg, may be much older; and it has been shown by Schmidt, in his suggestive little book, Die Indogermanen (Leipzig, 1911, p. 148), that the earliest Indo-European conception of Fate is that of a share inherited from the mother at the time of birth; the Roman Parce (from pario), equally with the Greek Eileôeia and the Slav, Rosadanîe, being Fate Mothers (Schicksalsmütter) assisting at every birth. From Brahmanism the theory of karma passed into Buddhism, and became one of Buddhism's leading tenets.

"When a man dies, the khandhas (elements) of which he is constituted pass off, and there results a new set of khandhas instantly starts into existence, and a new being appears in another world, who, though possessing different khandhas in a different form, is in reality the same man just passed away, because his Karma is the same. Karma, then, is the link that preserves the identity of a being through all the countless changes which it undergoes in its progress through Samsâra." (Children, Dict. of the Full Land, London, 1972, p. 181).
in this respect with the latter. There existed in ancient times a large number of philosophical systems, belonging to two principal classes—one asso
ciated with the doctrine of free will, immortality, and transmigration; and the other negating the same. Both Jina and Buddha belonged to the former class. They believed in transmigra-
tion: the determination of the final end in which they had in view (Pischel). According to the Jaina doctrine, the deeds performed in the
trees by the souls are karma, merit, and sin. This drives them, when one body has passed away, into another form of existence, foretelling the future lot or the karma. Virtue leads to the heavens of the gods, or to birth among men in pure and noble
acts. Sin consigns the souls to the lower regions, sends them into the bodies of animals or plants, or even into masses of lifeless matter. The addition of new karma can be prevented by right faith, strict control of the senses, and austerities on which
the Jainas lay special stress (Bühler).

Of modern Hindustan, the Sikhs may perhaps be said to be the most fatalistic of all. They agree with the adherents of other systems in explaining the glaring difference between riches and poverty,
human disease and their divine counterpart in a former life determining the present condition and circum-
stances of a person. But they go very far in deny-
ing the liberty of human action, everything being subject to the decree of Fate, be it the future lot of a person written on his forehead. These ideas have struck root very generally among the Sikhs, who, therefore, are far more rigid fatalists than even the Mohammedans. The karma theory occupies a place in the Sikh religion in India, and the highest goal of the Sikh is not
paradise, but the cessation of re-birth and existence (Trumpp, Macauliffe).

To return to Brāhmans, it should be observed that the rigid determination of its view of karma is frequently mitigated by admitting the modifying and controlling influence exercised on Fate by human exertion. Thus the Anukāsa Parvan of the
Mahābhārata contains the fine discourse on human effort (purvākāra), in which the relative importance of fate (dāiva) and human acts is discussed.

As, unseeded with seed, the soil, though tilled, becomes fruitful, without individual exertion, Destiny is of no avail. One's own acts are like the soil, and Destiny (or the sum of one's acts) is, as it were, the seed. From the union of the soil and the seed doth the harvest grow. It is observed every day in the world that the deer resapes the fruit of life, and the wolf and the raven obtain their food, and are free from good decrees, and benefit from bad ones. Acts, when done, always fructify, but, if not done, neither good nor evil is produced.

By devotion, detachment (or by au-
terity) one acquires beauty, fortune, and riches of various kinds. Everything is secured by exertion, and nothing can be gained through Destiny (dāiva) alone, by a man wanting in personal exertion (Mahābhārata, xii. vi. 7-12).

And so it is stated in the Vana Parvan that
those persons in the world who believe in Destiny, and those
again who believe in Chance, are both the worst among men. Those only that believe in the efficacy of acts are lauded. He that lies at ease, believing in Destiny alone, is soon destroyed like an unburnt earthen pot in water. So also he that believeth in Chance, i.e. stultify inactive though capable of activity, lives not long, for his life is one of weakness and helplessness" (ib. xii. 13-19).

- It is also declared in the Mahābhārata that only
enuchs worship Fate (dāiva). In other places, the paramount power of Destiny is upheld, and it is clear that the comparative weight of free will and fate must have furnished a fruitful theme for discus-
sion to these Brāhman theorists.

The part played by Fate in the ordinary relations of human life, according to Hindu notions, may best be gathered perhaps from the view which the Indian jurists take of Fate or Chance (dāiva).

Thus, it is a well-known rule in Indian law that a
depositary is not responsible for such damage as may have occurred to a chattel deposited with him by the act of Fate (dāiva) or of the king, Fate being
explained to include ravages caused by fire or water, the falling down of a wall, decay through the lapse of time, an attack by robbers or by imini-
ral forces, and the natural response of fire, water, and
transmigration; and the other negating the same. Both Jina and Buddha belonged to the former class. They believed in transmigra-
tion: the determination of the final end in which they had in view (Pischel). According to the Jaina doctrine, the deeds performed in the
trees by the souls are karma, merit, and sin. This drives them, when one body has passed away, into another form of existence, foretelling the future lot or the karma. Virtue leads to the heavens of the gods, or to birth among men in pure and noble
acts. Sin consigns the souls to the lower regions, sends them into the bodies of animals or plants, or even into masses of lifeless matter. The addition of new karma can be prevented by right faith, strict control of the senses, and austerities on which
the Jainas lay special stress (Bühler).

FATE

success in every enterprise depends on Destiny and human acts; the acts of Destiny are fixed from the beginning. The direction and the quality of man's life are therefore through action. And this, too, is thus said by them, that God cannot be responsible for a man in the world does not happen; and that which is destined, be it something good or evil, predestined through sinfulness or slothfulness, is injured by it. That which will come to pass through exertion is such as he who goes to a meeting of happiness, or the elevation of man, who, owing to sickness, dies early; and he who through sinfulness or slothfulness is not sapped, is not wed no wife, and is certain that no child of his is born, or such as he who gives his body unto slaughter, and life is injured by his living.

Some colour is lent by XXVIII. 17 to the view which the present writer, like Cumont (Mysteries of Mithra, tr. A. E. Cowley, Chicago, 1905, p. 124.), is inclined to favour, that Zoroastrian fatalism is borrowed, in the main, from Babylonic astrology, when it declares that 'every good and the reverse which happens to mankind, and also the other creatures, happen through the seven planets and the twelve constellations.' It is useless to strive against fate, for, according to XXIII. 5-9,

'though a man puts on new clothes in this world, he is not saved, what soever he was, even the self of man puts on new bodies, which are in accordance with his acts in a former life' (Fargam, xx, 50, tr. Jolly).

J. JOLLY.

FATE (Iranian)

The Gathas attribute foreknowledge to Ahura Mazda (Yasna xxix. 4, xlv. 2, 6, 9-11, 13-19, xxviii. 2), which is also implied in the whole Iranian scheme of the Ages of the World (g. a.). Foreordination, however, scarcely developed in Zoroastrian thought, except in a minor infrazalasian sense, until a comparatively late period. Practically the only Avestan passage which is directly cited is its teaching in the Zend, v. 9-10, which states that a man apparently drowned is really carried away by demons, and that 'there, then, Fate is fulfilled, there it is completed' (atha adhita fragasati bozda adhita nashatas).

In genuine Zoroastrian fatalism there is no place, for the entire spirit generated by the long struggle which each man must help Ahura Mazda to wage against Ahriman and every other power of evil militates against a concept which—whatever its alleged justification—has, as a matter of history, sapped the energy of every people that has held it. And yet fatalism came to be an important doctrine of the Zoroastrians, the source of which is a new factor—philosophical speculation, the malign influence of Babylonian astrology, the crushing of the national spirit by the foreign dominion under which the Zoroastrians passed, or a combination of these factors; yet there is at least a curious and suggestive analogy between the rise of fatalism in Iran and that of karman (q.v.) in India, which seems to have been evolved from a combination of philosophical speculation with the religious beliefs of the aborigines of India.

The Dinkart (iii. 77, tr. Sanjana, Bombay, 1874 ff., p. 85) teaches a qualified free will when it says:

'It is through the power and the assistance of the Iads (angels) who knows the Holy Self-existent (Ahura Mazda), fights with the Darjis (demons) and delivers his body and soul from the Darjis and overcomes the power of the Ganges' (the other creation of this world. Under the design of the Creator, man is born, and has the power to direct himself, under the supervision of the Iads. The aholo (in man) of the evil qualities of the evil passions is for the purpose of obstructing him, but not for the purpose of convincing to plunge man into sin.'

Within the sphere of orthdox Zoroastianism, fatalism comes to the front chiefly in two Pahlavi works—the 9th cent., Dāštīsān-ī Dači (DD), and the Dīnī-ī Mavarān-i Xrīt (MX) of uncertain date, but probably of the 10th cent. or later, and possibly in the reign of Chosroes i. (531-570) (MX, ed. Sanjana, Bombay, 1895, p. viii f.). According to DD xxxi. 3, 5,

'there are some things through destiny, and there are some through action; and it is thus fulfilled by them (the high priest) that life, wife, and authority and wealth are through destiny, and the righteousness and wickedness of priesthood, warfare, and toil are through action. And this, too, is thus said by them, that God cannot be responsible for a man in the world does not happen; and that which is destined, be it something good or evil, predestined through sinfulness or slothfulness, is injured by it. That which will come to pass through exertion is such as he who goes to a meeting of happiness, or the elevation of man, who, owing to sickness, dies early; and he who through sinfulness or slothfulness is not sapped, is not wed no wife, and is certain that no child of his is born, or such as he who gives his body unto slaughter, and life is injured by his living.'

In the Dinkart, fatalism is also apparent in the numerous prophecies of future events (e.g., for example, Yatskiki-i Xwarab, tr. Modi, Bombay, 1899, pp. 211, 291., in which Jami prophesies to King Vissapasa the outcome of battle and in the Dīnī-ī Mavarān-i Xrīt, tr. Kerkohi, Erzurum, 1889, pp. 107, 148, and also his Oriental Religions in Roman Paganism, Eng. tr., Chicago, 1901, p. 101, where the cooperation of Babylon. influence is again emphasized.
entire system of Persian divination (q.v.). In the Persian epic of the Šāh-Nāmeh (tr. Moh., Paris, 1876-1878) the power of Fate is also emphasized. Thus the Emperor of China declares (iii. 121): ‘Every event of destiny, all the actions of men (geraditi i-ānān), even though he were able to overthrow an elephant, and the poet makes a similar reflection on the violent death of Yazagird I. (v. 410); but here, as de Harlez observes (Avesta ... trad., Paris, 1881, p. lxxxviii), we no longer move in a Zoroastrian sphere.

LITERATURE.—F. Spiegel, Erw. Alterthumskunde, Leipzig, 1860, p. 388; [see also the philosophy based on predestination by R. Gessner, Do. 1862-1863, ii. 219; L. C. Casartelli, Pitt. of the Mahāyānaist-Buddhists under the Sung. in A.S. 1890, 9, 311-337; E. West, Pokhiri Texts, iii. (SBE xviii. 1883, xxiv. (1885).

LOUIS H. GRAY.

FATE (Jewish).—Based on the OT, which on the whole acknowledges freedom of choice, Judaism does not, and consistently cannot, hold the pagan doctrine of Fate. The subject never entered Jewish consciousness, and therefore there is not even a Heb. word in the OT corresponding to πτωμα or fatum. πτωμα is an engraved statute and hence a law of Nature, but not applied to human affairs. What little attention Jewish countrymen, and more especially their Pharisees, gave to the question of fate, was due to the fact that there is no place in the OT for a theory of predestination. And this state of things is explained by the fact that the Jews had no idea that God desired or intended that his name should be known in the world, and that the whole purpose of his revelation was to prove that his name is great, and that he is the only living God (Isa. 45:5; 1 Sam. 15:3). Thus, when Josephus (BJ i. 2, 4, v. 8) uses the word πτωμα as if he were a real fatalist, the repeated emphasis laid on divine foreknowledge is a step in the direction of the Christian theory of predestination. When Josephus (BJ ii. viii. 14) adduces the Muaph prayers for the New Year, God is spoken of as ‘looking’ (πτωμα) and beholding to the end of all generations.’ A dictum of R. Akiba’s was (Ab. iii. 19): ‘Everything is foreseen (πτωμα), equivalent to Josephus’ ἀφορίστης προφύλακτος (BJ ii. viii. 14), although it is added: ‘free will is given.’ Man in his nature and environment is a product of a predetermined will. ‘He is fashioned, born, lives, dies, and is brought to judgment against his will’ (Ab. iv. 29). In his antecedent state his sex, constitution, size, shape, appearance, social position, livelihood, and all that may befal him, are pre-ordained (Tanh. on Ex 38). Marriages are final in heaven. Forty days before the birth of a child its future spouse is proclaimed by a herald (50:2), and no prayers can alter it (Moed K. 188; Sanh. 22a). Throughout his life he (or she) must be let alone, and his fate is sealed from the first day of his life. No one can touch anything that is destined for another. No kingdom can extend a hairbreadth against another (Yoma, 38c).

History is shaped in accordance with a preordained plan. Suffering, death, the Deluge, Israel’s servitude in Egypt and persecution by Haman, were preordained before creation (Tanh. on Ex 3). God revealed to Adam before he was completely formed his righteous descendants (ib.). To Moses He showed a list of their names—Israel, its kings, guides, and prophets from the creation until the final resurrection of the dead (Midr. on Ex 31). The leaders were to appear on the stage of time as they were wanted: una omnino non deficit alter. Thus, ‘before Moses’ sun set, Joshua’s rose.’ Similar was the case with Eli and Samuel. On the day R. Akiba was slain, ‘the whole creation trembled’ (Jer. 13:31). The day of the great death day Rab Ada bar Alahia was born, etc. (Midr. on Ge 23). Israel’s election was decreed from all eternity, and is irrevocable. Their final redemption must be preceded by repentance.
Should they fail to repent at the appointed time, God will force it by raising up for them another tyrant like Haman (Sanch. 97b, 98a). The interference of miracles with the course of Nature, such as the dividing of the Red Sea at the Exodus, the destruction of the Idolaters, the drought and the deluge, etc., was in accordance with a Divine ‘stipulation’ before creation (Midr. R. on Gn 14).

How far foreordination was compatible with the doctrine of rewards and punishments, was a frequent subject of discussion in the Talmudic period. But the Rabbis advanced no solution of the problem beyond the categorical statement that, notwithstanding, man possessed freedom of will. At most it was added that compliance with the law merited greater reward for the righteous and severer punishment for transgressors (Shab. 32a). The problem wrecked the faith of Elisha ben Abuyah.

It was left to the Jewish philosophers of the Middle Ages to reconcile the doctrine of Divine foreknowledge with freedom of will. It being beyond the scope of this article to reproduce their arguments, we conclude that all, with perhaps the exception of the 19th-century Rabbis, have rejected fatalism, pointing out that foreknowledge was not identical with causation.

FATE (Muslim).—1. General. — Islam has often been charged with being a fatalistic religion, but this reproach is not quite merited. For a proper analysis of fatalism in Islam, it is important, in the first place, to distinguish between the popular point of view and the philosophical or theological. Eastern peoples have a psychological tendency to fatalism; but this species of popular fatalism, numerous traces of which are found in their folklore, is a sentiment rather than a doctrine. It is, moreover, limited to the outstanding accidents of human life, and especially to death, which it represents as happening of necessity at such and such a time and in such and such circumstances, no matter what one may do to avoid it; it is, we may say, a physical fatalism. The fatalism of the schoolmen is of a moral fatalism; it does not apply specially to death, but refers to all human actions, holding these to be decreed by God. It is true that there have been scholars who taught fatalism in Islam, and that the books of Muhammad’s successors contain vague and plausible propositions apparently inculcating fatalism. At the same time, it must be remembered that the doctrine of fatalism has always been expressly repudiated by orthodox Islam, which believes in the free will of man, although it encounters serious difficulty in reconciling this with the all-powerful will of God. We now proceed to indicate briefly how the questions of predestination and free will are treated in the Qur’an, among various philosophical sects, and among the people.

2. In the Qur’an.—Muhammad speaks of books, kept in heaven, in which the deeds of men are written; and which will be the basis of the Last Judgment. One of these books is called ‘Il’iyyun : ‘The book of the righteous is in ‘Il’iyyun’ (Qur’an, Ixxxii. 18 [SBE ix. 324]; and ‘Na’sha : ‘The book of the wicked is in Sijjin’ (xxxii. 7 [SBE loc. cit.]). The Qur’an has it that these books are eternal, though this is not indicated in the text of the Qur’an; probably Muhammad thought the lists were written day by day as the deeds took place. There are also books relating to each individual:

‘As for him who is given his book in his right hand (at the Last Judgment), he shall be reckoned with by an easy reckoning; . . . But as for him who is given his book behind his back, he shall call out for destruction, and he shall brol in a blaze!’ (xxviii. 7–13).

Muhammad’s idea seems to be that human actions are noted down as the books at the time they are performed. There is still another book, called the ‘perspicuous Book,’ relating to the whole world: ‘Nor shall the balance be of little weight to them, of a heavy, or of little weight, that, or greater, save in the perspicuous Book’ (xxviii. 150). According to this tradition, this book is eternal; but the Qur’an does not say so. In short, the relevant passages do not justify the popular expression ‘It was written’ (with ‘all eternity’ understood).

While there is no text in the Qur’an affirming that man’s actions are decreed in advance by God, we find passages, on the other hand, which seem to signify that God forces certain men to do evil, that He predestines a certain number to hell; e.g. the following verses:

‘Had we pleased we would have given to everything its guidance; but the sentence was due from me; I will surely fill hell with the jinn and with men all together’ (xxiv. 133). ‘We have created for hell many of the jinn and of mankind: they have hands, and feet, and eyes and they see not therewith; they have ears and they hear not therewith; they are like cattle, nay, they go more astray! These it is they who go not in the right way’ (xvi. 6, 7). ‘All whom He pleases, and guides whom He pleases’ (xxv. 9, etc.).

These passages are probably not to be taken quite literally; but it is clear that the Qur’an does not speak with the precision of a teacher, but rather expresses himself as an orator, almost as a poet. His very emphatic terms were occasioned by the persistent stubbornness of his audiences, and may mean only that God finally hardens the hearts of the wicked who have first scorned His favours. This is more clearly stated in ii. 17 (SBE vi. 3): ‘Deafness, dumbness, partiality, and they shall not be guided.’ It will be noticed that the above passages are reminiscent of the Bible; Muhammad applies to the wicked what the Bible says of idols (Ps. 115:7-10).

3. With the theologians. — It was not until philosophical studies began to flourish that the question of fatalism was thoroughly investigated in Islam. The attributes of God are enumerated; amongst them is specified knowledge, will, power. These Divine attributes must be absolute; what room is left then for the will and power of man? The philosophers-knew God as universal agent and personal creator of all. ‘If God decreed of everything, how could man be the ‘agent’ also (and, so to speak, over and above) of his own actions? In God also they saw the supreme ‘cause, the cause of causes; how then could they admit that man was capable of performing deeds of which God was not the ‘first cause’? Such were the philosophical forms in which the question was clothed.

God’s will and knowledge, according to Muslim theologians, produce from all eternity a sort of decree which is realized by His power. This decree is called the qada; its continual realization is the qadar (cf. Jurjani, in the book of the Ta’rif). Now, man, who is this Divine creator enough liberty to give his life a moral significance; at the same time, the morally bad actions of wicked men must not be attributed to God. This was the problem which Muslim theology tried to solve, but we cannot say that it has given a clear solution.

There is a short treatise by an interesting though late author, Ab dar-Razzaz (q.v.), the Shufi († A.D. 1350 at Kásán), which well represents the point of view of Muhammad’s Muslim Tradition in regard to this question. The work is called Tract on Predestination and Free Will (Risalat fi’t-Qada wa’t-Qadar). Amidst many subtleties, we see how the author conceives the role and function of the will in human action, and the part he means to leave to it in
relation to God's will. Knowledge, says'Abd ar-Razzāq, is the impression of the form of a known object on the mind of man; perception is the feeling of the object given by the external senses, such as light by the eye; it is the mind's power of intelligence or imagination. Power is that faculty of the soul which makes it able to accomplish or leave unaccomplished any action; will is the decisive power. Non-agreeableness, according to Jurjani, is the accomplishment of the 'power' and the 'will' of man. When we perceive a thing, we know it; when we know it, we judge whether it is agreeable or repugnant to us; and it produces in us a certain inclination which makes us pursue or reject it: this inclination is will; and it is will that acts upon the power which moves the members according to the choice of the will. In cases where we are not compelled to admit the absolute agreeableness or non-agreeableness of the object, our intelligence is supplied by the faculties of reflexion and imagination to find out to which side the balance leans; and the will of the intelligence gives free scope to its opinions in this investigation. It may happen that a thing is agreeable under certain aspects and distasteful under others; e.g., it may please some of our senses and not the others; it may be good for certain members and harmful for others; it may please the senses and repel the mind, or, inversely; or, again, it may be advantageous for the present but not for the future, or inversely.

Every agreeable motive produces an attraction, every other a repulsion; if the attractions prevail, the result is a free decision in favour of the action. To this decision should be attributed praise or blame, according as the action is good or bad; but in this decision is deserts either reward or punishment. Nevertheless, 'Abd ar-Razzāq continues, there is no doubt that perception, knowledge, power, will, reflexion, imagination, and the other faculties exist by the agency of God and not by ours. He concludes that we must refer all actions to God as the agent who makes them exist, without, however, entirely withdrawing them from their human authors.

Ghazālī has a fairly thorough investigation of the question in his Epistle to Jerusalem, a section of his great discourse on the Qiyās. The principle is that everything produced in the world is the act and creation of God—'God has created you, and what ye make' (Qurān, xxxvii. 94). No single member of the perfect body of God can make a single movement of his without the consent of all the other members. All the members lie none the less with man to a certain extent. Every free act is, in a way, decided twice—once by God and once by man; it depends upon God for its production, and upon man for the merit or demerit resulting from it; or even, outside of the moral sphere, for the advantages or disadvantages following upon it, since for God there is no advantage or disadvantage. This quality in actions of being advantageous or disadvantageous, which does not exist except from the human point of view, is called kabh, 'gain' (cf. Jurjānī, Tahrīfāt). The choice, therefore, lies with man, the accomplishing of the action with God; the movement is man's, but created by God. God is the creator of the action decided by the human will.

Even before Ghazālī, this doctrine had been very clearly formulated in the work of the theologian Ash'arī. Human power, according to this Ash'arī, can have no influence upon the production of actions, for everything that is produced by a unique decree which is superior to the distinction between the human and the divine, it is not possible that a decision could influence this creative decree; it could also influence the production of natural objects, and almost create the heavens and the earth. We must, therefore, believe that God has arranged man's actions beforehand in such a way that things will happen at their proper time in conformity with the decisions of the human will. Man produces an action in appearance only; it is really created by God; but, from the moral point of view, the action is 'attributed' to man because he decided it. Here we have a veritable system of pre-established harmony, of an accomplished design.

4. With the School of Philosophers.—The question of providence and evil was thoroughly discussed in the philosophic school. Avicenna (q.v.) in particular has some very fine passages on it in his Nūṣṭāt (p. 78, section on Providence, and how evil enters into the Divine judgment), and in a treatise specially devoted to the subject—the Risālat al-Qadr (Treatise on Destiny, tr. by Mehrèn). In these we meet with ideas, expressed in very eloquent terms, that might be compared with those of Leibniz.

Providence, for Avicenna, is the 'knowledge of God enveloping everything.... The knowledge God has of the kind of beneficence applicable to the universal order of things is the source whence good flows over everything.'

How is evil possible in this world which is enveloped by the thought of the absolutely good Being? Avicenna answers the question by a theory of optimism. He regards three kinds of evil—metaphysical, moral, and physical. To moral evil he pays little attention: metaphysical evil does not exist except in potential beings, not yet completely realized, i.e. in the corruptible world, which is inferior to the sphere of the Moon; it depends on matter; but in the sphere of the Intelligibles there is no metaphysical evil, since everything there exists in a state of complete perfection. For physical evil is not so widely spread than physical good; it is frequent, indeed, but not so frequent as good; not ill, but health, is the normal state. Further, every evil is a good in some sense; the weaker animal torn by the wild beast, and the sparrow carried off by the bird of prey, suffer; but their suffering is for the advantage of the stronger animal. Physical good and evil cannot be the same in the eyes of God as they are to us; His point of view and the motives of His judgment are hidden in a mystery which ought to forbid our condemning His work.

5. With certain theological sects.—The doctrine of 'Abd ar-Razzāq is that of the Qadarīs of Islam; it strikes a happy mean; on one side there is a sect famous in the history of Islam: the Qadrātīs, who credit man with full power in the production of his actions, and the Jabārīs, who credit him with none.

The Qadrātīs (from qudrāh, 'human power,' not from qadar, 'the Divine decree') hold that man has the power to create his own actions, and do not allow that his evil actions are produced by God. Ash'arī and 'Abd ar-Razzāq reproach them with positing two principles, one for good deeds—God—and one for bad—Satan. The prophet, writes 'Abd ar-Razzāq, said:

'The Qadrātīs are the Magi of this generation, since they acknowledge two powerful, independent principles, just as the Magi, who looked upon the action and the will as independent principles, the one of good, the other of evil.'

The Mu'tazilites, who were not exactly, as they have been called, free-thinkers, but theologians with a rationalistic tendency, in the 3rd and 4th centuries of Christianity, were inclined to the question of human freedom; they treated the subject, with a very few differences, in the Qudrātī sense.

The Jabārīs are the opposite of the Qadrātīs. They utterly reject the necessity view, and do not believe that an action really comes from man, but attribute everything entirely to God. Man, they hold, does not even have the power of choice.
FATEHPUR-SIKRI

God creates the choice and the action along with the sanctions of fate, 'constraint,' because in this system man is constrained in his every action by the decree of God; good and evil are necessary in him just as are their consequences.

The juristic teacher is Jahm, son of Satsrān. He began to teach at Timnāz and was put to death by Sulamīn, son of Ayvān al-Malzī, at Misor at the end of the reign of the Umāmidīs, but, according to Shirāzmīdī, text, p. 209.

This teacher held that God creates actions in man as he creates the air that sustains man and, metaphorically, as they are to things, it is said, e.g., that the tree produces fruits, the water runs, etc. Rewards and punishments are nothing more than the actions themselves.

The name Jabarite with the qualification 'moderate' (or 'mitigated') has, according to Shahristānī, sometimes been given to those who accord a certain role in the production of an action to the power of man, while not allowing him freedom of choice. Jurjānī's definition in the Ta'rifātī, that the moderate Jabarites are those who accord man a certain merit or demerit in the action, like the Ash'arīs, is not exact; for this last position is confused with the orthodox view.

It should be observed that those ancient Muslim teachers who deny human freedom always deny it on the ground of the omnipotence of God, and not on a purely natural determinism; they still cling to religion even in the very act of annihilating freedom, the condition of moral life.

'Abd ar-Rassāq criticized both sects—Qadarites and Jabarites—of those times.

"Both are blind in one eye; the Qadarites in the right eye, the stronger, the eye that perceives essential realities; the Jabarites in the left eye, the weaker, the eye that perceives exterior objects. But the man whose sight is sound enjoys two eyes and sees both. The essence of the right eye and refutes human actions to it, both good and bad; he acquires things with his left eye, and holds that man influences his own actions, not his own actions are compulsory, but the actions themselves, respecting the truth of the word [attributed to the Prophet]—not absolute constraint or absolute independence, but something between the two.

6. In popular belief.—The popular conception of fatalism as we have said, applies only to the outstanding accidents of life and to death. Man is in the power of certain superior, obscure forces, and, however, he may struggle against them, he cannot alter the destiny in store for him. This is exactly the ancient Greek idea of destiny: human freedom is not free. But it is represented as vain in practice, in face of the all-powerful forces that preside over our lives. For example, if it is decided by the power above a man shall die under certain circumstances, nothing can ever prevent the execution of this decree.

It was prophecied to Khalīf Mā'mūn, the famous promoter of philosophic studies in Islam, that he would die at Basra; he accordingly always avoided the well-known town of that name; but one day, when returning from an expedition, he encamped in a little place, where he was seized with a violent fever; he asked the name of the village, and was told that it was Basra; then he understood that this was the place, unknown to him, to which destiny had brought him, and he had no doubt that his death would follow soon— as it did, in fact, within a few hours.

This willingness to believe that death cannot come except at a fixed time and place is a source of great courage in battle; for where is the danger of recklessness? If it is not written that one is to die, he will suffer no harm; and, if it is written, then nothing can save him. Orthodox theology, however, does not altogether approve of this sentiment. Khalīf Ommar attested a saying on this subject, which well represents the point of view of sound theology: 'He who is in the fire should resign himself to the will of God; and he who is in the water should not need to abandon himself into it.' 'Resignation' or, rather, 'abandonment' to God is the form of fatalism admitted by the teaching of Islam. It is the idea of Christian mysticism— the believer should abandon himself to the will of God. But the very name of Islam expresses this sentiment: 'Islam' means 'the action of giving up oneself, of surrendering' (i.e., to God).

FATEHPUR-SIKRI

[Arab. fatḥ, 'victory', Hindi 'jyosa', Persian and Shahī 'baytul hikma', i.e., 'House of Wisdom', of the site]—A famous deserted city situated in the Agra District of the United Provinces of Agra and Oudh; lat. 27° 5′ N.; long. 77° 40′ E.; 23 miles W.S.W. of the city of Agra. Akbar selected the rocky ridge which passes through the old Hindu village of Sikrī as the site of his new capital.

The native historian, Nigel-d-din Ahmad, in his Ta'biḥat-4 Akbari (h. M. Ellis, Hist. of India, 1873, v. 393.), records that 'the Emperor had several sons born to him, but none of them had lived. Salīm Salīm Chishti, who resided in the town of Sikrī, 32 km from Agra, had gladdened him with the promise of a son. The Emperor went to visit the Shaikhs; several times, and remained there for a week or twenty days each occasion. He commenced a fine building there on the top of a hill, near the Shaikh Salīm. The Shaikh made two mausoleums—a mausoleum and a fine mosque, which at the present day has no equal in the world, near the royal mansion.' This noted saint of niksī, a descendant of another descendant of Fakhr ad-Din Shakarganj, was born at Delhi in A.D. 1453, and spent the greater part of his life at Sikrī, where he died in 1572. The son promised to Akbar was born in the house of the saint, was named Salīm Salīm after him, and became Emperor under the title of Jahangīr (born 1569, ascended the throne, 1605; d. 1628, age 54; Est., 1902, 1027).

The new palace was founded by Akbar in 1569, after his return from a victorious campaign at Ranthambhōr, and the name 'city of victory' commemorates this success and the conquest of Gujrat which immediately followed. His design in selecting this site for his capital and palace was to secure for himself, his family, and people the benefits of the intercession of the holy man referred to above. It continued to be the principal residence of Akbar until 1584, and was occupied by his son and successor, Jalāngī; but it was abandoned by Shāh Jahan in favour of Delhi, partly because the position of the latter was superior, and partly because the site of Fathpur-Sikrī was found to be unhealthy and the supply of water unsatisfactory. Many of the buildings are now in ruins, but careful restoration has been effected by the Indian Government, and a complete survey of the site was carried out by E. F. Smith. Here is the principal residence of the two of the most important religious buildings—the tomb of the saint Salīm Chishti, and the Great Mosque, both situated within the same enclosure, the state entrance to which is by a splendid gateway, the Buland or Bālagān Darwāzā, 'great gate.'

Ferguson describes this gate as 'stately beyond any portal attached to any mosque in India, perhaps in the world, and points out the skill of its architect. The inscription, cut in bold Arabic characters, records its erection in A.D. 1562 to commemorate the conquest of Khānchāt. Coming from a great builder, it has a pathos of its own: 'Said Jesus, on whom be peace! : The world is a bridge; pass over it, but build no house there. He who heareth for an hour, may hope for an eternity. The world is but an hour; spend it in devotion; the rest is unseen. If you standeth up in the sun not in his duty, exaliboth not himself, remaining far from God. The best possession is that which thou hast given in. The best traffic is selling this world for the next.' (E. W. Smith, The Mogul Architecture of Fathpur-Sikrī, pt. iv., p. 17.)

The Great Mosque attains a size which only the 'glory' of the place, and is hardly surpassed by any in India. Bishop Heber (Journal, ch. xxi.) characteristically contrasts it with the Oxford and Cambridge quadrangles. The site of the site—mountain arch records its erection in A.D. 1571. The tomb of the saint, with its lovely carved arcade enclosing the cenotaph, the body being interred in a vault below, is one of the most beautiful buildings in India. It has been fully illustrated.
and described by E. W. Smith. The tomb is largely frequented by pilgrims from all parts of N. India, the great fair commencing on the 20th day of the month Ramadán, when the chief guardian, known as Imám, or Sajjjdanishin, 'he who believes and is true to the Mosso, the descendant of the saint,' is enthroned. Women, as well as men, come to pray; and, though the former are not allowed within the cenotaph chamber, they wander timidly and silently round the temple, which is particularly attractive to children and childless women, who have been placed by people who trusted that the saint would intercede for the recovery of their sick animals.

For aspects of fear not discussed in the present art., see Religion.

FATHER.—See CHILDREN, FAMILY.

FATHERHOOD OF GOD.—See GOD.

FEAR.—1. Definition. Fear in its most general sense means the anticipation or expectation of evil or pain, as hope is the anticipation of good. In its incidence and kind it may be momentary, transitory, and occasional, or a permanent, persistent, all-pervading influence poisoning the whole mind and behavior; it may be a natural, healthy resistance to a particular danger, or a mad, uncontrollable slavement, a paralysis of will and effort in the anticipation of some remote and improbable contingency. Surprise may be regarded as a mild form of fear—the query as to whether an evil is present or not; astonishment is a slightly stronger form of the same emotion; embarrassment and shyness are social forms; anxiety, a more diffuse, indefinite kind; terror is usually employed for more extreme and sudden onsets of fear, fright for a momentary case, and horror for the deepest degree to which the emotion attains (C. Darwin, Expression of the Emotions, ed. London, 1892, ch. 12).

2. Physical concomitants. In its more pronounced form, fear has correlated with it a distinctive group of physical changes in the organism, which, together with their outward effects, form its "expression." These are: (1) changes in the circulation: the blood-vessels contract, with resulting pallor; the heart beats more rapidly, and more violently, as if against a greater resistance. (2) Changes in the respiration: the breathing becomes labored, heavy, and more rapid, with occasional deep inspirations, while in extreme cases the mouth is opened wide as if for easier breath. (3) In the glands also action takes place: the skin perspires freely (a 'cold sweat'); the mouth is dry because of the failure of the salivary glands; the voice is hoarse and the vocal cords descendent; the digestive processes are checked; extreme fear may produce nausea and sickness.

The muscles are variously affected: the skin trembles all over the body ('shaking', with fear) in an extremely tremulous as well as hoarse, and may fail to act ('the tongue cleaving to the roof of the mouth'); the eyes are opened widely ('staring'), the eyebrows arched, the forehead wrinkled, the lower jaw dropped; the arms are swung upwards, as if warding off an approaching enemy; the body, at first motionless and rigid, may become flaccid, the individual shrinking, crouching, perhaps falling upon the ground. In children, and in most primitive races, these phenomena are exaggerated; in civilization, they are modified by training and other causes, but some never fail to present themselves wherever fear is. Similar expressions are found in animals, and in man in the rhesus monkey, where they have been placed by people who trusted that the saint would intercede for the recovery of their sick animals.

W. Crooke.

FEAR 205

FATHER.—See CHILDREN, FAMILY.

FATHERHOOD OF GOD.—See GOD.

FEAR.—1. Definition. Fear in its most general sense means the anticipation or expectation of evil or pain, as hope is the anticipation of good. In its incidence and kind it may be momentary, transitory, and occasional, or a permanent, persistent, all-pervading influence poisoning the whole mind and behavior; it may be a natural, healthy resistance to a particular danger, or a mad, uncontrollable slavement, a paralysis of will and effort in the anticipation of some remote and improbable contingency. Surprise may be regarded as a mild form of fear—the query as to whether an evil is present or not; astonishment is a slightly stronger form of the same emotion; embarrassment and shyness are social forms; anxiety, a more diffuse, indefinite kind; terror is usually employed for more extreme and sudden onsets of fear, fright for a momentary case, and horror for the deepest degree to which the emotion attains (C. Darwin, Expression of the Emotions, ed. London, 1892, ch. 12).

Timidity, again, is the general character or temperament from which fear is likely to spring.

2. Physical concomitants. In its more pronounced form, fear has correlated with it a distinctive group of physical changes in the organism, which, together with their outward effects, form its 'expression.' These are: (1) changes in the circulation: the blood-vessels contract, with resulting pallor; the heart beats more rapidly, and more violently, as if against a greater resistance. (2) Changes in the respiration: the breathing becomes labored, heavy, and more rapid, with occasional deep inspirations, while in extreme cases the month is opened wide as if for easier breath. (3) In the glands also action takes place: the skin perspires freely (a 'cold sweat'); the mouth is dry because of the failure of the salivary glands; the voice is hoarse and the vocal cords descendent; the digestive processes are checked; extreme fear may produce nausea and sickness. (5) The muscles are variously affected: the skin trembles all over the body ('shaking', with fear) in an extremely tremulous as well as hoarse, and may fail to act ('the tongue cleaving to the roof of the mouth'); the eyes are opened widely ('staring'), the eyebrows arched, the forehead wrinkled, the lower jaw dropped; the arms are swung upwards, as if warding off an approaching enemy; the body, at first motionless and rigid, may become flaccid, the individual shrinking, crouching, perhaps falling upon the ground. In children, and in most primitive races, these phenomena are exaggerated; in civilization, they are modified by training and other causes, but some never fail to present themselves wherever fear is. Similar expressions are found in animals, and in man in the rhesus monkey, where they have been placed by people who trusted that the saint would intercede for the recovery of their sick animals.

W. Crooke.

HERBERT SPENCER suggested that the nervous current follows the line of least resistance; these muscles which are most frequently used, and also those which are nearest the centre, and which are small and unattached to any resisting weight, will present the most permeable paths. Hence the facility with which the muscles of the face are played upon by fear, as by every other emotion (Essays, 2nd ser., 1863, pp. 105, 111). Mosso (p. 112) explains the influence of fear upon the capillary blood-vessels, their contraction and the resulting paleness of the skin, on similar principles. It is known that the centres of all such emotional expressions, including the paleness of the skin, the trembles of the heart, the trembling of the skin-muscles, etc., lie in the brain below the fore-brain (in the mesencephalum and myelencephalum). Jeffrey (Proc. Roy. Soc. 1873, 40) says: For frescoes and other works of art, see V. A. Smith, A History of Fine Art in India and Ceylon, 1911, pp. 225, 406 ff., 415, 430, 435, 437, 441, 519 ff., 596.

W. Crooke.
FEAR

keep the centres supplied with fresh materials. The withdrawing of any of the blood vessels may be the direct cause of the erection of the hair, and, even when the latter does not occur, and when the terror is prolonged, the trophy is given, and even the case with grey or fall out afterwards. The circulation of the blood is dependent in its turn on a sufficient supply of oxygen. The breathing of air with oxygen, one may be a great fear is similar in its nature and its origin to the pasting after an exertion, or during and after death. There is a great emotional energy, and all the vital processes are set in action to counteract or make it good. The trembling of the body or the shrinking of the muscles may be, as it were, by-products of this general reflex tendency; they are not adaptive, and serve no end for the advantage of either species or individual.

So obviously is the expression of fear in ordinary cases un-adapted, an organism that Darwin after suggesting the explanation by ' relics' of useful habits,—no longer useful in present circumstances,—admits the inadequacy of his explanation. It has even been thought that the fear-reactions were determined by natural selection, not for the good of the terrified species the victim—but for that of the terrifying species—the beast of prey. This would, indeed, be a bizarre product of evolution. Mosso showed that they have simply no reference to evolution: the trembling of the body, for example, in fear, is similar to the trembling which occurs when lifting a heavy weight, or when exhausted by illness: the nervous excitement prevents us from co-ordinating the movements of the many muscles involved in every—even the simplest—action, as standing, walking, speaking, etc. A man who is afraid does not see better, however widely he opens his eyes; he does not hear better, for his ears shrivel his terror and therefore, presumably, his danger. Actions which are so injurious to the organism should have been discarded in the course of evolution. But the mind, once it is adapted, more hurtful to the individual, the greater the actual danger. The more we go back into the past, the more numerous are the cases, as well as the products of evolution, but symptoms of disease, pathological forms taken by normal conditions of life.

The principle of adaptation can be applied only when we are dealing with very mild forms of fear—little more than expectation. It has no place in the expression of severe attention reflexes—the wide-open eyes, the raised eyebrows, and the frown, which Darwin interpreted as a nascent crying, but Mosso showed to be part of the act of adapting the sight to a near object. Any mental effort tends to set in play the attention reflexes, so that at all higher mental processes tend to have as their expression: the same reactions as occur in the corresponding sensory processes.

3. In its closest form, fear is a perceptual emotion, felt on awareness of an object or recognition of a situation of some definite kind. In other words, the object in the fear-consciousness is collapsed stand-in, constitutive element, which are added to the immediate effect of the stimulus, either from memories of past experience or in some other way. Small and defenceless birds show fear of the hawk and other birds of prey, and of snakes and serpents; horses show fear of the wolf, its appearance, its howl, and even its odour; kittens show fear of dogs; dogs of tigers and lions; cattle of strange dogs, etc. The great cats are so brave that they live on the dragon-fly; the cockroach, according to Bell, of the larger spiders; the child has fear in insecure positions (fear of falling), fear of the dark, of wild animals, etc. It seems, then, as if there were definite classes of objects, corresponding to the most dangerous features in the natural life of every animal, with the perception of which fear is associated. Healthy dogs are said to avoid 'instinctively' a dog which has rabs; they will not attack it, nor do they retaliate when themselves bitten by it. The question arises as to how this is possible. A natural explanation refers the formation of the percept, and its association with the fear of the object. The child in such the individual is, either in memory of actual experience, as a dog 'learns' to reject food seasoned with mustard, or in some sort of inference from past experience, as a child learns to avoid eating something from a table which may feel insecure at any high level afterwards. But, as this explanation is obviously inadequate to account for fear in infants and in young animals, whether it is due to actual experience or to some other circumstance, it is necessary to bring in the experience of the injurious influence of the object. The explanation has been extended to include the ancestors of the individual. It is their experience and not his that conditions his special behaviour towards the object of fear. In the former case, simple and comparatively familiar forms of association account for the result; in the latter case, disturbances of the nature of the case are grey or fall out afterwards. The circulation of the blood is dependent in its turn on a sufficient supply of oxygen. The breathing of air with oxygen, one may be a great fear is similar in its nature and its origin to the pasting after an exertion, or during and after death. There is a great emotional energy, and all the vital processes are set in action to counteract or make it good. The trembling of the body or the shrinking of the muscles may be, as it were, by-products of this general reflex tendency; they are not adaptive, and serve no end for the advantage of either species or individual.

So obviously is the expression of fear in ordinary cases un-adapted, an organism that Darwin after suggesting the explanation by ' relics' of useful habits,—no longer useful in present circumstances,—admits the inadequacy of his explanation. It has even been thought that the fear-reactions were determined by natural selection, not for the good of the terrified species the victim—but for that of the terrifying species—the beast of prey. This would, indeed, be a bizarre product of evolution. Mosso showed that they have simply no reference to evolution: the trembling of the body, for example, in fear, is similar to the trembling which occurs when lifting a heavy weight, or when exhausted by illness: the nervous excitement prevents us from co-ordinating the movements of the many muscles involved in every—even the simplest—action, as standing, walking, speaking, etc. A man who is afraid does not see better, however widely he opens his eyes; he does not hear better, for his ears shrivel his terror and therefore, presumably, his danger. Actions which are so injurious to the organism should have been discarded in the course of evolution. But the mind, once it is adapted, more hurtful to the individual, the greater the actual danger. The breathing of air with oxygen, one may be a great fear is similar in its nature and its origin to the pasting after an exertion, or during and after death. There is a great emotional energy, and all the vital processes are set in action to counteract or make it good. The trembling of the body or the shrinking of the muscles may be, as it were, by-products of this general reflex tendency; they are not adaptive, and serve no end for the advantage of either species or individual.

So obviously is the expression of fear in ordinary cases un-adapted, an organism that Darwin after suggesting the explanation by ' relics' of useful habits,—no longer useful in present circumstances,—admits the inadequacy of his explanation. It has even been thought that the fear-reactions were determined by natural selection, not for the good of the terrified species the victim—but for that of the terrifying species—the beast of prey. This would, indeed, be a bizarre product of evolution. Mosso showed that they have simply no reference to evolution: the trembling of the body, for example, in fear, is similar to the trembling which occurs when lifting a heavy weight, or when exhausted by illness: the nervous excitement prevents us from co-ordinating the movements of the many muscles involved in every—even the simplest—action, as standing, walking, speaking, etc. A man who is afraid does not see better, however widely he opens his eyes; he does not hear better, for his ears shrivel his terror and therefore, presumably, his danger. Actions which are so injurious to the organism should have been discarded in the course of evolution. But the mind, once it is adapted, more hurtful to the individual, the greater the actual danger. The more we go back into the past, the more numerous are the cases, as well as the products of evolution, but symptoms of disease, pathological forms taken by normal conditions of life.

The principle of adaptation can be applied only when we are dealing with very mild forms of fear—little more than expectation. It has no place in the expression of severe attention reflexes—the wide-open eyes, the raised eyebrows, and the frown, which Darwin interpreted as a nascent crying, but Mosso showed to be part of the act of adapting the sight to a near object. Any mental effort tends to set in play the attention reflexes, so that at all higher mental processes tend to have as their expression: the same reactions as occur in the corresponding sensory processes.
spinosus wasp which preyed upon them. But experiments show, whatever be the views with in-
sects, and higher and higher animals have no such
innate dread of particular objects. Thus there is
no congenital fear of man (Hudson, *Naturalist in 
La Plata*, London, 1892, p. 88 if.); birds crouch with
fear not merely at a hawk, but at any large
object flying over them; in Aberdeenshire, when
grouse are very wild, and are being shot over
dogs, a practice of keepers to fly a paper kite; this
has the effect of making the birds evince till the dog
is upon them. The cry of a hawk frightens, but so
does any harsh, shrill, or grating cry; blind
kittens show fear, hiss, and bristle at the smell of
them, but they do the same at any strong odour,
— such as ammonia (Lloyd Morgan, *Animal Be-

E. L. Thorndike describes experiments on the fears of chicks, corroborating Morgan's decision that "no well-defined specific
fears are present; that the fears of young chicks are of strange
moving objects in general, shock in general, strange sounds in
general." So specific reaction occurred, e.g., to the presence of
man or to the presence of a cat, unless the cat sprung upon
them, when they showed the same sort of terror as when a
basket or fountain was thrown among them. The general fear
of a novel object in motion is not present from the beginning,
but appears during the first month; this is true of the fear
of man. Among the interesting observations made is that of the
great individual differences in the degree of fear, both in the
eigenrassen, and in the process of acquiring definitions of
perception. The meek of a cat, for example, caused a great
shocking of ears or withdrawal in all others (Thorndike, *Animal Intelligence*, N.Y., 1911, p. 169). Thus,

fear, as Lloyd Morgan expresses it, "can be said to have the
same kind of consciousness to deal with, in accord-
ance with the results which are its data" (op. cit. p. 51).

However simple or however complex the fear-
consciousness may be, the reactions and, therefore,
probably the feelings themselves, are essentially
the same as those of the sensory experience—for
effort, the feeling and reaction on being clawed,
bitten, mothered, or otherwise injured (Schneider,
*Der menschliche Wille*, ch. 12). The differences
between actual pain and its reaction on the one
side, and the mental anticipation of pain in fear and its
reaction on the other, are differences only in the
extent of the muscles and organs affected, the
number of movements made, etc. In no case is

*will* concerned with the origin of the fear-reactions;
they are neither distinctly intentional, nor the
"traces," "relics," or "rudiments of ancestral" in a
well-defined sense. Experience may modify them, lead to a selection of their
objects, and to the control or even the exaggera-
tion of these movements, but it has no part in their
formation (cf. also Lloyd Morgan, 110).

In the child the first real expression of fear is
towards sudden, sharp, and unfamiliar sounds, also
to loud, voluminous sounds, and, in some cases,
even to musical sounds when first heard (J. Sully,
*Studies of Childhood*, London, 1866, p. 194). Occa-
sionally such fears do not show themselves in the
early months, until the child is a year old or more;
according to Sully, they are not to be explained
entirely by the disturbance to the nerves sensi-
tibility, but by a sort of " vague alarm at the unex-
ected and unknown": when the sounds have been
"traces," "relics," or "rudiments of ancestral" in a

way repeated, the fear disappears. The fear of
crashing, shown by all children of a few months
old, when being awkwardly carried, or later, when
first trying to walk, may be referred to the same
general cause, that situations are unfamiliar, there-
fore feel extremely uncertain. No doubt also the ex-
perience of actual falls is a contributory influence.
In the case of visual impressions, again, it is mainly
the new and strange—a new room, a strange person,
a child's first play with a familiar person, any new or
distorted form of a familiar object, a grinning,
a什么方向，the play of shadows. Feathers and fur, animals of all kinds when first seen, more
especially by animals that are dark, especially
being alone in the dark, are familiar occasions of

fear in nearly all children, although these feelings
are not developed until the child is several months
old. Many children are afraid of being alone even
by day. But in this, and in respect of every other
fear, children differ so enormously from each
other, so much depends on experience, and on the
suggestions of adults, that the idea of an hereditary
or atavistic element in child fear seems unnecessary
and even absurd. As in the case of animals, fear of
the novel, strange, startling, or disconcerting,
along with fear of what actually causes pain to the
child, gives a sufficient basis for experience to work
upon. Fears of the imagination, probably because of
the very vagueness of the imagery underlying
them, can bring up the nurse excites by her tales of "black man," "booby," ghost and
goat, ogre and dwarf, robbers and murderers in
the dark places, etc.—are of the most intense
descriptions. Children being hereditarily trans-
mitted, the above simple conditions seem sufficient
to account for the facts. The varieties observed in
children may be explained by an inherited ability in
some, which depends on experience, on the ac-
ceptation—"the same cause which makes women
more easily terrified than men, and the victim of
alcoholic or other form of nervous disease more
easily terrified than his fellow in a tense shock of
childhood, and especially in early youth, may permanen-
tly weaken the system, so that a slighter cause may produce fear or terror
than with the normal individual.

4. Theory of fear.—As is well known, these
views have led C. Lange 1 and William James 2 to
regard the feeling of fear as succeeding, not pre-
ceeding, the reactions; it is the conscious-
ness of these changes and movements as they are occur-
ing and after they have occurred—a consciousness
conditioned by sensory nerves leading from the
various muscles and joints of the body, from the
skin, and from the various internal organs to the
brain. In this "back-stroke" hypothesis, expression
precedes feeling or emotion; the reaction (the
"expression") is connected directly with the per-
cception of the object, or with the sensory elements
integrated" in the perception; further, feeling itself
cases to be a different kind of mental ele-
ment from sensation; in the last resort fear can be
analyzed, it is claimed, into the awareness of the
coldness and stiffness of the perspiration, the trem-
ing muscles, the ineffectual efforts, the dryness of
the mouth, the sinking of the stomach, the inability to see clearly, to attend

1 Uber Gesamtheitsempfindung, G. Engelmann, 1867.
or to think steadily, etc.; each of these phenomena has its reflex in consciousness, and these in their sum up the emotion of fear or fear. Thus, according to Lange (p. 40), fear has its characteristic colour from these three processes—the weakening of voluntary innervation (this by itself characterizes fear), dilatation of the blood-vessels (these two combined represent sorrow), and the spasm of the organic visceral muscles. Its diametrical opposite, from this point of view, is considered the common form of the voluntary innervation, dilatation of blood-vessels, but with inco-ordination of action added. In these various manifestations the primary are the vasomotor changes; the muscular weakness, etc., comes from the fact that the nervous system, like the skin and other organs, receives too little blood (p. 41), owing to the narrowing of the fine arteries. Fear, then, is simply the perception (or other consciousness) of certain changes in the person’s body (p. 51).

"Take away the bodily symptoms, let the pulse beat quietly, the eye be steadfast, the colour healthy, the movements rapid and certain, the speech strong, the thoughts clear—what is there left of fear?" (p. 52)

The chief evidence appealed to by both Lange and James is: (i.) the cases of fear and similar emotions existing without any adequate or conscious cause; these, however, the ordinary theory is quite competent to account for, as it is the case of (ii.) The admitted effect of such drugs as alcohol: fear can be removed by alcohol, and by its abuse fear in the most extreme form (as in dili
tium tremens, or in neurasthenic anxieties, etc.) may be produced without, in either case, the external situation offering any cause. This is because alcohol, at first and in moderate doses, excites the vasomotor apparatus, increases the frequency and strength of the heart-beat, dilates the capillary vessels, heightens the voluntary innervation, etc., while alcohol-poisoning has precisely the opposite effects. In the former case, speech and movement are easy, the subject feels warm and active, the thoughts flow freely; in the latter, speech, action, sensation, thought are all alike paralyzed: the resulting state in the one case is courage, in the other fear, and the emotions suggest objects, imaginary if no real ones can be fixed upon. The process is therefore (a) physical state, (b) emotion (its conscious reflex), (c) object, in that order of time, whereas, on the ordinary theory, the procession is from object (perception) to emotion, and from emotion to physical state (expression).

It does not belong to this article to discuss the general theory; there can be no question, however, (1) that in our own case, and in that of animals, the fear-reaction is instinctive, and attaches directly to the perception of its object; (2) that the emotion itself, of fear, is in us largely constituted by sensory and perceptual elements arising from our changed organic and muscular state; (3) there are also many associative ideas present, memories and imaginations of evil, from our own direct experience, from tradition, from analogy, etc.; but these factors alone do not account for the emotion; in itself it is (4) a mental attitude, depending in each case partly on the sensations and their feelings (pain), partly on the bodily disposition as a whole, health, fatigue, etc., partly on the make up the emotion of fear. From both these causes the lower liability to physical fear in ourselves as compared with more primitive peoples, or with our own ancestors of a very remote generation or of the Lower animals, teaches us what the modern fear has lost in intensity and in materiality it has gained in extensity, in persistence, in re- inforcement of torture. Worry is the most extreme, the common form of the two fundamental characters of intellectual and spiritual fear: one the side, the attention is held only by those sensations or percepts, those passing memo- ries, images, and thoughts which harmonize with or corroborate the emotion; the latter forms a morbid apperceptive system by which the whole outlook upon life, the colour and trend of the thoughts, is modified; on the other side, action is paralyzed, dangers, difficulties, evil consequences, uncertainties are constantly before the mind, so that the individual either does not act at all, or acts on any blind impulse that happens at a given moment to have some strength.

In diseases of the brain or of the general nervous system, whether organic or functional, the deficient energy with which the various nervous processes are carried out, the ineffective muscular action, the impaired digestion, other symptoms, the fear and anxiety, are the result of the weakened emotional vitality, of the lack of the of the emotional state, so that it is raised to the intensity and associative force of a dominant idea; in other cases such a real experience has occurred, perhaps in early childhood, but has been forgotten; yet it may be subconsciously revived by the emotion, and so draw to itself the control of thought and of action, without rising into distinct conscious- ness, except after the analysis of the dream. Superstitious fears are largely of this subcon scious type; the intensity of the fear is quite dispropor tionate to the ideas actually in consciousness. To see the baneful influence of such fears in full force, one must go to the African or Australian native. Thus, R. H. Nassau (Feticism in West Africa, London, 1894) represents fetishism as a monstrous outgrowth from natural beliefs; it is crushing the natives out of existence even more effectively than the white man’s competition, destroying independence of mind and freedom of thought among individuals; trust, even in one’s nearest relatives, has ceased to exist—there is universal fear and inse- curity; as every act has to be carefully deliberated, and all possible measures taken against evil influ ences, the result is an appalling waste of human effort, wasted time, and energy, with no hope of progress or even of escape. On the other hand, fear, especially fear of the inexplicable, of the unknown, has formed an almost universal stimulant to religious custom and belief. In the individual, especially in the race, the coming of religion—conversion—is, in a very large number of cases, as Starbuck’s analysis shows, the sequel of a longer or shorter period of intense anxiety and fear (Psy- story of Religion, London, 1894, ch. 4).
FEARlessness—FEAsting

LITERATURE.—The works of Darwin, Spencer, Moses, Sully, William James, and C. Lange, as referred to in the text; also W. McDougall, Social Psychology, London, 1911.

J. L. McINTYRE.

FEARlessness.—In the highest forms of courage (q.v.), fear (q.v.) still persists as an element; there is at least the consciousness and, therefore, the anticipation of danger. Many of the bravest soldiers have gone with trembling limbs and palpitating heart through their earlier engagements, and many a moral or religious act of devotedness or self-sacrifice has been carried out in ‘fear and trembling,’ yet is all the more highly valued on that account. Fearlessness, on the other hand, is insensibility to danger, where the natural or normal individual would be keenly conscious of it, as in a situation involving almost certain death, or loss of fortune or social reputation. It may arise from inexperience or ignorance, as in the case of an infant’s attitude to fire, or that of the Antarctic penguins to man when first approached by him; or, again, from the absorption of a strong, instinctive impulse, as when a mother-animal turns to defend her wounded young, regardless of her own danger, or as that of the sheep-dogs of S. America, described by Darwin in common, showed of extreme timidity when away from their flock, but turned with the utmost ferocity and fearlessness when back among the sheep with which they had been brought up, and which they probably regarded as their ‘pack.’ In such cases, the consciousness of numbers, as in the ‘crow,’ gives a suggestion of strength to the individual, and inhibits in his mind the thought of difficulty or danger, of possible evil consequences; a naturally timid man may under such conditions become absolutely fearless.

In such cases, fearlessness springs from a temporary absorption or concentration of the attention on one group of facts, with correlative anæsthesia for others, especially those inconsistent with the former. The intensity of absorption in its turn is explained by some primary instinct, social or individual, which is stimulated. Such a state may also be natural and permanent, as in those fortunate beings who, with a capacity for finding happiness in almost any conditions, never experience evil in their own lives, and fail to appreciate the extent of its presence in those of others: W. James gives Walt Whitman as an instance (op. cit. infra, p. 84). So in all great enthusiasts—moral, religious, and political—there are temporary reversals, drawbacks, consequences, do not enter the mind at all; or, rather, they are thought of only as one notes and avoids obstacles in walking across a room, as conditions requiring some adjustment of our action, but not in the slightest degree affecting its successful issue. Such an attitude tends of itself to compel success: confidence is increased; energy, both physical and mental, is economized; the highest possible coordination between thought and action is obtained, without any of the irresolution, uncertainty, weakness, which fear connotes. Civilization has not removed the bodily weakness and mental incapacity of animal fear, with which man has enormously extended the number of fear-objects, just as it has widened the conception of the self, to include the family, the nation, and the race. In its modern form of ‘worry,’ as in older animal forms, fear is destructive to the individual, paralyzes activity, and debases the quality of thought.

A religion which gives the sense of an Infinite Power behind the finite individual, and of infinite goodness and benevolence to all fear, to produce fearlessness, so far as the religion is really believed. Christian Science (q.v.) and other ‘mind-care’ philosophies make this their conscious aim—

to produce in the individual, whether by persuasion or by suggestion, a sense of perfect security and trust. All strain, all effort, deaths by exposure, worry, mental or to some extent, even physical fatigue, fall away, when the thought of self has been banished. The result that is claimed is a great increase not only in the happiness, but also in the efficiency, freedom, and confidence of the individual (see the chapters on ‘The Religion of Healthy-Mindedness,’ in W. James, Varieties of Religious Experience, London, 1902, p. 78 ff.; the characteristics of Saintliness, ib. p. 372 ff.; and the striking instance of George Müller, ib. p. 465 ff.).

J. L. McINTYRE.

FEASTing.—Introductory.—The custom of feasting together is a direct development of the meal partaken in common. The allaying of the pangs of hunger by food taken at more or less regular intervals has had for man very important and unexpected results. Perhaps as a result of food being prepared by the earliest mother-animal for the use of central spirits or, ultimately, of gods—the gods came to be recognized at the common meal by being presented with some of the food. Eating thus assumed a religious aspect. But, by the very fact that the meal was partaken of in common itself a bond of union between the eaters; and, since it was shared with gods, it thus obtained a sacramental character. Hence there was no more usual way of admitting a spirit to kinship than by permitting him to share the common meal. Again, since the partaking of food gave rise to pleasurable sensations, man’s social instincts suggested the sharing of these sensations, and only the abundance of food or some luxurious form of food was available. In all these ways the common meal easily passes over into the feast, in which there is a religious, a social, and a sensuous aspect, as far as savage and barbaric life is concerned, and frequently at higher levels also. In savage and barbaric life, feasting occupies a considerable place and is indulged in upon every possible occasion. The mere fact that food is abundant frequently leads to a feast in which large quantities are consumed or wasted, with the usual savage lack of forethought. The mere desire for good fellowship and for jollification may lead to a feast at which there are guests from far and near.

Such gatherings are found in the Nicobar Islands, when invitations having been duly sent out, the guests arrive bringing contributions, in the feast of ports, wine, champagne, toddy, etc. (Solomon, JAI xxvii. [1902] 201 ff.). Among the Eskimos there are festal occasions in the tribal or in the family house, when the performers and all present indulge freely in fish and berries (Bancroft, VI. 67). Among the Tasmanians there are frequent drinking feasts lasting for many days, whenever liquor is plentiful (ib. 1. 725).

In civilized society the same social instinct leads to frequent gatherings, private or public, at which the guests eat and drink and enjoy each other’s company. While the motive for these on the part of the giver of the feast may be mere display, none the less the love of fellowship is there, and the pleasurable sensations aroused also stimulate that fellowship. In this article we shall consider feasting as it occurs at different periods: birth and naming, wedding, initiation, marriage, funerals; in connexion with sacrifice; and at various seasonal festivals, including harvest.

1 Nature’s Voyage, ch. 5 (ed. 1904, p. 149).

2 Vol. V. p. 51.
1. Feasts in connexion with birth.—Children being generally regarded as a valuable asset among savages and barbaric peoples, rejoicings usually take place either before or soon after birth, often in connexion with the ceremony of naming.

Thus among the Southern Massim a feast is given when it is certain that the wife is pregnant (Seligm. Ml, ed. New Guinea, Cambridge, 1910, p. 704). Among both Hindus and housed of the Fuegians the feast takes place during the 8th and 9th, or the 7th month of pregnancy (Rose, JAI xxxiv. [1905] 277, 279). In E. Africa, when a young wife is pregnant for the first time, a great feast is held in which only women who have borne children take part (Macdonald, Afri- cana, 1882, i. 128 f.). Among the Southern Massim the untitle! cord of a first-born child is placed in the shroud of one of the leaves growing near the base of a banana. When he bears fruit, the first of a series of feasts termed sypyn is given to the child's maternal uncles, and the produce of the tree forms a part of the feast. Four or five feasts are given at an interval of a month and a half (Seligm., ed. New Guinea, 1847). At Uvea a feast is held soon after the birth of a child, in connexion with a ceremonial iustration (Ploss, Der Kind!, Leipzig, 1884, i. 258). Among the Baganda, at the name-giving ceremony, a portion of the feast is made over to the relatives of the name-giver (Roscoe, The Buganda, 1911, p. 62). The birth of twins was celebrated with much feasting, as this was regarded as a very lucky event, dancing and promiscuous intercourse being part of the proceed- ings (ib. pp. 68-72). At the baptism of the child among the Muhammadan Swahili the ceremony is ended with a feast (ZE xxxi. [1899] 67). Among the Mayas a birth was celebrated with special rejoicings, and feasts were held when the umbilical cord was cut (Bancroft, NR ii. 679). Similarly the Nahuas held a feast a few days after birth, while during the baptism of the child the festivities lasted 20 days, and open house was kept by the parents (ib. 270, 276). American Indian tribes usually celebrate name-giving with festivities. Thus the Pottawatomies make a great feast, inviting numerous guests by sending a leaf of tobacco or a small ring (de Smet, Voyages, Brussels, 1573, p. 395). On the occasion of the birth of a child among the Puna Musalmans, friends are invited to feast on the goat offered as a sacrifice, the parents, however, always invite their own relatives (Campbell, Notes on the Spiritual Basis of Belief and Custom, Bombay, 1885, p. 410). Among the Chinese, when the ceremonial of shaving the child's hair takes place at the end of the 1st month, a feast is held to which neighbours and relatives are invited (see ERE ii. 649). At the amphidromia celebrated by the Greeks on the 5th day after birth, banquets were held for the assembled friends and relatives (Pliny, in Ath. 370 D), and on the tenth day, at the name-giving ceremony, festival banquets were also held (Aristoph. Birds, 494, 922 f.; Eurip. Elect. 1192, fr. 2). In Burma, a fortnight after birth, a feast was given by the relatives of the child and a feast is prepared for all the friends and relatives (Monier-Williams, Buddh. Journ., London, 1889, p. 353). Among the Tibetan Buddhists the name-giving ceremony con- cludes with a feast (Köppen, Rel. des Buddh., Berlin, 1857-59, i. 320). Muhammadans celebrate a birth with great feastings and rejoicings, the father entertaining his friends, usually on the seventh day or on several successive days after a birth (Lane, Arabic Society, 1893, p. 187, Modern Egyptians, 1846, iii. 142 f.). In modern times and in Christian countries the festival gathering of relatives and family friends at a baptism is an asset, and contnues these feasts of ethical races.

2. Initiation feasts.—Initiation being an import-
part of the elaborate ceremonial of marriage consists in the bridegroom's kin bringing many pigs to the bride's folk, who supply a large quantity of fish and fowl upon which the feast is made. With the Southern Massim the kin of the bride and bridegroom exchange presents of food, upon which they feast, the young couple, however, not partaking. This constitutes the bringing married (Seligmann, 271, 504). In Fiji the feast, provided by the bridegroom, was an indispensable part of the ceremony, and was followed by the bridegroom taking a bath (Bancroft, 202). In New Britain, three days after the bride was taken to the man's house, a feast called Wauvonin, 'giving to drink,' was held, the friends of the pair exchanging pigs and comfits. Three days later a more elaborate feast was held.

It consisted mainly of a large dish of tare and coco-nut milk, and of baskets of puddings, almond nuts, chestnuts, bananas, etc. These were arranged in a line, with bundles of food brought by separate individuals. The guests marched round these, and the chief broke a coco-nut over the heads of the pair. Food was then interchanged, the large dish of tare being kept for the second day (Brown, 115 ff.).

In Florida (Melanesia), after the bride has remarried to her first husband, in the house of her father-in-law, her parents bring presents of pigs and other food there, and a feast is made upon this. Neither bride nor bridegroom partakes, but after the feast is over, for now he is married (Dlodrinton, 238). Among the Yornbas, a marriage feast is held at the house of the bridegroom's parents, the bride's parents taking no part in it. There is much merrymaking, and the feast is preceded by dancing (Field, Peoples, 1894, p. 154). Among the Baganda, after the consummation of marriage, the bride visited her own people, who gave her presents of food. Next day she cooked a feast for her husband, who called together his friends to share in it, the first meal prepared for him by his wife (Roscose, 91). With various S. African tribes, marriage is the occasion of a great feast and dance for the friends, neighbours, and retainers. One head of cattle must be killed, or the marriage would be disputed. Beer and milk also form part of the feast (Macdonald, 2JAI xix. (1896) p. 271). Among the Stomatans (Lillooet) of British Columbia, when the bridegroom is conducted by the elders of the bride's family to sit by her, a feast follows at the house of her people. A few days later, the parents of the bridegroom visit to the house of the bridegroom, when another feast takes place (Tont, 2JAI xxxv. (1905) 131 ff.). With other American tribes, feasts and dances had a prominent place at marriages (Lancort, N.E. I. 350, 515, and passim). The Araunanos held a feast three days after the bride was taken home, to which relations of both the young people came (Lachalm, 2JAI xxxix. 359). In higher civilizations the marriage feast still plays an important part. With the Aztecs a banquet shared by all the relatives and friends, but in which the wedded pair took no part, concluded the ceremonies; and among the Mayas a great feast, with lavish quantities of food and wine, was an essential part of the proceedings (Lancort, ii. 238, 608). In ancient Babylon, the marriage day ended with a feast in which the families of bride and bridegroom and numerous guests participated (Maspero, Dawn of Civilization, 1901, p. 735). Feasting and merriment on a most extensive scale are a necessary part of all Hindu marriage ceremonies. Among the aboriginal tribes, e.g. the Gonds, the wedding feast is equally important, and is characterized by much drunkenness and licence (Monker-Williams, Rel. Thought and Life in India, 1883, p. 398 ff.; Hopkins, Rel. of Four Great Religions, 117 ff.). In modern Buddhism, the principal ceremony of marriage is a feast which is given by the bridegroom or the parents. To this all relatives, priests, and neighbours are invited.

There is no more obvious ceremony than the feast. Among Muhammadans in Egypt, the bridegroom's feast his friends, once or oftener, before the wedding. Feasts also take place on the night before the nuptials and on the wedding night; and, according to the character of the feast, it may be incumbent duty, the second day's a sunnah ordinance, and the third day's for ostentation and notoriety. Feasting also takes place on the seventh and fortieth days after marriage (Lane, Modern Egyptians, i. 208 ff., iii. 141 ff., Arab. Soc. 232 f.). Among Indian Muhammadans also the festivities precede and follow marriage (Hughes, DFJ, 315). Among the Greeks the wedding feast (thyiaos) took place after the procession to the bridegroom's house, and it formed one of the most important parts of the proceedings, as there was no civil or religious ceremony. Women as well as men took part in it, though the women sat at a separate table. The bride was then conducted to the nuptial chamber. Among the Romans, after the bride arrived at the bridegroom's house, he gave a feast to the guests, which sometimes, was the second or even a third, a most elaborate and prolonged character, affording an opportunity for display and for gadding. It is also customary to renew them at intervals after a death, or on the anniversary, or there may be a yearly feast, the tossoi (Greek Peop., II. xxii. 52 ff.). Among the Egyptians, also, it was a custom to renew them at times of special rejoicing (see ÈRE iv. 434 ff.; Seligmann, passim; Brown, 201; Roscoe, 120 ff.; Seligmann, The Vedas, Cambridge, 1911, p. 130).

Wenef (Ethics, I. 141) has shown that the reason sometimes alleged as the origin of these feasts—viz. the custom of giving food to all who attended the funeral as a compensation for their trouble in coming, this passing over into a duty and often becoming a means of ostentations display—does not really explain their origin. There is no doubt that the feasts originated out of a desire at once of profiting and of holding communion with the dead by means of the food which they were now supposed to share with the living. Hartland has argued that the feasts in which the mourner's dead is with the dead kinsman are a natural transformation of the communal meal upon the dead (LP. ii. 278). Although this is not unlikely, yet, where food was offered to the dead and shared by the living, the practice would originate and exist independently of the cannibal meal.

Among higher races the funeral repast is also found. In Egypt, during the long interval which often elapsed between the death of the king and the funeral, feasts were held in honour of the dead (Wilkinson, Manners and Customs, ed. 1878, iii. 432). In Babylon the monthly offerings to the dead formed also the material of a meal by which the living had communion with them (see ÈRE iv. 445). Among the Greeks a funeral repast (repediavros) took place in connexion with the rites of burial, those who took part in it regarding themselves as guests of the dead (Lucian, de lootis, 524; Artemidor. Enecn, v. 82; II. xxii, 52 ff.). The anniversary of a death was celebrated by a repast or feast (seyxeta, seyseveta) as well as in other ways. The Romans ate a funeral repast at the tomb, the allimentum, and a banquet in honour of the deceased was held at the house, the cena funeris. Memorial feasts were also celebrated during the Parentalia, the family festival of the cura cognati and cura series. The fourth day, the dies natalis, was considered an anniversary of a death, and at other times. In China the food placed before the dead man is eaten by the family, and after the funeral the food which has been placed by the mother of the dead or by the family is again cooked and eaten. The feast is known under the name of the funeral repast. Subsequently, funeral feasts are also held (de Groot, Rel. System of China, Leyden, 1892 ff., i. 118, and passim). The ancient Teutons celebrated great funeral banquets (exod, or 'heir beer') in which the noble and the chief were especially invited to participate, and at which the hero entered.
FEASTING

on his inheritance (de la Saussaye, Rel. of the Tentons, Boston, 1902, p. 301). Among the Burmese, great feasting goes on in the house for the benefit of the corn spirits and other divinities (cf. Waddell, Buddh. of Tibet, 369). In Tibet the relatives and friends are entertained during the funeral rites with much food, beer, and ten—a species of ‘wake’ at which the dead man’s relatives joined in a feast. A year after the original feast is held (Waddell, Bud-
dhism of Tibet, 1895, pp. 491–98). In modern Europe, memorial feasts for the dead occur sporadically among the folk (Yorks, P. 35 ii. 37), and a meal is often partaken of by the relatives after a funeral, but, this, however, having now little ritual significance. See also Ancestor-worship, Communion with the Dead, Death and Disposal of the Dead.

5. Sacrificial feasts.—Whatever be the origin of sacrifice, the custom of the worshippers feasting upon part of the offering is wide-spread. The feast has a religious aspect, whether we regard it as an actual eating of slain divine victims, or as eating, through the medium of the priest, a part of the offering which has acquired a sacramental character. The Vedas of Ceylon make offerings of food to the spirits of the recently dead, and then eat the offerings as an act of communion with the dead. (cf. Bigsby, 1891, i. Florida) As a public sacrifice some of the food was presented to the tindalo, and the remainder was eaten by the sacrificer and the assistants (Cordrington, 131). In Fiji the gods were supposed to eat the ‘soul’ of the offering, the wor-
shippers consuming the substance of it (Williams, Fij., 1858, i. 231). In Samoa, men partook of the offerings to Tanaalga, god of the heavens, women and children being excluded. Other sacrificial feasts in the cult of Taismalie, for which all kinds of food were prepared, only the family of the priest partook (Turner, Samoas, 1884, pp. 53, 57). Among the Tais, after a human sacrifice to the river-gods, a bullock was killed and divided among the inhab-
habitants of the village (Ellis, Tese-speaking Peoples, 1887, p. 66). Among the Baganda the owner of a fetish often sacrificed a fowl to it, dropping the blood upon it. The bird was then cooked and eaten by him and his friends in presence of the fetish (Roscoe, 329). The Zulus feasted on the black cattle sacrificed to the sky-god when war was required. (Callaway, Rel. System of Amazons, 1884, p. 29). The Patans sacrifice a goat, fowl, and cakes to the Earth-goddess, the males and unmarried girls eating the flesh (Crooke, P.B., 1890, i. 32). The ancient Peruvians at the great festival of the solstice feasted on boiled grains which were then offered sacrifi-
cially. Much wine was also consumed, and the feast was closed with music and dancing (Prescott, Hist. of Conquest of Peru, 1890, p. 51). Herodotus describes a sacrifice of a pig to the moon in Egypt. Part of it was consumed by fire and the remainder eaten by the worshippers (ii. 45). At the festival of Ihsis an ox was sacrificed, and the parts which were not burned were eaten by all present (Wilkin-
on, iii. 376). Among the Zulus the sacrificial feast was well known. Indeed, every meal had a sacrificial aspect, and there, as elsewhere, feast and sacrifice were almost synonymous terms (cf. Athen. vi. 19). Part of the victim was burned on the altar, the remainder was cooked and formed part of the sacrificial feast, the ἔδεικνυα δᾶσ. These feasts were often occasions of great indulgence (Diog. Laert, vi. 7: Life of Dio.

1 Cf. the excellent remarks of Ames, Psych. of Rel. Experi-
tence, Boston, 1910, p. 122 f.

Among the Romans, when the extra of the victims had been burned on the altar, the remainder was eaten in a feast with bread and wine by the wor-
shippers, or by the priests and senarii (Wissowa, Rel. and Cultus der Römer, Munich, 1902, p. 335 f.). In the cult of Mithra the sacrificial repast had also a prominent place (Cumont, Myst. of Mithra, Chicago, 1913, p. 160).

The ancient Tentons in sacrificing animals offered only the exuvice to the gods, and a great feast on the flesh followed. On great occasions much cattle was slaughtered, and many people assembled to take part in the ceremony, bringing food with them, and feasting and drinking together, feasting the gods and each other. Here, also, the gods were conceived as sharing in the feast with the worshippers (Vigfusson-Powell, Corpus Poet. Boreale, Oxford, 1883, i. 404; Grimm, Tent. Myth. 1822–88, p. 46 f.; de la Saussaye, Rel. of the Tentons, 368 f.). In India in Vedic times, while the gods were supposed to eat the flesh of the slain cattle, many people were allowed to eat the offering, but, as in the cult of Sita ál, the gods having partaken of the essence of the food and so consecrated it (Waddell, 343). Sacrifices of animals are made on mountain passes, and those present dine off the flesh with much singing and dancing (Lander, In the Forbidden Land, 1898, ii. 38). In many of these instances the feast upon sacred food is pre-
pared for by propitiatory and other ritual customs, e.g. by fasting (q.v.).

6. Seasonal feasting.—Among the lower races, with whom, as with higher races, the regulation of the food supply is of the highest importance, the periods connected with sowing, ingathering, the opening of the hunting season, etc. are times of rejoicing, in which after hard work it is natural for them to partake in feasting cele-
brated with divine influences, feasting has a promi-
tant place. Man feasts with his gods. But, besides these, other seasonal occasions are also celebrated with feasting, e.g. the appearance of the new moon, the recurring festivals of diversities, etc. The Abipones celebrated the reappearance of the Pleiades with great rejoicings, ceremonial dancing, and feasting (Dobzhansky, The Abipones, 1922, lii. 224). The people of the southern Shantands group (Kiska Islands) held a festival called Vlote when the Pleiades appeared at the nutting season (Brown, 210). Among the ancient Mexicans, at the end of each cycle of the Pleiades (i.e. the four points across the zenith—the sign of the endurance of the world for another period of 52 years)—was the occa-
sion of great rejoicing, eating, and drinking (Bancker, NZ li. 394 f.). Among the Southern Massas in a great feast was held during the south-
east monsoon. For this enormous quantities of food were prepared and distributed among all present (Seligm. 534). In Mysore the appear-
ance of the new moon was the signal for a great feast in honour of deceased parents (TES, new ser. viii. 1895) 96). The Yorubas also feast when the new moon appears (Ellis, 82). The Baganda
FEASTING (Hebrew and Jewish) 805

celebrate a feast lasting 7 days, at each new moon, in honour of the python god, the people feasting and day by day and night (Roscoe, 322). Similarly many American Indian tribes held a feast with sacrifices at the beginning of the hunting season, at which all the victims must be eaten (Tanner, Narrative of Captivity, New York, 1830, pp. 195, 257; Scholoof, Indian Tribes, Philadelphia, 1833-6, iii. 61). But most general is the feast that at such firstfruits are either offered to spirits or divinities, or solemnly eaten by priest, chief, or people. Until this is done no one may eat of them, but then follows much feasting and merriment. A few examples of this will suffice. The tribes of the Niger celebrate the yam harvest by a feast to which every one contributes a fowl (Parkinson, JAI xxxvi. (1906) 319). The Yoruba at the yam harvest celebrate a festival in honour of the god of agriculture. All partake of the new yams, and quantities of vegetable foods are cooked and set out for general use (Ellis, 78). In Fiji great feasts take place at the time of the presentation of the firstfruits of the yams to the ancestral spirits (Fison, JAI xiv. (1884-85) 27). Among the Jakan of the Malay Peninsula there is an annual feast at harvest when, besides dancing and singing, much eating and drinking take place (Petrie, 1898, p. 160). The Dayakys hold a festival when the pudding is ripe. They place the firstfruits on an altar, dance and feast for two days, and then get in their crops (St. John, Forests of the Far East, 1863, i. 191, and S. B. Scott, 'Harvest Festivals of the Land Dayakys', JAOS xxix. (1908) 236-290). In Celebes at the time of the new rice, fowls and pigs are killed, and some of the flesh and rice and palm-wine is given to the gods. Then the people eat and drink together (Graafland, Die Minahassa, Rotterdam, 1889, i. 165). Turning to American Indian tribes, we find that the Seminoles at the 'Green Corn Dance,' having prepared themselves by fasting, ate sacramentally of the new corn, and then enjoyed a great feast (MacCauley, & BBEW (1887) 522 f.). The Natchez at their harvest festival, which was solemnly observed with fasting and offering of the first sheaves of the maize, concluded their rites with a great feast (Chateaubriand, Voyage en Amérique, Paris, 1860, p. 136). In India the Hos held a Saturnalia when the granaries are full, sacrificial oxen were slain, the dead were commemorated, and feasting and drinking follow (Dalton, Deos, Ethnol., Calcutta, 1872, p. 196 f.). The hill tribes near Rajmahal held a thanksgiving festival, which was solemnly observed by eaten and sacrifice made. The ceremony concludes with drinking and festivity for several days (Shaw, Asiatic Res. iv. (1765) 56 f.). Similarly, the Japanese held a festival of firstfruits of the rice, followed by feasting in holiday dress, songs, and dances (Aston, Skinto, 1905, p. 277).

Among the lower races, festivals of the gods are sporadically found, of which one great incident in feasting. The Elema tribes of the Papuan Gulf held tribal feasts for eating, drinking, and merrymaking, associating with these one or more tribal gods (Holmes, JIAI xxxix. 427). In Samoa, annual feasts were held in honour of the gods (Brown, 229). The Yoruba held such annual festivals, e.g. one in honour of Oro lasting for 3 months, at which the men feasted on dogs and fowls (Ellis, 111). At one held in honour of the snake, and another in honour of the sun, both of a locustian and banchuanian character (Hopkins, 227 f.). Many such annual festivals were held in Mexico, all of them being occasions for great feasting, and drink were consumed, and much licence occurred (Bancroft, li. 341, 347, 390, and passim).

In the higher religions the many recurrent festivals of divinities are usually the occasion of feasting. Men honour the gods; and, feeling themselves on good terms with them, they rejoice before them—the rejoicing being both testified to and stimulated by a large amount of food and drink. See artt. on FESTIVALS AND FASTS.

Thus in most religions, from the lowest upwards, festival occasions are signalized by the consumption of food and drink, and the feasting at firstfruits are either offered to spirits or divinities, or solemnly eaten by priest, chief, or people. Until this is done no one may eat of them, but then follows much feasting and merriment. A few examples of this will suffice. The tribes of the Niger celebrate the yam harvest by a feast to which every one contributes a fowl (Parkinson, JAI xxxvi. (1906) 319). The Yoruba at the yam harvest celebrate a festival in honour of the god of agriculture. All partake of the new yams, and quantities of vegetable foods are cooked and set out for general use (Ellis, 78). In Fiji great feasts take place at the time of the presentation of the firstfruits of the yams to the ancestral spirits (Fison, JAI xiv. (1884-85) 27). Among the Jakan of the Malay Peninsula there is an annual feast at harvest when, besides dancing and singing, much eating and drinking take place (Petrie, 1898, p. 160). The Dayakys hold a festival when the pudding is ripe. They place the firstfruits on an altar, dance and feast for two days, and then get in their crops (St. John, Forests of the Far East, 1863, i. 191, and S. B. Scott, 'Harvest Festivals of the Land Dayakys', JAOS xxix. (1908) 236-290). In Celebes at the time of the new rice, fowls and pigs are killed, and some of the flesh and rice and palm-wine is given to the gods. Then the people eat and drink together (Graafland, Die Minahassa, Rotterdam, 1889, i. 165). Turning to American Indian tribes, we find that the Seminoles at the 'Green Corn Dance,' having prepared themselves by fasting, ate sacramentally of the new corn, and then enjoyed a great feast (MacCauley, & BBEW (1887) 522 f.). The Natchez at their harvest festival, which was solemnly observed with fasting and offering of the first sheaves of the maize, concluded their rites with a great feast (Chateaubriand, Voyage en Amérique, Paris, 1860, p. 136). In India the Hos held a Saturnalia when the granaries are full, sacrificial oxen were slain, the dead were commemorated, and feasting and drinking follow (Dalton, Deos, Ethnol., Calcutta, 1872, p. 196 f.). The hill tribes near Rajmahal held a thanksgiving festival, which was solemnly observed by eaten and sacrifice made. The ceremony concludes with drinking and festivity for several days (Shaw, Asiatic Res. iv. (1765) 56 f.). Similarly, the Japanese held a festival of firstfruits of the rice, followed by feasting in holiday dress, songs, and dances (Aston, Skinto, 1905, p. 277).

Among the lower races, festivals of the gods are sporadically found, of which one great incident in feasting. The Elema tribes of the Papuan Gulf held tribal feasts for eating, drinking, and merrymaking, associating with these one or more tribal gods (Holmes, JIAI xxxix. 427). In Samoa, annual feasts were held in honour of the gods (Brown, 229). The Yoruba held such annual festivals, e.g. one in honour of Oro lasting for 3 months, at which the men feasted on dogs and fowls (Ellis, 111). At one held in honour of the snake, and another in honour of the sun, both of a locustian and banchuanian character (Hopkins, 227 f.). Many such annual festivals were held in Mexico, all of them being occasions for great feasting, and drink were consumed, and much licence occurred (Bancroft, lii. 341, 347, 390, and passim).

1. The great prominence given in the OT to the idea of religious joy is attested, not only by the stress frequently laid on it in the sacred texts, but also by the series of Hebrew words (םז, שז, מז, מז, מז, מז, מז, מז, מז) employed to express the various gradations of rejoicing. For it is clear that, where there is a full appreciation of the different degrees of any given sensation, the terms be

2. The few exceptions to this wholesome restraint, e.g. the habit of copious drinking at the Feast of Purim (see, e.g., Abraham, Jason and the Greeks in the Middle Ages, 1898, pp. 305, 320), do not, as a rule, involve more than venial shortcomings.

The Reformed Church in North America—Theological & Historical Library—William J. B. Kelso—FEASTING (Hebrew and Jewish).—Religious joy characteristic of Judaism.—The underlying higher motive for feasting among the ancient Hebrews and pious Jews of the Diaspora down to the present day is religious joy of one degree or another. The occasions of rejoicing may range from celebrations of universal import, such as the ingathering of the harvest, to more or less private family reunions, as at a wedding or the weaning of a child; but the motive of religious joy is to the pious Jew the golden thread that runs through all his seasons of cheer and gladness. It is possible for this high motive to rest on a lower motive, as for instance, the case at the making of the golden calf, when 'the people sat down to eat and drink, and rose up to play,' or perhaps 'to make merry' (Ex 32). But even so a religious element would remain, however eaten and sacrifice made. The ceremony concludes with drinking and festivity for several days (Shaw, Asiatic Res. iv. (1765) 56 f.). Similarly, the Japanese held a festival of firstfruits of the rice, followed by feasting in holiday dress, songs, and dances (Aston, Skinto, 1905, p. 277).

Among the lower races, festivals of the gods are sporadically found, of which one great incident in feasting. The Elema tribes of the Papuan Gulf held tribal feasts for eating, drinking, and merrymaking, associating with these one or more tribal gods (Holmes, JIAI xxxix. 427). In Samoa, annual feasts were held in honour of the gods (Brown, 229). The Yoruba held such annual festivals, e.g. one in honour of Oro lasting for 3 months, at which the men feasted on dogs and fowls (Ellis, 111). At one held in honour of the snake, and another in honour of the sun, both of a locustian and banchuanian character (Hopkins, 227 f.). Many such annual festivals were held in Mexico, all of them being occasions for great feasting, and drink were consumed, and much licence occurred (Bancroft, lii. 341, 347, 390, and passim).

1. The great prominence given in the OT to the idea of religious joy is attested, not only by the stress frequently laid on it in the sacred texts, but also by the series of Hebrew words (םז, שז, מז, מז, מז, מז, מז, מז, מז) employed to express the various gradations of rejoicing. For it is clear that, where there is a full appreciation of the different degrees of any given sensation, the terms be
a strong and fully realized sense of its presence. A mere glance at the rows of passages given in the HEBREW BIBLE shows how the words of the words named will be sufficient to impress the mind with the prevalence of the idea of religious joy in the Hebrew Canon, but it will be useful to refer here especially to such typical passages as the following:

"Ye shall rejoice before the Lord your God seven days" (Lv 23:9; Feast of Tabernacles): 'Serve the Lord with rejoicing, come into his courts with dances (Ps 100:1): 'To keep the dedication with gladness, both with thanksgiving, and with singing, with cymbals, psaltery, and with harpe' (Neh 8:10).

In later times, it will be remembered, set itself to discourage all gloomy brooding on a shadowy hereafter in Sheol, and all the unmeaning and disquieting practices that were connected with such brooding, and placed before the people instead the ideal of a life of brightness, plenty, and holy rejoicing. Some special illustrations of the continuance of the same cherished idea among the Jews of later times will be found in § 2, and the reader will do well to consult the article 'Preced, in the HEBREW BIBLE (when a number of Talmudical references bearing on this topic will be found), besides the various articles in the JE to be referred to later. The marked development of the idea of the hereafter among the Jews of post-Biblical times, which had, indeed, a tendency to grow and to acquire a strong ascetic tendency in some members of the race, but the bulk of the nation and the majority of its leaders remained faithful to the old idea of a life of joy; and, as the later Jewish doctrine of the future life was—towards of a cheerful disposition, at any rate—centred in the thought of torment or of a shadowy Hades, but rather in a life of bliss for the good under the wing of Jehovah, they found no contradiction between the newly developed idea of the life to come (נין לארשי) and the ancient Divine command to rejoice in the present (גא יב). They, indeed, gave themselves earnestly to fasting and mourning on the days specially set aside for that purpose, but the dominant tendency of their mind remained one of hope, and of the readiness to rejoice which accompanies hope. It is even correct to say that one effect of the many sufferings and persecutions which the Jews had to undergo was to heighten the relish of religious joy on every possible occasion. The Ghetto is generally thought of only as a place of depression and gloom, a kind of mediaval Jewish purgatory, but it had its bright side as well. In their secluded homes, their synagogues, their convivial gatherings, their Sabbaths (when capacity for enjoyment increased by the bestowal of a חס כה, i.e., additional soul), and more particularly their festival rejoicings, they found a welcome refuge from the many ills that beset them in the world around. The inwardness of the people, the great love that they had for their nation, as well as their love of ease and good cheer, had a tendency to grow with the dangers, the continual, and the suspicions that fastened on them so readily from without.

2. Occasions of feasting.—A brief survey of the chief occasions of feasting, additional to those of festivals proper, may be fitly grouped under (a) special celebrations that were in vogue during the second Temple period and partly carried over into the pre-Exilic times; and (b) seasons of rejoicing: largly observed down to the present day, partly celebrated in continuation of customs prevalent in OT times, and partly dating from later times. The feastings that

1 As one of the best illustrations of the prominence given by the Jews to the idea of life's joy, even in seasons of highest seriousness, may be given the custom of wishing the minds of Jewish young men to thoughts of matrimony (see Bah. Ta'amith, 599; Bab. Bathra, 1119).

was customary at the reunion or parting of friends (e.g. Gn 29:6), at a time of sheep-shearing (I S 3:20, 3:15; 2 Chr 29:3), or at a festival following the bringing of the Ark (2 S 6:6, 1 Ch 15:29), when David 'danced before the Lord with all his might,' need not be included in the list chosen for special treatment.

(a) First to be noted under this head are the processions from the provinces connected with the conveyance and presentation of the firstfruits to the Temple priests at Jerusalem, in accordance with the ordinance contained in Dt 26:1-11 (v. 2). They shall rejoice in all the good,' etc.). This semi-festive religious observance no doubt goes back to very early times, and has its parallels in the customs of other nations (see HDB, art. 'Firstfruits').

The time during which the presentations could be made extended from the Feast of Weeks or Pentecost to the Hasmonean Feast of Dedication (in the month Kislev [December]) see Bikkurim, and cf. Philo, de Festo Copitani, and Jos. Ant. v. viii. 22).

A much greater degree of rejoicing characterized what is commonly known as the Water-feast, which was celebrated during the nights of the Feast of Tabernacles. According to St. John (v. 10) account of these additional festivities will be found), a person who has not been present at these celebrations 'has never seen joy.' The real character of the festivities is still a matter of dispute. Geiger (Lehrbuch dein. Talmud, Breslau, 1872, viii.) translates it by 'Fackel,' (torch') and others consider the torchlight procession to have been its principal feature. Herford and Venetianer (see Lit. at the end of the article) have respectively advocated a connection with celebrations in honour of Dionysus and with the Eleusinian Mysteries. The extraordinary effort of a chief like Simeon b. Gamaliel I. to amuse the people on these occasions by personally engaging in a grotesque dance with eight lighted torches in his hands (Bab. Sukkot, 53a) would seem to favour the idea that he had a particular reason for diverting the attention of the populace from the undesirable associations of such festivities. The purpose of giving a higher sanction to an originally pagan celebration may also be discerned in Midrash Rabba on Gn 29:9 (ch. Ixx. § 0), where the institution of this rite is made to signify the bestowal of the Holy Spirit (cf. Eph 5:18), and where also the well-known suggestion of a connexion with the 'rivers of living water' of Jn 7:39 is referred to.

Special mention must also be made of the thirty-five days ennumrated in Megillath Ta'amith (original text begun in the 1st cent. A.D. and completed in the 2nd), on none of which public fasting was allowed, whilst on the most important of them public mourning was also prohibited. The first of these days was the 5th of Nisan, on which certain Pharisaic statutes were carried in opposition to the Sadducees; and the last date was the 28th of Adar, when news of the close of the persecutions instituted by Hadrian arrived. There is a distinct religious flavour about these half-festive occasions and the entire tone of Megillath Ta'amith.

(b) The second part of this survey appropriately begin with the question of birthday celebrations among the Jews. There is no clear reference to such celebrations among the ancient Hebrews in the OT. The mention of the 'day of our king' in Hos 7:5 may quite naturally be taken to refer to the anniversary of the king's accession to the throne, and the other passages quoted in JE iii. 221 are still less decisive. The only clear reference to a birthday festivity in the OT is found in Gn 40:18. 

1 The occasion of the feasting referred to in Job 14:16 is not clear. As the seven days appear to have been consecutive, they could hardly have been birthdays.

2 On Job 14:2 see the preceding note.
FEBRONIANISM

The birthday celebrations in the Herodian family (see Jos. Ant. xix. 7; Mt 14) were, no doubt, an imitation of Great Pyramids. One can say of Jewish feeling that it in mediaval times is that the birthday celebration of a private person among pagans lay under a minor kind of ban, its connexion with idolatrous worship not being considered pronounced enough to warrant the cessation of all business connexion with the pagan concerned for three days preceding the festivity, so that the ban lay only on the day itself (see Maimonides, Mishneh Torah (Cov. rep. 27, m. ch. ix.), in modern times, however, Jews very largely adopt the custom of birthday celebrations from their neighbours.

The circumcision feast, which was celebrated by banquetting in Talmudic times (see JE ii. 496), had, of course, a profoundly religious significance; but the attempt of the Rabbis to refer the institution of such feasting to Abraham (see JE, loc. cit.) rests on a basis such as it is no question of banqueting on the occasion of a circumcision in the OT.

The weaning of an infant, on the other hand, which apparently took place at the end of the 2nd or 3rd year of the child's life (see Gn 21, 6), is said to be a time of sacrifice in early times (see Gn 21, 6, weaning of Isaac; 1 S 2, 20, weaning of Samuel). The reason for the celebration was, no doubt, the entrance of the child on a more independent and more vigorous existence, but under the influence of Yahweh all such thoughts were permutated by a strain of genuine religious joy.

An occasion of festivity, the mere title of which suggests its religious character is that of bar-mitzvah ('son of commandment'), a term denoting a youth who has completed his thirteenth year, and thus enters on a life of religious responsibility. On the first Sabbath in his fourteenth year the youth is for the first time in his life called up to read a portion of the Torah, and sometimes also the prophetic section entitled the Hafstarah. A family feast, to which the teachers of the youth as well as friends are invited, and at which religious addresses are delivered by the bar-mitzvah himself and others, is the natural accompaniment of this institution. The oldest Rabbinical reference to the idea underlying the institution is found in Pirke Aboth, where it is declared liable to observe the commandment at the age of thirteen (מן שבעה), although the name bar-mitzvah itself appears to be of much later origin (see JE ii. 50). Any young man, according with the doctors of the Law, when only twelve years of age (Lk 2:40-41), has been brought into relation with the same idea. In Morocco a boy becomes, in fact, bar-mitzvah when he has passed the age of twelve years (JE, loc. cit.).

On the subject of festivities connected with betrothal (in the old Jewish sense of a ceremony of so binding a character that only divorce could dissolve it) and marriage (i.e. the home-taking of the bride), only one remark need here be made. Although the Jewish contract of marriage is a purely civil one, in the sense that the presence of a Rabbi and its ratification in a synagogue are unessential, yet the occasion is one of profoundly religious import. Marriage being a Divine ordinance, and the procreation of children a sacred duty, wedding festivities may in the nature of things also bear a deeply religious character.

A minor occasion of sacred holiday-making in old-fashioned Jewish circles, and more particularly among young students of the Talmud (hence called 'Scholars' Festival'), is Lag b'Omer, i.e. the thirty-third day of the Passover, when a slice of the firstfruits was brought as a 'heave-offering' (Lv 23:41). The exact reason for the festivity is lost in obscurity (for some Rabbinical guesses, see JE ix. 400); but some kind of union with the progress of agricultural operations appears to follow from its dating after the heave-offering at Passover time; for, as has already been intimated, religious joy has in the Jewish mode of thought generally been associated with such occasions from early times.

Worthy of mention are also the various local Purim feasts, celebrated in imitation of the Biblical Purim, or Feast of Esther, on anniversaries of delivery from great calamities (see JE, loc. cit.). The best-known of these is the Purim of Cairo, annually held in that city on the 28th of Adar, in commemoration of their escape from the dangers that threatened the Calernre Jews in 1524 at the hands of Ahmad Shaitan Pasha (see JQR viii. [1890-96] 274-288, 511 f.). The reading of a Megillah, written in close imitation of the Book of Esther, forms the central part of the religious observance. For a list of similar celebrations (including that of Frankfurt) in occasion as that of the Purim of Padua, which is held in commemoration of the extinguishing of a great fire in 1750, see JE, art. 'Purims.'

See also artt. FESTIVALS AND FASTS (Hebrew) and (Jewish).

LITERATURE.—In addition to the original texts and the various works already named, the reader should consult J. Hochman, Jerusalem Tempel (London, 1880), P. L. Oppenheim, 'Purim and the Firstfruits'; II. 'The Water-Feast.', L. Herzfeld, Gesch. des Volkes Israel im Exil (Berlin, 1871. ii. 136; 'Die einlaufen. Mysterien im jers. Tempel,' in Brüll's Populärwissenschaftliche Bibliothek, 1887, pp. 121-125, 128-129, for theories on the Water-Feast. Among the editions of Megillah in Hebrew is that of Neubauer in Medieval Jewish Chronicles, i. (Amsterdam Grseco-Roman, Semitic Series, vol. 1, p. iv.), and a full account of the work is given in Hamburger, Reisenep. des Juedenraums i, Leipzig, 1866, Supplementband, p. 104-125. On other topics, see JE, cit. on 'Buonacori,' 'Hetzer,' et al.

G. MARGOLOUTH.

FEBRONIANISM.—The system of Church government defended by Honthem, auxiliary Bishop of Trier in the 18th cent. under the pseudonym 'Justinus Ferbonius.' It is the German form of Gallicanism with an Erastian colouring; it had a general currency at the time of the religious decay during the early 19th cent., and was not finally expelled from the Roman Catholic Church till the Vatican Council in 1870.

1. Life of Honthem.—Nicholas von Honthem was born of a distinguished family at Trier on 27th Jan. 1701. His father and most of his relatives were officials in the service of the Bishop-Electors. He began his studies at the Jesuit college at Trier, and continued them at the universities of Trier, Louvain, and Leyden. When he was 12 years old, he was tonsured and received a canon's stall at the collegiate church of St. Simeon in his native city. At Louvain he came under the influence of Van Exem. He took his degree in law in 1724, travelled in Belgium, Holland, Germany, and Italy, and was three years at the German College at Rome, was ordained priest at Trier in 1728, and taught Canon Law in the university from 1728 to 1738. From 1728 to 1747 he was 'Official' (agent) of the Elector at Coblenz, and Director of the Seminary there. In 1747, after having ever been absent from literary work, he retired to his monastery at Trier. As the Elector (Pfalzgraf zu) in 1747 appointed him auxiliary Bishop in place of the one who had just died. He was ordained at Mainz on 13th May 1749, with the title Bishop of Myrhopphus (hitherto an auxiliary bishopric) and exarch, and he became Inspector General and Vicar General in spiritualibus under the Electors Johann Philipp (von Valberg) and Clemens Wenzeslaus (von Schenken). The end of his life. The Electors lived at their castle on the Rhine, and were more princes than bishops, so that Honthem was practically left in peace, free to develop that talent and proficiency in learning and piety. On several occasions he succeeded in composing sermons, and in every instance was proved to be a zealous and pietistic bishop. No one disputes the correctness of his moral, thepolicy of the greater harm (see 'Abida tara, 1, 3, and Examenum, p. 19, 19, in W. A. L. Eisn's edition of the treatate (FS, vol. viii, no. 2), who, however, always defended the position of the Hebraists by instead of taking ויהי used to signify the day of the Census' apostolic conclusion.

The birthday celebration of a king, on the other hand, was only made a religious festival by way of distinction from the greater ban (see 'Aboda zara, 1, 3, and Examenum, p. 19, 19, in W. A. L. Eisn's edition of the treatate (FS, vol. viii, no. 2), who, however, always defended the position of the Hebraists by instead of taking ויהי used to signify the day of the Census' apostolic conclusion.
which arose from his book. He had a Schloss at Montquentin on the Rhine. He died there on 2nd Sept. 1739, and was buried in the crypt of the Church at Trier. In 1802, his body was removed to St. Geraudus in the Neustädte, where it now lies. He left a number of other original chirographies.

2. Writings and system.—Honthem was the author of a number of works. He is said to have written the lessons of the clergy of the Friar religious order (Opp. cit. i. xii.) and he doubts this, as they do not at all represent his ideas (Allgemeine deutsche Biographie, xiii. 83). He deserves well of German historians for his Historia Praevisionum et actionum Romanorum Pontificum libri quinque (Bibliotheeupublica, 1763) and Prodigiorum Historia Trevisana (2 vols., do. 1755). But the work to which he owes his fame is the Febronianus, published in 1763. It is said that the interference of the Papal Legate in 1742-1745 first gave him the idea of writing a work which should distinguish the political from the ecclesiastical power of the Pope. He chose the pseudonym 'Justinus Febronius' from the name of his niece, a nun at Juvin-gy, in religion Justina Febronias. The MS was taken by his friend von Knauf to a bookseller, Esslinger, at Frankfurt am Main, who promised the strictest secrecy as to the identity of the author, and even paid any fee for it. In order to keep the secret, an imaginary publisher and place were printed on the title-page. The work appeared as: Justini Febronii Modi (i.e. in- confidentially) de Ecclesia et personis pontificiis Romani Pontificis liberi singularis ad omnium dissidentes in religione Christiana compositionis; Bullioni apud Guliliemum Evaridi, 1763. The main idea of the work is that the whole power of the Pope should be reduced and that of the bishops increased; the Christian princes should see to this. There is nothing new in it. The ideas are those of du Pin, Richer, Van Espen, and the Gallican school. It puts these clearly, forcibly, and in a moderate compass. The author declares that, so far from opposing the Papacy, he wishes only to strengthen it by fixing its just limits. Thus he hopes to reconcile Protestants and bring them back to union with the Pope. He dedicates his work to the Pope Clement XIII. (1758-1760), 'surnom Pontifici, primo in terris Christi viceari, Christianis principes, et principiis, et doctrinae.' The Pope is the guardian of the Canons for the whole Church. He can make laws 'in the name of the universal Church,' and has a principalis, not of jurisdiction but of order and consociatio. It is entitled 'De incrementis iurium Primiatus Romanorum, et incrementis novitatis et insaniae, tum sunt.' Many Papal rights have been acquired by devotion; there are no part of the regimina ordinaria. The False Decrees totally modified and exterminated the government of the Church. The Roman Curia must be distinguished from the see. Ch. iv. ('De canonicis officiis ministri ecclesiae vocatori') shows how these canons should be reconciled to the Pope. Questions of faith are not reserved; any bishop may condemn heresies. Local synods may reverse the decisions of the Sacred Congregation of the Roman Curia. The confirmation and deposition of bishops, erection of new sees, and so on, are reserved to the Pope. Cardinal Power has been reunited against the monarchical claims of the Church. Ch. v. discusses the right of making laws for the universal Church and the question of appeals to the Council deobliged. The C. X. 2257 does not apply to the successor of Peter. Papal laws are not binding till they are promul- gated; papal bullae and various circulares in 1802 are to be treated as the royal law. Ch. vi. ('De Concordiis generalibus') declares that no Divine or ecclesiastical law re- serves any right to the Pope; 1833, the first right was convened by the Emperor. A General Council is above the Pope. He may not re-examine its decrees, but many Councils have re-examined decrees of the Pope. It is lawful and often expedient to appeal from the Pope's decision to a future General Council. A General Council shall be summoned only, not for the whole Church, but for the provinces or dioceses of England, Germany, and France. th. 2251. The immunities of regulars from episcopal jurisdiction are a grave abuse, a 'hard and undeserved wound' to the rights of the bishops. Ch. vii. ('De sacris restaurandis et caussa') is about the False Decrees. These destroyed the freedom of the provincial Churches, and are the source of all other dangers. The immediate impediment to the reunion of Christendom. Ch. ix. declares that Roman Catholics must carefully watch every step of the Roman Curia which may be hurtful to right law. The best remedy would be to summon without delay a Council of Cardinals and princes and a common constitution by which they would be the best way of securing this. Nor need any one fear the censure of the Pope; there is no danger of a schism. The princes should arouse popular feeling against the False Decrees. The end of the Ecclesiae is to teach the Church the whole purpose of the pope. "It is the interest of the Church certainly to maintain the primacy, but to keep it within proper bounds." An obvious criticism of this famous work is that, like many reformers, its author is carried by his principles too far to have any chance of being heard by authority, perhaps further than he himself foresaw. Certainly it was not difficult for his opponents to quote his book, which is reprinted in almost every country in Europe.

3. The controversy.—The book at once excited enormous interest throughout Europe. The first edition was called for in 1755 and translations appeared immediately in German, French, Italian, Spanish, Portuguese. The effect of Honthem's principles was soon seen. In 1768, Venice declared that the bishops have jurisdiction over all regulars throughout its territory; the Neapolitan Government abolished the rules of the Roman Cencellaria in that kingdom; Maria Teresa allowed similar laws for the Duchy of Milan. The Bishop of Cambrai, who had forbidden the book in his diocese, was forced by Government to withdraw his order. Especially throughout Germany was the effect of the Febronius long felt, in spite of its repeated condemnation by the Pope and German bishops. The complaints against the Curia made by the legates of the three episcopal Electors at Coblenz on 13th Dec. 1709, the 'Emser Punktat' in 1786, and meeh of Joseph II. and Pius v. 1773, were elaborated. The liberal movement in France was considered by H. It in Italy the Synod of Pistoia (1756), and Leopold of Tuscany (1755-1790) follow the same principles: so that most of the later so-called Gallican movement throughout Europe found the Febronius a guide, or an expression of its principles.

Meanwhile the book was condemned at Rome and attacked by a great number of opponents. As soon as it appeared, it was denounced by the Nunno (Cardinal Borromeo) at Vienna; on 27th Feb. 1764 it was put on the Index by Clement XIII., who on 21st May wrote an encyclical to the German bishops telling them to suppress the book in their dioceses (these are reprinted in 'Lettres de vauchy'. Romanus Pontifex, iii. 234-240. Nine obeyed, including Clemens Wenzenslaus of Trier; sixteen took no step either way (letters of German bishops condemning the book are reprinted in 'Lettres de vauchy'. Febronius a guide, or an expression of its principles. The book was being read with approval by the princes at court; he ordered it to be destroyed wherever found (ib. 238). Clemens Wenzenslaus still did not know, or affected not to know, that the bishop of Vienna had heard that the book was condemned under the unknown name of Justins Febronius' (ib. 241). Among the many writers who entered the lists against Febronius, the most noticeable are F. A. Zaccaria, S.J. (Anti-Febronius . . . una apologetica febroniana fuerint, Rome 1758, Papae, 1770, and Anti-Feronius in crinitudis, do. 1774).
FEELING

B. P. Larrillo (de Potratio ecclésiasticum Summorum Pontificum, Verona, 1769), and the archaeologist T. M. Mannelli (Eutis- tomerium, 3 vols., Rome, 1776-1778). Hontheim answered his critics in four more volumes under the title "Scrip-turae et Constitutiones," which appeared in 1778, 1779, 1780, 1781; in 1777 he published "Febronius abbreviatus."

At first the secret of the authorship was well kept. But in 1764 it began to leak out, apparently through Hontheim's friend Giampi. Pius VI (1775-1799) insisted on a retractation, and Clemens Wenzeslaus in 1778 began to urge Hontheim to withdraw. Apparently he threatened, in case of a refusal, to dismiss not only Hontheim himself, but all his friends as well, from his service. On 14th June 1778, Hontheim sent an incomplete retracta-
tion to the Elector, although he still defended 16 propositions which the Elector's theologians had declared heretical. Neither the Elector nor the Pope was satisfied with this, and a formula of entire retractation was presented for Hontheim's signature. After much discussion he signed it, with one modification, the erasing of the sentence: "Wherefore rightly the government of the Church is called monarchical by Catholic doctors." The Nuncio accepted this. On 2nd Jan. 1779, Pius VI. published a Brief an-nouncing the retractation. Hontheim having received the public an-nouncement (though it always follows, and he had received no guarantee to the contrary), and in letters to his friends began to complain of the way he had been treated. So the idea spread that he had not really meant to retract at all. On 7th April 1780, he published in the Coblenzer Intelli-genzblatt a statement that he had retracted freely and was about to publish a defence of his retracta-
tion. This appeared at Frankfurt in 1781 under the title: 
Justini Febroni-Jeti Commentarius in svnam ret rac tationem Pio VII. Pont. Max. Kol. nov. an. 1778 submissam. In this work he so explained his action that it was plain that he still held the ideas condemned. So the Roman Curia declared itself not satisfied, and the dispute began again. From now to the end of his life Hontheim showed a curious vacillation. In 1781 he wrote to the Hamburger Zeitung:

"The world has read, tested, and approved the statements of my book. My retractation will no more persuade thoughtful men to reject the statements than will so many refutations written by pseudo-theologians, monks, and flatterers of the Pope."

On the other hand, in 1780 he wrote against the "Emser Punktat," which only echoed the ideas of the Febronius. Towards the end of his life he seems inconsistent and perhaps wilfully ambiguous. He was not then the liberal, zealous, and sincere person in union with the Church. The effect of the Fe-
bronius lasted intermittently in Germany into the 19th century. J. V. Eybel took up his ideas to fortify the policy of Joseph II. in 'De ist der Kurfürsten Hof? Vienna, 1782.' The final blow to Febronianism was given by the Vatican Council in 1870.

LITERATURE.—Krafft, "Hist. de la vie de J. J. de Hontheim;" in Otto Mejer, Febronius, Freiberg, 1868; F. X. Kraus, "Hon-

FEELING.—1. Definition and scope.—The equivalent term 'feeling' is now the accepted designation of states of consciousness viewed as agreeable or disagreeable. We have sensations, and they are pleasant or unpleasant; we have ideas, and their presence in the mind creates pleasure or pain; we carry on activities, and along with them goes a glow of delight or a mental disturbance or aversion. The experiences through which we pass create melody or discord, and we are aware of it. A feeling is an expression of its subjective aspect from its emotional, volitional, or volitional companion, as we do whatever it pre-its praise or blame, and the same is true of feeling. The characteristic marks, then, of the feelungs are these two: pleasure and pain (in a somewhat broader and more technical sense than popular use attaches to the words), and pure subjective, as being simply states of the self, and wanting the objective reference implied in knowing and in willing. Among the feelings, we generally mark off the emotions (affections, passions, sentiments) as of the most extensive and the most important class.

It was long customary to regard the distinction of intellect and will—the contemplative and the active powers—as exhaustive. Feeling being regarded as merged in impulse, desire, and volition, and the emotions as complex products in which cognition and appetite blend; and to this view some still adhere. But, whether we consider the dual or the triad, the subject of feeling is more exact, it must be admitted that feeling is so unique a fact, and that the feelings are so impressive, bulk so large in consciousness, and are so important to them, that it is imperative to give the exposition of feeling a place of co-ordinate rank with that of knowing and of willing. In days past, when the struggle of life was more arduous than it is now, and when men had to gather all their energies for a swift and vigorous reaction on circumstances, feeling was readily lost in impulse and volition, and men had little inclination to view it in abstraction from activity, or to give it an independent value. It is otherwise now, as, among other symptoms, the modern novel proclaims; although even now, in circles where life is hard and stern, feeling is apt to be viewed as an intruder.

The importance of feeling may be realized by a moment's consideration of the consequences of its withdrawal from consciousness. Were we incapable of pleasure and pain, of joy and sorrow, of nothing good in our eyes and nothing evil, we should be as stones, nothing could have any value for us, no event any interest, and life would be bereft of all significance. We familiarly speak of an apathetic man as dead. It is only because we are capable of feeling that we are interested in ourselves, or interested in each other, or have any questions to put about life and the universe, or have any reason for desiring any one event to come or dis-
feelings that for base—sensuous, or dissonant-feelings, e.g. the pleasureable feelings arising from the taste of food, from the colour of flowers, from the light of day or the blue sky, or from the sight or hearing of the organism; or (2) painful feelings arising from gloom or weariness, or jarring sounds. (2) There are feelings that have ideas for their base—such as may arise from presentation of an object to sensation (e.g. seeing a man) when it is not accompanied by such ideas as may arise in the activity of memory, and the constructive imagination. Examples are hope, fear, melancholy, jealousy, moral approbation, the sublime. This class of feelings is commonly distinguished about many emotional states, which makes them as difficult to grasp as name; the sensations of the viscera. It is curious that in certain languages emotions have received names that are untranslatable into other tongues; for example, we have no equivalent for the German Gemuthlichkeit; and it is said that no other language has an equivalent for the Scotch word 'earnest.' Further, each one of the more familiar emotions runs through a gamut of modifications or shades, e.g. we have the course of the emotions, we have the pretty, the graceful, the elegant, the lovely, the picturesque; in the emotions of the ludicrous, we have the witty, the humorous, the funny, the grotesque. Thus, fear becomes alarm, terror, despair; anger becomes resentment, indignation, rage, fury; joy becomes brightness, gladness, cheerfulness, delight, rapture, ecstasy. Probably every modification of consciousness has its own

We have a new model for feeling as the thermo-electric pile in relation to the degree of temperature. (b) But what next observe the manner in which the emotions ramify in the mental life. As an example, we may take the emotions of fear. We can trace its presence in the religious feelings of reverence, awe, and adoration. It enters into the composition of the emotion of the sublime. According to Kant at least, it belongs to the sense of duty. In timidity, anxiety, diffidence, suspiciousness, caution, prudence, bashfulness, it requires but little insight to detect its colouring. It acts as a check on conceit and arrogance. Superstitious, bigotry, intolerance would more readily slumber their hold, but for fear. The emotion of fear, like all other simple feelings, is in itself neither good nor bad; but it may enter as an element into the worst and very best qualifications and activities. Similarly we might trace the ramifications of hope, pride, or anger.

It is more than doubtful whether there is any fact in mind that can be properly expressed as 'psychical chemistry'; but the nearest approaches to it seem to be found in the emotional life. The emotions compound themselves; and there emerge new products of the common stock in the form of simplicity, until, turning an analytic gaze upon them, we force them to disclose their elements. One of the simplest examples is found in melancholy, in which the patient regrets the pleasure of recollection of possession, or the pain of self-commiseration, which is attached to the process of self-congratulation, or to the self-conscious enjoyment of the emotions. A somewhat more complex example is found in jealousy, in which the joy and pride of possession, the fear of loss, anger, indignation, rivalry, all blend to create the remark, the form of tragic potency. A more notable example is found in the passion of love. The analysis of its components, as given by Spencer (Psychology, 1870-72, vol. i., pp. 250-251), will be found a marvel of acumen and exactitude. They sometimes even conflict. They influence each other in the most various ways. The question as to the result where two or more emotions press upon consciousness is an open question. (a) Like emotions combine easily and enhance each other. Thus, there is apt to be an easy fusion of disappointment, vexation, anger, envy, and malice; or of success, generosity, kindness, courage, and pride. One would expect a generous donation from an angry and disappointed
FEELING

man; but one may readily obtain it when he is elated with the joy of success. Homogeneous emotions not only fuse easily, but in doing so enhance and inflame each other—although this may not happen in the case of the ethical emotions, or even the pathetic. When a man is already down, a slight addition of sorrow may readily prove the last straw; and in the presence of some new trial, in itself not insurmountable, he will cry out, 'I am done for; the losses I have gone over me.' Some emotions are contradictory, and related like salt and sweet, which never blend. Love and hate, arrogance and humility, laughter and devotion, ludicrous contempt and reverence, exclude each other, and do so in proportion to their intensity. Yet they will sometimes press simultaneously on consciousness. King Arthur loves the fallen wife at his feet, while, at the same time, he is inspired with anger and indignation. A friend will sometimes provoke at once our admiration and our contempt. A merchant will be in grief over business losses and in joy over the birth of an heir. An ass has been known to pray at the church door while the congregation was engaged in prayer. What happens? If we could suppose the conflicting emotions to be of equal strength in the case, there would simply neutralize each other. It commonly happens that the one supplants the other, as when a ludicrous idea makes devotion impossible; or, if it cannot quite supplant the other, there takes place a trial of strength and a rapid and distracting alternation of moods. We try to end the turmoil by going in search of reinforcements of the emotion we desire to prevail. (c) There is a third case, however, long ago observed by philosophers, but not clearly defined, although not contradictory, related like bitter and sweet: for example, joy and the ludicrous, humility and hope. In this case, the result is various and uncertain. If the one feeling is weaker than the other, the predominant emotion absorbs the other, and converts it into itself, while yet receiving from it some modifications. Thus, the self-confident courage with which a speaker advances to an audience is sometimes met by the different feeling of alarm when facing it; and the ordinary result is that his courage is toned down, and the speaking improved. A man does not speak the better for over the management of the bosom. On this interesting section of the emotional life, the reader may consult with advantage Hume on the Passions, pt. iii. § ix., also his Dissertation on the Passions, especially in §§ ii. and vi.; Hofling, Psychology of the Emotions; and various sections in Bain, Emotions and the Will.

The method of the spread of the emotions seems next to demand attention. The main instruments are the laws of contingency and similarity. Let M stand for an emotion, and C for its cognitive base. But C is connected by contingency with D, E, F, fuses therewith, and forms the unit CDE. M now spreads over that larger complex unit. Thus, if a man loves a woman, he is apt also to love everything connected with her, even her very raiment, and the ground on which she stands. A similar expansion takes place by similarity. We are here in presence of a weighty factor in human life, and one of extensive application. Thus, Palestine became the Holy Land by virtue of our reverence for Him who lived and died there, extending itself to the very soil with which He was contiguous. Thus, such an emotion as patriotism is created; the colonist, after long years, still turns with longing heart to the hills and rivers associated with parents, friends, and ancestral traditions. In the case of the man who has a bad conscience hates himself; and, as he never be part from the self he hates, the odious thing becomes contiguous with all things he sees or handles, with all places he visits, with all associates and all occupations; a dark shadow falls everywhere, and he hates the very earth on which he comes to hate existence and curse the universe. Another tragic example may be found in the irrational hostility of renegades and apostates to the creed they have cast away; for the hostility is not proportioned to the logical grounds of rejection, but to the misery associated with a former belief. Thus do our own emotions, by their tendency to diffuse themselves, colour the universe, making it, perchance, a temple of God or a pit of blackness.

If turning our eyes in a somewhat different direction, let us next note the conspicuous fact that the emotions of the soul are almost correlative with concomitances of the body, although in smaller degree in the case of the higher or more intellectual emotions. There is no doubt a correlation between every form of mental life and the physical organism; but it does not obtrude itself as it does under the quickened or impeded pulsation and breathing, the stir in the abdominal viscera, that attend anger and fear, joy and sorrow. This 'somatic resonance' of the emotions occupies a popular location in the heart, and was more reflected in Oriental speech, which located them in the liver, bowels, and kidneys. A paradoxical doctrine has even found some acceptance in recent years, to the effect that the bodily commotions reported in consciousness constitutes the emotion: that we do not tremble because we are afraid, but are afraid because we tremble, and similarly that we are sad because we weep. However, this has been adduced at all likely to upset the judgment of common sense that the bodily movement follows as the effect of the mental disturbance. Some bearings of the physical reverberations of the emotional life are important. The unwholesome manner in which the explosive and impulsive will is converted into the rational and deliberate will of the moralized man. Let us note, further, that the 'somatic resonance' of the emotions explains their bearing on health and life. There are authentic records of sudden death through the ahrunt irritation of glad or evil tidings. There are also those that are pining away into early graves through the starving of the emotions, and to whom love and hope would come as the very breath of life, restoring health and youth. Faith-healings and kindred phenomena show what wonders can be wrought when the emotional thrill discharges itself into all parts of the body through the nervous mechanism.

We have next to note the fact that the various emotions are correlated with definite bodily movements, and that each has its definite and characteristic expression. The emotion has a face and attitude we can tell that a man is deep in thought or is fixed in purpose; but we cannot tell what is the thought or resolution. In the case of the emotions, however, we can tell at once the fact of the emotion and the definite nature of it. We have familiar examples in the blush of shame, the pallor of fear, the clenched fist and dilated
nose of rage, the drooped eyes and downward curved muscles of sadness. So close is this emotion to the physical attitude or the expression of an emotion, we can in some measure induce the emotion, and by suppression of its expression to some extent, destroy the feeling, as when we half conquer a man's anger by preventing him to being seated.

Since Darwin's time and the publication of his Expression of the Emotions (1872) there has been much interesting discussion on the various emotional expressions. There is force and truth in many explanations adduced, along with a little that is fanciful or personal. (For illustrative examples, see Spencer, Physiology, ii. §§ 694-695.)

(b) The function of the emotions is to serve as the connecting link between the intellect and the will, and to furnish us with springs of action. Aristotle (Ethics, v. 2, § 8) uttered a weighty truth when he said, 'Intelligence moves nothing.' Ideas, simply as such, have no more power to touch the will than our perceptions have. Truths that have no inherent fitness to create feeling never become springs of action. Man never did anything simply in virtue of his knowledge of algebra. Doctrines, however great and important, never have the smallest real influence on life, unless they become identified with a feeling. The heart; the world has seen immoral philosophers, and upright theologians. It is always emotion that mediates and translates thoughts into deeds. Victory will always be on the side of the principles that can commend the strongest and most persistent enthusiasm. Nothing great was ever yet accomplished by a man incapable of intense feeling. The practical bearings of this principle are numerable. We single out these two: (a) do we do violence to our nature, and demoralize ourselves, if we do not use emotions as the impetus to conduct, or if we permit ourselves to cultivate them simply for the luxury of having them; (b) we need not in any case expect too much from mere teaching and preaching. If a man is already under the power of any emotion or passion, we shall not rescue him unless we succeed in creating a yet stronger emotion or passion; and the creation of this 'potential' is the supreme difficulty in all attempts at moral reformation (cf. Chalmers' Sermon on The Exasperative Power of a New Affection).

(c) 'The inertia of feeling' is a fact of far-reaching consequence. The imagination,' says Hume, 'is extremely quick and agile, but the passions (emotions) in comparison, slow and restive' (Dissertation, § 8). We can pass with ease and rapidity from the object of one emotion to another and from one kind of mental activity to another; and, when we cannot do so, some harassing feeling is the cause; but, as everyone knows, we cannot thus rapidly and easily pass from insensibility to gladness, from ill-temper to serenity, from despondency to hopeful courage, from the comic operas to the church. Our emotions detain us; they drag; they move heavily. Hume has happily compared emotions to a strange instrument that continues to vibrate for a while even after the impulse has ceased, while cognition is like a wind instrument. It follows that emotion is in some respects a hindrance and in other respects advantageous to the movement of thought. The emotion that creeps to a thought will not move and yield so readily as the thought, and may, therefore, cause a memory to haunt us, from which we desire to be free, and draws the attention on our long after its logical hold has been booned or destroyed; but we have the compensation that, once a new conviction has been lodged in us, and has been well saturated with emotion, it becomes thereby a lasting impression of which we cannot be deprived. 'Intelligence is apt to be a disintegrating force in human affairs; emotion alone weds strongly, and perpetuates securely.

Emotion is the slow conservative side of human nature, the custodian of old ideas, old customs, and the old institutions. Emotional natures, with strong loves and hates and ardent attachments, are apt to be most conservative; thus, women, as a rule, are more conservative than men. Cold intellectual natures, whose principles are not saturated with feeling, have no such difficulty in adapting themselves to its changes and applications and heartening to the bidding of logic; they therefore change easily, and are apt to wonder that the world is so slow and irrational. Indeed, on the contrary, where the intellect is not a better, were there no such thing as the inertia of emotional attachment. The inertia of feeling may be used to explain the persistence of character compared with the instability of opinion; also the inevitable relapses and reactions following on too many and too violent changes of habit or thought, whether in the case of individuals or in that of communities; and also, the perpetual bribing and corrupting of the intellect by emotional prejudices.

The doctrine just inculcated may seem to be inconsistent with the undoubted fact that emotional natures are also most impulsive and headlong—the very reverse of conservative. But there is no inconsistency. Emotional natures, having the warmest attachments, are, so doubt, on this very account, with greatest difficulty to change. When 'attachment' movement they are apt to go further. We may find a good example in the proverbial fœtus ingenium. Spinoza, who said, 'people are wedded with intense passion to their own traditions, and move from them with deep reluctance; but what people has gone, and in its reasons and actions they can Scotland abide compromiss in Church and State, after the manner of the English people, on whom that habit site so lightly, and who find it useful. The story of the French Revolution might furnish other examples.

(d) The ethical import of the emotions appears when we consider their relation to character. It is patent that the springs of conduct lie among the emotions, in emotional dispositions, and in complex emotional formations. Man act from hope and fear, love and hate; from love of money, power, knowledge, distinction; from kindness, sympathy, or perseverance from malignity and misanthropy. When we describe the character of men, we, for the most part, do so in terms taken from the emotions; we speak of them as timid, gentle, irascible, sanguine, affectionate, cold-hearted, sentimental. No doubt, we also speak of moral character in terms of intelligence, as when we praise a man for prudence, discretion, consideration, but even in such cases we have in view types of intelligence created by a habitual preference for certain forms of emotion. Thus, the prudent and cautious man has had his habit of judgment formed by the emotions, long habit to another regard; and, when we cannot do so, some harassing feeling is the cause; but, as everyone knows, we cannot thus rapidly and easily pass from insensibility to gladness, from ill-temper to serenity, from despondency to hopeful courage, from the comic operas to the church. Our emotions detain us; they drag; they move heavily. Hume has happily compared emotions to a strange instrument that continues to vibrate for a while even after the impulse has ceased, while cognition is like a wind instrument. It follows that emotion is in some respects a hindrance and in other respects advantageous to the movement of thought. The emotion that creeps to a thought will not move and yield so readily as the thought, and may, therefore, cause a memory to haunt us, from which we desire to be free, and draws the attention on our long after its logical hold has been booned or destroyed; but we have the compensation that, once a new conviction has been lodged in us, and has been well saturated with emotion, it becomes thereby a lasting impression of which we cannot be deprived. 'Intelligence is apt to be a disintegrating force in human affairs; emotion alone weds strongly, and perpetuates securely.

(5) The relation in which emotion stands to religion cannot be neglected; and, clearly, it is an intimate one. It is the heart that pants for the
possession of religious life, even when the search takes the ostensible form of a longing to penetrate the mystery girding us, and to comprehend the use and meaning of our existence: for how could any such desire awake in us except for a longing to be rid of the spiritual wretchedness and to be able to rejoice in the conviction that life has value? The possession of religion comes to a man as a new emotional experience; as a deepening, expansion, and purification of his feeling; as a power to realize in his own existence as an inestimable gift of the Creator; as freedom to look abroad over the world with peaceful eyes made glad with love and hope; as a consciousness of inward nobility raising him above the world's vanity; as a new self-consciousness springing from a heart purged from the foulness of a bad conscience; as a revelation of a new capacity for praise and adoration.

The religion portrayed in the Psalms and Epistles is a life glowing with emotion; and nowhere else in literature have we any such record of emotional experience. If we compare such Psalms as the 88th and the 103rd, we see how this emotive light envelops all, intensifies, and passes from deepest sadness to highest rapture. A religion of this sort requires no evidences. It is like salt, or light, or the aroma of an ointment. It finds its life and motion in the impression of itself like a contagious enthusiasm. Of this sort was Christianity meant to be: such it was in the beginning; and such will it be again some future day. But emotion cannot feed itself, nor can it support itself. The sumnum bonum revealed in immediate feeling demands reconciliation with the sumnum verum; and here all our difficulties in dealing with religion begin. The experience of the heart enwraps ideas that we have great difficulty in making clear and stable, and in bringing into harmony with the facts of life and the world. The correlated creed has never yet been able to make itself more than just a reasonable faith, and in its details has never risen above the fogs of controversy. Nevertheless, no one who has truly experienced the religion of emotion can doubt that it is the greatest and best that can ever enter into the life of man, and that its necessary implications must needs be true.

Our attention is arrested by the fact that there is to be found a fervent emotional religion without merit with its extra Açık characteristics. This was so often brought under his notice in connexion with revivals that Jonathan Edwards (q.v.) wrote his memorable book on The Religious Affections in order to set forth the marks by which to discriminate between genuine and spurious religious emotion. But no empirical tests are available; and the outcome of his effort is simply to show that religion must enwrap intelligence and volition as well as emotion—must root itself in enlightened conceptions, and take form in a holy walk and conversation—must grasp consciousness in the unity of reason. It is so; but it deserves, nevertheless, to be made emphatic that religion is centrally an emotional experience. Otherwise it is formalism. We thus reduce Dogma, Ritual, and Church to their rightful position of subordination.

(1) We are naturally conducted to the question whether emotion can ever be accepted as a ground of judgment, a basis of belief, and a test of truth. Emotion is, without doubt, a cause of belief; but a cause of belief is not a ground of reason. There are cases in which all would admit that emotion must be peremptorily excluded, as, for example, in a judicial trial, and generally in all purely intellec
tual work. It would, indeed, be held that there are certain cases in which emotion may sit in judgment on truth and error, especially in moral and religious questions. That 'the heart has a logic of its own' is a sentiment preached in many a discourse. Tennyson tells us, in Well known lines, that, in virtue of having felt, a man may justly rise in wrath against the freezing reason, that is, of the cold and worthless reason, and authority silence it (In Memoriam, cxxiv.). In a similar vein Jacoby says, 'There is light in my heart, but, when I seek to bring it into the understanding, it is extinguished'; and pronounces the verdict on himself: 'a hearten with the understanding, but a Christian with the spirit' (quoted in Uberweg's Hist. of Philosophy, Eng. tr., 1875, ii, 230). The heart, then, has a co-ordinate title with the judgment to say Yes or No, on a question of truth; nay, a superior title. A writer on Browning says of him that in his poems he assumes that 'love, even in its illusions, may be accepted as a messenger of truth' (Orr, Methodology, 1885, p. 357). Right through all the forms of Mysticism there runs a doctrine of this sort. We have before us an example of the fact that, for popular literary purposes, forms of speech may be allowed which are necessary in the case in hand, and passed by the logical understanding. Nevertheless, there is truth and meaning in such words as 'The heart has a logic of its own,' and in Tennyson's lines. It is true that there come trying hours when our heart moves us to affirm what our head urges us to deny, or in which arguments point to a conclusion that is repugnant; and occasionally it may well be the case that the instinct of our emotion is founded in the end with the higher and sublime. It is guided by an implicit logic, vaguely conscious of the pressure of arguments which it is unable to formulate, but which it will readily recognize when expressed by a clearer and more vigorous understanding; and, in such cases, the first appearance is as if emotion alone judged. When emotion seems to judge in moral and religious matters, it is found that the process is one of deductive reasoning assuming as true some such major premises as 'No doctrine can be true which rob existence of worth and meaning,' or 'The Universe is at bottom wise and good and rational'; and every emotion so governed may, if directly guided by an implicit logic, vague conscious of the pressure of arguments which it is unable to formulate, but which it will readily recognize when expressed by a clearer and more vigorous understanding; and, in such cases, the first appearance is as if emotion alone judged. When emotion seems to judge in moral and religious matters, it is found that the process is one of deductive reasoning assuming as true some such major premises as 'No doctrine can be true which rob existence of worth and meaning,' or 'The Universe is at bottom wise and good and rational'; and every emotion so governed may, if directly
only as we have felt. In Schiller's Wallenstein we hear Thekla singing:

1. Ich habe genossen das froehliche Glück,
2. Das gesang von einem niedrigen Bruch,
3. Der gefühls und geistig.

We may generalize the sentiment: we have lived only as we have gloved with emotion; and the hours of intense feeling stand forth in memory as the hours of life. It was then we learned into how goody an inheritance God summoned us when He gave us being. It is to be feared, however, that such hours are few, and that the emotional experiences of many men are meagre, and within a narrow compass. The more simple emotions, such as love and hate, hope and fear, are known by all men; but the higher emotions seem to remain an unrealized possibility.

'One may assert,' says Ribot, 'that these higher forms are unattainable by the great majority of men. Perhaps scarcely one person in a hundred thousand or a million reaches them; the others know them not, or only suspect them approximately and by hearsay. They are a promised land only entered by a few of the elect' ('Psychology of the Emotions,' 17).

There is much to justify this strong impeachment and moral censure of human nature, which seems so severe a disparity. (n) The intellectual (or logical) emotions, such as arise in connexion with cognitive activity and gather round the idea of truth, seem to be unknown to us. Is it not perhaps that the few have been the only few high in intellectual life. They are not gained by inconsistencies and contradictions, are easily tolerant of the absence of order and of logic; nor do they know the joy of the entrance of a new thought, of emancipation from an error, of a new perception of the law, or of grasping unifying principles. All men laugh, and desire to be made to laugh, yet it does not appear that the higher reaches of the emotion of the ludicrous are very common. The sense of humor, with its sublime combination of quick perceptiveness and genial kindness, is not a universal possession; and the want amounts to a fearful impoverishment of reason. Those who want it neither see nor feel. Their souls become like leather. In rudimentary form all men have some sense of the beautiful; and the ornamentation of their bodies, their furniture, and their weapons, on the part of the humblest races, shows us how deep a root in reason the aesthetic emotions spring. It is a superfluous flourish, but deep as the demand for truth and goodness. Yet a true artistic sense is not yet common; how an exception to the rule reveal the beauty except to one who can sense it all with the inner wealth of his own soul. Probably, the emotion of the sublime is among the rarest of all experiences—the inceptive movement towards it seldom going beyond a vague sense of the imposing, unless to give way to the feeling of awe and terror. Being important for life and conduct, and incessantly demanded, the ethical sentiment exists in considerable vigour. No normal human being is lacking in the emotion of moral approbation and disapprobation attendant on the judgment of conscience, or perhaps an integral part of it; and every man is thus constrained to a recognition of a sacred law or truth in human existence, and of a sublime End giving law to conduct. And yet the immorality of the world proclaims the feebleness of the moral emotions. Probably, no man is without the germs of the religious emotion. In a sense, all men are religious; and they are also irreligious. We cannot extinguish the religious sentiment; nor can all agencies make it strong and fruitful excepting in elect souls, who sense and feel the first stirrings of humanity into God. Religion flares up in a man's spirit in hours when he realizes his nothingness in the immeasurable universe, his weakness in face of its immensity, its tendency to nothingness in the infinite, and the drift of all things towards death. The religious emotion is a direct outbreak of the soul in the face of an unrelenting and sinister future; it is the expression of the futility of our existence. Religion rises up in man's spirit in hours when he realizes his nothingness in the immeasurable universe, his weakness in face of its immensity, its tendency to nothingness in the infinite, and the drift of all things towards death. The religious emotion is a direct outbreak of the soul in the face of an unrelenting and sinister future; it is the expression of the futility of our existence.
Mishna, Amsterdam, 1898-1905, v. 294-310; Ugo- linus, Theatrums, Venice, 1744-49, xii. 147-150; Sa- muel, Tobit ii. i. 276, which gives other instances of ceremonial cleanliness). It must be remembered that the priests always walked about the Temple with bare feet. The ground was covered with a fine dust which was often thrown over the inanimate objects of ceremonial cleanliness. It is necessary to show that in the ancient world, as in Egypt, the priests and worshipers washed their feet, and that the practice was widespread and of long standing.

(2) Roman.—Abolition of the feet was enjoined as a preliminary to worship of the gods under the Roman and Greek cultus (Jos. Laurentius, Varia Sacra, Antwerp, 1629, and Gronovius, Thea Gr. Ant., Lyons, 1607-1702, vol. ii. 215). The practice of feet-washing before engaging in any religious service is still maintained by Musulmans, who have carried over to the ceremony from the Mosaic regulations (cf., e.g., W. M. Thomson, The Land and the Book, Lond. 1881-86, p. 122).

4. In Christian.—Churches of the early Christian centuries were provided with a atrium or area or 'court,' surrounded with porticoes or cloisters, in the middle of which stood a fountain called eauturus or phiola. In this it was deemed necessary by the worshippers abate they wash their feet and hands before entering the church.
(4) North Africa.—An unsuccessful attempt has been made to make Augustin responsible for the prevalence of the ceremony in the N. African Church (J. Viccione, de Antiquis baptismi ritibus, 1018, iii. xx. 911, 1904). The belief in the authority, however, of the work in which references to the Pedilavium in the N. African Church occur has now been given up. The treatise in question (de Tempore, 160) is really a sermon by Covarrubias, archbishop of Arles (A.D. 504). Covarrubias quotes the words of a Gallican missal still extant (Martene, i. 64): 'Secundum quod ipsis in baptismo dictum est, Hospitium pedes lavent, etc.' But this, of course, has nothing to do with the Church in N. Africa (see Cassar. Art. Serm. clxviiii. 3, ecvii. 2, in App. to Augustine, t. vi. col. 291 f.). It is undoubtedly true that Augustin twice refers to the practice. In his Ep. ad Januar, cxviiii., he speaks of the catechumens bathing their whole body, but not only their feet before Easter, that they might be free from bodily filth. This, he says, however, was not a ceremonial washing, but in order that the bodies of the catechumens might not be offensive to others. In the other epistle (cixx. 18) he especially refers to the practice of washing the feet of catechumens after baptism 'on the day when the Lord first gave this lesson on humility.' But he adds that they wear their Pedilavium (which is usually held towards the end of Lent) should be regarded as essential to the proper observance of baptism, it never received general recognition (cf. Casullus, de Veter. sacer. Christi, cit., 1881, p. 49).

(5) Spain.—That there were many attempts to introduce the rite into Spain as part of the Gallo-Gothic service is generally admitted. Apparently, however, there was a growing feeling against its celebration, not only in Spain, but in neighbouring territories. Many Churches, indeed, refused to allow it as part of the baptismal service, and relegated its observance to a day further on in the ecclesiastical calendar—either 'the third day of the octave,' or 'the octave after baptism' itself. Others absolutely declined to admit the observance of it at all. Falling thus into general disfavour, the practice was formally abolished by the Spanish Church.

The 48th canon of the Synod of Elvira (Illibera), a.d. 306, forbids the celebration of the rite in these words: 'Neque pedes eorum (qui baptismato lavandis sunt a sacramentis) lavi unt salui vel sancti' (Manet, i. 14). The prohibition passed into the Corpus Juris Canonici (c. 121, cap. 1, q. 1; see also Casullus, Concilia, Concess. Canum, Eccles. Hispan., Madrid, 1888 [re- produced by Bruno, Biblioth. Eccles. ii. 1, 177]; Habichol, Concilia, 1716, p. 34; Heffele, l. c. 157; Smith, D. D. i. 164, art. 'Baptism'; §§ 34, 67, ff. ii. 1160. art. 'Mundy Thursday').

No traces of the practice can be discerned in the East; and, as it was never followed at Rome, it is plain that the feet-washing of baptized persons was a purely local peculiarity, introduced at an early date into some parts of the Catholic Church, but never universal. At the present day no trace of the rite can be found anywhere in connexion with the sacrament of baptism.

6. The monastic, imperial, and royal washing of the feet of the poor.—Though the practice of the Pedilavium (or Lenten washing, as it is sometimes called) was forbidden as regards the reception into the Church of catechumens, the rite was nevertheless encouraged in connexion with the poor. As the practice was widely spread through both Western and Eastern sections of Christendom, and has secured a place in certain divisions of Protestantism, it will be most convenient to treat of its growth with reference to the headings of the countries in which it has been practised, in order that local variations may be observed.

1. THE WESTERN (ROMAN) CHURCH.—(1) Rome.

The earliest reference to the monastic feet-washing of a Roman bishop seems to be in Offorini, Agnus Dei, 5, of the 11th cent. (Mabillon, ii. 101: 'Pontifex vero...')
INGREDIENTIUS BASILICA S. Laurentii, et sine planetae
residens in seco, facit Mandatum duodecin sub
divisum et Manualis primario cantore et magnis
vaporibus, et ministris suis, quanto unius
vaporo evam, ut mos esset."

The office is in the Missale Romanum from the first ed. (1474) onwards, under
ferta quintai in Coena Domini (see ed. Baltha-
saratius M. Mogesi, 1896, p. 178). Throughout
the Middle Ages the practice was commonly observed in nearly every monastery and court;
and the feet of subordinate priests, of the poor, or
of inferiors, were washed by priests, bishops,
and in some monasteries, by the monks. The fre-
quency of the rite varied. In some places it was performed every Lord's Day. But one day
in particular in the ecclesiastical calendar was decreed as the only day, annually suitable, viz. Holy Thursday, the day before Good Friday. The rubric for this
day runs: 'convenient clerici ad faciendum mandat-
um'—'mandatum' being the name given to the
rite—"in the words of the first antiphon
salutem, and perform the service; 'Mandatum novum do vobis ut diligatis invicem' (Jn 13th; hence 'Maundy' [see below under
Eland, p. 818])."

At one point in the rite as it was practised until 1570 by the Popes is given in Picart, Cerem. and Rites, Customs of the World, 1733, II. 21; Tucker-Mallet, Handbook to Christian and Eastern Rites, Revised Edition, 1886, p. 384; M. S. Romeyn, A Pilgrimage to Rome, 1831, p. 242; F. Chambers, Book of Days, 1863, I. 415; Walsh, F. A., Calendar of the Holy Catholic Church, 1865, p. 670."

This ceremony of foot-washing, associated with Holy Thursday, is widely practised still in the churches of Italy. In Florence, for example, the archbishop on this day annually washes the feet of twelve poor old men, who are given each a small and mansion-houses is it considered to be the correct
thing for the nobleman or his private chaplain to see that the mandatum is observed. Holy Thurs-
day was also the day on which there took place the
participation of those penitents who had been expelled since Ash Wednesday, their re-admission and reconciliation being gone through with accord-
ing to the ritual given in the Pontificale, and with the chanting of the prescribed 'Penitential Psalms' (EB
cxviii. 457, art. 'Penance'). A full account of the
conditions of this restoration is given by H. J. Feasey, Anc. Eng. Holy Week Ceremonial, 1897, p. 96."

A further ceremony known as the Lananda was maintained until recently in Rome during Holy Week. The Great Hospital of the Capuchins has a shrine open to the public of pilgrims who stream across the Alps from all parts of Europe. A corps of Roman ladies and gentlemen, wearing a distinctive form of dress, with blue caps and white aprons and arrangements for the reception of these guests. Only those newly arrived were cared for; and, as the pilgrims were mostly very poor, and had travelled for several hundreds of miles without boots and with their feet enswathed in 30 or 300 yards of linen, they were very grateful to have had their blood-stained clothes removed, and their sores attended to. They were guided to basement rooms with a low wooden seat round the wall. Here the corps of ministerate, men serving men, and women attending on women, in separate rooms, with warm water and coarse soap washed away the dust and the blood from the pilgrims' feet, and dined with them strongly. The foul, steamy atmosphere was very trying and disgusting. Relay after relay was then taken to a long refectory, where they had a good second course of bread and sauce, served at deal tables covered with a coarse white tablecloth. They were then guided to St. Peter's, where they participated in the august ceremonies of the Holy Week (Walsh, 800, art. 'Pilgrimage'). Since the Italian Government has remodeled the sacred rooms the Lananda has ceased (Tucker-Mallet, II. 251, 254).

(2) Milan.—The earliest reference to the practice of
foot-washing in the Milanese Church is probably that given by Beroldus in the 12th cen.
(see Magg.

'Interas vero archiepiscopii lavat presbyteri et diaconos et magistrum scholas et primum et primores inum cum magno reverentia singulis singulos pedes, his causentur hanc anti-
pherere, donee suscitaverit Dominus a 'orato post
mandatum: 'Adesto, Domine, offece servitutis nostrar, qui
pedita lavaret dominus et tuta disciplinae sis et sicut unde
explorat securitas suppletur imprescripturae sua omnium nostrorum interiores
inventor peccata,' etc.- His finitus, pro caritate bibit cum elia
archiepiscopi, presbyteri et diaconos et magistrum scholas et
primicerio lectorum doctos deseros tribuit.'

It may be surmised that this practical was the
manner in which the service was carried out in most of the churches of Northern Italy.

(3) Gaul.—The earliest reference to Frankish
monastic foot-washing is the 24th Canon of the
Council of Aachen (Aquignesranec), A.D. 814. It
runs thus: 'Statutum ut in Coena Domini pedes fratum abbas lavet et osculetur, et demum propriis
mias, ut et legem et sacrosstatum [553].

The obligation of kissing the feet already met with is here most explicitly laid down. The rite was in force in every monastery within the
Frankish monarchy, and was observed in substantially the same form, though slight local variations in the ritual are noticeable. The fullest description of these variations is given by Marténe (vol. ii. col. 290, and vol. iv. p. 372). The mandatum
was performed in some convents not by the abbot alone, but by every inmate, and not merely on
twelve poor persons, but on as many paupers as
were monks in the cloister. The practice of foot-washing was already so well established in the
Roman Church, was still further extended and
encouraged by the enthusiasm with which the re-
nowned Bernard of Clairvaux (A.D. 1091-1153)
urged its observance. So high did he regard this
rite that he sought to have it placed alongside of
Baptism and the Lord's Supper as an eighth sacra-
ment. His words are: 'Nam ut de remissione
disquantiorum minime dubitimus, habemus ejus
sacramentum pedum ablutionem.' A liquid
ligatur quod necessitatum erat ad salutem
quando sine eo nate Petrus partem habet in
regno Christi et Dei (Opera, i., Sermon. 'de Coena
Dom,' col. 187). Though the Pope at first refused to agree to Bernard's plea, such was the greatness
of his character and the weight of his example
that the ceremony was fixed more securely than ever in the service of the Church. There are references from time to time in history to the royal Maundy
of the kings of France. Helgardus (Vita Roberti
regis, in Duchesne, Hist. Franca. Scriptor, 1630-
49, vol. iv.) states that King Robert II. (A.D. 871-
1037) daily gathered to his table 300 poor guests
and, after feeding them, was accustomed to lay
aside his royal vestments, and clad in a rough
garment of goats' hair, to wash the feet of 100
of them, and to wash also the feet of the clergy
head to toe. Each then he made a present of two
ounces of silver ('duobus solidis remunerans'). Picart (ii.
21) records that in his time the chief physician of
the king (Louis xv. [1715-1775]) annually made
choice of twelve children whose feet were sifted
on Maundy Thursday, and who were afterwards
served by his Majesty with dishes of food.

(4) Spain.—To Spain belongs the distinction of
being the first country in Europe to give a synodal
imprimatur to the rite of foot-washing. Canon 3
of the 17th Council of Toledo (A.D. 684), while
affirming that the ceremony ought to take place on
the anniversary of the day when Christ first per-
formed it, viz. Thursday, the 14th Nisan, decreed
to decree: 'Si quisquam sacrosacrametum hos nostrar
diutulit ad implere decretum, duorum mensium
spatia sese noverit in sanctae communione percipien
tes frustratam ('Conc. Tolet., Deel. xvi. 2.) (see
Marténe, vol. iii. col. 280). The office is in Liber
Ordinum (ed. Férrotin, col. 192, or Ximenes,
Missale Mista (Librariae Mozarabicae secundum
Regulas beat. A. Fr. I, pars II. 320, &c. in the
420, 'ad lavandos pedes'). It is here stated that
the rubric as to foot-washing did not exist in the
Missale Toledo, but that it had been an ancient
custom, kept up on the following day of Holy Wch, in
certain churches of Spain and Gaul, and allowed

VOL. V.—52
FEET-WASHING

lapse in others. In consequence of this, the Council of Toledo ordered the bishops throughout the whole of Spain and Gaul on this day to follow the example set by Jesus Christ, and to practise the same, under the penalty of excommunication, for two months for non-performance—whence, it is added, there arose the ceremony of the washing of the feet of poor persons, which everywhere was performed even by Christian princes centuries before Constantine. In the 18th cent., the royal Maundy as observed in Spain was described by Picart (op. cit. ii. 23). At the present time, besides being observed in almost every convent and palace in Spain, the rite is still continued by the King, twelve old men and twelve old women having their feet washed with a sponge and a towel by the monarch, who afterwards waits on them at a feast. House (The Everyday Book, ii. 465) gives a full account of the ceremony as performed in Seville. In Madrid at the present time all vehicular traffic is forbidden on Holy Thursday. A foolhardy cabman in 1870 nearly lost his life while attempting to defy the public opinion on the subject (see Walsh, 677).

(5) Portugal.—Feet-washing as a part of the services of Holy Week was not observed by either the ex-king (Manuel) of Portugal or his father. In fact, the only royal act of a regal character on that day was the crossing of Dom Pedro V. (1851). After the institution of the Republic the ceremony was no longer maintained in the Royal Chapel, but in only a few of the churches of the city. Twelve poor persons had their feet washed amid much pomp and splendour and a great profusion of lights. Those operated upon in the Royal Chapel used each to receive Rs. 900 (worth to-day 26 shillings). This was done every year.

(6) Bavaria.—The ceremony of the feet-washing is still annually observed in Munich on Holy Thursday. It is performed in the 'Hercules-Saal' of the Royal Palace by the King (at present by the Prince Regent) in presence of the members of the Royal Family and the dignitaries of the Church. After the usual religious service, the feet of twelve old men, above 90 years of age, selected from every part of Bavaria, are washed by the sovereign, and afterwards kissed by the senior priest of the Royal Chapel. After the ceremony, the King (or Prince Regent) hangs a little blue and white bag containing a small cross of the ecclesiastical bulls of the twelve apostles. Every 10 years, the rite is also celebrated at Oberammergau, 45 miles S.W. of Munich, in connexion with the famous Passion Play.

(7) Austria.—Every Holy Thursday it has for centuries been the custom for the Emperor of Austria to wash the feet of the 12 oldest poor men in Vienna. In one of the halls of the Hofburg, amid a throng of brilliantly uniformed nobles and aristocrats, the scene takes place. First comes a 'feast' given to the old men, who are all dressed in a quaint old German costume, and seated on a row of chairs at a table. The Emperor stands at the end of the table, making the number 13. From a side room emerge 12 maids, each carrying a tray laden with entails. The Emperor places the plates in turn before each old man. They remain motionless, not touching a morsel. No sooner are the plates on the table than they are quickly lifted up again and carried off by 13 men, who form a bodyguard. Four courses are thus served, and all—dishes and fruit—are later sent to the houses of the poor guests. Relatives, who have been standing behind the chairs, now remove the shoes and hose of the old persons, and spread a roll of linen over their knees. A high church dignitary reads the Gospel for the day, and at the words 'et coepit ludere pedes discipulorum,' the Emperor dips a towel into a basin, and hastily wipes the feet of the old men in turn. The actual washing is very perfunctory, and the whole ceremony is over in a few minutes. Lastly, the Emperor hangs round the neck of each guest a silken bag containing silver pieces, and the old men are taken home in Royal carriages. The late Empress Elizabeth had discontinued the practice of performing a similar rite on old women in Vienna for some years before her assassination. The custom of the Pedilavium is still widely practised by the lower clergy and church of Austro (cf. P. H. Ditlichfield, Old English Customs extend at the present Time, 1896, p. 258).

(8) England.—In England, Holy Thursday has received the name of 'Maundy Thursday.' A. Nares (Glossary, 1822, s.v.), following Spelman and Skinner, derives the word from the Saxon maund, 'a basket' (in which the provisions were given away). Cf. Shakespeare, A Lover's Complaint, 'A thousand favours from a manul she drew.' Maund has also been derived from Fr. maundier = 'to beg' ('mendicant' = 'a beggar'); hence 'Maundy Thursday' = 'the poor people's Thursday.' Gentleman's Magazine, July, 1776, p. 361. To Société (Concise Etymol. Dict., 1901, s.v.) emphatically maintains that the true derivation is through the Mid. Eng. maundee from Old Fr. maund, and that again from Lat. mandatum, 'a command' (13th cent.), and that this had with them cross-, or 'sprung,' is 'as false as it is readily believed.' The day is also known as 'Shere Thursday' (also Sheer, Chare, from Mid. Eng. sher or shere = 'pure,' 'unaloed, 'clear'; st. been in the use of <sheer, to express physical purity). The Liber Festivolis (fol. xxxii. b) of 1511 explains the name because 'in old faders daues the people wolde that day shere thei hedes, and clypp thei berdes... and so make them honester againe Easterday' (see also Brand, Popular Antiquities, 1813, i. 142, and Wordsworth, Eccles. Diog. i. 297). Hope (Every-Day Book, i. 402) says: 'In the miraculous legend of St. Brendan (A.D. 578) it is related that he sailed with his monks to the island of sheep, 'and on thare thursdays, after souer, he wesshe thei feeet and kyssed them lyke as our lorde dyd to his dysceple [Captions: Golden Legend]' (cf. Early South English Legendary [Early Eng. Text Soc., 1887]).

The Anglo-Saxon Church differed from the national Churches of France, Spain, and other countries in this respect, that it had no distinctive rite or type of liturgy for the washing of the feet. The events which occasioned its existence to Augustine of Canterbury, the A.S. Church was Roman all through. The various missals in use in the A.S. Church were practically the Roman missal with variations and other modifications which serve to distinguish them from the Continental missals of the same date. Of these A.S. missals, written before the Norman Conquest in 1066, three have survived. Two of them have references to the ceremony of feet-washing: (a) The Missal of Robert of Junius (ed. H. A. Wilson, Henry Bradshaw Soc. xi. [1896] 275), once the property of Robert, prior of the Benedictine monastery of St. Ouen at Caen, Abbot of Junius' in 1037, bishop of London under Edward the Confessor in 1044, and archb. of Canterbury in 1051. The MS is of the end of the 10th cent. and the beginning of the 11th, and was preserved at Caen. The other manuscript (for which Dibdin is responsible: Bibliog. Tour, ed. 1821, i. 153) was meanwhile been preserved under the heading 'Benedictio (or Oratio ad mandatum ipso die.' It runs thus: 1

1 On the alleged connexion between 'Chare Thursday' and the German 'Getreide' or 'Karmesin,' see Wilkins, [1801] 399; and for the derivation of 'Charefreitag,' cf. Graff, Worterbuch, Berlin, 1834-46, iv. 694, and Wagner's, Wort zu seinem Ladebuch, p. 319.
Feet-Washing

Adesto, Domino, officio nostrae servitutiae, quia tu pedes
Ivare dignatus es discipularum; nec displicea opera mantuum
his iuseque extremitate gaudies et, ut, etiam si, orare
sicut hic externa alibiurntur inquinamenta. sic et omnium
nobissimam speciem sanae vitae, quae regali poetae
etc. (cf. the 'Gradus post mandatum,' in the Millesine Church).

(b) The Leofric Missal (ed. F. E. Warren, 1883),
bequeathed to Exeter Cathedral by Leofric, first
bishop of Exeter (d. 1086), is a complex volume
with three main divisions: (a) a Gregorian sacramentary,
written in Lotharingia early in the 10th century;
(b) an A.S. calendar, written in English about
A.D. 970; and (c) a number of masses, etc.,
written in England, from the 10th to the 11th century. (see
CQI xiv. (1882) 278). In it (p. 256) we find
the following rubric for 'Peria Quinta in Coena Domini': 'Ante
missam vero faciant mandatum cum peregriini et hospitibus.'

In addition to these surviving pre-Norman service-books, we have scattered historical references to the observance of the rite in the A.S. Church. Wearmouth, abbot of St. Albans, ordained
a daily celebration in the Archb. of York, washed the feet of 12 poor men
and fed them every day. In other religious houses it was the practice to wash the feet of as many poor religious as there were monks, the custom being
not only on Maundy Thursday, but on the Saturday before Palm Sunday, which therefore received the name of Mandatum pauperum to distinguish it from the Mandatum Dic
(T. Thesleff-Dyer, Brit. Pop. Customs, 1876, p. 159). Aelfric,
archb. of Canterbury (A.D. 996–1006), ordered the
Saxon priests: 'Impa mandata Domini in coena
ipseius,' 'Do on Thursday as our Lord commands you
in the Gospels, wash the feet of the priests and clerics among
them, and with humility wash your feet among yourselves as Christ himself did and commanded
us so to do.' (Rock (Church of our Fathers, iv. 85, 95)
describes in full detail the ceremony as observed
in the A.S. Church. The rubric for the mandatum
is given by St. Dunstan as it was carried out
in every church throughout Anglo-Saxondom (Roll, 1871, 370). Rupert of Deutz (Tuitonis
(f. 1135)) erroneously ascribed the origin of the rite
to the woman who anointed Christ's feet. It was
sometimes performed in monasteries for the purpose
of comforting the souls of friends and families of the late monks regularly buried there.
Some of the A.S. kings (Biblioth. Patr. 951), referred
to in Froshoake, Ecne of Ant., Lond. 1840, art.
'Mandacy,' p. 827). The Clogne monks merely
tumped each other with the words 'to give, give, give.' The monks of those poor
men: the Benedictines and Cistercians scrupulously
washed the feet of the brethren, the abbots not
being named.

Further references to the early English practice will be
found in the Cistercian Constitutions (ed. Guignard, p. 110 (1875));
and in J. H. Feasey, op. cit. p. 95. References to the observance
of the rite in later times are found in several of the masses,
service-books, and 'tunes.' The Westminster Missal (Missale
ad usum Eccles. Westmon, ed. J. Weckham Legg, Henry
Bradshaw Soc., lii (1893) 573) has 'ad mandatum pauperum
in die cese, Anilpius Domino Bene's.' (see also note in vol.
ii. p. 310 as to the identity of this author with that in
Laurence's rite). The York Missal (Missale ad usum insignum
Eccles. Ebor., (Sarcus Soc. L. 101, ed. Henderson, 1874), a MS
of the 12th cent., gives the rubric first for the mandatum
for the poor, and then that for the brethren (see Maskell, Asc.
of the ceremony (see Bradshaw Soc., lii (1893) 597). The Consuetudini Regulares provides the
body of the abbot (Col. 55, line 10) immediately after the
miserum (the 'refreshment'), and makes no mention of a
purpose for the ceremony. General, Laurence's Notitia agree with the Ezechias Book in placing here
the refreshment, but differ in that it in making no
mention of the abbot's Mandacy (Toynbee, Archdioce. Cant.,
Anilpius, 1826, App. 87, 220). The Rites of Durham (1866
(Sarcus Soc. L. 101, ed. Henderson, 1874), a MS of 1290, has a MS
of A.D. 1290, gives a full guide to the abbot as to the performance
of the ceremony (see Bradshaw Soc., lii (1893) 597). The Consuetudini Regulares provides the
body of the abbot (Col. 55, line 10) immediately after the
miserum (the 'refreshment'), and makes no mention of a
purpose for the ceremony. General, Laurence's Notitia agree with the Ezechias Book in placing here
the refreshment, but differ in that it in making no
mention of the abbot's Mandacy (Toynbee, Archdioce. Cant.,
Anilpius, 1826, App. 87, 220). The Rites of Durham (1866
(Sarcus Soc. L. 101, ed. Henderson, 1874), a MS of 1290, has a MS
of A.D. 1290, gives a full guide to the abbot as to the performance
of the ceremony (see Bradshaw Soc., lii (1893) 597). The Consuetudini Regulares provides the
body of the abbot (Col. 55, line 10) immediately after the
miserum (the 'refreshment'), and makes no mention of a
purpose for the ceremony. General, Laurence's Notitia agree with the Ezechias Book in placing here
the refreshment, but differ in that it in making no
mention of the abbot's Mandacy (Toynbee, Archdioce. Cant.,
Anilpius, 1826, App. 87, 220). The Rites of Durham (1866
(Sarcus Soc. L. 101, ed. Henderson, 1874), a MS of 1290, has a MS
of A.D. 1290, gives a full guide to the abbot as to the performance
of the ceremony (see Bradshaw Soc., lii (1893) 597). The Consuetudini Regulares provides the
body of the abbot (Col. 55, line 10) immediately after the
miserum (the 'refreshment'), and makes no mention of a
purpose for the ceremony. General, Laurence's Notitia agree with the Ezechias Book in placing here
the refreshment, but differ in that it in making no
mention of the abbot's Mandacy (Toynbee, Archdioce. Cant.,
Anilpius, 1826, App. 87, 220). The Rites of Durham (1866
(Sarcus Soc. L. 101, ed. Henderson, 1874), a MS of 1290, has a MS
of A.D. 1290, gives a full guide to the abbot as to the performance
of the ceremony (see Bradshaw Soc., lii (1893) 597). The Consuetudini Regulares provides the
body of the abbot (Col. 55, line 10) immediately after the
FEET-WASHING

Progresses of Queen Elizabeth, 1583, i. 225; Hone, Every-Day Book, i. 401.

Charles V., its reign (1560-1568).—On Thursday last his Majesty washed poor men's feet in the Basquing House, an act of humility never before known, in all the presence of many poor men who had served him as such. The Queen did the same to several women of St. James's (Brock, London Paper, i. 1566; see Weeks, ed. Walthall, in vol. ii. 257):—April 4th, 1567.—My wife had been...to the Mundy, it being Mundy's custom that the King did not wash the poor people himself, but the Bishop of London did it for him.' It was in this reign that 'Mundy pennies' were first coined, coming fresh from the mint to the recipients of the grace of St. James's I.'s reign.—The last English sovereign to perform the rite of washing the feet of the poor was Queen Victoria (in Caselli, Oeuvres pour les Etrangers, 1863, p. 33, it is said: 'Le Jeudy Saint, le Rey, selon un fort ancienne coutume, lava les pieds a tout autant de chars qu'il avait dans ses propriétés.' But in the 3rd ed. of the same work (p. 43) there is a reference to the fact that the act was no longer performed by royalty in Britain; 'Mais le Roy G. III, (William iii, a laisit l'habitude de cette cérémonie a son grand Ammoner ou un Evéque du Royaume.' (9) An elaborate account of how the archb., York, as Lord High Ammoner (on 13th April 1571), performed the annual ceremony of washing the feet of a certain number of poor in the Royal Chapel, Whitehall, in the presence of the monarch (see Hone, op. cit. i. 401; Grosvenor Street, Friday, 3rd April, 1823; and Old and New London, iii. 368.).

Since 1754 the rite of feet-washing has been wholly abandoned by the Church of England; and in place of the former gifts of provisions and clothing a fixed sum of money is granted. The ceremony in 1814 is described by Hone (op. cit. i. 401). In 1818, owing to the advanced age of George iii, the mandate was not given. In 1830, Queen Victoria's reign it was the custom to present Mundy pennies to twice as many aged men and women as the Queen had lived years. King Edward vii, omitting the rite for a few months days, in 1887, and in 1888, and the practice is kept up similarly by King George v.

The Roman Catholic Church in England still preserves the rite in its entirety, as well as in certain parts of Ireland. In the archdiocese, clothed in episcopal robes, washes, and wipes with a linen cloth, the feet of 13 choir boys arrayed in casseque and cotta, in the Cathedral at Westminster, each boy afterwards receiving a gift-book (Walshe, op. cit. i. 675).

(9) Scotland.—The references to the practice are scanty. St. Kentigern is recorded to have washed the feet of a group on the Saturday before Palm Sunday (J. Craig Macdonald in Myths, 1882, p. 254, notes, who may be reckoned as Scottish (A.D. 676), is recorded by St. Bede (Life of St. Cuthbert, tr. Stevenson, 1887, p. 33) to have found one day at Ripon a young man sitting in the graveyard, and when he came to the custom with the customary forms of kindness. He lathed his feet for him, wiped them with a towel, placed them in his bosom, himself chafing them with his hands. During his residence in Lindisfarne, he would devoutly wash the feet of his brother monks with warm water, and he is told to have taken off his shoes, and to suffer them to wash his feet for so entirely had he put off all care as to the body, and so had given himself up to the care of the soul alone, that when once he had put on his long hose, which were made of hide, he used to wear them for several months together. Yet, with the exception of one at Easter, it may be said that he never took them off again for a year until the return of the Paschal, when he was washed for the ceremony of the washing of the feet by a bishop of a small order, at 10, Thursday morning (Ed. p. 84; cf. Martine, De Ant. Eccl., Dieuse, c. xxii. pp. 277, 346 [ed. 1796], and De Ant. Monach., Rom. ii. 12, 961).

In Turgo's Life of St. Margaret, Queen of Scotland, p. 61 (tr. from the Latin by W. Forbes-Listh, 1884), as also in Johannes de Fordun's Chronica gentis Scotorum, lib. v. 'The Historians of Scotland, 179, 216, it is stated that, 'when the office of matins was finished, she (Margaret), returning to her chamber, along with the king (Malcolm Canmore), washed the feet of six poor persons, and used to give them a piece of bread. He was so poor, that to relieve him from extreme poverty,' Her son, Alexander i, the Fierce, copied the example of his mother (ib. ch. 28, p. 227). After the Reformation the practice was viewed with great abhorrence (Caldewood, Hist. 1678, iii. 703, referring to reign of James vi.).

(10) Ireland.—Traces of the solemn celebration of this rite are recorded in the Missale Vetus Hibernicum (ed. F. E. Warren, 1879, p. 119, in the service for Maundy Thursday); in the legends of St. Bridget (Hall, Early Christianity in Ireland, 1863, p. 144; see a curious account in the Lives of the Saints from the Book of Lismore [ed. W. Stokes, 1890]; Carmichael, Carmen Gadelica, 1900; cf. also what is said about St. Brendan, above, p. 519).

(11) Palestine.—In an observance of the mandatum takes place in Jerusalem in front of the entrance to the Holy Sepulchre, between the Chapel of the Angel and the Greek Church. The rite is described by Mantell, in PEFS, 1889, p. 180.

II. THE EASTERN CHURCHES.—(1) Greek Orthodox Church.—The ceremony of the Lavapiedum was observed with a scrupulousness in the Eastern Church rivaling that of the Western communion. The office—σέλυσις των θεού και ερημών (in the ordinary ETXAOAITON TO META). Older forms are noted in Goar, ETXAOAIION (p. 291). The variants from the Church of Russia are the oldest in vogue, v. c. A.D. 795. (See also Dmitrijevskiy, Euchologias, for further details regarding the ancient office.) The Greek office prescribes a full service of chants and prayers and the foot-washing service takes place at the end of the service, thus:—The priest—ένοικος ἐν οὔτε ἐν διαθήκῃ. The gift-offerer says, εἰς τὸ χορτον της Θεοτόκου, and the deacon is to pipe in the words: 'He poureth water into a basin,' the brother both repeats the sentence and imitates the action. Goar (p. 596) refers to Jerome's practice of washing the feet of the Lord with a white silk robe, which service was in Russia (1810, i. 55; see also Leo Allatius, de dom. et lebb. Graec., 1846, p. 23). The Cantor of Byzantium is the bearer of Russian, and the Greek Orthodox Church, continues to this day at St. Petersburg the practice of the imperial mandatum, which was observed in the Court of the Byzantine Emperors at Constantinople. The fullest account of the ancient Byzantine ritual is given by Codinius, de Officiis Magna Eucharistia (ed. Bekker, Bonn, 1839, p. 70, and notcs, p. 318; see also PG civil; and, for the date of Codinius, to whom the de Officiis is erroneously attributed and Manuel 1809-1900, vol. vii. note). The repetition of the Triaskan; the pouring out of the water into the basin by the Empress, of the mandatum, and the washing of the feet of each poor man, each carrying a burning taper, the washing and kissing of the right foot of each by the Emperor; and the giving to each panurer of three pieces of gold, are all slight variants in practice from the ritual as observed elsewhere.

(22) Turkey.—The monastic mandatum is carried out yearly on Maundy Thursday by the Greek Metropolitan in Constantinople. (23) Palestine.—On Maundy Thursday the Greek Patriarch washes the feet of 12 of his bishops in a court in front of the Church of the Holy Sepulchre at Jerusalem. The courtyard is a spacious one, about 3 ft. above the pavement, protected by an iron railing, and enclosing a space about 8 ft. by 12.Inside and outside the railing the seats are filled with the back a gold and white arm-chair cushioned with red satin for the Patriarch. A priest carries in pieces of gold, which is distributed to the poor as labor. Then rise while prayer is offered. The Patriarch removes his shoes, elevates, and stands in white silk robe, and white silk glove. He twines a long Turkish bath-towel round his head, and pours water into the basin, while the twelve
bishops get their feet out of their gaiters, and pull off their whole dress. The Patriarch, who sprinkles, dries, and kisses each. The last is "by foot," who objects, violently gesticulates, and rises. But the Patriarch, as he takes the oil of Holy chrism, shakes his hand at Peter, and the un prudent "apostle" protests. At this moment some bells are rung in the Greek church, before Jerusalem breaks into music. The Patriarch descends the steps and, followed by his footsteps in double file, marches away. A priest raises the vase containing the remains of the holy water, dips a large bouquet of roses into it, and therewith sprinkles the upper part of the nave, a pious gesture, who rush forward, wipe up the drops on the floor with their handkerchiefs, and raise the feet of the sick. "Almost, &c.;" a very full account is given by L. Mantelli, P.P.M., 1852, p. 184.

(2) Armenian.—A translation of the office for Maundy Thursday is given by F. C. Conybeare (Baillie Armenianum, p. 212).

For to-day our Lord, the Giver of life, humbled himself for our salvation, to wash the feet of his disciples. And the Master of the Bible, in the fullness of fulness and fulfillment of the tremendous economy, went down on the knees of dust-created beings, and with the nimble whereby he was girt, washed away and cleansed in the nave, where he washed the feet of his apostles, giving them power and authority to trample on asps and vipers and all the hosts of the enemy. And so it was the Accomplished God, Son of God, who to-day stooped to the feet of the disciples, washing away the scandal from them (the text is from A. an uncial codex in San Lorenzo Monast., Venice, dated, but probably of 9th cent., not later than 10th). In the Armenian rite a vessel of water is placed in the chancel and is poured upon it with the benediction. When the bishop has washed the feet of clergy and people, he also anoints them. Then, resuming his cope, which was laid aside for the feet-washing, he is lifted up on high, and dispenses the people from fasting during Easter-tide (Butler, op. cit. ii. 350).

The Armenian services of Holy Week, in the form they have assumed since the middle ages, and retain till today, have been published by Amy Apax of Odzadzota (Melodies of our Offices in the Holy Week according to the Apostolic Synod of Armenia, Leipzig, 1902). In this work the hymns sung by the congregation are printed with modern musical notation (note by Conybeare, p. 213).

(3) Coptic.—The Text of the Office is in Tuki, Ἐκκλησίας τῆς Καισαρείας, pp. 170-226. The present Coptic usage is described by J. A. Butler, p. 350: "a. The Maundy Thursday, called "The Thaurophany," tiscore, sext., and none are duty recited; after which, if there be no consecration of the holy oils to come first, a procession is formed to a small tank, in the nave, where the Bishop blesses the water with ceremonies similar to those ordained for Egyptian baptism, and hymns of the occasion are sung upon the subject of the Lord's washing the feet of the disciples. At the end of the prayers, the Patriarch gives his benison to the assembled priests and people, sprinkling them with water from the tank; then he washes the feet of sacerdotal persons, both clerics and laymen. In this he is joined by them with a kiss. On this day immediately after the washing of feet, the door of the "khalâs" is opened and the僧们 of the congregation of the Holy Communion, after which it is closed again; but in this Mass the kiss of peace is dispensed, as the commemoration of the dead are omitted." In the Byzantine rite the ceremony of the Synod reads the Deacon from the aposom or pulpit, setting forth the duties of the Patriarch, it is expressly mentioned that he is to perform the office of feet-washing on Maundy Thursday (ib. ii. 145). Hence Butler thinks the ἐκκλησίας mentioned in the ancient usage must mean a towel, besides of fine embroidery, gorgeously woven with silver and gold. It was laid on the patriarch's shoulder at his ordination, with special reference to his performance of this ceremony, to which the Coptic Church attached great importance (see Butler, ii. 122, for the special fano used instead of a mitre on this occasion).

The tank used for feet-washing is a conspicuous feature in Egyptian churches. It is usually a shallow rectangular basin about two feet long and one foot wide, sunk in the floor, and edged generally with costly marbles. The ordinary position for it is in the westward part of the nave, but in many desert churches it lies rather more eastward (ib. 350).

7. Feet-washing in Protestant Churches.—(1) Lutheranism.—At the Reformation, Luther denounced the practice of feet-washing with characteristic plainness of speech. To him the ceremony was one "in which the feet which had been the seat of the feet of Christ, who, the ceremony over, will have all the more humble towards him, while Christ had made it an emblem of true humility and abasement, and the Church thereby the position and status of those whose feet he washed. "We have nothing to do," said he, "with feet-washing with water; otherwise it is nothing but the feet of twelve, but those of everybody we should wash. People would be more bound by such a custom to wash their feet as to dangerous work, and the whole body washed. If you wish to wash your neighbour's feet, do it yourself, and help everybody to becoming better." (Sämtliche Schriften, pt. xiii. [Magdeburg, 1743], col. 680).

Similarly the Lutheran J. A. Bengel (1687-1751) followed his custom in condemning the rite: "In our day, popes and princes imitate the feet-washing to the letter: but a greater subject for admiration would be, for instance, a pope so abased, as to wash the feet of the laity or people, than the feet of twelve paupers" (Gnomon (Eng. tr. of 1759, ii. 439); Bengel recommends the study of Iturigs, de Pedilavit, 1703).

In 1718 the Lutheran Upper Consistory of Dresden condemned twelve Lutheran citizens of Weida to public penance for having permitted Duke Moritz Wilhelm to wash their feet (PRE 2 vi. 325, art. 'Fusswaschung').

(2) Moravian.—Amongst the other ancient practices revived by the Moravian Brethren was that of the Pedilavium, though they did not strictly enforce it. It was to be performed not only by leaders towards their followers, but also by the Brethren among themselves, while they sang a hymn in which the significance of the rite (called the 'lesser Brethren') was explained. In 1793 a Synod of the Church held at Herrnhut, the practice was abolished.

(3) Mennonites.—Menno Simons (1492-1559) in his work, The Fundamental Book of the True Christian Faith (1539), laid stress on feet-washing in addition to Baptism and the Lord's Supper, as a necessary ordinance (Mosheim, Eccl. Hist., 1688, iii. 545; Kurtz, Church History, ii. 405 [Eng. tr. 1801]). His followers were styled Pedalontae. The Confession of the United Brethren or Men- nonites (1660) acknowledges the standing obligation of the rite as instituted by Christ. The Mennonite Church in Holland for 164 years split into 'Flemings' and 'Waterlanders,' the former holding the binding necessity of feet-washing, the latter being not so strict. The Waterlanders now call themselves Doopsgezinden. The literal practice of feet-washing led to a split in the American Mennonite Church in 1811 (McClintock-Strong, Cyclop. vi. 95, art. 'Mennonites').

(4) Dunkers or Dunkards.—However divided on other points, the members of this church are agreed on the binding obligation to observe the feet-washing. The ceremony takes place twice a year in each congregation before the celebration of the love-feast. But as to the correct mode of feet-washing, i.e. whether the person whose feet must also wipe them, or whether another person should perform the latter operation, there have been grave disputes. The 'single mode' is insisted on by the oldest churches as being more in line with Christ's example, but the Annual Meeting has prescribed the 'double mode' as the recognized rubric for the general brotherhood (Schaff-Herzog, iv. 24, art. 'Dunkers').

(5) Winebrennerians, or The Church of God.—The 11th article of their creed says: 'This Church believes that the ordinance of Feet-washing, that is, the literal washing of the saints' feet according to the words and example of Christ, is obligatory upon all Christians, and ought to be observed by all the Church of God.' In every congregation Feet-washing, with Baptism and the Lord's Supper, are 'positive ordinances of perpetual standing in the Church' (see H. K. Carroll, The Religious Forces of the United States, i. 102; Schaff-Herzog, lii. 91; PRE 2 iv. 359; McClintock-Strong, vi. 335, art. 'Church of God').

(6) The Ammonia Society, or Community of true Inspiration.—One of their most sacred religious services is the Liebezahl, or love-feast, celebrated now but once in two years. At this Lord's Supper, the ceremony of feet-washing is
FEET-WASHING

observed by the higher spiritual orders. The participants are arranged into three classes: 'The number of those who were to serve had to be determined in proportion to the great membership. Thus there were appointed for the foot-washing at the first Love-feast 13 brothers and 12 sisters. For the second Love-feast likewise 13 brothers and 14 sisters from the first class (see Amana Society, vol. i. p. 365 f.).

(7) Seventh-Day Adventists.—Among this American denomination the rite of feet-washing 'is observed at the quarterly meetings, the men and women meeting separately for this purpose, previous to the celebration of the Lord's Supper, during which they meet together' (Special Census Report [1906] on Religious Bodies, ii. 23, Washington, 1910).

(8) Baptist sub-sects. — The Freewill Baptists believe in this rite (ib. 124), as do some General (Arminian) Baptists (ib. 129), and it is also performed by the Two-Seed-in-the-Spirit Predestinarian Baptists (ib. 156) and by more than half of the Primitive Baptists (ib. 139). Both the Separate Baptist Churches (in the Church of Christ) hold that there are three ordinances—baptism, the Lord's Supper, and feet-washing (pp. 132, 136); while the Coloured Primitive Baptists observe the rite 'not 'as a Dutch custom. In this matter of faith in, and obedience to the example given by Him'; the sacramental service is not considered complete until this rite is performed (ib. 151).

(9) River Brethren. — Both the Brethren in Christ and the United Zion's Children—two sub-sects of this denomination, which is ultimately derived from the Mennonites—observe this rite, although the Brethren in Christ hold that the rite is not to be distinguished from baptism (ib. 209). One of the reasons for the formation of the New Congregational Methodist Church in 1881 was its wish to grant to those who desired it permission to observe the rite of feet-washing in connexion with the administration of the Lord's Supper (ib. 147). It is also permitted by the United Brethren in Christ, who hold that the practice of feet-washing should be left to the judgment of each individual (ib. 646).—Louis H. Grove, 1. 2.

It remains only to be observed that some of the purest and noblest souls in modern times who have lived for the welfare of their fellow-men have felt so attracted by this rite that they have desired to have it recognized as a sacrament (see A. B. Bruce, Life of William Denny, 1888, p. 250).

8. Feet-washing in connexion with marriage. — In many countries, both in ancient times and at the present day, hands and feet are washed, and, more particularly, washing of the feet, have been reckoned essential features to the proper celebration of marriage. Thus Roman brides had their feet washed by the groom when they approached his household on the wedding day (Festus Pompeius, ii. 6; Macrobius, Sat. iii.; cf. Matt. Brouerius, de Pop. Vot. Re. Recent. Adorationibus, 1713, col. 976). In many parts of rural England and Scotland, relics of this custom still survive. On the evening before the marriage takes place, a few of the bridegroom's friends assemble at his house, when a large tub nearly filled with water is brought forward. The bridegroom is stripped of shoes and stockings, and his feet and legs are plunged into the water. While one friend washes his feet and legs, another, from the other side of the tub, washes those of another, and so on, in an orderly manner. Subsequently, another besmears them with shoe-blacking or soot, while a third practises some other vagary (cf. the practice of the ancient Greeks in daubing their naked bodies with clay and dirt in the Dionysiac Mysteries; see G. L. Combe, Household of Early Village Life, 1883, p. 219; Gregor, Folklore of N. E. Scotland, 1881, p. 89; and de Gubernatis, Storia comparata degli usi nuziali in Italia, Milan, 1889, p. 121). In 1903 a case occurred where the bridegroom was a son of the Provost of Huntly. His feet were thus washed by his friends, and the bride would have been similarly treated had not her health prevented it (W. C. Hazlitt, National Faiths and Popular Customs, 1905, ii. 434). It was sometimes customary for the ring to be dropped into the water during the washing of the feet of the bride; whoever recovered it first was deemed to have the best chance of being the next to be married (John Grant, The Penny Wedding, Edinburgh, 1836).

In the warm Orient, the practice enters largely into the ceremony of the marriage day. In some parts of Java, it is a matter of a matron or an elder who washes the bridegroom's feet. Among the peoples inhabiting the Tenggar Mountains in Java, the bride washes the feet of the bridegroom, while she is still actually bending in lowly reverence before the priest during the marriage service (E. J. Wood, The Wedding Days in all Ages, the East and the West, 1845, p. 157). It is by means of the hands and feet that bhutas (spirit) enters the body, it is held necessary in India for feet-washing to form part of the marriage ceremony (Crooke, Popular Belief and Folklore of N. India, 1896, i. 241). Thus, at a Sattal wedding, women come forth and wash the feet of the guests who arrive with the bridegroom at the village (E. T. Dalton, Deser. Ethnol. of Sattal, Calcutta, 1872, p. 216). So run its the Musul, at certain times in the marriage service, the two fathers wash the feet of the bride and the bridegroom respectively (ib. 243). If this washing was omitted, some foreign and evil spirits enter the body, and the second, the bridegroom, slip into the company, just as (according to the favourite example of the result of neglect of this rule) Aditi's failure to do this allowed Indra to form the Maruts out of her emulsion (Crooke, i. 242). Amongst the Marathas in India, feet-washing is repeatedly observed in connexion with a marriage. When the bridegroom's father sends a relative along with the priest to the girl's father to propose the match, they are welcomed, and water is given to them to wash their hands and feet. On the marriage day a married woman of the bride's house pours a dish full of water mixed with lime and turmeric on the bridegroom's feet, with the bride's husband and wife, the bride's father and mother sit on two low stools in front of the bridegroom face to face, and the father washes the feet of the husband, while the wife washes the boy's mother's feet, and marks her brow with vermilion. On the morning of the marriage the bridegroom dismounts at the door of the bride, and his feet are washed by one of the women servants of the house. Of the marriage-feast day all wash their hands and
FEINNE CYCLE 823

Feet at a place prepared for the purpose. The maid who stands at the door with an earthen pot full of water empties it at the feet of the pair, who enter the house. The bride and her friends and relatives. At a later stage the girl again washes her hands and feet, and takes her seat as before, to the right of her husband. At night the girl washes her husband's feet in warm water, with the aid of her elder sister, and some friend, and on his feet paints vermilion and turmeric shoes (ib. pp. 115, 117, 119).

A feature of the Bengal Brahman wedding ceremony is the Jāmātā-lārōm, or the bridegroom's welcome by the bride's father. The latter offers his prospective son-in-law water for washing his feet (pādyā-arγhyan), which the bridgegroom touches in token of acceptance (ib. p. 190). On the Malaḥ baros, early in the 19th cent. the bridegroom's feet were washed with milk by a young relative who also put a silver ring upon his toe (Wood, op. cit. ii. 141). The Indian theory of the duty of the wife to wash her husband's feet has even been changed into a means of salvation for the woman. Just as it is taught in the Tantras that 'the water of a guru's (religion teachers') feet purifies all sin' (Morrison, New Ideas in India, 1907), so in the Sācita, the woman's feet (iv. 35) is it laid down: 'Let a wife who wishes to perform prescribed obligations wash the feet of her lord, and drink the water; for a husband is to a wife greater than Siva or Vīra.

The husband is her god, her priest, her religion; with whom she must live in her heart, she ought first and chiefly to worship her husband.' Even amongst the ancient Poles, the bride on being led to church was made to walk three times round a fire, then to sit down and wash her husband's feet (Wood, i. 219). In Rabh, literature it is made abundantly plain that feet-washing was a service which a wife was expected to render to her husband (Jers. Kt. v. 30b). According to R. Huna, it was one of the personal attentions to which a Jewish husband was entitled, however many maids the wife may have had.

A similar duty is laid down in the Rabh, Talmud (Kt. 61a), where washing the husband's feet is part of a wife's necessary service to her lord (cf. Maimonides, 'Yad,' Iskut. xxxi. 3; JE v. 357).

For the rite observed in the Eastern Churches, the principal authorities are: (1) for the Greek Orthodox Church, Gear, Exakton, 2nd ed., 1720; (2) for the Armenian service, Dieudonné, in Cod. Officii Magne Ecclesie (ed. Bekker), Bonn, 1802. The Eastern Catholic ceremony is very simply described by Mantell, loc. cit. (3) The Armenian service is described most fully in A. F. Schaff's Hist. of Religious Knowledge (ed. Dunker), and H. K. Carroll, The Religious Forces of the United States, N.Y., 1880, are of importance.

For feet-washing in connection with Indian marriage customs, the most numerous references are probably to be found in the works of Rev. W. R. Carrie and E. Thurston, Castes and Tribes of S. India, Madras, 1869.

G. A. FRANK KNIGHT.
or, as later and less authentic accounts would have us believe, being absent in Rome.

There are no contemporary records, or extant manuscripts of the Feinn, more than those of Abraham, of Moses, or of Homer. The earliest references to Feinn (originally Finn) occur in a passage (ed. of 1703, and in Annals of Plymouth, c. 1087). Both of these allude to the manner and date of the hero's death, as well as to the information from a poem of Cinmidh na Haraignain, who died in a.d. 963. Translated, this poet's remarks run thus: 'By the Finn of Lyons was the glory of his days, viz., his Ath Bres against Boyne (Book of Leinster, fol. 31b). As it was the bard's and professional story-tellers who in the memory of great men and great incidents, it is possible that no tales of the heroes were written, except perhaps in ogham, till the 13th century. The oldest extant MSS in which they have mention of Feinn and the Feinn are the Leabhar na h'Uidhre, compiled from earlier documents towards the close of the 11th cent., and the Book of Leinster, similarly produced about fifty years later. In the former there is a poem ascribed to Feinn; a remark of his wife's containing Gaelic words so old that they required to be glossed in the 11th cent.; an account of the cause of the battle in which his father was killed; and the story of Morgan, an Ulster king of the 7th cent., who was regarded as Feinn come to life again. In the later MS the references are more numerous. Besides poems ascribed to the Feinn chief, to Old, Cius, and others, there are passages from the Leabhar na h'Uidhre, a topographical tract respecting Feinn; an account of a battle in which he fought; his genealogy as well as that of his famous officer Diarmaid O'Dubhair; an account of the Feinn besides Feinn mentioned in the Book of Leinster, but, if the poem is really drawn up during the 12th or beginning of the 13th cent., as Hyde thinks of Dorisbo de Judaville has proved (Literary History of Ireland, p. 382), then it is evident that there were then extant historical stories of the Feinn, telling as early as that period. And in what Whitely Stokes has written of the ancient poet's art in the earliest portion of the Naxogion of Cormac, king of Cashel (A.D. 877-923), there are two further very definite allusions to the wonderful head of the Feinn, who is then mentioned again.

These earliest written hints and impressions represent Feinn as a real historical personage. The story of his life which they unfold is certainly meagre, but it is perfectly intelligible.

The oldest version of the tale, that in the 'Lather na h'Uidhre is probably the most substantial. According to it, Tadg, chief Druid of King Conn, had a beautiful daughter, called Maurne. Cumhail, son of Trenmor, at that time ruler of the Feinn, wished to wed this young lady. On coming to know this, her father stoutly opposed their alliance, because he knew by his Druidical foresight that, if Cumhail married her, he would lose his power at Almanh (present Allen) in Leinster. But the great military champion was not thus to be balked. So he took the beautiful Maurne and married her against her father's wishes. The result was that the old man at this time resigned the red crown for red, and the royal forces were despatched to deal with the arbitrary hero. This army encountered Cumhail and his Feinn at Cunaca, where a deadly struggle took place, during which Cumhail was slain by Aodh MacMora, who, because he lost an eye in this battle, was ever afterwards known as Goll, that is, 'the blind,' MacMora. Hearing of the fate of her husband, Maurne fled to her sister and gave birth to a son, whom she named Finn, but subsequently she called him Fionn. On account, it is said, of his white head (Finn means 'fair'; Fionn, gen. Feinn, 'band' or 'troop'), by Finn, 'troops' or 'soldiers' (Trans- actions of the Gaelic Soc. for 1886 and 1893). When the boy grew up he demanded eric from his grandfather Tadg for the death of his father, and thus came into possession of Almanh, as his greatgrandson had anticipated. He also made war on the lands of Cumhail and his brother, and usually figures in the stories as a kind of Ajax. Like his father Cumhail, Fionn got the command of the Feinn and was greatly regarded as a poet. In fact, in the oldest setting of the so-called Ossianic tales, the poets of the Feinn were Fergus and he, not Ossian. It was only in later and comparatively recent times, as E. Windisch has shown that the latter ousted his father from the pre-eminence in this respect (RCB, p. 170). He learned the art of poetry from Finn Eges or Fionnog, a bard who lived on the banks of the Boyne (for poem attributed to him at this period, see Kuno Meyer's Four Songs of Summer and Winter, London, 1891)."
he held the secret, but he did not. And so to all posterity there is this surviving: the only one recorded—on the character of the truth, wisest, and kindest of the Feinn, one who, if he could help it, would never let any one be in poverty or trouble. He met his death, it is said, at the hands of a fisherman, probably a Finn of Luagné who sought the notoriety to be obtained from slaying so famous a warrior. The event was followed by the fateful battle of Gabhhrn, and from this time the career of the Feinn falls on the career of the Feinn as an organized body, who henceforth enter the region of myth and fable.

5. For one reason or another these heroes presented ideals of existence that appealed most profoundly to the Gaelic-speaking race, and continued to appeal, in spite of all change, down to the period when science began definitely to cast men's thoughts into other molds. After the Feinn débâcle, the story of their exploits passed into oral tradition. The common people, the hands, the professional story-tellers, the annalists, and the churchmen were all more or less familiar with the details, and added exceedingly complicated and amplified them each class in its own way—with the result that in course of time a great variety of versions arose and entirely new elements entered into the history. In fact, all, the Feinn began to be associated with the supernatural and with personages and incidents belonging to the popular Celtic mythology. As "distance lends enchantment to the view," so the old heroes were gradually elevated and idealized in the popular imagination. Qualities that originally belonged to the gods were ascribed to them, and they figured in scenes and incidents similar to those rehearsed in the earlier mythical stories. In fact, the opponents of Fionn and his men were no longer the heroes of Connaught and Ulster, but underworld deities, and the strife between the two seems like a variant of that between the Tuatha Dé Danann and the Fomorians. Sometimes the former are represented as helping Fionn against his powerful foes. That this defying process had been carried far before the 11th cent. is evident from the story of the Mongan who, the annalists averred, was a reincarnation of the famous head of the Feinn, and son of the god Manannan MacLir.

By and by the Norsemen began to appear and settle in Ireland, and then another new element entered into the legends and wood of the Feinn saga. Fionn in this later rôle is neither the tribal Leinster chief fighting against the northern clans, nor is he the demigod in conflict with underworld deities; he is the leader of all the invaders against the overseas invaders from Lochlann. According to some of the sagas, he was born in Lochlann, and, after his voyage to the giant's land, was put ashore in Ireland, which he then trod for the first time. According to others, he walked from Lochlann to Erinna on a road.

The introduction of the Norse element, like that of the supernatural, has rendered the story of the Feinn, and all its complicated and contradictory, so that the authorities find it hard to reconcile the various versions with the known facts of history. Commenting on this point of view, Headlam (C.R., 390) says: *The only reasonable explanation is that Lochlann meant Norse settlements in Ireland. That fits all versions, and makes this story constant.*

Stripped of the mythology, which is partly Scandinavian in character, the framework thus far may be seen to consist of another Fionn, as he appears in the Celtic. The Norwegians and the Irishmen tempt him to Ireland, where he is slain on the Irish king's territory. His son is born in Ireland, and is or is not the hero in question. When he grows up he seeks vengeance, like an Irishman in a saga. The story makes no progress ahead, coming back to the place where his father set up for himself, tells tales to account for his riches, and then follows his father's example, and fights chiefly in Ireland with Norsemen and Irishmen, turn about, till his power is broken and his men are scattered. Then he becomes mythical, and other authors who have dis- appeared from the world.*

But such a view is surely inconsistent with the earliest impressions of Fionn's origin and history given in the I. t. Echidhne an leath. Also J. Rhy's conjecture (Origin and Growth, p. 335) seems to offer a more likely solution when he says that Lochlann, like the Welsh Llychlym, before it came to mean the center of the Norsemen, denoted a mysterious country in the lochs and seas. The Lochlanners might, in that case, be originally the submarine mythical people or underworld deities corresponding to the Fomorians, with whom the Feinn were represented as fighting when they began to be confused with the personages of the mythological cycle.

A third remarkable element in the saga is the religious or ecclesiastic. It is introduced in the following peculiar way. After the overthrow of the Feinn, Osin and Cuilte agreed to separate. The former went, as tradition says, to Tir-nan-og, 'the land of the ever young'; the latter passed over Magh Bnech, southwards, and ultimately joined St. Patrick. When 150 years had passed away, Osin returned on a white steed to seek his old friend and comrade Cuilte. From this horse he was carried, and not to dismount him lest he lose his immortal youth. On the way he found everything changed. Among other things, instead of the old temples of the gods he observed Christian churches and the Feinn, alas! were now but a memory. One day, unfortunately, as he attempted to assist some men in raising a stone, he slipped from his magic steed, and as soon as he touched the earth he became a blind and withered old man. His horse rushed off to Tir-nan-og, after which Osin was brought to St. Patrick and Cuilte, with whom he lived the rest of his days. Both were the saint's constant companions in his missionary journeys through Ireland, and were useful in giving him the history, legends, and topography of all the places they visited, and many besides. These were written down by Brogan, St. Patrick's scribe, for the benefit of posterity. Osin loved to recount the exploits of the Feinn and to debate with the apostle of Ireland regarding the new religion, against which he was prejudiced in favour of the ethics of his younger days. Between the saint and the aged pagan there were various heated and impassioned disagreements, the settlement of which is the subject of Oschin's Prayer' (Scottish Review, viii. [1886] 350 ff.). The conversations are given in the form of dialogue between the two, the one representing paganism, the other Christianity. Doubtless, if less they were the work of monks or ecclesiastical scribes in the 12th cent. or earlier, and they appear in their pristine form in The Colloquy of the Ancients, which is the longest of all the Feinn saga. It is preserved in MS s dating from the 15th cent., but chiefly in the Book of Lismore (tr. in O'Grady's Silen Garddies; Whitley Stokes, Irisce Texte, vol. iv.).

A fourth element that entered largely into the popular tales and ballads of later times was the wizardry of the Middle Ages. In these, giants, dwarfs, enchanted castles, dragons, palaces, witches, and magic figures were introduced. In Ireland it introduced is impossible to say, though James Macpherson fancied they were imposed on the Feinn saga in the 15th century. There is evidence that, even earlier, the Feinn sagas were represented as giants; and Scottish authors such as Hector Bocce, Bishop Leslie, and Gavin Douglas refer to them as such. As the centuries passed, the volume of detail increased, each age contributing its own impressions and its own imaginative setting. In Scotland we have evidence of this extraordinary activity in the Book of the Dean of Lismore in the 15th cent.;
6. Who were the Feinn? It is a question of the deepest interest, in view of the varied opinions that have been expressed. (a) Irish writers have, always regarded them as an actual martial caste or militia maintained during several reigns by the kings of Erin for national defence. Tighernach, Keating, the Marshes of O'Curry, and Dugald, Hyde, are representative of the common native opinion which has prevailed from early times. Keating, writing about A.D. 1630, gives the traditional account as he gleaned it from ancient books now lost. O'Curry, publishing the same view last century, wrote the following as his own conviction in the matter:

"I may take occasion to assure you that it is quite a mistake to suppose Feinn MacCumhail to have been a merely imaginary or mythical character. Much that has been narrated of his exploits is, no doubt, apocryphal enough, but Finn himself is an undoubtedly historical personage; and that he existed about the time at which his appearance is recorded in the Annals is as certain as that Julius Caesar lived and ruled at the time stated on the authority of the Roman historians" (O'Curry, MS. Materials, Letters, 379).

The band of Feinn were divided into three, or more usually seven, regiments, and had officers over every nine, fifty, and a hundred men. Before a soldier could be admitted he was subjected to rigid tests, some of them of the most extraordinary kind. His relatives had to renounce their right of eric in his case. He himself required to promise—(1) never to receive a portion with a wife, but to choose her for her good manners and virtues; (2) never to offer violence to any woman; (3) never to refuse charity to the weak and poor in the matter of anything he might possess; (4) never to flee before nine challenges, and with these obligations went the loyalty to the High-King and sworn fidelity to the commander-in-chief. More difficult accomplishments were the following:—He must have the gift of poetry, and be versed in the twelve books of the Mase according to the rules of the chief bard. With only a hazel stick of a forearm's length and a shield, and standing in a hole up to his belt in the earth, he had to defend himself against a simultaneous attack by nine warriors armed with spears, and separated from him only by a distance of nine field girds. If he were hurt, he was not received as one of the Feinn. Not a man was taken until, with his hair braided and a start of only a tree's breadth, he was pursued by a war-troop through Ireland's woods, and succeeded in eluding them without letting his hair fall. If even the weapon in his hand trembled, or a withered twig broke under the power of his grip, he was not taken to the fortress. The candidate had further to leap over a branch the height of his forehead, and bend under another no higher than his knee; to hold a spear horizontally with steady arm; and, without shaking his pace while running, to cut at the man's foot with his nail (15th cent. Vulcm in British Museum, marked *Egerton, 1782*).

The duties and privileges of the Feinn were equally well defined. In time of peace they acted as the custodians of the public security, maintaining the right of the ruler and guarding the country against strangers. In winter from Samhain to Beltane (1st Nov. to 1st May) they were quartered on the people and under shelter. In summer they lived in the open air, hunting and fishing, and established the royal bounds and Petty and Biggott in the summering. Their bed consisted of branches, moss, and rushes. Even to this day the peasantry of Ireland profess to find the traces of their fires (Suidheachan na bhFinn) in many of the enclosures. Their bed consisted of branches, moss, and rushes. Even to this day the peasantry of Ireland profess to find the traces of their fires (Suidheachan na bhFinn) in many of the enclosures.

(b) W. F. Skene and D. MacLachlan believed that the Feinn were a race distinct from the Gaels and probably allied to, or even identical with, the Picts. The latter writer went further, suggesting the possibility of their being the forerunners of Gaelic tradition. But the theory that the Picts were a non-Celtic race is not now accepted. Duncan Campbell put forward the view that Fionn figures as a Gaelic type, the leader, like Arthur, of a militia modelled upon the Picts, of the Gaelic Society of Inverness, 1887). Zimmer thinks that he was really the Viking robber, Caitill Find, who commanded the Gull Gaediltach or great host of Ireland. The Pictish St会谈 of Cettica and Ctt bu Dui is, in his opinion, the old Norse Asvin and Ageir. Kuno Meyer is equally convinced that all the names of the Feinn are Gaelic, not Norse, and, like Windisch, he holds that in all probability there were real historical characters round whose memory the tales and myths and folk-lore grew.

(c) While in the main Irish and German scholars thus favour the view that the primeval heroes corresponding to Fionn and the Feinn actually existed, some recent British authorities, prominent among whom have been Alfred Nutt, John Rhys, and Alexander MacBain, are disposed to uphold the opposite opinion, and look upon the Feinn as simply the gods of Celtic mythology humanized, or regarded as men. This way of construing the history may be gathered from the words of MacBain:

"Finn is evidently the incarnation of the chief deity of the Gaels—the Jupiter spoken of by Caesar and the Dagda of Irish myth. His qualities are kingly and those of Cuchulain. He is surrounded by a band of heroes that make a terrestrial Olympus, composed of counterparts to the chief deities. The story of Osian, the poet and warrior corresponding to Norsemen Ogmius of the old myth of the man-god; Cioso, the swift rider; and so on. . . . The stories are racial and general, and can be tied down to neither time nor place" (Celtic Mythology, p. 108).

But this theory does not readily square with the facts. In a review of history we find that it is not so much the gods who are degraded as it is the heroes who are exalted. Popular legends, who in their own day were human enough, in course of time were clad with divinity. By a curious working of the human imagination they are credited with attributes and deeds beyond the range of man's experience. If this means that the tales of Fionn and the Feinn became mixed up in popular fancy with the earlier mythical accounts of gods and heroes, the incidents of the latter were transferred to the former, until the history of prehistoric Ireland was deified. Indeed, Windisch, impressed with the likelihood of some such transference, looked on the mythical incidents of the Feinn cycle as derived from the previous Cuchulainn cycle, which in turn drew upon Christian tradition and the old tales of war, of magic, and of the hero.
impression one gets who is familiar with the varied literature of the Feinn, the actual mythology of to-day, and its history in the past.

FEMALE PRINCIPLE

1. Female deities.—Among many primitive peoples, and in the present tide in those of less developed cults, goddesses occupy important places in the pantheon. In early Babylonia there were as many goddesses as gods; for each male deity, we may assume, had his female companion. There was at least one goddess as patron of each of the cities, sharing with her lord the devotion of its worshippers. Instances are Nana, patroness of Uruk; 'good lady' Bato, 'mother' of Lagash; Ninlil of Nippur; 'mistress of the lower world' and 'lady of the great mountain'; and the 'glorious and supreme' Ninni of Gishgalla, 'mistress of the world.' These city-goddesses had a precarious and extremely varied history. Some of them sank out of sight as consorts of the gods whose majesty and power they could not equal. They became mere shadowy reflections of the gods, with but little independent power, and in some cases none at all (Hastrow, "Rel. Sem.," London, 1894, p. 104). This twilight extinction is especially true in early Babylonia, in Syria, and among other nations that entered upon a heroic programme of world-conquest. As to complete the logics of this type of subjection, goddesses fused into male deities. 'In various parts of the Semitic field we find deities originally female changing their sex and becoming gods' (W. H. Smith, "Rel. Sem.," London, 1894, p. 82). This extinction is brought about by other more powerful and more beloved goddesses, as villages were fused into cities and cities into States. A marked instance of this subjection and absorption was found in the war between later Babylonia and Assyria to the position of 'mother of the gods' (and of goddesses as well), who sometimes absorbs the titles and qualities of all. In the event of an eclipse by a male consort or by a greater representative of her own sex, a goddess did not always forfeit her existence, but was deflected into the performance of some special function of lesser importance.

An instance in point is Ishtar, 'princely mistress' of Minid. This solar deity, Minid, 'mighty one of the gods,' remains even to the days of Nefeshendar up, a 'king of heaven and earth,' and in Assyria also is honoured with every conceivable epithet as god of war and the chase; whilst Assur is only occasionally invoked by the Mesopotamian divines in the lowest role of healer of diseases. In like manner, Juno came to be called by the Romans Juno Lucina, the special goddess of childbirth' (C. M. Gailey, "Clastic Myths, London, 1901, p. 204). No less a goddess than the beloved Ishtar (Astarte of Phrygia) often suffers the humiliation, which in other cases was reserved for other deities, of serving as the parasites of sensuality.

Another line of differentiation from the multitude of early municipal goddesses was the borrowing or transportation of favourite deities by other peoples, or the amalgamation of their qualities and names with those of native goddesses of the places into which they came. Nana of Erech was one of the first of the important goddesses of the early Sumerian period of Babylonia. Her name appears in many forms and places during early Semitic times: Nana, Nani, Nanya, Anitis, Anca, Tanath, etc., through a considerable list. In like manner she won a place in the worship of other nations.

'The worship of the Semitic goddess Nana of Erech is traced with probability in Phoenicia, with certainty in Syria, Babylonia, India, Asia Minor, and Greece. She had shrines with a similar name in Assyria-Babylonia, with Anahita in Perse, Armenia, and possibly in Babylonia with Ashur pattu (Astarte) in Rheneia, and went to the making of Artemis or Diana, of Aphrodite or Venus, and of Athena in the Greek world' (W. G. Gilmore, "New Schaff-Herzog," viii. 90).

It is possible, however, that the goddesses of Greece and Rome are instances of the law of fusion rather than of borrowing. It would seem that Greece and Rome worshipped goddesses of love in very early times, and that their importance was enhanced through association with foreign female deities.
2. Personality of female deities. — Goddesses have exchanged the place of their temporal and even everyday occupation as deities, with mental qualities to fit the part. There is, however, a law of differentiation of function as between male and female deities that sets the gods apart to exercise the after-cults as ruler, judge, protector, or conqueror, whilst goddesses symbolize the gentler and more heartful qualities of Nature and mind. Illustrations are the Greek Aurora, goddess of the dawn, analogue of Uṣā in India; Venus, the spirit of love and beauty; and the Scandinavian Freyja, goddess of the atmosphere and clouds, of marriage, and patroness of the tender affectation of married lovers, and of parental devotion. This specialization of function often produces a compassionate goddess whose prevailing presence can breathe solace in times of grief and pain, and inspire hope to the weary and heavy-hearted. Such is the lady often represented in India, with her almighty power as exact counterpart among the Iroquois, Aztecs, and Mayas of America and elsewhere (D. G. Brinton, The Religious Sentiment, New York, 1876, p. 68).

While it is true that Max Müller has pointed out (Contribution to the Science of Mythology, London, 1897, ii, 518), that female deities are purely abstract principles, it is safe to say that they are generally more spiritual than the gods. The name Minerva, goddess of wisdom and contemplation, is from the Latin, Greek, and Sanskrit words for mind. 'Among the Tzontals of Mexico was and is still worshipped the highest of goddesses, Alagon Naum, 'he who brings forth mind.' To her was due the mental and immaterial part of Nature; hence another of her names was Izta lX, the mother of wisdom' (Brinton, Myths of the New World, Philadelphia, 1896, p. 179). This pervasive quality of goddesses causes them to burrow in the deeps of things, whence they fix destinies, like the Fates—Clotho, Lachesis, and Atropos, daughters of Night. Of the members of the Egyptian triad, Osiris, Horus, and Isis—the last was par excellence the skilled magiЛan. Whilst many goddesses are resplendent with light, others are, since they dwell in the deeps of things, of a sinister character. Others combine both qualities, as is true of Durga, Kali, Kuan Yin, and Chánmunda, goddess, judge, protectress, and whom the worshipper prayers of little children, and at the same time are gloomy and foreboding. Female deities have often, thanks to their spiritual qualities, acted as intermediaries between gods and men. The Hindus are manifestly by their wife 'the Great Goddess,' Mahādevi. She 'with a thousand names and a thousand forms, is able to suffice the day by her eloquent presence (A. Barth, Religions of India, London, 1801, p. 199). It should not be supposed that, because goddesses are the more spiritual and pervasive presences, they lack integrity and stability. On the contrary, it is frequently maintained in the midst of change. The soil in which such a feeling springs is found in a myth rather wide-spread, that the original creative principle is female, and another belief that woman alone is endowed with immortality.

In making generalizations upon the gentler spiritual traits of goddesses, one should not forget the warlike proclivities of the Assyrian Ishtar, and that Minerva was also Pallais. Athena who hurled the thunderbolt (see also Ashtarti, Bengal, §§ 13, 31, Durgā, Earth, etc.).

3. Supreme goddesses. — Female deities have often enjoyed the highest place among the gods. This depends upon the nature of the social organization and the respect in which women are held. Clan-life in which the mother is the head of the group is likely to lift the 'mother-goddess' into a supreme position, provided the nation has risen above the stage of magic. The early Semites, who before their dispersion had a polyandrous social organization, are an illustration. G. A. Barton says of them:

'We only see more clearly [than did even W. Robertson Smith in his Religion of the Semites] that the chief deity of the clan was at this primitive time a goddess, and that, in so far as a male deity,planet,or conqueror part, was he the son and ruler (G. A. Barton, London, 1892, § 82, f.)

During Babylonia history her later equivalent, Ishtar, rose to a position 'independent of association with any male deity' and 'becomes the vehicle for the expression of the highest religious and ethical thought attained by the Babylonians' (Jastrow, 82 f.). Many other illustrations are found among the natives of America (E. J. Payne, History of the New World called America, Oxford, 1892-90, i. 402, ii. 480).

'The goddess Tamanō, Our Dear Mother, was the most highly venerated of the divinities, and it is because her mother fell upon Our Lady Guadalupe that the latter now can boast of the most popular shrine in Mexico' (Brinton, Myths, 179). It seems inevitable that, as the quilter agricultural pursuits, the worship of goddesses have fallen into the background, through the fusion of clans and cities into warring nations in which chivalry and virility are the chief, a premium on a more gentle and less raised, rine, while those of the 'weaker sex' have been degraded to lesser functions, attached as consorts, superseded and forgotten, or, to save themselves, have changed their sex to fit the new demands (cf. Barton, esp. P. 178-189).

India is unique in having the opposite history of higher appreciation of goddesses, along with its later development. It illustrates, however, the same principle in a negative way. The Vedas were written before and during the period when the Aryans were conquering the aborigines of India and were engaged in feuds among their own tribes. Under such conditions there are no goddesses, although the literature is richly polytheistic. Since the nation has settled down into a relatively peaceful life of agricultural pursuits, the worship of female deities has risen to a place of supreme importance; Durga, Kali, Sarasvati, and Kāli, soul of infinity and eternity; Sarasvatī, supreme wisdom; and Sakti, mother of all phenomena. This is not so strange in a land in which from the earliest times 'one of the highest object of tenderness' (Mann, iv. 185) and 'the mother is a thousand times more than the father' (li. 145), and in which there is the present phenomenon, as in the province of Malabar, of women holding a higher social and political position than men (Sister Nivedita, The Web of Indian Life, New York, 1904, p. 76 f.). Hence it is that the Hindu worshipper utters daily the prayer:

'O Mother Devī, Thou art beyond the reach of our praises; Thou pervadest every particle of the universe; all knowledge proceeds from Thee, O Infinite Source of Wisdom! Thou dwellst in every form, and all women are Thy living representatives upon earth' (Swami Abhedananda, India and Her People, New York, 1908, p. 253).

4. Goddesses of love.—The term 'love,' as shown in the sequel, is a fusion of three or four separate meanings. In this connection it is used in the sense of love of many kinds, with passion. There can be no doubt that certain goddesses of various countries have been patrons of courtship, marriage, and fecundity, and even of sensuality. The Aphrodite in Greece. Freyja in Scandinavia, Ishtar in Babylonia, and Tlalocitoatl of the Aztecs witnesses to this fact. The behaviour of many of these consorts of the gods is evidence that their wifely attributes were much in the thought of the wor-
shippers. The gods have often conducted themselves toward their mates in a wanton and sensuous manner. In addition to the worship of the deities of the Bacchanalian, the Phallicism of the Semitic peoples, and the spiritual unions of Christian mystics with Christ have been of a passionate sort.

In the main, according to W. James, the religion of St. Teresa 'seem[ed] to be of that of an endless introductory flirtation—if one may say so without irreverence—between the devotee and the Virgin' (Varieties of Religious Experience, New York, 1902, p. 347). The full extent of feminine attraction in religion cannot well be appreciated, however, without an adequate recognition of the retention of the private symbols of sex even after the goddesses themselves have lapsed into oblivion. The persistence of the symbols betrays how the concept and the accompanying impulse have been fixed, then abstracted, and finally blended into the central stream of religion. Among the commonest of these symbols and the least mistakeable in their meaning are representations of the reproductive organs, which are symbolized and still are used in the under currents of Shintoism in Japan (E. Buckley, Phallicism in Japan, Chicago, 1898; Griffis, The Religions of Japan, New York, 1895, pp. 29, 49, 58, 280-384). The tōgas in India is the symbol under which Siva is universally worshipped (J. Dowson, Dict. of Hindu Mythology, London, 1891, p. 177). The 'sign of the Mother Goddess,' the symbol of the female organ of reproduction, ramified through many of the Semitic cults (Whatham, AJP, July 1911, pp. 252-309).

Many writers regard certain pillars and posts of houses and altars, and signs carved upon these, as representations of the threshold of life of the mother-goddess (H. C. Trumbull, The Threshold Covenant, 1896, pp. 109-164, 228 ff.; Barton, 101 f., 251, 253, etc.). There are wide-spread serpent-stories and serpent-symbolism in religion (H. Ellis, Psychology of Sex Auto-emotion, Philadelphia, 1905, p. 206) which are supposed to typify sex (G. W. Cox, Myth. of Argyan Nations, London, 1887, p. 353). Fruit-bearing trees, their boughs, their fruit, bunches of grapes, and even the gams that exude from the tree, have been regarded as sacred symbols of the reproductive principle of Nature, and perhaps contain a strain of sexual obsession (W. R. Smith, Rel. of the Anc. Egyptians, London, 1897, p. 138). In Egypt and amongst the Survites in India, the lotus is a symbol of the reproductive act (Crenzer, Symbolik und Mythologie, Leipzig, 1836-43, 1 i. 412). The Buddhists of the north countries still repeat, without suspecting the origin of the phrase, 'Om! The jewel in the lotus.' (Brinton, The Religious Sentiment, 214).

In the West, too, these symbols persist, even when, as also among the Buddhists, they contradict the central doctrine of the religion in which they appear. In later Rome, women carried phallic emblems in the processions in their favour. This was prohibited by the Council of Mars in 1247, and again by the Council of Tours in 1396 (Encyc. Am., art. 'Phallus': on the survivals of old cults, Barton, 203-206). See further, PHALICISM.

When one combines the presence of these phallic rites and emblems with the fact that religion has amongst most peoples a greater or less extent become symphallic, it is evident that the lotus, sarasvatī, the serpent, Siva, and other orgastic veils, and often has with seeming purpose ended in the most unbridled passion, it cannot be doubted that there is something in common between 'love' and the religious sentiment (cf. art. CHASTITY). This is so evident that many students have gone to the extent of affirming their complete identity.

The judgment of M. de Vigny: 'We find that all religions have engaged and concerned themselves with the sexual passion; from the times of Phallic worship through Jewish celibacy, Mohammedanism, witchcraft, to Mormonism, the female is drawn to man's reproductive instinct' (Journ. Med. Science, 1874, p. 198). Even a sober student as the 'beginnings of the Semitic religion go back to the sexual relation' (Sem. Or, 167), and 'that the religions and moral development of many has been closely bound up with fatherhood and motherhood' (p. 307).

Since other writers hold the opposite view of this much debated question, namely, that the sexual content of religion or even deny the connexion altogether, the restrictions and limitations of its unqualified acceptance should be pointed out. An enthusiasm, it is claimed, fostered by the pursuit of a new theory, has blinded students to the multitude of facts pointing in the contrary direction. Some of these are as follows. The greater number of female deities have little or no connexion whatever with sex. Such, for example, are Ceres and Minerva of Rome, and Sarasvati and Lakshmi of India. Even those of 'love' have often subserved primarily other functions. The Asshur-tanis of Assyrian legend are one such; and it is a function of her original prototype that, while a chaste love entered into her relationship with her subjects, she was essentially a goddess of war, of battles, of protection, and was oftentimes a violent destroyer (Jastrow, 204 f.). So much does tradition distort her true picture that she has been handed down essentially in her connexion with the tender passion. There is a curious trait in human nature by virtue of which scanda] travels farther and faster than sober fact. It must be reckoned with in judging the character of those deities and their worship.

The lively imagination of the supporters of the phallic theory of the nature of religion, it would seem, has led to a confusion and distortion in seeing sexual significance in symbols where none exists. The serpent has clearly been an emblem of lightening, of graceful curves, of sinister presences, and many other things. Its place in religious symbolism cannot justly be called invariably a sign of sex (cf. W. R. Smith, 158, and esp. Brinton, The Religious Sentiment, 206-209). The lotus is a token of beauty, of spirituality, and, since it springs forth miraculously from its impure surroundings, of resurrection (Wiedemann, Rel. of the Anc. Egyptians, London, 1897, p. 138). Pillars and columns have been loaded down with phallic significance from the remotest period to the present day. Others are much more cautious in their generalization (cf. W. R. Smith, 456 f. et al.; Moore, Ash'toreth and 'Masseleah', in BDI). The way in which doorsposts, columns of many kinds, obelisks, towers, and steeples have been seized upon as phallic signs illustrates more clearly perhaps the law of apperception in mental behaviour than the sexual content of religion.

It should be borne in mind, too, that religion has tried to suppress or regulate or even to eliminate every type of eroticism. It has practised and preached celibacy in India, Egypt, Europe, Mexico; and elsewhere. The conception of the universe, the seasons, and the months have been linked with the sun, the moon, and many other celestial objects, until the distinction between the sacred and the profane has been almost completely lost. It is from this point of view that authors who have written on the subject of the Virgin birth have come to the conclusion that they are concerned with human beings who sprang from the
FEMALE PRINCIPLE

brain of Jove. It has created goddesses who have ignored and transcended any connexion with 'love.' Because Vesta, the guardian of the home and companion of the hearth, rejected all suitors, and in the place of honour in his palace; and in the sacred temples of men on earth she was blessed with a position of highest reverence. Vestal virgins (as also in Mexico and Peru), whose chastity was forfeited at the cost of life, attended her sacred altar. Those who would magnify the erotic element in religion have been wont to think that the presence of priestesses and their attendants, in the exaltation of the other sex, has shown that there is much evidence for it, there are equally convincing proofs that religion has succeeded in preserving the chastity of its worshippers (cf. Jastrow, 536). The large rôle that priestesses have filled in ritual and worship is sufficiently explained on the ground of the finer nervous organization of women and their capability of more delicate emotional response, and hence their special fit-
ness to act as oracle-givers, witches, sorceresses, mediumis, and diviners of the will of the god (Jastrow, 492, 485, 530). It is fair to judge religions, like individuals, at their average best rather than at their worst.

If these considerations as the above would indicate that between eroticism and religion there is at most a kinship rather than an identity. Their inter-relation comes about for two reasons: first, the similarities of the psychoses involved, and second, the almost uncontrollable intensity of the reproductive instincts which religion is trying to regulate. On the first point the law is stated correctly by Brinton:

'Emotion is the sentiment and you arouse the passion of love, which will be directed as the temperament and indi-
vidual culture prompt. Develop very profoundly any form of love, and by a native affinity it will seize upon and consecrate to its own use whatever religious aspirations the individual has. This is the general law of their relation' (The Religious Sentiment, 73).

The other aspect of the law is that religion acts as a control or a regulative function of all phases of life. That sensuality breaks out in it is evidence simply that the strength of the sexual life, due to its utility in conserving biological ends, constantly threatens personal well-being and social symmetry, and that religion has had, therefore, an especially difficult task to keep it in check. This regulation it accomplishes in two ways: by repression, as we have seen, and also by refinement. The refining process consists in the suppression on the one hand of the coarser form of the love impulse, and on the other of the desire to conserve it for the higher levels of consciousness, or 'spiritualizing' it, and then blending it completely with all the other instincts and impulses that subserve life's needs. Philicisms at their best have in this way been softened and dignified and also weakened by being relatively lost in the rich fusion with other strains of mental life. Griffs, for example, in describing the phallic observances in Japan, says: 'I have never had reason to look upon the implements or the system as anything else than the endeavour of man to solve the mystery of Being and Power' (Religions of Japan, p. 51). It is the failure to appreciate the cost of life, the lowering and over-intense forms of the love impulse, and at the same time the effort to spiritualize and harmonize it with the rest of the complex, that has led to much making debate and false interpretation of its place in religion.

5. The female element in terms of the meaning of religion as a whole.—The older emphasis of the rôle of love in religion is thus due to the supposition that religion exists to preserve some form of the love impulse, and at the same time to check its excesses. It does not seek to gratify any taste or appetite, but is for the sake of getting on. It seems to be a function of life as a whole, and is in terms of adjustment and fulfillment. It has, like life in all its relations, an 'antidoteic' or 'tele-
thetic' quality to the world of ideal situations. It has also its 'opposite' or 'complementary' aspect, by which it seeks delicately to adjust life to the immediate situations around it. The worshipper consequently responds to the present and future in terms of what life, attended for whatever with whatever is at hand in the accidents of his surroundings. Among the needs are protection and safety. Gods have been especially useful in this relation. Another need is the increase of crops, herds, and children. Goddesses have been the natural and convenient symbols of fertility and increase. Many of them have filled the rôle simply and solely of ensuring the increase of crops and herds except in so far as, by an easy and natural process of association, the life of sex has been caught up as an incident in their worship.

Diana was 'a personification of the teeming life of nature' (GB, vol. I, vol. II, p. 68). Even the 'marrriages' of gods and god-
desses performed in her cult were charms to promote the growth of crops (ib. p. 121). In Palestine, during drought, the maidens and women carried a winning-form of a woman, called it the 'bride of God,' and performed ritual with it to bring rain. There is no evidence that it was connected with the ceremony except that of exalting a magical influence over the weather. In seeking to compel increase and induce proper management has used the ogre custom of the hood of a symbol, but the cow, the bull, the grape, and any-
thing that the imagination could connect with the increase of crops with a positive observation of erotic customs (ib. pp. 104-112). In the rich literature of the Rigveda there were endless piotations of petitions for abundance of crops, herds, and children, and the reaction and success with it was all male, and there is essentially no evidence of anyatory religious sentiments among the gods or men.

Another great problem of religion has been the question of the origin of things. Femininity has again proved a natural and convenient symbol of creation — but so has the egg, which may, for example, split, one part becoming the heavens and the other the earth.

'Half of the Vedic religions are, in fact, characterised by the cult of an androgenous or female divinity. The ākāti, . . . has its roots . . . in a sexual dualism, placed at the beginning of things (in a Brāhmana of the Yajur-Veda, for instance, Frāśpāli is androgynous), or of a common womb in which beings are formed, which is also their common tomb' (Barth, 200).

Femininity is thus clearly one factor only in the larger business of religion as adjustment and fulfill-
ment.

6. Sexless deities.—It is suggestive of the limita-
tion of the place of femininity in religion that, along with growth, religion has progressively not only emphasized virgins, continent priestesses, and worship, but also conceived as well sexless and hermaphrodite deities and angels, and also gods and goddesses who transcend considerations of sex entirely. Centrally, as the religious impulse does, in feeling the larger life or 'the sentiment of con-
tinuance,' it has thus sought to express the unity of Nature and life in the purely human. It has, therefore, been fond of combining both sexes in one personality, or of fusing, in a deity who happens to be by name of a certain sex (due, let us say, to the limitations of language), the qualities of the opposite sex.

'In the Vaishnavas we see masculine strength united with maidenly softness: in the traditional face and figure of Christ a still more striking example of how the most minute of traits of both sexes to express the highest flexibility of the species' (Brinton, The Religious Sentiment, 67).

Were it not for the fact that gods, irrespective of sex, subserve the higher functions of protector, helper, and unifier, how could one explain the fact that Ishtar sometimes appears as female among the Semites and as male among the others.

In the highest general function of life, the highest of all functions, have risen superior to sex. The God of Muhammad, white calling forth a holy prophet from a virgin mother,
FEMALE PRINCIPLE

831

'begettestth no children'; to impute such to Him would be so gross an impiety as to threaten the clearing of the heavens assunder and the destruction of the earth.' It is not meet for God that He should have a son; God forbid! When He decreeth a thing He only saith unto it 'Be' and it is, (Qur'an, xix., 'He begettesth not, neither is He begotten' (exii).)

Such likewise are Brahma and Jahwhe.

In the female godhead the erotic consciousness of the Heavens, the idea of divine fatherhood is entirely dissociated from the physical basis of natural fatherhood. Man was created in this passion, but never so as to make him a thing of nature but a thing of grace' (W. R. Smith, 41).

More barbaric religions, not being able to regard in terms of aesthetic or moral values or general concepts, have been compelled to picture things in more concrete terms. Deities have sometimes been, therefore, progenitors, just as at other times they are potters who shape men from clay.

Particularly among uncultured people it has been a convenience to represent 'Reality,' the higher self, and the present and possible relationship of the individual to the racial and universal life, as in a softened, refined, or almost imperceptible form, or transcended and left behind. Both these things are likely to happen, each in its own way.

7. Summary of psychological theories.—The interpretations of our problem from the standpoint of psychological discussion have been extremely diverse. Although somewhat antagonistic among themselves, they lie in the same sphere, as truth in each and all of them. Characteristic theories are here described, arranged as far as possible in a series from the least to the most satisfactory.

(a) Degeneration.—A popular conception has been that there is little or no connexion between the female sentiment and religion. Whenever they have mingled, it is because the reproductive passion has broken through its proper bounds. This notion of their antithesis has arisen out of the law of contrast, by which the high and the low, the good and the bad, are sharply set off against each other. This inevitable tendency has gradually produced the two incompatible worlds of 'grace' and 'nature,' the 'sacred' and 'secular'—a contrast unknown to the primitive mind—with 'religion' confined to the one sphere, and the biological function of reproduction to the other; and it has ended in making each a rival to control the other. Modern psychological conceptions have undermined such artificial distinctions. The truth of this notion rests upon the vast difference, through development, between the 'lower' and the 'higher' which is the refined, intellectualized, and controlled expression of the tender passion; and upon the fact of the strength and persistence of sex, with its consequent dangers from the crasser forms of its expression. Its failure to remain in the resultant divided and incoherent personality, the sensualizing of the biological function by freeing it from the control of the higher sentiments, and in limiting religion to a relatively narrow field of highly abstracted values.

(b) Identity.—Many students take exactly the opposite view, and regard the religious impulse as primarily, if not solely, the refinement of reproduction. Love in religion is a spiritualized form of love for mates. In the development of individuals the curve of frequency for conversions and other religions awakenings is essentially coincident with that of the reproductive functions (Starbuck, The Psychology of Religion, London, 1899, ch. iii.). The phenomena attending the stress of conviction for sin are similar to the disturbances of sex (ib. 185, 296). There are marked likenesses between 'love' at its highest and mystical states of religion (Hall, Adolescence, New York, 1904, ii. 295-301). A genetic series of 'love-states,' from its physiological sinking to its highest mystical qualities, identical with those of religion, is easily describable (ib. ii. 126-143). The pathology of the two shows remarkable similarities.

(c) Regeneration.—Religion—man's sentiment of continuance and feeling after perfection, or, as theologians prefer to call it, God's revelation to the mind and guidance in the heart—has been trying to reconcile itself to the need of ascendance. It has tried to incorporate the reproductive instinct in order to regulate its intensity and to eliminate promiscuity (Marshall, Instinct and Reason, New York, 1898, pp. 309-316). In earlier times, biologically, in the absence of the care of children, the perpetuity of the species depended upon multiplicity of offspring. Under such circumstances there must have been a utility in an uncontrolled passion for reproduction. The laws of heredity and recapitulation have brought up this old strain into human life. The conditions later changed. With the increased advantage to the species of having the family as the basis of social organization, the condition of advancement was the establishment of monogamous marriages, and the consequent weakening of the sexual impulse. Religion is in part the crystallization of this feeling and of the need of such regulation. It has, therefore, taken over into itself the function of sex and marriage, and has used every conceivable means of exercising control over them. It has hedged them about with reproductive functions which are frequently celibates or eunuchs, with ritual and ceremony too solemn to be disregarded, and with gods and goddesses whose will could not
be withstood. It has made marriage difficult to enter, has tested the fitness of mates by periods of long delay, and has sealed their union by forbidding divorce. It has uttered its admonitions, prohibitions, and punishments, but wherever it has attempted to restrain the passions, and direct the mind into a sense of the dignity and sacredness of this phase of life, when limited to the channels of social and spiritual well-being.

Adaptation. — But religion has at times assumed the positive attitude of stimulating the reproductive impulse under its controlled form. The reason for this is to be found in the social sense of the need of increasing the number of individuals in the tribe or nation, combined with the individual recognition of special fulfillment through progency. Primitive warring tribes have shown much concern over the birth of the greatest possible number of male children. It is natural that this need should be taken up and made part of the business of religion. No warrior could enter Valhalla in early Germanic times who had not begotten a son. Again, the Mormons one condition and position in heaven depends upon the number of offspring brought forth under the regulation of the 'family.' Modern governments have taken seriously the problem of encouraging marriages and the production of living children. Since the discovery and stimulation of such matters has come over, through specialization, into a body of social customs and also under State control, it has inevitably come about that religion has progressively loused itself, to a greater extent relatively, with ideal adjustments irrespective of the relation of mates. So much is this the case that in the empirical study of the religious confessions of normal persons at the present time there has been carried up into religion a rich blending of fear, self-regard, hunger, self-expression, love, curiosity, and many others. Each of these can be traced from its simple, crude forms to its highly refined existence. It has something with every phase of the mental life. It has been a fascinating theme of students to trace out these relations. Fear, for example, betrays itself by the presence in religion of demons, hell, sacrifice, priestcraft, and the like, and also, with a slight blend from other instincts, as the sense of majesty and reverence, which characterizes religion at its best. Self-regard, likewise, develops from the seeking for mere benefits up to the craving for perpetuity through immortality, and at last becomes the esthetic demand for ideal perfection. The temptation of such procedure, since a certain渗透 permeates entirely the higher religious life, is to give way to the fascination of the description, and conclude, therefore, that religion is nothing else than the single instinct in question. It is analogous to the procedure of an amateur chemist who should be entirely satisfied with discovering a single element in a compound, because he is sure that it permeates every part of the solution. There is perhaps not an instinct that does not, and with much, and just to be the all-filling source and content of the religious life. The enthusiasm of the sex psychologists in particular, during recent years, has resulted in a strange confusion. Many of the facts that seem to the popular mind with religion only want more careful scrutiny to betray their insufficiency. Much has been made of the coincidence and concomitance during adolescence of reproductive and religious awakenings. (On the similarity of these curves of frequency, see ch. ii. for value of this kind of reasoning, consult W. James, pp. 385, 460.) There is no evidence, however, of a causal relationship. On the contrary, it is clear that for the most part on the mental side they are contradictory and antithetical. The coincidence seems to be due to the prevalence of initiation ceremonies practised among all primitive peoples. The modern equivalent is a custom of confirmation. These ceremonies celebrate the entrance of young men and women into the social, political, and religious ways of the clan, and mark at the same time the fitness for marriage. A process of long social selection in connexion with these ceremonies, through weeding out the mentally and physically unfit, has called out and accentuated the eventful period of early adolescence, with its marked readjustment in the complex strain of character, and the sudden calling out of reproductive instincts, whereinto, the fitness for both the civic and the marital relationship, it is but a matter of course that the awakenings of sex and religion should be synchronous. Keeping in mind the distinction between the cause and condition of a mental happening, one may safely say simply that frequently in adolescence the explosive quality of the 'love' instinct touches off a large stock of activities, insights, and interests which are not limited, and among these, the religious impulse. But religion is 'touched off' also by a score of other adolescent nascences, such as scientific insight, logical aumen, and the joy of conquest, and many more frequently so than by the sexual impulse. So markedly is this true that it is not safe to conclude that the reproductive instinct furnishes to any considerable degree the raw material out of which religion is constructed.

The reasoning from the pathology of sex and religion is equally at variance with the facts. That the pathologies of eroticism are likely to take on a religious cast none will doubt. This is the correct clue and it is meaningless to dwell on such fanatics. In the case of Swedenborg, for example, the evidences from his journal and from his writings are conclusive that his 'divine love' and 'angelic wisdom' are— not wholly, but in the effluvia from an unstable and over-excitant erotic temperament. Other instances can be found, particularly among the radical mystics. They are the exceptions, however, from which alienists have derived too sweeping generalizations.

Religions and sexual insanities are both extremely complex psychoses. Each draws from many sources. There are on the one hand many religious insanities that have no sexual setting (J. c.), and on the other many kinds of sexual insanity that do not take a religious turn. The small part that either sex or religion occupies in the whole range of insanities is indicated by statistical studies. Out of 60,918 male inmates in the asylums of England and Wales during the years 1875-1887 there were but 2·57% whose disturbances took the form of religious or sexual expression, sex deaths to sexual or reproductive causes (H. Ellis, in Tuke, p. 1154). It is from these two small and relatively incompatible fields that the facts have been found from which wholesome conclusions have been obtained. Not so, however, when we turn to the raw material from many other sources than sex, but religion is
an indefinitely bigger thing than mysticism, which itself only occasionally shows exaggerated eroticism. That there is more in religion than irradiations of sex is suggested by the fact that alienists of the 19th and 20th centuries have been attracted by its humanizing, restraining, steadying, and stimulating influence (cf. Gasquet in Tuke, 1088–91). Nor can this be suspected as an instance of similia similibus curantur. The occurrence, it should be said, of the interplay of erotic mysticism and sexual insanity is due to the law of association which operates amongst the emotions no less than in the cognitive processes. Religion is the whole-hearted response of the devotee to his sense of absolute values. Its psychoses tend to be completely obsessive and voluminous. This is the character, too, of all the instincts, particularly of the sexual emotion. It is to be expected, therefore, that in the exaggerated form mysticism and eroticism should blend, even if, as is true, they draw for the most part from different sources and have a somewhat independent history.

The greatest oversights of the identity theory of the female sentiment and religion is the supposition that love, which is the central fact of religion, has had its sole origin in sex (cf. Mercier, *Sanity and Insanity*, London, 1890, p. 220). But love is a compound. It has at least three somewhat independent sources—sex, gregariousness, and Nature appreciation. The evolution of the first has brought into religion the tender affection for kind, while its exaggeration results in phallicism and erotics of many sorts. The refinements of gregariousness have created the sentiments of fellowship, sympathy, and loyalty to kind, regardless of sex, and which have provided the basis for the social life, on the one hand, and unreflecting missionary zeal on the other. Nature appreciation, the sheer enjoyment of things in and for themselves, has ripened into a sense of presences of objects, and at last into Nature-gods and Nature-religions. Gregariousness, or ‘sociality,’ as M. J. Guyau calls it (*Non-Religion of the Future*, London, 1897, p. 44), can exist independently of sex. In his fine analysis, Ribot (*Psychology of the Emotions*, London, 1897, pp. 276–303) points out that gregariousness is founded upon nutrition, the will to live, and the attraction of like for like, irrespective of sex, while the development of sex and mother-love lead to these. These two, although having an element in common, have remained, in the course of evolution, ‘distinct and mutually independent’ (p. 280). It is clear, therefore, to the present writer, that the gregariousness of life, irrespective of sex, that the true social and moral feelings are developed, whereas the sentiments that arise in connexion with ‘domestic aggregates’ based upon the tender emotion are ‘restricted to a closed group, without expansive force or elasticity’ (p. 281). Societies formed within the same sex, or even among members of different species, or among animals like bees and ants in which reproduction is but a brief incident for perpetuating the species and limited to a few—all such societies, because of their common interests and contacts, show loyalties, fellowships, and loves of the most saving kind. The co-operation is based upon the instinct of conservation, and the attraction is derived from the interplay of personalities which becomes part of the mental and spiritual furnishing of each individual, in the absence of which there is a loss of stimulus and enrichment. If this dualistic theory of the separate origin of the family group and the social group is correct, as seems highly probable, then the human instinctive and general psychology would be that morality and religion, which are primarily in terms of fellowship, have drawn far more from the gregarious instinct than from sex. The empirical evidences, as we have seen, emphatically support this view. In this connexion it is suggestive that sex is but a specialized form of reproduction, the latter having been performed originally through division, and that both reproduction and sex are functions of the will to live. The reproductive system, for example, is a specialization, embryologically, of the nutritive organs. These considerations would seem to fortify the one point of view that religion, besides being in the interest of the adjustment and fulfillment of the developing higher life, and not for the sake of any special sentiment.

The root of the difficulty, then, with the identity theory of sex and religion is, in the first place, the failure to appreciate that love in religion is a compound of the tender emotion, the gregarious instinct, and Nature attachments, the first suffusing the other two with an esthetic quality, and furnishing them with a basis for external reference; secondly, the failure to see that religion is a compound of all the instincts. The female sentiment is, therefore, but one of the ingredients—more important formerly than now—in a rich compound of sentiments called by the single name ‘religion,’ whose function is ideal adjustment.

EDWIN D. STARBUCK.

**FENG-SHUI.**—Chinese dictionaries give no definition of what is to be understood by Feng-Shui. No native treatises expound it upon scientific lines. Feng is ‘wind,’ shui is ‘water.’ Wind is what cannot be seen, and water what cannot be grasped. ‘Wind and water’ is the term, therefore, for the ocular sensations which are always bearing down upon human life. Professors of Feng-Shui prefer that it should remain a mystery, and those who pay them for their services accept the position, declaring that it is not to be expected that common people should understand the unfathomable. Eitel (*Feng-Shui, or the Rudiments of Natural Science in China*) calls it a conglomeration of rough guesses at Nature. It undoubtedly grew out of naturalistic beliefs, though it has become distorted and degraded into a gross superstition.

Practically there is little religion in China but such as springs out of Feng-Shui. The worship of ancestors, the reverence for the gentry, the desire to have the good fortune of the gentry, the reverence for the gentry, the reverence for the gentry, etc., is indissolubly connected with it. It enters into every important arrangement of daily life. Every proposed change must be brought to the test of its Feng-Shui. All events which are favourable or adverse, are explained by it. It is spoken of with reverence and awe. The common people are its slaves. Confucianist gentry laugh at the Feng-Shui doctor, but are careful to fall in with his theories and commands. Chinese law does not discuss it, but the courts always act on the presumption that its principles are not fictitious. The Government, though not acknowledging it, publishes every year an Imperial almanac giving all the lists, figures, and diagrams which are required by its professors and their victims. When a rebellion breaks out, the first act of the authorities is not to raise troops, but to send envoys to spoil the Feng-Shui of the rebel leaders by despoiling their ancestral tombs. And, when selling land to foreigners, the mandarins are careful to assign them only what is believed to have bad Feng-Shui.

S. Wells Williams (*The Middle Kingdom*, ii, 246) remarks that this geomantic and spiritualistic faith became systematized in the times of Chu Hi, who lived under the Sung dynasty (A.D. 960–1275). Chu Hi’s commentaries on the Chinese Classics are read in every school; and his mode of thinking has been adopted by modern Confucian-
ism. His theory is that the soul has a dual nature, consisting of the animus and anima—sometimes called the breath of Heaven and the breath of Earth. The anima is the material spiritual element; the animus is the male or material element. So long as a man lives, these two principles co-exist in combination, but at death the union is dissolved. The anima returns to heaven, the animus to earth. While man wanders in a vast and light in space. The animus enjoys freedom of movement, but chooses to limit its peregrinations to the vicinity of its former habitat, and to the company of the people with whom it was formerly associated. The anima lies quiet in the tomb, provided that the tomb has good Feng-Shui. The Chinese believe themselves to be compassed about by a great cloud of witnesses in the persons of their ancestors and forbears generally, and they hold that the spirits of these deceased relatives are omnipresent in the elements of Nature.

Here we arrive at the practical point which is of such extreme interest to believers in Feng-Shui. The selection of a grave is the most vitally important matter in a man's life. The quiet repose of the anima in its tomb is essential to the well-being of its mortal relations. The tomb must be in consonance with that of the universe; and in case it will be disposed favourably towards those members of its family who survive. If otherwise, so low is its ethical character in this disembodied state that it will make havoc of their fortunes.

The Feng-Shui Sien-Sang, or doctors of the geomantic art, know how to profit by these delusions. They are ridiculed and satirized, but universally feared. Nothing affecting the welfare of a family can be decided without their help. They are called in for consultation on a great variety of occasions. Guided by a curious compass with cabalistic signs, they solemnly profess to be able to judge whether a grave is in the proper position, whether it is safe to build a house on a particular spot, or whether a business is likely to prosper where the shop or office stands. If the client is rich, it takes a long while, so the Chinese say, for the learned doctor to arrive at a decision. A coffin corpse may have to remain for years on a shelf in a temple, or to lodge under a shed, till all appears secure. Or, disasters may befall the family after the burial of their relative; whereupon the Sien-Sang declares that the bones must be unearthed and stored in a jar until better Feng-Shui is discovered. If the districts where these jars are filled are co-existent, or a lid is awaiting the populace. Any one disturbing them would do so at the risk of his life. A temporary pagoda is sometimes erected as a regulative influence in order to test the quality of the Feng-Shui; but the pestilence breaks out, and some talented youths in the district win honours at the local examinations, the Feng-Shui is proved to be good. A permanent pagoda then takes the place of the temporary one. These pagodas, as regulating the streams of spirit influence in wauling off the evil or attracting the good, are supposed to exercise a remarkable power in producing talent in students. For this reason they are placed with high pointed roofs in imitation of a pencil or writing brush; and they are often spoken of as 'towers of literature,' the topmost storey being furnished with an image and shrines.

As it is necessary sometimes to build a pagoda to attract or to divert streams of lucky influence, so it is sheer madness to build tall chimneys, to place chimney on houses, to erect telegraph poles and semaphore signals, to cast up a railway embankment, or even to dig for coal. There is no knowing what mischief may be done by such rash adventures.

Some German missionaries near Hong Kong built two little watch-towers in their house. One of these houses is a mile away. Its enraged owners threatened to burn down the whole mission premises. The missionaries argued that the spirit of the house would never dare to do it; but if he stood up, but not if he was lying down quietly in his grave. No discussion of any avail until the house was discovered to be dead was compromised by a substantial money payment to the living!

Much of the violence of the people in Canton, Tientsin, and Peking against foreigners and Christianity is due to the erection by Roman Catholics of lofty cathedral buildings, which upset the Feng-Shui of the whole district. The objection to railways, with their cuttings, tunnels, embankments, and signal-posts, is of the same nature. The first railway in China, from Shanghai to the port of Wu-sung, nine miles away, was purchased and destroyed by the Chinese; for the men who work with the speed of the train destroyed the Feng-Shui of tens of thousands of people on both sides of the line.

With a view to warding off evil influences which are presumed to exist, the custom prevails of building brick or stone signal-posts, or semaphore towers, with painted lucky symbols, or words of defiance, or the rampant figures of savage beasts.

When the Feng-Shui is bad, it can be improved. A low hill may be raised, or a rugged hill-top may be lowered. A straight road or watercourse may be made serpentine. A pond may be laid out on the south side of a cemetery, or a tree which obstructs the favourable spirit-breezes may be cut down.

The Chinese believe that the British have mastered the whole science and art of Feng-Shui. To quote Eitel's reference to the evidences of this in Hong Kong:

'Hong Kong, with its 'abundance of rocks and boulders scattered about on the hillsides, abound in malign breath, and the Chinese think our Government very wise in endeavouring to plant trees everywhere on the hill to screen these harbinger of evil. But the most malificent influence under which Hong Kong suffers is caused by that curious rock on the edge of the hill near Wanchai. It is distinctly seen from Queen's Road East, and forebodes generally in Eitel and Abel, China, as not slaying his brother. The Chinese take the rock to represent a female figure, which they call the bad woman; and they firmly believe that all the immorality of Hong Kong, all the recklessness and vice of Taiping-shan, are caused by this wicked rock. So firmly is the belief impressed upon the local people that there is a Ko-go that those who profit by immoral practices actually go and worship that rock. A rope is spread out on the rock, and the rock is sacred. The British Government have taken care that the rock is at its foot. None dare to injure it; and I have been told by some otherwise sensible people that several stone-cutters who attempted to quarry at the base of the rock died a sudden death immediately after the attempt.'

From all this it will be perceived that Feng-Shui is not strictly a religious doctrine. It is held by no sect. It has no temple, no priesthood, no ritual. It founds no college, nor has it an authorized professorship. Yet its occult influences pervade the whole of Chinese society. It might be called the materialistic faith of China. It has nothing to do merely with happiness and misery, but virtue and vice are generated. Its origin is the current of Nature's breath over the surface of the earth, the configuration of the landscape deciding the limits of its powers. It is a mode of thought characteristic of primitive times. It views heaven and earth as one great fest, animated (as Eitel points out) by a blind, unintelligent, but omnipotent vitality. In place of the idea of the divinity of the sun, the Chinese have substituted the idea of the immortality of the earth. Instead of stars it speaks of hills. Rivers and lakes take the place of the Milky Way.

Philosophically, it maintains that the prismatic cause of the existence of illuminated objects is 'the Great Nothing.' When it began to move, the great male principle came into being; and when it rested, the female
FESTIVALS AND FASTS (Armenian)

In the ancient Armenian calendar there are two kinds of abstinence—absolute and relative. Absolute abstinence (fasting) is practised on the first 5 days of Aradjarwarkh (three weeks before Carnival Sunday), and for the 6 weeks of Lent, beginning with Ash-Wednesday and continuing till the Saturday before Palm-Sunday (but see below, Relative abstinence prevents every Wednesday and Friday in the year, and also during (a) the week of Pentecost (the abstinence of the prophet Elijah), 5 days; (b) the week preceding the Feast of Gregory the Illuminator (the 3rd week after Pentecost), 5 days; (c) the Transfiguration (the 6th week after Pentecost), 5 days; (d) the week preceding the Sunday of the Assumption of the Holy Virgin, 5 days; (e) the week preceding the Sunday of the Exaltation of the Holy Cross, 5 days; (f) the week preceding the Feast of St. George, or the Feast of the Cross of Varaj; (g) the week preceding the Feasts of Archangels and Angels; (h) the week of Julife; (i) the week preceding the Feast of St. James of Nisibis; (j) the 7 days preceding the Christmas Epiphany Feast.

During Lent there is no fasting on Saturdays and Sundays, and the same holds for all Holy Week, but abstinence is practised. In none of the above-mentioned cases is abstinence practised on Saturdays, except on the eve of the Transfiguration, of the Assumption of the Exaltation of the Cross, of Christmas, and of Easter; on these days

FESTIVALS AND FASTS (Armenian)
FESTIVALS AND FASTS (Buddhist) — The Buddhist calendar prescribes the following festivals and fasts.

1. Upasatha. — The Upasatha days owed their existence to the ancient Vedic custom of holding sacred days or periods in honor of the new moon (Durka) and the full moon (Purnamasa). These feast, or sacred, days were called Upavasatha, and offerings of intoxicating soma were made in connection with the worship of the sun. According to Buddhist tradition, the monks of non-Buddhist sects were accustomed to meet together at the middle and at the close of every half-month in order to proclaim their new teaching in public. At such times the people gathered together, and the different sects found their opportunity of increasing their numbers and influence. The Buddhists adopted the custom of these periods for their fasts, but confined themselves to meeting twice in each month. In later times the intermediate quarter-month days were also held sacred, and so the number of Upasathas was increased to four in every month. The words of the Upasatha are: 'I present food to you on the fourteenth, fifteenth, and sixteenth day of each month.' In the Dhammika Sutta the wording is: 'Moreover, being of a pious mind, one should observe Upasatha on the fourteenth, fifteenth, and sixteenth day of the lunar fortnight.' The fourteenth and fifteenth days must be taken to mean the fourteenth day from the new moon in short months and the fifteenth in long months.

2. Though the idea of four monthly fast-days was borrowed from Brahmanism and other non-Buddhist sources, the manner in which they were kept was entirely original. It was not proper to trade or do any business; hunting and fishing were forbidden; schools and courts of justice were closed. They were also, from ancient times, fasting-days. The laity were to celebrate the days with clean garments and clean minds. Special observance of the moral precepts was inculcated on these days. In the Dhammika Sutta the eight precepts are detailed, and it is added: 'Such, they say, is the eight-fold fast (Upasatha) declared by Buddha, which came to the world through the Four Eleventh.' The eight precepts were: (1) not to destroy life; (2) not to take what is not given; (3) not to tell lies; (4) not to become drunkers of intoxicating liquors; (5) to refrain from unlawful sexual intercourse; (6) not to eat unseasonable fruits at night; (7) not to wear garlands or use perfumes; and (8) not to sleep on a mat spread on the ground. Furthermore, the brethren and sisters were to make use of the gatherings to confess to the assembled the sins and faults which each had committed, and to take upon themselves the penance which the transgression incurred.

At this Upasatha ceremony the Pattimokka, which forms the second Khandhaka of the Maha-vagga, had to be recited. 'This (Pattimokka) will be their Upasatha service.' Explicit directions are given in regard to the ceremony: an Upasatha was to be held in a clearly defined district; at

1 SEE xii. Introd. p. x; Monier-Williams, Buddhism, London, 1888, pp. 84 and 236; Ibys Davids, Buddhism, do, 1899, p. 138 of the New, of the Aramaic, Gregory arranged that the Feast of St. John the Baptist should be celebrated on the same date as the fast. After the fall of the Arsacid dynasty, this arrangement was abandoned, and the Feast of St. John the Baptist passed over into the ranks of the simple Feasts of the Saints.

3 Feast of Diwam Anurah.. — A fortnight after the beginning of the year, on the 13th of Naxard, Gregory commemorated the Feast of the goddess Anahit (on whom see ERE i. 797). Gregory the Illuminator transformed this into the Feast of the Imme of the Holy Virgin. The feast was brought by St. Bar-
Festivals and Fasts (Buddhist)
FESTIVALS AND FASTS (Celtic).—1.

FESTIVALS (Celtic).—The division of the Celtic year.—The division of the Celtic year and the position of its festivals were originally determined by agricultural processes. Probably at first the year was divided into two unequal parts, summer and winter. Later came the astronomical cycles—at first lunar (Plin. xvi. 80), then, as a result of the influence of the Roman calendar, solar. Two important facts must be borne in mind: (1) that, in Celtic belief, night preceded day, and that, in early Celtic literature, "night" usually means a night and a day, with the result that every festival began on the previous night (Cesar, de Bell. Gall. vi. 18; Loth, R.Celt. xxv. 116); (2) that the year began with winter—probably about mid-November, though later the winter festival began on November eve. When we first became acquainted with the Celtic calendar from Irish texts, we find a two-fold division—each half being again subdivided. The winter half (Samhain) was succeeded by Samain, i.e. Oct. 31, and was subdivided into two parts, the second beginning on Feb. 1; the summer half (samhaineth) began with May and the Beltane feast, and also had its subdivision, its second portion beginning on the first day of June (divided in Book of Rights, Dublin, 1847, p. lif.). There were thus four quarters, but these do not correspond to those beginning with the solstices and equinoxes. They begin each with a feast, three of which—Samhain, Beltane, and Lughnasad—can easily be traced. The February feast is now replaced by St. Bridget's day (Feb. 1): its pagan predecessor has left scant traces. It is unlikely that this definite subdivision existed in earlier times, as, indeed, the shifting of Samhain from mid- to 1st November suggests—in the Isle of Man it is still held on Nov. 12 (J.P. II. [1891]308)—and the arrangement is doubtless due to the analogy of the Roman calendar. But the influence of the lunar calendar had the further effect of displacing some of the festivals.

Thus, in Gaul, much of the ritual of Samhain was transferred to the calends of January, while there was a tendency to celebrate Midsummer day instead of Beltane as the summer feast, both being found with similar ritual over the Celtic area, and they are evidently twin halves of one festival. The Roman Christian calendar, with its lists of feasts and saints' days, might also have been taken into account, some of the ritual of the earlier pagan festivals now occurring as survivals on holy days within the range of the pagan festival periods. All these festivals being mainly connected with agriculture, magic as well as religion had its place in the ritual, the object of the magical acts being to promote fertility and to aid the power of the divinities or spirits of fertility.

2. Samhain (perhaps from cean, 'summer,' and fein, 'sunset' or 'end') [Windisch-Stokes, Jr. Texte, Leipzig, 1889, ii, p. 757], though Stokes ([Urk. Sprachw., Göttingen, 1894, p. 229] gives to "samhain" the meaning of "assembly"), as a festival of the beginning of winter when blight and death were assuming their reign, naturally took account of that fact, and its ritual was intended to assist the reaper in his work, to help in the conflict with winter's death. But it had other aspects, also, and a complete understanding of the festival can be arrived at only by studying early descriptions of the ritual or actual survivals. With the growth of Celtic religion this festival started setting itself the task of one of the ritual lesser festivals. It is a festival of beginnings, like the New Year festivals of all primitive folk. Its ritual suggests also the festival of earlier pastoral times, when the flocks and herds were regarded as themselves divine animals. It is also a harvest festival, as is that in England in August; and, though harvests did not occur before mid-November, some of the ritual may have been transferred to that date, especially if it had been associated with threshing rather than with the harvest of the field. With the coming of livestock to the central hearth for a time and the adoption of the Roman calendar, the ritual of the festival was once more scattered over the other sacred days in winter.

(1) As a festival of beginnings, some of the ritual had reference to that fact. All fires having been extinguished, new fire was brought from the sacred bonfire (Keating, Hist., Lond. 1866, pp. 125, 300), itself kindled probably by friction. Possibly the blazing Yule-log brought to the hearth at Christmas was originally derived from the Samhain rites, by being dislocated from them as Christmas festivities became more prominent. Merriment and feasting characterize the festival in Ireland (Windisch-Stokes, i. 205; d'Arbois, ii. 5), and this may also be traced in the Scots Hallowe'en customs.

In other words, it was an orgiastic feast; this is clearly seen from the licentious customs of the calends in Ireland. The Yule-log remained in use for a long period. Such licence always characterizes a festival of beginnings, when the evils of the past year are being ritually got rid of by various means. Rightly or wrongly the inquirers during the coming year, were also in evidence. The most common rite was for each person to throw a stone into the bonfire which was kindled at Samhain. Its position next morning indicated the fate of its owner (Brand, Pop. Ant., London, 1899, i. 390; Stat. Acc. xi. 621). Perhaps in earlier times this rite was a casting of lots to obtain a human victim, while the memory of the slaying was long after transformed into a passage of death or misfortune within the year. Other rites of divination, such as those described in Burns' Hallowe'en, had an erotic character (Hazzlitt, Dict. of Faiths and Folklore, London, 1905, pp. 297 f., 340).

(2) The lack of fodder led to the slaughter of cattle at this time, or rather at a date corresponding with Martinmas, which points to the earlier date of the festival in mid-November. This slaughter, like that of the Scandinavian Blot-mannah, was sacrificial in character, and was followed by a feast on some of the animals. Within recent times in Ireland it was customary to choose one of the sacrificial victims, and especially the successor of some pagan animal-divinity in anthropomorphic form, and ill-luck followed the neglect of this rite (Curtin, Tales of the Fairies, Dublin, 1855, p. 72). This semi-religious slaughter dates back to the age when the animals were themselves divine. In this pastoral stage, perhaps associated with totemism, the annual slaying would be limited to one animal in each group; and, the animal being divine, the feast on its flesh was sacramental. If the slaughter had been more general from the first (as it certainly became in later times), it would be accompanied with rites intended to propitiate the divine animals, as "supernatural" as the life of the animals, as the festival would still be sacramental. The sacramental eating, the divinity of the animal, the gradual anthropomorphic tendency to give the animal-god a human form, as in the case of Attis, of this Christian may, be seen in the Irish legend of St. Martin (already associated with the slaying), which tells how he was cut up and eaten in the form of an ox (BCVL vi. [1884] 254). Possibly the representation of the corn-spirit in animal form may have blended with the divinity of the animals slain at Samhain. Again, in Gaul, at the calends, as formerly at
FESTIVALS AND FASTS (Celtic) 839

Samhain, men wore the heads and skins of animals, in the belief that by this means they could effectually contact the animal divinities, as they had already done by eating. This custom was vigorously attacked by Church Councillors and by individual preachers (see chapter of passages in Chambers, *Medieval Stage*, Oxford, 1903, App. N; PL xxxix. 2001). In certain recent survivals in the Hebrides a youth dressed in a cow's hide paraded the village and was blessed to the annoyance where another or person an animal inhale the fumes of a pile of burning hide carried by him (Chambers, *Pop. Rhymes*, Edin. 1847, p. 257). This custom, which may have taken the place of the carrying of the slain animal in procession, resembles the rite of the festival, which was hunting the woe (see *Animals*, in vol. i. p. 5329), which occurred at Christmas. But this, like the animal masquerades, may have been associated with Samhain in earlier times. Masquerading is still common among young people on Samhain in the Highlands, and in some parts of Britain dressing in animal disguise was associated with an autumnal festival (see *Northumberland*, Newcastle, 1784, ii. 46; *Thoms. RH*, xxxvii. [1898] 334).

(3) The agricultural aspect of the feast is seen first of all in the bonfire which was (and is still in Celtic countries) an offer to the divinities. The analogy of the Beltane and Midsummer fires shows that it was intended as a fire-charm to aid the power of the sun by virtue of mimetic magic, while, at the same time, this symbol was virtually the thing symbolized and conveyed its benefits. Hence the fire was lit from the divine fire, blazing flagots were carried through the village, and the flames jumped through the air in order to be purified and strengthened by contact with the divinity. Numerous references show that various evil powers (perhaps blight and death), represented as demonic beings or witches, were especially rampant on Samhain eve (*Rit. x*, [1898] 214, 225, xxiv. [1903] 172; *Joyce, Soc. Hist. of Anc. Ireland*, 1903, ii. 556; O'Grady, *Silva Gadelica*, London, 1892, ii. 374; *Cymromored. vi.* 176), and one of these references shows that they were particularly hostile to the crops and animals. They may have been conceived as combating the powers of light and growth, which were thus assisted by the bonfire. There are also traces of a traditional belief that offerings were offered to the Welsh for the fire was extinguished, to escape from the "black sow" who captured the hindmost—perhaps a reminiscence of sacrifice (Rhys, *Celtic Folklore*, Oxford, 1901, i. 225), and early Irish literature refers to the tax of the year's corn and milk, and of two-thirds of the children born within the year, to the evil Fomorians on Samhain eve. Keating (Hist. 300) also speaks of a sacrifice to the gods, burned in the fire on Samhain eve. But, though the powers of blight may have been propitiated, it is not unlikely that the primitive slaying of a human or a representative of the corn-spirit or of some divinity of growth was later conceived as such a propitiatory sacrifice. The process of thought is difficult to follow, but it may have seemed natural that, since the divine fire acted magically upon the life of the sun, it would act also upon the power of the god or spirit who was consumed in it in human form. By dying, the divine life was renewed and strengthened (see *Préaux*, 1903, p. 109). We must not overlook the fact that the powers of growth may themselves have come to be regarded as evil in Christian times, just as the corn-spirit was given a demoniac aspect. The "black sow" in the Welsh instance may have been an earlier animal embodiment of the corn-spirit, which had come to be looked upon as more or less demoniac. A person who represented the corn-spirit could hardly be kept apart from the victim slain at Samhain, more especially as harvest is late in several Celtic regions; while, to judge by folk-custom, the slaying was frequently connected with the threshing of the grain, rather than with the harvest-field (Mannhardt, *Myth. Forsch.*, Strassburg, 1884, p. 333 ff.). The slaying of the corn-spirit was probably derived from the similar slaying of the tree-spirit at the summer feast. The corn-spirit, like the latter, had also various embodiments—the last sheaf, an animal, or a human being; and all of these had powers both of quickening and of strengthening the fruits of the earth, cattle, and women, while there can be little doubt that part of the flesh was also eaten sacramentally (Mannhardt, 317 f.; Frazer, *GB* ii. 288). Possibly, too, as the representative of the tree-spirit had once been a priest-king, so he who represented the corn-spirit may have been called a king also. This would account for the choosing of a mock-king, e.g. the king of the bean, at winter festivals (Hazlitt, *Chambers, Book of Days*, Edin. 1863, i. 62). This and the presence of effigies of saints, which were carried in procession, their clothes distributed, and then finally burned (Chambers, ii. 492; Hazlitt, 101), form survivals, though somewhat disfigured and disturbed, which are doubtless derived from the ritual of the corn-spirit, or perhaps that of the divine animal associated in earlier times with it. But, since the last sheaf representing the corn-spirit is usually called by some female name, "the Maiden," "the Mother," etc., this shows that the corn-spirit had originally been conceived as female—doubtless as a result of the fact that agricultural customs first in the hands of women; while in survivals ultimately derived from Samhain rites a "queen" or "Yule's wife" is in evidence (Hazlitt, 97; Davies, *Man. Records of York*, London, 1894, p. 276). With this we may also connect the fact that men disguised themselves as women at the calends. The increased power of the fairies—in Ireland the successors of gods of growth and fertility—on Samhain might be easily explicable by the nature of the festivals, though they may have been sometimes confused with the demoniac powers. The vaguer corn-spirits doubtless became greater and more anthropomorphized divinities, and the spirit of sacrifice was later transferred to the slaughter of several victims, while death was also considered beneficial to vegetation. A similar evolution occurred in connexion with the vegetation spirit, while a holocaust of victims took the place of his representative. Doubtless among the rural people themselves the vaguer spirits and the older ritual still prevailed with little change. This substitution of several victims for one would account for the so-called sacrifice to the Fomorians, if they were aboriginal gods of fertility, and for the sacrificial cult of Crom Cruich, connected in one place with Samhain (see Acts, v. 2). The gods of growth, evolved from these vaguer spirits, may well have been conceived as in conflict with powers of blight and death at this time, and this may have been ritually represented by a combat. The story of the battle of Magtured might then be regarded as based on a myth which told of this conflict, and which showed that, in spite of the apparent blight in Nature, the powers of growth could not be finally vanquished; the same, too, may have been true of the Tuatha Dé Danann, at this battle.

(4) A yearly festival of the dead took place on Samhain eve at the battle of winter, when the power of growth was at its weakest, and when possibly a representative of the corn-spirit was slain. Hence this festival, like that of Lagna-
FESTIVALS AND FASTS (Celtic)

Sad, may have been associated with the spirits of the dead. Or, a ritual associated with dying powers would easily become a feast of the dead generally, while the dead themselves were connected with the underworld god of fertility. In Scandinavia and the dead left from the spirit world, the festival of *fylgjur*, identified with the *disir*, also females, living in the hollow hills and apparently earth-goddesses. The Celtic analogy is found in the Matres, also earth-goddesses. Christmas Eve was called *Māthair* (Mother) or *Māthair 113f.* to *Gaidoz*, The In God (Bede, Bre). The festival, therefore, was devoted, a festival originating from *Beltane* (Le Braz, *La Légende de la mort*, 2, Paris, 1902, ii. 115). Thus the festival of the dead brings us back to the earth, and it is not unlikely that the Yule-log was originally associated with Samhain, when new fire was kindled on the hearth, and that the libations poured on it were intended for the dead. The place of the two Christian festivals of All Saints and All Souls is ascribed, and 1 and 2 (the time of Samhain) remains to be explained. The first, of earlier origin, was doubtless intended to supplant the pagan festival of the dead. As it failed to do so, a Christian feast of all the dead was then originated to neutralize existing pagan rites (Frazer, *Adonis, 253 f.*). In this it only partially succeeded, but it is perhaps due to Christian influences that the more friendly aspect of the dead has been largely forgotten, and that they are associated in popular belief with demons, witches, etc., whose power is great on Samhain eve, and who are perhaps representatives of the old powers of blight and death.

3. Beltane, Midsummer.—These two festivals being twins halves of one early summer festival, the object of which was to promote fertility in field, fold, and house, the ritual acts of both may be considered together. The word *Beltane* was already a puzzle to early Irish philologists, who explain it as meaning (1) *Belt-eine*, a goody fire, or (2) *Belt-eine*, because the newly-born cattle (dithe) were offered to a god Bel (Cormac, in Stokes, *Three Irish Glossaries*, London, 1862, p. 9, a. v. *Bel, Beltaine*; *Arch. Rev.,* i. (1888) 201; cf. Joyce, *Irish Names of Places*, 191, i. 578; *RCÉ* xxi. (1904) 95). The latter derivation is followed by those who connect a god Beal or Belus with a borrowed Semitic Baal. No such god is known, however, unless Belenos, Belsam, etc., may be connected with Beltane, as some suppose. P.Arbols (ii. 243) proposes a connexion with *Belus, to die*, and makes the festival his day. But no such god is known, and the feast was one of life and growth, not of death. Stokes (ibid.) divides the word into *Belt-eine*, while its root is perhaps the same as that of the Latin *beleus*, and suggests that it is a termination as in *séchmaine*, week." In his *Uralt. Sprachkreis*, 125, 164, he shows how the primitive form was the composite *belleus*, *pe-neus*, *beleos*, and *beleos*, and that the personal name Beleus is probably derived from it. The name of the divinity is *Belenus*, and *beleos*, *fire* (G. *brn*). The name is perhaps identical with that of the moon-god, *Belos*, and *beleos* is *fire*.

As at Samhain, the chief ritual act was the kindling of a bonfire by a spark from flint, or by friction from a rotating wheel (need-fire), frequently the fires of the district had been extinguished. Cattle were driven through the fire or between two fires lit, as Cormac says, by Druids with incanta-

tions. By this means, viz, contact with the divine fire, they were freed from disease. Survivals show that the festival was communal, since all the inhabitants contributed to the fire, while its religious side is seen in the fact that, within recent times, if there was a contest between a soldier and a mayor and priest attended the fire. They represented the earlier local chief and pagan priest. The fire was sometimes lit round a tree, representing the vegetation spirit, or round a pole covered with green material. If a tree was cut and thrown into the fire (Hone, *Every-Day Book*, London, 1838, i. 849, ii. 593; Joyce, i. 216; *RCÉ* iv. (1879) 193). The people, probably clad in leaves in order to assimilate themselves to the vegetation spirit, danced sunwise round the fire to the accompaniment of songs or chants. The dance, imitating the course of the sun, probably was intended to assist it, for the livelier the dance the better would be the harvest. The fire being divine, the people crept through it to avoid disease and ill-luck, to ensure prosperity, or to remove barrenness. They ran through the fields with burning brands, or killed a bull and blazing wheels over them, or sprinkled ashes from the fire upon them, or preserved charred brands till the following year. The tree itself was borne through the fields before being burned. Certain cakes, *Bé恋s* of the half-grown boughs. All these rites had one end, viz., to ensure fertility through contact with the divine fire or the spirit of vegetation. As in the Samhain ceremonies, the fire represented and aided the sun; and such contact with the fire was equivalent to contact with the divine sun. Animals were sacrificed, probably as representatives of the spirit of vegetation or fertility. Among these was the horse, as an Irish survival, in which a horse's skull and bones were placed in the fire (Hone, ii. 595), or a man wearing a horse's head and representing all cattle rushed through the fire (Granger, *Warship of Romains*, London, 1895, p. 119 f.; for a legend of a speaking horse coming out of a mound at Midsummer eve and giving oracles, see Kennedy, *Legendary Fictions of the Irish Celts*, 1866, p. 153). Some of the flesh may have been eaten sacramentally, and some of it placed on the fields to fertilize them. In French Midsummer survivals, animals were burned, sometimes being enclosed in osier baskets (Bertrand, *Ret. des Gaulois*, Paris, 1897, p. 1; *Syrie de Gaulle, genoise*, 2, Paris, 1879, p. 21). Human victims seem also to have been burned in the fire, or otherwise slain. Thus, in a Perthsire survival, he who received a blackened portion of a cake, the pieces of which were drawn by lot, was called 'the Beltane carline' or 'devoted,' and a pretense was made of throwing him into the fire, and he was spoken of as dead (Stat. Acc. xi. 629); while in France he who stumbled in leaping through the fire was considered unlucky and 'devoted to the faeots, or spirits (Bertrand, 119). In earlier times such persons would be sacrificed. In other places gigantic effigies made of osier were carried in procession or burned, Cahunard, *Bouwkultur, Berlin*, 1875, pp. 514, 523.

Can the sacrificial to these survivals bear witness be connected with the periodic Celtic sacrifices for fertility referred to by Cesar, Nircho, and Diodorus, all perhaps borrowings from Poseidonus, as Maunhardt, *Annukultur, Berlin*, (1875, pp. 514, 523).

The connection of these survivals bear witness be connected with the periodic Celtic sacrifices for fertility referred to by Cesar, Nircho, and Diodorus, all perhaps borrowings from Poseidonus, as Maunhardt, *Annukultur, Berlin*, (1875, pp. 514, 523).
representative of the spirit of vegetation. The Celtic holocausts were not to be seen as the original slaying of the tree, as might have been imagined. The custom of slaying annually one man who was an incarnation of the tree was a later development. The tree and the god were not divorced by light and growth, and there had been a priestly king who had all the powers of the vegetation spirit, but in later times a surrogate took his place and was slain, though regarded as divine. Otherwise, the dying tree was looked upon as a sacrifice; hence it would naturally be thought that the benefits of the rite would be greater if the number of victims increased. This would account for those great periodic holocausts, though elsewhere, as modern survivals show, the ceremony continues in modified form. The victim was burned in the fire—a sun-charm—and thus vegetation received beneficial influences from the sun. He himself assimilated the fire which he consumed. At first the vegetation-spirit had been a tree-spirit which had power over growth, fertility, and fecundity; hence he had a conspicuous place in the summer festival, and it had all the virtues of the spirit which it embodied. It was carried in procession, imparting these virtues to fields and houses; branches were placed over houses to obtain them by contact, the tree was burned as a sun-charm, and the tree ceremony was held in the first year, so that its presence might bestow blessing, and was then continued. At the festival of the Beltane (Beltain), the burning of the sacred tree (Flinty [H.V. xvi. 249]) says, it was cut on the sixth day of the month, though he does not specify the time of the year; but other rites, e.g. circumambulating less frequent, or cereals, or Midsummer eve in order to be effective, and it is far from certain that the rites practiced at the Midsummer festival have been in the same manner. It is well that we have been the mistletoe (called in Gaelic an darchadh, a festival) was collected because it was held to be necessary that it be cut by men, and is discernible by the green. Fired to be cut, and it was burned till its life was secured, in accordance with a wide-spread belief that the life of all vegetation was preserved by being placed under a woman's charge and freedom for himself and that he will die if any one secures it (MacCulloch, OP, London, 1665, ch. 3). But, as survivals, in which women and a sacrifice are the tree and a brazen, and a tree is burned, we may also see human representatives of the vegetation-spirit brought into contact with the earth or heaven, and the tree and the life of the person (Manndag, 315 f.). The vegetation-spirit was given, now a theriomorphic form—hence it could be represented by a ram or a bull. In either case the ruler remained, as a constant factor in the ritual. Hence the doubling of the tree-spirit and the human spirit, the gathering of the mistletoe secured nature at once the life of the tree and that of the beast or man who was also slain. Possibly the oenon slain at the mistelote rite may have been theriomorphic embodiments of the vegetation-spirit, though, as a rule, a human embodiment was found; but at the same time human sacrifices had been prohibited in Gaul. Fraser has, therefore, suggested that the myth of Bolder slain by the mistelote was derived from actual ritual in which the mistelote was plucked before the human incarnation of the vegetation-spirit could be slain (GB 111. 315). Thus in the primitive Celtic summer ritual the spirit or god of vegetation, the tree, and the animal or human victim were one; their life was in one. Hence the burning of the mistelote was at the time of the Beltane in the spirit of Man (GB 111. 9). This done, they were burned in the fires which represented the sun, the visible power of life and growth. Hence both fire and earth were purifying powers. For they smoke, burned brand, ashes, and pieces of the victim added whatever they touched; purifying, strengthening, fortifying. Hence people leaped through the fires, or passed through it, or believed that the fire or smoke fertilized their fields, or carried their life to the earth. They were sprinkled with ashes, or hung a part of the victim in them, or preserved the brands in their houses. The death of the victim was a sacrifice, a purifying rite to which Flinty may refer when he speaks of the Celtic belief that to eat human flesh was considered as holiness (H.V. xxii. 1). The spirit of fire and victim was magico-sacramental. Through them, men, animals, and vegetation were brought into touch with the divine spirit. And in like manner fire and slain victim reacted beneficially upon the gods or spirits whom they represented, the fire upon the sun, the dying god upon the god who lived again. From such vegetation-spirits the greater Celtic gods of growth were probably evolved.

The role of this rite was to roll a log or branch through the fields, initiated the progress of the sun, assisting it and also benefiting the crops. Such an initiation of the sun’s motion is found in the Slav rites, e.g. circumambulating less frequent, or cereals. The log was rolled through the fields in the direction of the sun (desielli), with the same intention as the roll of the log in the Celtic practice of walking diessell round some object on any important occasion. Originating in the idea that to imitate the action of the sun is beneficial, it was the custom to do so brought good luck and repelled evil influences. Thus in the Codhulmian ceremony, to roll a log or branch setting out for war, her charioteer makes her chariot describe a right-hand turn (desielli) to repel evil omens (Lenkbar na hEilekhe, 59). In late survivals the desineil took more formal forms. Probably further process of thought, it was believed that the blazing wheel in its course could purify the earth; and the communities in all probability evils were laid on the slain divine representative (Hone, i. 441; Hazlitt, ii. 340), whether animal or human (see CIRCUM- AMBULATION, POWERS, WREZYA).

Thus the two chief rites of the Beltane and Midsummer festivals, as also those of Samhain, were mutually complement- ary. The vegetation-spirit, slain as tree, animal, or man, died with him or in his place. He might be a god of life and death, and man. So, too, the blazing fire assisted the life of the powers of the sun, its growth, and the earth and vegetation. All these rites survived with little change into Christian times and were used as the pagan cerebrations. The pagan Midsummer rites were described by Paulus Diaconus (165-67, v. 219). Again, by associating the pagan Midsummer feast with the idea of the sacred marriage, the people also associated the services and ritual of the Church, an attempt was made to modify their heathen paganism. But in neither case was it effectively stifled.

It was usual to roll ‘Beltane cakes’ down a slope—again in evident imitation of the sun’s action; but in some cases the whole summer of the cake was denominated by its remaining whole or breaking—if it broke he would die within the year. Perhaps we may trace here an earlier selection of a victim by lot, as in the case of the lot by the blackened fragment of cake. In another survival, pieces of such a cake were given to unnamed friendly powers and to animals hostile to the flocks (Pennant, Tour in Scotland, London, 1774, i. 97). If this was done in the primitive pagan rite, there was a propitiatory benediction and hostile powers—an example of the double outlook of all primitive religion. But probably in their earliest use the cakes were sacramental in character, and not purifying. Many Teutonic instances (Grimm, Teut. Myth., 1880-88, ii. 1239) as moisture was necessary for the growth of the crops, magical methods of obtaining rain were tried, and rains were visited, and rain charms performed with their waters. Hence such wells were deemed to be specially efficacious in other ways at these times, and people visited them for healing and other purposes (Hazlitt, i. 38, ii. 340; New Stat. Acc., Wigtown, 1854-44, p. 208). The customs of bathing in May dew and bathing in a river at Midsummer were originally connected with the magical methods of producing moisture. There was also a dramatic representation of the conflict between the powers of growth and those of blight, or between summer and winter, with the victory of the former at this period. Traces of this ritual are found all over Europe, and notably so in the combat of the forces of the Queen of May with those of the Queen of Winter on Lla-Bodlyn (Beltane) in the story of the Battle of Mynydd Maen (GB 111. 95). Here people—probably surrogates of the May-king and May-queen in popular survivals, and the fact that their pagan predecessors were incarnations of male and female spirits of fertility or vegetation, suggest that the ‘sacred marriage’ was also part of the summer rite. In worldwide agricultural rites the symbols or divinities were united temporarily, the object of the union being to promote the fertility of the soil through mimetic magic (GB 111. 306). Probably a considerable amount of general sexual licence for the same magical end occurred at the same time.

4. Female cults of fertility.—At the winter and summer festivals a divine virgin—the king or his surrogate—was slain, in order to aid the processes of growth and fertility. But, as Celtic divinities and spirits were once mainly female, and as the practices of agriculture were once in the hands of women, it is easy to see how elaborate festivals sprang up on one time confined to them. The divine victim would then be a female—the priestess or her surrogate—representing a female divine being.
Certain survivals point in this direction. The slaying of a female representative of the spirit is suggested in some name of a goddess, 'Beltane' or 'old woman,' applied to the devoted person in the Highland survivals (see above, 840).

Though this person was a male, the name shows that in earlier times the victim was a woman. In which festivals the name was used in this direction, it was masqueraded as women (Chambers, *Med. Stage*, ii. App. N); in local observances of St. Catherine’s Day, Nov. 25, a ‘queen’ was chosen by girls; *Vit. Ewln* shows this was a part of the Christmas pageants (Hazzitt, i. 97; Davies, *Mun. Rec. of York*, 270). Again, at the summer festival, the May-queen had frequently in survivals a more prominent place than the May-king. In both cases such ‘queens’ were the incarnations of a female spirit of fertility, an earth-goddess or vegetation-spirit, and were slain by the women who practised the cult. And if, as is probable, the witch orgies are remains of primitive female cults, the special activity of witches on Beltane eve, especially on hills which were formerly the site of worship (Grimm, *i. 1051), may be traced back to this direction. Later, goddesses took the place of goddesses, priestesses of priestesses, and male victims were accordingly slain. But sporadically the female cults probably still held their ground. This may explain some classical notices of female sacrificial victims. Strabo (iv. 4. 6) mentions sacrifices paid to native goddesses, whom he calls ‘Demeter and Kore,’ on an island near Britain. The cult resembled that of the celtic goddess of Samothrace, i.e. it was a cult of fertility in which female divinities were worshipped. These divinities may still be represented in the sheaves of corn called the Old Woman and the Maiden, the corn-spirits of the past and the future year. The seed of the latter was mixed with next year’s seed-corn, that the life of the goddess might pass into the seed sown (Frazier, *G.B. i. 171 ff*). Probably the goddesses were once represented by actual personages, whose blood was used to fertilize the seed-corn. Such a rite may underlie Strabo’s account of the Nannie women who worshipped Dionysus on an island at the mouth of the Loire, which no man might visit (iv. 4. 6). Yearly they unsowed the temple and the same day re-fooled it, each woman bearing a supply of materials; but she who dropped her load (and this always happened) was torn in pieces and load was replaced with wild cereals. Dionysus Periegetes (v. 570) says that the mysteries took place at night in honour of earth-goddesses, with a great clamour, and that the women were crowned with ivy. The whole reference is obscure, but it might be possible to connect it with rites of fertility, if the flesh of the victim was carried to the mainland and there used to fertilize the soil or the seed-corn. This assumes that she was slain as the incarnation of divinity. Perhaps Strabo was mistaken in saying that a god was worshipped; the cult may have been that of a goddess, as Dionysus reports. Another cult is reported by Pliny (xxii. 1) as occurring among the Britons. In it nude women stained with blood took part. This ritual, which may be connected with that of the Lady Godiva procession is a survival (Hartland, *Science of Fairy Tales*, Larousse*’s Popular N.F.,* J. G. Jones, *Highland*). Agricultural magic, in which nudity is essential to fertility. The same purpose is effected by dressing in foligans, thus effectively personating the spirit of the dead. From this may be seen why the Nannie women were crowned with ivy, and also why, as Diodorus reports (xxxi. 13 [ed. Dindorf, *Paris*, 1842, ii. 490]), sacrificial victims were crowned with leaves. The latter custom might be an extension of the more primitive one. Just as sporadically the cults of women held their ground, so ‘the female’ (Brigint) has remained even after the divinities or spirits of fertility and growth, of corn and vegetation, had been conceived as male. The image of a goddess, called by St. Gregory of Tours Bersyavia (probably a female) (Pagi. Mem. 19) by Beccabrun (Cybele under this name), was borne through the fields and vineyards, on her festival and in time of scarcity, while the worshippers sang and danced before it (Zur. *Glor. Conf.* 77; *Sul. Selv. Vita S. Mart. 9*). Such a lustration of the fields with an image in order to fertilize them is found in many regions (cf. the procession of the Germanic Nertlins [*Tac. Germ.* 49]), and we have already seen that the tree representing the vegetation-spirit was similarly borne through the fields, and probably the image has here replaced such a divine tree. The practice continued even among Celtic religious communities, either with the image of a saint or with his relics (Adamnan, *Vita Columb.*, ii. 45). The washing of the image after the lustration—probably as a rain-charm—is mentioned by Strabo. Later, goddesses, as already mentioned, were commonly used elsewhere; hence it may be assumed that it occurred, since on Celtic ground the washing of images of saints for that purpose frequently took place.

5. Lugnasad, or August, or more probably in earlier times some day in mid-August, occurring midway between Beltane and Samhain, was observed as a festival. It began, as the autumn or harvest-season, and was probably itself a harvest festival associated with the offering of firstfruits, though it is doubtful whether, in Britain and Ireland at least, the harvest would be ingathered by August 1. This points to mid-August as the earlier date of the festival, while, as we have seen, part of the ritual of the harvest festival passed to the Samhain feast. One name of the day, *Brian Trigain*, is explained as ‘the earth is alliterated or under fruit,’ *Trogan* being a name for the earth (‘Wooing of Ener,’ *Arch. Rev.* i. 232; O’Donovan, *lii*). The day was dedicated among the Celts, as the corresponding Lanna among the Anglo-Saxons, to a sacrifice of the fruits of the soil (Vallancey, quoted by Hone, *i.* 1063). But the day was associated with the god Lug; hence its Irish name, *Lognasad*, in Scots *Gaelic Lisnasdal*, in Manx *Luo-Lhuanaig*. Cornacre, *ries* (p. 390) explains the name of Lug mac Eithnenn, which was celebrated in him in the beginning of autumn. But the Rennes Dindsenchas (RCD xvi. [1895] 51) says that Lug’s foster-mother Tatituin was buried on that day, and that Lug directed an assembly and games to be convened then as a yearly memorial of her at her grave-mound. This may be a later explanation of the slaying of the corn-spirit in a human representative. In primitive times, when agriculture was in the hands of women, the victim would be a female, later euhemerized as Tatituin, perhaps herself at one time regarded as the corn-goddess evolved from an earlier corn-spirit. In other parts of Ireland, as at Carman in Leinster, the festival was associated with the death of a woman Carman who had evil designs upon the corn of the Tanatha Dé Danann, but a variant made it commemoratory of Lug mac Eithenn (RCD x. [1894] 313 ff). This may suggest different conceptions of the personality of the corn-divinity, now a goddess, now a god, the one having female, the other male representation. It may be seen why the male victim may have been regarded as a king, on the analogy of the representative of the spirit of vegetation. When the festival, as at Tatituin, was further associated with Lug, it would be easy to...
connect the goddess Tailtin with the god, in the relation of foster-mother, as the euhemerized myth sets forth. The association of Lug, probably a sun god, with the festival of Tailtin in celebration of victory of the powers of light and growth over those of blight, as evidenced by a plentiful harvest. The people rejoiced in presence of the victorious god. But Lug, like a sun-god, was also the warrior spirit, and the magical cult of the waters was also in evidence. Cattle were swum through a pool or river so that they might live through the year, and in recent times in the Isle of Skye, through the waters of the island, a sacred well (Vallancey, quoted by Hazlitt, ii. 340; Rhys, Celtic Heathendon, London, 1888, p. 422). Besides this agricultural aspect, the local assemblies at Lussnasad had also their social side. These assemblies were fairs at which horse-races took place—Lug being the introducer of such races (Laebrar Laingnech, 10, 2)—while marriages were also arranged. Many may have been more inclined to enter upon wedlock when their garters promised to be full. But it is also possible that behind this lies an earlier promiscuous love-making as a result of the frenzied festival gladness, or with the object of securing a rich harvest of the season. Possibly, too, the rite of the divine marriage was also a part of the festival proceedings. At all events there are hints that it was connected with Lug. Though we may explain this as his 'wedding the kingship' on the occasion of his being made king after the battle of Magtured (Rhys, 414)—a phrase which may be an allegorical method of stating what was ritually enacted, viz., the wedding of the divine king, the incarnation of Lug, who received the kingdom by virtue of his marriage with a daughter of the royal house, in accordance with the laws of female succession or the matriarchate. In another text this allegorical interpretation is more plainly seen, for here the kingdom or sovereignty of Erin belonged to a male though mysterious queen who is found in a magic palace with Lug (O'Curry, MS Mot., Dublin, 1869, p. 618). For this reason Rhys explains saosad, not as Cormac = 'festival,' but as 'a wedding,' the word perhaps having the same origin as Latin nuptius (op. cit. 415). The proper observance of Lugnasadh, like that of the festival at Carman, held on the same day, though not apparently in connexion with Lug, produced plenty of milk, grain, and fruit, as well as general prosperity and freedom from pestilence. It was mainly followed, with any neglect of it. We cannot doubt that the seed of the last sheaf, representative of the corn-spirit, was preserved to mix with the next year's grain, in order to increase its fertility by contact with the divine cereal, while the cattle were made to eat straw for the same purpose; or that the human incarnation of the corn-spirit was slain, and his blood or flesh mixed with the grain for the same purpose, or eaten by the worshippers. To neglect this rite would cause a less bountiful harvest, and from this thought may have sprung the wider ideas about observance or neglect of the festival itself. Though Tailtin is mentioned as the place where 'all Ireland' met to celebrate the feast, this is certainly an exaggerated way of describing many such central gatherings, since we know of others held, e.g., at Carman and Cruachan. Probably the greater part of the festival was connected with Lugus (Lyonns), may be similarly explained. In this case the gathering on August 1, originally in honour of Lugus and of the same nature as the instaurated Carman festival, was continued in honour of Augustus, and was called, after his name, the Feast of Augustus. This still survives in Welsh Gwyl Aest, the August, or, more probably, the August festival, proving that the romanization of the native feast had spread to Britain. Similarly the christianizing of the pagan offering of first-fruits has issued in the Lannæs customs. But relics of the ancient rites still mark the modern observance of the day.

6. These greater periodic Celtic festivals may be regarded as the final development of village rituals having for fertility at one time or another during the year, which were more or less liable to variation. The festivals concerned the anthropomorphic divinities of growth, and were apparently held as central gatherings. But side by side with them the older village rituals have been conserved. For example, the folk associated the latter with such anthropomorphic divinities is unknown, but they may simply have concerned themselves with the cult of the older spirits of fertility, of vegetation, of the corn. In any case, no strict line can be drawn between the festivals and the village rituals. Their central purpose was the same, though the festivals may have extended their scope; and we know of the ritual of the festivals constantly recalls that of, popular survivals of the village cults. The ruder aspects of such rituals have been held to be pre-Celtic in origin (Gomme, Ethnology in Foklere, London, 1889), but recent discoveries prove that these peoples had such cults cannot be doubted, but nothing goes to show that Celtic institutions had emerged out of a savage past, that much in 1861, Lugus, and Lugus as the ritual of the node, is shown, and that, if they accepted aboriginal cults, it was only because such cults were already familiar to themselves.

FESTIVALS AND FASTS (Chinese).—The Chinese work Ts'ing-Kwei, 'Regulations of the Priesthood,' contains instructions for the observance of all festivals and fasts throughout the year. They are (Jan. 1912) as follows:
1. National.—(1) The Emperor's birthday. The festival commences three days before and continues for three days after. It is called Sheng-t'ien, the sacred festival. (2) The Empress's birthday. (3) The day of the new moon of April. (4) Four monthly feasts—at the new, and full moon, the 8th, and the 23rd days of the month. They are called Kin-ming si-chet, 'the four feasts illustriously decreed.' (5) Anniversaries of Emperors' deaths, of the present dynasty only.
2. Celestial beings.—(1) Day of worshipping Devas. The authority for the observance rests on Kin-Kweng-ming-king, 'the bright sutra of golden light.' (2) Eclipses of sun and moon, the celestial beings being addressed, in the services, as Bodhisattva (q.v.), and the power of Buddha evoked to deliver them. (3) Sacrifice to the moon on the 5th day of the 4th month, being the moon's birthday. (4) Prayer for fine weather, to various Bodhisattvas. (5) Prayer to Wei-to, protector of the Buddhist religion. If supplies at the monasteries fail, Wei-to is appealed to to replenish them. (6) Birthday of Weng-ming-king, 'towards the end of the 5th month, though the 24th day of the 6th month is the date in the national annals. (7) Birthdays of the divine protectors of monasteries: (a) Hwa-kweng, on the 28th day of the 9th month; (b) Lung-weng, 'dragon-king'; (c) Kwan-ti, 'god of earth.' That the 24th day of the 5th month, though the 24th day of the 6th month is the date in the national annals. (8) Birthdays of the kitchen-god, on the 24th day of the 6th month, the 3rd of the 8th, and the 24th of the 12th.
3. Buddhas and Bodhisattvas.—(1) Birthday of Mi-hi Fo (Maitreya Buddha), 1st day of 1st month. (2) Anniversary of Sakyamuni Buddha, 15th day of 2nd month. (3) Birthday of Kwan-shi yin pu-sa, or Avalokitesvara (q.v.), 19th day of 2nd month. (4) Birthday of P'ah-hien pu-sa,' or Samantabhadra (q.v.) Buddha of the northern Buddhism, 21st day of 2nd month. (5) Birthday of the female Buddha, Chum-ti, 6th day of the 3rd month. (6) Birthday of W'en-shen pu-sa,' or Manjusri Bodhisattva, 4th day of the 4th month. (7) Birthday of T'shui-chi pu-sa', 1st day of the 5th month. (8) Birthday of 'Ta-shi-chi pu-sa', 1st day of the 7th month. This Bodhisattva, with Kwan-yin and Amitabha, are the three sages of the West. (9) Birthday of Ts'ang-tsan pu-sa, 30th day of the 7th month. (10) Birthday of Yoh Fo (the Buddha who instructs in healing), or Bhaisajyaguru Buddha, 30th day of the 9th month. (11) Birthday of O-mi-to fo, or Amida, Amitabha Buddha, 17th day of the 11th month. (12) Anniversary of elevation of Sakyamuni to the rank of Buddha, 8th day of 12th month.

4. Characters in Chinese Buddhist history.—(1) Birth of Huai-yen, 16th day of 1st month to the Death of Huai-yen, a founder of the Tsing-tu school, 6th day of 8th month. (3) Death of Tausien, a founder of the discipline school, 3rd day of 10th month. (4) Anniversary of death of Bodhisattva, 3rd day of 10th month. (5) Death of Ilien-shen, founder of the school bearing his name, 14th day of 11th month. (6) Death of Chi-K'ai, founder of the Tien-tu school, 24th day of 11th month.

5. Supplemental anniversaries.—(1) First day of the year, special worship. (2) End of winter, Kia-tung, 15th day of 1st month. (3) Birthday of Sakra, 9th day of 1st month. (4) Birthday of Yowang pu-sa, medical king and Bodhisattva, 15th day of the 4th month. (5) Commencement of summer, 16th day of 4th month. (6) Yul'jan-p'en, ceremony for feeding hungry ghosts, 15th day of 7th month. (7) End of summer, 16th day of 7th month. (8) Birthday of the Bodhisattva Lingshu, or 'Dragon-tree,' 25th day of the 7th month. (9) Birthday of the ancient Buddha Jan-teng,' or 'Light Lamp' (Tagungka Buddha), Chien-dao disciple, in a former element, Sakyamuni, 22nd day of 8th month. (10) Commencement of winter (L-tung), 15th day of 10th month. (11) Birthday of the Bodhisattva Hwa-yen, 29th day of the 12th month. (12) End of winter, 16th day of 12th month. In this popular calendar, the Tsing-Kuei, no mention is made of anything astronomical. The Buddhists have arranged their calendar of festivals and fasts to suit the Chinese months (see Calendar [Chinese]).

FESTIVALS AND FASTS (Christian).—

1. Days of weekly observance.—The week of seven days was taken over by Christians from the Jewish Church with a change in the sacred day—the first, the day hallowed by Christ’s resurrection, occupying the place of the seventh.

(a) The observance of the first day of the week, as the day when Christians met together specially for ‘the breaking of the bread,’ is already noted in the NT (Jn 20 9.23, Ac 20 7, 1 Co 16 16). In the Epistle of Barnabas (end of 1st cent.) the words [1] Eddius, Chinese Buddhist, London, 1855, pp. 206, 212. occurr (ch. 15): ‘We keep the eighth day for rejoicing, in which also Jesus rose from the dead.’ The Didache (ch. 8) refers to this custom and speaks of the Easter vespers (ch. 14): ‘On the Lord’s own day (sabbato after the resurrection) gather yourselves together and break bread and give thanks.’ Ignatius in his Ep. to the Magnesians (ch. 5), and Irenaeus (Adv. haer. 1.3.6), speaks of a day called ‘the Passover’ which had been converted from Judaism as ‘no longer observing Sabbaths, but fashioning their lives after the Lord’s Day, on which our life (he says) also rose through Him. The latter passages do not fit the Easterntide. In the same sense the words ‘the day of the passover’ (Ch. 10) of Deut. 16 are used, (2) By the Pali calendar; to be noted are July 7, Sundays and Fridays, which were observed by Christians as half-fasts—senejigunia (Tert. de Jejun. 15), so called because they were not prolonged beyond the ninth hour, i.e. the middle of the afternoon. They arc mentioned in the Didache (ch. 8); ‘Let not your fasts be with the hypocrites, for they fast on the second and fifth day of the week, but ye shall fast on the fourth day and on the Preparation’ (repeasreev, see Matt. 9 15). The feast of the passover is referred to in Lk 11 7. In the Shepherd of Hermes (1st half of 2nd cent.) (Simil. v. 1) the author speaks of himself as fasting and holding a ‘station’ with this word, which is explained by the Tertullian (de Orat. 19) as a military term implying that persons were then specially on garrison, is his name for the two weekly fasts (de Jejun. 2 and 14). Clem. Alex. Strom. vii. (P.G. ix. 564) also mentions these fasts, but without using the word ‘station.’ The fasts of Wednesday and Friday are still continued in the East; in the West, Friday alone, as a rule, is so observed. These days were also marked by assemblies for worship (synagogues). In Africa at the end of the 2nd cent. the Episcopast was celebrated as on Sundays (Tert. de Orat. 19); and this was the also the case in Jerusalem, except during Lent, in the 4th cent. (Eucharia, Peregrin. iv. 8) but at Alexandria (Socrates, Hev. v. 22) and at Rome (Innocent I, Ep. ad Decent. 4 [PL xx. 556]) at this latter date the service was non-liturgical.

(c) There was a tendency at first, as might be expected, among the Jews in Christian practice, to continue the observance of Saturday (the Sabbath); but this practice came to be regarded as a mark of Judaizing (Col 2 16). It is not observed again of any importance, except in certain places. We think, indeed, that in the East had become a day of worship, generally eucharistic, and bore a festal character, fasting being forbidden on it, except on Easter Even (Conne. Laod. 16 and 49 [Manit. ii. 567, 571]; Apest. Const. v. 14, 20, viii. 23 [ed. Funk]; Basil. Ep. 98 [PG xxxii. 483]). In the West, on the contrary, except at Milan, Saturday became a day of fasting and was non-liturgical (Ang. Ep. xxxvi., PL v. 304, 306). Even the Conne. of Elvira (524), canon 23 and 26 [Manit. ii. 9, 10].

2. Lent and Easter.—Our Lord’s death and resurrection took place about the time of the Passover. It was inevitable, therefore, that the Apostles, who were Hebrews, and their converts, who at the first were of the same race, should attach a new Christian significance to the ancient festival. There seems to an intuition of this in 1 Co. The letter was written after a winter, yet before
FESTIVALS AND FASTS (Christian)

Pentecost (16th-9th), therefore about the Passover season; and in it (5th) St. Paul speaks of Christ as our 'Pascha' (hence Paschal victim) which hath happened. It is at all events of the early church dispute about the time of its celebration that we have the first historical notice of the Christian Pascha. Polycrates, Bishop of Ephesus, and Irenæus, Bishop of Lyons, in their letters to Victor of Rome (last decade of 2nd cent.) trace the Quarto-deciman custom of proconsular Asia back to Poly carp (τ 155), who claimed for it the authority of St. John. The custom of Rome is traced by Tertullian to Bishop Xystus (c. 190), further than whom apparently the tradition did not go (Euseb. HE v. 24).

3. Lent.—(a) Easter never stood alone; it came as a day of rejoicing after a fast which commemorated the death and burial of Christ. The word 'Pascha' for the first three centuries signified not Easter, but Good Friday (Tert. adv. Jud. 10; de Bapt. 19); and this meaning was supported by a singular notion that it was the 'Thursday' (Iren. iv. 10 [PG vii. 1000]; Lact. iv. 26 [PL vi. 531]). The fast, to which at first more importance was attached than to the festival which followed, was called the 'lent' or 'lenten' period. In his letter to Victor (mentioned above, 2.), alludes to different usages as prevailing in his time, and long before (πὸ τὸ πρότερον). 'Some think,' he writes, 'they ought to fast one day, others two; others even more; others reckon the period as 40 hours day and night.' The 40 hours may be illustrated by passages from Tertullian (de Jejun. 2, 13 [PL li. 1006, 1029]), in which he speaks of the custom of fasting during the days 'when the bridegroom is taken away' (Mt 9), i.e. the period from Good Friday evening to Easter morning. In Alexandria, in the middle of the 3rd cent., we are informed that some lasted during the whole week before Easter Day, others for shorter periods, and that the fasting varied in degree of rigour (Dion. Alex. Letter to Basiliades, in Feltoe, Dionysius of Alexandria, Cambridge, 1904, p. 101 f.).

(b) The mention of a Lent of forty days (Quadragesima, τετταρακοστη) first occurs in the fifth canon of the Council of Nicea (325) (Mansi, ii. 689); and, the reference being only a note of time (τετταρακοστη), a well-established custom is implied. The period from henceforth is frequently mentioned as a time of preparation of catechumens for baptism, for the discipline of penitents, and generally of spiritual retreat for Christians. Some celebrate it at a different time; but the practice varied in different countries. See, further,FASTING (Christian), II. 2.

4. Holy Week (Major or sancta Hebdomada, ἡ ἑβδομάδα μετὰ τοῦ σαρώματος).—(a) Palm Sunday (Dominica in Palms, ἡ κυριακὴ τῶν βασιλῶν). The procession of palm-bearers in memory of Christ's triumphal entry into Jerusalem six days before His passion, from which the title of this Sunday is derived, took its origin in Jerusalem. Etheria (Peregrinatio) relates how the whole Christian community there went on the evening of this day to the Mount of Olives, where a religious service was held, and there lifted up hymns to Christ. In the branches of palm or olive and singing, 'Blessed is he that cometh in the name of the Lord.' The ceremony was not introduced into the West until much later. Isidore of Seville (early in 7th cent.) is acquainted with the name 'Dies pulmarum,' but "The Peregrinatio Etheriae is a MS discovered by I. F. Giesuanni in 1716; it is a record of a pilgrimage to Jerusalem, addressed by a Spanish nun to her sisters in religion. Her name was at first wrongly supposed to be Etheria (as Etheria, Christian Worship, p. 480). An ed. of the Peregrinatio, with an Eng. tr. by Bishop Bonner, was published, Christian Worship, p. 480."

(b) Easter Monday (Feria v. in cena Domini, ἡ θάνατος καὶ μεταμόρφωσις τοῦ Χριστοῦ).—The anniversary of our Lord's death is the only day in the year when by general custom the Easter is not celebrated—a custom which was formerly extended to Easter Eve (Innocent i., Ep. ad Decent. 4 [PL xx. 550]), as it is still in the Eastern Church. The first part of the service for Good Friday in the Roman Missal—consisting of lessons from Holy Scripture and Collects, followed by a series of intercessory prayers—probably preserves the type of worship originally used in the West on non-liturgical days (Duchesne, Christian Worship, 172, 248). At a later date (7th or 8th century) (PL xxxiii. 764), the 25th March was the day of Christ's death, and the 25th of His resurrection. The festival seems to have been generally observed in Gaul, as we have fragments of sermons preached on the occasion by Gregory the Great (sermon 321), and it is mentioned by Eulogius of Noyon (c. 610-669) (hom. 10 [PL xxxvii. 229]).

See FLEET-WASHING.

(c) Good Friday (Feria vi. in Passacages, ἡ θάνατος καὶ μεταμόρφωσις τοῦ Χριστοῦ or ἡ ἀναστάσις τοῦ σώματος).—The anniversary of our Lord's death is the only day in the year when by general custom the Easter is not celebrated—a custom which was formerly extended to Easter Eve (Innocent i., Ep. ad Decent. 4 [PL xx. 550]), as it is still in the Eastern Church. The first part of the service for Good Friday in the Roman Missal—consisting of lessons from Holy Scripture and Collects, followed by a series of intercessory prayers—probably preserves the type of worship originally used in the West on non-liturgical days (Duchesne, Christian Worship, 172, 248). At a later date (7th or 8th century) (PL xxxiii. 764), the 25th March was the day of Christ's death, and the 25th of His resurrection. The festival seems to have been generally observed in Gaul, as we have fragments of sermons preached on the occasion by Gregory the Great (sermon 321), and it is mentioned by Eulogius of Noyon (c. 610-669) (hom. 10 [PL xxxvii. 229]).
FESTIVALS AND FASTS (Christian)

cent.) this service was elaborated by the introduction of the ceremonies of the Adoration of the Cross and the Mass of the Passion celebrating the Lord's passion. These ceremonies are the origins of the Gelasian Sacramentary and in the Ordines Romani dating from the 9th cent. (ed. Mabillon in Monumenta Gregoriana, reprinted PL, LXXVIII.,). It is omitted in the Gregorian Sacramentary, probably because it was never sung. The same day at Rome was prayed by all the faithful as said by the Pope (Duchesne, 248 n.). It came to the West from Jerusalem, where on this day, in the 4th cent., the true cross, discovered, as alleged, by Helena the mother of Constantine, was laid out to be kissed by the faithful (Eutheria, Peregrinatio). The Mass of the Passion is the communion of the priest, and formerly of the people also, with the Eucharist consecrated on the previous day. The rite was borrowed from the East, where, on days on which the Eucharist was not permitted to be celebrated, the Liturgy of the Paschal, ἡ ἑορτὴ ἡ πασχαλικὴ ἡμέρα, was appointed in its place. The rule in relation to Lent is laid down by the Council of Trullan (692), can. 52 (Mansi, ix. 968) (see Nead, Gen. Intr. 704 ff.; Alliatis, 1531 ff.).

The Devotion of the Three Hours, so popular in modern times in the Roman and Anglican Communion, and probably introduced into the thirteenth century by Robert of Jumieges, was adopted in the fourteenth century. This, the chief festival of the Christian Church, was at first distinguished by any special rite from other Sundays. So late as the 6th cent., it was ordained by Pope Vigilius (537-555) that the Mass on Easter was peculiar to the Church of England. Elsewhere in the West the day is popularly known as ‘Holy Friday.’

(a) Easter Even (Sabbatum sanctum, τῆς μνήμης ή τῆς μνήμης του φεστιβαλ).—This is the only Saturday in the year which is kept as a fast in the Eastern Church. For this day no services were appointed in the Latin rite. The office of the Vigil of Easter, held before the dawn of Easter Day, was in the 7th cent. (see Gelasian Sacramentary) transferred to the afternoon of Saturday, and later on to the morning. Thus the English name is in accord with the ritual aspect of the day. The vigil service proper—consisting of a long series of lessons, chants, and prayers—was followed by the blessing of the font, and the baptism and confirmation of the catechumens. This function was concluded by the Mass, which originally was celebrated at the first signs of dawn. Two other ceremonies were pre-

fixed later on to the vigil service—the blessing of the new fire and of the Paschal candle. The new fire probably took rise from a pagan custom to which its religious significance was attached. The first notice we have of it is connected with Ireland in the legendary history of St. Patrick (Stokes, Tripartite Life of St. Patrick, 1587, p. 278). The custom seems to have been carried to the Continent by Irish missionaries. They may have recognized that it was unknown at Rome in the 8th century (Pope Zacharias [741-752], Ep. 13 ad Bonifacium [PL, LXXVIII. 851]). The fire, which, according to the rubric, must be produced from flint and steel, is used to kindle the lights throughout the church. In the East, the holy fire is peculiar to the Holy Sepulcher at Jerusalem, and cannot be traced farther back than the 9th century, though it has been conjectured that it was introduced by the Latin monks stationed there by Charlemagne, 799-811 (Wordsworth, Ministry of Grace, London, 1893, p. 384 ff., and APP, E, p. 426 ff.). The practice, ‘Holy Fire’ (de la Feuery), was adopted by the Church in the custom of the Gallican rite, and perhaps in Africa. It seems to be mentioned by St. Augustine († 430), who quotes verses which he has taken from the Christian Bersit (de in Dei, xx. 22 [PL, LXXVI. 467]). Two forms of blessing are found in the Opuscula (9, 10) of Emmodius of Pavia (521) (PL, LXXVI. 288, 289). Pope Gregory I. († 594) writes of the proces quae super Cererini in

Ravennati cicitate dili solent’ (Ep. x, 33 [PL, LXXVII. 1146]). The 4th Council of Toledo (633) refers (can. 22) to Easter Eve Mass celebrated by the Greek rite as said by the Pope (Duchesne, 248 n.). It is also in the Gelasian, but obviously inserted there (Wilson, xxvii.). Although not adopted at Rome until much later, the Liber Pontificalis (ed. Duchesne, I, 253) states that it was inserted in the churches of the suburbanian churches as early as the time of Pope Zosimus († 418). The service was read from rolls exquisitely written and illuminated, many of which dating from the 10th and the 12th centuries, are still preserved. They are called ‘exultates,’ from the first words, ‘Exultet iam angelica turba cœliorum!’ At the blessing of the font, the Paschal candle is plunged into the water during a prayer for the desecration of the Holy Spirit. It is lighted at every service from Easter to Pentecost.

5. Easter.—(a) Easter Day (Dominica Resurrectionis, Πάσχα; Εορτή Ρασκά).—This, the chief festival of the Christian Church, was not at first distinguished by any special rite from other Sundays. So late as the 6th cent., it was ordained by Pope Vigilius (537-555) that the Mass on Easter was peculiar to the Church of England. Elsewhere in the West the day is only added by the admission of suitable Scripture lessons (Ep. ad Euthar, 5 [Mansi, ix. 32]). At Rome on this day the custom of communion in both kinds was retained until near the end of the 14th century (Ordo Rom. xvi. [of Amelius, c. 1578-1398] ch. 85, ed. Mabillon, Missa It. ii. 505 ff.). A Western medieval rite, which lasted up to the 12th cent., was the blessing of the flesh of a Paschal lamb (Ordo Rom. xi. 1140, Mabillon, p. 142; Bona, Etemon Lit. II. II, 1185 ff.). A form of blessing is given in the Missal of Robert of Jumieges, 11th cent., p. 103 (H. Bradshaw Soc.). Another rite, still finding place in the Latin Service-book, formed a conclusion to the ritual of Good Friday. On that day, after the Adoration of the Cross, the cross itself with the reserved Sacrament was placed in the ‘sepulcher,’ a recess generally situated on the north side of the sanctuary. Before Matins on Easter Day the Host was ceremonially taken from the sepulcher and laid upon the altar, while the antiphon, ‘Christ rising from the dead, Alleluia!’ was sung. This was the source of the special anthems prefixed to the proper Psalms for the day in the Eng. Prayer Book. The English name ‘Easter’ is probably derived from Eastre, an Anglo-Saxon goddess, to whom special sacrifices were offered at the beginning of spring (Beede, de Temp. Jat. xvi., Op. ed. Giles, London, 1843, vi. 179).

(b) The Sunday after Easter, with which the Paschal season ends, was formerly called simply Octava Pascha, or Pascha clausum; but later it received the name Dominica in albis (albi deponenda), because on this day the newly-baptized laid aside their white baptismal robes. In the Greek Church it is styled Κ. τετελεσμένον γενικώς έκ του γενικώς. The latter title referring to the Gospel for the day. In England it is traditionally called ‘Low Sunday,’ for which the unadorned altars are ‘Laudes,’ the first word in the sequence, or ‘Close Sunday’ (Proctor-Frere, New Hist. of the Book of Common Prayer, London, 1893, p. 543 n.).

6. Ascension Day (Dias, de apol. Κ. τετελεσμένον γενικώς έκ του γενικώς).—The day of our Lord’s ascension was commemorated at Jerusalem in the time of Ethereis, 380 (Peregrin.). It is called by her ‘the 40th day after Easter, that is, the fifth feria (Thursday).’
In *Apoc. Const.* v. 20 (c. 375) it is directed to be kept as a festival. We have sermons preached on this day by Gregory of Nyssa († 395) (PG xlvi. 608 ff., 614 ff.), Athanasius (c. 372), and Chrysostom (c. 405) (PG 1. 441-452), who speaks of it as an ancient and universal feast. There is Western testimony of about the same date. Five Ascension sermons of St. Augustine († 430) (PL xxxviii. 1300 ff.) have come down to us. In the second he says: *This day is celebrated throughout the whole world.*

7. The Transfiguration of our Lord. (Transfiguration of our Lord, *Día Μεταμόρφωσις*), Aug. 6. —This invariable feast may most fittingly be mentioned here among other festivals of our Lord. It was first observed in the East, being noted in the Coptic Calendar (ed. Selden, *de Synedrìa*, iii. cap. 15, p. 409) and in the *Menology of Constantine* (8th cent.; i. 102, ed. Morelli). In the West the Transfiguration formed the subject of the Gospel for the Lent Ember Saturday (St. Leo, *Serm.* 81 (PG lv. 293)); but it was not uniformly commemorated. Probably the Greek festival on Aug. 6 was introduced by the Crusaders; but it did not come into general observance until 1457, when it was introduced in the calendar of the Eastern Church (Baillet, ii. 84). It is only a Black-letter day in the Eng. Prayer Book; but in 1892 the Church in the United States assigned to it a Collect, Epistle, and Gospel, and proper lessons.

9. Pentecost. —By early Christian writers the name *Pentecost* (sometimes *Quinquagesima*) in Latin authors) was generally given to the whole space of fifty days after Easter. The period was regarded as a continuous festival during which no fast was permitted, and prayer was said standing (Tert. de Idol. 14, de Bapt. 19, de Cor. 3; Basil, de Spir. Sanc. 27 (PG xxix. 192)). There is a survival of this use of the word in the Greek Liturgy, where the name *Mesopentecost* is given to a festival of eight days which begins on the Wednesday before the 5th Sunday after Easter. But even so early as Origen (c. Cels. viii. 22 (PG xi. 1540)) and Tertullian (de Cor. 3) we find the word applied also in the restricted sense to the day which closed the period. The Council of Elvira (305) insists upon the duty of celebrating the Whit festival (can. 43 (Mansi, ii. 19)), and subsequently this use of the word prevailed. The word *Pentecost* (Peregrina.) gives this name to the festival, and describes the ceremonial observed at Jerusalem (end of 4th cent.). The Eng. term *White Sunday,* according to the most probable derivation, is *White Sunday,* so termed from the white robes worn by those lately baptized (Procter-Frere, p. 546, n. 4, quoting Skeat), the eve of Pentecost being in the West one of the chief seasons for baptism (Bingham, *Origines*, xi. vi. 7).

10. Trinity Sunday. —The Sunday after Whit Sunday at first known simply as the Sunday of the octave of Pentecost (Diaecium Sacram. and appendix to Gregorian). Its observance as the main festival of the Trinity was of late and gradual introduction. As the day was *dominica vacans* without any distinctive office of its own, the custom arose in some places of using on it the Mass of the Trinity drawn up by Stephen, Bishop of Liége (903-920). This practice was discouraged by Pope Alexander ii. († 1073), on the ground that any special festival of the Trinity was superfluous, as every day in the year was consecrated to the honour of the Trinity in Unity (*Micrology*, 59 and 60 (PL cl. 1019)). But the observance of the day grew in popularity in England, Germany, and France, and was sanctioned by several diocesan synods, as, e.g., that of Arles (1260) (Mansi, xxiii. 1006). Finally, the festival was appointed to be observed generally in England, apparently by Pope Gregory xiv in 1570, and by Pius v in 1566. According to the Roman use, the succeeding Sundays until Advent still continued to be reckoned as after Pentecost. The usage of numbering them from Trinity was adopted in England and for a time in Germany. It is now peculiar to the English Church. In the Greek calendar the day is called *'All Saints’ Sunday*, Ἐκκλησίας τῶν ἀγίων Πατρών.

11. Corpus Christi. —This festival, the latest in the year of the movable feasts of the Reformation, is held on the Thursday after Trinity Sunday. The commemoration of the Eucharist on Maundy Thursday, the day of its institution, was necessarily tinged with the sadness of Holy Week. It also became overshadowed by the consecration of the sacred oils and other ceremonies which had subsequently been appointed for the same day. Thus there arose in the Middle Ages a desire for a festival in honour of the Eucharist at another time. The celebration of Corpus Christi was first kept in 1247, in the diocese of Liége, by direction of Bishop Robert de Thorote, who was influenced, it is said, by a vision which he experienced on a visit to the church at Rheims, which was instituted by a bull of Pope Urban iv. in 1244, which was confirmed by Clement v. in 1311, and by John xxii. in 1316 (Baillet, iv. 107 ff.). The observance of Corpus Christi was discontinued in the Church of England at the Reformation.

13. Christmas. —See sep. art. under that title.

14. The festivals after Christmas. —With the festival of the Nativity of Christ were associated, at least from the 4th cent., commemorations of eminent saints of the NT. Gregory of Nyssa, in his oration at the funeral of his brother Basil, states that after Christmas and before 1st Jan., the date of Basil’s death (379), the Church kept the festivals of Stephen, Peter, James, John, and Paul (PG xlv. 789); and in an earlier panegyric on St. Stephen he explains the principle on which these names were selected, namely, that it seemed fitting that the praise of the proto-martyr should be followed by a commemoration of Apostles (ib. xlvii. 729). This statement of Gregory is confirmed by the Syrian Calendar of the same date and country, which contains the following festivals: Dec. 26, St. Stephen; Dec. 27, SS. John and James; Dec. 28, SS. Paul and Peter. The Armenians do not observe Christmas on Dec. 25, but Dec. 26, 27, 28 they honour the same saints, with the difference that in their order the feast of SS. Peter and Paul precedes that of SS. James and John (Niles, i. 373, ii. 829). The Nestorians in their calendar follow the same general principle. Their custom is to commemorate saints on a Friday; and on the Fridays following Christmas they observe the feasts of St. James the Lord’s brother, St. Mary, St. John Baptist, SS. Peter and Paul, the four Evangelists, and St. Stephen (Maclean, *East Syrian Daily Opuscles*, p. 265 f.). A similar series of holy days following Christmas is found in the West, with the substitution of the Holy Innocents (Rome) or Holy Infants (Paris) on Dec. 26 for SS. Peter and Paul, who in these countries were already commemorated on June 29. The festivals are thus recorded in the Calendar of Cartagine (c. 565): *Dec. 26, St. Stephanus primi martyris; Dec. 27, St. Johannis Baptistae et Jacobi Apostoli.*

1 *In Apoc. Const.* (c. 375) viii. 33, among other festivals and times on which slaves are to rest from work, St. Stephen’s day is mentioned, but the date is not given.

2 On Dec. 25 they commemorate SS. David and James as relatives of our Lord—*Davidum ac Hierovolam* respectively.

3 Baptize*tae* occasionally a transliteration of *βαπτιστα* and *βαπτιστής*, as St. John Baptist is commemorated in the same calendar on June 24.
FESTIVALS AND FASTS (Christian)

Dec. 28, SS. Infants. The Gallican liturgies agree with the African and Syrian calendars in celebrating both the sons of Zebedee on Dec. 27; but in the Roman liturgy St. John the Baptist was retained, and St. James was subsequently commemorated on July 25. At Constantinople the Roman date, June 29, for SS. Peter and Paul was observed in the 6th cent. (see below, 22 (c)). Holy Innocents' day also, under the title of Holy Infants, (των ἁγίων νεωτέρων), was adopted later on, but on the 29th instead of the 28th December.

15. The Circumcision.—The earliest notices of the Christian observance of Jan. 1 represent it as a fast kept with the object of counteracting a riotous pagan festival held at this time of the year (St. Augustine, Serm. 198 (PL xxxviii. 1025)). The second Council of Tours (567) (Mansi, ix. 796) enjoins (can. 17) that three days at the beginning of January shall be an exception to the rule that all the days between Christmas and Epiphany shall be treated as festivals. In the Gelasian and Gregorian Sacramentaries the 16th of January was called the Octave of Christmas (Octavas Domini), and the service bears the character of that festival, with a special reference in the proper Preface to the Virgin Mother. The name 'Circumcision' as given to the day was first adopted by the Council of Tours mentioned above. It appears also in the Hieron. Martyr. (c. 595) and in the Gallican liturgical books of the 7th and 8th centuries, which treat the day as a festival. Byzantine calendars of the 8th and 9th centuries connect Jan. 1 with the Circumcision (Menology of Constantinople, i. 83, ed. Morelli, and Calendar of Naples [Mai, Novae Collect. Script. vet., Rome, 1821, v. 568]). The Armenian Church, which observes the Circumcision of the Lord with the Greek on Jan. 6 (the Epiphany), naturally observes the Circumcision on Jan. 13 (Nîles, i. 374).

16. Epiphany.—See separate article.

17. Festivals of the Blessed Virgin.—(a) It has been noted above (14) that the Nestorians hold a festival of St. Mary on the second Friday after Christmas. A similar feast is found in the Coptic Calendar on Jan. 16 (Selden, iii. cap. 15, p. 260). (b) In the West the holding of a festival in honour of the Virgin Mother was at first peculiar to countries of the Gallican rite. Gregory of Tours (6th cent.) states that her festival was held in Gaul in the middle of January. In the Liber Annalis or PL lix. 713). In the Hieron. Martyr. (c. 595) the date Jan. 18, the same as that of the Gallican St. Peter's Châl (see 22 (b), below), is assigned to it. In C. of Bonn (1818 n.), to Rituale Romanum, Gallican books the precise date is not given, but it is placed early in the year. In Spain the 10th Council of Toledo (665), ch. 1, fixed Dec. 18 as the day of the festival, with the note "that it could not fittingly be celebrated on the most suitable day, viz., that of the Incarnation, because it sometimes occurred during Lent or the Paschal season, when, according to ancient rule, festivals of saints might not be held on the same day" (341). At Rome the commemoration of the B.V.M. was that which was superadded to the service of Jan. 1 (see above, 15) until the 7th cent., when four festivals in her honour were introduced from Constantinople. All are mentioned at length in C. of Bonn, but the title '1. Feria post Epiphanias, 665-701," and find place in the Gelasian Sacramentary.

(c) The Purification (Purificationis) B.V.M., or Ursula, January 2, Feria II. (Ives) (I. n. Goggin), Feb. 2.—The earliest of these four festivals was the 'Hypapante,' this name, which always continued in the East and was long retained in the West—sometimes in the form 'Ocurrence of the Most Holy Virgin,' (τις Οκουρείσιν της Σοφίας της Ανωτάτης) of Constance J. C.—refers to the meeting between the infant Saviour and Simeon and Anna. Its later name of 'Purificatio' appears first in the Gelasian Sacra-

1 When the feast was introduced into the West and the Roman Calendar, the Nativity being on the 24th, the Epiphany on the 25th, the Holy Infants on the 29th, and the Circumcision on the 1st, the Conception naturally was dated vi. Idus Sept., the Conception naturally was dated vi. Idus Dec.
is known as ἡ Ἐλληνική τῆς ἁγίας καὶ θεοφρονετή τῆς Ἐυβοεἴας— the word 'conception' in its Greek equivalent being understood in the East in an active sense. Such a celebration, of which the name of John of Euboea (middle of 8th cent.) (PG xvi. 1499), and finds place in the Menology of Constantinople (ed. Morelli, p. 80). Through the Greek settlements in lower Italy, its name passed to the Calendar of Naples (96 cent., ed. Mai, v. 65) is 'Conceptio S. Anne Marie vir.'—it passed into the Western Church, where it appears first in English Calendars and Service-books of the end of the 10th and beginning of the 11th century (Gallican Calendar, Breviary, Psalter, Gallican Calendar, Missal, and Breviary until 1477 (by Sixtus IV.). In 1584 it was re-named by Pius ix. the 'Immaculate Conception', due to the Immaculate Oblation in the Church. In the Anglican Calendar all these festivals are found, with the exception of the Assumption, which was omitted in the Reformation; but the Annunciation and Purification are alone ranked as Red-letter days.

18. Festivals in honour of St. John the Baptist.—
(a) Nativity (Nativitas S. Ioannis Baptistae, τοῦ Γενέθλιον τοῦ Προφήτου), June 24.—The date of this festival, suggested by Lk. 1, was placed exactly six months before Christmas; or, according to the Roman Calendar, on viii. Kal. Jul. as corresponding with viii. Kal. Jan., i.e. on the 24th instead of the 25th of January. The Festival is of Roman origin, as the Latin date intimates. It is first mentioned by St. Augustine (Serm. 287, PL xxxviii. 1501), who remarks that the Church celebrates two birthdays only—that of Christ and that of the Baptist. It appears in the ancient Calendar of Carthage (c. 500). The festival was accepted in the East at an early date. Notwithstanding the appropriate-ness of June 24 for this festival, we have evidence that in earlier times St. John's nativity was celebrated in the East and in Gaul shortly after Christmas-tide. The Armenians placed it on the first day lawful for a festival (i.e. not Wednesday or Friday) between the octave of the Epiphany (Nilos, li. 565). The Nestorian festival, which in the Bishops of Persia, probably his nativity, on the 3rd Friday after Christmas, has been noticed above (14), and in the Calendar of Tours (490) the 'Natale' appears between the Epiphany and St. Peter's (Cath. i.e. at the same time of the year. This Calendar has also the festival of June, but strangely calls it the 'Passio' of the saint.

(b) Beheading (Decollatio or Passio S. Ioan Bapt., τῆς Ἀποκτησεως τοῦ Ἴησού τοῦ Φοβόβατος), Aug. 29.—This festival was adopted in Constantinople before it reached Rome (Menology of Constantinople, ed. Morelli, ii. 222). It is found also in the Coptic Calendar, but with the date Aug. 30 (Selden, i. cap. 15, p. 376). In the West it appears first in the Gallican liturgical books, where it is undated, but follows at a longer or shorter distance after the feast of the Baptist. It is absent from the Leontine and Gregorian Sacramentaries, and its presence in the Gelasian is probably due to a Gallican interpolation.

19. The Cross.—(a) Holy Cross Day (Exaltatio crucis, η Ἀναβολή τοῦ σταυροῦ), Sept. 14. is a Palestinian festival of the 4th century. It is the anniversary of the dedication in 335 of the two churches built by Constantine at Jerusalem—the Martyrium on Golgotha, and the Anastasis over the Holy Sepulchre. The day chosen for the dedication was, according to Eutheria (Perigrinis), that of the discovery of the True Cross by the Empress Helena. Thus the festival was regarded as commemorating both events. Eutheria (end of 4th cent.) notes that the festival was continued for eight days and was attended by a large concourse of pilgrims. From Jerusalem the festival passed to Constantinople, and thence to Rome, where it is mentioned first in connexion with Pope Sergius (657—701) (Lib. Pont., ed. Duchesne, i. 374, 378). It appears in the Martyrologies of Walchester and Canterbury. The festival was suppressed after the Norman conquest, but was reintroduced, at first into Benedictine monasteries, early in the 12th century (Gasquet, Bishop, The Bonneworth Psalter), p. 43 ff.) About the same time we read of the festival in Normandy, where it became so popular that in the Middle Ages it was known as 'Festum nationis Normannicae' (Kellner, Heerdt, 533). The feast gradually made its way through Europe, but was not received into the Roman Calendar, Missal, and Breviary until 1477 (by Sixtus IV.). In 1584 it was re-named by Pius ix. the 'Immaculate Conception', due to the Immaculate Oblation in the Church. In the Anglican Calendar all these festivals are found, with the exception of the Assumption, which was omitted in the Reformation; but the Annunciation and Purification are alone ranked as Red-letter days.

20. St. Michael (Dedicatio S. Michaelis Archangeli), Sept. 29.—This, the most ancient Angel-festival, is noted in the Leontine Sacramentary (6th cent.), but on Sept. 30, as the day of the dedication of a church of the archangel in the Vic Salaria, six miles from Rome (Natalie Basilice Angeli in Salaria). A later festival of St. Michael is that of May 8, and is connected with a church on Mount Garganus in Apulia. The feast of St. Michael in the Greek Church is kept on Nov. 8, and is relative to a church in the baths of Arcadius built by Constantine (Socome, MF ii. 3; Martinoz, Ann. Eclt. p. 273). Legends of apparitions of the archangel are connected with all three sites. At the last revision of the Pr. Bk. (1662), 'and all angels' was added to 'St. Michael' in the title of the festival of Sept. 29, which had already in the Calendar prefixed to Bp. Cosin's Private Devotions (1627). The longer description is also now unknown in the Roman Church. In Bailleul, iii. 371, the festival is named 'S. Michael et tons les Anges'; the same title occurs in AS, Sept. viii. 4 ff., Antwerp, 1762. The festival of the 'Guardian Angels' (Angelorum Custodum), March 1, was first observed in Spain in the 16th cent.; and was admitted to the Roman Calendar by Paul v. in 1608. The date was subsequently changed, except in Germany and a part of Switzerland, to Oct. 2, by Clement x., in 1670. For a general account of the Angel-festivals in the West and East, see AS, Sept., and Bailleul (loc. cit.)

21. The Maccabees, Aug. 1.—This, which is the only commemoration of OT worthies in the West, was observed about universally as early as the 5th century. It is found in the early Calendars of Filocalus, Carthage, Pseudus Silvius, and Syria. It is the subject of Sermons by St. Gregory Nazianzen (Res sacr. in East and West, see AS, Sept., and Bailleul (loc. cit.). In the Roman Calendar, it now yields precedence to the feast of St. Peter ad Vincula (see below, 22 c), which is observed on the same day.
22. Festivals of Apostles.—(a) SS. Peter and Paul.—The early Eastern commemoration of these Apostles, which closely followed Christmas, has already been mentioned (see above, 14). The Roman date of the festival has always been June 29. In the Calendar of Eusebius (336), where it first appears, this date is connected with the translation of their relics to a place called 'Catacumbae,' in the consulsip of Tuscus and Bassus (238). The Calendar of Carthage is defective here, but there are clear indications that it originally contained the entry; and sermons by St. Augustine (295, 296) on the Festival show that this must have been the case (PL xxxviii. 1548, 1552). The festival occurs, but without date, in the Calendar of Tours (490) (Greg. of Tours. Hist. Franc. x. 31), and thenceforward in all Western Calendars and Martyrologies. The observance of the Western date in Constantinople is first mentioned by Theodorus Lector (HE B. 16 (PG lxxxvi. 192)). His statement is that through the influence of Festus, a Roman senator who had been sent on a political mission to the Emperor Anastasius in 491, the festival was celebrated for the first time before. It afterwards came into general observance in the East as in the West. In the Gregorian Sacramentary, in addition to the Mass for June 29, a Mass in honour of St. Paul is appended to the 50th; and this augmentation is still marked in the Roman Missal and Calendar. This ancillary festival is accounted for by the difficulty which the bishop found in celebrating Mass at the tombs of both Apostles on the same day, and the consequent postponement of one of them until the morrow (Kellner, Heortologie. 285). At the Reformation the Church of England made June 29 a festival of St. Peter only, thus confining the commemoration of St. Paul to his Conversion (Jan. 25).

(b) St. Peter's Choir (Cathedra S. Petri).—Another festival of St. Peter appears in the Calendar of Eusebius on Feb. 22 with the title 'Natale Petri de Cathedra.' From early times this has been regarded as meaning the beginning of St. Peter's episcopate; in the Calendar of Tours (490) it is styled 'Natale S. Petri Episcopus'; but recently a view has been put forward that it refers to the actual wooden chair used, as was supposed, by St. Peter, which is mentioned in a document of the time of Gregory the Great (de Rossi, Bull. d'Ann. xvi. Rom. 189). Whether ever may have been the origin of the festival, the choice of the day on which it was held was apparently prompted by a desire to offer Christians a counter-attraction to a popular pagan festival, the 'Cara Cognitio' or 'Caristia,' observed on Feb. 22 in memory of deceased relatives. The festival of St. Peter's chair soon reached Gaul. It is found in the Calendar of Polenus Silvius (448), but under the incorrect designation 'Deposito SS. Petri et Pauli.' It also appears, as we have seen, in the Calendar of Tours. The second Council of Tours (567) complains that Christians sometimes relapsed into pagan rites on this day (Mansi, ix. 803). In Gaul, however, later on, probably in order to prevent the festival taking place in Lent—an occurrence forbidden by the Council of Toledo (see 18 (b) above)—it was transferred to an earlier day, which, after various changes, finally became the 18th in the liturgical books, was fixed at Jan. 18. The two dates appear in the Hieron. Martyr., where the Gallican editor noted Jan. 18, the date familiar to him, as the Calendar of Rome, and, finding another 'Cathedra S. Petri' on Feb. 22, he explained the co-existence of the two commemorations by attributing the latter to the episcopate which tradition assigned to the Apostle at Antioch. This diversity of use as to the date of the feast continued until 1558, when, at the instance of Paul Ry., both festivals were appointed to be observed with the Hieronymian distinction (Cherubini, Bullarium Rom., Lyons, 1655, i. 822). The feast of St. Peter's Chair has never been introduced into the East.

(c) St. Peter ad Vincula, Aug. 1.—This festival, which coincides in date with that of the Maccabees (see above, 21), commemorates the dedication of the Church of St. Peter on the Esquiline, after its restoration in the time of Sixtus III. (432-440). The church, in which the Apostle was believed to be preserved, both those mentioned in Ac 12 and those of his Roman imprisonment. The feast appears first in the 8th cent., having place in the Gregorian Sacram., and in the Martyrology of Bede. The Eastern Church has a festival of St. Peter's Chains on Jan. 16 (Nilles, i. 71). In the English Calendar the festival is termed 'Lammas Day,' which, according to the most probable derivation, is 'Loaf-mass,' and refers to an Anglo-Saxon custom of offering on this day bread made from the new corn in thanksgiving for the harvest. Lammas is one of the legal quarter-days in Scotch water-splendor.

(d) Conversion of St. Paul (Conversio S. Pauli), Jan. 25.—This festival in the Hieron. Martyr., where it is first mentioned, is entitled 'Romae, Translatio B. Pauli Apostoli;' the reference is doubtless to the imperial edict of Constantine. In the Missale Gothicum it appears bearing the name with which it has come down to us. It is not mentioned in the ancient Roman Sacramentaries. The need for it was not felt at Rome, because there a special commemoration of St. Paul was connected with Sexagesima Sunday. The station for that day was held in the basilica of St. Paul on the Ostian Way; the Collect in the Mass involves the protection of the Epistle (2 Co 11) narrated his sufferings. The festival is peculiar to the Western Church.

(e) St. John Apostle and Evangelist.—See 14 above.

(f) St. John before the Latin gate (S. Ioannis ante portam Latinam), May 6.—This festival probably marks the anniversary of the dedication of the church at this place in the time of Pope Adrian (772-795) (Lib. Pont. iv. 398). It is first mentioned in the Sacramentary (the Gregorian) which has come down to us through this Pope. See COLLECT, 2 (l). The legend of the Apostle being thrown into a cauldron with hot and cold water (3 7 et) Whence? What? is subsequently to be connected with it. A Greek festival of St. John on May 8 commemorates a miracle said to have been performed on his tomb at Ephesus; another on Sept. 26 celebrates his legendary assumption (xerardun) into heaven after death (Nilles, i. 164 f., 385).

(g) SS. Philip and James, May 1.—These Apostles are commemorated on the anniversary of the dedication of a church at Rome in their honour about 561. The day was selected for the purpose because it was already connected with the memory of St. Philip (Lib. Pont. i. 306, see n. 2). As only two St. James's are in the Calendar of the West, and St. James the son of Zebedee is celebrated on July 25, it follows that the saint here associated with St. Philip is St. James the son of Alpheus, who is identified with our Lord's brother of the same name, in whose name the son of Alpheus is commemorated on Oct. 9, St. James, 'the brother of God,' on Oct. 23, and St. Philip, 'one of the first company of the twelve,' on Nov. 14.

(h) St. Andrew, Nov. 30.—This festival is of exceptional importance as fixing the date of Advent Sunday. It occurs in the Calendar of Carthage (c. 565), in which no other Apostles are mentioned by name except St. James the Great
and (probably) SS. Peter and Paul. It appears also in all the Gallican and Roman liturgical books. In the Liber Usualis (p. 340; 352, 353) it says, 'At the dedication of the Church, it was the day of his martyrdom at Patras. It is thus the only festival of an Apostle which makes a claim to being observed on the actual anniversary of his death. The day is held in high honour among the Russians, who call St. Andrew the Apostle and patron of their Church (Martinov, p. 293).

(i) The dates of the feasts of other Apostles and Evangelists as celebrated in the West and East are as follows: St. Matthias—in West, Feb. 24, in East, Aug. 9; St. Mark, Apr. 25; St. Barnabas, June 11 (in East, St. Barnabas and St. Bartholomew are commemorated together); St. James the son of Zebedee—in West, July 25, in East, Apr. 30; St. Bartholomew—in West, Aug. 25, in East, June 11 (see above); St. Matthew—in West, Sept. 21, in East, Nov. 18; St. Luke, Oct. 18; SS. Simon and Jude—in West, Nov. 30, in East, Nov. 28; Zelotes, May 10; St. Judas (Thaddeus), June 19; St. Thomas—in West, Dec. 21, in East, July 3. We have no evidence for the reason of the assignment of these days to St. James, St. Judas, or St. Thomas. It is very likely that the Church, in the celebration of the anniversaries of the dedication of churches or of the translation of relics.

23. St. Mary Magdalen, July 22.—This festival is first noted in the Martyrology of Bede. As regards Service-books, it appears first in a Missal of Verona of the 10th cent. and then in some 11th cent. Missals. It was not received into the official Roman books until the 12th cent. (Kellner, Heortologia, p. 171). In the West, St. Mary Magdalen is identified by the Gospel for the day (Lk 7:36-50) with the woman who was a sinner. In the Greek Service-books she is described as 'the holy ointment-bearing and equal of the Apostles.' In the English Pr. Bk. of 1549 this festival was retained as a Red-letter day, with Collect, Epistle, and Gospel, the latter being as usual that in the Latin missal. Since 1552 the day has merely been noted in the Calendar.

24. Days of the Martyrs and Confessors.—The earliest martyr festival on record is that of St. Polycaur, Jan. 26. The letter of the Church of Antioch to the Church of Rome of 137 AD (P. O. I., 226) gives an account of his martyrdom (c. 155) stating that it had been thought wise to celebrate the 'birthday' of Polycaur at his grave 'as a memorial of those who had finished their course' (Martyr. Polyc. 18 [PG v. 1044])—words which imply that earlier martyrs had not hitherto been commemorated. In this letter we find for the first time the death of a martyr described as his 'birthday,' i.e. into a better world—the name by which it came generally to be known (βῆμα γερονθιας, natale, or dies natalis, or natalitius) (cf. also COMMEMORATION OF THE DEAD, vol. iii. p. 718 f.). We find no trace of the commemoration of other individual martyrs until the 3rd cent. to which belong the earliest noted in the Calendar of Filocalus. At first martyr festivals were entirely local, each Church honouring its own saints. There is, therefore, more likelihood of the days of martyrs being real anniversaries of their deaths than those of Apostles. By degrees these local festivals, or some of them, were adopted by the central or mother-church of the country. St. Cyprian (+ 258) noted that the days of martyrs should be noted, in order that they may be locally commemorated, but also promises that, where he is (i.e. at Carthage), oblations shall be celebrated in their memory (Ep. 35 [PL. 328]). Before long the practice arose of one Church adopting com-

memorations from the Calendar of another, so that eminent saints came to be honoured not only in their own country but by the official Calendar. The Roman Calendar of Filocalus appear the Carthaginian martyrs Perpetua and Felicitas (March 7) and Cyprian (Sept. 4). Some, like the last named, passed into the common Calendar of the Church. At first martyrs alone were commemorated, but later on saints otherwise eminent were admitted to share their honours. The authority to admit to the roll of saints belonged originally to the Bishop of each city that claimed them (v.g.v.) in its later sense, by a Pope, was that of Udalric, Bishop of Augsburg, by John xv. in 995 (Matillon, Atti. SS. Ben. Siao, v., Paris, 1898-1701, Pref. lxviii; Gibbins, The Dyptich, Dublin, 1864, p. 33).

Among local festivals which in early times came to be observed should be mentioned the anniversaries of the dedication of churches, the burial days (depositiones) of bishops, and their consecration days (natalia), which were kept during their episcopate.

25. All Saints' Day (Festum omnium Sanctorum), Nov. 1.—The origin of the festival is obscure. The Liber Pont. (i. 317) relates that Boniface IV. (908-915), having received the pagan temple known as the Pantheon as a gift from the emperor Phocas, transformed it into a temple of the Virgin Mary and all Martyrs, no date of the dedication being given. In the Martyrologies of Rabanus Maurus and Florus (8th cent.) there appear, on May 15, 'Natae Sanctora Mariae ad martyres' and, on Nov. 1, 'Festivitas omnium Sanctorum.' The origin of the latter festival is assigned in both works to the consecration of the Pantheon by Boniface IV., the passage from the Liber Pont. being read in this connection; it passed through the chronicle of Bede (de Temp. R., cap. 66, ed. Giles, vi. 323). But the festival of May 13 corresponds better in title with the observance of the Pantheon, and it is apparently older than the festival of Nov. 1, as it is found in the Gregorian Sacramentary, a document of some what earlier date, in which the Feast of All Saints does not appear. Adon, who worked upon and supplemented Florus, observed no such festival; and in his Martyrology he attributed the origin of both festivals to the dedication mentioned in the Liber Pontificalis. He also supplemented the notice of Nov. 1, 'Sanctorum omnium,' by 'Sanctorum Pionum' (779-840), at the instance of Gregory IV., ordained that the festival of All Saints should be perpetually observed on that day in the Gallic territories. As this event would have occurred in Adon's time, we may believe that we are here, at any rate, on solid ground of history (Quentin, Les Martyrologies historiques, p. 366 ff.). In the Eastern Church the Festival of All Saints is kept on the 1st Sunday after Pentecost (see 10, above). It was already observed in Antioch in the 4th cent., as sermons preached on that day by Chrysostom have come down to us (PG I. 706-712).

26. All Souls' Day (Commemoratio omnium fidelium Defunctorum), Nov. 2.—The first distinct notice of the observance of this day is its appointment in 998 by Odilo, Abbot of Cluny, for the monasteries of his order (Dictionnaire de l'Église [PL. exii. 1058]). The first diocese to adopt it seems to have been Liége, where it was introduced by Bishop Notker (c. 1008). In the Greek Church the commemoration of the departed is kept on the 1st Saturday before the Sunday called ' Apostolics,' which corresponds to the Western Septuagesima. The Armenians keep it on Easter Monday. The
day ceased to be observed in the Anglican Church at the Reformation.

27. Octaves.—The word ‘octave’ signifies the eighth day, or the period of eight days after a festival, treated as a repetition of the festal observance. The usage may have been suggested by the rule laid down for the prolongation of the chief OT festivals (Lv 23:34–38). The first octave of which we read is that of Easter and during which the newly-baptized continued to wear their white garments. Etheria (Peregrin.) notices the custom at Jerusalem in connexion with Epiphany, Easter, and the Dedication days of the churches called the Martyrium and the Anastasis. She speaks of the eight Paschal days as kept everywhere. At first the octaves were generally attached only to festivals of our Lord, but in the 8th and 9th centuries a few of the greater saints were similarly honoured (Amalarius, de Excl. Off. iv. 36 [PL cv. 1228]). In medieval times, octaves became more numerous, chiefly owing to the liturgical influence of the Franciscans (Kellner, Hertoirel. 15). In the Eastern Church a similar treat as same is known by the name of 'Apodosis,' but the period observed is not always a week; it may be longer or shorter (Neale, Eastern Church, Gen. Introdc. 764; Daniel, Codex Liturg. iv. 278 f.).

28. Vigils and Ember Days.—See Fasting (Christian), III. 6 and 5.

29. The days of the week.—The Latin and Greek names in liturgical use are 'diei dominicae, feria secunda, l. tertia, l. quarta, l. quinta, l. sexta, sabatum'; 'ημερα, θετερα, τεταρτη, πεταρη, παρακατη, σαβατον.' Why 'feria,' which in classical use means a holy day, should be employed for an ordinary week-day is unknown. The most reasonable explanation is that, as the Jews numbered the days of the week from the Sabbath, saying the 'second of the Sabbath,' the 'third of the Sabbath,' etc., so Christians, adopting the same method, substituted, for 'Sabbath,' 'feria' as an equivalent for 'Lord's day,' the holy day from which they counted (Valesius, Annotationes in II. E. Eusebii, Paris, 1678, p. 155 f.). The names for the days of the week which the early Christians found in general use—as, in Latin countries, 'diei solis, lunae, etc.'—were deemed by them inappropria tate, as derived from pagan gods. At the Reformation in England, when the vernacular was again used, the names of the days of the week, the popular names, which had long lost their pagan associations, were naturally admitted into the Prayer Book.

30. Classification of festivals.—(a) Lanfranc (in his Statuta pro ordin. S. Benedicti ed. Giles, i. 126 f.), distributes festivals according to their importance into first, second, and third classes. These came to be known as Doubles, Semi-doubles, and Simples. A double festival probably derived its name from the usage which before the 9th cent. prevailed in Rome and elsewhere on greater feasts, of reciting two offices, one of the feria and the other of the festival. In process of time the classification of festivals became more elaborate, and the system in force at the present day, according to which there are six grades in the Roman Calendar, viz. Doubles of the 1st class, Doubles of the 2nd class, Greater Doubles, Doubl es, Lesser Doubles, Simples.

(b) The festivals of the Latin Church are also known as Festa chori—their obligations on the clergy only, and confined to the celebration of Church offices; and Festa chori orarii—i.e. those which lay people are bound to observe by attendance at Mass and rest from labour. In modern times there has been a large transference from the latter class to the former owing to the pressure of civil authorities. Thus the festivals of general obligation have been considerably reduced in number, but no uniform rule prevails. In England the settlement made by Pope Pius vi. in 1777 has been but slightly modified since. At present, in addition to Sundays, the following holy days are observed—viz. the Ascension, Corpus Christi, SS. Peter and Paul, the Assumption, and All Saints.

31. (a) In the Church of England, all the feasts for which a special Collect, Epistle, and Gospel are provided (i.e., the eight Sundays) are known as Holy Days. The following list is a rude sketch of the ecclesiastical calendar, excluding the Holy Days.

32. See also Calendar (Christian), Fasting (Christian).
FESTIVALS AND FASTS (Egyptian).—

I. SOURCES.—Egypt is extremely rich in this regard.

1. We have first of all the tables enumerating the festivals in regular series, or in the form of chronologically arranged annals of a religious sanctuary. The ordinary form of the first-named is that of the temple calendars. One may consult [Eng.], and also [Fr.]. The specimens most worthy of mention, in order of date, are those of Karnak (XVIIIth dynasty), Medinet-Habu (XXth dynasty), Edfu (Ptolemaic), Denderah, and Edfu (Ptolemaic period). The famous 'Stone of Palermo' (Vth dynasty) is a good example of the second type.

Individual mention of a long series of festivals (sometimes augmented by brief descriptions or explanations as to their value or aim) is made from time to time in the corpus of the Egyptian texts. As principal types we may mention: (a) historical mural inscriptions or official stelae of the temples; (b) mortuary inscriptions of a non-historical character; (c) allusions to commemorations of private stelae or inscriptions engraved upon private statues; (d) funerary literature adds very little to our knowledge of the ceremonies performed at the funerals and the funerary processions of ancient Egypt; (e) some of these ceremonies are mentioned in the records of the temple of Bes at Thebes; (f) others come from a combination of the private stela (e.g., in regard to everything connected with the feasts of the battles and death of Osiris at Abydos); the ex-votos of cures or oracles (cf. Divination and Disease and Medicine [Eng.]) add a great number; finally, the papyri of administrative or private correspondence (principally for the last centuries) serve to complete our knowledge down to the minutest detail (e.g., the papyri of the Ptolemaic period for the kābāsur of the Theban Ammon).

To these properly Egyptian documents, the classical Greek writers add important information on the ceremonies of the ancient religions, and we are indebted to Ptolemaic period for the kābāsur of the Theban Ammon.

The total actually known of Egyptian festivals of all kinds—general, local, exceptional, royal, funerary, commemorative, etc.—extends to round numbers, 1900. Of course, this figure must not deceive us as to the real number of festivals taken part in by the national life of Egyptian society (cf. below). It is more certain, however, that a classification is necessary if we are to render more explicit the understanding of this enormous series. The most satisfactory method seems to be a division of the festivals according to their chief characteristics, without taking account of their chronological details or geographical divisions. Such a procedure is artificial, but it places the information most quickly at the command of the reader.

II. CLASSES OF FESTIVALS.—1. Local festivals having reference to the life of local gods. It has been pointed out in a former article (Calendar [Eng.], VI.) that the detailed list of the acts of the legendary life of the gods, celebrated at times which were foreseen and fixed, marked a decisive advance in the religious civilization of the old nations. This advance makes it possible to follow the series of attempts culminating in the point at which the history of Egypt has already arrived. We may summarize the
Festivals and Fasts (Egyptian)

Festivals of the local gods under the following heads:

(a) The annual festival of the birth of the god (specimens: Stone of Palermo, Sarcophags of Babo).—Practically speaking, the date of these festivals seems to have been based upon the astronomical determination of the heliacal rising of a star, or upon the reappearance in the firmament of a constellation supposed to be the habitation, or one of the 'sousis,' of the divinity (an exception is made, naturally, for the god of Nilotic character or whose solar character, for whom the system is much more complicated).

(b) Festivals having the character of 'seasons of the year,' associated with a local god (not including the feasts of the inundation).—These are more especially the festivals of the 'first day of the year,' coinciding with the reappearance of the star Sothis (Sirius), and the beginning of the rising of the Nile (end of June). The festivals of the New Year Denderah, where the statue of the goddess is brought on to the terrace of the temple and there receives the first rays of the rising sun, are a good example.

(c) The legendary episodes of life of the gods constitute probably the most ancient festivals. Most of these commemorations consist principally in sham battles, and seem to be reminiscences of fights of two rival deities by the friendly divinities and the monsters who were enemies of man (cf. Dualism [Egypt]). The myths of Osiris and Seth disguised them, in the historical period, as the anniversaries of the principal dates of the war between Horus and Seth-Typhon. The traces of the pre-historic period may still be found in many typical details (magical dances, disguises, masks, etc.), and suggest instructive connexions between them and the modern 'assemblies of thieves' of other civilized peoples. Some, still more ancient, seem to have been linked, before any attempt at cosmogonic religion had been made, to the magic festivals in connexion with hunting or fishing, such as are still celebrated in the provinces of a horde of primitive civilized cultures.

(d) The local life of Divine idols.—Like the local lords and princes, who were their heritors, the Egyptian gods lived in effigy the life of lords of the manor in their sanctuaries. The walks which they took for pleasure or inspection, their excursion into their 'houses of rest' during the fine season, form the schema of a series of festivals which the calendar spreads over the whole length of the year. It is of these outings kWhn and journeys that the Theban collection, thanks to the exceptional wealth of its contents, gives us an abundant list, illustrated and commented upon by hundreds of texts.

The festivals of Amun, those of Maat his wife, and of their divine son, Khonsu, represent for us the visit paid by Amun to Maat and Khonsu in their sanctuaries; the Mother-goddess of the nome giving a visit to the home of the family in the great temple of Karnak represents the joyful excursion of the members of the theocratic family of the solar king =Luxor. The Hathor of Amun on the west side of the capital, and the festival of the valley, the 'great festivals' of Amun-Hinu, Medinet-Habu and at Thebanus, the beautiful festival of Amun in Thebes, and the small festivals, sanctuaries which are the object of the most singular pious devotion of the whole province of the Thebaid. What we know of Edfu, Denderah, and Memphis shows us a calendar quite as full of amazing events, which would encourage us to still longer list the 'outings' or the 'manifestations' of its god Phah, in great or in small. The only difference in favour of Thebes arises from its position as capital, for the time being, of Egypt, and from the number of monuments which it has left us by reason of this privileged position. Everywhere, in the same way, the dividing up of the divinity into idols having a special epithet and a particular cult has brought about festivals in connexion with other special 'aspects' of the divinity: 'Lord of Joy' (in Thebes, 'Beautiful Rest'), and Khonsu, 'the magnificent union,' had distinct anniversaries for their rejoicing or processes; just as Ptah, the 'modelleer of the world,' and Phah, 'of the districts of the South,' had theirs.

(c) A series of local festivals of a more essentially 'naturist' character is connected with the cycles of rejoicing proper to each region of Ancient Egypt.

The gods naturally linked with the local region in connexion with their rôle or their legend is here less evident. The festival of the 'reception of the river' (Beni-Hassan, Kahun, etc.), and the festivals of the 'arrival of the Nile' (Silsileh, of the 'beginning of the rising' or the 'opening of the canals' =passim), are the most conspicuous. The popular character of these rejoicings, as revealed in our sources and in the classical authors, shows a strong resemblance to what, during last century, was still the character of festivals such as that of the opening of the khaliy at Cairo. Similarities are equally evident in festivals such as those of the dhemet mentioned by the contemporaries of the Alexandrian civilization, as in the popular 'assemblies' where the people went into the country or to the neighbouring necropoleis or into the 'valley' (Thebes, Denderah, etc.), to make presentations of offerings to the gods, or to taste the sweetness of new honey, while repeating the saying: γάλακτος ἡ ἀλέθεια—as Plutarch tells us (de Is. et Osir. 68). The description of rejoicings of this kind gives the impression of something quite analogous to the festival of demeter in modern Greece, or to the shaman an-asam so dear to the hearts of the lower-class people of modern Egypt (see below, p. 884).}

3. Inter-provincial festivals.—The statues of the chief divinities of the nome came out once or twice a year to pay visits of great pomp to their neighbours. Information in the form of accounts of these journeys abounds in the principal temples. Herahabet of Thebes went to see Hathor of the Fayyum, and the latter came to visit him in her turn. Edfu saw Hathor of Denderah arriving with an immense suite of priests and followers; and Horus of Edfu went to visit the gods of the Fayyum, just as the gods of the Fayyum made the same pilgrimage to the other gods of the Delta. In all cases where the gods are not wanting, and show that the whole population took part, augmented by thousands of pilgrims from outside, not to mention, of course, the presence of the princes of the respective provinces of the visiting gods, their officers, and the whole of their clergy. The episodes of sham wars and massacres, of great popular affrays, and certain strange scenes where troops of animals (oxen, goats, etc.) were hunted, whipped, or put to death, connect these ceremonies with the highest antiquity. Over and above the legendary wars of the Osirian myth, we catch glimpses of magical festivals, with propagandist religious significance, with sham or tribal wars, similar to those which are found among modern uncivilized peoples.

3. Festivals of a national character.—The mechanism which set the machinery to re-act. To begin with, part of them took their rise simply in the successive political preponderance of the large towns of Egypt. The festivals of the local gods of Memphis, Thebes, and the Delta became those of the whole of Egypt. When each town in turn was the first city of the valley of the Nile, the nation adopted in each case the local dates of the festivals or anniversaries, and established them as general feast-days. Their
splendour tended to pale with the decline of the town to which the god really belonged; it diminished in favour of new-comers. Thus it comes about that at the time of Herodotus the great festival of the Thebans had given place to those of the divinities of the Delta, because it was in Lower Egypt that the dynasties of the Bubastites, the Tanites, and the Salites had established the political centre of the Enroutu. The greater number of the gods, which drew their sanctuaries from the highest spoken names, were fairly numerous, but the gods of the great towns. The coronation and the jubilee (saud) are the two great ceremonies. The first divides itself naturally into a series of distinct festivals, ranging from the solemn recognition of the king by the chief of the gods, the presentation to the people in the court of the temple, and the adoption of the "sacred name," to the consecration properly so-called. These were begun from the very beginning to be held at Heliopolis; the few remaining Memphite monuments represent it as being attached to that town, and it is seen from historical inscriptions that the rule of the Pharaoh was valid till after these traditional solemnities had been accomplished at the Heliopolitan sanctuaries. Piankhi himself, the conqueror of Egypt, was not considered the legitimate king of Egypt until he claimed descent from the ancient capital, all the long ceremonies fixed by the custom of thousands of years. Without discussing here the difficult question of the exact nature of the saud, it is evident that its jubilee nature makes it a repetition of the festivals of the coronation. Through it we obtain part of the material details which are lacking with regard to certain points of the coronation, for the festivals of saud have everywhere been represented on Egyptian monuments either in a shortened form or at full length.

The texts of the Pyramids show that the episodes represented on the monuments commemorative of the saud (e.g. at Memphis [XIII dynasty]) existed as early as the proto-historical period. They are found almost unaltered down to the time of the Ptolemies. In this latter period Heliopolis lost the privilege which Memphis gained, of seeing the Pharaoh crowned. The most detailed and curious scene representing the magnificent pomp of these festivals and the concourses of all the divinities of Egypt are represented in the bas-reliefs of the "festival hall" of Peosor [II.], found and re-constructed in 1895 by Naville at Bubastis.

4. Anniversaries of a historical or pseudo-historical character.—Although still having a connexion with the divine life, the festivals in question have reference rather to acts done by human chiefs and to their commemoration. The Thinite monuments and the Stone of Paderno represent for us, as regards the most ancient period, the "festival of beating Anu" or that of "constructing the defences of Dewaza," which may be connected with memories of the real genuine wars of Egypt (but reserve as regards the mythological share). More definite anniversaries were instituted by the Pharaohs of the first Theban Empire, and celebrated the coronation by the Pharaoh. The "festival of repelling the troglodytes" and that of "taking captive the Nubians" were still commemorated, after having been instituted by Usiresen III. (XIIth dynasty), under Thothmes III., in the middle of the New Empire.

At the same time, we ought not to be deceived by these anniversaries. At certain times, some Pharaoh might renew them out of devotion to one of his ancestors, or to show that he was repeating his exploits. But in the interval they had fallen into disuse, and everything tends to prove that festivals of this type rarely survived their original occasion.

5. Foundation of sanctuaries.—The great decorative compositions and the connected texts in the temples of Deir el-Bahri or Soleb, as well as the frescoes of Amarna, are, with much wealth of detail, the festivals which took place at the foundation of new temples. The arrival of the royal procession, the ritual of foundation, the laying of the first stone (Edfn), the ceremonies of inauguration, and the rejoicings accompanying all may be followed step by step. As regards Amarna in particular, the biographical pictures left by the principal dignitaries of the time are very valuable information to the official descriptions given by other documents, in that they show in a life-like way the popular gaiety and joyous excitement of the crowd.

6. Coronations and royal jubilees.—The categories of anniversary festivals in relation to the life of sons of Amun and of the gods, are, as a result of connexion with the festival of the divinities of Bubastis, Sais, and Buto. But side by side, with this first-changing group, a certain number of festivals, throughout almost the entire course of Egyptian history, are celebrated all over Egypt at one time. They are all almost connected, as is only logical, with those gods who, with the chief god Ra, were accepted as the universally adored gods, by the side of the local gods (with whom they are frequently confused). These are, then, festivals in connexion with Ptah-Sokar and with Osiris. As well as having in all those special sanctuaries, where the festivals of their particular calendars were celebrated, their great anniversaries always drew to Memphis, Mendes, or, more especially, to the mysteries of the huge crowds which came from all of Egypt.

The famous Osiran festivals of the month of Chosok at Dendereh seem to have acquired a more gradual popularity, and to have become more universal only when the festivals of Amen-Amon declined. As to the Heliopolitan festivals, which are as ancient as the very history of Egypt, they seem to have retained a monarchical character of high accessional initiation, which separates them absolutely from the great pilgrimage festivals of the other sanctuaries. The national festivals are connected more especially with the funerary life of Ptah-Sokar, Deir el-Bahri, and the "Round of Walls," and ought, rationally speaking, to be taken rather in connexion with the festivals of the dead (cf. below).

7. Royal episodic festivals.—Besides the participation of the Pharaoh in the great festivals of the cult or in the enumerations of his own reign, two distinct series of festivals have been left us by the monuments.

(a) Those having reference to expeditions of war and celebrating the victories of the Pharaoh or his triumphal return.—The royal procession with its booty and its captives, the solemn arrival of ambassadors or tributes from foreign lands, sacrifices and offerings presented in thanks to the Divine Lords are the subject of immense decorative compositions on bas-relief and frescoes, either in the temples themselves (Karnak, the tower of Luxor, Ramessuem, etc.) or on the walls of private tombs (neopelopses of Thebes and Amarn.).

(b) Those accompanying the different acts of royal life (birth of princes, marriages, journeys, inauguration of palaces, etc.).—The sources, which are still richer in incomplete records, are filled up by the paintings of Amarna, which constitute in this respect a series of historical pages of the highest interest. We must make special mention of the arrival of the famous queen-mother Tyana at her new palace at Thebes and of the journey which marked her arrival from Thebes (banquets, popular rejoicings, midnight banquets, processions of musicians and of torch-bearers, military parades, official processions of the gods),

8. Festivals of a funerary character.—The enumerations or calendars of the Memphite mus-
FESTIVALS AND FASTS (Egyptian)

Festivals (Ivth-Vth dynasties), of Denderah (Vth dynasty), of Syat (Xth dynasty), of Berenice (XIII-XIVth dynasties), of the Theban necropoleis (XVIIIth - XXVth dynasties), give us the complete lists. The character of these festivals has been shown in art. Calendar (Egypt). The same is the same as for the festivals of the gods. The cults of local gods of the dead and the festivals of these funerary gods become, at least in regard to some of the gods, national anniversaries which were little by little fused into the great cycle of the cult of Ptah-Sokar-Osiris. The placing of the god in the coffin and then in the tomb, the planting of sacred trees or mystical insignia (ancient fetishes?), the mourning of the divine family, the apparent death of the god and his subsequent resurrection, form so many episodes giving rise to distinct festivals, with which are connected the festivals of ordinary dead persons. The participation of the living in the principal anniversaries (see the frescoes of the Theban tomb of Nofrihatet) gradually modifies their character. The agape, the so-called 'funeral banquets,' the general mourning on the day of the feast, the procession of holy pilgrims to the necropoleis, the days of magic 'navigation' of the souls towards Abydos (festival of boats), the prow of which is turned towards Abydos in the night when the totating priests and the whole populace are in tears, the festival in which the processions go by the light of torches to seek the statues of the dead in the necropoleis, and the festival in which 'the round of the walls of the Temple is made praying for the venerated deities,' the festival of new fire, are only exempla which may be quoted in passing. Herodotus (ii, 62) has given a picturesque description of the episode of the 'festival of the Lamps.'

The Character and General Character. The description of the pomp of these great Egyptian festivals cannot be made the object of even the briefest description in a summary so condensed as this. The Theban pictures show their gaiety and magnificence (see Lit.): troopers of dancers and singers, companies of soldiers, troopers of negroes, orchestra, officers and priests, processions of bearers of offerings or sacred objects, emblems, banners, perfumed statues of gods, which have, in a word, along with the local modifications of Egyptian civilization, the signs of rejoicing which are present in festivals all over the world. The three characters of these Egyptian festivals are (a) the procession: what is carried on litters, on which are placed the tabernacles of the images of the gods; (b) the carrying of insignia and emblems, in which may sometimes be recognized the survival of very curious archaic fetishes (the 'box' of Min, vases, didu, thrones with the emblem khaibet, etc.); (c) the participation in the festivals of small portable statues of deified kings or of the reigning king. This participation of the royal 'tools' is made clear by numerous inscriptions and by the bas-reliefs of Medinet-Habu, Deir el-Bahri, Karnak, Ramesseum, Karnac, and Luxor.

Certain traditional and especially venerated statues (of those of Ahmes I. and Nofrihatet), which were continually being embellished or re-made in precious materials, seem to have played a part similar to that of the most famous images of certain of our Christian sanctuaries. The participation of high dignitaries and the local nobility in these festivals would require a long article for itself alone. It is to be regretted that the representations of the deities of Denderah, and more especially of King, have never been popularized as they should be by modern reproductions.

The frescoes of Amarna and the notes made by Herodotus of his travels briefly indicate how the part played by the populace in all these ceremonies; the noisy and sometimes licentious gaiety of the crowds which flock to the pilgrimage, the thousands of devotees encamped in the approaches to the sanctuary, give the impression that a festival of modern Egypt, like the famous fair of Tanis, must still present an aspect not unlike that of a great festival of Egypt at the time of the Pharaohs was like.

The religious ceremonies which were thus gone through comprised essentially in the following:

(a) A representation of celestial navigation by small sacred boats on the sacred lake of the temples. This is probably the most ancient source of the theme of itinerant cerebrations with the organization of mimetic magic in its civilization.

(b) Journeys (by land and sea) taken by the statues of gods, visiting their various provincial sanctuaries. As if they were real living guests, they receive gifts on their arrival, and are entertained at solemn feasts; they are washed, anointed, perfumed, and robed. Sometimes they rest for the night 'on a bed of flowers. During their journey they halt at stations of rest,' analogous to the reposits of Roman Catholic state processions. A solemn sacrifice marks the culminating point of the ceremony.

(c) Visits of the gods to the tombs of deceased kings or princes in the necropoleis, on the great days of commemoration (e.g. the opening of the necropoleis). These divine statues at the solemn acts symbolizing the great events of agricultural life (the rising of the Nile, the cutting of the first sheaf at the harvest).

(d) Sacred dramas, sometimes particularly in representations of wars, battles, and brawls interspersed with songs and incantations. The 'mysteries' of the type of Mendes, Abydos, and Denderah are of a more complicated kind; in them was given a representation lasting for some days and taking place at various points of the sacred territory, of the wars of the god, his death, the battles of his supporters, his entombment, and his resurrection. The making of symbolic images of the god, which had been broken in pieces, associating his death and resurrection with the processes of the death and resurrection of the substances of Nature (corn and vine), is the most salient feature of the famous Osirian festivals of the month of Chouak. Ceremonies like those of the great pilgrimages naturally lasted several days, and in certain cases even several weeks. Festivals of even a local character have, in a word, along with the local modifications of Egyptian civilization, the signs of rejoicing which are present in festivals all over the world. The three characters of these Egyptian festivals are (a) the procession: what is carried on litters, on which are placed the tabernacles of the images of the gods; (b) the carrying of insignia and emblems, in which may sometimes be recognized the survival of very curious archaic fetishes (the 'box' of Min, vases, didu, thrones with the emblem khaibet, etc.); (c) the participation in the festivals of small portable statues of deified kings or of the reigning king. This participation of the royal 'tools' is made clear by numerous inscriptions and by the bas-reliefs of Medinet-Habu, Deir el-Bahri, Karnak, Ramesseum, Karnac, and Luxor.

Certain traditional and especially venerated statues (e.g. those of Ahmes I. and Nofrirahtet), which were continually being embellished or re-made in precious materials, seem to have played a part similar to that of the most famous images of certain of our Christian sanctuaries. The participation of high dignitaries and the local nobility in these festivals would require a long article for itself alone. It is to be regretted that the representations of the deities of Denderah, and more especially of King, have never been popularized as they should be by modern reproductions.

The frescoes of Amarna and the notes made by Herodotus of his travels briefly indicate how the part played by the populace in all these ceremonies; the noisy and sometimes licentious gaiety of the crowds which flock to the pilgrimage, the thousands of devotees encamped in the approaches to
This page discusses various festivals and religious practices in ancient Greece and Egypt. Key points include:

1. **Festivals and Festivities** - The text describes several festivals held in honor of deities, often with agricultural themes and associated with the natural world. For example, the harvest-month festival is mentioned, which was probably held in June and involved the observation of the phenomena of the natural world.

2. **Religious Practices** - The text mentions offerings to the gods, such as libations and sacrifices, and the importance of the natural elements in religious observances. It notes the significance of the earth-magic performed during festivals, which was believed to ensure fertility and prosperity.

3. **Historical References** - The text references works by ancient authors like Homer, Hesiod, and Pindar, indicating the influence of these literary figures on the religion and mythology of the period.

4. **Societal Roles** - The text highlights the roles of women in religious ceremonies, such as the Thesmophoria, and notes the importance of maintaining the purity and fertility of the land.

The overall theme is the interconnection between the natural world and religious practices in ancient Greece, emphasizing the role of nature in societal and religious life.
vegetation-spirit—was merely pursued and caught, to get his electrifying power for the Spartan vineyards. The pharmonakoi in the Thargelia were, somewhat informally, intended, obviously, to indicate his connexion with a fertilizing vegetation-power;1 was burned and his ashes scattered to the sea and the winds as a purification of the tainted city. Harppocratic adds that this was done at the Thargelia, and not merely, as Tseutes says, 'if disaster, by the wrath of heaven, overtook a city.' The intention is obvious: the pharmonakoi are at one and the same time incarnation of vegetation-idolies and scapegoats. On both counts, of course, they are liable to be put to death—in the one case, to prevent their powers from waning and give them an opportunity to be re-incarnated, and, in the other, to get utterly rid of them and purify the city, which they are Indem. But they were certainly not actually put to death in civilized Athens. On human sacrifice the Greeks of historical times looked with loathing and horror. The omen boys, because they were nearer to—it just as the Amer. Indians, some of whom at least were once ritual cannibals, regard as permanently infamous any of their number whom hunger has driven to such a terrible resource. Yet no enemy of Athens ever accuses her of so awful a practice; Athenians, and notably the author of the Minos, are as emphatic as any one in denouncing it; and our authorities for the practice are late and double. Finally, the Thargelia was a festival of Apollo, and there is good reason to believe that not even the righteous exaction of a condemned criminal was allowed to sully its purity. The killing of the pharmonakoi can have been only a form; but no doubt, in earlier times or among more backward sections of the Greek world, it was real. At any rate, it was part of a great ceremony of purification, preparatory to getting in the harvest, of the same cult-stratum as the fertilizing rites of the Thesmophoria and Arrephoria. Apollo’s connexion with it is not very clear; probably in his character of a god of joy9 he took over an older ceremonial.

It is especially interesting to us particularly from a literary point of view, are those mimetic vegetation-rites connected with the name of Dionysos—the dances and mummmings of the ‘goat-men’ which took up to Thargelia and Lenaia. In these and many other ceremonies it is not primarily Dionysos the wine-god who is worshipped (a wine-deity pure and simple would hardly exclude wine from some of his offerings, as Dionysos did), but rather Dionysos the god of fertility in general, and especially the fertility of the fields. In Thrace there survives to this day a curious ritual in which we get both phallus, reminding us of the phallic dances out of which, says Aristotle, Comedy sprang, and a masque of men dressed in goat-skins, which provides at last the needed link between ἀργαλία and ἀραγγία and helps to sweep away various absurd etymologies.1 For this masque is ‘tragic’ and turns on the death of one of the characters—no doubt in old times

Dionysos himself. It is well known that nothing is more common than the death, followed by the resurrection, of the vegetation-god; Adonis, Osiris, Dionysos, Balder, Mithra, among many others, are good gods who are slain by Winter or the Storm, and generally returns again in the spring. No festival of Dionysos comes in the summer; he is worshipped in spring and autumn, intended, as the course of the year shows, to be in Poseideon=December (Rural Dionysia), Gamelion=January (Lenaia), and Elaphebolion=March (Greater or City Dionysia), and he is also connected with the Feast of All Souls (Ἀναστάςις) in Anthesterion=February. Counting the Rural Dionysia and Lenaia as merely two forms of the same festival, we get the three feasts just about where we should expect them in the case of an agricultural deity: one at the time of the new wine (Anthesteria), one in full spring (Great Dionysia), and one (Lenaia) to arouse the sleeping vegetation-power in winter. He has no Attic festival, however, in Pyanopsion (October), its place being taken by the festival of the hopi-arrhi.

But we must pass to a brief discussion of the nature of the two great Athenian feasts, the Lenaia and the Greater Dionysia. In those little bits is left of the simple and primitive Nature-cult, either on its quasi-magical or on its orgiastic side (to be considered later). The former festival consisted (1) of a procession, managed by the king-archon and certain assistants (εταυχαρεία) chosen from the sacred gentes of the Enompidai and Kerrykes; (2) of a contest of lyric and dramatic poetry, managed by the king-archon alone.2 Only the contest (μάθημα) is important, for it was at this that many of the great dramatic works were produced. In this connexion, it cannot be too carefully kept in mind that the plays were all religious, at least in theory, and that going to see them was quite an act of worship. A devil of a Greek did not go to the theatre to see a play of Sophocles or Aristophanes merely because he found it amusing or moving, any more than a devout Florentine goes to Sanatissimo and Commedia dell’arte merely because the singing is good. Of course, aesthetic enjoyment played its part, as it generally does—the people who built the Parthenon or Cologne Cathedral were moved by a love of beauty as well as religious zeal,—but, in its essence, the State’s action in appointing chorogoi, the chorogoi putting out and training his chorus, the dramatist’s composition of the tragedy or comedy, and the spectator’s pleasure in the theatre were all parts of the public and private religious duty of Athens and her citizens. It is so long since we have had any such union between Church and State that we are apt to forget that there was a time when the miracle-play was almost as much a part of the service, at some times of the year, as the Kyrie or the Te Deum. The tragedies, as has already been indicated, are the glorified form of old peasant miracle-plays, very like our own May-day and Christmas mummmings in general appearance, representing the contest between the two champions and the death of one of them.3 Rather harder to

explain is the Old Comedy, with its railing and satire, its wild fun and buffoonery, and its frequent coarse jests. Although this is rather strenuous and not merely a survival, for the ideas were still alive in Greece—of old notions connected with fertility, magic, and good-luck charms. We have countless examples, many of them Greek, of peasant merry-making, with the thin line between broad fun at the expense of all and sundry, the ancient 'jests from the waggon' and we shall have occasion to see later on, that in the highly-decorous plays of Dinoysos and at the City of Dionysia one cannot lose their deliberate coarseness. The phallos, as has already been mentioned, was used in these primitive rites as a symbol of fertility. It had its verbal equivalent—designedly coarse and foul jests. These were no mere wantonness—we hear of respectable women ceremonially using them—but part of the fertility-charm. As to the continuous railing against individuals, that may be serious enough sometimes in Aristophanes, but in its ultimate origin it was as often as not a mere method of averting the evil eye; just as a street-boy of Artemis 'Best and Raisins'—really to show, or pretend to show, his contempt for it, and so avoid nemesis. We can now understand why Aristophanes dares to rail against Dionysos himself, painting him as fool, coward, effeminate, and so on. It is really (though whether Aristophanes fully realized this is doubtful) a pious mode of address—an averting from the god of any possible φθονος. Dionysos, though he could be very terrible, was a friendly god who came close to his worshippers in their festivities; and extreme reverence for the beings he worshipped was not a characteristic of the Greek. 1 Cf. arrt. Drama and Drama (Greek).

So much for the spirit of the plays. The details of their production are fully discussed in well-known books, such as Haigh's 'Attic Theatre,' Oxford, 1888, and need not be entered into here, any more than the vexed question of stage or no stage. These points have absolutely no bearing on the religious side of the question. It should, however, be noted—what Dörrpfeld has overlooked—that whether his discovery of the sacred drama of Aphaia and of the wine-press be all he claims for it or not, the name ἄφαιας has nothing to do with λαράς, 'a wine-vat,' which would give ἄφαιας, but must come from ἄφας, an old word for 'straight,' and signify 'to sink or settle.' But ἀφαίαν, however, has nothing of the orgiastic character which the name might imply.

The chief occasion for the production of plays was the Great or City Dionysia, in Eleapheldon. This began, on the 8th, with a παραγωγή, including lyrical performances—no doubt, as in the Lenaia, dithyrambs, the form from which Tragedy is said to have been evolved—and offerings to Asklepios. The feast proper began, as we gather from Pausanias (t. xxix. 2 and other passages), with a solemn procession, in which the sacred cult-statue of Dionysos of Eleutherae was carried to the precincts of the great theatre and placed near the Academy. In this κανενοροι, or girls carrying baskets containing sacred emblems—probably of a similar nature to those borne by the arrhephonoi—

1 Nor always of medieval Europe; cf. the following lines from the song of the song of the Cretan lau-elect a lauell: 'Fat eure al, lovetone! n'as pas pregouve?'
2 'Font Fiz est mort, et a dem compone ung ivrege!' This is quite a famous passage from the Irish 'Religion of the Druids,' as Maudslay.
3 'Irons, 190, in the songs of the Iliad in the Lenaia. So Bhagavati is elaborately burlsted at her great spring-festival at Cranganore (see G.B. pl. 1, vol. i. p. 192).”
4 Parn. v. 206; Nis. 276, who aptly compare ἄφαγος. Mimosena and Miss Harrison support the contrary view.

—took part, as also did dancing and singing boys. A phallic procession is also mentioned. 2 Next—perhaps on the fifth and following days—came the dramatic contests in the great theatre of Dionysos on the slope of the Akropolis. Here there assembled, not only the Athenians themselves, as at the Lenaia, 3 but also representatives from all over the Empire from foreign States. This was the occasion on which most of the new tragedies were produced; indeed, 'at the new tragedies (καινοὶ ἔργαρια) is sometimes used to mean 'at the City of Dionysia.' We hear, nevertheless, of new tragedies being produced even at the minor Peiraic Dionysia; and Aristophanes' frequent references to the Lenaia show that he often produced a new play then, as was natural, since so much of his humour is topical and local.

The most discussed of all these agricultural and quasi-agricultural festivals are the two held yearly in Attica in honour of Demeter and Kore, the Lesser and Greater Mysteries. A good deal is known of the external ritual of these great ceremonies (τὰ φεστανήματα ἰσώρεια), but exactly what was taught, or whether anything at all was taught, has been much disputed point, or side Lobe. We know, unfortunately, next to nothing about the rites, except that they must have been simple, as there was no temple of Demeter, so far as we know, at Agrai, and consequently no place for elaborate ἰσώρεια to take place. 4 The important thing is that the candidate who had been initiated in these mysteries became a μοῖρος, and was entitled to admission to the Greater Mysteries the next year but one.

The Greater Mysteries were held in Boedromion, 5 the true lasting from the full moon of Metageitnion to Pyanopsis 10. They began, it would seem, on the 13th, with a procession of the Athenian epheboi to Eleutherae to get the certain sacred objects of which we know little, but which probably included ancient and peculiarly holy cult-statues of the two goddesses. They returned the next day. Then on the 15th came the ἀργυρις, or assembling of the candidates, who were addressed by the king-archon, the hierophant, and δαυδικοί, at the Stoa Poikile. All who were guilty of certain ritual inquiries (such as the eating of forbidden foods), all who were unable to understand Greek, all who had been deprived of civic rights, and other disqualified persons, were warned away. What this speech was like one can gather from Aristophanes' parody of it (Rem. 204 ff.).

5 'Let every one stand aside who owns an intellect meddled with sins, or in arts like these entitled:

If the mystic rites of the Musee true he has never seen or sung,
He never the magical music knew of Caelius the Bull-eater's tongue.

5' Behold, I give word; and again give word; and give word for the third, last time:

Make room, all such.'
Next followed the rite which gave the day its name, Ἱλαστήριον, 'To the sea, ye mystai!' The whole body of the initiate went down to Phalereon, washed themselves in the sea, and also washed their plait. For in this, as in all other parts of a chthonian sacrifice, the pig was a recognized means of purification, generally by means of its blood. Exactly how the animals were used on this occasion we do not know; however, he suggests that they formed the material substance of some kind of sacrificial feast. Then followed certain rites of which little is known. On the 17th we hear of a sacrifice of a sucking-pig to Demeter and Kore. On the 18th (?) there was a procession in honor of Asklepios, probably identical with the Epiphania which Philostratus mentions (Vit. Apoll. Tyan. iv. 18). On the 19th, late in the day, so as to last well into the night, and therefore, by Greek reckoning, into the 20th, came the great Iakchos-procession to Eleusis, visiting various holy places en route, and stopping at a certain bridge over the Sophas for the rough journey which we have already seen, is associated with agricultural rites. Here it is, in fact, that the presence of Iakchos-Dionysos in this festival of Demeter and her daughter. Our earliest document, the Homeric Hymn to Demeter (7th cent.), knows nothing of him. Probably the Iakchos-route was imported from Thrace, with the Delphic oracle acting as its vigorous missionary and supporter, Dionysos was simply added to the Eleusinian deities, whom he resembled in many ways. Arrived at Eleusis, no doubt after a rest—for the journey of some 15 miles, made fasting, with incidental dancing and singing, must have been extraordinarily fatiguing—the mystai proceeded to the rites of initiation, perhaps on the nights of that very day. Concerning these we know, briefly, the following facts. Firstly, they were connected with the legend of the rape of Persephone, the grief-stricken search of Demeter, her arrival at Eleusis, the gift of corn, and the recovery of her daughter. Secondly, we gather that some part at least of all this was enacted in a sort of mystery-play at the telesterion, or Hall of Initiation. There was also a λεπός γάμος, or mystic marriage ceremony; that at a certain point in the rites the hierophant cried aloud, 'Our Lady Brimo hath borne a holy child Brimos;' that there was some sort of representation of the terrors of the underworld; the elements of later Jewish and Christian authors; and, though quite possibly true for some ritual or other, have not necessarily anything at all to do, really, with Eleusis. One fact, however, we do know, that at the climax of the rites certain holy things were shown. Here again we are in ignorance of what they were.

We know a little about what was said—a less important matter than what was done. We hear of a sacred formula, ὄνομα, Ἰάτριον (Ο Έκκυ), conceiving (O Earth), used by the hierophant—a rain-charm, apparently, belonging to the oldest stratum of the rites; of the mystic formula (passwords?) employed by the initiates; but exactly what it all meant is unknown. The secret was well kept.

Perhaps the fact is that there was no secret—at least no secret doctrine. The glow of ecstatic which with many writers, especially Neo-Platonists, was derived from the Eleusinian mysteries, and which has been furnished by the great pentaeteric festival at Athens, the Panathlon. This occurred towards the end of Hekatombolion, in the height of summer, the chief day being the 28th of the month—πάναθηναίον, ο' εἴτε θερίας, held from 27th to 30th, originally held near the sea and calculated as to allow the rising sun to shine full in through the door on this day, in the year of the temple's completion, 456 B.C. This feast was the celebration of the might of Athens, her power over lesser States—for all the allies were expected to send contributions to it—and of the might of her patron-goddess. It consisted of a series of contests such as a goddes of the artistic and war might be expected to delight in. First came an ἄργος πολεμικός, or contest of singing, instrumental music, and, at least in the days of Peisistratos, recitations from Homer. Next came a gymnastic contest (lasting three days), originally held near the Panathenaeum, but later (4th cent.) in the present Stadium. The prizes for this consisted of jars of oil, originally at least the product of the μοῖραι, or sacred olives of the goddess. There were four prizes for each contest, the second being ¼ of the first; e.g. the winner in the boys' pentathlon received 40 jars of oil, the 'runner-up' 8. The contests were of the usual nature—foot-racing, boxing, wrestling, etc. Next came the chariot race—horse-racing of various kinds; then certain minor contests—a pyrrhic dance, an εὐανδρία, or parade of crack troops, and a torch-light procession—all competitive, each

1. Parn. ii. 171 B.
2. The modern Kohalythou, approximately; about half an hour from Eleusis.
3. The procession probably started from the Agora (Bros. 320, reading δ' Ἰάτριον for Διανοσίνα). For Jesting (γεγονότα), cf. Rln. 420 B.
4. The small extent of this hall, whose foundations are now completely excavated, and which has been, therefore, the object of very elaborate speculative performance, and indeed makes it hard to understand how the numerous μύσαι can have got in at all.
FESTIVALS AND FASTS (Greek)

tribe entering. There was also an all-night festival (pannychis), mentioned by Ennius (Herc. 117–1785) and Plutarch (Mor. 757 B), in which the starting day of the feast, an elaborate procession, bringing the city’s tribute to the goddess—the richly embroidered robe (εἵλος) on which was represented her descent to Hades—was held. Moreover, in the midst of this civilized ritual, we get a touch of primitive feeling; the statue of the goddess needs clothing, just as at another period of the year it needed to be taken down to the sea and washed, while the temple was undergoing a revivifying process (Plynteria and Kallynteria). The festival ended with a regatta in the harbor.1

(b) The great games at Olympia and elsewhere were not very different from the gymnastic part of the Panathenaea, which they no doubt suggested. Existing nominally to do honor to Zeus, Poseidon, etc., it is at least possible that they originated from the funeral games of honored heroes. However this may be, and whatever be the origin of the games (Olympian chronology is very uncertain, the list of victors compiled by Hippias of Elis being criticized as early as Pindar’s time), in the 5th and 4th centuries B.C. they became hardly by exaggerated. They were pan-Hellenic; a truce similar to that proclaimed by Athens before the Mysteries protected all visitors; and all Greece was in a state of high tension to violate it. Any one who could satisfy the board of judges that he was of pure Greek blood, and not of a city under a curse, that he was free from crime and impurity, and that he had trained for the past 10 months was entitled to enter. This meant that all Greece proper, Ionia, Sicily, Magna Graecia, and the colonies scattered over the Mediterranean sent representatives to Olympia at least, if not to the other religious games. The programme—originally 1 day only—lasted 3 days in later times, and consisted of long and short distance foot-races, races in armour, boxing, wrestling, the pankration, and an ‘all-round’ contest, the pentathlon—jumping, running, discus-throwing, javelin-throwing, wrestling—besides the great chariot- and horseback-races. It was to celebrate victories of athletes that the greatest lyric poets wrote, and the victor received almost divine honors from his city. Moreover, no place was so good as one of these great athletic meetings to hear all the latest news, see every one worth seeing, and listen to the latest poets, authors, or philosophers.2 Where no actual ‘meeting’ contests existed, the games fostered art and literature, as well as the Pan-Hellenic spirit, indirectly at least.3

(c) The best example, perhaps, of this is the great Apolline festival of the Sceptera. This was held at Delphi every ninth year (i.e. once in each oktateria), and was supposed to commemorate Apollo’s slaying of Python, his flight and exile, and his purification and return.4 A boy of good family—obviously representing the god—was escorted, along with certain other boys, by torch-bearing women (oleiati) to a wooden hut built to represent a palace (the ‘abode of Python’). This was set fire to, and the table in it was overturned. Then the boy pretended to go into exile; finally all went— not in mimerly but in actual fact— to Tempe, were purified with laurel, crowned themselves with it, and entered the sanctuary.5 Pythian oracles are given both in the temple and on the way. On the next day the Pythian festival was held at Delphi in triumph. Here we have a good example of a rite giving rise to an etiological myth. For, assuming the Apollo-Python story as a basis, why should a palace—which depicts sentiments do not usually inhabit—and why is it elaborately destroyed, furniture and all? Whereas, starting from the 1 ceremony, it is all plain enough. The boys, headed by the incarnate god, get rid of any mismas they may have in, in the pythiades by the fire of the ceremony, by burning. They go, successfully bear the sins of the people with them, and, instead of their purification, they come back after purifying themselves. In the midst of this civilised ritual, we get a touch of primitive feeling; the statue of the goddess needs clothing, just as at another period of the year it needed to be taken down to the sea and washed, while the temple was undergoing a revivifying process (Plynteria and Kallynteria). The festival ended with a regatta in the harbor.1

2 For details, see Gardner, p. 31 f.
3 Parn. iv. 239 ff.
4 Iliad. 103 ff.
5 It should be remembered that the primitive mind looks upon moral evil of all kinds as much as we regard it as illness of a disease, or something contagious, and to be got rid of by the action of fire and certain medicinal substances, and that this idea persists into quite late times, in a more unconscious form.
identified? Though powers to be feared, their functions are kindly enough; they give fertility and general good fortune. (See EMENIDES.) Did Demeter and Kore develop out of some such figures? Or is the present festival of a simple sacrificial nature? These are questions easy to ask and hard to answer. We think, however, that the close resemblance between the worship of heroes and the worship of fish is enough to seek for a mythical theory a likely one. But this is not the place to discuss so wide a subject, and we shall merely notice a few typical pieces of ritual in which these powers receive honour.

1. Actual offerings to the dead, or to some particular dead persons.—We find a good example of this at Platea, where, under the title of θανάτοι, those who fell in the great battle received offerings—a black sheep, wine, milk, oil, unguents—every year on the 6th of Alkalonemion—Maimakterion.

2. Worship of heroes in conjunction with Olympus.—Here a good example is afforded by the ritual of the Hyakinthia at Amyklaion. This festival, held in the month corresponding to Hekatebion, divides sharply into two parts—the mournful, involving abstaining from cereal food, banqueters ungarlanded, etc. and the other joyous. It is not merely the ritual, but the name, that as one associates with Apollo, whose feast it is. The reason is clear. Apollo's ritual has been superimposed upon that of an old chthonian power Hyakinthos, who, being dead permanently, as a hero, or temporarily, as a popular hero, would in any case become identified with Apollo. His absence as the number of years, he has something to do with harvest, contains the not uncommon tabu on cereals before the harvest begins.

3. Heroes and other chthonians with the name of Olympians.—This does not include genuine Olympians such as Hermes; but it does, on the one hand, include the purely heroic Zeus-Agamemnon, where 'Zeus' is almost an adjective, and, on the other, the Zeus worshipped at the Dian—Zeus Meilichios. Here the ritual is chthonian; the object of worship is often represented as a snake—a regular chthonian form—yet he is called 'Zeus the Easy-to-be-eat.' To the present writer this proves, with some approach to conclusiveness, that the powerful Olympian has been superimposed upon a local chthonian god—or ghost, it makes little difference—to such an extent as to blot out the original. The new form was, and less, merely the gloomy, chthonian nature of certain of the rites: just as a little later in the same month (Antheateron) Dionysos' vigorous personality all but effaces the ancient All-Souls' festival of Xerxes, which still betrays itself, however, in certain points of the ritual.

4. Finally, we must not omit an important class of chthoniacs, namely, the Eleusinians. Every Greek city had its Commination Service, and the powers who fulfilled the cure would naturally be chthonian— the Erinyes, for example. One of the best known of these solemn curses is the so-called 'Dirae of Toss,' with its liturgical refrain: 'May he perish, both himself and his kin' (ἐκίνημαι ἄμαλλοιν καὶ γίγος τὸ εκίνημα), while we know, from the parody in Aristoph. Thesm. 333 ff., the nature of the ritual. The story, told by every Athenian as an archon by the herald at the beginning of each ecleis.

4. Orgiastic ceremonies.—These, though foreign and never germane to Greece, deserve a word of mention, because they are associated with the

Great name of Dionysos. This is not the place for a detailed account of them; but it may be said that they rest on a basis quite different from the calm ritual of ordinary Greek worship. Instead of a simple sacrificial rite, or even a quasi-magic rite, such as we have seen surviving in the Thesmophoria, orgiastic religions seem to be the worship of the object of his worship—either by means of a kind of religious mania or self-hypnotism, induced by wild dancing and the like, or by a sacramental devouring of some animal believed to be the incarnation of the god. This, in the case of Dionysos, was generally a bull or a calf. He himself is hailed as a 'noble bull' in the Eleusinian songs preserved in Pindar, Qucest. 259, B, and often represented as horned or taurocephalous. But this was really a Thracian-Phrygian worship, and in Greece proper Dionysos was usually the recipient of a more sober and ordinary cult. Of his share in the Mysteries we have already written.

In connection with orgiastic and enthusiastic worship in general, the frenzy of prophets, and especially of the Pythia at Delphi, may be noticed. Here we have a curious bit of savagery, for it is simply the 'hymn to the horse' as he saw the god, surviving in the most orderly and most thoroughly Hellenic of all cults. The explanation perhaps lies in the fact that Delphi had been a mantic shrine before the coming of Apollo; and that certain traces of an older and cruder worship were not to be eradicated. At any rate, the actual givers of oracles were the official 'interpreters' of the priestess' inspired ravings, and not herself, as she was in all probability totally unintelligible.

Summary.—The variety of cults mentioned in this art. may perhaps give a wrong impression of the general nature of Greek worship. We close, therefore, by insisting on the fact that the average Greek ceremony, the sort performed by the ordinary worshipper nine times out of ten, was neither orgiastic, chthonian, nor magical, but consisted simply in a sacrifice, partly sublimated by burning, so as to reach the celestial abode of the gods, partly eaten by the sacrificer and his fellow-worshippers. This, from Homer times onward, was the normal expression of Greek piety. In the following ecclesiastical calendar, so to call it, of Athens, the preponderance of such feasts may be seen at a glance.—O. "indicating a festival of any sort in honour of an Olympian, 'Ch.' a chthonian, 'O-Ch.' a hero-feast, 'O-Ch.' one combining both elements.

The Eclesiastical Year at Athens (the dates of the festivals are from Mommsen, to whom the reader is referred).

FESTIVALS AND FASTS (Hebrew). — I. PERIODICAL FESTIVALS. — I. WEEKLY. — The Sabbath. — From probably an early period every 7th day was observed as the holy day of rest. Since the Sabbath is described in the cuneiform inscriptions as 'a day of rest for the soul,' 1 Sayce (Higher Crit. and Mon. 2, London, 1894, p. 74) argues for a Babylonian origin, and compares it with the observance of the 7th, 14th, 18th days, as days on which it was unlawful to do certain kinds of work. But the Jewish observance of the Sabbath was of a very different kind from that of the ancient Babylonians. The earliest historical reference to the Sabbath in the Bible is in Deut. 4:13, but the language used suggests that its observance was a long-established custom. The fact that at different times and different places its meaning was not the same is shown by the discussion in the Talmud (see HBD iv. 319).

FESTIVALS AND FASTS (Greek). — I. PERIODICAL FESTIVALS. — I. WEEKLY. — The New Moon. — This is frequently mentioned with the Sabbath and other festivals of ordinary occurrence (2 K 4:9-11). In the Bara' tradition a special offering was made of two young bullocks, one ram, seven lambs, and a goat for a sin-offering (Nu 28:13). Just as the Sabbath was probably the dedication of each phase, so the New Moon was the unification of the observation of the whole moon or month (see Calendar [Hebrew], § 1).

ii. MONTHLY. — The Hebrew calendar is based on the lunar year, and the monthly festivals are calculated in order to fall on the 1st day of the Hebrew month. The most important of these is the New Moon, which is marked by a sacrificial feast, at which all the household were expected to be present, unless prevented by some ceremonial uncleanness or other religious cause (1 S 25:1). In the Tosaphot the feast of the New Moon is said to be observed as a fast (see Calendar [Hebrew], § 1).

(a) Pre-exilic. — It is not improbable, when every important town had its separate sanctuary, that customs with regard to the festivals, their number and their character, may have varied in different localities. But there is evidence to show that at some sanctuaries, such as Shiloh, probably the most important temple of the early days of Samuel
—there was a great annual festival which, if not the only one, was so important as to be regarded as the great yearly sacrifice (1 S 1:5-21), and which all within the district attended, unless hindered for a sufficient reason (1 S 2:5). The early evidence of the state of things in Samuel's time, may at least be regarded as evidence of what was customary at a typical local sanctuary in the time of the early monarchy. With this we may compare the customs of the annual family feast, of which we have evidence in 1 S 20:26-28, at which the scattered members of the family assembled.

The annual sacrificial feast at Shiloh has been frequently identified with the Feast of Booths at the end of the year. It would probably be more correct to say that the latter was a later development of the annual festival. Ex 23:24 (post-exilic hot evidently based on earlier documents) certainly supports the view that this annual feast was originally a vintage celebration.

In the earliest legal codes, we find three annual festivals: (1) Unleavened Bread (Pesah), including perhaps Passover (Pesah; (2) Weeks (Shelah'; and (3) Ingathering (A'saph) (Ex 23:4, 34:21-23 (J)). That these were agricultural in origin is evident from the last two, and probably in that of the first.

1. Passover.—The meaning of this festival is not given in the early documents (its association with the Exodus being probably an afterthought); see below. Whether the Passover was celebrated once a year or more times is undecided (cf. 1 S 20:26-28). It appears to have been originally distinct: (1) the Paschal meal, or Passover proper, (2) the seven days' Festival of Unleavened Bread, (3) the wave-offering of the first sheaf ('omer).

(1) The essential feature of the Passover proper was the sacrificial feast of the Paschal lamb. There was a very ancient religious tradition that the firstlings and firstfruits belonged to Jahweh (Ex 13:11-13 20:24-26 23:19 34:21-23 (JE)). This tradition that in the last plague the firstborn of Egypt had been involuntarily sacrificed to Jahweh (Ex 13:19), and that the tribe of Levi was consecrated to Him as a tribe to whom the rights of the firstborn had been transferred (Nu 3:13-19), as well as the offering of all firstfruits and firstlings, including the redemption of men and unclean animals by the substitution of a lamb (Ex 13:12-13 etc.), belongs to the same cycle of ideas. What was more natural that the first lambs of the season should be offered to Jahweh? But, as it came to be a matter of importance, with the consolidation of the tribes, that the offering should be observed at all at the same time, the lambs would in due course have ceased to be necessarily the first-born, and the original intention of the feast has been lost sight of, or overshadowed by its connexion with the Exodus. This view of the origin of the Passover is borne out by the analogy of the Feast of Booths which, originally an agricultural feast, came to have an exclusively historical meaning (see below).

(2) The origin of the Festival of Passover is more uncertain. It appears to have originated from an old religious custom that all bread offered to Jahweh was to be without leaven (Ex 23:18; cf. 34:26 (J)], where the same prohibition appears to be confined to the Passover. In later times the law was not rigorously observed. At any rate a distinction seems to be made between unleavened cakes actually offered on the altar (Lv 22:18) and those which were merely prepared for the wave-offering of the firstlings at Weeks (see below), and the thank-offering (Lv 22:18). Whether the sheaf bread was made of leavened or unleavened bread is not clear. It is probable that in early times a distinction was made between the wave-offerings and the essential part of the feast, as usually the animal sacrifice, and what was merely eaten with it, as the bread. In the case of Maspoh, the unleavened bread was the essential part of the sacrifice, and later times, the unleavened cakes were the first prepared out of the barley harvest, analogous to the first two loaves of the wheat harvest at Weeks (Lv 23:20). There is no reason to suppose that the festival in early times lasted more than a day, or was even more than a single day. The chapters, though sometimes been explained, as by Wellhausen, as arising from the unwillingness to mix the firstfruits of the new season with what belonged to the old, the leaven being a piece of old fermented dough. Even in the earliest family feast, of which we have evidence in 1 S 20:26-28, at which the scattered members of the family assembled.

In the Priestly Code the Feast of Maspoh follo
Josiah. It does not, however, appear in D to be necessarily connected with the festival of Ἱεροσόλυμα; and, if the view taken of the latter be correct, it would naturally have preceded it by a few days. According to the former view, the times have taken place on the morrow after the Sabbath in that festival (Lv 23:10). This has generally been explained as the day following the first day of the feast, i.e. the 16th of Abib (see Jos. Ant. iii. x. 5), but the Sabbath being obvious and necessary in the immediate context in vv. 13, 14, and probably should be so understood here (see Driver, PB, 'Leviticus,' p. 94). The reason for fixing this day was probably that the cutting of the corn was unlawful on the Sabbath itself. At a later time, when the Sabbath was understood to mean the first day of the Feast, it became a burning question whether the cutting of the sheaf was lawful if the day after happened to fall on an ordinary weekly Sabbath (Edersheim, Temple: Its Ministry and Services, p. 222 f.). The waving of the sheaf was followed by an offering of a lamb with a meal-offering. The Feast of Ingathering, therefore, may be thought of as the new corn, whether parched or in leaves, be eaten (Lv 23:4).

2. The Feast of Weeks.—The second festival in the book of Joel is the Feast of Weeks, or Harvest, the firstfruits of their labours, in 343 as the 'feast of weeks, the firstfruits of wheat harvest.' The name 'feast of weeks' is explained by the fact, stated in Dt 16:9, that it took place 7 weeks after the beginning of the harvest (i.e. the barley harvest); hence the Gr. πανάγνησις, the 50th day. But the name and the relative date which gave rise to it are both very artificial, and are hardly likely to be original. If they had originated with D, they probably illustrate a custom in vogue at the Temple of Jerusalem, and exemplify the natural tendency, especially in a city, to substitute, for the sake of general convenience, fixed dates for the chances of the natural seasons. It seems likely that the festival was originally known either as the 'day of the harvest' or as 'the day of the firstfruits'—a name which survived even in D (Nz 22:14; but the phrase, 'the firstfruits of the harvest,' raises a further question, whether originally the rite may not have consisted in the offering of a sheaf of wheat analogous to the sheaf-offering of barley at the commencement of the barley harvest (see above). If this were so, the festival must originally have been only a few weeks after the Passover. At a later time, at any rate, the firstfruits consisted of the first two ears made out of the new wheat (Lv 23:17 [H]), analogous perhaps to the original intention of the Feast of Unleavened Bread. In the Priestly Code the sacrifices were the same as on the 7 days of Ἱεροσόλυμα.

Just as the Passover became the Easter of the Christian Church, so did Weeks (Pentecost) become the Whitsun Feast, commemorating the outpouring of the Holy Spirit on that day (Ac 217 [E] 212 [J]) is described in these ancient codes as taking place at the end of the year, i.e. about the antannel equinox, but otherwise does not appear to have been definitely fixed. It is implied in D (Dt 16:9-12) that it was a thanksgiving for the produce of the threshing-floor and the wine-press. It is to be kept with joy for 7 days. No explanation of the basis of the D date is evidently spoken of as a well-known and recognized custom. In H (Lv 23:16, 19, 20, 41-45) it is ordered that it should begin on the 15th day, and that it should last 7 days (v. 40), which speak of an almost definitely fixed. It is implied in D of the shaving of the threshing-floor and the wine-press. It is to be kept with joy for 7 days. No explanation of the basis of the D date is evidently spoken of as a well-known and recognized custom. In H (Lv 23:16, 19, 20, 41-45) it is ordered that it should begin on the 15th day, and that it should last 7 days (v. 40), which speak of an almost definitely fixed.
able resemblance in the name and ritual between this and the feast which is called in later times the 'Day of Lights' (see Bingham, Ant. xx. iv. 6, 7).

4. Purim (called also 'Mordecai's Day.') In 2 Mac 11. 35 it is mentioned as the 13th and 12th of the 12th month (Adar), with an allusion to the custom of Mordecai and Esther to celebrate this festival. But it may be supposed that the Book of Esther was written at a date when the custom of the Jews to celebrate this day was more in the ascendency than at a later period, since it has been shown that the name Mordecai was chosen to express its primitive character (see above). The feast of Purim may have been originally a Persian or a Babylonian institution adopted as a secular feast by the Jews, and afterwards invested with a religious character. Even in later times the only religious ritual for many centuries appears to have been the solemn reading of the Roll (megillah) of Esther. See, further, art., 'Purim,' in BD, vol. ii. 153 ff.; and cf. Frazer, Gen. iii. 155 ff.; also below, p. 914, sec. 4.

5. Feast of Nicanor.—This was appointed to be kept on the 13th of the 12th month (Adar), in the time of Judas Maccabaeus, to commemorate his victory over Nicanor (1 Mac 7: 2, 2 Mac 12). But it never appears to have been observed as the basis of a great festival. Josephus says of it: 'The Jews thereon (i.e. the 13th of Adar) celebrate this victory every year, and esteem it as a festival day' (Ant., xii. 5). Another reason for the absence of this festival is that it was overshadowed by the Feast of Purim, and came to be kept as a fast in commemoration of the fasting of the Jews connected with the object of that feast (1 Es. 4).

6. Sacred years. —I. The Sabbatical year.—An ancient law provided that the term of service for a Hebrew slave should be 6 years, and that in the 7th year he should at least have the option of going free (Ex. 21: 2-6). But this was never enforced, and the law was practically ignored. Another law provided that the land should not be sown, or any work done in the vineyard or oliveyard every 7th year, but the self-grown crops were to be reserved for the poor and the beasts of the land (Ex. 23: 11). In Deuteronomy there is no provision for the land lying fallow in the 7th year, but, in addition to the law of slave-release every 7th year, there is another requiring the release from all debts in each 7th year, which in this case was called the 'Jubile' (Deut. 15: 1). But the first it was overshadowed by the Feast of Purim, and came to be kept as a fast in commemoration of the fasting of the Jews connected with the object of that festival (1 Es. 4).

II. Sacrifices.—The laws regulating this year are given in Lev. 23: 17, 20, 22, 24, 27-31. As, however, the first and principal passage breaks the context (vv. 17 and 18 dealing with the Sabbatical year), it is probable that it is a later interpolation derived from an original passage as belonging to the Priestly Code (Driver, on the other hand, in his 'Leviticus,' PP., regards vv. 18-20, requiring the restoration of the land, as a genuine part of I.). According to the text as it stands at present, every 50th year (or probably every 49th year; see below) — (1) all land is to be restored to its original owners (vv. 10, 23-16, 25); (2) all slaves, whether Hebrew or foreign, receive their liberty, and no choice of bondage is contemplated (v. 16, etc.); (3) the land is to lie fallow, as in the Sabbatical year (v. 17); (4) the year itself is to be proclaimed by the sounding of a loud horn on the 10th day of the 12th month. (1) The first of these regulations made all possession of real property practically a sort of lease, and calculations were made as to the length of tenure in buying and selling land. Originally it was not a continuous, but a seasonal, release of real property, which descended from father to son (see 1 K. 21). But the custom had long fallen into abeyance (cf. Is. 58), and the regulation of P was probably the result of a fusion of both. (2) The second was the first instance of a modification of the old custom. (3) The same tendency is shown with reference to slave release. The law in this respect was probably an attempt to enforce, on every jubilee, what should have been observed in every 7th year, but in fact had not been. (4) Perhaps the same was intended with reference to the fallow law; but in this case the 7th year's rest was in fact revived and enforced. (5) It has been suggested that the year originally began on what was afterwards not the 1st but the 10th day of the 7th month. This would account for the Attonement being afterwards connected with it. The atonement of the sacred things on probably the 1st day of the 7th month, proposed by Ezekiel, may be a continuation of a pre-exilic practice (Ezk 45: 1-7; see below, III. 2). The absence of any reference to debts is singular if it was intended as part of the jubilee's release: cf. the corresponding release of the Sabbatical year, but it is partly explained by the law which forbade usury altogether to a Hebrew (Lev. 25: 35-38).

It has been argued that the law of jubilee was merely tentative and was never really enforced, on the grounds that: (1) it was impracticable to have a second year of jubilee immediately following the last, viz. the 49th year; (2) there is no certain reference to it in history, and in fact the only Sabbatical years of which the date is actually known, viz. 104-105, 163-164, etc., and A.D. 68-69, do not give room for an intercalated year. But these objections depend largely on the assumption that the year of jubilee was intercalated after the 40th, and that the next jubileal year was reckoned not from the last, but from the year of jubilee. This is nowhere stated. On the contrary, it is quite possible that the jubilee was intercalated before the 40th year. "Then shalt thou send abroad the loud trumpet" (Lev. 25) might as well refer to the 40th as to the 50th year of the cycle. The 10th day of the 7th month is equally difficult to explain in either case, but the difficulty disappears if it was a custom to keep a feast on this day. No mention is made, in connection with the Sabbatical year of Lev. 23, of the release either from debts or from slavery, but the first is clearly implied in Neh. 10: 31, where it is evidently referred to as an ancient custom. We find several references to the Sabbatical year in later times. In it all warlike operations ceased (Jos. Ant., xiii. viii. 1, 17; Jdt. ii. 4). In it they held it as unlawful, or perhaps only as impracticable, to partake of it at any rate, and again the laws regulating it might be interpreted thus (Ant. xi. viii. 5). Tacitus complains that the 7th year was given by the Jews to idleness (Hist. v. 4).

II. Occasional festivals. —Festivals not followed up by a yearly commemoration were appointed to celebrate some important religious or secular event, such as the bringing of the Ark from Kiriath-jearim (2 S. 6: 19-23), the coronation of
the king (1 K 1:4), the dedication of Solomon's Temple (1 K 8:46), the victory of Jehoshaphat over the Ammonites and Moabites (2 Ch 18:24), the laying of the foundation of Zerubbabel's Temple (Ezr 3:10), the dedication of the city walls by Nehemiah (Neh 12:27). If the date of the "7th" of the Chronicler cannot always be trusted in his descriptions of such events, there is abundant evidence of the custom itself. Some of the Psalms, especially Ps 120, embody the contents that they were written for such occasions.

**III. Periodical Fasts.**

1. The earliest appointed fasts were those instituted during the Exile to commemorate events connected with the siege and capture of Jerusalem (Zec 7:1-13). The fast of the 4th month (17th of Tammarz which commemorated the capture of Jerusalem (Jer 39:10), 2 K 25:4) gave the 9th as the day that the breach was made by which the king, etc., escaped, but do not make it clear that the city was at once captured. The fast of the 5th month (9th of Ab) commemorated the destruction of the Temple (according to Jer 52.18 2 K 25:6-7) in 2 K 25:7 (the 7th). The fast of the 7th month (2nd of Tisri) was said to commemorate the murder of Gedaliah and his companions at Mizpah (Jer 41:1-2 2 K 25:23). The fast of the 10th month was in the 10th of Tisri (Jer 33:14; Zec 8:19). After the Return, the question arose whether these fasts should be still observed. Zechariah answered it by saying that the observance of them had been strictly speaking, after all, a purely selfish thing; that what Jehovah really cared for was justice and mercy (8:19-22; cf. the similar teaching of Is 58:10-12); and that the time was coming when these fasts would be "joy and gladness, and cheerful feasts." They, still, however, continued, and new traditions arose to account for their origin. Thus the first was said to be the anniversary of Moses' breaking the tables of the Law; the second was held to commemorate also the destruction of the Second Temple by Titus, etc.

2. The Day of Atonement (yom hokkip'arim, "Day of Coverings," which came to be known as, par excellence, the "Day") was observed as a complete day of rest and fasting, from the evening of the 9th to the evening of the 10th of the 7th month (Tisri). It was evidently unknown in the time of Zacharias (see above); and perhaps in the time of Nehemiah (ch. 9) it was not made use of for the special purpose of a national humiliation, but a day for the purpose was appointed just a few months later, when the feast of Trumpets was duly celebrated on the 1st, and that of Booths on the 15th-22nd days of the same month. It was probably a very late institution, belonging to the period of a late recension of the Priestly Code, the laws regarding it in Lv 23:23-32 being a later insertion in the Law of Holiness. Curiously enough, in Ezekiel's Temple (Ezk 45:15) the atonement for the Temple takes place on the 1st day of the 1st month and on the 1st day of the 7th month (so probably correctly, LXX); but there is no mention of any atonement for sins. This raises the question whether the atonement was not originally intended as a sort of annual consecration or purification of the Holy Places, the 10th day of the 7th month having been originally, so it has been suggested, the beginning of the year (see above). This pushing of the Holy Place affair back to be a very prominent feature of the ceremonies of the Day. Of these, as the rite existed in later times (Lv 16), the most important were the offering of a young bullock by the high priest, as a sin-offering for the iniquity of the sanctuary, and of the goats by lot—one for Jehovah, which was sacrificed; the other for Azazel, which was sent into the wilderness after the high priest had confessed over it the sins of the people. It is probable that Azazel (q.v.) was originally some popular deity, perhaps connected with the goat-gods, 32'thon (Ltv 17, 2 Ch 11:14, Is 15:19), which were believed to inhabit desolate places (cf. Mt 12:24). It came afterwards to be regarded as an evil spirit, just as the Ekronite god Baalzebub (2 K 1) came to be taken as the name of the prince of devils (Mt 12:24). The meaning of the name then became. that the sins were consigned to destruction. According to the Mishnic tract Yoma, the goat was led out and thrown over a rock. The high priest entered at least thrice into the Most Holy Place, purifying it by sprinkling the blood of the bullock and the goat about the mercy-seat, or the stone which afterwards represented it, and cleansing them with incense. The Holy Place was afterwards purified in the same way. This was the only day on which even the high priest, and then he only, was permitted to enter the Most Holy Place. For a symbolic explanation given by an unknown Christian writer, see He 9:24.

3. Weekly fasts on Mondays and Thursdays were practised by the stricter Jews between the Feasts of Passover and Weeks, and between those of Booths and Dedication (cf. Ltv 14)—the latter a week-day being strictly observed, the sabbath on which Moses went up Mount Sinai to receive the two tables of the Law, the former that on which he descended (see Lightfoot, Hor. Heb. on Mt 23).

**IV. Occasional Fasts.** In pre-exilic times there were no regularly recurring fasts, but fasts were proclaimed as acts of humiliation and penitence on the occasion of national calamities, etc. Thus we read of the fast at Mizpah in consequence of the oppression of the Philistines, followed by their overthrow (1 S 7:5; cf. 2 Ch 20); that appointed by Jezebel when she got Naboth accused of blasphemy (1 K 21); that appointed in the reign of Jehoashim, probably with a view to warding off the threatened attack of the Chaldeans (Jer 36:4). We find the practice of special fasts continuing in post-exilic times, and such a fast was appointed by Nehemiah on the 24th day of the 7th month as a national act of penitence (Neh 9; cf. also Jon 3:1, Jl 1:14 2:3).

**Festivals and Fast Days (Hindi).** As described in ancient literature, all Hindù festivals were religious; and this is not due solely to the fact that the literature itself is religious. Either inherently, as in connexion with sacrifice to a god, or artificially, as when a coronation was accompanied by rites which made the whole ceremony a religious festival, all celebrated in pre-Buddhist times consisted partly in feasting and partly in religious exercises.

**I. ANCIENT FESTIVALS.** Among the seasonal festivals the moon-feast always held a high rank, and is important not only on account of its authority, but also on account of its prevalence, since even the Buddhists preserved a memory of it in the
FESTIVALS AND FASTS (Hindu)

Upa\-n\-a\-tha festival, though reduced in that sober organization to a Saddle-day observance. In the sacrifice at the new moon, and the full moon, the Hindus themselves recognize the prototype of all sacrifices of similar character, and they are probably right in doing so. The moon-festival lasts two days at the new moon and one day at the full moon, but neither the latter has so well preserved the festival character as has the ‘four month’ celebration (see § 2).

2. The seasonal ‘four-month’ celebration, as the name suggests, occurs at the beginning of the seasons of four months each, so that there are three in every year. At the close of winter or the beginning of spring the celebration is ostensibly in honour of the All-gods; at the beginning of the rainy season, in June, it is in honour of the water-god, Varuṇa; and in autumn it becomes the sacrifice of firstfruits. Especially in these seasonal festivals is the old popular participation in the religious rites predominant. The goat and ram which are sacrificed are decorated with phallic-figures, and the wife of the sacrificer has to confess in public how many lovers she has had and wish them all ill. She and the sacrificer take a bath of purification annointed with a holy oil, and the beaten sacrifice go to the fire on the occasions, in which the man and woman wash each other’s backs.

3. There is also a special ceremony of firstfruits, in the time of eating of the firstfruits is regulated religiously.

4. In the soma-sacrifice the dramatic element enters in the purchase of the intoxicant. The Vājapeya, an autumnal soma-festival and sacrifice, has a number of such popular elements. The chief participants were garlanded with ‘golden garlands’, and at a fixed time there was a horse-race over a measured course (seventeen bow-shots), in which three horses were harnessed to one car, and sixteen other four-horse cars took part in the race. This festival was marked by the drinking of sūvā (brandy) as well as soma. The crowning of the sacrificial post and the special prominence of agricultural elements point to the fact that it was at first a farmers’ festival, though it has become a weak priestly affair, from which the popular character has disappeared. See, further, art. Am. Saka, vol. i. p. 24.

5. Either in autumn or in spring occurred the consecration-ceremony, which, as occasion demanded, was celebrated as a sacrifice; but it also contains much of popular usage, such as magical rites, war-games, and a special ceremony to cure the drunkenness due to debauch. The king is soundly beaten, and the reminiscence of human sacrifice still lingers in the formal ritual of the great occasion. The inhabitants of the realm may not cut their hair for a year after this ceremony—a tabu met with in other parts of the world.

6. Like a public festival is the horse-sacrifice, later associated with the assumption of the dignity of emperor, but originally not peculiar to this function. It is one of the oldest of Hindu sacrifices, and must have been originally a carouse of the gods, and a special ceremony to cure the drunkenness due to debauch. The king is soundly beaten, and the reminiscence of human sacrifice still lingers in the formal ritual of the great occasion. The inhabitants of the realm may not cut their hair for a year after this ceremony—a tabu met with in other parts of the world.

7. Apart from these celebrations, the beginning of the great modern festivals which terminate annual pilgrimages may be seen in the early mention of pilgrimages and sacrifice in certain particularly holy spots, such as those to the Sarasvati and Drāpadviti rivers. The tīrtha, or ghāt, where a stream is fordable, became, in the case of a holy river, the meeting-place of pilgrims. Such pilgrimages are recognized but not approved by the early writers, who admit only the efficacy of sacrifice at a holy place; but such orthodox objections were set aside after the visits at Buddha’s shrines and similar popular, and, in the first centuries before our era, hundreds of holy places were known and visited by the devotees of various Brahmanical gods.

8. Modern Festivals.—These stand to those of ancient days somewhat in the same relation as private and public festivals stand to each other. They cannot be entirely separated from the old, yet they are so new in their character as to be virtually distinct. The old occasion is preserved, or rather it forces itself upon the notice of the public; but that public is so different, and the ceremony of celebration is so diverse in details, that it is new in effect, though old in general character. The chief local festivities to-day are associated with places and deities unknown to the ancient world of India; but the seasons remain the same, and the celebration of the advent of spring characterizes the fact that the old spring-festival. To whom the honour is paid is of less importance than that the festivity should be celebrated. The rites in honour of one god may be passed over, or modified without materially altering the celebration, and sometimes even to-day the same celebration is held in honour of different gods. Thus the very pleasing ‘lamp-festival’, in which, in autumn, lamps are lighted in every direction, while the horse and the sacred river, etc., is celebrated by some as a festival in honour of Vīṣṇu’s wife, and by others in honour of Durgā (g.v.), the wife of Śiva. One thing is to be remarked in regard to the modern festivals, as

- The adoration of the steed, and the music and obscenity of the rites are shown in the ritual; but the main object of the popular character of the festival is more truly conveyed by the description of the horse-sacrifice in popular literature (see, further, art. Aṣvamedha, vol. ii. p. 106).

9. Among the most popular and the oldest was the celebration of the solstice-feast. Many popular traits connect the old ritual with the modern New Year’s festival—music, lute-playing, the dramatic ceremonial and the turn of the sun dramatized by discus-play and by mounting the swing. Each of the two solstice-festivities had its proper divinity and melody, and the melody of the summer solstice was accompanied by drums, to imitate thunder, while that of the shortest day was accompanied by the rattle of war-cars, representing an attack on the evil spirits of winter. The dancing of girls round fire, with full water-jugs, and their singing (‘a joyous song’) were additional popular elements.

- A twelve nights’ celebration occurred after the winter solstice, though little remains in this of festival character, except the recognition of a period of extraordinary sacrifice and the sanctity of the days. In the present day it is considered sacred, when the Ribhus, the three personified seasonal deities who divided up the year, slept. The weather of this season was taken as a prognostic of the year to come, and the reasons to-day for celebrating the similar feast in South India. The eighth day after the full moon of the new year was the exact ‘type of the year’, which determined whether the year was to be lucky or not.

10. Apart from these celebrations, the beginning of the great modern festivals which terminate annual pilgrimages may be seen in the early mention of pilgrimages and sacrifice in certain particularly holy spots, such as those to the Sarasvati and Drāpadviti rivers. The tīrtha, or ghāt, where a stream is fordable, became, in the case of a holy river, the meeting-place of pilgrims. Such pilgrimages are recognized but not approved by the early writers, who admit only the efficacy of sacrifice at a holy place; but such orthodox objections were set aside after the visits at Buddha’s shrines and similar popular, and, in the first centuries before our era, hundreds of holy places were known and visited by the devotees of various Brahmanical gods.

11. Modern Festivals.—These stand to those of ancient days somewhat in the same relation as private and public festivals stand to each other. They cannot be entirely separated from the old, yet they are so new in their character as to be virtually distinct. The old occasion is preserved, or rather it forces itself upon the notice of the public; but that public is so different, and the ceremony of celebration is so diverse in details, that it is new in effect, though old in general character. The chief local festivities to-day are associated with places and deities unknown to the ancient world of India; but the seasons remain the same, and the celebration of the advent of spring characterizes the fact that the old spring-festival. To whom the honour is paid is of less importance than that the festivity should be celebrated. The rites in honour of one god may be passed over, or modified without materially altering the celebration, and sometimes even to-day the same celebration is held in honour of different gods. Thus the very pleasing ‘lamp-festival’, in which, in autumn, lamps are lighted in every direction, while the horse and the sacred river, etc., is celebrated by some as a festival in honour of Vīṣṇu’s wife, and by others in honour of Durgā (g.v.), the wife of Śiva. One thing is to be remarked in regard to the modern festivals, as
compared with the old, namely, that whereas the old seasonal festivals, such as those of the New Year, spring, and autumn, were degraded into rituals, in the modern, in most cases it is hard to recognize the original intent, the modern festivals have thrown off Brāhmanism as far as possible, and are more clearly celebrations of seasonal types, the spring-festival is more-sufficient. In other words, in the modern festival we have a reversion to the real meaning of the feast, which, even in the oldest literature, was already so buried in ritual as to be virtually lost. Most of the modern festivals either consist, or are held in connexion with pilgrimages to some holy place, the shrine, or the river tirtha.

In Northern India the most famous of these types are respectively the spring-festival, the pilgrimage and celebration at the shrine of Jagannath (originally Buddha, now Viṣṇu), and the pilgrimage and fair at the junction of the Ganges and Jamuna rivers (Alāhābād [q.v.]). The seasonal festival is celebrated by all; that at Puri, in Orissa, in honour of Jagannath is supposed to be celebrated by worshippers of Viṣṇu, but is actually celebrated by worshippers of Śiva and Durgā as well; while many religions have their own pilgrimage. It is a case to Alāhābād, to wash away his sins and enjoy himself at the fair. In South India the spring-festival is celebrated much as in the North, and the Tirū prāthi, known in the North, though with rather more pronounced sectarian feeling. There is, however, a great difference in the character of the different modern festivals. The clearest is the tirūka celebration. This is really a moral as well as a religious performance; and, though men and women bathe together almost naked, there is no wantonness, and no advantage is taken of the situation by evil-minded men. It is a festivity by accident, due to the immense concourse of people and the resultant fair. It is kept, as it is intended to be, as a purificatory. On the other hand, the temple and shrine pilgrimages in honour of an erotic deity are naturally more or less erotic in character, and at the spring-festival indecency is part of the recognised programme.

Finally, before passing to a closer consideration of the modern festival, it should be said that between the old and the new there must have been a large number of special festivities now lost sight of, or only faintly reflected in the intermediate literature—not to speak of the many special festivities that are described in the medieval Purānic and Tantric literature. Some of these appear to have been popular as well as sectarian; but we know very little about those not described in religious books, and the latter, as described, consist in childish rituals.

Some of the modern festivals are both sectarian and seasonal. Thus the spring-festival in the South is often a Kṛṣṇa festival and love-feast, and the autumn-festival in the North (Bengal) is indifferently a seasonal or Durgā feast, as it is now called. As in the devil-frightening festival already referred to as the ‘Jamp-festival,’ the original intent of the celebration is merged in the worship of some modern deity. The same sort of a celebration as that in honour of Durgā is held in other parts of India in honour of Śītā, the wife of Rāma. Rāma’s birthday—Rāmakṛiti—is observed in South India, and it survives to-day in practically the same form whether as a feast to Durgā or to Śītā. A characteristic feature of all these festivities is mimetic exhibition, which on the stage assumes serious proportions, but on the street is simply licensed vulgarity.

The Holi (spring-festival) is, as in other countries, the occasion when this sort of thing is most pronounced. The orgies of obscenity which welcome the return of spring are scarcely veiled. The very cars of the gods are decorated with huge garlands of flowers, and the mimes now kept from view, but which in India form the delight of men and women. The law practically permits of any excess, the god encourages it, and the nature of the people, which makes the law and its changes, or any change held in connexion with pilgrimages to some holy place, the shrine, or the river tirtha.

The chief seasonal festivities are the Makaravatīrthās, which vary in the North, and the prāthi, as in the South. Thus we have a New Year’s Day, which is the time for the great pilgrimage to Alāhābād and the annual bath of purification in the sacred rivers of the North, while in the South it is the season for the festival called Pongal, at which the boiling of the new rice is watched and regarded as an augury for the New Year, and cattle are led about decorated with garlands and treated with veneration. Presents are given to friends at this time, and general rejoicing takes place. The festival lasts for three days, and is officially a celebration of the Vedic gods Indra and Agni, with the addition of the (later) god Gaṅeśa. The cooking of the rice is in the South the main event of the Pongal, which has given the name to the festival. Anxious bands await the verdict of the official cooks, and, when the rice boils, a glad cry resounds, ‘It boils, it boils,’ and with intense excitement, they repeat the acclamation. In Bengal the New Year is inaugurated in spring, and here the main features are the worship of the Ganges and the cult of the chhenti, or hawking-bean. While at the date of the southern Pongal, the bathing-festival, which brings together 100,000 people, absorbs popular interest.

Between the New Year’s and the Holi festival a special day is devoted to the worship of the goddess of eloquence and arts, Sarasvatī, at which time books are worshipped and fasting is enjoined; but the occasion is also a festival, more especially for children; and boys play games to celebrate the day. Another day is devoted in early spring to Śiva, whose phallic image is worshipped, with fasting and prayer, by pilgrims. The birthdays of the two popular gods, Rāma and Kṛṣṇa, are also observed by adherents of these sects, one of them coming on the ninth of Chaitra (March-April) and the other in July-August, just before which there is a celebration in honour of the fabulous Naga, although the birthday of Kṛṣṇa is sometimes celebrated as an autumn-festival, in August-September (the eighth and ninth of the month Bhadra). On the fourth of Bhadra, Gaṅeśa, the ‘son of Śiva,’ in many places, is represented by his image is thrown into the water. The Durgā festival of Bengal occurs in the month Āśvin, on the tenth day of the light half of the moon, about the time of the autumnal equinox. After this
there is the 'lamp-festival' in October (see above), and at the full moon of October-November (in the native month Karttika) a celebration especially devoted to Siva. The great goddesses, wives of the god and mothers of the nation, have their festivals; and since these there is a great festival in honour of women and children, or the goddess supposed to be theirs, namely, the 'mother of sons,' who is revered under the name of the Mother-goddess. This festival (in Bengal) consists chiefly in processions and music in honour of the mother-goddess. The procession goes to the banyan tree, and the participants worship and pray to her there. On this occasion fathers-in-law are expected to give presents to their sons-in-law, and the time is said to be 'one of the happiest days of the year.' The festival of fasts, to which reference has already been made, is not one in honour of a special god. It is held at the season when new grain is ripe; and offerings are made to gods, names, cattle, cows, and jackals. The rites to the names are celebrated with great solemnity in February at Gayā (e.g., the old seat of Buddhistic worship—some say because the Buddhists were regarded as most opposed to this cult. It is at present a stronghold of Vaishnavism.

The chief day during the period of the celebrations, which is often considerable, is easily met at places where there is a huge concourse of visitors, as at Puri or at Pāndharpur, in the Bombay Presidency, where as many as 50,000 pilgrims gather in a day; but many small communities the cost is met by public contributions, and several villages will often combine to have a festival in common—building a pavilion, honouring the god, and providing the feast. The idol that is made use of on such occasions is a temporary effigy, made of clay and sticks, and is 'animated' by the priest, who, at the end of the festival, flings the image into the water. At the small village celebrations the prayers and processions are, of course, in honour of the local deity thus represented, but the entertainment is more popular, and often consists in an evening recitation by professional story-tellers (or miracle-plays by professional actors) in honour of any god. Such entertainments sometimes include a nautch dance, theatrical representation of some mythological story, etc., and are not infrequently levied. In India on the two occasions of the Ratha-yātra, or char-journey, of the god, to which thousands assist, and in the confusion and tumult the worshippers sometimes lose their lives. The cars are lofty structures, unwieldy wooden buildings on wheels, embellished with obscene sculptures, and dragged through the streets by a frantic mob of devotees. Such a yātra at Puri in honour of Viṣṇu, or at Bhuvanesvar, in honour of Śiva, forms the chief public gratification of the god. Like many other traits of modern Hinduism, it was probably borrowed from Buddhism. At Puri there are three yātra; the first being followed by the car, and being the beginning of the celebration. It is called Jāma-yātra, and celebrates the bathing of Viṣṇu's image.

That there were many festivals not included under the screen of religious rites in ancient times may be inferred from a grant, if not exactly modern, at least not mediaeval; that is, it reverses at most to an age subsequent to that of the Vedas. There are such eras in common use—two political, two sectarian, and one personal. The first political era is that of Viṣṇu, in India regarded as equivalent to the year 57 B.C. This is designated at times simply by the word Samvat, 'year,' which leads to confusion, since the second political era is regularly designated; a non-intercourse era is the 'era of the Scythians' (Sāka), popularly identified with A.D. 78. The two religious eras are those of the Buddhists, in Burma and Ceylon, and of the Jains, in North India. Buddha was born (probably) 500 years before the Viṣṇu era, so that his death (at the age of eighty) would have
FESTIVALS AND FASTS (Hindu)

The Vedic literature is based on the entire lunar month, which is divided into four stages, each with a length shorter than the preceding.

For dates within a year the popular method has always been to give the day by the asterism (moon-station) in which an important event occurred, which designated the month, and by the fortnight; also, to be more exact, by the muhārta, or hour of the day, sometimes by the night-watch (each night having three watches). Thus: 'on such a muhārta of the tenth of the month called Dasamangala Manvantara,' which is the name of the day and month, is evidence that the five-year cycle of later periods was already recognized. According to this cycle, the solar year and the shorter lunar year were adjusted to each other by the insertion of an extra month on the second and fifth year of the cycle.

The sacrifices and festivals depended upon the moon far more than upon the sun in India, and this is also recognized in the Rigveda, which speaks of the moon as 'determining the seasons'—whether the sacrifice or the year is not stated; but, from the context, the latter is less probable, and in fact the moon had nothing to do with the annual seasons, of which only three were recognized: Heat, Rains, and Cold (later five and six seasons were known, but these also were named without reference to the moon). Moreover, the names of the months refer only to lunar months. The path of the moon through the heavens was laid out according to the stars or constellations through which it passed in the course of its round. These were 27, later 28, stations of the moon, and formed altogether a sort of lunar zodiac, like that of the Chinese and Arabs.

The fact that the moon-stations called naktām were already utilized to make the calendar of the month, which is important, bearing upon the

A sectarian distinction. This is not the place to discuss the probability of any of these dates being correct historically. At any rate, in this era of the calendar, a month is equal to a lunar month (an extra year in 1802).

2 For details, see art. AGENS OF THE WORLD (Indians), in Vol. I. 250. After the Hindus came in contact with the foreign teachers, from whom they were ever prone to learn, they acquired the knowledge of the progression and then developed the monstrous system of zōna, kalpas, and manvantaras, to which we came in Persia, according to which even one age includes 4,293,000 years.

3 The relations between the Hindus 'moon-stations' and the Greek Signs of the Zodiac show that the latter borrowed many of their signs from the former, who, however, could not have known them (the signs are all from the Babylonian solar zodiac). Strictly speaking, only a few of the constellations represent zōna. The first, corresponding to stars in Aries, is called 'Horse (head)'; the third is (Teridōs) 'six nymphs';

question of the date of Vedic literature. Besides the lunar month to the Ilma, the Hindu month is divided into four stages, each with five subdivisions each, but do not seem to have subdivided further, though the week, a 'seven-days,' is a period frequently alluded to in later literature. The lunar fortnight division attracted the attention of the Romans and the Qumrants before the Christians, and the period of Alexander (viii. 9), speaks of it as a noteworthy fact.

As the five-year cycle was divided into years, each having the same name and divinity—Sama, Sāra, Parivāra, Iđava, Sutva, Uda, and the divinities being respectively Fire, Sun, Moon, Creator, Indra—so the greater cycles afterwards employed by the astronomers were divided in the same way.

Apart from these cycles, two popular methods of reckoning are known, one of which is the Kalī-cycle, already alluded to. Another, confused with it, is called the cycle of the Seven Seers (i.e. the stars of the Great Bear), which are supposed to change their position once in a century, according to the asters that the Seers are situated. Thus, as their cycle of notation is 2700 years. Medieval historians have alluded to this cycle, which was a popular one, with their more learned reckoning. So Kalhana says that the 24th year of the 'people's era' is identical with the Kali-month called Dēpak. The popular belief was that the Seven Seers had been for seventy-five years in the asterism Magha when the Kali-age began. The cycle of the Seven Seers is carried back to a date corresponding with the year 4077 B.C.

The astronomical cycles known as 'eras of Jupiter' (the planet Bṛhaspati) are two, one of one revolution of the planet, that is, of twelve years, in which each day is called after the asterism in which Jupiter heliacally rises, and one of five revolutions, that is, of sixty years, in which the first year corresponds with the initial year of the Kali-cycle. In the South this era is regarded as identical with the solar year. There are locally known cycles of less importance, such as the 1000-year cycle of Pārašāma, recognized in the South, but known in the North, even to astronomers, only by name. The only one of these cycles can claim a respectable antiquity is the sixty-year Jupiter cycle, which perhaps reverses to a time antecedent to the beginning of the Christian era.

FESTIVALS AND FASTS (Iranian).—The extant Avesta contains no specific information regarding festivals or fasts, and what literature does exist is almost equally silent. Nevertheless, the Dinkart states (viii. vii. 1, 3, 8, xxix. 8, 10, xiv. 4, tr. West, SHE xxxvii. [1892] 15E, 95, 167) that the last day of Fes-ti-val, Hûparán, and Hadîxôti Naskids discussed, among other matters, 'what is about a season-festival; where the appointed place is, when is the celebration held, and when it has fully elapsed; the assembly of the season-festival, and the duration for the feast; what and where when the celebration is possible, in what proportion the days are to be computed to the festival of the sær (the feast); and divided; where its advantage is, and what benefit there is from it to the good creations both spiritually and materially.' The sinfulness of a failure to celebrate the season-festival is also considered in the Dinkart, and there are a number of minor allusions to the festival in Pahlavi, such as Zâd-i Mainog-i Xrast, iv. 5, vili. 13, Sâstga-i Sâstga, xii. 10, xiii. 29, xvii. 84, xiv. 4.

Besides the season-festivals, we find allusions to the days of the guardian spirits in Bahmen Yâst, ii. 43, Sâstga-i Sâstga, x. 2, xii. 31, Sad Dor, vi. 2. The 'season-festivals' here mentioned are the gahânbâr (the 'yearly'—gâyra—divinities of Yasna i. 9, ii. 9, Vêsp. f. 2, ii. 2), which have been considered in art. CALENDAR (Persian); and the 'days of the guardian spirits' constitute the festival of the Fravashis (cf. p. 645, iii. 717f., also art. FRAYASHIS).1 There is also some reason to believe that there were four lunar festivals in each month. In Yasna i. 8 (so also ii. 8, Yâst vii. 4) occur the words, nisîxhâyâni 'hârsnârâ-yêni mokhtâlî, vêdast, 917, ... perèvî-hârî vêdastkhârî, 'I dedicate, I perform (the sacrifice) for the month (the gods), the day-divisions of Aša, for the between-moon [i.e. the new month] to the full moon, and for the intervening seventh(s)';—in other words, for the first, eighth, fifteenth, and twenty-third days, which, as has been seen in CALENDAR (Persian), were all dedicated to Ahura Mazda (cf. also Bartholomae, 1729).

Our chief knowledge of the Zoroastrian feasts is derived, not from Avesta or Pahlavi texts, but from Paro- Arâbic authors, the most important of whom, in the present connexion, is al-Biruni (Chronology of Ancient Nations, tr. Sachau, London, 1879).

In each month an especially sacred day was the one now called āshû (Av. yasna, 'praise'), on which the corresponding day-name was at the day Fravashi of the month Fravashi.

The āšû are, accordingly, the 14th day of the 1st month, the 21st day of the 2nd, the 10th and 22nd day of the 3rd, the 7th and 21st day of the 4th, the 16th and 29th day of the 5th, the 6th and 26th day of the 6th, the 9th and 25th day of the 7th, the 14th and 29th day of the 8th, the 5th and 15th day of the 9th, the 21st and 34th day of the 10th, the 14th and 17th day of the 11th, and the 12th and 24th day of the 12th (cf. the lunar feasts noted above), the 2nd of the 11th, and the 4th of the 12th.2 Various legends and popular usages are connected with a number of the āšûs, among which al-Birûnî includes the following: Tirgân, 13th day of the 4th month (209 f.); Mihrâjan, 16th day of the 7th month (207-209); Alûk, 10th day of the 8th month (210); Ādâr-čâš, 9th day of the 9th month (211); according to Zadâwâli, as quoted by al-Birûnî, 207, this name was also applied to Saharhû-esteem, as the 4th day of the 6th month (see preceding paragraph), this statement, if correct, probably being due to the retrogression of the calendar; Xûrram-rûz, 1st day of the 10th month (212), 21st day of the 11th month (213), 12th day of the 12th month (216 f.). This list may be supplemented by a Parsi-Persian text made accessible by Unvala.1

1 The view of Lâzgâr (Pârsûn, Göttlingen, 1887) that Fravashis formed the foundation of Parsiism has been discarded; and equally ambiguous is the theory of Schellevicolta (Alcriche in AT., Berlin, 1901-03, 40f., li. 44-45) that the is borrowed from O. Pers. 'fras-avesta freyd, 'frash'; particularly as considered Avesta word probably means 'thriving, growth, prosperity' (Bartholomae, Altdprs. Worterb., Strassburg, 1904, col. 99).
month, Mehekan (Hübchmann, i. 95), and it was evidently known to the Persian kings, as is clear from the statement of Strabo (203) that the arrival of Atranja sent the Persian monarch 20,000 colts annually at the Mehekara. Mihrajan and Nauruz were the two times at which the earlier Sassanian kings gave public audiences (Christensen, I. 183). In his inscription (707, pp. 226, 78 f., 98); and it should also be noted that, according to Ctesias and Duris of Samos (apud Athenaeus, x, 45), the Mihrajan was the one occasion on which it was customary for the Persian king to become intoxicated and to dance the national Persian dance.

The remarkable parallelism between Nauruz and Mihrajan finds its very simple explanation in the fact that both were New Year festivals. Similar double beginnings of the year existed among the Babylonians (E.R.E. iii. 74°, 76°) and the Hebrews (Ex 23°, 34°, 129°), and Marquart has argued (ii. 206-212) with good reason that the Avesta year originally began about the time of the autumnal equinox, and that during the closing years of the reign of Darius I. (522-486) it was changed to conform with the regular Bab. year, thus coming about the vernal equinox.

The date of the Avesta year may be discussed more briefly. On 17th Frawarzin the festival of Zanamahali ('muttering'), on which Sraosa was held to have revealed the murmuring regarding the 17th of the month as well as improving in speech, in easy words became absolutely necessary, during eating (al-Biruni, 204; Hyde, 241). The 6th Tir was the Cahn-i Nitfar ('feast of the water'), and al-Biruni (295) to be of recent date (Hyde, 245, puts it on 17th Ameroda). The 8th (more probably the 18th; cf. Unvola, 208) Satavro was Haszan ('autumn'), an autumn feast (Hyde, 244), which also gave its name to the eighth month of the short-lived calendar of Yazdagird II. (ib. 197). The 1st Mitro was Haszan-i digar ('second autumn'), a feast for the common people, because on that day the work of sowing seeds and cultivation was completed (Unvola, 208; al-Biruni, 207).

A feast of special interest as being, in all probability, a survival of an ancient Bab. custom was celebrated on the 1st Ajar, the Rockh al-Kausi, or Koski haran (the 'ride of the thin-bearded'), which was apparently observed also as a popular feast of rejoicing at the departure of winter and the coming of spring, so that al-Biruni (211) calls it a festival of the vernal equinox.

This festival is described, with trilling variations, as follows (Hyde, 249-251; Unvola, 208; al-Biruni, 211; Marzof, iii. 413; Amerd, 345). The purposes of the festival, which is held in honor of iron, or to-be-beardless (or toothless) man rode (taked, in some accounts) on a horse or ass, holding a fan in his hand and complaining of the heat. Escortied by the attendants of the king (it was usual to make a tour through the city, the target for snow and ice, but the recipient of hot foods. In his other hand he held a crown or, according to other accounts, he carried a pot full of water) with which, as also with mud and fat, he bespatterd those who refused him the drink which was his own property. If he was delayed an instant in receiving his tribute, he had the right to seize everything in the shop. The dirhams which he received in payment of his tribute and the first prayers (7 a.m.) must give to the king or governor; those which he received during the festival (11 a.m.) were his own property; after the second prayers he might be beaten with impunity.

Here the fact, that the chief figure in the 'ride of the thin-bearded' was escorted by the servants of the king or of the governor; that (b) between the first and second prayers he could exact tribute from every shopkeeper, and, if refused, could seize all in the shops of the recusants and could inflict punishment upon them; and that (c) his authority was shortened, since he could be roundly haggled after his brief tenure of power, all point to his original identity with the crowned criminal who enjoyed a brief reign during the Bab. Saca. Anquetil du Perron (ii. 581) had already suggested that the 'ride of the thin-bearded' had perhaps taken the place of the Saca, and the two celebrations have also been compared with the Day Lagari (31 ft.), and especially by Frazer (GP iii. 181-184). It seems, on the whole, most probable to hold, with Meissner (ZDMG i. 1896, 296 ft.), that Winckler (231) calendar that of Mihrajan (208), with variations, and that the festival was similar, or perhaps an imitation of the Zoroastrian Avesta feast of the third month (al-Biruni, 345), Brockelmann (ZA xvi. 1902, 391), and Frazer (Dying God, London, 1911, pp. 115-117), that the Saca was connected with the Bab. New Year, Azgank; and it is of particular interest to note that at Zela, in Pontus, where the Saca was still celebrated in Strabo's time (p. 512), the ruler had formerly been a priest-king (p. 539, xai υδ' ἵππος αἱδέρον).

This interpretation of the Saca seems to the present writer to be preferable to the theory of Geiger (ZA xii. 1875, 144 ft.), Justi (GVP ii. 417), Fräsee (Gesch. der Meder und Perser, Gotla, 1906-10, ii. 215), Zimmern (KAT 384, note 4, 427, 515), and Jeremiah (PREZ xi. 644), that the feast (on which see Jerome, apud Athenaeus, xiv. 44; Dio Chryseotom, Grat. fr. ed. Dindorf, 76, and the enumpheredized account of Strabo, p. 212) was an Azar Anaitis festival. This hypothesis leaves the most characteristic features of the Saca unexplained, although in its favour may be urged the fact that the great festival of latar was celebrated in the spring, which is usually regarded as corresponding to the month of Losa, and the statements of Strabo, which also connect the feast with Anaitis. On the other hand, calendrical retrogression may explain some of the chronological difficulties connected with the date of the celebration of the Saca (we know, for example, that in 232, Ah, but in Tamizz (Robertson Smith, apud Frazer, GBP ii. 514, note 11); and King believes that Losa is the name of the month in which the festival was held). As far as we are told that both the Sogdian and the Chorasmian years began in July (al-Biruni, 220, 223), as did the Armenian (ERE iii. 790). It seems, on the whole, safe to conclude that the Persian 'ride of the thin-bearded' is the vernal counterpart of the (originally) autumnal Babylonian Saca, and that it represents a direct descendant of the Bab. festival of the Zangak.

The 11th Din is regarded as the anniversary of the death of Zaratushtra (Karnika, i. 149). The 14th Din (according to Hyde, 224, the 24th) was Sir-sava ('garlic feast'), when garlic was eaten as an apotropaic (al-Biruni, 212). The 5th Yohuman was Barpadagh ('above or new Sadaq'), five days before Sah sadagh (Canon Masudiana, quoted by Saucho, Chron. Arab., xiv. 213).

The latter feast (‘night of the bonfire’) was falsely understood to be the ‘hundredth night’ (Pers. sadah, from which the Arab. sadagh is borrowed, being taken as an equivalent of the ‘hundreded’). Sab sadagh was originally the feast of fire par excellence (Sād-nāmah., tr. Mohl, Paris, 1876-78, i. 26 f.), and its great importance at one period is shown by its frequent mention side by side with the feast of Nizām (Nizāma); for example, in 551, vi. 109, 506, vii. 27, 327, 374; for other legends, etc., see al-Biruni, 213 f.; Hyde, 224-227 (where it is wrongly identified with the winter solstice); Unvola, 207 f.; Colius, 37-39. On this night blazing
FESTIVALS AND FASTS (Iranian)

fires were lighted, and cattle and birds were driven into the flames, fettered with dry herbs and the like, so that they might speedily escape. The festival falls five days before the Mildāz-winter, and the fires may have been kindled to hasten, by sympathetic magic, the slowly increasing length of the sun's warm activity, as well as to purify the creatures that passed through them.

The 22nd Hūrūrūn was the Bahar-i 'āmr ("wind day"), and was probably connected with the Sogdian Badh-bāghān, which was celebrated on the 24th of the corresponding month (al-Bīrūnī, 222). The feast was probably the "windy" day, because of a tradition that on this day a wind blew, after seven years of windlessness, with sufficient force to move the wool on a lamb (Unvāla, 210).

The 30th Vohūnān was celebrated at Isfahān as the Ahrījārān ("outpouring of water"), a rain-festival which, according to some authorities, coincided with Tīrān (Hyde, 243; Unvāla, 206), or, according to others, fell on 20th or 30th Horvadāt (Hyde, 242); probably, as Hyde remarks, the day of celebration varied in different localities.

The 5th Spendarmān was the Jašīn Barzgārān ("feast of cultivators"), on which charms are prepared for the extermination of hurtful creatures (for specimen, see the Jastrow, Pesq. Or. 1866-1903, i., 253), and in which many snakes and other noxious creatures as possible were killed and brought to the priests (vašīr-maṣūr) as a proof of hatred of Ahrīman. The day following is a celebration called Mīrāk-i 'āmr ("fresh wind") of the Pers. al-Kausā, Sactea (Hyde, 217). On the 19th Spendarmān fell Naurūz an a miyā yārī ("new year of rivers and running waters"), when rose-water, perfumes, etc., were cast into the streams (al-Bīrūnī, 217; Hyde, 260); and on the 25th-30th (according to others, only on the 30th) came the Mard-girān ("man-seizure"), when the women could lord it over the men and take from them what they would (Hyde, 259).

This festival bears considerable resemblance to the later form of the celebration of the Saceā, when, according to Herodotus, masters were ruled for five days by their servants, one of whom wore a quizzical robe (vānān rī fināfī) called goyaf, (a word held by Melsner, 29, note 2, to represent Assyry. bēdū, Heb. yēj, "pretect, ruler," and was in control of the land in the 1st month of the year, vānān rī 1ānā). Since, however, the celebration of Mard-girān was separated from that of Rūkūb al-Kausā, which we have been able to be a New Year festival coming within the 1st month instead of by six months, any association of the "man-seizure" with the Saceā seems improbable. If, therefore, the al-Kausā-Lebān, which in the Saceā must have been a celebration of the summer solstice. The month of celebration is curiously identical with the Jewish Purim on 14th Adar, but the identity of month is doubtless merely fortuitous, and no connexion can safely be alleged between the two festivals.

The Gemara to Miṣna III. of the Talmud treats of Aboda zara, i. (11th of Bābī, 99 of Yeruṣālim) mentions four festivals of the Persians which are of interest as showing what ones were at that period regarded as of most importance. The list given in the Gemara is, in more accurate words, to, oil, tey, pe, pērūn, and yōs (for the variants, see Jastrow, Dict. of the Targumim, etc., London, 1886-1903, pp. 741, 534, 739). The first and the third name clearly stand for Naurūz and Miḥrajān; the second doubtless represents Tīrān (on the probable early importance of this feast as that of the summer solstice, see above, p. 572); and the fourth may be conjectured to stand for Xurram. These three would then represent the four seasonal festivals as celebrated at the time of composition of the Aboda zara.

Our information concerning specifically Persian festivals is scanty, but it is certain that each Persian celebrated his own birthday with a feast (Herod. i. 133), and that the king also gave on his birthday a banquet calledǰowzd (connected with Av. tāxwaman, "seed"; O. Pers. tāvar, "family"; Skr. tuṣ, tū, "posterity"; Jackson, J.A.O.S xx. (1899) 57), on which he was bound to grant every request (Herod. ix. 110), while other festivals celebrated the king's marriage (Est 25; Josephus, Ant. xvi. vi. 2) and the birth of his first son (Plato, Aethclides i. 121 C).

A Persian festival of much importance was the Magophonia. According to the usual view (Herod. iii. 78; Ctesias, apud Photius, Biblioth. xxviii.), Agathias, in his 79th book, speaks of the "festival of the Magophonia," and the first of the Magophonia is explained by Darius (cf. Behist. ii. 35-71), and then "no Magian may appear in the light, but the Magians keep themselves in their houses that day." This view, maintained by Spiegele, (Erud. 1878, xxv. kundes, ii. 310, ill. 586-708), Christensen (151), and Meyer (Elie2.) xx. 283, is attacked by Marquart (i. 64, ii. 132, 135; so also Práscik, ii. 140), who holds that there was a corruption of O. pers. βαγγάκινα, and that it is identical with the feast of Miḥrajān, considered above, especially as the upros (βαγγάκινα) lasted five days (Herod. iii. 80) after the death of Gānātā, which was killed on 10th Bagāzān (Beitol-Wuhr), which corresponds to the Zoroastrian month Mitrō (nord. 135). Despite the cleverness of this suggestion, it seems open to objection. Marquart is certainly right in identifying the Magophonia with the old New Year festival of Miḥrajān, and it is almost certain that the O. Pers. year originally began with Bāgayādi ("month of the honouring of the god (Mithra)"), just as the Avesta year at first commenced with the corresponding month Mitrō; though later the O. Pers. New Year was changed to a month of unknown name" corresponding to the Avesta Fararāž and the Bab. Nisan. It seems most plausible to hold, therefore, that it was under the cover of an old festival of uproarious character that they were enabled to kill the usurper, their fury both leading them and inciting the other Persians to slay every Magian they could find (Herod. iii. 79); so that the later celebration to commemorate the slaying of the pseudo-Smerdis came to obscure the real origin of the festival in the popular consciousness.

Why the Magi, so universally honoured in Iran, were obliged to keep within doors during the Magophonia has been a hard problem on the basis of the current explanation: but if, as Marquart holds, it was originally a New Year celebration, to be connected with the Miḥrajān (Beitol-Wuhr), which was probably connected further with the Saceā, which, from the statement of Dio Chrysostom and Berosus, was almost certainly a New Year festival, the prominent feature of which was the killing of a criminal who had for five days been permitted to wear royal robes, to sit on the royal throne, and empowered not only to issue whatsoever mandates he would, but even to consort with the royal concubines, and after his brief tenure of office was escorted and hanged, so that the Saceā probably represents in attenuated form, the wide-spread practice (found also in Babylonia) of killing the priest-king (cf. Frazer, Dyn. and Trad. 113-117; see Lang, Magic and Religion, London, 1901, p. 118 ff). It would follow then that the origin of the festival of the Magophonia was the actual killing of a Magnus
who was at the same time both king and priest. This explains why the Magians were both revered and also liable to be killed, although long before the period of actual killing had been abandoned, and the festival survived merely in a season of merriment, during which the Magi were perhaps the butt of practical jokes and rudely remained indoors. The success of the attack of the Christian forces on Ctesiphon Smardus was very likely due in great part to the fact that Gannáta was himself a Magian; and later, as already noted, the Magophonia was rationalized to commemorate this event, just as in Szurabî's day the Sacaean itself had come to be reinterpreted as commemorating a victory over the Scythians (Zaxâ) which may, indeed, have been won at the time of the celebration of the ancient festival of the Sacaean, after it had long since lost its primal significance.

The meaning of the word Mayapâdana, is, therefore, probably 'Magus-slaying,' representing an O. Pers. *Magumânâya*; and the festival was originally a New Year celebration during which the priest-king was slain.

The four seasonal festivals may, accordingly, be summarized as follows:

- **Autumnal equinox** (Sacaean), Magophonia, Mihrâjan.
- **Winter solstice** (Suraun). 
- **Vernal equinox** (Zagamuk, Rukbû al-Kausâ), Naushâriya.
- **Summer solstice** (Szurabî), Mayapâdana.

The festivals of the Sogdianas and Chorørians are listed by al-Birûnî (221–229), the principal festivals—so far as either their names or their celebrations are known—being the following: 1st day of the 12th month, local Sogdian feast of the Buhkâr Magians at the village of Râmûl; 1st day of the 13th month, Chorørian beginning of the rainy season; 2nd day of the 6th month, Chorasman feast of the Sogdian at Balkâzid; 11th day of the 4th month, Sogdian eating of leavened bread after a fast (read *instead of אֶת הָעַמִּים* [11]; among the Chorørians this day was Ağährân ['firewood and flame'], since in former times it had marked the approach of autumn; 15th day of the 6th month, Sogdian Bâba (or Bîmî) Xûrâ, marked by drinking good, pure wine; 1st day of the 6th month, Choræanian Paghûshnîb, when the king went into winter quarters; 3rd and 15th days of the 6th month, Sogdian feasts, the latter lasting seven days; 1st day of the 7th month, Sogdian Nâyésar ('half of the year'); and Chorasman Azâd Kand Xûrâ, or 'eating of bread prepared with fat' (as a protection against the cold); 2nd day of the 7th month, Sogdian feast of eating cakes of millet-flour, butter, and sugar; 13th day of the 7th month, Chorasman Gârîrî ('day of the wind') celebrated by the Chorasmanas just as was Mihrâjan by the Persians; 21st day of the 7th month, Chorasman Yasat Xûrâ, a Chorasman beginning of the rainy season; 4th and 15th days of the 10th month, a local Sogdian feast of which neither name nor particulars are given; 11th day of the 10th month, Chorasman Nimjâh, which, if it may be read Nimâdân instead of [Nimāmân] (منامان)، is a festival of the very prosperous sort in the month of Elul (or to al-Birûnî, 223, 224), the beginning of their summer was the 1st of Nûsâkerî); 24th day of the 11th month, Sogdian Bâhâghizh (see above, p. 876); 15th day of the 12th month, Chorasman Wâzângânî, in honour of 'the angel [Wis]âzâ' who has to watch over the water, and especially over the river Oxu'; 35th day of the 12th month, the beginning of the Sogdian and Chorasman feast for the dead.

Some special festivals introduced in the Muhammadian period (al-Birûnî, 217), as well as the mythological festivals recorded for the 'Sipâstân' by the Dâbistân (tr. Sheeh and Troyer, Paris, 1845, i. 63), may be disregarded here.

The whole purpose of fasting, fasting, is absolutely forbidden by Zoroastrianism. According to Sad Dar, lxxixii, 'it is requisite to abstain from the keeping of fasts' (rizâl-dâštân), for 'in our religion it is proper that they should not eat every day or anything, because it would be a sin not to do so. With the keeping of fast is this, that we keep fast from committing sin with our eyes and tongue and ears and feet, but not that other things besides.' That which, in other religions, is fasting owing to not eating is, in our religion, fasting owing to not committing sin.

To this al-Birûnî add that fasting commits a sin, and must, by way of expiation, give food to a number of poor people. The reason for the prohibition of fasting lies, not merely in the entire Zoroastrian outlook upon the universe, but in the idea that it is as wrong to torture oneself as any other being of the good creation (cf., further, Modi, *Catechism of the Zoroast. Religion*, Bombay, 1911, p. 35 ff.). The Mandaeans understand fasting in a very similar sense, and, polemize against Christian fasts (Brandt, *Mandäische Religion*, Leipzig, 1889, pp. 93, 143 ff.; K. Kessler, *PRE XII. 173 ff.); so also the Yezidis (Brockelmann, *ZDMG* iv. [1901] 334 ff.) who, on the contrary, long-continued part of the Sogdian religion (al-Birûnî, 221; cf. also above, pp. 760, 765).

LOUIS H. GRAY.

**FESTIVALS AND FASTS (Jain).—** There is, perhaps, no shorter road to the understanding of a religion than to study its festivals and fasts, the occasions on which it rejoices, and the things over which it mourns. This is certainly the case with Jainism—a religion which lays special stress on outward observance.

1. **Pājudnaka.**—Amongst all their holy seasons none is regarded by the Jains as more sacred than the closing days of their religious year, when the ascetics and faithful of all three sects observe the solemn fast of Pājudnaka. At this time they fast a month and a day, and renounce the meat of any living being whatever, against ahinsâ (non-killing), one of the main tenets of the Jain creed. Mahâvîra, their great religious leader, decreed that Pājudnaka should begin 'when the rainy season had elapsed,'1 his reason apparently being that the lay people would by that time have prepared their houses to brave the elements; and business, too, being less brisk, they would be at liberty to attend to their religious duties. It is a convenient season for the ascetics also, who, during the rains give up for a time their peregrinations, lest they injure any of the abundant life, animal or vegetable, then springing into being.

The fast nowadays includes the last four days of the month of Šrâvâna as well as the first four of Bhâdrapada, i.e. it falls usually in August. The Jains say that formerl, instead of eight days, it lasted for one day only, the fifth of Bhâdrapada. The Digama Bâins (the sky-clad or naked sect) usually observe seven additional days for worship at the close of these eight fast-days.

The Jains (sûtras), while fasts varied in strictness: one fast for the whole eight days from all food and water, others only every other day, eating specially dainty food on the alternate days, while others, again, fast in question of the mode in which they happened to fall at the time of their incorporation. *Hydr, St. 254*, had already noted the possibility of such inception of fasts, although in his actual instance, the festival of Sab sadhân (on which see p. 873 ff.) is incorrect.

---

1 *Kalpa Sûtra* (SB 2, 9, 90).
During Pājjuśana special services are held in the upāsārā (monasteries) of the various sects. In those of the Śvetāmbara Jains (the white-clad sect) a well-known monk usually reads from the Kājāśāni, the sacred Jain book of famous sacred books); and in those of the Śīrṣākavāśa (the non-idolatrous sect) readings are given from various books which they consider specially sacred, such as the Antegeta or some other. Only the śaivāda (ascetics) are given raised seats; but, on agreeing to sit on the floor and to remove leather shoes, the present writer was courteously admitted to the services.

The exposition of the sacred books was of a colloquial character, questions being freely asked and answered, and the preaching śārūha generally intoning each paragraph before he expounded it. Noticeable amongst the audience were some laymen wearing only the loin-cloth and scarf which form the saucy dress of the Jain ascetic, their nashven heads marking them off from the monks present. They were doing pūsha, i.e. they had become monks for the time being, and during the twenty-four hours they could not leave the upāsārā; but would spend their time in meditation and fasting. Posaha may be observed every fortnight; indeed, the Utarādhyogāna lays down that the faithful householders and laymen should observe the four fasts in both fortinights, not even for a single night; but there is a special obligation to observe it during the season of Pājjuśana. Pōsahe was, according to the Śrīdrakrttigī, specially instituted for those who said that we cannot, submitting to the terrors, renounce the life of a householder and enter the monastic state, but we strictly observe the pūsha on the fourteenth and the eight days of each fortnight (on the new moon, and full-moon days, and) who further undertook to keep the five monastic vows of non-killing, truth-speaking, honesty, chastity, and noncovetousness, so far as the exigencies of lay life permitted. Posaha well illustrates the special genius the Jain religion has for making the laity feel themselves intimately connected with the monastic order, which largely accounts for its survival in India to-day.

Some Jains, however, find even during the sacred season of Pājjuśana that the twenty-four hours' fast from all food and water entailed by posaha too much. For these the hotel-like eating fast, that is, the ākāśic or sahajāvara affords a welcome alternative. Those who observe this fast sit in the upāsārā and listen and meditate for any period they like to choose, from ten to twenty-four hours, but they may take water, and the new moon for half the number of times permitted, and the water not specially prepared for them.

Suhāvatari, the last day of Pājjuśana and the last day of the Jain religious year, is the most solemn day of all. Every adult Jain must fast throughout the day, abstaining even from water; the upāsārā are more than filled, and gatherings of devout Jains are also arranged in secular buildings, such as the verandahs of shops or the dining-halls of various castes. On the afternoon of this day no ascetics are present at the lay gatherings, but they may be seen in the smaller rooms attached to the temple, and making the vow confession privately; one notices that the hair has been newly plucked from their heads, for this austerity (peculiar to Jain ascetics) has to be performed before Pājjuśana ends.

It is most interesting to visit the various upāsārās on this day. Those of the Śvetāmbara sect adjoint their temples, the men and women having different buildings. The women, bedecked

4 On boiled water, see M. Stevanino, Data on the Jainism, p. 27.

with jewels and arrayed in their brightest clothes, are seated in silence on the floor, with the exception of one woman who may have paid for the privilege of reciting the prescribed mantras anything from one ruppee upwards. In front of her a wooden tripod is set with food. A little to the left is an altar with lamps and eight heads, the number of the qualities of the Pālākāparasamajī (the Five Great Ones). On the opposite side is the courtyard adjoining the temple is the airlikhā, in which the laymen are seated, clothed only in their loin-cloths, listening to one of the number reciting mantras. The Śīrṣākavāśa women's upāsārā there was no tripod, but first one woman and then another used to sit on the floor and recite mantras which in this community went by singularity. The Śīrṣākavāśa men, having been crossed, went out of their upāsārās, and to the women's of the town school when the present writer saw the ceremony. One of their number was preaching, not merely, as in the other gatherings, reciting mantras: he was giving an instruction on the twelve vows of a layman, which corresponded very much to an instruction that might be given on the ethical aspect of the Ten Commandments. In preaching, for instance, on the vow against dishonesty, he showed how this vow would be broken by a shopkeeper over-praising his goods. At the close of the instruction on each vow, the whole audience rose, and in a set form of Māgadhī words confessed their breach of it and asked forgiveness. Although the meetings went on till eight or nine o'clock, no light was permitted. At the close all asked each other's forgiveness for any slight or injurious committed during the day in the following words: 'Twelve months, twenty-four half months, forty-eight and four weeks—if during this time I may have said or done anything annoying to you, pardon me!'

No private quarrel may be carried beyond Śuhabāsā, and letters must be written to friends or even at a distance, even if written by hand: the postal authorities can testify how faithfully this is carried out, for the mail of the Jain community increases extraordinarily at this season of the year.

Kalpa Sūtra procession. In the morning of the third day of Pājjuśana, the Śvetāmbara community organizes a procession in honour of the Kalpa Sūtra, a Scripture which they hold in peculiar reverence. Some wealthy Jain, who has outlived the others, presents the new clothing to the temple copy of that Sūtra (which is preferably written, not printed, and should be illustrated) to his house in the evening. It is placed on a little table and covered with a rich cloth, and, with the long inanimate of the house and their friends continue what an English-speaking Jain called 'Harmony-Barmony,' singing songs in its honour and playing on as many instruments as they can.

Next morning the procession is formed to return the book to the temple in state. The details would, of course, vary in different places, but when the writer saw it, it was arranged as follows:

The procession was carried by the hotel-like eating fast, lent for the occasion by the Jātā, followed by other drummers on foot, who preceded the inrulīkṛṣṇa, a painted wooden trolley surmounted by the wooden elephant the king of the universe, mounted on a tier of red and blue flake ornamented with gold brocade. A pujari (official), who generally followed, bearing a light, was preceded by four boys walking behind him carrying smaller silver sticks, their parents having paid heavily for this privilege and the spiritual advantages accruing from it. A portion of the crowd wedged themselves in at this point before the main figure of the procession, the carrier of the Kalpa Sūtra, appeared. The proud distinction of being the carrier is accorded to some child connected with the house in which the Kalpa Sūtra has been kept. The child, in this case a little girl of seven or eight, arrayed in her gayest silk garments, was seated on a horse; in her hand she held the Kalpa Sūtra wrapped in silk, and the book lay a cocoanut marked in red with the auspicious Sankītā sign. She was followed by more of the crowd playing on musical instruments, and by other boys who had paid for the honour of carrying the draft lamps which they held in their hands. The last place in the procession was held by groups of women singing songs in honour of the Kalpa Sūtra.

Mahāvīra's birthday. —The birthday of Mahāvīra, the founder of Jainism, has been conventionally fixed for the 11th day of Pājjuśana (the month of Bhrānapada), though the Śvetāmbaras believe Mahāvīra to have been born on the bright thirteenth of Chaitra. The Śīrṣākavāśa Jains would like to keep this festival, but their gurus disapprove it, fearing that it might lead to idolatry. It is observed with great pomp and rejoicing by the other Jains, and the temples dedicated to Mahāvīra are
Festivals and Fasts (Jain)

The Śvetāmbara arranges a cradle procession in honour of the day. This procession very much resembles that of the Kalpa Sūtra. The drum, the bell, the silver staves and air lamps, the singing crowds, and the small elephant-trolley are again in evidence; but, instead of the book, the child on horseback carries in the centre of the procession a little wooden cradle containing his or her godchild.

The conventional birthdays of several other Tīrthaṅkaras are celebrated on various days, when the temples specially dedicated to them are decorated with flags, and the imprints of hands dipped in a red mixture are made on the walls. (The hand, the Jains say, is the special symbol of favour, since it is always used when blessing.) Not only the birthdays but also the days when the various Tīrthaṅkaras attained kaivalya and nīkāya are celebrated, the pomp, of course, being all the greater at the actual place where the event is supposed to have happened.

The Jain festival to Pojsuṣṭa the greatest of all the Jain sacred seasons is Diwālī. If the former owes its importance to the emphasis which Jains lay on the sin of killing, Diwālī derives its position from the importance of wealth. A mercantile community like the Jains has a special reason for their participation in what is really a Hindu festival in honour of Lākṣaṇī, the goddess of wealth. They say it originated when Mahāvīra passed to nīkāya and the eighteen confederate kings and others who were present at his passing instituted an illumination, saying: ‘Since the light of intelligence is gone, let us make an illumination of material matter.’ The festival continues for four days—the last days of Āśvin which close the Hindu year and the first of Kārttika—falling usually within the months of October or November. Amongst the Śvetāmbara Jains, the first day (Dhanartera) of the festival is devoted to polishing jewellery and ornaments in honour of Lākṣaṇī; on the second day (Kālichehanda) the women try to propitiate evil spirits by giving them some of the sweetmeats they prepare and cook on this day. These they place in a circle at cross-roads (q.v.), in order to protect their children from evil influences during the year. The third (Âmāsa) is the great day of the feast. It was on this day that Mahāvīra went to nīkāya, and Gantama Īndrabhūtī attained to kaivītya. This is the day on which Jains worship their account-books and decorate and illuminate their houses. In the morning, Jains of all three sects go to their temples and convene and do reverence to the chief monk or nun present, who preaches to them on the life of Mahāvīra and sings appropriate songs. The more devout laypeople stay and do pūjā, but the generality go home and make up their accounts for the year. In the evening they summon a Brāhmaṇ to direct the Sūradā pūjā, or worship of the account-books, for Brāhmaṇs are still the domestic chaplains of the Jains. After the Brāhmaṇ having arranged his account-book on a stool, the Brāhmaṇ enters and paints a chāndalo (auspicious mark) on the Jain's forehead, his pen, and one page of the account-book. He then writes the word Śri (i.e. Lākṣaṇī) on the account-book, either five, seven, or nine times, in such a way as to form a pyramid. A rupee (the eldest possible) is now placed on the book; this rupee for the time being is considered to be Lākṣaṇī herself, and the placing of it is called Lākṣaṇī pūjā. All the year the owner will carefully guard this particular coin, as it is considered luck-bringing, and will use it again next Diwālī, so that in some Jain homes the rupee can hardly be considered a commonalty. Besides the coin, the leaf of a creeper is also placed on the account-book, and the Jain waves a little lamp filled with burning camphor before the book, on which he has placed rice, ānī, betel-nut, turmeric, and various kinds of fruit. The ceremonial of procuring the red powder, after which the Brāhmaṇ and the Jain feast on sweetmeats. The account-book is kept open for several hours, and before closing it they say: Lokā labhakkā Lokā labhā, i.e. ‘a hundred thousand profits!’

The various Jain conferences are trying to introduce a new Sūradā pūjā of their own in which the Brāhmaṇ will play a less important part, and the Jain himself will perform the pūjā to the rupee; but most Jains are content with the old rite. Some of the stricter Śvetāmbara refuse to have anything to do with either the old or the new rite, regarding both as idolatrous. The Śvetāmbara light their temple at Diwālī with little earthenware oil lamps, saying their selves contain the Tīrthaṅkara, the chief objects of Jain reverence. Between the figures are written the names of the three jewels of the Jain faith: Īdāra, Right Knowledge; Dravīdā, Right Faith; and Chaitya, Right Conduct; and also the word tapa, ‘austerity,’ on which the Jains lay such overwhelming emphasis in their system. This plate, which thus bears on its surface a complete summary of Jainism, is regarded as of such importance that no Śvetāmbara temple is ever without it. Twice in the year, once in Āśvin (September or October) and once in Chaitra (April or May), it is worshipped for eight days by office bearers and conventuals, and during each of these eight days the saint-wheel is taken outside the town to some spot, probably near a tank or lake, where, before doing the eightfold pūjā, they bathe it with water, and this is called Jaijalātrī, ‘water pilgrimage.’ This little pilgrimage is accompanied with much rejoicing, and the pilgrims usually celebrate their return home by a feast.

Full-Moon Fasts. — The phases of the moon are watched with the keenest interest by the Jains (as they are, indeed, by all the inhabitants of an agrarian country like India); and four of the full-moon days are observed as special fasts. On two of these, Kārttika Purnama (October or November) and Chaitrī Purnama (April or May), they go, if possible, on pilgrimage. The favourite places of Jain pilgrimage are the hills of Satrājīya (in the State of Pālītāna, Sametākshara (Bengal), Gīmār (Junāgarh), and Mount Abu (Rajputānā); but at these full-moon āṣṭās the place is most eager to visit is Satrājīya. It was on Satrājīya, they say, that at Kārttika Purnama the two sons of Kṛṣṇa—Drāvdā and Vālīdllī—
obtained sodas along with about a hundred million monks, and at Chaitri Puja that Puṣṭārīka Gaṇḍhāra, the chief disciple of the Bhāṣavas, obtained sodas with Sūrya Deva. This is not merely Śrāvaṇa but any of the other days, Jains still manage to acquire some special pilgrimage merit by taking a map or photograph of Śrāvaṇa into the field, or in their tent, in the direction of that mountain and worshipping it there.

On the two other full-moon fasts, Phālaṃgana Puṇeṇa (in February or March) and Āśādhī Puṇaṇa (in June or July), Jains of either the Śvetāmbaras or the Digambara fast seat, decorate their temples with lamps, and are specially diligent in attendance at the temple-worship, whilst Śrāvakāśī Jains go to their spākṣārā to hear sermons. Āśādhi is especially important to the ascetics, for in whatever town monks or nuns may be for that fast, there they must remain till the moonson is over and Kārttika Puṇaṇa comes round.

5. Śvetāmbara and Śrāvakāśī Jains observe the 5th day of the bright half of Kārttika, which they call Āśādhiṣṭhāpana, since special knowledge is gained by those who worship their sacred books on this day. The institution of these books is specially useful in proving to Saddhā and DigambaraJains, for not only are the books worshipped and sandal-wood sprinkled over them, but all the volumes in Jain treasure-houses are supposed to be dusted, freed from insects, and rearranged on this day.

6. Maunagāyārasa.—Once a year the very strict ascetics commemorate by a solemn fast the five stages through which a mortal must pass before he can become a Sadhā. Śrāvakāśī laymen do not generally keep this day, though some of the Śvetāmbara laity do. During the whole day absolute silence is observed, together with abstention from both food and water. The Jain, as he tells his beads, meditates on each of the five stages (śādhu, or ascetic; upākṣāṭaṃ, or preceptor; ācchārsaya, or ruler of monks; śrāvakāśī, or lay-finder; śādhu, or perfected one) which lie before him. This fast, as its name shows, must be kept on the eleventh day of a month. If possible, it should be observed on the eleventh day of the bright half of Mārgāśīra (November and December); but, if this particular date is inconvenient, the eleventh of any other month may be substituted. On the day following, Śvetāmbaras celebrate the breaking of this eleven-day fast in a curious way. They choose five or six of the things connected with the pursuit of knowledge, and put eleven of each kind, such as eleven pens, eleven books, eleven pieces of paper, eleven ink-pots, etc., in front of them, and worship these 112 articles.

7. All or Amba.—Eight days before Chaitri Puṇaṇa great fairs are held at the chief places of pilgrimage, which are attended by Jains from all over India. At this time men and women take special fasts called, Amba, promising, for instance, to eat only one kind of grain throughout the day and to drink only boiled water. Oli or Amba is the fast par excellence of women, for this season a royal princess, Mayaṇā Śnātikā, by purchasing the mint-wheel, won health and restoration to his kingdom for her husband, Śrīpāla, who had been a leper. Ever since the days of this princess, women who want a happy married life have kept this fast. Keeping this fast, giving up all the things they particularly like, such as melted butter or molasses, and eating only one sort of dish.

8. Days of abstinence.—In addition to special fasts like the above, many careful Jain observers observe as

9. The bathing of Gomateśvara.—Three or four times during every century the Digambara Jains hold a great festival at Śrāvaṇa Belgolā (Hassan District, Mysore State) to lave the gigantic statue of Gomateśvara. This statue, which is one of the wonders of India, was cut some 900 years ago from a solid block of stone sixty feet high.

The last festival was held in March 1910, when Jain devotees gave grants to the materials and labour to erect the immense scaffolding which encircled the image on its three sides. On the day of the bathing Indraḥitā was closed to all but Jains, but it was possible to get a view of the figure from the ground by the stairs which were erected for the worship of the image. The actual bathing took place in the afternoon, and the gradual darkening of the image, as the mingled streams of water and milk and milk-powder flowed over it, was noticeable even from afar. The privilege of paying the figure had been previously put up to auction, Jains bidding what price they would pay for every separate cup of mixture they poured over it. During the festival the question was raised of erecting a glass shelter over the sixty-foot figure, but it was decided that to hold this would be to appear wiser than their ancestors, and, furthermore, the placing of the image was considered to have proved a valuable means of protecting it from the elements. It was suggested that the festival should be held more frequently, and the image bathed every three or every seven years.

10. The consecration of an idol.—Perhaps amongst festivals should be included Aśādiṣṭhāpana, the consecration of a new idol, for it is celebrated with the greatest pomp and magnificence. Mantras are recited, and in the case of Śvetāmbara Jains the metal eyes are inserted in the head of the idol, while also the metal eyes are inserted in the head of the idol, which is then anointed with saffron; until this takes place, the idol is not regarded as sacred. The ceremony is rare nowadays, owing to the enormous expense it entails on the donor of the idol, who has to pay for great processions and feasts in addition to the cost of the image.

11. Hindu festivals and fasts observed by Jains.—In addition to their own fasts and festivals, Jain laymen observe most of the great festivals of the Hindus: for example, Holi, the festival of spring which, however, is kept by the ascetics or by laymen who have taken the twelve vows; Sītalāśātama, the festival of the goddess of smallpox, when most of the Jain women and children (despite the efforts of their religious leaders and the conferences) go to her temple and offer drawings of eyes to the goddess and money to the temple Brāhmaṇas to obtain immunity from small-pox for the year. On this day, as the women refuse to cook on the ordinary hearths (believing the goddess of smallpox to be sleeping there for the day), the household has usually to eat stale food, or to cook on some other hearth. Jains also observe Vīrapaṇa, which falls on some Sunday in the month of Śrāvaṇa (August), when brothers give presents to their sisters, and sisters bless their brothers; and the corresponding feast of Bhāī bāja, when sisters invite their brothers to their houses. Diśā, in a sense a monopoly kept by Jains only to the extent of eating specially dainty food on that day. Another Hindi festival the Jains observe is Mahārāṣṭrākānti, which falls...
in January. On this day they fulfil one of their Four Fundamental Duties—that of charity—by giving away food and clothing to the poor and fodder to cattle.

Many Jain women, even of the non-idolatrous sect, observe the Hindu fast of Bakotha, by abstaining from food till evening, when they worship the goddess Gaari, wife of Siva, and then cows and calves, which they mark with red on their foreheads. Jain girls very frequently keep the Hindu fast of Muktaka, abstaining for a whole day from all food containing salt, in order to obtain a kind husband. Many of the Jains so far observe the Sraddhaka, or death-cremations of the Hindus, as to eat specially good food on that day. (The ceremony of throwing food to the crows at this time has, however, in most cases been discontinued by them.

In fine, so many festivals do the Jains observe, and such rich food do they eat in celebration of them, that a proverb has sprung up—'To turn Srikvaks for Siro—which accuses folks of turning Jain for the sake of a luxurious and dirty feast.

LITERATURE.—The information contained in the above article has been derived directly from Jain informants. The reader may consult also Tr. L. (1903), p. 115, and the present writer's Notes on Modern Jainism, London, 1910.

FESTIVALS AND FASTS (Jewish).

1. Modifications of the ancient feasts.—Although the post-Biblical period of Judaism witnessed the institution of several semi-festivals and other memorial days, it was marked by the rise of new festivals invested with the solemnities of the ancient feasts. As an offset to this, however, the feasts prescribed in the OT underwent manifold changes, and the character of not a few was fundamentally modified. More particularly after the destruction of the Temple, and the consequent cessation of sacrificial worship, the Jews sought to find a substitute for the latter, partly in the development and institution of an ordered liturgy—the terms of which, it is true, go back to the time when the Temple was still standing—and partly in the establishment of new observances for family devotion, as, e.g., the Kiddush (lit. 'hallowing'), i.e., the ceremony of hailing the dawning Sabbath or feast-day by speaking a benediction over a cup of wine, the Seder (see below) designed for the evening of the Passover, and the like. Other modifications were wrought by the altered conditions of life; thus, e.g., the pilgrim festivals almost entirely lost their agricultural character, and became purely historical celebrations.

One particular modification which affected all the Biblical festivals except the Day of Atonement was the introduction of a second feast-day for the Diaspora, i.e., for countries outside Palestine. Among the Jews in the time of the Second Temple, and for centuries afterwards, the beginning of the month was determined, not by calculation, but by observation of the new moon, as it was described by the authorities that the month should begin with the first sight thereof (see art. CALENDAR [Jewish], vol. iii. p. 117 ff.). At first the authorities caused the event to be announced to the various communities by beacon fires on the hills (cf. Wunsche, in Becker's Islam, i. [1910] 101), and afterwards by express messengers (Mishna, Rosh Hashanah, i. 3-4, ii. 2-4), telling the people to keep the same day, whether the preceding month was 'defective', i.e. one of 29 days, so that the new month began on the thirtieth, or 'full', i.e. one of 30 days, the new month thus commenced on the thirty-first. But, as the Diaspora became more widely spread, it was found impossible for messengers to reach the communities in due time, and accordingly, in order to avoid all possibility of error, these outlying communities observed not only the computed feast-day, but also the day following, which, if the closing month had been a 'full' one of 30 days, would, of course, be the proper date. Thus, e.g., the Diaspora kept the Feast of the Passover from the 15th to the 22nd (instead of to the 21st) of Nisan, and held a solemn celebration on the 15th and 16th and on the 21st and 22nd (instead of the 15th and 16th only), etc. An exception was made in the case of the Day of Atonement alone, as being a fast, for it was considered dangerous to fast for two days in succession (Jerus. Halta, i. fol. 57c, i. 14; Bab. Rosh Hashanah, 21a). The New Year festival, again, which fell on the 1st of Tishri—on the first day of a month—was often celebrated on two days, even in Palestine, on the ground that it was never possible to determine whether the previous month, Elul, would be 'defective' or 'full'. Once the fixed calendar was introduced, all uncertainty in the matter was at an end; nevertheless, a second New Year, known as Rosh Hanisan, was observed in Palestine as elsewhere from the 12th cent. A.D. (cf. 'Responses of the Geonom,' ed. Lyck, 1864, no. 1; Zerubia Gerundiu's Ma'or on tr. Beqa, at the beginning). In the Diaspora likewise, the observation of the second day of the Jewish year by them was called by the introduction of the fixed calendar, but it was allowed to continue for tradition's sake (cf. Bab. Beqa, 4b). The first to reject it were the Karaites, who reinstated the observation of the moon, and many modern Jewish communities follow their example.

The several festivals were modified as follows:

(1) Pesah (The Passover).—Of the three characteristic symbols of this feast—the sacrificial lamb, the unleavened bread, and the bitter herbs—the first was discarded, while the others survived in family devotion under the name Seder. In Palestine the Seder is observed on the first, and in the Diaspora on the first and the second, evening of the festival, and the ritual for its observance is contained in a book called Hagadda ('story, narrative'). A faint vestige of the originally agricultural character of this festival appears in the prayer for dew (tal), which is recited on the first day (see below).

(2) Shavuoth (The Feast of Weeks).—According to Scripture, this feast was to be celebrated seven full weeks after the Passover. The seven weeks were reckoned from the new moon, minhorath hash-shabbath (Lv 23:15), and the interpretation of these words was subject of controversy between the Pharisees and the Boethusans. The Pharisees, as also the LXX, Philo, and Josephus, understood them as meaning 'on the next day after the feast,' and counted from the 16th of Nisan; so that the Feast of Weeks fell (when Nisan and Iyyar were both 'full') on the 5th of Sivan, or (when Nisan was 'full' and Iyyar 'defective,' or conversely) on the 6th, or again (if both were 'defective') on the 7th (Jer. Rosh Hashanah, i. fol. 57b, i. 18 from foot). Hence, after the introduction of the fixed calendar, according to which Nisan was always full and Iyyar always defective, the festival fell on the 6th, or (in the Diaspora) on the 6th and 7th of Sivan. The Boethusans, on the other hand, interpreting the Biblical phrase as 'on the next day after the Sabbath,' began the commemoration with the first Sunday of the Passover festival, and celebrated the Feast of Weeks always on a Sunday. The Boethusans were followed in this by all the schismatic communities, down to the Samaritans and Karaites of the present day (cf. Poznanski, in Konfunnun, 1884, p. 491; and Breder, ib. note 4). But there were others who took the words to mean 'on the next day after the last
FESTIVALS AND FASTS (Jewish)

feast-day' (so e.g., the Syrian Peschîta), and therefore counted from the 22nd of Nisan, celebrating the Feast of Weeks on the 12th of Sivan (as e.g., the Babylonian Talmud). The reckoning was by months of four weeks or twenty-eight days—on the 15th (so e.g., the apocryphal Book of Jubilees; cf. Epstein, Eldad ha-Dani, Vienna, 1891, p. 154). Weeks likewise lost their liturgical character, and became the festival of the Sinaitic legislation, which was delivered in the third month, i.e. Sivan (Ex 19; cf. Bab. Shabbath, 80b). The festival bears this character also among the Samaritans (cf. Cowley, The Samaritan Liturgy, Oxford, 1909, i. 335 ff.) and the Karaites.

(3) Rosh Hashanah (New Year Festival).—In the Pentateuch (Nu 29) and Lv 23* this feast, which falls on the 1st of Tishri, is referred to as Yom Teru'a ('a day of blowing the trumpet'), but not as the beginning of the year (the year began with Nisan [Ex 12]), though the Feast of Tabernacles (Lv 23) was celebrated on Tisri, is spoken of as taking place 'at the turn of the year' (Ex 24). Ezekiel (40) speaks of the 10th of the month—probably Tishri is meant (cf. Lv 25)—as the day when the people of the land were to read the Book of the Law before the assembled people of the 1st of Tishri, and calls the day 'holy to the Lord' (Neh 8:1-12), but not New Year's Day. The latter designation was first given to the festival in the Talmud (Rosh Hashanah, l. 1), where it ranks also as a day of Divine judgment. We may perhaps discern here traces of Bab. influence (cf. Zimmern-Winkel, KAT, p. 515). The days from the 1st to the 10th of Tishri came simply to be days of penitence and heart-searching ('Aserath Yeinê Tshabib; cf. Rosh Hashanah, 18a).

(4) Yom Kippur (The Day of Atonement).—Here, too, a substitute for the abandoned sacrifice was found in a solemn festival in the synagogues, and this day is regarded as the most important of the Jewish festivals.

(5) Sukkoth (The Feast of Tabernacles).—This festival likewise entirely lost its originally agricultural character as a vintage festival. According to a Talmudic ordinance (Ta'anith, l. 1), God is to be praised as the sender of rain in a prayer beginning on the 8th day of the Feast of Tabernacles and ending with the 1st day of the Feast of Tabernacles, that is, by praising therewith, a special prayer for rain (geshem) was offered on the former day—as also one for dew (tal; see above) on the latter—and various hymns were sung for the geshem from the 7th or 8th centuries. The 9th and last day of the Feast of Tabernacles—in the Diaspora only, of course—was called Simhat Torah, 'delight in the Law,' because, according to a very ancient custom, the reading of the Pentateuch in public worship was completed, and a fresh beginning made, on that day; this designation, however, is first met with in the 11th or 12th cent. (cf. Luzz, Ritus, Berlin, 1859, p. 80f). The 21st of Tishri, the last of the semi-festival days, is styled Hoshâna Rabbe'th, 'the great Hosanna,' or Yem 'Arâbâ, 'the day of willows' (Sukkah, 45a). At this festival it was customary to set up willows about the altar, and march round it once; but on the 21st of Tishri the altar was compassed about seven times, and in commemoration thereof it is still the practice to hold a sheaf of willows during the prayer on that day. Physically Middle Ages, Napoleon gained a powerful hold upon the day, and converted it into a statutory judging day supplementary to the preceding New Year's day and the Day of Atonement (see above, Regeln, Rundbemerkungen zum hebr. Gebetknichte, ii. [1912] 25 ff.).

2. Minor festivals of later origin.—Of semi-
festivals, besides the Biblical Feast of Purim and the Feast of the Maccabees (Hanukka)—not found in the Bible—both of which have been referred to in the 'Hebrew' section, the following, together with other minor festivals, some of which have been given up and some fallen into decay, may be noted:

(1) If, owing to Levitical uncleanness, or from any other cause, a man was unable to present his Paschal offering on the 14th of Nisan, he could, provided he observed certain regulations, make good his omission on the 14th of Iyar (cf. Nu 9:11-12). Traces of this practice still survive, and the day is known as Pesah Sheni ('Second Passover'),

(2) The 15th of Ab was the day on which wood was supplied for the altar of burnt-offering, and was, as such, a day of rejoicing (references in Schürer, GJV ii. 516). The recollection of this fact was subsequently lost, and the Ta'anith (de. Ta'anith, 69e; Bab. 39b) seeks in various ways to explain the significance attached to the day.

(3) Nicano's Day was the 13th of Adar, and commemorated the time when Tobi, the general of the Syrian general Nicano at Adasa in 161 B.C. (1 Mac 7:19-25, 2 Mac 15:1-28; Jos. Ant. XII, x. 5), P. Hapht ('Purim,' Beitr. zur Assyri. v. 2, 3 ff.) sees a day of rejoicing from Purim from Nicano's Day, but, as it would seem, without a very good reason. Nowadays, as we shall see presently, the 13th of Adar is observed as a fast.

(4) and (5) The Alexandrian Jews celebrated several other festivals of a special character. One of these was designed to commemorate the translation of the Torah into Greek (Phil, Vita Mosis, ii. 7), another was a memorial of their marvellous deliverance at the time when Ptolemy IV. (1 Mac 6) or Ptolemy VII. (Josephus, c. Apion, II. 2) attempted to destroy them by means of elephants. The dates of these festivals, however, are quite unknown.

(6) A little book bearing the title Megillath Ta'anith ('Roll of Fasts'), and redacted in Aramaic in the 1st or 2nd cent. A.D., contains a list of days on which, as commemorative of some joyful event, it was not permissible to fast (Lit. in Schürer, i. 157, and JE, c. v.). Of such days there are no fewer than sixty-two, including, besides the Hanukka, those mentioned in 1-3 above.

(7) The 15th of Shevat is spoken of in the Misna (Rosh Hashanah, 10) as the New Year for trees—that is to say, the Biblical ordinances relating to trees and their fruits (as, e.g., in Lv 19:23) come into operation for the year on that day. This date still marks the agricultural associations, and is regarded as a day of rejoicing.

(8) The forty-nine days between the Passover and the Feast of Weeks are called the 'omer days,' because the beginning of their enumeration was signalized by presenting a sheaf ('omer') of barley as an offering. These days were also accounted a time of mourning, as it was said that 12,000 pupils of Akiba had perished during the period (Tebanoth, 62b); and perhaps we have here the Jewish reminiscence of Bar Cochba's revolt under Hadrian, in which Akiba took a very active part. Further, it is regarded as improper to marry during this season; but the earliest mention of this restriction is found in post-Talmudic sources (cf. the 11th of Omer, p. 22, in Geiger's Jüd. Ztschr. viii. [1886] 83), and many scholars find in it simply an echo of the Roman practice of having no marriages in May, as the spirits of the gods were then in a decaying state. On very special ceremonies, and the so-called Lustrans celebrated, in that month. An exception was made of the thirty-third 'omer day (Lag bc'omer; lag = 37 = 33), which coincides with the 15th of Iyar, and is regarded as a great semi-festival. The practice of designating this particular day is far from clear. A felicitous conjecture has been made by Derenbourg
FESTIVALS AND FASTS (Muslim).

The festival of Sacrifices connected with the feast of Ghufrān, for reason of al-Aladha; yaum an-nahr; al-'id; al-kabir or al-akbar; Turk, qurban bairâmi), which is celebrated from the 10th to the 13th of Dhu-l-Hijja by pilgrims in the Valley of Mina (now Minâ), east of Mecca, and by non-pilgrims at home. Although the festival

still later origin; and in France, even as far down as the 11th cent., the fast was regarded not as an enactment of the law, but as a custom of the church. 

The Karaites keep strictly to the Biblical dates, fasting on the 7th of Tamuz, the 7th and 10th of Ab, and the 10th of Tebeth. On the authority of Neh 9, they hold the fast of the 7th month on the 24th of Tishri, and they too connect it with the as-}

customary for fasting, probably because it was on these days that the people of the surrounding districts came into the cities for the purpose of hearing the lesson from the Torah, or of attending the law-courts (cf. Joel Müller, Misschet Seforim, Leipzig, 1878, p. 226 ff.). But we find that fasting was practised on other days as well, though never on Sabbath, or on feast-days, or their preparatory days (cf. Jth 9).

There are also local fast-days, designed to commemorate particular local calamities, and thus obligatory only upon the Jews living in the countries concerned, viz., Zadok, Ritus, 127 ff. Of such fasts the best known is the 20th of Sivan, observed as a memorial of the slaughter of Polish Jews by Cossacks in 1648-49.

LITERATURE.—This has been sufficiently indicated in the course of the article, see N. EL POZNAŃSKI.

FESTIVALS AND FASTS (Muslim).—Properly speaking, Muslims know only two festivals ('id, more rarely mawlid), which, however, are not mentioned in the Qur'ân, though they are based on it. Further, they have introduced, in the course of time, a multitude of commemoration days for holy men and sacred events; and, finally, in countries which were arabized later, they have appropriated the pre-Islamic holidays to a certain extent. Thus we can distinguish festivals and holidays, properly speaking, from observances purely Islamic and half Islamic, universal and local.

1. The greatest festival is the festival of sacrifices connected with the feast of Ghufrān, for reason of al-Aladha; yaum an-nahr; al-'id; al-kabir or al-akbar; Turk, qurban bairâmi), which is celebrated from the 10th to the 13th of Dhu-l-Hijja by pilgrims in the Valley of Mina (now Minâ), east of Mecca, and by non-pilgrims at home. Although the festival

still later origin; and in France, even as far down as the 11th cent., the fast was regarded not as an enactment of the law, but as a custom of the church. 

The Karaites keep strictly to the Biblical dates, fasting on the 7th of Tamuz, the 7th and 10th of Ab, and the 10th of Tebeth. On the authority of Neh 9, they hold the fast of the 7th month on the 24th of Tishri, and they too connect it with the as-

customary for fasting, probably because it was on these days that the people of the surrounding districts came into the cities for the purpose of hearing the lesson from the Torah, or of attending the law-courts (cf. Joel Müller, Misschet Seforim, Leipzig, 1878, p. 226 ff.). But we find that fasting was practised on other days as well, though never on Sabbath, or on feast-days, or their preparatory days (cf. FESTIVALS AND FASTS (Muslim)

rests on a heathen basis (cf. art. CALENDAR (Muslim), vol. iii. p. 1209). Islamic legend assumed that the sacrifice of Ismail was performed by Abraham at the hand of Abraham. In the Sūra al-Hijāz (xxii.) of the Qur'an there is, besides the explicit recognition of the Ka'ba cult, also a mention of animal sacrifices in 'a day of the festival' (Qur. ii. 264; cf. vi. 16). The prophet's successors, semi-officially, interpreted it to mean the sacrifice of animals on the 10th of Muharram.

'So proad to thy Lord and slaughter (victims)!' (Qur. eviii. 2) of the festival of sacrifices. According to the oldest tradition (hadith, quoted according to the Sahih of al-Bukhārī, Bulaq, 1256 [vocalized], in 8 parts), the introduction of the festival order, partly in common with the other festival (see below), which this festival has. First (Bukhārī, ii. 3, 8, 3, 18, 4, 2, 15, 6, 10, 7, 20, 8, 4; vi. 223, 226, 6, 7) contains the general prayer (salāt) accompanied by an edifying address (khutbah) by the leader in prayer (imām). Only thereafter can the sacri9dng of the animals take place. Some wished to make the address precede the prayer, because after it the crowd could not be held in restrain. But this practice is criticized. It is lawful to eat dates before the prayer, but not to slaughter or taste flesh (ii. 3, 15 ff., 5, 18, 6, 11, 10, 5, 9). If any one does not respect the prayer as a sacrifice, he had to repeat the slaughter after the address. When the imām addressed women, they used, in the times of the Caliph, to put the ornaments, as rings (saddqah) into the garment of the mu'dadāhin, Bilāl, hold out to them. During the prayer (ii. 5, 4, 7, 20, 8, 12) an antique weapon (anaz), short spear, or hābā, dart, javelin, used to be planted in the earth before the imām (ii. 7, 10 ff.). (This explains also the name dābha for Friday, because it was forbidden by the Prophet to carry armes on festival days (ii. 51 ff.). It is told that the Prophet commensuated the sacrifice in the following fashion (vi. 224 f.). He took two rams (kibā, cf. Gn 22:8), placed them in the direction of the Ka'ba, and then 'brought the other to the Ka'ba, and slaughtered the animals. The following predicates are applied to the victims: (1) amal, 'of mixed colours'; black and white (Tweddie, Arabuhn Horse, 1894, p. 283, translates this rare expression 'silver grey'); (2) i'xaq, 'with grown horns'; (iii.) in some texts but not all, manfah, 'mash实际行动, i.e. 'with testicles crushed' between two stones in the boards, because a sacrificial animal must have no sensuality. The last regulation seems to be pogan; for we may infer from Ly 224 (mep) and Dt 23 (527292) that this practice was also present in the Canaanite cult, and was suppressed only by the Jahveh-reformation. The 'protection of the rams' (qilday) is mentioned even in Islam (vi. 227, 71.). The victim is called dāba, ahiya, dābha (cf. 221), and in the texts it is called 'ayada. The flesh was eaten by the owner of the sacrifice, and also often distributed among the poor (vi. 233, 8; Ilaifawiti, i. 623, 6 f.). The second and the third days, on which the inferior parts were consumed, were called on this a day of the heads; yaum al-qār, 'day of the remnants'; yaum al-adār, 'day of the legs'. Besides sheep, oxen and camels were allowed as victims. At the slaughtering the following words are pronounced (a) Dismilah! 'in the name of God!' (cf. Qur. xii. 37); (b) Allahā akbar! 'God is very great!' (cf. Qur. xxii. 41); (c) Allāhumma kāddā minka wa-slika (lahkā) 'O God! this from Thee and unto Thee,' which probably means, 'From Thee, and unto Thee, we take the gracious Gift!' (cf. I. Goldziber, 'Über eine rituelle Formel der Muhammedaner,' ZDMG xlvii. (1894) 95 ff.). The ethical side of sacrifice is emphasized in Qur. xxii. 38 as well as in tradition (ii. 7, 10). It is a matter of fends of securing moral advantages, the blessing, and of coming near to God (acc. to the interpretation of gurba, 'sacrifice'). The puri9tive Abu Bakr wished therefore to hold in restraint as far as possible the joyful disposition that such a festival naturally brought with it, and to exclude female singers. But the more tolerant Prophet allowed them (ii. 2 f.). Also in the matter of luxury in clothing, there existed side by side a stricter and a laxer practice. Whether or not neglected the celebration of the sacrifice, or could not be present, had to substitute for it a prayer consisting of two bows (raka') (ii. 10, 15 ff.). In course of time both festivals have become connected with other regulations, during which the faithful make calls and give presents, put on new clothes, and seek annuements; yet they also visit graves, and hold devotional exercises.

2. The custom of fasting and the festival that follows it are closely connected. (a) The fast (sawm, i'jām) (opp. ifṭār).—According to the Arabian tradition, Muhammad commanded first that the faithful should fast on the Day of 'Ashār, the 10th of Muharram, after the fashion of the Jews, who fast on the 10th of Tishri, the Day of Atonement (ii. 208, 8, 225, 8, 231, 6, 14; iv. 290 f.). Later this regulation was abrogated, and, instead, the whole month of Muharram was declared fasting month (calend.). The regulation for this is in Qur. ii. 179 ff.

O ye who believe! There is prescribed for ye the fast as it was prescribed for those before ye; haply ye may fear. (19) A certain number of days, but he amongst you who is ill or on a journey, then let him fast the number of days which he has not; and if ye can do it not, then feed the poor (of God's possessing)." This is best for you; and if ye do it not, then feed the poor, until ye feel the weight of the burden of your fast. (20) That ye may think of the countenance of your Lord, and for manifestations of guidance, and for a discrimination. And he amongst you who beholds this month let him fast it; but he who is sick or on a journey, let him fast an equivalent time. And those are of the guidance of your Lord, straight; and God is well-pleased with them. (21) And if ye do not feed the poor then feed the poor of your own. (22) The words 'may redeem it by feeding a poor man' were soon abrogated (mamāsh), because they were nuisanced by the wealthy (Qur. ii. 180; Bukhārī, ii. 219). The custom of determining the daybreak by the test of the heathen on the earth was recognized, not as a reward for piety, but as a black is of Jewish origin. The ethical nature of the fast was strongly emphasized in the earliest tradition (ii. 208, 18, 210, 19, 211, 4 f.), just as it was in the case of the Day of 'Ashār, 'atonement' (kabārā), on the other 'a protection against sensuality.' It is of no benefit whatever as a mere opus operatum, but it must take place (1) in faith (mīmān), (2) intentionally (nīma), (3) on the part of the one who is called to it (ibtiṣab) from God (ii. 210, 4, 222, 7, 233, 17). Whoever does not give up untruth and deceit will not profit by fasting (ii. 210, 18). Boisterous merrymaking is not allowed (ii. 210, 19). The faithful
are exhorted not to insult each other during the fast. Whoever is insulted or attacked while fasting must not rise to his feet, but he is not fasting' (ii. 298. 15, 210. 220. 2). Tradition says of one who keeps the fast in this manner: The perfume of the mouth of the faster is more pleasant before God (cf. ii. 208. 210. 20). The month may not be shortened, but there must not be any overdoing either (ii. 233 f.). The Qur'an itself excludes all rigorous practice (ii. 181). Similarly, tradition says that the fasting month is one of mercy, and one of tolerance, for equality of each individual (Ba'jawi, i. 102. 6). Some overzealous people wished to continue (wisal, muaqala, aard) the fast after sunset through the whole night until the next morning; this met with disapproval, and was even threatened with punishment (ii. 223 f.). To meet different conditions and circumstances of everyday life there are special regulations which partly border on casuistry. The Qur'an itself makes an exception in favour of the sick and of travellers (i. 180). Likewise a Bedawi proverb says, Al-mu'aqil fi kifir, 'The traveller is (like) an infaid, i.e. he is not bound by ritual precepts. Sexually or the dressing of a woman is allowed (although restricted by the ethical conception of the fast, ii. 215), just as the swallowing of one's saliva (ii. 215. 20) and the use of the mouthpiece (i. 185). Furthermore, it was allowed to snuff up medicine (as al- 'at) and to dye the eyes with eye-paint (kuhul) (ii. 216. 7). In view of the question whether vomiting or bleeding breaks the fast, the following principle has been established (ii. 218): the fast concerns that which goes into the body and not that which comes out (contrast the position in Mk 7:31 ff.). Others condemn even the drawing of blood. The pious do not permit smoking, wine or other pleasures. One who is dying in Ramadan must appoint a substitute (wadi) to fast the rest of the month in his place (ii. 221. 11). In time of menstruation, a woman may neither fast nor pray (i. 221. 4).

Some people fast voluntarily at certain times outside of the month of Ramadan, e.g. on the Day of 'Ashura (i. 231) (see above); in Sha'ban (i. 225); on the 13th-15th of each month; during the days of pilgrimage at Mount 'A'adib (in the valley of Min'ah, Min'ah (i. 229)); or three days in each month (i. 101. 18 f.). If a person alternately fasts one day and not the next, that is called 'the fast of the Prophet' (i. 224. 1). More than once fasting is given in the Qur'an as a penalty, e.g. iv. 94, where two months' fast is commanded for a case of murder; lviii. 5, two months' fast for one who wishes to have intercourse with his wife after having once pronounced the formula of divorce; v. 91, three days' fast for breach of faith; all this when the culprit is not able to pay the prescribed material penalty.

The oldest Islamic legend explains the choice of Ramadan, which had no special significance in pre-Islamic Arabia, as far as we know, by the tradition that it was the month of revelations. The 'Leaves of Abraham' (Qur. lxxxvii. 10, cf. lii. 37), the Torah, the Gospel, and the Qur'an (ii. 181) are said to have been successively 'sent down' in Ramadan (Ba'jawi, i. 102. 19 f.). Owing to the fast and the Laylat al-qadr (see below), the month of Ramadan is surrounded by a greater halo than any other Islamic month. The mere sighting of the new moon (hilal, cf. Calendar [Muslim]) which inaugurates Ramadan causes a joyful excitement. Ramadan is surrounded by a greater halo than any other Islamic month. The mere sighting of the new moon (hilal, cf. Calendar [Muslim]) which inaugurates Ramadan causes a joyful excitement. Ramadan is surrounded by a greater halo than any other Islamic month. The mere sighting of the new moon (hilal, cf. Calendar [Muslim]) which inaugu...
verse the order, and commemorate his death on the 15th anniversary of the day of the Prophet's birth (mawlid, milad) of the Hijra, i.e. of the Hijra and Hijriya together, falls in Rabi' ii. Many other great and small saints also have their mawlid. In Jumada I come the commemorations of the birth of Ali, his birth on the 8th, and his death on the 15th. On the 20th of Jumada I, the Ottomans celebrate the capture of Constantinople in A.H. 857 (27th May A.D. 1453). Rajab has been regarded as a specially holy month ever since the times of the Prophet. On the 17th of this month is the Lailat ar-ragha'ib, 'the night of the fulfilled desires,' because the Prophet is said to have been conceived in that night. The night of the 26th of Rajab is the Lailat al-miraj, 'the night of the ascension' of the Prophet. This observance is based on the narrative, found in Qur. xvii. 1, of the 'journey by night' (isra', mi'raj) which the Prophet made on a marvellous animal (burdah) from Meecca to Jerusalem and back. This event has been treated both in prose and in poetry in the literatures of all Muslim peoples. The 3rd of Sha'ban is considered by some as the birthday of 'Umar bin al-Khattab. The 12th of Sha'ban is very important as 'night of privilege' (Lailat al-barat); in it the heavenly tree, Sidrat al-muntaha (Qur. lii. 14), is shaken to decide who shall die in the following year. Something similar to this is told also of the Lailat al-nilad; (see above), so that one can apply to both nights what Meisner says about the latter, that it must be regarded as a reminiscence of the Babylonian festival of the New Year (ZUAPAKU; ARzF. (1902) 227; KA7, p. 515). On the 21st of Ramadan the Muslims of India commemorate the death of 'Ali. In the month of Shavan, soon after the 'little festival,' the Egyptian, Syrian, and the Ottoman countries. Consequently the celebration of the departure and of the return of the pilgrim caravans is now more and more confined to the sending of the kiswa to Mecca. But the pilgrims, who used to start on foot or riding about this time, have now come to use extensively European steamers from the Maghrib, Egypt, Syria, and the Ottoman countries. The observance of the observance of the holiday, the festival of the Lake of Hamun, where the Prophet is said to have nominated 'Ali as his successor, is purely Shi'ite, and kept on the 18th Dhu-l-hijja.

4. Just as in the worship of Saints, so also in the observance of certain festivals, a syncretism exists which is otherwise unknown in Islam. It is true that the Arabs, though numerically far inferior in the great countries which they had conquered, thanks to some other factors spread their language there more or less successfully. But, on the other hand, they naturally adopted some customs, among which was the observance of certain days, closely bound up with the nature or the history of the subjected peoples. Thus in Egypt the following days are celebrated as general festivals: the second day of the Capricorn Raster (Shaminan-nasim, 'smelling the mild west wind'); the Lailat es-nasqis, 'night of the dropping,' i.e. the wonderful light of the 15th, which is the most important as 'night of privilege' (Lailat al-barat); in it the heavenly tree, Sidrat al-muntaha (Qur. lii. 14), is shaken to decide who shall die in the following year. Something similar to this is told also of the Lailat almiraj; (see above), so that one can apply to both nights what Meisner says about the latter, that it must be regarded as a reminiscence of the Babylonian festival of the New Year (ZUAPAKU; ARzF. (1902) 227; KA7, p. 515). On the 21st of Ramadan the Muslims of India commemorate the death of 'Ali. In the month of Shavan, soon after the 'little festival,' the Egyptian, Syrian, and the Ottoman countries. Consequently the celebration of the departure and of the return of the pilgrim caravans is now more and more confined to the sending of the kiswa to Mecca. But the pilgrims, who used to start on foot or riding about this time, have now come to use extensively European steamers from the Maghrib, Egypt, Syria, and the Ottoman countries. The observance of the observance of the holiday, the festival of the Lake of Hamun, where the Prophet is said to have nominated 'Ali as his successor, is purely Shi'ite, and kept on the 18th Dhu-l-hijja.

5. Besides the above yearly festivals, the Muslims have also other, regular, festive days, Friday, Jumma, Jumma'a (cf. Calendar [Muslim] and Bukhari, i. 1941). Work is not forbidden on Friday; but every good believer is expected, even if he thinks that he has an excuse for other days, to take part on that day in the common prayer in the mosque (jami', musjid), and to hear the address (khutbah) of the imam or hukb, which follows the prayer. The observance of the rest of the day is private, or taken up with the dhikhr exercises of the dervishes.

R. VollerS.

FESTIVALS AND FASTS (Nepalese).—Buddhism and Hinduism are so closely connected that the festivals of Nepal are of mixed character as are the religions. With the mass of the people the religious character of the festivals is scarcely recognized. They are occasions of festivity and mirth rather than of religious worship. All the national, or Nirvar, festivals have lost a great deal of their importance under Garkha rule. The share which individual Nirvars take in the different festivals is not optional, but depends upon a curious custom. Under the Nirvar kings, from the earliest known times, the acting, or festival occasions, was the duty or privilege of certain families or castes; so also were the dancing, the construction of the cars, the making of masks, and the necessary painting. In each instance the privilege was hereditary, and passed from father to son. The custom continues to the present day. The important Nirvar festivals are given in the following table. The date according to which they are celebrated, commencing with the month of Baisakh, the first month of the Nirvar year.

1. 'Bhairabjatra' or 'Biskati', in the month Baisakh.—Bhairava is an incarnation of Siva, the most popular deity of Nepal, and regarded as the guardian angel of the country. The deity is essentially Hindu, but has been admitted into the Buddhist pantheon. Dancing and the sacrifice of buffaloes characterize the festival, which is always celebrated at night, except every twelfth year, when it takes place in the daytime.

2. 'Lashai'—This festival is in honour of the cow. It commences on the first day after the full moon of Sawan. The Hindu festival, where the cow is worshiped, is confined to one day. The Buddhist part of the festival lasts a month. The Buddhist vilakas and temples are visited, little wax trees (probably commemorative of the sacred Bo-tree at Gaya) are carried, and offerings are made to various Buddhas. Images and pictures are exposed to view in the vilakas for fifteen days—from the fifth day before till the tenth day after full moon (Dassami), when the festival closes, and the pictures are taken down and carefully put away in the vilakas.
3. "Banhratra," in the month Sawan.—The name alludes to feasts which are given from time to time to the Brahmans, Sarvastivada and Mahayana sects of Buddhism. The feasts are held alternatingly (quarterly, in the months Baisakh, Sawan, Kartik, and Margh. They are celebrated by the giving of alms to the banhras on the part of any patron or any one in whose honor they are given, and on the part of the people generally. On this occasion the coronet of Amitabha Buddha is taken from his image in his temple and exposed to public view.

4. "Machendrajatra," in the month Bhadu.—This festival, held in Kathmandu, is peculiar to Nepal. It is held in the beginning of September. It commences four days before the full moon of the month Bhadu, and lasts until the fourth day after.

5. "Swayambhumahal," in the month Assin.—This is the birth day of Swayambhu. It is a great Buddhist holiday, on the day of the full moon, and there is general Buddhist worship throughout the country.

6. "Sheorati," in the month Phagan. —It is held on the first day of the month, and is a fast, not a feast. It is a purely Hindu festival, but most Nepals (Siamese) observe it, of course on the first day of the new month. It consists of three distinct portions: (1) the bathing of the image of Machendra; (2) the dragging of the image in a triumphal car; (3) unrobing the image and exhibiting his shirt to the people.

8. "Neta Devi Rajatra," in the same month.

9. Great "Machendrajatra."—This is the most important festival in Nepal. It is held in the fifth month, and consists of the death or birth of Buddha (Buddhist) or of his image (Shiva). The festival consists of the death or birth of Buddha (Buddhist) or of his image (Shiva). The festival consists of the death or birth of Buddha (Buddhist) or of his image (Shiva). The festival consists of the death or birth of Buddha (Buddhist) or of his image (Shiva).

10. Festival of "Narayan"—Narayan is a form of Vishnu, and Buddhists to some extent into the worship of the day. 

FESTIVALS AND FASTS (Siamese).—Introductory.—Siamese festivals, fasts, and observances are a rule, traceable to either Brahmanism or Buddhism. These two creeds, introduced into the country at a very early date into the country, have ever since existed side by side as rivals for the supremacy, but without any violent struggle, in so far at least as extant records go. The former (in its varied developments, especially Saivism) was, with few exceptions, patronized by the Court till about 150 years ago, while Buddhism found most support among the masses, not naturally led the rulers of Siam, even when deeply attached to Saivism, to assume the rôle of defenders of Buddhism as a matter of policy. Thus in every Siamese capital of the past (as even in the present one, Bangkok), and in the chief provincial towns, especially in the south (Malay Peninsula), Brahmanic temples with a body of officiating Brahmins, who acted at the same time as State and Court priests, were to be found along with numerous Buddhist shrines and monasteries erected, some by pious rulers, but mostly by the people. Of these temples there were at least three in each town, facing the east, and dedicated respectively to Siva (that on the south), Ganesa (the middle one), and Vishnu (that on the north side). The result of all this was, if not an actual blending of the two religions, the gradual introduction into most of the national festivities and ceremonies of both Brahmanic and Buddhist rites. This process was further intensified during the reign of siamese Buddhist sovereigns like Song-tham (1618-28) and Mongkut (1851-68), who succeeded in infusing into Buddhism there having spent a considerable part of their life in a cloister. It was especially through the endeavours of the latter ruler that the introduction of Buddhist rites into State and Court ceremonies, which had long re-

maintained strictly Saivism, reached its climax. It thus comes to pass that nowadays in well-nigh all festivals and ceremonies occurring in the same period, whether of Brahmanic or Buddhist origin, we find Buddhist rites associated with Brahmanic practices. Nor is this all, for the prestige of Brahmanism, especially during the present dynasty (which ascended in 1851), having even more considerably dwindled, it may be said that in a good many festivals and domestic ceremonies the presence of the so-called Brahmanis (now a somewhat degenerate body) is solicited chiefly out of homage to a time-honoured tradition which renders them indispensable. Their task consists mainly in calculating auspicious dates, making offerings to the gods and goblins, performing lustrations, blowing banhras shells, or striking the gong of victory, and waving their Savile hour-glass-shaped drum (damara).

The private observances and ceremonies of the Siamese will be discussed in art. VI (Buddhism). In this art. only festivals of a public nature are treated.

For the sake of easier comparison and identification of Siamese festivals introduced from Brahmanic or Buddhist India, and of those of their land of origin, the Siamese solemnities are here mentioned in the serial order of the months in which they occur, beginning with Chaitra, the Siamese New Year. It is with this that the Siamese new year now commences, whereas at an uncertain remote period it began with Magha (as in North India till about the end of the 10th cent., according to al-Biruni), the present Siamese first month. Along with public festivals, some solemnities now held only at Court, or abolished of late, which were formerly more or less public, will also be mentioned. It seems fit, moreover, that the principal state ceremonies periodically repeated at the appointed seasons should not be passed unnoticed, owing to their intimate connexion with most public festivals, of which they often constitute the predominant feature. The national periodically recurring holiday is the Moon-feast, or Buddhist Uposatha festival, which till recently was regularly observed on the 8th and 15th days of the waxing and on the 8th and 15th days of the waning, but is now telescoped to a large extent (since the adoption of the solar calendar in 1889) for civil purposes by Sundays.

I. CHAITRA (6th month).—The greater part of this month is occupied with New Year's festivals, which are actually three, intended to solemnize respectively the commencement of the lunar-solar, civil (modern solar), and astrological (old solar) years. Leaving out civil New Year's Day—fixed, since the introduction of the modern calendar in 1889, to fall invariably on the first of April, and which is an empty observance—it remains to consider the other two, owing to their being essentially religious, connected with the old calendar adopted from India on the basis of the Saka era reckoning, and celebrated with as much pomp as ever, despite the introduction of the new calendar.

1. 'Trut', or popular New Year.—The festivities last three days: the 15th waning of Phalguna (4th month); the 1st wakening of Chaitra (5th month), or New Year's Day; and the day following. These holidays are an occasion for the people to perform meritorious work and enjoy themselves, after having duly freed the premises from ghosts through exorcistic recitations by Buddhist monks, who are presented with food and requisites. The task is accomplished on a much larger scale in the town of Bangkok, where recitations of the *Atanatiya sutta* (an uncanonical compilation) are held all round the royal palaces and the city walls, and guns are fired off from them at regular intervals during the night to frighten the goblins. The people carry protective...
FESTIVALS AND FASTS (Siamese)

rings of unspun cotton cord on the head, and threads of the same material, ground on the shoulders for the same purpose, so as to be freed from evil influence on New Year's Day. On this date (1st of Chitātra), oblations to the gods are made and ancestral worship is performed. At court, after this and a koma sacrificial offering on the sacred fire by the Brāhmaṇa, the 'name' of the year is changed. This ceremony, termed Saimachabhara-chinch, consists in changing the name of the animal denoting the place of the Brāhmaṇa's residence (or convent) in the chandrayoni cycle (of the twelve animals; see CALENDAR [Siamese]) after which the year is designated, but not the 'figure' or serial number of the year in the era, the altering of which is to be effected later, on Maha-saṅkhranti, i.e., at the completion of the astrological (solar) year. The people are allowed free gambling—an extraordinary ordinance of which full advantage is taken. In connexion with this popular New Year festival the following other important ceremonies are performed.

1. 'Saṅhāra,' or 'Gajendrāsa-saṅhāra' ('sprinkling of the lordly elephants and horses,' a later reduced form of it).—This has been but recently imported into the kingdom. It was originally a general purification of the army, like the Hindú Nirajāṇa, which was restricted later to a formal sprinkling of the elephants and horses from the royal chariot, offered from stands with blessed water as they filed past in a stately procession. On the same occasion the Vṛddhi-pāda Brahmans (i.e., those in charge of auspicious rites in connexion with elephants) uncoiled, in the royal elephant warfare houses, the ropes and nooses stored therein for elephant-catching, and performed a hook and noose dance in honour of Viṣṇu, simulating the capture of elephants. This took place on the third day of the fasting. Next morning the ropes and nooses were coiled up again and stored away. Both these ceremonies were repeated on the 4th new-moon day of the 11th month (Aśvayuja) in connexion with the half-year festival. The purpose was a general review of the army, so that all its equipment might be kept in proper order and efficiency.

2. 'Thī-Nam,' or drinking of the water of allegiance.—This is a ceremony performed with the utmost splendour in the royal Buddhist temple of the capital (and in the chief temple of every provincial town) with the concourse of all officials. It takes place on the third day of the fasting, and is a sort of re-litigation with the sawal year festival on the 13th day of the waning of the 10th month (Bhṛdrapada). Water is locally drunk, in which royal weapons (symbols of the sovereign power) are dipped, adjurations being pronounced the while, so as to make it fatal to traitors. In essence this is tantamount to a water-ordeal, of the kind that formerly obtained in the Hindu Courts (cf. Brah-पति, in SEB xxxii. 1889:218).

3. Songkrān, or astrological (solar) New Year. This falls nowadays on either the 12th or the 13th of April, the date of the assumed entrance of the sun into Ari, according to the traditional local (Hindu-zodiak) reckoning. The day is tenanted by Maha Songkrān day (Maha-saṅkhranti being substantially the same as Maha-saṅkhranti), and with it commences a three days' festival, the year's serial number in the era being changed with much ceremony on the third day, which is actually regarded as New Year's Day (solar). On this occasion the king performs with much splendour a kind of shower-bath with hustral water, termed mardāhābhikṣaṇa, and afterwards he sprinkles the sacred images. The people, amid much rejoicing and free gambling, as on the popular New Year's Day, perform a good deal of meritorious work by washing the Buddha images in the temples, sprinkling the monks and their relatives as an act of respect, and building sand-hilllocks in the temple-grounds. They partake of rice gruel, and offer pūṣadas of food, and lighted incense-sticks and tapers, to the statues of the Buddha.

ii. Vaisākhā (6th month).—5. Ploughing festival.—The king, that state ceremony, traceable to the remotest antiquity in India, is performed up to the present day in Siam in order to usher in auspiciously the tilling of paddy fields. The people also make the sacrifice of the bull, (which is done by the Brāhmaṇa). This festival has been held, in which prognostics are also drawn concerning the prospects of the crop. It takes place on a lucky day designated by the astrologers in the waxing part of Vaisākhā (usually the early days of May). A high official, formerly holding the title of baladeva, and representing the king (now the task falls ex officio to the Minister of Agriculture), performs the ploughing in a Crown field, attended by the Brāhmaṇas, a large retinue, and crowds of people who naturally take a keen interest in the ceremony. After having cut three concentric furrows with a gilt plough drawn by richly caparisoned bulls (which were hitherto employed), he severs over them seeds which have previously been hallowed by mantra (Brāhmaṇic, and now also Buddhist, recitations). The bulls are next fed with seven different sorts of food, and as those they most relish will be plentiful during the year. In ancient times the king presided in person, but later he delegated authority to the Minister of Agriculture, who holds, according to the ancient statutes, the title of baladeva in allusion to Baladeva or Balarāma, Krishna's brother who accomplished so many wonders with his ploughshare. This dignitary was on such an occasion, till a century ago, regarded both from his appearance in princely attire, surrounded by a retinue carrying princely insignia, but also from his being entitled, during the three days that the festival lasted, to collect all toils and ship-dues in the capital and its suburbs, while the real king kept retired in his palace without transacting any state business. The present king of Siam, however, did away with this absurd custom by resigning on 24th April 1913 the ploughing festival, to which he drove in his motor car, his presence being greatly appreciated by all as a token of the sovereign's interest in promoting the welfare of the nation's agriculture.

6. Vaisākhā pūjā. This is a strictly Buddhist festival, occurring at the full moon of Vaisākhā, which is held to be the anniversary of the birth, enlightenment, and death of the Buddha. For three days the people, and especially those in their dwellings festively, suspending flower wreaths, garlands, and lanterns which they light at night. They assemble at the temples to worship the sacred images with flowers, scents, and lamps, and to bear religious addresses. They adorn the holy spires with flags and streamers, present offerings of food, etc., to the monks, distribute alms to the poor, and purchase living animals (especially birds and fishes), which are released. The Buddhist precept of showing kindness to all creatures. It goes without saying that the royal temples on the evening of such days are gorgeously illuminated, with the addition of the manmade festival-lights; till this the festival is not so intensely popular as the New Year and Mid-Year ones.

iii. Jjyēṣṭha (7th month).—7. Top-spinning.—This state ceremony, which was disapproved of as superstitious, was discontinued by the king. It was performed with the sacred images. The people, amid much rejoicing and free gambling, as on the popular New Year's Day, perform a good deal of meritorious work by washing the Buddha images in the temples, sprinkling the

monks and their relatives as an act of respect, and building sand-hilllocks in the temple-grounds. They partake of rice gruel, and offer pūṣadas of food, and lighted incense-sticks and tapers, to the statues of the Buddha.
the three gods, were carried out in procession by the Brahmins from the temple of Siva and set in motion on a board by means of a silken string of five colours. From the duration of their spin and the number of revolutions, they were drawn, iv. Asādi (5th month).—8. Vīśṇu's sleep.—It is well known that Vīśṇu is supposed to commence his four-months' sleep on the Milk Sea on the 11th waxing of Asādi, a date which is to this day solemnized in the form of a festival. This was certainly the case formerly also in Siam, as is evidenced by the state ceremony recorded to have regularly taken place, in the past, at such a season. It consisted in a lustration (mūrdhābhiseka) administered to the king by the household Brahmins on a dais rising in the centre of a pond (representing the one the sea and the other the serpent Viṣṇu, Vīśṇu's mythical couch). Besides the above Yalovana festival (or in connexion with it), the Asādi, or Midsomer festival (7th to 14th day of waxing) was likewise celebrated in Siam in bygone days, and at the end of it the Brahmins began their retreat and fasts. But the festival gained very little in importance: the Brahmins were entirely absorbed in the following Buddhist one.

9. Beginning of 'Vassa,' or Buddhist retreat.—This is solemnized by a festival lasting three days (the 8th, 9th, and 10th of waxing; during the first of which elaborate vasta tapers are carried in procession to the temples, where they are to be lighted and kept burning for the whole year. Offerings of robes and requisites for the incipient retreat-season are liberally made to the monks; and the days preceding it are widely taken advantage of by the youths who seek to gain admission to the holy Order whether as novices or as monks. There is a similar lustration at this period in and about the temples. On the 15th the magnificent vasta tapers (a sort of Paschal candles) are formally lighted by means of 'celestial fire' (which is obtained from the sunbeams through a burning-glass, or, in default, produced with a flint and steel). Those in the royal temples are lighted from candles sent by the king, which have been kindled from the 'celestial fire.' Rehearsals of the Vessantara Jātaka are held in the Upovasa hall of royal and other temples by lay devotees engaged for the purpose; Buddha images in the shrines are sprinkled with scented water, and their attire is changed, a scarf being put on their shoulders as befits them in the rainy season. Among the presents made to the monks are large quantities of bees' wax formed into tapers, artificial flowers, trees with gilt or silvered branches, and tiny figures of birds perched on them, sometimes even entire landscapes to recreate the recluses; or modelled into pineapple-like cakes gorgeously ornamented with ribbons and flowers—all in order to provide light to the monks during their retreat, as they are not allowed to use oil lamps.

v. Śrāvana (9th month).—10. 'Tulābhara.'—This state ceremony (well known in India as Tulāpuraṇa or Tula), consisting of the being weighed against gold, silver, etc., and distributing this in charity, was in the past invariably practised by Siamese kings, and at times also by the queen, at this season; but after the middle of the 18th cent. it fell into disuse.

11. 'Varuna-sattram,' or 'Mahā-megha Puja.'—This propitiation of Varuna and of the clouds was essentially a rain-making ceremony, performed of old in India. It consisted in marking against gold, silver, etc., and distributing this in charity, was in the past invariably practised by Siamese kings, and at times also by the queen, at this season; but after the middle of the 18th cent. it fell into disuse.

12. Semi-annual renewal of the oath of allegiance.—The adjured water is drunk a second time by all officials on the 13th waxing, as at New Year (see no. 2 above).

13. 'Sāt' (Śrāda).—This is the Half-Year or Autumnal Festival, termed Sāt (Śrāda) from the autumn season which now begins. The celebration lasts three days (i.e. the last one of Bhādrapada and the first two of Āśvin). Originally it was mainly a Saiva solemnity, connected with the descent of the sun (Siva) to the realm of the departed (the south), which suggested worship to the Brahmins in the Saivism, and profited by the festival has long assumed a Buddhist character. It is an occasion for merit-making; oblations are made to the gods and goblins, offerings to the elephants, and the king and the monks together joined the Order two months before, and presents of sweetmeats to relatives and friends. Every one partakes of rice cooked with coco-nut milk and sweetened with either honey or sugar.

vi. Bhādrapada (10th month).—A festival by the name of 'Bhadravata' took place at this season, not explained in the old records, which possibly corresponded either to the Sakra utṣava (Indra's festival, 12th of the waxing) or to the Ananta chaturdāśi (festival of the serpent-god Ananta, 14th). Now the only solemnity in the following months is the following:

12. Semi-annual renewal of the oath of allegiance.—The adjured water is drunk a second time by all officials on the 13th waxing, as at New Year (see no. 2 above).

13. 'Sāt' (Śrāda).—This is the Half-Year or Autumnal Festival, termed Sāt (Śrāda) from the autumn season which now begins. The celebration lasts three days (i.e. the last one of Bhādrapada and the first two of Āśvin). Originally it was mainly a Saiva solemnity, connected with the descent of the sun (Siva) to the realm of the departed (the south), which suggested worship to the Brahmins in the Saivism, and profited by the festival has long assumed a Buddhist character. It is an occasion for merit-making; oblations are made to the gods and goblins, offerings to the elephants, and the king and the monks together joined the Order two months before, and presents of sweetmeats to relatives and friends. Every one partakes of rice cooked with coco-nut milk and sweetened with either honey or sugar.

14. Lustration of arms.—It being now the half-year season, the sprinkling of elephants and horses, as well as the uncoiling, tendusting, and re-coiling of the elephant neck, are performed, with similar ceremonies as at New Year (see no. 2 above).

15. Royal regatta.—Until the downfall of the former capital, Ayuttihīyā, in 1767, a regatta used to take place at this time of the year between the king and the queen in their respective state barges, in which a number of officials also joined, racing between them. Prognostics were drawn; if the king's large lost, it betokened prosperity to the realm; but, if it won, it was a sign of impending calamities and famine. This state ceremony was discontinued, but a possible survival of it: in a modified form is the boat race held annually on the 8th waxing, in honour of the Phak-nam Pagoda (a spire rising in the middle of the river Mō-nam near its mouth), though this is strictly a Buddhist festival.

16 and 17. Termination of the 'Vassa,' or Buddhist retreat; floating of lamps at night.—These are two festivals occurring contemporaneously on the 14th and 15th of the waxing and on the Ist of the waning. Although now believed to be both connected with Buddhism, there can be little doubt that the second one is merely the traditional continuation of the Hindu Dvīda or Koṭāgara festival, held at full moon in honour of Insira and Lakom, when lamps are also lighted. In Siam little rafts with lamps are floated on the streams these three nights, with the object of thus worshiping the footprint which the Buddha is said to have left on the sandy bank of the Nareulā, at the instance of the Nāgas. Round fish-pies, some of large size, are made and partaken of. The Buddhist festival ending the Vassa is celebrated on these three days by illuminating the sacred images, offering flowers to the monks wherewith to adorn the wposatha hall in which Paviraraṇā is to be held, and the halls reserved for recitations of the Mahā Jāti.

18. 'Kaṭhin' processions.—From the termination of the Buddhist Vassa on till the end of the month, and even for some days later, presents of
robes and requisites for the monks to use during the coning dry season of outdoor errands are con-
dveyed to the temples in solemn processions, either by water or by land. Such processions are termed 
Kathin processions, for they consist of the presentation of the robes and requisites on such occasions to the monks, which, ac-
cording to old custom, should be made from raw cotton, spun, woven, ent, and stretched together in the form of a single day and night, such a feast being considered highly meritorious. The Royal 
processions taking place for the same purpose at this season are famed for their magnificence, which makes them well worth seeing. Before A.D. 1630 or so they were held only by water, but since then 
King Prasat Thong instituted also the land Kathin or Kathin Bok, of which Tachard in 1685, Kaempfer in 1690, and nearly every other traveller in Siam, have spoken in glowing terms.

19. The ‘Phi-pit’ serenades.—Robes and re-
quisites are also presented to the monks in a some-
what stealthy manner which enhances the fun of 
the donation. This is accomplished at night by a 
surfing, past a state ceremony, regent and ducal 
silent procession to the precincts of the monastery 
singled out for the purpose, and lays the robes and 
other gifts in and about the bush (whence the name 
‘Phi-pit,’ composed of the two words ‘Pha-pa’ 
— i.e. robes and trees). When everything is ready, 
displayed, the party suddenly bursts into a lively 
serenade, with musical instruments and singing, 
thus awakening the monks, who, as soon as day-
light sets in, come out to gather the presents.

viii. K ARTIKA (12th month).—20. Feast of 
Lamps.—This embraces two distinct festivals: (1) 
the hoisting of lamps on poles on new-moon day 
and the lighting of them at night, till the second 
day of the waning, when they are lowered; (2) 
the floating of lamps in the streams at night on the 14th, 
15th, and 16th days of the moon, with the eventual 
addition of fireworks. This second form of illumi-
nation seems, however, to be connected more especi-
ally with the festival hereafter explained (no. 21).
On the other hand, the aerial lanterns hoisted on 
poles, as aforesaid, are kept burning to scare away 
goblins in time of epidemics (cf. the raft-pit—
predipas), and, it is believed, also to retain the 
water from draining off the paddy fields, for the 
ears of rice would not attain maturity if the yearly 
rainy season were to abate so early. Hence the 
festival is a very popular one, likewise counter-
part of the Divali or Dipawali, in India. They closely 
correspond, although the aksha-predipas (lamps 
raised on poles in the air) are in India lighted in 
highly-illuminated streets. We have here to do essen-
tially with a festival in honour of Vienm and his 
consort, for it is known that on the 11th day of the new moon of Kariikta the god awakes from 
his four-month sleep, and that his victory over 
king Bali (Vimaça avatara) took place at this season.

21. ‘Kartikeya’ festival.—The main feature 
of this in Siam, besides the popular one of lamp-
floating, past a state ceremony, regent and ducal 
visit the monks by the four temples of each stand, facing 
the four points of the compass, hillocks were 
erected, formed of earth mixed with cow-dung. 
Three earthen pots containing paddy, beans, and 
and mixed with oil were placed on the top of each stand; and, the wicks having been lighted, 
fire was kept burning in the pots for three days. 
Prognostics were then drawn by means of twelve 
staves, having rags dipped in oil tied at one end. 
After the setting of fire to these the staves were 
burned, and the staves of Kathin are lined with 
hillocks rising round each stand. From the side 
on which they fell it was argued that prosperity 
would arise either the king, the clergy, the officials, 
the people, or the gods; and further, if the tops 
of parched rice to the earthen pots, and addresses 
to the three gods. Similarly in Southern India, 
and new-moon day, rice-meal pans are made, with 
a cavity in the centre filled in with gph and 
vided with a wick which is lit; and bonfires are 
kindled on the mountain-tops in honour of Kär-
tikeya. This is practically a Saiitve festival held as 
a counterpart to the Valanvite one mentioned 
above, which in India is by some celebrated in 
organisation of Durga, the wife of Siva. So are eventu-
ally the lamps set out afloat on the streams. In 
Siam this lamp-floating is accomplished more gener-
ally and with far more splendour than in the month of 
Karttika. During the 17th, because the rains 
are now at an end and fine weather has set in. 
Many of the lamps are quite elaborate creations, 
carved out of squill stalks, some being in the form 
of rafts of rafts, or floating groups of figures in them, or neatly arrayed with lanterns, 
tapers, and fireworks, which are lit when they are set adrift.

x. MA RAGIRSa (1st month).—22. Feast of 
speeding the outflow.—This ceremony, literally 
‘driving away the water,’ of high importance in 
connexion with agriculture, was not performed 
regularly every year, but only in years of great 
storms. The last three times that this took place was on the 
occasion of the memorable flood of 1831. It has 
since fallen into disuse. The purpose was to drive 
away the flood-monstr, or, in plain language, to 
cause the water in the river to abate rapidly, so that 
the paddy fields might be drained and the harvest 
accelerated. To this end the king proceeded down 
the river in his state barge, escorted by a pompous 
water-procession, and repeatedly waved the royal 
flabellum in the direction of down-stream, as a 
magic intimation to the water to flow off rapidly. 
Kaempfer and other contemporary writers mistook 
the royal flabellum for a sword, and thus put on 
record the king that the water with a knife in 
or, as it were, like counterintended, the Divali à la 
aver (see Kaempfer, History of Japan, Glasgow, 
1906, l. 73, where he confounds this ceremony with 
that of Kathin-am, ‘Water Kathin,’ for which see no. 19). 

23. Kite-flying festival.—This was a state 
ceremony as well as a public festivity. Large paper 
kites were flown with the object of calling up the 
seasonal wind by the fluttering noise they made. 
The festival was obviously connected with hus-
bardy, as the wind prevailing at this season is the 
main-east monsoon, which, when beginning to blow, 
sweps the rain-clouds away, so that fine weather 
sets in and the yearly rain quickly abates, the 
fields drying up rapidly. This festival was des-
continued after the downfall of the former capital, 
Ayuddhá. La Loubere, who was in Siam during 
the last quarter of 1857, mentions that the king 
of the king of Siam is in the air every night for 
the two winter months, and some mandarins are 
ominated to ease another in holding the 
string’ (Historical Relation of the Kingdom of 
Siam, London, 1699, p. 49). From this it follows 
that the kite-flying was continued far many days 
in succession, till the desired result (the setting 
in of the north-east monsoon) had been attained.

x. PAUSA (2nd month).—24. PuSAIRESKA.
This state ceremony, past a state ceremony, regent 
and ducal visit the monks by the four temples of 
fall of the former capital, Ayuddhá, consisted in
25. Worship of the sacred bull.—This festival, which has dropped out of use for several centuries, consisted in leading the sacred bull (Nandi, the bull-god) with a handbell of Siva's and a cymbal, to five houses, which the Brahmans who attended upon him performed a sort of angel dance. The rite corresponds to the Hindu Puṣṭabaṅgaka Śāna, or ceremonial bathing of a king when the moon stands in the asterism Puṣṭabha in Cancer.

26. Swing festival.—This very popular festivity is held with much pomp for the reception of Siva, and is followed by a quieter one to welcome Vīṣṇu. It has been celebrated from the remotest period in all old Siamese capitals and chief cities, and in some of the latter (e.g., Ligor) swing-pillars exist to this day and a semblance of the ceremony is still performed. But it is in Bangkok, the present capital, that it survives in its splendor. As it falls about the vernal solstice, its original purpose was undoubtedly that of a solstitial festival, in which the swinging and the circular dances that follow it typify the seasonal movement of the sun. But its origin is different, and it is not the orbit of the sun, but the circle of the year that it is symbolically represented. As it stands, the festival is an admirable illustration of the usefulness of local customs. It is, in the first place, an excellent form of amusement for the people of the city. It serves to give the people an opportunity of taking part in a public festival, of enjoying their day, and of being taken care of by the temple, which is always wealthy in offerings and gifts. It is therefore a great social event, and brings together all the people of the city. It is also a religious festival, for it is a time of great devotion, and the people of the city go to the temple to pay their respects to the gods. In addition, it is a time of great prosperity, for it is believed that the gods will grant the people whatever they ask for during this festival. In short, it is a festival of rejoicing, of thanksgiving, and of proper worship of the gods. It is a festival that brings together all the people of the city, and it is therefore a very popular festival.

27. The reception of Vīṣṇu.—The Vaiṣṇavite festival immediately following the Sāvite one just described is performed quietly in the temple of Vīṣṇu. It begins on the first day of the waning, and ends on the sixth, the date of the god's departure from the world of men. The statues of Vīṣṇu, Lakuṣṇī, and Mahēśvarī are carried about the town in procession before moonrise, as befits the god of darkness (the night). In former times the king of Siam, mounted on an elephant, used to escort the gods Siva and Vīṣṇu in procession in and out of the temple.

XII. MĀṆGA (3rd month).—28. 'Dhānya-dāha' (or 'Dāhanam'). Festival of burning of the ears of paddy.—This was another popular agricultural ceremony, associated with the harvest, as a form of thanksgiving for the same; it has since been abolished. It must somehow have originated from the old Brahmānic rite of partaking of the firstfruits of the harvest (Agrāvyāna sacrifice, for which cf. the Gṛhyasūtras). A canopied dais was set up in the Crown paddy fields, to which the usual mock-king proceeded in state as on the occasion of the Ploughing Festival (see no. 5 above). Before the dais a large rāhutta (state conical umbrella) was erected, having three storeys, made respectively of a different variety of paddy, and held together. To this structure the mock-king set fire; then his followers, divided into four parties differently attired and representing the gods of the four quarters and their retinue, rushed in to contend for the umbrella. Prognostics were drawn according to which of the parties succeeded in obtaining possession of the spoils.

Conveying the paddy home.—The ceremony just described was followed by the conveyance home of the harvest. When thethreshing of the new paddy had been completed on the Crown fields, the king proceeded thither in state, loaded some of the grain on his paddy sled, and had this
FESTIVALS

At the same time, the palace caused a large conical umbrella to be made with this rope, while from the fresh trees gathered over the juice expressed. This was the usual coagulated milk and sugar, and sent as an offering to the king of the royal monasteries. It goes without saying that such ceremonies were followed by the celebration of the religious festival of the keenest interest, while in the country the harvest operations were, and are still, celebrated by the peasants with oblations to the gods and rites similar to those already described, though on a less pompous scale, but amid lively pastimes and intense rejoicing, of which harvest songs (especially threshing and reaping ditties), joined in alternately by men and women, form the chief and most pleasant feature.

29. 'Siwa-ráti. Festival of Siwa's night. — This is, as the name implies, strictly Savite, and has been celebrated from the remotest period in Siam on full-moon day of Magha, it being derived from the similar Hindu festival more correctly termed Magha festival, which falls on the 14th day of the waxing. An earthen pot full of water, but with a hole in the bottom, is suspended by means of strings to four poles, and beneath the pot is a vessel placed, which rests upon a basement of the usual symbolical form, provided with a spout. At night the vessel is let down upon the tiinga, and collected from under the spout into vessels. Shortly before dawn, rice is cooked in the temple of the god, with the addition of honey, palm sugar, and other condiments, and when ready it is distributed all round in small portions to the bystanders, to be partaken of. At daybreak all go down to bathe in the river or creeks, and wash their heads with some of the water collected from underneath the tiinga. It is believed that all impurities and sinful stains are thereby removed and carried away by theallowed water.

30. 'Mágha-púja.' — This is a purely Buddhist ceremony, revived only some sixty years ago by King Mongkut. It is held on full-moon day, to commemorate the exposition of the Pátimokkha made on that date by the Buddha to his 1250 disciples of the four congregations. The celebration takes place in the royal temple, where, after feasting the chief monks in the forenoon, a recitation of the Pátimokkha and of the Buddha's discourse thereto is held in the evening, after which 1250 tapers are lit round the temple in honour of the saintly company referred to above. The full-moon period of this month is also largely taken advantage of by the people for making religious pilgrimages to various sacred spots and shrines in the country, such as, e.g., the models of Buddha's footprint (Páthá-bít) and shadow (Páthá Cháit), two stone benches on which the Blessed One is reputed to have rested, etc.

LITERATURE.—There is no reliable account of Siamese festivals and fasts, in works that have hitherto appeared on Siam. For the literature of Siamese Buddhism generally see Siam (Buddhism in).

G. E. GERIN.

FESTIVALS (Slavic). — Beginning with the winter solstice, the festivals of the pagan Slavs, attested in historic texts, folklore, and popular vocabulary, seem to have been of twisted greatly altered or even nonexistent. Kraun or koroën was the festival of the shortest day. The popular word for the solstice itself is koleda, which is simply a transcription of the classical calendae, kalēdā. The people, as a rule, personified Koleda and made a mythical character called Krst (cf. Ital. piantana — epifania; Eng. 'Father Christmas,' etc.).

At the coming of spring among the Czechs, the Serbs of Lukeia, and the Poles, a figure called Marena, Marzana, was thrown into the water; this probably the act of cleaning out the water, is a festival of an ancient Greek, that is to say, the washing of the earth by the cold of winter.

In the month of May there was a festival of roses (Rusalia). — At the summer solstice the festival of kypalo (festival of the bath) among the ancient Russians, coinciding later with the Christian festival of St. John (June 24). This name seems to have been derived from the verb kypati, 'to bathe,' perhaps because river-bathing begins in the month of June, perhaps—and this designation would be produced under a Christian influence—because John was baptized by immersion.

The chronicle of Thietmar (b.c. 61) supplies a very detailed description of the annual festival celebrated at Arcona in the island of Rügen in honour of the god Sçmotovita. The description is too minute to be reproduced here. The festival was held in the month of July, on the third day, in memory of a battle which the Teutonic tribes, in their consternation, committed to a common enemy that a common duty to violate every rule of temperance. According to Helmold (i. 52), the sacrifices of the Baltic Slavs were accompanied by feasts and orgies. The people assembled around the banks of the river, pronouncing over it meanwhile formule not of consecration but of exorcism. Helmold was evidently thinking of the consecration of the Teutonic Slavic.

According to the Czech chronicler Cosmas, prince Bretislav in 1092 suppressed the festivals celebrated by the Czechs about the season of Easter—festival during which offerings were carried to the springs, and victims were sacrificed to the demon.

One of the biographers of Otto of Bamberg (Ebbe, ii, 12, 13) speaks of annual festivals of a very rustic and warlike character, which were held at Pyritz and Volyn by the Baltic Slavs. For festivals in honour of the dead, see artt. Aryan Religion, in vol. ii. p. 25 ff., and Death and Disposal of the Dead (Slavic), vol. iv. p. 509.

L. LÉGER.

FESTIVALS AND FASTS (Tentonic). — Among the Germanic races, religious festivals seem to have been in the main occasions for intertribal intercourse. Tacitus relates of the Germans that 'at a certain period all the tribes of the same race assemble by their representatives in a grove consecrated by the auguries of their forefathers and by immemorial associations of terror' (Germania, 39). Some seven centuries later a religious festival at Skiringslas, in Southern Norway, seems to have united persons who certainly had no political organization in common; and this was probably the case with the great religious festivals held every nine years at Upsala; for the 11th century. Adam of Bremen states that it was the custom in all Swedish lands that a religious festival should be held at Upsala (Mon. Germ. vii. 380). We have Thietmar of Mersburg's authority for a similar nine-yearly festival at Lejre in Denmark (ib. iii. 750), but all the other public festivals of which we have any knowledge appear to have been annual. Of these the most important all over Germanic territory were three in number: one in the autumn, one at midwinter (Yule), and one at midsummer. But, though the Germanic peoples were thus more or less agreed as to times and seasons, the religious significance attributed to these festivals varied in different countries. Thus, among the Scandinavians we are repeatedly
told that the autumn festival (at the 'winter nights') was 'for plenty,' and it was a favourite time for weddings, whereas among the Saxons the festival season was legally ordained for festivities connected with the cult of the dead; and that this was the more usual significance of the autumn festival seems clear from the fact that the Church found it advisable to institute the festival a few days after the date of the Feast of All Saints from spring to autumn. In England, we know that the autumn festivities gave the name to the month known as Blotmånath (cf. Swedish dialectic Blötmanad), because, as Bede intimated, in May during that month the people sacrificed to their gods the cattle slaughtered during the autumn. The importance of this festival doubtless originated in the necessity of killing off a large number of cattle on the approach of winter. The old heathen midwinter festival lasted from about Christmas Day till Twelfth Night, and the high esteem in which it was held by the Teutons is recorded by writers of all nationalities, from Constantius to Morphygenitus, who describes the Yule-tide observances of the Varangian guard at Constantinople, to Bede. The latter tells of the wearing of animal masks at the Anglo-Saxon festival on the Colnigh; she says of the night of the mothers—which he declares, fell on the same date as Christmas Eve. Procopius tells of a festival celebrated by the people of 'Thule' (Norway (7)) to greet the sun on its reappearance—presumably early in January. It was, moreover, at this season—about the date of the Epiphany, says Thietmar—that the great nine-yearly festival at Lejre was held.

The Scandinavians, and possibly also the Anglo-Saxons, seem to have had a festival in spring. According to later writers, this was 'for victory'—no doubt with a view to the Viking expeditions of the summer; but an agricultural festival in spring seems to have been common all over Teutonic Europe.

The midsummer festival may be said to survive to this day in rustic observance, especially in the Scandinavian countries, where bonfires are still lighted on St. John's Eve (June 23). But this festival is rarely mentioned in early times; and the conclusion seems inevitable that it had already sunk into a popular observance, of magical rather than religious significance. The originally agricultural importance of some of these heathen festivals is seldom indicated by the earlier sources, and popular customs in later times often serve as evidence for the close connexion of heathen festivals with agricultural operations. Of these rustic observances certain rites, such as ploughing round the fields at Yule-tide, and leaping the fire at Midsummer, are so common in all Teutonic countries as to make it almost certain that they formed part of the original heathen festivals. The older sources, however, lay chief stress on the actual feasting and ale-drinking, which was no doubt characteristic of all festivals.

Icelandic sources show that the blood of the sacrificial victims was offered to the gods, while the flesh was cooked and eaten. Horses were much valued as sacrifices, so that horseflesh was identified by Christian converts with heathendom, but excavations of Icelandic temples show that other domestic animals were more common victims. The other integral part of the festival was the ale, which seems to have been brewed in vats so large that Saxo Grammaticus declares that a Danish prince, Hunding, was accidentally drowned in an ale-bowl at a festival in Central Europe. We do not know how he came across a party of men sitting round an enormous vat of ale, and that they described themselves as worshipping Woden. Early Norwegian laws enjoin the brewing of ale before all Christian festivals, and its consumption in the company of neighbours, under penalty of a fine. The Swedish laws of the 13th cent. also speak of a 'legal custom,' called Festival in late Latin, following St. Martin's Day (Nov. 11). In heathen times, toasts were drunk to the gods and to the memory of departed ancestors. Drunkenness seems to have been a feature of the feast, according to Tacitus tells us (Anna. i. 50) that the Romans surprised the Germans at a festival, and were able to massacre an intoxicated foe. It is Saxo, centuries later, who relates that, while Athilod was honouring the funeral rites of Wolf with muchгу austerity, he drank too greedily, and paid for his filthy intemperance by his sudden end (iii. 75).

Most of the private festivals in the North were actually described as Jól, 'ale.' For instance, the eax-jó, or funeral feast, which was very important in Scandinavia and in Northern England, survived in the latter country as årded till twenty years ago.

After the Reformation, 'lyke-wake drinking' formed the subject of many restrictive ordinances for Denmark and Norway. Already in 1570 the 'great excess of meat and drink at funerals' was prohibited, and Christian IV, in 1624, finally suppressed all Pressed. Before that date it was usual in the regulations of Danish guilds that on the death of one of their members the heirs of the deceased shall give the guild-brothers a drink and some food. On the Continent, memorial (anniversary) feasts were popular, and Christian priests were strictly forbidden to 'drink wine for love of the dead,' or to join in the festivities connected with such observances.

Drinking seems also to have been characteristic of wedding-feasts. In the North the 'ale of departure' and the 'greeting-ale' were additional occasions for festivities. A feature of all these feasts was the vows taken by the chiefs, pledging themselves to some deed of valour, such as a Viking expedition, vengeance on a powerful neighbour, and the like. This custom persisted into Christian times, and the attempt of the Jomsvikings to conquer Norway in the latter half of the 10th cent. is attributed to such a vow, made at a funeral feast.

From the hints our sources afford us, it seems as if the actual feasting took place at night, Tacitus and the Icelandic sagas concurring in the mention of games during the day. That the festivals actually took place in the temples is also indicated by the fanatical persecutions in Iceland and Scandinavian custom. A post-Reformation bishop complains of 'the carousing and drinking and dancing with life and drum' which took place within the church-doors on the Monday and Tuesday of a wedding-week, and elsewhere he finds it necessary to assure his flock that eating, drinking, and dancing in church are only fit for the children of the devil (Danske Magazin, iii. [Copenhagen, 1847] 60).

If we may judge from the silence of our sources on the subject, fasting for religious purposes seems to have been unknown among the Teutonic races until the introduction of Christianity. It was certainly unknown in Scandinavia, for the Icelandic Laxdala Saga expressly mentions the extreme interest aroused in a neighbourhood by a Christian convert's Lenten fast.

**Literature.—** Information regarding the religious festivals will be found in all manuals of Germanic religion, but the following deal more especially with the subject: A. Tiele, Julefe (Wolf and Christmas), Leiden, 1859; G. Griffler, Christmas, Jülfest, Stuttgart, 1891; K. Weinhold, Uber die deutsche Jahrfeite, Leipzig, 1892; D. Conrath, Altertumsansichten, Strassburg, 1901, s. v. 'Jahrfeite'; W. Mannhardt, Wilde und Politik, Berlin, 1878; H. Thomsen, Legefund. Hau- nenschild, Hanover, 1878; J. G. Frazer, GB, 1911, 'Midsummer Observances,' pp. 58-69.

B. S. PHILLIPTON.
FESTIVALS AND FASTS (Tibetan).—The popular festivals of Tibet are essentially religious in character, and almost all of them are assimilated to the Buddhist type. Those which manifestly belong to the pre-Buddhist religion, the indigenous Bon, are taken part in by the Buddhist laity as priests.

The festival in Tibetan means feast-time ('dus-ston), which aptly denotes the popular conception of the event, with its cessation from routine work and the preponderance of enjoyment over the religious acts of worship and ceremonial. The term 'feast-time' is derived from the same root as 'harvest-season' and 'autumn,' implying plenteous store of food and fruit for feasting upon. It also suggests that originally the great festival was probably in the autumn, after the crops were garnered. The great festivals are called by both laity and lama 'Great Feast-time ('dus-ston ch'en-po), or shortly, 'Great Time' ('dus-ch'en).

Another term which is less commonly used, and more specifically applicable to the Bonist festivals, is amgur, or 'banquets,' which in its religious sense denotes a propitiatory feast to the four great classes of beings, namely (1) the Holy Gods, interpreted by Buddhists as the Triratna (Buddha, the Law, and the Monarch), the founder of the spiritual bar and his personal retinue; (2) the 'Lords of the east,' deities of veneration, (3) the six classes of beings (the five underworlds and the sun), and (4) the deities of the wild beasts and the home gods (cf. 134); (5) the aboriginal deities called glon and byongs.

1. General characteristics.—The Tibetan festivals may be broadly classed as (1) indigenous, or Bonist, and (2) Buddhist.

(1) The indigenous festivals appear to be for the most part Nature-feasts, in the revolutions of the seasons of the year. They are obviously related to the solstices and equinoxes, and display what seems manifestly to be worship of the powers of Nature, conceived mythologically as benign spirits and malignant demons of darkness, drought, and ill-luck, to be appeased or expelled from the land. In addition to this Nature-cult there is an element of ancestral worship to be seen in the festivals given to the dead and malignant ghosts. The survival of the cult of ancestors (in itself opposed to the principles of Buddhism, which teaches that ancestors do not remain in the tomb, but return to life in new forms) is seen in the elaborate ceremonial to secure repose of the spirits of the dead and the lighting up of the funeral monuments (chortens) at the cremation of the cremated remains of the more wealthy classes and the actual bodies of the higher lamas—amongst whom the Dahi lama claim to have as their dead ancestors the kings of the country, whose tombs and those of their noblest subjects the country in the pre-Buddhist period (cf. ERE iv. 509).

(2) The Buddhist festivals commemorate semi-historical and legendary events in the life of Buddha (his birth, attainment of Buddhahood, death, etc.), and in the life of the two great canonized monks of Tibet, namely, the Indian teacher Padmasambhava (c. A.D. 855-1100), the founder of Lamain, and the Tibetan reformer Tsong-kha-pa (A.D. 1356-1417), the founder of the modern dominant sect of lamas, the yellow-cap sect ('dus-ston), and other Grand Lama hierarchies belonging. Some of these Buddhist festivals appear to have been grafted on to pre-Buddhist feast-days, as is evidenced by the aboriginal rites which they embody and the discrepancy between some sects of lamas and those current in other Buddhist countries.

2. Ritual.—During the festivals, some of which extend over several days, the laity generally cease from their ordinary work in the fields, whilst spending their time mainly in festivities, also devote more time than usual to pious deeds to avoid the five great sins, muttering their mystic spells, plying their prayer-wheels, circumambulating the sacred buildings, and visiting the temple to bow before the chief images. For the clergy these events include many parts of the liturgy: the solemn celebrations, reading of the sacred texts, and austere vigils and fastings. The ritual exhibits generally both indigenous and Buddhististic elements—the latter being most conspicuous in the festivals of the yellow-cap sect. The indigenous rites of both private and public worship generally include expiatory and sacrificial ceremonies, though the latter do not usually involve the taking of life, and there are satirical revels and orgies.

3. Occasions.—The general feasts, annual and monthly, are held mainly at fixed periodical times. One, the Water-Festival, is movable according to the appearance of a particular star, and occasionally there are special festivals, at irregular times, for passing events, such as the installation or death of a Grand Lama, or war, or pestilence.

The dates for the general Buddhist festivals are at stated times definitely fixed in the lunar calendar of Tibet (cf. ERE iii. 63). But, owing to the disparity between the lunar and the solar year (ib.), and the regular adjustment of our solar calendar to the lunar—calendaring a month every few years, the relationship between the dates and the natural seasons has become seriously displaced. Further confusion also has been introduced by the date of the ancient Tibetan New Year, which obviously coincided with the winter solstice, having been transferred by the yellow-cap sect to a lunar date corresponding to January-February. This was manifestly done with the object of making it coincide with the Chinese New Year, which, however, it does not exactly. Hence the seasonal incidence of the festivals seldom coincides precisely with the actual equinoxes and solstices, rainy season, or harvest, as the case may be. As a result we get, among other anomalies, 'flower-festivals' in icy January-February.

The monthly festivals are the usual ones as prescribed for meditation and fasting in all Buddhist countries, following the Brahmanical rule, namely, the auspicious days of the new and full moon (cf. ERE iii. 78). To these were added later the other two lunar quarter days, so that this holy day, recurring four times a month, might be called 'the Buddhist Sabbath.' In Tibet it is the 8th and 15th day of each month which are mostly observed, and these are holy days rather than 'festivals,' being days of fasting, and of less, partaking of nothing except farinaceous food and tea; and many of the laity do likewise, and on no account take animal life. The lamas spend these days in reading the scriptures, make formal confession of sins (pratimoksa), and perform the rite of 'washing away sin' (tsi-sol).

The annual festivals, which include all the festivals properly so-called, are not enumerated or described in any known Tibetan work. In compiling the following list from his own observations and those of others, the present writer has arranged the events in the order of the Tibetan calendar, and has shown within these brackets the corresponding approximate month in the European calendar.

1st month, 1st-3rd day (= February), Carnival of New Year (Logar) in new style.—The festival of the New Year is held on this date in Lhasa and the other centres where the yellow-cap sect of lamas is dominant. Elsewhere it is observed on the old date in the 11th month, about the winter solstice. The popular festivities are generally similar to those of Christmas in Europe. It is a season for cessation from work and for general rejoicing, singing, dancing, feasting, and visiting of friends. Even the younger monks have their restrictions.
relaxed, and are permitted to participate for two or three days in the mirth-making. For the event the roads are swept, the houses whitewashed, and the doorways decorated. There is also a pudding, resembling the Christmas pudding of the West, to the eating of which the head of the family invites to his house all the other members and relatives. The pudding is made with raisins, dried apricots, etc., and is brought into the room often with a red flag, at which time a certain incantation is chanted; when this is finished, a hole is made in its centre, into which melted butter is poured—which, as the fuel of lamps, is said to symbolize light and life. Thus it may be supposed the advent of the New Year's light dispelling the demons of darkness. The flag is admitted a demon-driving device in Lamasism.

The head of the house first partakes of the pudding, next his wife, and then his guests and the rest of the family. During the festivities the people indulge in much food delicacies than usual; and charitable gifts are freely dispensed. A custom of 'first-footing' also prevails.

There is in the course of the day, when the noise of the festivities commences, we had a good mind to get up to witness the happiness of the inhabitants of Lhasa, but the cold was so severe that all quiet and entertainment was under outer wooden coverings. Unfortunately for our comfort, violent knocks on our doors and windows warn us that there is something we must resource to our project. We therefore donned our clothes, and, the door being opened, some friendly Tibetans running into the room, invited us to the New Year's banquet. 'Next year will have plenty. Rejoice, Take, Earn.' (G3.36.)

Amongst the festivities at Lhasa is the spectacle of 'Flying Spirits,' by performers who glide down a rope stretched from the summit of Potala palace to its base. 1st month, 4th-15th day (=February), Supplication (Mon-lom).—This appears to be prayers and expiatory sacrifice for new growth and prosperity during the new year. It is conducted chiefly at Lhasa and Tashilhunpo, and is the greatest ceremony of the year in the Lamaist church, when yellow-cap monks to the number of 30,000 congregate in Lhasa alone, as described in the present writer's "Buddhism of Tibet." At this festival largesse is distributed to the assembled monks (amounting to about ten shillings per ordinary monk, and several hundreds to the higher lamas) from the treasury of the Dalai Lama's Government, as well as from the emporium of China, which is for a special purpose specially represented by the Amban on the occasion. The prayers continue till the 15th day of the month, which is the anniversary of Buddha's conception, and on this date the great temple of Buddha (Thub-thob, Jokhang) is illuminated with lanterns. Thereafter the demons are propitiated, and on the 30th day the ceremony of 'Deliverance' (grol-ston), a festival of relaxation, concludes the feast. A notable feature of this festival is that the civil government lapses or changes hands during the currency of the New Year's ceremonies, which continue throughout the month. The temporal government of Lhasa is removed from its usual custodians, and for the month is placed in the hands of the chief proctor of Dre-jung monastery (to which the Dalai Lama is affiliated), and that monk becomes for the time a rex Sacroesus, as with the Romans. It probably represents a period during which the administration of justice was suspended to allow of unrestrained carnival or mirth-making, in accordance with the ancient Greeks and the dies nectus of the Romans. In Tibet, however, it is made the occasion of excessive extortions of taxes, to escape which many of the residents leave Lhasa during this period. The procession concludes to have spread over Tibet. In Ladak, at the present day, during the New Year festivities the Tibetan ex-ruler is permitted by the Kashmir State to assume royal dignities and to occupy the old palace.

1st month, 18th day (=February), Anniversary of Buddha's Conception.

1st month, 29th day, Procession of the Holy Dugger (Phurba or Vajra).—This is obviously a Bonist celebration for expelling evil influences from the country. About a thousand Buddhist priests, half of whom are dressed in Chinese costumes, and the other half are in their native guise, with drums, etc., and, accompanied by about a thousand mounted Tibetan soldiers, and the high priest of the State Oracle of Nechung, whose attendants carry in state a famous miraculous thunderbolt-dagger (phurba) from Sera monastery, file past a throne in the open on which is seated the Dalai Lama. After dancing movements to the beat of the drums, there is raised a series of bowls 'like the roar of a tiger,' which may possibly be intended to rouse the sleeping god from his winter slumber, and would be appropriate in connexion with the old-style festival which occurred at the winter solstice. Later in the day follows the foremost Lama of Tibet, the successor and representative of Tsong-kha-pa, the 'Ti-Rinpoche,' who is usually ex officio regent of Tibet (and was so during the British mission of 1904), and the Buddha Trik-ul, the chief of the orthodox Manichaeans. His duty is to recite the prayer against the evil spirit, who is called 'The King of the Serpents and Lord-rieds' (Lung-gon rgyal-ba). This concludes the ceremony amidst great rejoicing.

2nd month, 26th day (=March), Chase and Expulsion of the 'Scapegoat' Demon of Ill-luck. — This ceremony as practised in Central Tibet is described in the present writer's 'Buddhism of Tibet' (p. 512 f.). In Ladak it is termed Naghron. Two Lamas called hlokar are stripped and their bodies painted black, on which ground a devil's face is painted in red on the chest and back. Other lamas surround the two figures and recite prayers and incantations, whilst others beat drums and blow trumpets. After an interval the hloktars appear to become possessed with devils, and begin to shout and leap about and rush over the roofs of the houses, chased by the people. Whilst in this excited state they are consulted as oracles, and eventually they fall down exhausted in a swoon.

3rd month, 15th day, 26th day (=April), Anniversary of 'Revelation' of the Demons Trik-ul-cult (Kila-chakro), with sacred masked plays.

4th month, 6th day, 8th day (=April-May), Anniversary of Buddha's Renunciation of the World.

4th month, 15th day, Anniversary of Buddha's Attainment of Buddhahood, and of his Death (parinirvana), Feast of the Dead, or All Souls' Day.—This corresponds to the first lunar month of the Indian calendar, the month Vaisakha, when the moon is full near the Southern scale, and is deemed by the Brahmanas a most auspicious time, to which Indian tradition ascribes the above great events in Buddha's life.

6th month, 5th day (=May-June), 'Buddha as the Physician,' or 'The Medical Buddha,' and the beginning of the Buddhist Lent (or Rainy Season).

6th month, 10th day, Anniversary of Birth of Padmasambhava.—This is a festival chiefly of the old sects, and is accompanied by masked plays and devil-dances. That at Hemis, in Ladak, is a celebrated fair.

6th month, 4th day (=July), Anniversary of Buddha's Birth and First Preaching of the Law.—This is the occasion for the display of great pictures of Buddha, or of Maitreya, the Buddhist Messiah.

7th month, 10th day (=August), Birth of Padmasambhava (according to Sikkim style).
FETISHISM

FETISHISM. — 1. Definition. — Few words have been used with so bewildering a variety of applications as ‘fetish’ and ‘fetishism.’ ‘Fetish’ is derived, through the French, from the Portuguese festico, which, in its turn, comes from the Lat. factitus. A Portuguese-French Dictionary defines it as ‘sortilege, maléfice, enchantement, charme.’ As an adjective, it means ‘made by art,’ ‘skilfully contrived.’ Miss Kingley observes (West African Studies, p. 44) that

‘the Portuguese navigators who re-discovered West Africa, noticing the reverence paid by Africans to certain objects, trees, fish, idols, and so on—very fairly compared these objects with the amulets, talismans, charms, and little images of saints they themselves used.’

The above etymology suggests that fetishism was at first regarded as a branch of magic, which, as J. G. Frazier has pointed out, may be either religious or non-religious. The fetish may be a god, or the abode of a god or spirit, helpful to its possessor or devotee; or it may be only a sort of clever device or instrument for attaining ends not otherwise to be accomplished.

The first to draw attention to fetishism as a branch of the study of religion was the French writer, de Brosses, whose interesting and, for the time, remarkable book, Du Culte des dieux fétiches, was brought out in 1738. He understands by fetishism ‘le culte de certains objets terrestres de matières,’ but includes the religious practices of certain tribes with whom those objects are not so much gods as things endowed with a Divine virtue, such as tracés, amulets, and preservative talismans. He excludes the worship of the Sun.

Augusto Comte, on the other hand, gave prominence to the Sun, Moon, and Earth as ‘grands fétiches.’ In his Positivist calendar he devoted a whole month to fetishism, instituting festivals to Animals, Fire, the Sun, and the Moon. To him and to his followers fetishism is practically Nature-worship. They apply the term to the first stage in the development of religion, in which the natural object or phenomenon is a direct object of worship, not a more or less anthropomorphic deity who has

abstention from food or from drink or from both, from sunrise to sunset, and total abstention from animal food or spirituous liquor. So intimately is fasting associated with the conception of holiness in the popular mind that the word for ‘virtue’ (dge-ba) is used as a synonym for ‘fasting.’ Many of the laity also observe a more or less partial fast during these holy days and feasts, as above noted.

Fasting is practised with exceptional strictness by the more ascetic Lamas, who are selected to perform not merely exorcistic sacrifices to the gods, but also the exorcising of evil spirits. In this latter regard it is noteworthy that even the low unorthodox priests of a shamanist type, who practise for purposes of sorcery and exorcism the animistic rites of the Bonist cult, also require, as an indispensable condition, to undergo ceremonial purification and be spiritualized by preparatory periods of fasting.

FETICIDE. — See FETICIDE.

Herbert Spencer’s view of fetishism is radically different from that of Comte. In his Sociology (t. 313) he says:

‘The unworldly object which makes an object a fetish, is supposed to imply an indwelling ghost—an agent without which deviation from the ordinary would be inexplicable. . . . Only when there were spirits of the place, appearances, or metempsychosing into a thing, does there arise this idea of a possessing spirit. The Chumbas worshipped lakes, rivulets, rocks, hills, and other places of striking or unusual aspect. Indirect evidences from all sides converge to the conclusion that the fetish-worship is the worship of a special soul supposed to have taken up its abode in the fetish, which soul, in common with supernatural agents at large, is originally the double of a dead man. It will be seen that the fetishism of Comte and that of Herbert Spencer are mutually exclusive. It is, therefore, not surprising to find that, while the former makes it the primary stage of all religion, the latter regards it as a more recent development. Herbert Spencer’s attempt to bring Nature-worship within the scope of his ghost-theory of the origin of religion is a veritable tour de force of sophistical rationalisation. Goblet d’Alviella, who calls Nature-worship ‘primary fetishism,’ is nearer the truth when he says, in his Hibbert Lectures (p. 82),

‘Man, having been led by different routes to personify the souls of the dead on the one hand, and natural objects and phenomena on the other, subsequently attributed to both alike the character of a fetish. For let us add that this must have taken place everywhere, for there is not a people on earth which we do not come upon these two forms of belief side by side and intermingled.’

1 Lipps’s definition of fetishism as ‘a belief in the souls of the departed coming to dwell in any thing that is tangible or visible in heaven or earth’ (Die Religionen der europäischen Culturvolker, 1888, 22), seems little more than an echo of Herbert Spencer’s.
No writer has done more to elucidate this subject than Taylor, who, in his *Primitives Culture* (ii. 144), defines fetishes as

the doctrine of spirits embodied in, or attached to, or conveying influence through, certain material objects—vessels or vehicles for the conveyance of spirit beings.

The term "fetish" is therefore applied to an object as a fetish, he adds (p. 146), "demands explicit statement that a spirit is considered as embodied in it or acting through it or communicating by it, or at least that the people it belongs to do habitually think of such objects; or it must be shown that the object is regarded as having personal consciousness and power, is talked with, worshipped, prayed to, sacrificed to, personified, with reference to its past or present behaviour to its votaries."

This is very clear and convenient. It covers a very large proportion of what is usually understood by "fetish," and applies with special force to the ideas prevalent in West Africa. It deserves general acceptance, if we are not to consign the word to the terminological scrapheap as so blurred and disfigured by indiscriminate usage that it is unserviceable and misleading. There is much temptation to do so.

Goblet d'Alviella's definition of fetishism is closely akin to that of Taylor. He calls it "the belief that the application of a bit of matter—the services of the spirit lodged within it." He distinguishes between the talisman or the amulet, in which the spirits act on inanimate things from without, using them as implements, and the fetish, which is a thing inanimate, in which the spirit or spirit-being is recognisable by the greater number of savage races. Max Bauer, on the other hand, thinks that fetishism belongs more to the realm of art than of religion, and that, instead of 'fetish' or 'idol,' we should say 'amulet' or 'medicine.' Others call a fetish a magical appliance, or "an object conceived of anthropomorphically." Schultze, in his *Fetishism* (p. 241) says that "a fetish is an object of religious veneration, wherein the material thing and the spirit within it are regarded as one, the two being inseparable." Travellers have added their quota to the confusion. Miss Kingsley, for example, means by fetishism the whole system of West African religion, of which, as she points out, the worship of spirits embodied in material objects forms only a part. Other travellers have applied the term to the material symbols of the great Nature-deities. Lexicographers naturally reflect the views of anthropologists and travellers. Perhaps Webster's definition represents as accurately as anything is possible, viz. "a material thing, living or dead, which is made the object of brutish or superstitious worship, as among certain African tribes." Littre says: "Fétiche—objet naturel, animal divinisé, boîte, pierre, idole grossière, qu'adorent les nègres des côtes occidentales de l'Afrique et même de l'intérieur des terres jusqu'en Nubie." No wonder that Max Müller exclaimed—"fetishism, whatever that may mean!"

2. Classification.—The variety of definition and opinion indicated above is not due to mere wanton caprice. It is the reflexion of a very great and real complexity in the subject matter. The evidence of which anthropologists have baséd their views is enormous in amount, and of a very heterogeneous kind. It comes to us from all parts of the world, though its chief source is West Africa. There are at least five distinct classes of objects to which it relates, all of which fall under the general description of material objects worshipped, honoured, or esteemed because of their qualities other than their physical properties or commercial value.

(i) CLASS I.—Natural objects and phenomena.—The Sun, the Sky, and the Earth (as a source of food) almost universally hold a leading position among the so-called things of this class. Aeschylus's Prometheus extends the list in his magnificent appeal to the Nature-deities to witness the injustice done him by the later generation of anthropomorphic gods:

O lofty divinities, O Winos of phoebe swift,
O fountainheads of Rivers, and O thou
Illuminating laughter of the Sea,
O Earth, the Mighty Mother, and thou Sun,
Whose辐Շ成都 with all

(Prometheus Vinctus, 88, 89, Morhead's tr.)

When once the personification, followed by the worship, of a few of the most striking and most powerful objects (distinguished as 'grand fetishes') has been accomplished, others follow easily, as the moon, trees, rivers, wells, mountains, rocks, and thunder. Nor does the process stop here. Having personified the most splendid, benignant, and awful objects of Nature, the active, though by no means powerful, imagination of the savage runs riot and defies indiscriminately all manner of objects of no intrinsic importance or significance, as curious pebbles, leaves, etc. Japanese myth speaks of a time when trees, rocks, leaves, and foam had the power of speech, and evil deities buzzed like flies in the 5th month. It is of the lower and more trivial levels of Nature-worship that 'teratism,' or the love of the curious and extraordinary, to which Herbert Spencer (*Sociology*, i. 313) attached an exaggerated importance, finds its chief sphere of operation.

As a distinction which, he says, is already recognised by the Sun is not worshipped because he is remarkable, abnormal, or extraordinary, but in gratitude for his daily light and warmth; the Sun and Rivers, because they supply fish for food, or will drown one if he is not careful; the Earth, as the great provider of human wants.

It is not always recognized by anthropologists that Nature-worship in its primary stage is not the worship of a deity or spirit immanent in the material object, or of an anthropomorphic being separate from it but controlling its activities. This would involve a dichotomy of soul and body, mind and matter, which is foreign to the ideas of the primitive man or savage. It is not found in the lowest races, though no doubt, as readers of Taylor's *Primitives Culture* are aware, it plays an important part in the philosophy of tribes of no great enlightenment or cultivation. The earliest cult of all is of the material object itself (Comte's fetishism) considered as alive. The Sun, the Sea, the Mountain, as the author of all things, is held to be in this early stage the god. There is no suggestion of an indwelling spirit in Aeschylus's invocation quoted above. The *fons et origo* of the Greek dramatists is simply the Sun. Herace's *Fons Bandusiae* (*Carm. iii. xiii.*), to which he promises the offering of a kid, is not a nymph of the well, but the water itself, as the epithet 'splendidior vitru' shows. Of course, nymphs, dryads, and fauns are plentiful enough in pagan myth. But this is a secondary development with which fetishism is not concerned. The two stages of belief, however, merge into one another.

The worship of Nature-deities is sometimes referred to the principle that primitive man, like the savage and the child, conceives of everything as animated by human feelings. This view requires some qualification. Strictly speaking, there is no such thing as a primitive man. Man, at any given period, has ancestors and a long history behind him. But, allowing the term as marking a stage of progress short of that of man's own, it will be plain, on reflexion, that the ordinary primitive man, like the lower classes everywhere, troubles himself little about the sentient aspect of the universe. To him, as to the lower animals, the animate is animate, and the inanimate inanimate. It is at all times only a few
of the more imaginative individuals of a race to whom their fellows are indebted for religious personification and myth. Religious progress is everywhere the work of the genius, not of the vulgar. Clans are sometimes divided to treat animates as alive. But this is exceptional, and usually stops short at make-believe. The child does not attempt to eat his own mud-pies. The boy knows well that his father's walking-stick is not a real horse, and, in spite of de Brosses, Schultz, and others, the girl does not really believe that her doll is a living being. A mother of the writer's acquaintance, having renominated with her little daughter for her pugn treatment of "poor dolly," received the reply: 'Poor dolly! It is only a bag of sawdust." Nor does even the primitive or savage genius discern life in all creation. He does so only in a desultory, fragmentary fashion, singling out such objects or phenomena as stir in him the feelings of gratitude, fear, or wonder. The worship of deified living men and of animals for their beneficial (as the cow) or formulative (as the tiger) function, is credited all 161), Hy Let rock-cave be deified. A Nature-deity representing phenomena whom the grandson of Heaven, 'genuine (2) mirror, ottered where the transition of a snake or serpent in many countries as the representative of a kind of god-body of Japan had its origin. Sun-goddess is represented in the temple of is by a mirror offered to her, according to the myth, in order to induce her to leave the rock-ave of Heaven, in which she had hidden her self at rude behaviour of her younger brother, the Rainstorm. When the Sun-goddess sent down her grandson to rule the world, she gave him this mirror, saying: 'My child, when thou lookest upon this mirror, let it be as it thou went looking on me. Let it be with thee on thy couch and in thy hall, and let it be to thee a sacred mirror.' Another myth says: 'This is the Great God of Is.' We see here the transition from the offering to the symbol, and from the symbol to the actual deity. Of course, the last development is the work of the most ignorant and dull-minded worshipper. But it is not without parallel. The in of the Ainus of Yezo (see art. ANUS, vol. i. p. 245 ff.), which consist of willow wands whittled into a mass of admirals, at one time made offerings, but occasionally receive direct worship as 'genuine fetishes,' to use the expression of John Batchelor, a missionary who lived amongst them for years. In Greece, as Lucian (Iam. 14) tells us, the visitors to the temple of Olympia believed that Phidias's statue was Jupiter in person. Plutarch and Seneque relumed similar superstitious ideas about the gods. In West Africa, the dead ancestor is represented by his skull, or by a mass of chalk saturated with dippings from the putflying head which is hung up over it. ‘The conception,' says Tyler (Prim. Cult. ii. 151), 'of such human relics becoming fetishes, inhabited or at least acted through by the souls which formerly belong to them, will give a rational explanation of much reli-worship otherwise obscure.'

With the Danarans of South Africa, the ancestors are represented by stakes cut from trees or bushes consecrated to them, to which stakes the meat is first offered.

From fetishes of this second class the transition is easy to the idol. In Ancient Greece the primitive memorial erected to a god did not even pretend to be an image, but was often nothing more than a pillar, a boulder, a shapeless stone, or an styx. At the present day in Korea we see these pillar-gods, consisting of upright logs of wood, which have so far approached becoming idols as to have their tops very rudey fashioned into human form. In the Indian Museum at Calcutta is a liiga with a face carved on one side of the top—an incipient idol.

The totem, regarded as the animal, vegetable, or mineral which represents the personified national or tribal unity, belongs to this class of fetish (see TETEMISM). In other cases, however, the animal may be worshipped as representing a Nature-deity, or as a personification of a particular phenomenon. It is sometimes difficult to say to which of these categories the animal gods of ancient Egypt belonged.

(3) Class III.—In this class the fetish is a material object which is supposed to be the permanent or temporary abode of a spirit, and is regarded and honoured accordingly. This is the most general use of the word, and is especially appropriate to the type of fetishism prevalent in West Africa, the chief home of this institution. It is the fetishism of Tyler and of Goblet d'Alviella, though the latter somewhat narrows its application by introducing the proviso that the spirit's services belong to the person who appreciates the fetish, as in the case of Aladdin and his lamp. Some of the sacred objects referred to material objects may be Nature-spirits, while others are the souls of dead men. In Japan, the spirit of a Nature-deity will descend into the sacred wand with paper scallops attached, which is called gohei, and answer questions by the mouth of the hypnotized medium who holds it in his hand. The soul of a dead Carib might be thought to abide in one of his bones, taken from the grave and carefully wrapped in cotton, in which state it could answer questions and even bewitch an enemy. But most fetishes of this class are tenanted by spirits of an indeterminate kind, no doubt originally suggested by the former two classes, but without specific character. The objects selected by the West African negro to serve as the abode of his guardian spirit are, such things as animals, snakes, shells, tiger's teeth, antelope hoofs, monkey's paws, horns, snake-skins, bits of metal or ivory, teeth, bones, beads, stones, rags, etc. A much valued fetish, which was the subject of a lawsuit, consisted of a brass pan containing a lump of clay adorned with parrot's feathers. Another was a mixture of clay and various roots in an earthen pot. Many are compounds of a number of strange and disgusting things which remind us of the contents of the witches' cauldron in Macbeth. Some of these objects have originally belonged to the second class of fetishes, and have been at first symbols rather than receptacles. A spirit may be lodged in the object selected as fetish by simple exposure in the open air, or by invitation. Frequently the intervention of a fetish-priest is necessary, with his ceremonial and hocus-pocus formula of consecration. Again, some chance circumstance may cause an otherwise indifferent object to be made a fetish.
A fetish is more fully trusted when experience has proved its value by its success in trade, war, hunting, or fishing, or as a protection against disease and danger. The owner talks to it, asks its advice, lays his complaints before it, and calls upon it on every urgent occasion. It is rubbed with ashes, bound with a cat's tail, and a toad, deer skin, or oil, is poured over it, and it is sprinkled with blood of animals or even of man. To swear by the fetish is the most binding of oaths. On the other hand, if it fails, after warnings and reproaches, to perform what is expected of it, it may be punished, thrown away into the sea, or buried, given away, or sold. Every fetish has its special province of efficiency. One prevents sickness, another heals it, others grant long life, children, wisdom, courage, safety in travelling or in war, protection against thunder, success in trade, fair winds, rain, etc. In short, they are supposed to procure every imaginable blessing and avert every conceivable misfortune. They are to be found everywhere—at the entrance to towns, in the huts and over the doors, by every road, at the foot of rocks and trees, on poles set up by men’s necks. Some fetishes are private, belonging to individuals or families; others are public and protect villages or tribes from misfortune by war or pestilence. The latter sometimes have priests and temples dedicated to them. The chief house is the home of numerous fetishes which may be credited with supernatural power, such as that of making rain. The priests of the fetish deity are naturally assimilated to him, and are credited with the possession of similar powers. In the case of the ordinary fetish, as well as of the idol, there are two currents of opinion. Many fetish-worshippers declare positively that, for example, ‘the tree is not the fetish. The fetish is the invisible spirit which has taken up its abode in the tree. It cannot consume the offerings of food which are made to it, but it enjoys the spiritual part of them, and leaves the visible bodily element.’

On the other hand, there is undoubtedly a lower conception by which the material fetish itself is the object of worship, the spirit which inhabits it being forgotten or neglected. Tyler says that the negro usually combines the two as forming a whole, and this whole is (as the Europeans call it) the fetishistic spirit of his worship of his spirits. Turner, in his Nineteen Years in Polynesia, 1861 (p. 527), says—

‘On the isle of Nukunono Fakaofo worship used to be paid to the Tai Tokosal, or Lord of Tokosal, who lived in a field of sand, covered with rocks, among which was a stone, wrapped up in matting, and held so sacred that only the chief could bring it on the beach. It was only once a year that this sacred stone was removed, and then only by seven persons who must have been chosen by the chief. When it was brought on the beach, it was placed on the sand and occupyed a key position in the ceremony, which lasted from morning till evening. After the stone was placed on the beach it was never touched by any one but its custodians. When the stone was returned to the field it was given back to its former owner. In former times this stone was regarded as a god, and was the object of constant worship. It was a two-headed stone, and the two heads were regarded as the heads of the two gods who were worshipped. The stone was divided into pieces when it was to be removed to another place, and each piece was given to some one who was regarded as being able to place it in the right position. When the stone was placed on the beach it was surrounded by a ring of men who were to protect it from harm. They were arranged in a circle around it, and each man was to have some part of the stone which was placed in front of him. The stone was then surrounded by a circle of fires, and the fires were kept burning all night. The stone was then taken back to the field, and placed in its former position. It was regarded as a sacred stone, and was regarded as a god. The stone was never allowed to be touched by any person who was not a priest, and it was always surrounded by a circle of men who were to protect it from harm.

‘The stone was regarded as a god, and was the object of constant worship. It was a two-headed stone, and the two heads were regarded as the heads of the two gods who were worshipped. The stone was divided into pieces when it was to be removed to another place, and each piece was given to some one who was regarded as being able to place it in the right position. When the stone was placed on the beach it was surrounded by a ring of men who were to protect it from harm. They were arranged in a circle around it, and each man was to have some part of the stone which was placed in front of him. The stone was then surrounded by a circle of fires, and the fires were kept burning all night. The stone was then taken back to the field, and placed in its former position. It was regarded as a sacred stone, and was regarded as a god. The stone was never allowed to be touched by any person who was not a priest, and it was always surrounded by a circle of men who were to protect it from harm.

As in the case of Class II., the transition of fetishes of Class III. to the idol is easy. A few days of paint or scratches with a knife are sufficient to convert a shapeless stone or post into an anthropomorphic figure. Idols are rare amongst most of the coast tribes of West Africa, but are common amongst all the interior tribes.

(4) Class IV.—The term ‘fetish’ is frequently used, though more in general literature than by scientific writers, of non-religious magical appliances, charms, amulets, etc., independent of any gods or spirits. Such are the piece of the rope with which a man has been hanged carried by the superstitious gambler, and the drinking of the springs of the well. To this class belong such fetishes as the kite’s foot hung round the neck of the Basuto child, so that he may escape misfortune with the swiftness of the kite. Another is the ill-will worn as the claw of a lion, in order that his life may be as firmly secured against all danger as that of a lion.

This class of so-called fetishes is dealt with more fully in art. Magic.

(3) Class V.—Material things are sometimes the objects of a make-believe worship. The Devonshire farmer, who at Christmas salutes his apple-trees with much ceremony, offering them a bowl of cider and raising the same with them, and then drinking out of a tree-god. When a Japanese housewife gives her needle one day’s rest in the year, and sets before it a tiny offering of cake, it is not necessary to suppose that the needle is taken for a sentient thing, or is believed to have a soul away, or is not called it kami, or ‘god.’ Both of these practices are due to the pleasure which men take in dramatic make-believe. The writer is not aware how far this applies to the annual honours paid in India by the artisan to his tools, which Herbert Spencer would include under the term ‘fetishism.’ Underlying all such cases there is, no doubt, a vague sense of gratitude, whether to the inventor or to Nature, which may eventually result in real worship. The kitchen-furnace in Japan is a recognized kami, or ‘god,’ and tree-worship had probably its origin in some such practices as that described above, which are known all over the world as well as in Devonshire.

The above classes of fetish often merge into one another in the most perplexing way. An object considered as a fetish (Class I. and II.) may be credited with both divinatory and curative qualities (Class I.), or be regarded as a divinity (Class III.).

Tylor (ii. 205) points out that ‘the negro can say ‘In this river, or tree, or amulet there is a wongo (fetish-deity)’ But be more usually says, ‘This river, or tree, or amulet is a wongo.’ Again, the same writer says (ii. 176): ‘So close is the connexion conceived between spirit and image, that the idol is itself called ‘wongo.’ The medicine or magical appliance which in one case is purely non-religious may in others be fortified by a prayer or incantation. The practice of prefixing the sign of Jupiter to medical prescriptions is perhaps not wholly obsolete with ourselves. On the other hand, an ostensibly religious fetish may be found to owe its efficacy to some physical property of the material object in question.

3. Religious value of fetishism.—Fetishism is, of course, an undeveloped or a degraded form of religion; yet it rests on a principle which the higher religions are unable to dispense with altogether. In the name of the god there is represented by the physical. Christianity has its Cross, its Eucharist, its Baptismal water. Unfortunately, the evidence relating to fetish-worship, though plentiful enough, seldom enables us satisfactorily to trace the history of the ideas which underlie it. Missionaries are hampered by their religious prejudices; travellers seldom have the necessary previous training for that thorough knowledge of savage languages without which precision is impossible. Supposing that a Tim-

buctoo savant, visiting this country, saw an educated English gentleman prostrate himself before a wafer of bread, how wholly false and inadequate an impression would he receive of an institution whose history is traceable back for thousands of years through many varying forms of ritual and belief! Not that the traveller is much to blame. But, under the most favourable circumstances, it would be difficult to learn from the fetish-worshipper, or even from the priest, the reasons for practices which they pursue in those faint impressions. They themselves, in fact, seldom know much about them. Yet all fetishes must have a history of some sort. It is not enough to say with de Brosses (op. cit. p. 182):

‘On n’est pas obligé de rendre raison d’une chose où il n’y en a point; et ce serait, je pense, assez inutilement qu’on en cher-
chercit d'entre que la cranite et la folie dont l'esprit humain est susceptible, et que la facilite qu'a de telles dispositions de se tromper. Le Fetichisme est un genre de ces choses si abordes qu'on peut dire qu'elle ne rapporte rien. Les gens croient qu'ils ont des ames et des consciences invisibles. Fear and folly do, no doubt, play a great part, but Herbert Spencer is nearer the truth when he says (Study of Sociology, 1866, p. 305): 'The wrong belief is sometimes always true, and there is a right belief hidden by them.' There would be no spurious coins if there were not a genuine gold or silver currency. We are sometimes able to catch a glimpse of this returning after, or a lapse from, something higher, associated with what might at first sight appear a gross form of fetishistic superstition.

In 644 a prophet arose in Eastern Japan who persuaded his neighbours to worship a grass-green caterpillar with black spots, promising them that, if they did so, they would enjoy long life and riches. The movement spread so far and so rapidly that the authorities intervened; the prophet's conceit of his religion was suppressed. This might seem pure fetishism of a low type. Yet, when we are told that the god was called the God of the Eternal World and the God of Gods, it seems probable that the caterpillar was merely a symbol, and that the movement, recorded by no friendly observer, was, in reality, a protest against the prevailing polytheism of the time. The circumstance that the devotees of the new god threw their property into the highways indicates a degree of religious exaltation hardly to be produced by the mere worship of a caterpillar, though the taboos indicate that in his time the Greeks worshipped the sword of Agamemnon. Surely it was not a moral or a religious object which they paid their devotions to. Its association with the heroic virtues of the men of the Homeric age must have counted for much in the motives for their reverence. The material object worshipped at the shrine of Ine in Japan is a metal mirror enclosed in a box, and never seen by anyone. This is quite different from the British objects take this form (Class B) for the actual deity; others know that, historically, it represents the Sun or, rather, the Sun-goddess; but the majority regard it as the higher, though less correct, conception of the god as a great Divine ancestor, who from heaven enviarthe tribal or national blessings. The sun-goddess of Japan. The sun-goddess worship of the Ancient Egyptians was something more than the mere adoration of bulls and cats.

Fetishism filling the word in its most comprehensive signification—rests on two principles. The first is what, in modern phrase, we call the immanence of Deity; the second is the necessity which there is for the spiritual to be expressed in terms of the physical. But the savage's conceptions of them are crude and inadequate, and his unintelligent application of them has resulted in a profuse outgrowth of gross superstition.

LITERATURE—C. de Broca, Des Cultes des dieux fictifs, Paris, 1870; M. de Poinsot, Polythéisme positif, ed. 1829-42 (tr. H. Martinoff, 1896); E. B. Taylor, Primitive Cultures, London, 1871; H. Schneider, Lectures, London, 1891; Herbert Spencer, Sociology, ed. 1874; A. C. Haddon, Magic and Fetishism, London, 1896 (contains a useful bibliography); J. H. Smyth, Fetichism (tr. 1883); R. F. Nassau, Fetishism in West Africa, London, 1904; M. H. Ellis, Fetishism in Central Africa, London, 1892; J. G. Frazer, The Golden Bough, London, 1900; W. Schneider, Rel. of the astr. Natureklik, Munich, 1891 (a most admirable work, with numerous references to anthropologists. Mention should also be made of Max Muller, Hartland, Collo, Réville, Casal, Brinton, Lang, Ellis, Bastian, Waite, and Huch, who, as travellers or students, have helped to elucidate this subject. Those who have practical opportunities of investigating fetishism will find Notes and Queries on Anthropology, issued by the Royal Anthropological Institute, a useful manual.

W. G. ASTON.

FETISHISM (American).—Among the native tribes of the two Americas, fetishism is rife. They regard the fetish as intrinsically possessing that magic power known to some of the N. Amer. Indians. In fetishism, the person who has the power in his possession, the personal essence which enables the object to achieve supernatural results. But the ability to perform these, and the sphere of action of the fetish, depend greatly upon the nature of the object containing the magic power. The possession of a fetish presumes possession of its magical properties.

It must be borne in mind that to the untutored Indian intelligence all things—animals, water, the seasons, the elements, the appearance of the night and day, and such properties as light and darkness—are regarded as possessing animation and the power of volition. It is, however, the general Indian belief that many of these are under the power of some spell or potent enchantment. The rocks and trees are the living tombs of imps imported from the spirit world. If they are impounded, it is probable it would appear as the place of demonization of some powerful intelligence imprisoned therein, for revenge or some similar motive, by the spell of some mighty enchanter.

Nearly all the belongings of a shaman or medicine-man are classed as fetishes by the N. Amer. Indians. These usually consist of the skins of beasts, birds, and serpents; roots, bark, powders, and numberless other objects. But the fetish must be altogether divorced from the idea of religion proper, with which it has little or no connexion, being found side by side with religious phases of many types.

The fetish is often the bone, a feather, an arrowhead, a stick carved or painted, a fossil, a tuft of hair, a necklace of fingers, a stuffed skin, the hand of an enemy, or anything which might be suggested useful to the original maker; usually, the idea is an imagination. It is sometimes fastened to the scalp-lock, the dress, the bridle, concealed between the layers of a shield, or specially deposited in a shrine in the wigwam. The idea in the mind of the original maker is usually symbolic, and is revealed only to one formally chosen as heir to the magical possession and pledged in his turn to a similar secrecy.

Notwithstanding that it has been stated that the cult of fetishism is not, strictly speaking, a department of religious activity, a point exists at which the fetish begins to evolve into the god. This happens when fetishes survive the test of experience, and achieve a more than personal or tribal popularity, as among the Zuhi Indians, examples of which will be adduced in the course of the article. Nevertheless, the fetish partakes more of the nature of those spirits which are subservient to man (as, for example, the Arabian jinn) than of gods proper; and, if they are prayed and sacrificed to on occasion, the 'prayers' are more of the nature of a magical invocation, and the 'sacrifices' no more than would be accorded to any other assisting agent. Thus sharply must we differentiate between a fetish, or captive spirit, and a god. But it must further be borne in mind that a fetish is a spirit, an individual, and not a piece of property. It may belong collectively to an entire community, and, as will be remarked later, it is not necessarily a small article, but may possess all the appearance of a full-blown idol. An idol, however, is the abode of a god—the image into which a deity may materialize. A fetish, on the other hand, is the place of imprisonment of a subservient spirit which cannot escape, and which, if it would gain the rank of godhead, must do so by a long series of luck-bringing, or, at least, by the performance of a number of marvels of a protective or fortune-making nature.

It is the personal essence of a belief exists in the Indian mind that there are many wandering spirits who, in return for food and other comforts, are willing to materialize in the shape that the savage provokes for them, and to assist him in the chase and other sides of life.

1. The Eskimos.—Among the Eskimos, fetishism presents itself in an almost perfect form, and with them is found one of the few instances of making a fetish of the human body itself. Nelson (In R.B.H. of 1899, pt. 1, p. 429) states that along the coast of Norton Sound and the Lower Yukon a new-born child is sometimes put to death for the purpose
of having the services of its shade to secure success in hunting. The child must be killed secretly, and its body stolen, so that no one may know of the occurrence. The body is then dried, placed in a bag, and worn on the person or carried in a box, with the head. By invoking the name of the hunter believes that he compels its shade, which is clairvoyant, to assist in finding game, and so to direct the flight of his spear that the animals he hunts cannot escape. The Eskimos also employ masks to assist them in hunting. These are carved to represent supernatural beings, the tun-ghat, or wandering genii, and are believed to possess the qualities of the animals they depict, the spiritual essence of which enters into the wearers. They are supposed to watch for game, and, by some clairvoyant power, to see it at a great distance; and the hunter is then guided by the influence of the masks to find it. They are also supposed to guide the spears in flight. Among the people of the Kaviak Peninsula and Kotzebue Sound, the possession of the dried body of a weasel, worn in a pouch or belt, is supposed to endow the owner with extraordinary skill in whaling. In all cases it follows that the owner of any mumified animal carries with it power over its shade, which becomes the servant of the possessor.

The Eskimo clairvoyant is of great importance to those fetishes which they believe bring them success in whale-hunting. To this end they employ images of fabulous and other animals. These are of practical significance as the mask fetishes allowed to above. A whale-hunter, for example, possesses a number of fetishes, such as a wolf's skull, a dried raven, the axis vertebra of a seal, feathers, the skin of a golden eagle, or the tip of a red fox's tail. At the end of the month after these are worn, a seal, they cut off and swallow the tip of its tongue in order to retain the essential essence or spirit of the animal. In several of their folk-tales it is mentioned that certain persons took small pieces of such skins, and that afterwards these became full-sized skins, to the benefit of the owner, thus indicating the meaning of this custom. They place implicit faith in such fetishes, which they believe to have been in contact with supernatural beings and objects which by their general appearance recall the effect expected from the fetish—a well-known phase of sympathetic magic.

Other fetishistic objects enumerated by Murdock ('Point Barrow Expedition, 9 RB EW, 1892, pp. 436-441) are bunches of the claws of the bear or wolverine, the metacarpal bones of the wolf, the head or beak of the gull or raven, and small dried seal, the young unbranched antler of a reindeer, the last three joints of a reindeer's foot, the sub-fossil incisor tooth of some ruminant, the task of a young walrus, and the stuffed skin of a black-bellied raven. A charm of great value to the mother who has a young babe is the canine tooth of a polar bear, as she is under the impression that, while she wears it, her milk supply cannot fail.

An instance of tribal fetishism is noticeable in the Ai-y̱a-gehák, or 'Asking festival,' when a wand known by the same name is made, having three hollow globe-like attachments hanging to it. It is used by a man, chosen for the purpose, to obtain the wishes of all the various members of the tribe, who in turn ask for something which he obtains for them from the other members. This wand is much respected, and it is considered wrong to refuse any request made with it. In some parts of the Lower Yukon, instead of stating their wishes, they make small images and hang them on to the wand held by the man, who conveys it from one to another.

2. Athapascan family.—The Apaches, both male and female, wear fetishes which they call tsi-daltos, manufactured from lightning-given wood, generally pine or cedar or fir from the mountains (Bourke, 9 RB EW, p. 587). These are highly valued, and are never sold. They are shaved very thin, rudely carved in the semblance of the human form, and decorated with red lines, representing the lightning. They are small in size, and few of them are painted.
Bourke describes one which an Apache chief carried about with him. It was a piece of wolf's neck skin, about the size of a silver dollar, having drawn upon it a figure in yellow with a black narrow band, and three snake-heads with white eyes. It was further decorated with pieces of examination to a sweet-smelling grease upon it, and fumigated the bones with the smoke. There are certain trees and stones which are regarded as fetishes; beside them the Siouan make offerings of red cloth, red paint, and other offerings. But all balls or fetishes, and in all hunting and warlike excursions the 'medicine,' or fetish, is carried. It usually consists of a head, claws, stuffed skin, or other representative of the fetish animal. Even their horses are provided with fetishes in the shape of a deer's horn, to ensure their swiftness. The rodent teeth of the beaver are regarded as potent charms, and are worn by little girls on their necks to make them shoot accurately. Bourke (op. cit.) mentions a class of fetish which he terms 'phylacteries.' These are pieces of buckskin, or other material, upon which are inserted or drawn certain characters or symbols of a religious or 'medicine' nature, and they are worn attached to the person seeking to be benefited. They differ from the ordinary fetishism in that they are concealed from the public gaze.

3. Iroquoian family. — Most things that seem at all unnatural are accepted by the Hurons as ok), or supernatural, and therefore it is accounted lucky to find them. In hunting, if they find a stone or other object in the entrails of an animal, they at once make a fetish of it. Any object of a peculiar shape they treasure, for the same reason. They give high honor to that depicted of the wand, the image of the bird, the claw, the serpent, the fish, and the hawk; these are the totem animals of the Huron, and are represented by many N. Amer. tribes. The medicinal virtue of some fetishes is regarded as very great, one old woman of the Lower Canada Hurons preserving the mumified embryo of a fish, which she said the swan had given her during a severe illness of which it had cured her.

4. Algonquian family. — Hoffman states 'The Medicine Lodges' (4 RBEW, 1886, pt. 1, p. 14) that at the medicine lodges of the Iroquois there are preserved fetishes or 'amulets, worn upon the elbows, which consist of strands of beaded work, metal bands or skunk skins, while bracelets of shells, buckskin, or stone are also worn.' At a great tribal festival of the Cheyenne was their medicine arrow, which was taken from them by the Pawnees in battle. The head of this arrow projects from the bag which contains it, and is covered with delicate waved or spiral lines which denote its sacred character. It was, indeed, the palladium of the tribe. A peculiar type of fetish consisted of a mantle made from the skin of a deer, and covered with feathers mixed with beading. It was made and worn by them in a mantle of invisibility, or chameleoning, to enable spies to traverse an enemy's country with impunity. In this instance the fetishistic power depended upon the devices by which it was conveyed.

5. Siouan family. — The principal fetishes among the Hidatsa tribe of the Sion are the skins of foxes and wolves, the favourite war-fetish being the strip-off the back of a wolf's skin, with the tail hanging down the shoulders. It is made of a large piece of flesh, and is worn by them in the skin, through which the warrior puts his hand, so that the skin of the wolf's head hangs down upon his breast. These, of course, are totemic fetishes. The Siouan tribal fetishes with the Siouan tribes are (or were) buffalo heads, the neck-bones of which they preserve with a view to preventing the buffalo herds from removing to too great a distance from them. At certain periods they perform a ceremony with these bones, which consists in taking a potsherd with live coals, throwing the sweet-smelling grease upon it, and fumigating the bones with the smoke. There are certain trees and stones which are regarded as fetishes; beside them the Siouan make offerings of red cloth, red paint, and other articles. But all balls or fetishes, and in all hunting and warlike excursions the 'medicine,' or fetish, is carried. It usually consists of a head, claws, stuffed skin, or other representative of the fetish animal. Even their horses are provided with fetishes in the shape of a deer's horn, to ensure their swiftness. The rodent teeth of the beaver are regarded as potent charms, and are worn by little girls on their necks to make them shoot accurately. Bourke (op. cit.) mentions a class of fetish which he terms 'phylacteries.' These are pieces of buckskin, or other material, upon which are inserted or drawn certain characters or symbols of a religious or 'medicine' nature, and they are worn attached to the person seeking to be benefited. They differ from the ordinary fetishism in that they are concealed from the public gaze. The serpent phylactery, therefore, may be employed to enwrap other 'medicine' and thus augment its own potentiality (op. cit. 59). It describes several of these objects. One worn by an Indian named Ta-lu-tu-je was 'tightly rolled in at least half a mile of . . . sodder's silk,' and when brought to light was found to consist of a small piece of buckskin, two inches square, upon which were drawn red and yellow crooked lines which represented the red and yellow snake. Inside were a piece of malachite, a small cross of light-brown, and two very small perforated shells. The cross they designated 'the black wind.' Another 'phyllactery' consisted of a tiny bag of hoodedt (on which see RBEW 4059), holding a small piece of buckskin. Inside it was stated that the phylactery, it was explained, contained not merely the 'medicine' of the crystal and the eagle, but also that of the black wind, the white bear, the yellow snake, and the skunk.

6. Shoshonean stock. — At Sikatski in Arizona, a territorial nucleus of the Hopi, Fewkes (17 RBEW, p. 5, p. 729.) had opportunities of inspecting many interesting objects. Among the noteworthy articles are веревки, covered in native graves were pebbles of botryoidal shape, with a polished surface, or with a fancied resemblance to some animal or other form. These, in good order, were objects of trade, and the most prized photographic is that at the Antelope rock at Walpi, 'around which the Snake dancers biennially carry reptiles in their mouths.' There is, in the cave, on one side a number of pebbles of such material (hematite), to which prayers are addressed on certain ceremonial occasions, and upon which sacred meals and prayer emblems are placed. There are a great number of the personal fetishes of this people consist of cephalopod fossils, some of which are wrapped up in the sacred bundles which are highly revered, the latter, of course, being tribal fetishes.

In one grave was found a single large totem of a mountain lion, made of sandstone, in which legs, ears, tail, and eyes are represented, the mouth still retaining the red pigment with which it was covered. It is almost identical with those used by the Hopi at the present day.

7. Zuñi family. — Cushing (2 RBEW, 1883) seems to think that fetishism among the Zuñis arose from the supposition they entertained that they were kin with animals, or, in other words, that their fetishes were totemistic. It is in this stage that totemism and fetishism meet, and the two are by no means incompatible, though they very often covered in native graves were pebbles of botryoidal shape, with a polished surface, or with a fancied resemblance to some animal or other form. Fetishes of this description are, indeed, the natural concomitant of a totemistic system. Zuñi fetish objects are usually natural concretions, or alluvial, but the resemblance to animals has been heightened by artificial means. Ancient fetishes are much valued by the Zuñis, and are often found by them in the vicinity of pueblos inhabited by their ancestors, and as tribal possessions are handed down from one generation to another. The shamans believe them to be the actual petrifications of the animals they represent. The Zuñi philosophy of the fetish is given in the Tale of the Two Sun Children, instanced by Cushing (op. cit. 14.)

"Now that the surface of the earth was hardened, even the animals of prey, powerful and like the fathers (god) themselves, would have devoured the children of men; and the Two Thought it not well that they should all be permitted to live, "for," said they, "silks will the children of men and the children of the animals of prey multiply themselves. The animals of prey are provided with talons and teeth; men have not poor, the finished beings of earth, therefore the weaker."

Whenever they came across the pathway of one of these animals, were great mountain lion or but a mere mole, they struck them with the fire of lightning which they carried in their magic shield. This fire was instantly he was shrivelled and burnt into stone.

Then said they to the animals that they had thus changed to stone. "Then if they make a slit in their great good unto them, have we changed you into rock everlasting. By the breath of prey, it endure forever within you, shall ye be made to serve instead of to devour mankind." Thus was the surface of earth hardened and scarred and many of all kinds of beings changed to stone. Thus, too, it happened that we find, here and there, certain totem forms, sometimes large like the beings themselves, sometimes shrivelled and distorted. And we often see among the
FETISHISM (American) 901

rocks the forms of many beings that live no longer, which shows us that all was, when the thing had happened. Let us now see the head of the beast, and observe the eyes, ears, nose, and mouth. Of these pietractions, which are, of course, mere concoctions or thoughts, in the form of the Zoulih says, "Whomever of us may be met with in the sun shining or in the moonlight, we will not see (discover, find) them and should treasure them for the sake of the sacred (magic) power which was given them in the days of the new." This tradition furnishes additional evidence relative to the preceding statements, and shows the motive which lies behind the power of these fetishes. It is supposed that the hearts of the great animals of prey are infused with a spirit or "medicine" of magic influence over the hearts of the animals that eat them. The animals therefore eat them with their breath, piercing their hearts and quite numbing them. Moreover, their roar is fatal to the senses of the lower beasts. The mountain lion absorbs the blood of the game animals; therefore he possesses their acute senses. Again, those powers, as derived from his heart, are preserved in his fetish, since his heart still lives, even although his body be changed to stone. It happens, therefore, that the use of these fetishes is chiefly connected with the chase. But there are exceptions. The great animals of the chase, although fetishistic, are also regarded as supernatural beings, whose mythological position is absolutely defined.

In the City of the Mista lives Po-shah-ahn-ka, father of the Medicine Beasts, a strange corruption of their name, which is guarded by six beings known as the 'prey-gods,' and it is their counterfeiting presentations that are made as fetishes. To the north of the City lives the Mountain Pest-prey-god; to the west, the Bear; to the south, the Badger; to the east, the Wolf; and in between them, below, the Mote. These beings possess not only the guardianship of the six regions, but also the mastership, not merely geographic, but of the medicine powers which emanate from them. They are the mediators between Po-shah-ahn-ka and man. The prey-gods, as 'Makers of the Path,' are chosen from among the divinities in high rank among their gods, but, notwithstanding this, their fetishes are 'held in captivity' by the priests of the various medicine orders, and greatly venerates by them as mediators between themselves and the animals they represent. In this character they are exalted with elaborate prayers, rituals, and ceremonies, and sometimes placed with sacrifices. Of the prey-gods of the hunt (see-med-e-ht) the special priests are the members of the Great Coyote People, the chosen members of the Eagle and Coyote, and, of the Prey Brother priesthood. These prey-gods appear to be almost unique, and may be indicated as an instance where fetichism has become allied with religious belief. They depict, with two exceptions, the same species of prey-animals as those supposed to guard the six regions of the world above the Wild Cuts. Each of the six species of prey-animals is subdivided into six varieties. They are, strictly speaking, the properties of the priests, and members and priests of the sacred societies are required to deposit their fetishes, when not in use, with the keepers of the Medicine of the Father. These 'medicines,' or memberships, alone can perfect the shape of the fetish and bestow its powers.

The 'Day of the Council of the Fetishes' takes place a little before or after the winter solstice or national New Year. The fetishes are taken from their place of deposit, and arranged according to species and colour, in front of a symbolic flat altar, quadrupeds being placed upright, and birds suspended from the rafters. The fetishes are prayed to, and prayer-meal is scattered over them. Chants are intoned, and a dance performed in which the cries of the fetish beasts are imitated. A prayer with responses follows. Finally, all assemble round the altar, and repeat the great invocation.

The life of the fetish among the Zoulih is extremely curious and involved.

The hunter goes to the house of the Deer Medicine, where the vessel of the fetish is brought before him. He sprinkles sacred meal over the vessel in the direction he intends to hunt, chooses a fetish from it, and presses it to his body. He then places the fetish in a backskin bag over his heart. Proceeding to the hunt, he deposes the fetish from his body. If the hunter has rested it, he imitates its cry, and is thus supposed to confine it within a narrow circle. He then breathes deeply from the nostrils of the fetish, and, with the help of the god of the deer, and puffes the breath long and loudly in the direction which he, being at the moment quite off the breath, he has borrowed from the prey-prey god will stiffen the limbs of the animal he hunts. When the beast is caught and killed, he infuses its spirit. Then he again breathes into the nostrils of the fetish. He then dips the fetish in the heart's blood of the slain animal, anoints it, and devours a part of the liver. The fetish is placed in the sun for a time, then replaced to the backskin pouch with a blessing, afterwards being duly returned to the Deer Medicine. The Zoulih priesthood of the Bow has three fetishes—the Mountain Lion, the White Bear, and the Knife-feathered Monster. The last is probably a tutelar deity, and was perhaps the Zoulih god of war—an instance of the reversion of a full-fledged deity to the status of a fetish, probably occasioned by the popularity and wide-spread nature of fetishism among this people. They have also an equine fetish borrowed from the Navahos, and known as 'The Pony'; and from the same people they have adopted a sheep fetish, the purpose of which is to ensure fecundity.

8. Mexico and Central America.—Although traces of fetishistic belief undoubtedly make their appearance in the religious systems of both Mexico and the ancient civilizations of Central America, the concrete examples of them are few, and it is owing to the fact that these religions had reached a stage far beyond the fetishistic radius. Nevertheless we cannot point to any particular reaction against fetishism, as we can in the case of Peru in the reign of Manco Capac, unless it be the alleged withdrawal of the Inca's city, Coyotyl towards the elimination of the swarming deities of the Mexican provinces, many of which probably were merely overgrown fetishes. But the heresies of the Tlatonoh of Teczenco are possibly fabulous.

The only Mexican idol now in existence was most probably of fetishistic origin. This is the uncouth beast known as the po-xotel Tezynomiquia—in reality Centoed—the 'Corn-mother.' The image shows signs of having been evolved, in its design, from the bundles of maize carried on the backs of women at her festival, and provided with a face back and front. This figure appears to reproduce the primitive fetish which it superseded, and we seem to have forgotten here the process noted among the Zoulih Indians. The first missionary of Achiollan, Fray Benito, cited by Burgoa (Hist. de la Prov. de Predicatoros de Guazaca, Mexico, 1674, ch. xxxviii.), destroyed at Miatlan, or Yoaquin, an 'idol' cut from an emerald of great value, of the size of a thick capsicum pod, on which was skillfully engraved a bird and a serpent coiled ready to strike. This the present writer suspected to be a fetish, and he was glad to see that Eduard Seeler confirmed his suspicions in his "Deities and Religious Conceptions of the Mexicans," and further identified it, from the hieroglyphs on its surface, with the Mexican god Quetzalcoatl, or 'Feathered Serpent.' But the latter circumstance would seem to make it an amulet bearing the god's name, and not a fetish. 2 There are, however, instances where amulets, especially jewels of great value, have been worshipped owing to their connexion with some great deity, as among the Hindus, and this may be a case in point.

The tepitoton, or small household idols of Mexico, were perhaps of fetishistic origin. We know very little about them save that they were broken by the people at the end of every seven of fifty-two years, when it was considered that the world might possibly come to an end. The ceremony then held was for the purpose of renewing the sacred fire throughout Mexico, and, if these small figures

2 Dorsey ('Boswell Coler,' II, B.B.W., 1904) calls the amulet a 'Amulet,' and the present writer to be 80. An amulet is considered to be directly associated with power, faith, or idea; a fetish is rarely symbolic, but is merely an acceptable or suitable substitution of a deity. Prey, and puffs the breath long and loudly in the direction where he is, being at the moment quite off the breath, he has borrowed from the prey-prey god will stiffen the limbs of the animal he hunts. When the beast is caught and killed, he infuses its spirit. Then he again breathes into the nostrils of the fetish. He then dips the fetish in the heart's blood of the slain animal, anoints it, and devours a part of the liver. The fetish is placed in the sun for a time, then replaced to the backskin pouch with a blessing, afterwards being duly returned to the Deer Medicine. The Zoulih priesthood of the Bow has three fetishes—the Mountain Lion, the White Bear, and the Knife-feathered Monster. The last is probably a tutelar deity, and was perhaps the Zoulih god of war—an instance of the reversion of a full-fledged deity to the status of a fetish, probably occasioned by the popularity and wide-spread nature of fetishism among this people. They have also an equine fetish borrowed from the Navahos, and known as 'The Pony'; and from the same people they have adopted a sheep fetish, the purpose of which is to ensure fecundity.
Each dwelling, had its own god, each different from those of all others, such as herbs, plants, flowers, stones, pebbles, pieces of jade and jasper. That many of these fetishes cannot be doubted. He also mentions that many of these lesser deities were animals, which were revered to imply a totemic system. But animals are used as fetishes as well as totems, as in Dahomey; and on the Slave Coast. In these areas the population was divided into tribes, or oyilas, supposed to be connected with one another by a system of spiritual relations, or ríos, and not to have as an object of worship often a single one— which was generally a group of rocks rendered conspicuous by their shape and isolation. These were often treated as totemic, and were regarded, and, in some instances, as the abodes of spirits imprisoned by the gods, or else as folk who had been turned into stone by the same agency. Such stones or monuments were to be seen at Tiahuanaco, Pucara, Xauxa, Pachacamac, and Casmares.

But, most important perhaps of all fetisist examples to be found on the American continent were the huacas. The word now signifies 'treasure-houses,' or 'ruins of the gods.' In Incan times it implied that the object was one to which worship should be given, and it denoted objects of worship of all descriptions. We have mentioned to do for huacas, and although some immovable ones were fetishes, such as those mentioned at Tiahuanaco and elsewhere. These portable huacas included the conojar, which were in reality household gods, and as such are of no more interest here than are the huacanaps, or amulets proper. Many of the movable huacas were stones or pebbles of unusual shape or colour, unshaped by hand; but often they were carved to resemble the image of a god, and in battle to obtain those of the enemy, which they treasure as fetishes. Their hereditary enemies, the Papago, reciprocated these customs, a case occurring where an aged warrior long wore an Apache arrow-point as a protective against Apache arrows. A Papago shaman also wore a Seri arrowhead for a similar purpose. The Seri are never without imitations of what they believe to be the fetishes of enemy camps.

McGee (op. cit. p. 250) says that 'the day before the 1895 expedition entered their stronghold, a band of warriors and women were furnished from a freshly slaughtered cow by party of cazadores so suddenly that their arms were left behind—a heavy Springfield rifle 'temple'ed' and loaded with 'a hundred and forty-two shot,' being fired from the muzzle by one of the priests, while the other carried with him a shortsword.' These weapons were, of course, regarded as symbols of mystical potency, as were several puma-like objects made from rattle-pitted cacao wood in and out of the form perhaps iron scales.

The chief use of the weapons of the whites by the Seri is shamanistic and symbolic. As regards their own efficacy, the appearance and rarity of their stone arrow-heads would seem to point to their being originally manufactured in fetisistic mimetics of alien deities, and it is notable that they are still made only by the shamans of the tribe. Most of the Seri shields or bucklers are fetishes, as is proved by the circumstances that they are usually made from pelican or some other bird so thin to turn aside a blow, their magical properties being considered sufficient to deflect an enemy's attacks.
FETISHISM (Indian).—1. Universal prevalence and nature.—Fetishism is a born strength of the Animism universally inherent in the religious practices of the population of India. It is a very common superstition of the educated, and part of the actual religion of the uneducated masses, and, of course, of the savages in their daily life. It is thus ubiquitous under the surface of all the formal religious beliefs prevalent in the country, and is present everywhere in the domestic and similar customs and in the folklore of the people. The main cause of its universality is to be sought in the eclecticism of that amalgamation of heterogeneous beliefs, aboriginal and imported, which goes by the generic name of ‘Hinduism,’ and is the prevailing recognized religion of the people, largely colouring every other form, and in the capacity of that religion for absorbing and assimilating parts of all the ancient faiths that happen to survive among its extremely varied and indefinitely diverse elements. Any but important cause lies in the fact that the popular Muhammadanism of India is, in reality, a graft of that faith on the indigenous Hinduism, retaining practically all the superstitions handed down by Hindu ancestors to converts, who, for the most part, do not count many generations.

But, while fetishism is thus in evidence all over India, it exists there fundamentally in the same sense as it is to be found concurrently with the various forms of religion which obtain in the Western world: credited by the philosopher and man of education, and unrecognized by the occupants of the official creeds, occupying largely the position of magic and witchcraft and their survivals among Christians. The natives of India, in fact, in adopting the ideas giving rise to the practice of fetishism, have much in common with the inhabitants of nearly every other religion of the civilized world.

2. Definition.—In India the root-idea of the fetish is spirit-possession. The object is conceived of as containing an in-dwelling spirit, and thus proper for worship as being capable of influencing the lives of those connected with it. And in pursuance of this idea it may safely be said that the Indian villages adopt as a fetish any conceivable kind of object, especially if it presents an unusual appearance.

(a) Spirit-possession.—Under the influence of the idea of spirit-possession, the most trivial objects are continually being created. Anything which can be imagined to possess a spirit is sufficient for this purpose: a hollow tree, a heap of stones, rags left on a bush, a ruin by the wayside or in the jungle, an isolated grave or hummock that can be conceived to be a possible grave, even a milestone of the British Government. Any kind of caim, grave, tomb, or monument will serve as a fetish, those of English men and women being not uncommonly brought into requisition. Once a story of sanctity is started by an honest or casual devotee, or by a wary would-be priest in search of a living, its mere currency is sufficient for all the neighbourhood to believe, for the tale to be embroidered with accretions, and, for the place to be provided with a holy legend, a special ritual, and a list of miracles. In a Hindu neighbourhood all the village bazaars are attributed to a godling, hero, or demon; in a Muhammadan neighbourhood, to a saint; among savages, to the spirits. But the sense is every-

1 Descubrimiento del gran Rio de las Amazonas, 1839, ch. xiv.

fetishes, according to the Mercurio Peruano for 1794, 'were adored as deities.' They are found in all the mountain passes, and doubtless originated in Inca times, when those who were laden with baggage, when they had to face a dangerous track, laid down their load, and as a sign of gratitude offered the first thing they could find or lay hands on to the local spirit, saying 'Apechecha,' which means 'to make whole.'

11. Brazil.—'Ibols,' says Prince Maximilian in his Travels in the Brasile (London, 1820, p. 67), 'are nowhere seen among the Tapuyas, and it is only on the River Amazon that certain images have been found which seem to have a connection with the religious creed of the inhabitants.' This would seem to be borne out by the evidence of Christoval de Acuña, who says that the Amazon River tribes had gods who rendered them active assistance in hunting, fishing, and war. On an expedition of war one of the war-gods was placed in the prow of the boat; on a fishing expedition this place was occupied by a god 'holding a fish. When not in use these fetishes were kept in baskets, and, should the expedition prove unsuccessful, the images were thrown aside, and replaced by others. Thus we learn how the savage carefully preserved the sacred spirit before he raises it to the level of a god.

The Uapes River tribes possess 'divine stones' of quartz, Jasper, or jade, to the piercing of which they devote several years of labour. On the Upper Jamunda is to be found a lake formerly consecrated to the 'Mother Moon,' into which the fabled Amazons threw their muirkatim, or sacred stones, representing animals, fishes, and other symbolic objects. The Ipirunas make fetishes of the bones of their ancestors, as do other S. Amer. tribes, and the ancient Caribs were punctilious in preserving the bones of their forefathers, which, after they had been cleaned, bleached, and painted, they kept in a wicker basket full of spices suspended from the doors of their dwellings.

12. Colombia.—The ancient semi-civilized Muysca-Chibcha race, who inhabited a portion of this Republic, manufactured many fetish-like articles of gold, both in the shape of human beings and of animals and plants. The gold figures were placed in the tombs of their dead, and in their dwellings. The Gojiuna, who inhabit the Colombian peninsula of the same name, keep a number of large golden 'ibols,' called guaras, which, when not in use, are suspended from the door of their houses, giving off a glistening colouring when the sun's rays strike them. Three figures have often served as the supreme arbiters of peace and war among the tribes. Any chief who possessed one and sent it to an enemy at once brought about a cessation of hostilities. The guara is carefully enclosed in a case wrapped in wadding, from which it is drawn only once a year to be bathed. The day is marked by festivities and the sacrifice of oxen. The origin of the guara is unknown to the Gojiuna, who say that they have possessed them from time immemorial, and inherit them from father to son. There are two which are widely celebrated: one at Samenta, and that of the Cacique Juipara, at Ichuuma. Several villages are possessed by numerous Indians, and partake of the general nature of personal fetishes.

FETISHISM (Indian)

where the same: it is held to be wisdom to worship the fetish, because of the power of the spirit within for diseases and other defects. These fetishes are occasionally carried very far indeed, as in the case of the Nukalsaini or Nikarsinghi 'faisqis' (Nicholson's 'devotees'), who worshipped the well-known General John Nicholson in Old Delhi, and Delhi famine during his lifetime, despite repeated severe punishments at the hands of their fetish for so doing. This worship is nowadays transferred to his monument in the Margallah Pass.

The sacred fire. — Attribution of a mystical power to a common object in this way has largely brought about the vogue of the sacred fire fetish in India among all sorts and classes of the population, alike at the shrines of the Hindu and Muhammadans and at the holy places of the Dravidian and other non-Aryan savages. Such fire must be ceremonially produced and tended, and it and the ashes it causes will then become worshipful as containing a guardian spirit and curer of disease. But the volcanic fires, meteoric lights, and ignes fatai observed in various parts of the country appear to be venerated as manifestations of the power in this hand and many of them are improper, though the border line here is not always easy to define.

3. Family and tribal fetishes. — Families, especially when of considerable social position, are peculiarly exposed to fetish worship, and instances are not unusual throughout India of some objects being possessed by the guardian spirit of the family being held in veneration thereby. Any handy domestic object serves for the abode of such spirit: a stone in the courtyard, an old pestle and mortar, a doorpost, a flower-bar, a specially planted tree or shrub, and so on. On the same principle the Santals keep sets of prophylactic symbols beside their houses, which represent the abodes of the powers of Nature: pieces of wood, white stones, arrow-heads, and iron tridents. Among the more civilized tribes, but still low down in the social scale, such symbols become rough wooden images set up together in groups, or rude clay models grouped on platforms, which are regularly worshipped as the tribal protectors.

4. Trade and industrial fetishes. — Closely connected with the notion of the family and tribal fetishes are those revered by trades and occupations. The followers of practically every calling among Hindus worship their tools or means of livelihood, actually or symbolically. The object everywhere is the protection of their interests and, incidentally, cures in general. Instances are as numerous as the occupations. Thus, in various parts of the country, and usually at fixed periods and feasts, sailors will worship their boats; soldiers their swords and other weapons, and, in some Native States, their colours; merchants and bankers their books; clerks their books, pens, and inkstands; grain-merchants their weights daily; farmers their oxen and ploughs; shepherds their sheep; market-gardeners their scales; artisans their tools daily; working-jewellers their pincers and blowpipes; carpenters their yard-measures and also their tools, chisels, and saws; shoemakers their lasts; tailors their scissors; potters and many other 'low castes' the potter's wheel and moulding-clay for luck; tanners their scrapers; curriers their axes; navvies their mattocks; oilmakers their presses; barbers their razors, scissors, and mirrors; religious mendicants their begging-bowls and bags; dancing girls their musical instruments.

(a) The Thags. — The most striking instance of a fetish of this description in the pickaxe of the Thags, a criminal brotherhood now suppressed, who gained their livelihood by professional murder by strangling. The pickaxe was the tool used for burying the victims; it was forged with great ceremony, and was especially venerated as the fetish of the association.

(b) The house-broom, plough, and rice-pounder. — In India, as elsewhere in the world, the corn-sieve, the house-broom, and the plough are common fetishes connected with marriages and births, as symbols of life and symbols of prosperity. To these in India must be added the rice-pounder.

5. Fetish stones. — The commonest kind of fetish in India to come under general observation consists of a stone or stones regarded as representing the village spirits or guardian. These are to be found practically in every village in the country, and are looked upon, according to the degree of civilization of the inhabitants, either as the natural abodes of the guardians themselves or as their symbols, or as representatives of the godlings, who, in their turn, are symbolical of the various powers of Nature. In any case it is considered right and wise to worship them and to treat them with ceremonial reverence. Curious or eccentric forms, such as is exhibited by stalactites in caves, is the usual visible sign of spirit-possessed stones, and for this reason many of them are the remains or fragments of ancient religious monuments, and even altars, temples, or pre-historic implements. So also any stone that lends itself by form to phallic worship is sure to be used as a village fetish. In this way, too, meteoric stones, and, in mountain regions, striking rocks, are sometimes regarded as sacred. There is no way remarkable by peculiar cleavage or otherwise, become abodes of the gods which attract special worship.

(a) Footprints: visująḍā. — Miracle-working and worshipful footprints are very common in India, with both ancient and modern attribution of sanctity — among Muhammadans to saints and to Muhammad himself, and among Hindus to all sorts of heroes and godlings. Elaborately carved visująḍā, or footprints of Visnú, which are true fetishes, are to be found in several places, and are probably copies of similar footprints of Buddha, common still in all Buddhist countries.

(b) Phallic stones (līṅga): perforated stones, śālagraṁa, grindstones: 'rain' stones. — The assumption of spirit-possession leads in the ordinary course to that of magical powers available for securing the desire of devotees, and hence of fetishes in general. Hence phallic stones (līṅga) in particular are venerated as disease-curers. But the form of stone which is specially associated with the care of man, and which is often held to be the most sacred is that which is naturally or artificially perforated. In addition to the perforated, split, fissured, and tunnelled stones and rocks at shrines and places of pilgrimage, both the śālagraṁa, a species of amonite with reputed prophylactic and curative qualities, which is ubiquitous in a religions sense, and the family grindstone must be placed in this category. The same line of reasoning has produced rain-getting stones in parts of the country.

6. Fetish trees and plants. — Fetish trees are almost as common as fetish stones, and the forms that most usually strike the observer are the lotus and the tulsi (sacred basil) plant, to be found in or near almost all Hindu dwelling places. The latter is frequently also grown in conjunction with the nimb tree (Morgania). The piṭpal or sacred fig, the bel or wood apple, the ām (mango), the sīt, and the bel (Terminalia) palm in S. India are examples of other trees treated as the natural haunts of spirits and therefore worshipped. So, of course, are hollow and unusually large trees, or those that grow in large and erection groves. Especially dark or 'ghostly' groves are further considered to be the abodes of spirits, and are feared and propitiated accordingly.

7. Fetish myths. — Myths, stories, and legends
;

;;
:

FETISHISM
about fetislies are, of course, legion, and it is hardly
an exaggeration to say that they are as numerous in
India as the villages themselves. They are chiefly
strictly local folk-tales of a religious cast, usually
made up of the traditional incidents peculiar to
their class, but occasionally throwing a valuable
light on the notions of the people in tins connexion.
For instance, the great mass of religious legend
which attaches to the soil of the Govardhan HUl
near Mathura has led to the belief that all its

stones are endowed with life.
Sometimes such
stories acquire a certain general importance, as in
the case of the legend of Lorik, a tribal fetish
among the widely spread and numerous Ahir (q.v.),
brought into vogue to account for the tribe's worship of a particular rock at Benares and of a fissured
boulder and an elephant stone near the Markundl
Pass. Of the same nature and social importance
are the very numerous and popular stories to account for the beneficial miracles to be secured at
real or reputed shrines and tombs of the more
'

'

widely known Muhanimadan saints. Indigenous
and imported, such as Saklii Sarwar, Badru'd-din
Anlia, Khwaja Khizar, Salar GhazI (Zinda Shah
Madar), Ghau.su' 1- Azam ( Abdu'l - Qadir), Sallm
Chishti, Shaikh Farid, Shah Daula, etc. ; or of
Hindu godlings, heroes, or holy men, whether of
classical antiquity or of comparatively modern or
even recent date, such as Bhairon, Bhimsen, Vetal,
Gam Gorakhnath, Guru Gugga, Lai Beg, Jnmadi,

modem religious
; or of eclectic media>val and
reformers, like Kabir and Ramanand. Such shrines,
tombs, monuments, or abodes contain and con-

FICHTE.—The philosophical work of Fichte falls into two well-defined divisions, corresponding closely with his periods of residence in Jena and Berlin respectively. The work of the first period is that which has had the greatest influence on subsequent philosophical speculation, for it gave direction to the advance which was made on Kant's position by post-Kantian idealists, while his teaching during the second period was more popular in form and closely bound up with current political events. In the first period we have the *Wissenschaftslehre* (quite inadequately translated as *Theory of Knowledge*), the practical philosophy of the *Theory of Natural Right* (*Naturrecht*) and of the *Ethics* (*Sittenlehre*), and the religious philosophy of the essay *On the Ground of our Belief in the Divine* (*Unter den Grundlagen des Glaubens an den Gott*) (in which the vocation of each individual is grounded).

*From this point onwards the inquiry centres in that divine idea, which Kant has called *the thing in itself*, whereupon the self-designing principle in the popular works, and which at first sight appears to have no immediate connection with the *Wissenschaftslehre* in its earlier form, in certain minor doctrines, the new expositions differ from the Wissenschaftslehre... but on the whole we find nothing to them to be extended or superposed the Wissenschaftslehre... They contain a wider, more concrete view, to which Wissenschaftslehre may be regarded as an introduction* (Adam-Phil. Fichte, p. 36).

Before describing the salient features of Fichte's contribution to speculation, we must briefly sketch his life and indicate his chief writings.

1. Life.---Friedrich Wilhelm Gottlieb Fichte (1762) was the eldest son of a humble handicraftsman at Rammnau in Upper Lusatia, who had married the daughter of a well-to-do manufacturer. The boy was meditative and earnest, endowed with a remarkable memory, and very fond of reading. These characteristics, along with a certain obstinacy, were to have far-reaching effects upon his life. An accident brought his talents to the notice of a nobleman, who sent him first to a tutor, and then to a monastery-like and antiquated foundation-school at Schulpforta, near Nurnberg.

At eighteen years of age he entered the theological faculty at Jena, being transferred, however, to Leipzig in the following year. Theological difficulties, especially those arising out of the relation of Providence to the voluntary action of man, led him to give up theology, and in philosophy, and he frankly adopted the determinist position, in which the reading of Spinoza's *Ethics* only served to confirm him. He was thrown on his own resources even before his University course was completed, and after three years at Leipzig he spent some years as a tutor in various families, first in Saxony, then in Zürich; it was in Zürich that he met his future wife, a niece of Kleistock. In 1790 he had a hard struggle against poverty in Leipzig, he spent some years as a tutor in various families, first in Saxony, and then in Zürich; it was in Zürich that he met his future wife, a niece of Kleistock. In 1790 he had a hard struggle against poverty in Leipzig, but the autumn of that year brought him more pupils, among them one who desired to study the philosophy of Kant. This was a turning-point in his life. *A circumstance,* he writes to his betrothed, 'which seemed the result of mere chance, led me to give myself up entirely to the study of philosophy. I determined to be as comprehensive as possible which restrains the imagination, always too powerful in me, which gives understanding away, and which raises the whole spirit to an infinity. It was the idea which at first struck me, and which I afterwards developed with more confidence; it is not a mere speculative dress, without direct bearing upon human life, but their consequences are the utmost importance for an age whose morality is at present in great need of spiritual illumination. I shall work on this subject more closely, and to set these consequences before the world in a clear light would, I believe, be doing my fatherland a service. I am thoroughly convinced that the human will is free, and that to be happy is not the purpose of our being,—but to deserve happiness.'

In 1791, Fichte paid a visit to Kant at Königsberg, and laid before him an essay entitled *Kritik aller Offenbarung,* and by some accident this was published anonymously. The professor seemed, already expecting a work on religion by Kant, assumed that the Königslberg philosopher was the author, with the result that Fichte, once again a private tutor, found his book immediately famous. A tour in Switzerland, after his marriage in 1793, brought him into contact with Pestalozzi and other men of wide reputation. The writing of political pamphlets, and deep reflexion upon the difficulties of the Jewish question, led him to Jena. In 1794, he was interrupted in the spring of 1794, he accepted the post of Extraordinary Professor of Philosophy at Jena, where he became the centre of progressive philosophical and literary movements in Germany. His work at Jena, where his influence among the students was remarkable, was cut short by an unfortunate attack upon him on the ground of his supposed atheism—an attack which he met with much tact. The result was, that he resigned the charge and before long he was compelled to make his way quietly to Berlin. There he at first moved in the circle of Schlegel, Schleiermacher, and others of the Romantic party, but it was not long before he found a more congenial and intimate circle of friends. Obtaining permission to lecture in Berlin, he gathered round him an audience containing most distinguished scholars and statesmen. At Erlangen in 1803 he delivered a number of lectures, including the famous course on *The Nature of the Scholar.*

In 1807, on the conclusion of the war with France, which had interrupted his residence in Berlin, Fichte was chosen to frame the proposed University of Berlin a constitution which should ensure its efficiency and success—a task peculiarly congenial to him. Unfortunately, a change in the scheme led to the rejection of his remarkable and far-sighted proposals.

With patriotic disregard of the risks he was running, he delivered his *Addresses to the German People* during the winter of 1807-8, while Berlin was occupied by the French, and his services to the restoration of Prussia were recognized by his election as first Rector of the University of Berlin in 1810. While in the strenuous service of his Fatherland, he was stricken down by a fever contracted from his wife, who had laboured in the overcrowded hospitals for five months, and he died on 27th January 1814.

2. Writings.---The *Kritik aller Offenbarung* appeared in 1792; it was an attempt to carry the principles of Kant's critical philosophy into full investigation of the possibility of revealed religion. Its interest lies in the emphasis which Fichte thus early laid upon the practical reason as the clue to speculative problems. In 1794 it was followed by *Über den Begriff der Wissenschaftslehre,* a tract containing a purely formal sketch of his first Jena lectures, which has unfortunately been frequently used as the most adequate source for a knowledge of Fichte's system. While at Jena, Fichte developed his speculative principle (described below) in a series of works dealing with its theoretical and practical grounds and implications, including *Grundlage der gesammten Wissenschaftslehre* (1794), *Grundlage des Naturrechts* (1796), *Erste und zweite Einleitung in die Wissenschaftslehre* (1797), *Versuch einer neuen Darstellung der Wissenschaftslehre* (1797) which expounds the philosophical system as a whole, and *System der gesammten, in *Grundlagen der gesammten Wissenschaftslehre* (1794), *Grundlage des Naturrechts* (1796), *Erste und zweite Einleitung in die Wissenschaftslehre* (1797), *Versuch einer neuen Darstellung der Wissenschaftslehre* (1797) which expounds the philosophical system as a whole, and *System der gesammten,
of current culture and thought of Grundriss des gegenwartigen Zeitalters (1806), and for the bold reconciliation of life and thought in religion which is found in the Anweisung zum seligen Leben (1806). When Prussia was invaded in 1805 by Napoleon, Fichte was by no means the man who had wished to make the unsuccessful appeal to be allowed to accompany the Prussian troops as a preacher of ‘fire and sword,’ found expression in the Reden an die Deutschen—addresses on the characteristics of the German people out of which the new State may be built up, and expound the steps to be taken in order to utilize the freedom and vitality of the nation.

(1) The Jena Period. — (a) Wissenschaftslehre. — Fichte’s problem was set for him by the unresolved difficulties of Kant’s system. By an analysis of knowledge and an investigation of the result, for knowledge, of the existence of the unity of self-consciousness, Kant attempted to explain experience. But the result of his method seemed to be that two elements, each of which has meaning only as related to the other, are equally necessary for experience, though the relation is a purely negative one.

What Kant, however, does not perceive, is that these two elements are not merely relative to each other, so that either taken apart from the other, becomes an empty abstraction. He has, indeed, proved that existence unrelated to a conscious life is an empty category, and therefore self in its universality—as opposed to all the other matters of the desires—cannot equally abstract itself and the self, and only the self, is nothing at all. Self-consciousness always implies consciousness of something else than self, and could not exist without it. Self-determination, therefore, though it may be relatively opposed to determination by the not-self, cannot be absolutely opposed to it, and the not-self the self would disappear (E. Caird, Hegel, Edinburgh, 1869, p. 134f).

Fichte refused to start with any abstract notion. Certainty to him rested on intuition, though he meant by intuition neither the Kantian mode of knowing things-in-themselves nor the consciousness of the Absolute of (Schelling), but what he called in his later writings the free activity of the Ego.

The best-known expression of this starting-point is found in the Grundlage der Wissenschaftslehre, where it is reached by a highly artificial method, which cannot be reproduced in brief. The procedure is to assume that any one who considers what happens when he calls himself ‘I’ will find that he is at the same time both object and subject. But this primitive activity of consciousness (its self-affirmation) is known to the Ego only through the thought, by limitation. In other words, ‘The Ego determines’ and ‘The Ego is determined’ are the two sides of one contradiction. The whole solution of this contradiction is found in the proposition ‘The Ego becomes itself and is partly real.’ From this position the theoretical Wissenschaftslehre analyzes the successive steps of consciousness which are involved in the opposition between non-Ego and Ego. Fichte was quite aware, and held, that this has only formal worth. The practical Wissenschaftslehre (Stiftenslehre) makes an advance. If the Ego is to unite the pure activity of self-affirmation and the limited, determined activity, ‘it must be an activity which is at the same time, though not in the same sense, finite; it must be an infinitely striving. Striving implies opposition. . . . Thus the practical activity of the Ego is the ground of the Antithetical Opposition, which renders intelligence possible’ (Adamson, 177).

(b) Practical philosophy. — The Theory of Natural Right and the Moral Phil. are deductions from the first principles of the Wissenschaftslehre, and lay down a series of stages marking the realization of the practical Ego. The Ego, on the principles of the earlier investigation, must affirm itself, be aware of its own activity. It can be so aware only in so far as it is practical, willing. ‘The practical Ego is the Ego of original self-consciousness conceived in its fullness, yet limitedly only in willing; and, were it not practical, would receive neither itself nor the world—would not be an intelligence at all. Will is in a special sense the free activity of the Ego, (between us and Adamson, 181). This striving is a feature of consciousness only to the extent that consciousness is limited, and the Ego is really a system of impulses, or strivings partially but absolutely opposed.

Fichte examines the implications of the principle that the Ego, to be self-consciousness, must affirm itself as acting freely; and his results are similar to that of right. For it is found that action involves the existence of a sphere of action, a world against which the activity is to be directed. Fichte further deduces the existence of a plurality of individuals, and the external world is the means of communication between such free intelligences. What is further, the complete knowledge of persons is possible only if they stand in a relation of right and wrong (Rechts) to each other. The theory of right establishes (1) primitive right (the right to be not to be violated by the cause involing personal freedom and property). To assure this right, there must be a (2) right of conscience as the agreement in a communon by mutual contract that violations of the former shall be annulled by the contrary. Hence (3) the political rights of free contract, of legislative and of executive authority.

Socialist principles regarding State-control of trade, labour, and money are deduced immediately given.

(c) Philosophy of religion. — In his first Essay in the critical style, the Critique of all Revelation, Fichte attempted to apply the critical principles to the question of the possibility, the form, and the content of any revelation, the religious ideas in the Kantian system. The importance of this Essay lies in the stress which he already lays upon the practical side of that system. Within the earlier system of Fichte there was no place for the conception of God as creative, or as personal. Kant had shown the possibility of the existence of Natural Religion, as involved in the necessity of the practical postulates of God and immortality; Revealed Religion, Fichte tried to show, rests upon the morally imperfect condition of those to whom the revelation is made, and any revelation must be in harmony with the natural law. It is of the Divine moral law, not of God, that Fichte speaks, which led to Fichte’s removal from Jena. Belief in the moral order of the universe is belief in God, and there is no other; only by reason of the necessities of intelligence do we regard this order as substance or person.

(2) The Berlin Period. — (a) The Nature of Man. — The harmony which Fichte had tried to establish between cognition and will, by means of the conception of the moral order, received during the Berlin period more elaborate treatment; the Wissenschaftslehre, so often taken as Fichte’s last word, is merely introductory to the whole of what is contained in the Popular Works. The clearest exposition of the later synthesis is found in Die Bestimmung des Menschen of 1800 (Jena, 1831. The three sections of this work—Doubt, Knowledge, and Faith—state the positions of Naturalism, Theoretical Idealism, and Practical (or Ethical) Idealism. Naturalism leaves us with the conflict of natural necessity and freedom, Knowledge is self-imposed, but the belief in the third book the end of existence is declared to be not knowledge, but action.

In the section entitled ‘Faith,’ Fichte shows that the attempt to analyze the freedom of the absolute leaves the sceptical doubts described in the section entitled ‘Doubt.’ We must simply accept the impulses to independence, and realise that ‘thought is not the same thing, but founded on the same impulses.’ ‘The true dignity of my understanding fills me with
reverence. It is no longer the deceptive mirror which reflects a series of empty pictures, proceeding from nothing and tending to nothing; it is bestowed upon me for a great purpose. Its cultivation for this purpose is entrusted to me; it is placed in my hands, and at my command it will be required. ‘We do not act because we know, but we know because we are called upon to act. The practical reason is the root of all reason.

The moral results which follow from this position are clear. ‘Not merely to know, but according to thy knowledge to do, is thy vocation,’ Fichte would, however, have us remember that others also are busy doing. ‘Assume it as already known that they can give a purpose to their own being wholly by themselves, and independently of thee; never interrupt the accomplishment of this purpose, but rather further it to the utmost of thy power.’ The vocation of the race is to form itself into one single body, each part of which shall be in intimate contact with every other. All has tended to this end, and much of the way is already passed over. Man has attained to a more comprehensive, more energetic freedom. ‘When once every useful discovery made at one end of the earth is at once communicated to all other parts, then, without further interruption, with united strength and equal step, humanity shall move onward to a higher culture, of which we can at present form no conception.’ But an even greater Order appears; the Eternal World, in which we are and live even now, the world in which Will is the first link in a chain of consequences that stretches through the whole invisible realms of spirit, rises before us. God, the Divine Will, is the bond of union between finite wills within that world, and our true life is a life of active endeavour to co-operate with other willing persons, fulfilling our respective vocations while respecting their freedom, guided by conscience, which is the felt harmony between the natural tendency and the tendency to freedom.

Creative life reveals itself in a different shape in each corner of the universe as the power by which we ourselves were formed. Here it streams as self-creating and self-forming matter through human veins and muscles, and pours out its abundance into the tree, the plant, and the grass. There it leaps and dances as spontaneous activity in the animal, and appears in ever-new forms. ‘Everything that lives and moves follows this universal impulse.’ Through that which to others seemed a mere dead mass, Fichte saw this life rising in ever-increasing growth, no longer the ever-recurring circle, or the eternally repeated play. ‘It is not Death that kills, but the more living Life which, cou-

The ENDE OF VOL. V.
